TABLE OF CONTENTS

Volume 1

DIVISION 00 PROCUREMENT AND CONTRACTING REQUIREMENTS

000110 Table of Contents

DIVISION 01 GENERAL REQUIREMENTS

014339 Mockups
017900 Demonstration and Training
018198 Facility Acoustic Performance Requirements

DIVISION 03 CONCRETE

033000 Cast-In-Place Concrete
033544 Polished Concrete Finish
034500 Architectural Precast Concrete

DIVISION 04 MASONRY

042000 Unit Masonry
042200 Concrete Unit Masonry

DIVISION 05 METALS

051200 Structural Steel Framing
052100 Steel Joist Framing
053100 Steel Decking
054000 Cold-Formed Metal Framing
054300 Metal Support Assemblies
055000 Metal Fabrications
055005 Miscellaneous Metal Fabrications
055100 Metal Stairs
055200 Metal Railings
057000 Ornamental Metal
057200 Ornamental Railings

DIVISION 06 WOOD, PLASTICS, AND COMPOSITES

061000 Rough Carpentry
064000 Architectural Woodwork

DIVISION 07 THERMAL AND MOISTURE PROTECTION

071413 Hot Fluid-Applied Rubberized Asphalt Waterproofing
071700 Bentonite Waterproofing
072100 Thermal Insulation
072700 Air & Moisture Barrier
074200 Metal Panels
075400 Thermoplastic Polyolefin (TPO) Roofing
076200 Sheet Metal & Flashing
077233 Roof Hatches
077236 Smoke Vents
078100 Applied Fireproofing
078400 Penetration Firestopping
078443 Joint Firestopping
079100 Preformed Joint Seals
079200 Joint Sealants
079513 Expansion Joint Cover Assemblies

DIVISION 08 OPENINGS

081113	Hollow Metal Doors & Frames
081400	Wood Doors
083100	Access Doors & Panels
083323	Overhead Coiling Doors
083473	Sound Control Door Assemblies
083474	Sliding Sound Control Door Assemblies
084400	Aluminum Curtain Walls, Storefronts & Entrances
084520	Translucent Fiberglass Panel Assemblies
085673	Sound Control Window Units
087100	Door Hardware
087900	Door Operator Switch Bollards
088000	Glazing
089100	Louvers

DIVISION 09 FINISHES

092200	Non-Structural Metal Framing
092900	Gypsum Board
093000	Tiling
095100	Acoustical Ceilings
096001	Flooring Transition Strips
096400	Wood Flooring
096500	Resilient Flooring
096723	Resinous Flooring
096800	Carpeting
097200	Wall Coverings
097700	Fiberglass Reinforced Panels
098000	Acoustic Treatments
099000	Painting
099600	High-Performance Coatings

DIVISION 10 SPECIALTIES

101100	Visual Display Boards
102100	Toilet Compartments
102600	Wall & Door Protection
102813	Toilet Accessories
104400	Fire Protection Specialties
105113	Metal Lockers

DIVISION 11 EQUIPMENT

112326	Commercial Washer and Extractor
115700	Vocational Shop Equipment
116123	Theatrical Platforms
116133	Theatrical Rigging
116135	Orchestra Pit Lift System
116143	Theatrical Drapery
116163	Theatrical Lighting Dimming & Control
116173	Theatrical Lighting Fixtures

DIVISION 12 FURNISHINGS

122413	Roller Window Shades
123551	Music Education Storage Casework
124800	Entrance Floor Mats
126100	Fixed Audience Seating
126600	Retractable Bleacher and Seating System
127100	Portable Audience Seating

DIVISION 13 SPECIAL CONSTRUCTION

134833 Sound & Vibration Control

DIVISION 14 CONVEYING EQUIPMENT

142400 Hydraulic Elevators

144200 Wheelchair Lifts

Volume 2**DIVISION 21 FIRE SUPPRESSION**

210500 Common Work Results for Fire Suppression
210502 Basic Fire Protection Requirements
210517 Sleeves and Sleeve Seals for Fire-Suppression Piping
210518 Escutcheons for Fire-Suppression Piping
210523 General-Duty Valves for Fire-Suppression Piping
210529 Hangers and Supports for Fire Suppression Piping and Equipment
210553 Identification for Fire Suppression Piping and Equipment
211119 Fire Department Connections
211200 Fire Suppression Standpipes
211313 Wet-Pipe Sprinkler Systems
213113 Electric-Drive, Centrifugal Fire Pumps
213400 Pressure-Maintenance Pumps
213900 Controllers For Fire-Pump Drivers

DIVISION 22 PLUMBING

220500 Common Work Results for Plumbing
220502 Basic Plumbing Requirements
220513 Common Motor Requirements for Plumbing Equipment
220517 Sleeves and Sleeve Seals for Plumbing Piping
220518 Escutcheons for Plumbing Piping
220519 Meters and Gages for Plumbing Piping
220523.12 Ball Valves for Plumbing Piping
220523.13 Butterfly Valves for Plumbing Piping
220523.14 Check Valves for Plumbing Piping
220529 Hangers and Supports for Plumbing Piping and Equipment
220548 Noise and Vibration Control for Plumbing Systems
220549 Noise Control Accessories for Plumbing Systems
220553 Identification for Plumbing Piping and Equipment
220719 Plumbing Piping Insulation
221116 Domestic Water Piping
221123 Domestic Water Pumps
221316 Sanitary Waste and Vent Piping
221319 Sanitary Waste Piping Specialties
221413 Facility Storm Drainage Piping
221423 Storm Drainage Piping Specialties
221429 Sump Pumps
221513 General Service Compressed-Air Piping
221519 General-Service Packaged Air Compressors and Receivers
223400 Fuel-Fired, Domestic-Water Heaters
224000 Plumbing Fixtures
224500 Emergency Plumbing Fixtures
224716 Pressure Water Coolers

DIVISION 23 HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

230500	Common Work Results For HVAC
230502	Basic HVAC Requirements
230513	Common Motor Requirements For HVAC Equipment
230514	Variable-Frequency Motor Controllers
230516	Expansion Fittings and Loops for HVAC Piping
230517	Sleeves and Sleeve Seals for HVAC Piping
220518	Escutcheons for HVAC Piping
230519	Meters and Gages for HVAC Piping
230523	General Duty Valves For HVAC Piping
230529	Hangers and Supports for HVAC Piping and Equipment
230548	Noise and Vibration Control for HVAC Systems
230553	Identification for HVAC Piping and Equipment
230593	Testing, Adjusting, and Balancing for HVAC
230700	HVAC Insulation - ASHRAE
230900	Instrumentation and Controls For HVAC
231123	Facility Natural-Gas Piping
232113	Hydronic Piping
232116	Hydronic Piping Specialties
232123	Hydronic Pumps
232300	Refrigerant Piping
232500	HVAC Water Treatment
233113	Metal Ducts
233119	HVAC Casings and Acoustical Housings
233300	Air Duct Accessories
233305	Noise Control Accessories for Ductwork
233416	Centrifugal HVAC Fans
233423	HVAC Power Ventilators
233600	Air Terminal Units
233713	Diffusers, Registers, and Grilles
234100	Particulate Air Filtration
235216	Condensing Boilers
236423	Screw Water Chillers
237316	Air-Handling Units
238123	Computer-Room-Air-Conditioning Units
238126	Split-System Air-Conditioning Units
238216	Air Coils
238236	Finned-Tube Radiation Heaters
238239.13	Cabinet Unit Heaters
238239.16	Propeller Unit Heaters
239000	Dust Collectors

DIVISION 26 ELECTRICAL

- 260500 Common Work Results for Electrical
- 260519 Low-Voltage Electrical Power Conductors and Cables
- 260523 Control-Voltage Electrical Power Cables
- 260526 Grounding and Bonding for Electrical Systems
- 260529 Hangers and Supports for Electrical Systems
- 260533 Raceways and Boxes for Electrical Systems
- 260543 Underground Ducts and Raceways for Electrical Systems
- 260553 Identification for Electrical Systems
- 260572 Short-Circuit Studies
- 260573 Coordination Studies
- 260574 Arc-Flash Hazard Analysis
- 260913 Electrical Power Monitoring and Control
- 260923 Lighting Control Devices
- 260936 Modular Dimming Controls
- 260943.03 Distributed Digital Lighting Controls
- 261116.12 Secondary Unit Substations with Switchboard Secondary
- 262213 Low-Voltage Distribution Transformers
- 262413 Switchboards
- 262416 Panelboards
- 262726 Wiring Devices
- 262816 Enclosed Switches and Circuit Breakers
- 263213.16 Gaseous Emergency Engine Generators
- 263214 Generator Connection Cabinet
- 263600 Transfer Switches
- 265119 LED Interior Lighting
- 265201 Interior Luminaires
- 265561 Theatrical System Electrical Requirements
- 265601 Exterior Luminaires

DIVISION 27 COMMUNICATIONS

- 270513 Communications Services
- 270536 Cable Trays for Communications Systems
- 270536.13 Non-Continuous Cable Supports for Communications Systems
- 271000 Structured Cabling
- 274100 Performance AV Systems

DIVISION 28 ELECTRONIC SAFETY AND SECURITY

- 280528 Pathways for Electronic Safety and Security
- 283111 Digital, Addressable Fire-Alarm System

Volume 4

DIVISION 31 EARTHWORK

- 311000 Site Clearing
- 311012 Fine Grading
- 311018 Soil Erosion Control
- 312000 Earth Moving

DIVISION 32 EXTERIOR IMPROVEMENTS

- 321216 Hot Mix Asphalt Concrete Paving
- 321313 Cement Concrete Pavements, Curbs & Gutters
- 321316 Decorative Concrete Paving
- 321373 Concrete Paving Joint Sealants
- 323119 Decorative Metal Fences & Gates
- 323300 Site Furnishings
- 328400 Planting Irrigation
- 329113 Soil Preparation
- 329200 Turf & Grasses
- 329300 Plants
- 329600 Transplanting

DIVISION 33 UTILITIES

- 331100 Water Main
- 333100 Facility Sanitary Sewers
- 334100 Storm Sewers, Underdrains & Drainage Structures

END OF SECTION

SECTION 014339 MOCKUPS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: General requirements for mockups specified in other technical Sections.

1.2 DEFINITIONS

- A. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
- B. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.

1.3 SUBMITTALS

- A. Mockup Shop Drawings: For integrated exterior wall mockups and integrated mockups of interior assemblies and finishes
 - 1. Provide plans, sections, and elevations, indicating materials and size of mockup construction.
 - 2. Indicate manufacturer and model number of individual components.
 - 3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.4 MOCKUPS

- A. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
 - 2. Notify Architect 7 days in advance of dates and times when mockups will be constructed.
 - 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 - 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 5. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
 - a. Allow 7 days for initial review and each re-review of each mockup.
 - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 7. Demolish and remove mockups when directed unless otherwise indicated.
- B. Mockup Pre-Installation Conference: Before beginning mock-up construction and installation, conduct conference with manufacturer's representatives, fabricators, installers, Architect, Owner and other interested parties to review procedures, schedules, and coordination of curtain wall installation with other elements of Work.
- C. Approved Mockups:
 - 1. Maintain approved in-place mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - a. Approved mock-up assemblies built in-place may remain as part of final Work.
 - 2. Maintain approved stand-alone mockup; do not disassemble or dispose of until so directed by Architect.
 - a. Demolish and remove stand-alone mockups when directed, unless otherwise indicated.
- D. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

1. Approved mock-up assemblies built in-place may remain as part of final Work.
2. Demolish and remove mock-ups when directed, unless otherwise indicated.
3. Mock-up shall remain on site and shall not be removed, disassembled, or disposed of until so directed by Architect.

PART 2 PRODUCTS

Not Used.

PART 3 MOCKUP SCHEDULE

3.1 INTEGRATED EXTERIOR WALL MOCKUP

- A. General: Construct integrated exterior mockup according to approved Mockup Shop Drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with other supporting materials.
- B. Mockup Shop Drawings and Mockup Pre-Installation Conference: As specified herein.
- C. Components to Include:
 - 1.

3.2 SPECIFIC MOCKUPS

- A.

3.3 OTHER MOCKUPS

- A. In addition to previous items, construct field (project site) mock-ups and samples for review where indicated in individual Specifications Sections.

3.4 INSTALLATION

- A. Installation: Construct mock-ups for Architect's visual examination, for quality control, and performance of required testing. Use materials, fabrication and installation methods identical with those indicated for Work. Simulate surrounding conditions as closely as possible.
 1. Construct mockups for Architect's visual examination, for quality control and quality of installation.
 - a. Demonstrate the proposed range of aesthetic effects and workmanship.
 - b. Build mockups of size indicated in Drawings.
 - c. Use materials, fabrication and installation methods identical with those indicated for Work.
 - d. Simulate surrounding conditions as closely as possible.
 2. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 3. Install mockups under manufacturer's direct supervision employing workmen who will be used during actual erection at job site.

END OF SECTION

SECTION 017900 DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
 - 1. Demonstration of operation of systems, subsystems, and equipment.
 - 2. Training in operation and maintenance of systems, subsystems, and equipment.
 - 3. Demonstration and training video recordings.

1.2 APPLICATION OF SPECIFICATION SECTION

- A. Specification section applies to Divisions 21, 22, 23, 26 and 28 – respectively Fire Protection, Plumbing, Mechanical and Electrical. The specific sections where this applies per division is below:
 - 1. Division 21
 - a. 211313 Wet-Pipe Sprinkler Systems
 - 2. Division 22
 - a. 221429 Sump Pumps
 - b. 223400 Fuel-Fired, Domestic-Water Heaters
 - 3. Division 23
 - a. 230514 Variable-Frequency Motor Controllers
 - b. 230900 Building Automation Systems
 - c. 230993 Sequence of Operation for HVAC Controls
 - d. 235216 Condensing Boilers
 - e. 236423 Screw Water Chillers
 - f. 237316 Air-Handling Units
 - g. 238123 Computer-Room-Air-Conditioning Units
 - h. 238126 Split-System Air-Conditioning Units
 - i. 238413 Humidifiers
 - 4. Division 26
 - a. 260913 Electrical Power Monitoring and Control
 - b. 260923 Lighting Control Devices
 - c. 260943 Distributed Digital Lighting Controls
 - d. 262713 Electricity Metering
 - e. 263213.16 Gaseous Emergency Engine Generators
 - f. 265119 LED Interior Lighting
 - 5. Division 28
 - a. 283111 Digital, Addressable Fire-Alarm System
- B. These demonstration and training requirements are in addition to those listed elsewhere in the project.

1.3 INFORMATIONAL SUBMITTALS

- A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
 - 1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.
- B. Attendance Record: For each training module, submit list of participants and length of instruction time.

- C. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

- A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.
 - 1. Identification: On each copy, provide an applied label with the following information:
 - a. Name of Project.
 - b. Name and address of videographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Name of Contractor.
 - f. Date of video recording.
 - 2. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
 - 3. At completion of training, submit complete training manual(s) for Owner's use prepared and bound in format matching operation and maintenance manuals and in PDF electronic file format.

1.5 QUALITY ASSURANCE

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative experienced in operation and maintenance procedures and training.
- C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.
- D. Preinstruction Conference: Conduct conference at Project site. Review methods and procedures related to demonstration and training including, but not limited to, the following:
 - 1. Inspect and discuss locations and other facilities required for instruction.
 - 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 - 3. Review required content of instruction.
 - 4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.6 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 PRODUCTS

2.1 INSTRUCTION PROGRAM

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system.

- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:
1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
 - a. System, subsystem, and equipment descriptions.
 - b. Performance and design criteria if Contractor is delegated design responsibility.
 - c. Operating standards.
 - d. Regulatory requirements.
 - e. Equipment function.
 - f. Operating characteristics.
 - g. Limiting conditions.
 - h. Performance curves.
 2. Documentation: Review the following items in detail:
 - a. Emergency manuals.
 - b. Operations manuals.
 - c. Maintenance manuals.
 - d. Project record documents.
 - e. Identification systems.
 - f. Warranties and bonds.
 - g. Maintenance service agreements and similar continuing commitments.
 3. Emergencies: Include the following, as applicable:
 - a. Instructions on meaning of warnings, trouble indications, and error messages.
 - b. Instructions on stopping.
 - c. Shutdown instructions for each type of emergency.
 - d. Operating instructions for conditions outside of normal operating limits.
 - e. Sequences for electric or electronic systems.
 - f. Special operating instructions and procedures.
 4. Operations: Include the following, as applicable:
 - a. Startup procedures.
 - b. Equipment or system break-in procedures.
 - c. Routine and normal operating instructions.
 - d. Regulation and control procedures.
 - e. Control sequences.
 - f. Safety procedures.
 - g. Instructions on stopping.
 - h. Normal shutdown instructions.
 - i. Operating procedures for emergencies.
 - j. Operating procedures for system, subsystem, or equipment failure.
 - k. Seasonal and weekend operating instructions.
 - l. Required sequences for electric or electronic systems.
 - m. Procedures and recordings for operating equipment above Wood Ceilings and all ceilings besides 2'x2' ACT ceilings.
 - n. Special operating instructions and procedures.
 5. Adjustments: Include the following:
 - a. Alignments.
 - b. Checking adjustments.
 - c. Noise and vibration adjustments.
 - d. Economy and efficiency adjustments.
 6. Troubleshooting: Include the following:
 - a. Diagnostic instructions.
 - b. Test and inspection procedures.
 7. Maintenance: Include the following:
 - a. Inspection procedures.
 - b. Types of cleaning agents to be used and methods of cleaning.
 - c. List of cleaning agents and methods of cleaning detrimental to product.
 - d. Procedures for routine cleaning
 - e. Procedures for preventive maintenance.
 - f. Procedures for routine maintenance.

- g. Procedures and recordings for accessing equipment above Wood Ceilings and all ceilings besides 2'x2' ACT ceilings.
- h. Instruction on use of special tools.
- 8. Repairs: Include the following:
 - a. Diagnosis instructions.
 - b. Repair instructions.
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - d. Instructions for identifying parts and components.
 - e. Review of spare parts needed for operation and maintenance.

PART 3 EXECUTION

3.1 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with operation and maintenance data.
- B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
 - 1. Owner will furnish Contractor with names and positions of participants.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
 - 1. Schedule training with Owner, with at least ten business days' advance notice.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
- E. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

- A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.
 - 1. At beginning of each training module, record each chart containing learning objective and lesson outline.
- B. Video: Provide minimum 640 x 480 video resolution converted to format file type acceptable to Owner, on electronic media.
 - 1. Electronic Media: Read-only format acceptable to Owner, with commercial-grade graphic label.
 - 2. File Hierarchy: Organize folder structure and file locations according to project manual table of contents. Provide complete screen-based menu.
 - 3. File Names: Utilize file names based upon name of equipment generally described in video segment, as identified in Project specifications.
 - 4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the Equipment Demonstration and Training Video that describes the following for each Contractor involved on the Project, arranged according to Project table of contents:
 - a. Name of Contractor/Installer.
 - b. Business address.

- c. Business phone number.
 - d. Point of contact.
 - e. E-mail address.
- C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.
- 1. Film training session(s) in segments not to exceed 30 minutes.
 - a. Produce segments to present a single significant piece of equipment per segment.
 - b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
 - c. Where a training session on a particular piece of equipment exceeds 30 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

END OF SECTION

SECTION 018198 FACILITY ACOUSTIC PERFORMANCE REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Special acoustical performance requirements of Project.
 - 1. Definition and identification of acoustically-critical spaces.
 - 2. Qualifications requirements.
 - 3. Preconstruction conference.
 - 4. Testing and Inspecting.
 - 5. Repair of work not in compliance with specified requirements.
- B. Related Work: Coordinate with Work of other specification sections related to Work of this Section and acoustically-critical spaces and construction.
 - 1. Specific test and inspection requirements are not specified in this Section.
- C. Related Sections:
 - 1. Section 017132 - Vibration Monitoring: Vibration and seismic monitoring during construction phase.
 - 2. Section 033000 - Cast-in-Place Concrete: Isolated concrete deck and isolation pads and coordination of underlayment installation.
 - 3. Section 054000 - Cold-Formed Metal Framing, Section 092216 - Non-Structural Metal Framing and Section 092900 - Gypsum Board: Stud-framed gypsum board assemblies incorporating resilient hangers and isolators.
 - 4. Section 057000 - Ornamental Metal: Metal panels and screens within performance space.
 - 5. Section 064000 - Architectural Woodwork: Wood fabrications within performance spaces.
 - 6. Section 077233 - Roof Hatches: STC-rated roof hatches.
 - 7. Section 077236 - Smoke Vents: STC-rated smoke vents.
 - 8. Section 078443 - Fire-Resistant Joint Systems: Fire-rated acoustical sealant.
 - 9. Section 083100 - Access Panels: STC-rated access panels.
 - 10. Section 083473 - Sound Control Door Assemblies.
 - 11. Section 085673 - Sound Control Window Units.
 - 12. Section 087100 - Door Hardware: Sound gasketing.
 - 13. Section 088000 - Glazing: STC-rated glass units.
 - 14. Section 092900 - Gypsum Board: Acoustic sealant, acoustic insulation, STC-rated partitions.
 - 15. Section 095100 - Acoustic Ceiling Tile.
 - 16. Section 095443 - Stretch-Membrane System.
 - 17. Section 098333 - Acoustic Plaster System.

 - 21. Section 230548 - Vibration Controls for HVAC

1.2 REFERENCES

- A. Acoustician's Report.

1.3 DEFINITIONS

- A. Acoustically-Critical Spaces: The following spaces are acoustically-critical spaces, requiring special provisions and restrictions to meet the target background noise levels, achieve proper sound isolating performance of demising constructions, and achieve the design intent for interior acoustic performance:
 - 1. Audience Chamber
 - 2. Stagehouse

3. Studio Theater
4. Sound & Light Locks
5. Trap Room
6. Control Booths
7. *Projection Booth*
8. *Dimmer Room*
9. Audio Rack Room, Sound, Communications, and AV Equipment Rooms
10. Mechanical and Electrical Rooms
11. *Café*
12. *Box Office*

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified fabricators, installers, and testing agencies.
- B. Certificates: Manufacturer's certificates for products and equipment.
- C. Test and Inspection Reports: Prepare and submit certified written reports as specified in other Sections.
- D. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses.

1.5 QUALITY ASSURANCE

- A. Fabricator and Manufacturer Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service acoustical performance. Qualified firm will provide authorized technical representatives to observe and inspect installation of products, equipment and assemblies.
- B. Subcontractors and Installers Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, being familiar with special acoustical requirements indicated, and whose work has resulted in construction with a record of successful acoustical performance.
 1. Engage specialists who satisfy qualification requirements indicated in specifications.
- C. Acoustical Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.

1.6 PRECONSTRUCTION CONFERENCE

- A. Preconstruction Conference: Prior to start of Work, conduct a conference to ensure understanding of Construction Documents and special acoustical requirements of acoustically-critical spaces and construction.
 1. Attendees: Contractor, Architect, acoustic consultant, theater consultant, audio/visual consultant, subcontractors, fabricators and installers of Work in acoustically-critical spaces. At minimum, sub-contractors represented shall include but is not limited to; carpentry, masonry, specialty interior finish, door, mechanical, electrical and plumbing.
 2. Agenda: Include the following agenda items:
 - a. Acoustical performance requirements of completed project.
 - b. Comprehension of Contract Documents and design intent.
 - c. Construction details and assemblies.
 - d. Review qualifications of personnel assigned to the work.
 - e. Review installation, sequencing, tolerances and required clearances.
 - f. Coordination of work by multiple subcontractors.
 - g. Possible conflicts and compatibility issues. Possible performance issues.

- h. Possible bridging of vibration isolation joints or flanking of airborne sound.
- i. Building services equipment and installation methods.
- j. Applicable field conditions, field dimensions, means and methods, general guidelines and practices.
- k. Other discussion topics and considerations related to acoustically-critical spaces and construction.
- l. Coordinate sleeving and sealing of penetrations through partitions and slabs at acoustically-critical spaces and at mechanical and electrical rooms.

PART 2 PRODUCTS

2.1 PRODUCTS

- A. Refer to specifications for product requirements.
- B. Provide products identical to those tested by an acoustical testing agency.

PART 3 EXECUTION

3.1 EXECUTION OF ACOUSTICALLY-CRITICAL WORK

- A. Refer to applicable specification sections for specific requirements.
- B. Do not enclose or obscure items requiring testing and inspection services after placement until after testing and inspection services are performed.
- C. Coordinate and provide sleeving and sealing of penetrations through partitions and slabs at acoustically-critical spaces and at mechanical and electrical rooms.
 - 1. Duct, pipe and conduit penetrations at acoustically-critical spaces shall be sleeved, packed and sealed airtight with flexible non-hardening sealant.
 - 2. Provide 1-inch flexible joint around penetrating elements, unless otherwise indicated in the Construction Documents.
- D. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- E. Not Permitted in Installed Work: Vibration harmonics; noises caused by movement of components; vibration transmitted to other building elements; loosening, weakening, or fracturing of attachments or components of system.

3.2 TESTING AND INSPECTING

- A. Acoustical Testing and Related Inspections: Engage qualified testing agency as indicated in individual Specification Sections, and perform additional inspections required to verify that the Work complies with requirements, whether specified or not.
 - 1. Provide advanced notice of at least five (5) working days to Owner, Architect and acoustic consultant to schedule field-testing and site inspections.
 - 2. Interpret tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 - 3. Notify Architect promptly of irregularities and deficiencies observed in the Work during performance of its services.
 - 4. Retest and re-inspect corrected work.
 - 5. Submit a final report of acoustical tests and inspections at Substantial Completion. Include descriptions of unresolved deficiencies.
- B. Scheduling and Coordination: Inspection of installation and workmanship may occur prior to or during completion of the Work, including:
 - 1. After completion of all partition framing, the first course of masonry work, ceiling framing, rough door framing, window framing, resilient ceiling hangers and sway braces, but before installation of the drywall, plaster or any other interior finish for all acoustically-critical Spaces.

2. After installation of acoustic underlayment or slab isolation, but prior to finish flooring installation.
 3. After all partitions, doors, windows, ceilings and floors, ductwork, conduit, sprinklers, have been installed and completed, including acoustic sealing of partition, ceiling and floor penetrations, but prior to installation of interior wall, ceiling or floor finishes in acoustically-critical spaces.
 4. Acoustical inspection of all other construction shall occur as appropriate to the phase and level of completion of each part of the work.
- C. Preparation for Inspections:
1. Confirm the air distribution system is fully balanced and operating normally.
 2. Identify construction and equipment within acoustically-critical spaces
- D. Prior to final commissioning by Acoustic Consultant, inspect and perform acoustical testing to determine compliance with requirements, including:
1. Overall separation of acoustically-critical spaces, acoustic sealant joints, vibration and airborne sound control.
 2. Installation and adjustment of acoustically-rated doors, door sets, gasketing and hardware.
 3. Installation and adjustment of sound-control door and frame assemblies.
 4. Installation and operation of sound-control window units.
 5. Sealing of service penetrations into and out of acoustically-critical spaces.
 6. Installation and operation of fixed and adjustable acoustic surface treatments and room tuning products and assemblies.
 7. Installation of sound and vibration components, vibration isolation joints and resilient equipment mounting and attachment.

3.3 REPORT

- A. Acoustic inspector will prepare a punchlist to itemize observed conditions that are not in compliance with specified requirements or intent of the Construction Documents.
- B. Do not proceed until the Architect and Acoustic Consultant have reviewed and approved these constructions in the field with the appropriate Contractor representative.

3.4 CORRECTION OF WORK

- A. Perform corrective measures in a timely manner acceptable to the Owner and prior to proceeding with subsequent work related Work.
- B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
 1. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

END OF SECTION

SECTION 033000 CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Division 00 - Procurement and Contracting Requirements, and Division 01 - General Requirements, are hereby made part of this Section.

1.02 SECTION INCLUDES

- A. Interior slabs on grade.
- B. Foundations, piers and walls.
- C. Underslab vapor retarder.

1.04 SUBMITTALS

- A. See Section 01 3323 - Shop Drawings, Product Data, and Samples, for submittal procedures.
- B. Product Data: Submit data for proprietary materials and items, including reinforcement and forming accessories, admixtures, patching compounds, joint systems, and others as requested by Architect.
 - 1. Submit data for form liners, form ties, and accessories for architectural concrete.
- C. Shop Drawings: Reinforcement: Submit shop drawing prepared by a registered Professional Engineer for fabrication, bending, and placement of concrete reinforcement.
 - 1. Comply with ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures" showing bar schedules, stirrup spacing, diagrams of bent bars, arrangement of concrete reinforcement. Include special reinforcement required and openings through concrete structures.
- D. Laboratory Test Reports: Submit laboratory test reports for concrete materials and mix design test as specified.
 - 1. Submit proposed design mix for each type of concrete required. Per ACI 301, supplier is responsible for compatibility of admixtures.
 - 2. Integral Waterproofing Admixture:
 - a. Permeability: Test reports indicating treated samples pressure tested to a 350 foot head of water (150 psi) showing no measurable leakage per COE CRD-C48-70 "Standard Test Method for Water Permeability of Concrete".
 - b. Photographs: Evidencing use of admixture taken with a Scanning Electron Microscope (SEM) showing crystalline formations within concrete.

1.05 QUALITY ASSURANCE

- A. Workmanship: Contractor is responsible for correction of concrete work which does not conform to specified requirements, including strength, tolerances and finishes. Correct deficient concrete as directed by Architect.
- B. Concrete Testing Service: Employ, at Contractor's expense, a testing laboratory acceptable to the Architect to perform material evaluation tests and to design concrete mixes.

1. Materials and installed work may require testing and retesting, as directed by Architect, at anytime during progress of work. Allow free access to material stockpiles and facilities. Tests, not specifically indicated to be done at Owner's expense, including retesting or rejected materials and installed work, shall be done at Contractor's expense.
 2. General Contractor will employ a testing laboratory for field quality control.
- C. Testing Agency Personnel: Certified per ACI CP-1, as ACI Concrete Field Testing Technician, Grade 1.
- D. Tests for Concrete Materials:
1. For normal weight concrete, test aggregates per ASTM C 33.
 2. For portland cement, sample cement and determine chemical and physical properties per ASTM C 150.
 3. Submit written reports to Architect for each material sampled, and tested prior to start of work.
 - a. Provide the project identification name and number, date of report, name of Contractor, name of concrete testing service, source of concrete aggregates, material manufacturer and brand name for manufacturing materials, values specified in the referenced specification for each material and test results.
 - b. Indicate whether or not material is acceptable for intended use.
 4. Certificates of material properties and compliance with specified requirements may be submitted in lieu of testing, when acceptable to Architect. Certificates of compliance must be signed by materials producer and Contractor.

1.06 PRE-INSTALLATION CONFERENCE

- A. Schedule a pre-installation conference at Cass Ave, Detroit MI-48201, minimum two weeks prior to start of concrete work containing waterproofing admixture, with the following parties in attendance.
1. Owner's Representative.
 2. Architect.
 3. Contractor.
 4. Concrete Supplier.
 5. Concrete Contractor.
 6. Waterproofing admixture supplier.
 7. Waterproofing admixture manufacturer's representative.
 8. Other interested parties.
- B. Review methods and procedures related to use of waterproofing admixture in cast-in-place concrete including, but not limited to, the following:
1. Inspect and discuss condition of subgrade and preparatory work performed by other trades.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 3. Review required inspecting, testing, and certifying procedures.
 4. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions.
- C. Contractor shall record discussion, including agreement or disagreement on significant matters. Furnish copies of report to all parties present within 5 days after meeting date.
1. If substantial disagreements exist at conclusion of meeting, determine how disagreements will be resolved, and set date and time to reconvene meeting.

1.07 MOCK-UPS

- A. General: Prior to installing cast-in-place concrete, construct mockups for selection of each finish required to demonstrate aesthetic effects as well as qualities of materials and execution.

1. Construct mock-ups minimum 30 days prior to start of Work using same personnel, materials, and techniques to be used for Project work.
 2. Construct mock-ups to demonstrate levels of the following finishes:
 - a. Light Abrasive Blast finish for exposed exterior vertical surfaces.
 - b. Stiff broom finish for Pool Deck.
- B. Build mock-ups to comply with the following requirements, using materials indicated for Work.
1. Locate mockups on-site in location indicated or, if not indicated, as directed by Architect.
 2. Size of mock-ups shall be minimum 5 feet by 5 feet.
 3. Construct 4 mock-ups for each finish required to demonstrate range available. Provide additional mock-ups, if requested by Architect.
 4. Notify Architect 7 days in advance of the dates and times when mock-ups will be constructed.
 5. Obtain Architect's approval of mock-ups and final selection of finish level before start of Work.
 6. Retain and maintain selected mock-ups during construction in an undisturbed condition as a standard for judging the completed Work.
 - a. When directed, demolish and remove mockups from Project site.

PART 2 PRODUCTS

2.01 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A 615, Grade 60, deformed.
1. Unfinished.
- B. Welded Wire Fabric: ASTM A 185, welded steel wire fabric supplied in flat sheets.
- C. Supports for Reinforcement: Bolsters, chairs, spacers, and other devices for spacing, supporting and fastening reinforcing bars and welded wire fabric in place. Use wire bar type supports complying with CRSI specifications.
1. For slabs-on-grade, use supports with sand plates or horizontal runners where base material will not support chair legs.
- D. Fiber Reinforcement: ASTM C 1116, Type III, engineered polypropylene fibers designed for secondary reinforcement of concrete fill at metal pan stairs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Forta Corp.; Forta CR.
 - b. Fibermesh, Inc.; Fibermesh.
 - c. Degussa Admixtures, Inc.; Grace Fibers.

2.02 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I.
1. Type III may be used for high early strength concrete.
 2. Use one brand of cement throughout the project, unless otherwise acceptable to Architect.
- B. Normal Weight Aggregates: ASTM C 33.
1. Fine Aggregates: Clean, sharp, natural sand free from loam, clay, lumps or other deleterious substances.
 - a. Dune sand, bank run sand and manufactured sand are not acceptable.
 2. Coarse Aggregate: Clean, uncoated, processed aggregate containing no clay, mud, loam, or foreign matter, as follows:
 - a. Crushed stone, processed from natural rock or stone.
 - b. Washed gravel, either natural or crushed. Use of pit or bank run gravel not permitted.

- c. Maximum Aggregate Size: Not larger than one-fifth of narrowest dimension between sides of forms, one-third of depth of slabs, nor three-fourths of minimum clear spacing between individual reinforcing bars or bundles of bars.
- C. Lightweight Aggregate: ASTM C 330.
- D. Fly Ash: ASTM C 618, Type F.
- F. Water: Potable.
- G. Colored Concrete Stain: Refer to Section 03 35 19 - Color Concrete Finishes.

2.03 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.
- B. Water-Reducing Admixture: ASTM C 494, Type A, and contain not more than 0.1% ions.
- C. High-Range Water-Reducing Admixture (Super Plasticizer): ASTM C 494, Type F or Type G and contain not more than 0.1% chloride ions.
- D. Water-Reducing, Non-Chloride Accelerator Admixture: ASTM C 494, Type E, and containing not more than 0.1% chloride ions.
- F. Water-Reducing, Retarding Admixture: ASTM C 494, Type D, and contain not more than 0.1% chloride ions.
- G. Certification: Provide admixture manufacturer's written certification that chloride ion content complies with specified requirements.
- H. Prohibited Admixtures: Calcium chloride thycyanates or admixtures containing more than 0.1% chloride ions are not permitted.

2.04 WATERSTOPS

- A. Waterstops: Provide flat, dumbbell type or centerbulb type waterstops at construction joints and other joints as indicated on Drawings. Size to suit joints.
 - 1. Rubber Waterstops: Corps of Engineers CRD-C 513.
 - 2. Polyvinyl Chloride Waterstops: Corps of Engineers CRD-C 572.
 - 3. Bentonite/Butyl Waterstops: CETCO; Waterstop RX.

2.05 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, approximately 9 oz. per square yard.
- B. Moisture-Retaining Cover: ASTM C 171, as follows:
 - 1. Waterproof paper.
 - 2. Polyethylene film.
 - 3. Polyethylene-coated burlap.

2.06 JOINT MATERIALS

- A. Preformed Expansion Joint Fillers: ASTM D 1751 and AASHTO M 213, resilient and non-extruding type pre-molded bituminous impregnated fiberboard units.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Knight-Celotex; Conflex Expansion Joint Filler
 - b. W.R. Meadows, Inc.; Fiber Expansion Joint Filler

2. Expansion Joint Filler Caps: Provide removable caps for all preformed expansion joint fillers. Provide caps by the following:
 - a. Bometals, Inc.; Expansion Board Caps
 - b. W. R. Meadows; Sealtight Snap-Cap
- B. Epoxy Control Joint Filler: Two component, 100 percent solids compound, with minimum Shore D Hardness of 50.
 1. Subject to compliance with requirements, provide products by the following:
 - a. Dayton Superior Corp.; Poxy-Fil (J-52)
 - b. L & M Construction Chemicals, Inc.; Epoflex SL

2.07 UNDERSLAB VAPOR RETARDER

- A. Vapor Barrier: Provide vapor barrier cover over prepared base material. Use polyethylene/polyolefin sheet per ASTM E 1745, Class A.
 1. Thickness: Not less than 10 mils per ACI 302.1R
 2. Water Vapor Transmission Rate: Maximum 0.01 perms tested per ASTM E154, Section 7 (based on ASTM E 96) or Test Method F1249. Refer to ASTM E1745 paragraph 7.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Stego Industries; Stego Wrap Vapor Barrier.
 - b. Raven Industries; Vapor Block 10.
 - c. W. R. Meadows; Perminator 10 Mil.
 - d. Inteplast; Barrier-Bac VB-250 (11 mil)
 4. Substitutions: See Section 01 25 00 - Substitution Procedures.
- B. Accessories: Provide manufacturer's recommended accessories as required to provide a complete vapor barrier, including but not limited to seam tape and vapor-proof mastic/sealant.
- C. Granular Base Course: Clean manufactured or natural sand; per ASTM D 448, Size 10, with 100 percent passing a No. 4 sieve and 10 to 30 percent passing a No. 100 sieve.

2.08 RELATED MATERIALS

- A. Dovetail Anchor Slots: Hot-dip galvanized sheet steel, not less than 0.366 inch thick (22 gage) with bent tab anchors. Fill slot with temporary filler or cover face opening to prevent intrusion of concrete or debris.
- B. Bonding Compound: ASTM C 1059, Type II, styrene Butadiene or acrylic base, rewettable type.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dayton Superior Corp.; Day-Chem Ad Bond (J-40)
 - b. Grace Construction Products; Daraweld C
 - c. L & M Construction Chemicals; Everbond
 - d. W. R. Meadows; Intralok
- C. Epoxy Adhesive: ASTM C 881, two component, high modulus, moisture tolerant, structural epoxy adhesive suitable for use on dry or damp surfaces. Provide material "Type", "Grade", and "Class" to suit project requirements.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dayton Superior Corp.; Resi-Bond (J-58)
 - b. W. R. Meadows; Rezi-Weld
 - c. Sika Chemical Corp.; Sikadur 32 Hi-Mod

2.09 PROPORTIONING AND DESIGN OF MIXES

- A. Prepare design mixes for each type and strength of concrete by either laboratory trial batch or field experience methods as specified in ACI 301 Article 3.9. If trial batch method used, use an

independent testing facility acceptable to Architect for preparing and reporting proposed mix designs.

1. Testing facility shall not be same as used for field quality control testing, unless otherwise acceptable to Architect.
 2. Limit fly ash to maximum 15 percent of cement content by weight.
- B. Submit written reports to Architect of each proposed mix for each class of concrete at least 15 days prior to start of work. Do not begin concrete productions until mixes have been reviewed and approved by Architect.
- C. Design mixes to provide normal weight concrete with the following properties and additives:
1. Footings and Foundations: 4000 psi 28-day compressive strength; W/C ratio, 0.50 maximum (non-air-entrained), 0.46 maximum (air entrained).
 2. Interior Slabs: 4000 psi 28-day compressive strength; W/C ratio, 0.50 maximum (non-air-entrained).
 3. Exterior Walls and Slabs: 4000 psi 28-day compressive strength; W/C ratio 0.40 (air entrained 6% plus or minus 1%).
 4. All Other Concrete: 4,000 psi 28-day compressive strength: W/C ratio, 0.50 maximum (non-air-entrained).
- D. Adjustment to Concrete Mixes: Mix design adjustments may be requested by Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant, at no additional cost to Owner and as accepted by Architect.
1. Laboratory test data for revised mix design and strength results must be submitted to and accepted by Architect before using in work.
- E. Water-Cement Ratio: Provide concrete with maximum water-cement (WC) ratios as specified.
- F. Slump Limits: Proportion and design mixes to result in concrete slump at point of placement as follows:
1. Ramps, slabs, and sloping surfaces: Not more than 3 inches.
 2. Reinforced Foundation Systems: Not less than 1" and not more than 3 inches.
 3. Concrete containing HRWR admixture (super plasticizer): Not more than 8 inches after addition of HRWR to site verified 2 to 3 inches slump concrete.
 4. Other concrete: Not more than 4 inches.

2.10 ADMIXTURE USE

- A. Use water-reducing admixture or high range water-reducing admixture (super plasticizer) in concrete as required for placement and workability.
- B. Use non-chloride accelerating admixture in concrete slabs placed at ambient temperatures below 50 degF (10 degC).
- C. Use high-range water-reducing admixture in pumped concrete, architectural concrete and concrete with water/cement ratios below 0.50.
- D. Use air-entraining admixture in exterior exposed concrete, unless otherwise indicated. Add air-entrained admixture at manufacturer's prescribed rate to result in concrete at point of placement having total air content with a tolerance of plus-or-minus 1% within following limits:
 1. Concrete structures and slabs exposed to freezing and thawing, de-icer chemicals, or subjected to hydraulic pressure.
 - a. Air Entrainment: 5.0%.
 2. Other Concrete (not exposed to freezing, thawing or hydraulic pressure): 2% to 4% air.
- E. Use admixtures for water-reducing and set-control in strict compliance with manufacturer's directions.

2.11 MIXES

- A. Ready-Mix Concrete: Comply with ASTM C 94 and ASTM C 1116, and as herein specified.
 - 1. Furnish Batch Ticket information.
 - 2. When air temperature is between 85 degF (30 degC) and 90 degF (32 degC), reduce mixing and delivery time from 1-1/2 hours to 75 minutes, and when air temperature is above 90 degF (32 degC), reduce mixing and delivery time to 60 minutes.

PART 3 EXECUTION

3.01 GENERAL

- A. Coordinate installation of joint materials and vapor retarders with placement of forms and reinforcing steel.

3.02 FORMS

- A. Design, erect, support, brace and maintain formwork, per ACI 301, to support vertical and lateral, static and dynamic loads that might be applied until such loads can be supported by concrete structure.
 - 1. Construct formwork as required so concrete members and structures are of correct size, shape, alignment, elevation and position. Maintain formwork construction tolerances per ACI 117 and ACI 347.
 - 2. Provide Class A tolerances for concrete exposed to view.
 - 3. Provide Class C tolerances for other concrete surfaces.
- B. Design formwork to be readily removable without impact, shock or damage to cast-in-place concrete surfaces and adjacent materials.
- C. Construct forms to sizes, shapes, lines and dimensions shown, and to obtain accurate alignment, location, grades, level and plumb work in finished structures. Use selected materials to obtain required finishes. Solidly butt joints and provide back-up at joints to prevent leakage of cement paste.
 - 1. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required in work.
 - 2. Single use spiral type forms are NOT ACCEPTABLE.
- D. Fabricate forms for easy removal without hammering or prying against concrete surface.
 - 1. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces
 - 2. Provide top forms for inclined surfaces where slope too steep to place concrete with bottom forms only
 - 3. Kerf wood inserts for forming keyways, reglets, recesses, and the like, to prevent swelling and for easy removal
- E. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Locate temporary openings in forms at inconspicuous locations.
- F. Chamfer exposed corners and edges as indicated, using wood, metal, PVC or rubber chamfer strips fabricated to produce uniform smooth lines and tight edge joints.
- G. Form Ties: Use specified type, sized as required to prevent form deflection, and to prevent spalling concrete surfaces upon removal.
- H. Provisions for Other Trades: Provide openings in concrete formwork to accommodate work of other trades. Determine size and location of openings, recesses and chases from trades providing such items. Accurately place and securely support work of other trades built into forms.

- I. **Cleaning and Tightening:** Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt or other debris just before placing concrete. Retighten forms and bracing after concrete placement as required to eliminate mortar leaks and maintain proper alignment.
- J. **Edge Forms and Screed Strips for Slabs:** Set edge forms of bulkheads and intermediate screed strips for slabs to obtain required elevations and contours in finished slab surface. Provide and secure units to support types of screed strips by use of strike-off templates or compacting type screeds.

3.03 PLACING REINFORCEMENT

- A. Comply with CRSI's recommended practice for "Placing Reinforcing Bars", for details and methods of reinforcement placement and supports, and as herein specified.
 - 1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder prior to placing concrete.
 - 2. Clean reinforcement of loose rust and mill scale, earth, ice and other materials which reduce or destroy bond with concrete.
- B. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as required.
- C. Place reinforcement to obtain at least minimum coverage for concrete protection per ACI 318.
 - 1. Arrange, space and securely tie bars and bar supports to hold reinforcement in position during concrete placement operations.
 - 2. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.
- D. Install welded wire fabric in as long lengths as practicable.
 - 1. Place on bar supports spaced to minimize sagging.
 - 2. Lap adjoining pieces at least one full mesh and lace splices with wire. Offset end laps in adjacent widths to prevent continuous laps in either direction.

3.04 VAPOR RETARDER INSTALLATION

- A. Place granular base course on slab sub-base material to minimum 4 inch thickness, unless otherwise indicated.
 - 1. Level and compact to tolerance of plus 0 inch, minus 3/4 inch.
- B. Following leveling and compacting of granular base for slabs on grade, place vapor retarder sheet with longest dimension parallel with direction of pour.
- C. Place vapor retarder directly on compacted sand cushion.
- D. Place, protect, and repair vapor retarder per ASTM E 1643.
 - 1. Lap joints 6" and seal with appropriate tape.
 - 2. Lap vapor barrier over footings or seal to foundation walls. Use manufacturer's approved methods for sealing to foundation and walls.
 - 3. Seal all penetrations with boots recommended by manufacturer.
 - 4. Place patches over damaged areas, overlapping damage minimum 6 inches. Tape complete perimeter of patches.

3.05 JOINTS

- A. **Construction Joints:** Locate and install construction joints as indicated, if not indicated, locate so not to impair strength and appearance of structure, as acceptable to Architect.
- B. Provide keyways at least 1-1/2" deep in construction joints in slabs; accepted bulkheads designed for this purpose may be used for slabs.

- C. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints.
- D. Waterstops: Provide waterstops in construction joints as indicated. Install waterstops to form continuous diaphragm in each joint. Support and protect exposed waterstops during progress of work. Field fabricate joints in waterstops in accordance with manufacturers instructions.
- E. Isolation Joints in Slabs-On-Ground: Construct isolation joints in slabs-on-ground at points of contact between slabs on ground and vertical surfaces, such as column pedestals, foundation walls, grade beams and elsewhere as indicated.
- F. Contraction (Control) Joints in Slabs-On-Ground: Construct contraction joints in slabs-on-ground to form panels of patterns as shown. Saw cut 1/8" to 1/4" wide x 1/4 of slab depth, unless otherwise indicated.
 - 1. Place sawcut joints as soon as possible, no later than 24 hours, after slab finishing is complete, and without dislodging aggregate.
 - 2. If joint pattern is not shown, provide joints not exceeding 15 feet in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).

3.06 INSTALLATION OF EMBEDDED ITEMS

- A. General: Set and build into work anchorage devices and other embedded items required for other work attached to, or supported by cast-in-place concrete. Use setting drawings, diagrams, instructions and direction provided by suppliers of items to be attached thereto.
- B. Install dovetail anchor slots to receive masonry anchors, in concrete structures as indicated on Drawings.

3.07 PREPARATION OF FORM SURFACES

- A. Clean re-used forms of concrete matrix residue, repair and patch as required to return forms to acceptable surface conditions.
- B. Coat contact surfaces of forms with an approved, nonresidual, low VOC, form-coating agent before reinforcement is placed.
 - 1. Coat steel forms with a non-staining, rust-preventative form oil or otherwise protect against rusting. Rust-stained steel formwork is not acceptable.
- C. Thin form-coating compounds only with thinning agent of type, and in amount, and under conditions of form-coating compound manufacturer's directions.
 - 1. Do not allow excess form-coating material to accumulate in forms or to come in contact with in-place concrete surfaces against which fresh concrete will be placed.
 - 2. Apply in compliance with manufacturer's instructions

3.08 CONCRETE PLACEMENT

- A. Preplacement Inspection: Before placing concrete, inspect and complete formwork installation of reinforcing steel, and items to be embedded or cast-in. Notify other crafts to permit installation of their work; cooperate with other trades in setting such work. Moisten wood forms immediately before placing concrete where form coatings are not used.
 - 1. Notify Architect when forms and reinforcing are in place and may be examined. Do not place concrete until authorized by Architect.
- B. Comply with ACI 304 "Recommended Practice for Measuring, Mixing, Transporting, and Placing Concrete", and as herein specified.

1. Deposit concrete continuously or in layers of such thickness that no concrete will be placed against concrete which has hardened sufficiently to cause formation of seams or planes of weakness.
 2. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete as nearly as practicable to its final location to avoid segregation.
 3. Protect adjacent finish materials against spatter during concrete slab placement.
- C. Placing Concrete in Forms: Deposit concrete in forms in horizontal layers not deeper than 24" and in manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.
1. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping. Use equipment and procedures for consolidation of concrete per ACI 309R.
 2. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than visible effectiveness of machine. Place vibrators to rapidly penetrate placed layer and at least 6" into preceding layer.
 3. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing segregation of mix.
- D. Placing Concrete Slabs: Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until the placing of a panel or section is completed.
1. Consolidate concrete during placing operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
 2. Bring slab surfaces to correct level with straightedge and strike off. Use bull floats or darbies to smooth surface, free of humps or hollows. Do not disturb slab surfaces prior to start of finishing operations.
 3. Maintaining reinforcing in proper position on chairs during concrete placement operations.
- E. Placing Concrete Footings: Once excavation is complete, protect bearing strata from being disturbed. If soil is susceptible to disturbance due to moisture conditions, place concrete immediately.
- F. Cold Weather Placing: Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperature, in compliance with ACI 306 and as herein specified.
1. When air temperature has fallen to or is expected to fall below 40 degF (4 degC), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 degF (10 degC), and not more than 80 degF (27 degC) at point of placement.
 2. Do not use frozen materials or material containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt and other materials containing anti-freeze agents or chemical accelerators, unless otherwise accepted in mix designs.
- G. Protections of Footings Against Freezing: Cover completed work at footing level with sufficient temporary or permanent cover, as required, to protect footings and adjacent subgrade from freezing; maintain as required.
- H. Hot Weather Placing: When hot weather conditions exist that would seriously impair quality and strength of concrete, place concrete in compliance with ACI 305 and as herein specified.
1. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90 degF (32 degC). Mixing water may be chilled, or chopped ice may be used to control temperature provided water equivalent of ice is calculated to total amount of mixing water. Use of liquid nitrogen to cool concrete is Contractor's option.
 2. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.

3. Fog spray forms, reinforcing steel and subgrade just before concrete is placed. Keep subgrade uniformly moist, without puddles or dry spots.
4. Use water-reducing retarding admixture (Type D) when required by high temperatures, low humidity, or other adverse placing conditions.

3.09 FINISH OF FORMED SURFACES

- A. Rough Form Finish: For formed concrete surfaces not exposed-to-view in finish work or covered by other construction, unless otherwise indicated.
 1. This is the as-cast concrete surface having texture imparted by form facing material used, with tie holes and defective areas repaired and patched and fins and other projections exceeding 1/4" in height rubbed down or chipped off.
- B. Smooth Form Finish: For formed concrete surfaces exposed-to-view, or that are to be covered with a coating material, or a covering material, applied directly to concrete, such as waterproofing, painting or similar system.
 1. This is as-cast concrete surface obtained with selected form facing material, arranged orderly and symmetrically with a minimum of seams.
 2. Repair and patch defective areas with fins or other projections completely removed and smoothed.
- C. Smooth Rubbed Finish: Provide smooth rubbed finish on exposed walls at areas scheduled/indicated, that have received smooth form finish treatment, not later than one day after form removal.
 1. Moisten concrete surfaces and rub with carborundum brick or other abrasive until a uniform color and texture is produced.
 2. Do not apply cement grout other than that created by the rubbing process.
- D. Related Unformed Surfaces: At unformed surfaces occurring adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

3.10 MONOLITHIC SLAB FINISHES

- A. Scratch Finish: Apply scratch finish to monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile, portland cement terrazzo, and other bonded, applied cementitious finish flooring material, and where indicated.
 1. After placing slabs, plane surfaces to tolerances of F(f) 15 (floor flatness) and F(l) 13 (floor levelness) measured per ASTM E 1155. Uniformly slope surfaces to drains. After leveling, roughen surface before final set, with stiff brushes, brooms, or rakes.
- B. Float Finish: Apply float finish to monolithic slab surfaces to receive trowel finish and other finishes specified; slab surfaces to be covered with waterproofing, membrane roofing, or sand-bed terrazzo, and where indicated.
 1. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating.
 2. Begin floating when surface water has disappeared or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both. Consolidate surface with power-driven floats, or by hand-floating if area is small or inaccessible to power units.
 3. Check and level surface plane to tolerance of F(f) 18 (floor flatness) and F(l) 15 ((floor levelness) measured per ASTM E 1155. Cut down high spots and fill low spots. Uniformly slope surfaces to drains.
 4. Immediately after leveling, refloat surface to a uniform, smooth, granular texture.

- C. Trowel Finish: Apply trowel finish to interior monolithic slab surfaces exposed to view, and slab surfaces to be covered with resilient flooring, carpet, ceramic tile, quarry tile, paint, or other thin film finish system, which have been float finish.
 - 1. After floating, begin first trowel finish operation using a power driven trowel.
 - 2. Begin final troweling when surface produces a ringing sound as trowel is moved over surface. Consolidate concrete surface by final hand-troweling operation, free of trowel marks, uniform in texture and appearance, and with surface leveled to tolerances F(f) 20 (floor flatness) and F(l) 17 (floor levelness) measured per ASTM E 1155.
 - 3. Grind smooth surface defects which would telegraph through applied floor covering system.
- D. Trowel and Fine Broom Finish: Where ceramic tile, porcelain tile, and quarry tile are to be installed with thin set mortar, apply trowel finish as specified, then immediately follow with slightly scarifying surface with fine brooming.
- E. Non-Slip Broom Finish: Apply non-slip broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

3.11 MISCELLANEOUS CONCRETE ITEMS

- A. Filling-In: Fill-in holes and openings left in concrete structures for passage of work by other trades, unless otherwise shown or directed after work of other trades is in place. Mix, place and cure concrete as herein specified, to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete work.
- B. Equipment Bases and Foundations: Provide machine and equipment bases and foundations, as shown on Drawings. Set anchor bolts for machines and equipment to template at correct elevations, complying with certified diagrams or templates of manufacturer furnishing machines and equipment.
- C. Steel Pan Stairs: Provide fiber reinforced concrete fill for steel pan stair treads, landings, and associated items. Cast in safety inserts and accessories as shown on Drawings. Screed, tamp, and finish concrete surfaces as scheduled.

3.12 CONCRETE CURING AND PROTECTION

- A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
 - 1. Start initial curing as soon as free water has disappeared from concrete surface after placing and finishing. Weather permitting; keep continuously moist for not less than 7 days.
 - 2. Begin final curing procedures immediately following initial curing and before concrete has dried. Continue final curing for at least 7 days per ACI 301 procedures. Avoid rapid drying at end of final curing period.
- B. Curing Methods: Perform curing of concrete by moist curing, by moisture-retaining cover curing, and by combination thereof, as herein specified.
 - 1. Provide moisture curing by following methods.
 - a. Keep concrete surface continuously wet by covering with water.
 - b. Continuous water-fog spray.
 - c. Covering concrete surface with specified absorptive cover, thoroughly saturating cover with water and keeping continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 4" lap over adjacent absorptive covers.
 - 2. Provide moisture-cover curing as follows:
 - a. Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3" and sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

- C. Curing Formed Surfaces: Cure formed concrete surfaces by moist curing with forms in place for full curing period or until forms are removed. If forms are removed, continue curing by methods specified above, as applicable.
- D. Curing Unformed Surfaces: Cure unformed surfaces and other flat surfaces by use of moisture-retaining cover, unless otherwise directed.
- E. Protect all concrete slabs indicated on Room Finish Schedule to be stained/sealed/colored concrete as follows:
 - 1. Sweep up all grit and debris immediately. Do NOT use oil based sweeping compounds.
 - 2. Use cleaner approved by sealer/hardener manufacturer for removing fine dust and grime on a daily basis. Avoid harsh chemicals.
 - 3. Report all spills to Contractor. Remove spills immediately.
 - 4. Do not eat or drink on slab.
 - 5. Remove isolated staining with specialty cleaner approved by sealer/hardener manufacturer.
 - 6. Get authorization from Contractor to operate equipment on the slab. Diaper all equipment and protect slab with absorbent drop cloth when working on slab.
 - a. Use non-marking tires on all equipment. Inspect tires and remove embedded debris that may scratch slab.
 - 7. Store and charge materials and equipment in designated areas only. Contractor shall select location to minimize soiling and damage to slab to remain exposed.
 - 8. Use temporary, breathable protective coverings as needed for access. Remove coverings immediately after work is complete.

3.13 REMOVAL OF FORMS

- A. Formwork not supporting weight of concrete may be removed after cumulatively curing at not less than 50 degF (10 degC) for 24 hours after placing concrete, provided concrete is sufficiently hard to not be damaged by form removal operations, and provided curing and protection operations are maintained.
- B. Formwork supporting weight of concrete may not be removed in less than 14 days and until concrete has attained at least 75 percent of design minimum compressive strength at 28 days. Determine potential compressive strength of in-place concrete by testing field-cured specimens representative of concrete location or members, or by use of nondestructive testing method acceptable to Architect.
- C. Form facing material may be removed 4 days after placement, only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

3.14 RE-USE OF FORMS

- A. Clean and repair surfaces of forms to be re-used in work. Apply new form coating compound as specified for new formwork.
 - 1. Split, frayed, delaminated or otherwise damaged form facing material is not acceptable for exposed surfaces.
- B. When forms are extended for successive concrete placement, thoroughly clean surfaces and remove fins and laitance, and tighten forms to close joints. Align and secure joint to avoid offsets. Do not use "patched" forms for exposed concrete surfaces, except as acceptable to Architect.

3.15 CONCRETE SURFACE REPAIRS

- A. Patching Defective Areas: Repair and patch defective areas with cement mortar immediately after removal of forms, when acceptable to Architect.
 - 1. Cut out honeycomb, rock pockets, voids over 1/4" in any dimension, and holes left by tie rods and bolts, down to solid concrete but, in no case to a depth of less than 1". Make edges of cuts perpendicular to concrete surface. Thoroughly clean, dampen with water and brush-coat area to be patched with specified bonding agent. Place patching mortar after bonding compound has dried.
 - 2. For exposed-to-view surfaces, blend white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with patching.
 - 3. Compact mortar in place and strike-off slightly higher than surrounding surface.
- B. Repair of Formed Surfaces: Remove and replace concrete having defective surfaces if defects cannot be repaired to satisfaction of Architect.
 - 1. Surface defects, as such, include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets; fins and other projections on the surface; and stains and other discoloration that can not be removed by cleaning.
 - 2. Flush out form tie holes, fill with dry pack mortar, or precast cement cone plugs secured in place with bonding agent.
 - 3. Repair concealed formed surfaces, where possible, that contain defects that affect the durability of concrete. If defects cannot be repaired, remove and replace concrete.
- C. Repair of Unformed Surfaces: Test unformed surfaces, such as monolithic slabs, for smoothness and verify surface plane to tolerances specified for each surface and finish. Correct low and high areas as herein specified. Test unformed surfaces sloped to drain for trueness of slope, in addition to smoothness using a template having required slope.
 - 1. Repair finished unformed surfaces that contain defects which affect durability of concrete. Surface defects, as such, include crazing, cracks in excess of 0.01" wide or which penetrate to reinforcement or completely through non-reinforced sections regardless of width, spalling, pop-outs, honeycomb, rock pockets and other objectionable conditions.
 - 2. Correct high areas in unformed surfaces by grinding, after concrete has cured at least 14 days.
 - 3. Correct low areas in unformed surfaces during, or immediately after completion of surface finishing operations by cutting out low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete. Proprietary patching compounds may be used when acceptable to Architect.
- D. Repair defective areas, except random cracks and single holes not exceeding 1" diameter, by cutting out and replacing with fresh concrete.
 - 1. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding compound.
 - 2. Mix patching concrete of same materials to provide concrete of same type or class as original concrete.
 - 3. Place, compact and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
- E. Repair isolated random cracks and single holes not over 1" in diameter by dry-pack method.
 - 1. Groove top of cracks and cut-out holes to sound concrete and clean of dust, dirt and loose particles. Dampen cleaned concrete surfaces and apply bonding compound.
 - 2. Mix dry-pack, consisting of one part portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing.
 - 3. Place dry pack after bonding compound has dried. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched area continuously moist for not less than 72 hours.

4. Perform structural repairs with prior approval of Architect for method and procedures, using specified epoxy adhesive and mortar.
- F. Repair methods not specified above may be used, subject to acceptance of Architect.

3.16 FIELD QUALITY CONTROL

- A. Contractor will employ a testing laboratory to perform tests and to submit test reports.
- B. Sampling and testing for quality control during placement of concrete may include the following, as directed by Architect.
1. Sampling Fresh Concrete: ASTM C 172, except modified for slump per ASTM C 94.
 - a. Slump: ASTM C 143; one test at point of discharge for each day's pour of each type of concrete; additional tests when concrete consistency seems to have changed.
 - b. Air Content: ASTM C 173, volumetric method or ASTM C 231 pressure method; one for each day's pour of each type of air-entering compound.
 - c. Concrete Temperature: ASTM C 1064, test hourly when air temperature is 40 degF (4 degC) and below, and when 80 degF (27 degC) and above; and each time a set of compression test specimens are made.
 - d. Compression Test Specimens: ASTM C 31; one set of 4 standard cylinders for each compressive strength test, unless otherwise directed. Mold and store cylinders for laboratory cured test specimens except when field-cure test specimens are required.
 - e. Compressive Strength Tests: ASTM C 39; one set for each day's pour exceeding 5 cubic yards plus additional sets for each 50 cubic yards over and above the first 25 cubic yards of each concrete class placed in any one day; one specimen tested at 7 days, two specimens tested at 28 days, and one specimen retained in reserve for later testing if required.
 2. When frequency of testing will provide less than 5 strength tests for a given class of concrete, conduct testing from at least 5 randomly selected batches or from each batch if fewer than 5 are used.
 3. When total quantity of a given class of concrete is less than 50 cubic yards, strength test may be waived by Architect if, in his judgement, adequate evidence of satisfactory strength is provided.
 4. When strength of field-cured cylinders is less than 85% of companion laboratory-cured cylinders, evaluate current operations and provide corrective procedures for protecting and curing the in-place concrete.
 5. Strength level of concrete will be considered satisfactory if averages of sets of three consecutive strength test results equal or exceed specified compressive strength, and no individual strength test result falls below specified compressive by more than 300 psi.
- C. Report test results in writing to the Architect, Contractor, and Contractor within 24 hours after tests.
1. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials; compressive breaking strength and type of break for both 7-day and 28-day tests.
- D. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted, but shall not be used as the sole basis for acceptance or rejection.
- E. Additional Tests: Testing service will make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained, as directed by the Architect.
1. Testing service may conduct tests to determine adequacy of concrete by cored cylinders per ASTM C 42, or by other methods as directed.
 2. Contractor shall pay for such tests conducted and any other additional testing as may be required, when unacceptable concrete is verified.

F. Measure floor and slab flatness and levelness per ASTM E 1155 within 24 hours of finishing.

3.17 PROTECTION

A. Protect all concrete slabs to receive exposed concrete finishes for petroleum staining, including but not limited to sealed/hardened, polished concrete or dyed and stained concrete floors

END OF SECTION

SECTION 033544 POLISHED CONCRETE FINISH

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Ground and polished finish applied to interior concrete slabs as exposed floor finish (CONC FIN-13).
- B. Related Sections:
 - 1. Section 033000 - Cast-In-Place Concrete: For concrete materials, mix design, placement, initial finishing and curing; and for other concrete finishes.

1.2 REFERENCES

- A. Concrete Polishing Association of America (CPAA): CPAA Recommendations for the Design, Specification and Placement of Concrete Floor Slabs for Polished Concrete
- B. National Floor Safety Institute (NFSI): NFSI Test Method 101-A Standard for Evaluating High-Traction Flooring Materials, Coatings, and Finishes.

1.3 PRE-INSTALLATION MEETING

- A. Pre-Installation Conference: Conduct conference at project site prior to installation of concrete slab to ensure complete understanding of Architect's design intent. Comply with requirements in Section 013100 - Project Management and Coordination.
 - 1. Attendees: General Contractor, Structural Engineer, Architect, Owner, concrete contractor, polishing contractor, ready-mix supplier, testing agency representative, decorative concrete product manufacturer's representatives.
 - 2. Suggested Agenda Items:
 - a. Substrate preparation requirements.
 - b. Polishing Schedule: Submit plan showing polished concrete surfaces and schedule of polishing operations for each area of polished concrete before start of polishing operations. Include locations of all joints, including construction joints.
 - c. Concrete slab mix, aggregates, cement, admixtures, reinforcement, curing agents/processes.
 - d. Review cold- and hot-weather concreting procedures, curing procedures, construction joints, concrete repair procedures, concrete finishing, and protection of concrete.
 - e. Review Contract Documents.
 - f. Subgrade: Coordinate preparation of subgrade required to be flat and level to ensure consistent concrete slab thickness.
 - g. Establish expectations for the surface appearance.
 - h. Protection: Confirm that the General Contractor, through coordination with other trades, will be responsible for the protection of the slab during construction to ensure that no contaminants such as (but not limited to) oil, grease, paint, adhesives, flux that will be present at the time of concrete polishing.
 - i. Flatness and Levelness Requirements
 - 1) Set a remedy for out of tolerance work if, Floor Flatness (F_F) and Floor Levelness (F_L) numbers do not meet specification/tolerances.
 - j. Required Slip-Resistance
 - k. Reflectivity/Gloss

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Mix Design: For concrete slab to receive polished finish. Coordinate with Section 033000.

- C. Samples for Initial Selection: Submit 4 samples, each 12-inches by 12-inches, demonstrating range of concrete mixes and colors, aggregate exposure and polished sheen.
- D. Samples for Verification: Submit 4 samples, each 12-inches by 12-inches, demonstrating range of concrete mixes and colors, aggregate exposure and polished sheen.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualifications Data: For Applicator, Product manufacturers, and Ready-Mix Supplier

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Manual: Submit installer's maintenance manual, including maintenance and cleaning instructions for polished concrete floor system.

1.7 QUALITY ASSURANCE

- A. Applicator Qualifications: Certified by concrete finish equipment and chemical manufacturer and capable of providing skilled workers who are thoroughly trained and experienced in the necessary craft.
 - 1. Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
 - 2. Installer trained by manufacturer and holding current certification for installation.
- B. Product Manufacturer Qualifications: Manufacturer capable of providing field service representation during construction and approving application method.
- C. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94 requirements for production facilities and equipment.
- D. Field Sample Panels: After approval of verification sample and before casting concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, approximately 48 by 48 inches minimum, to demonstrate the expected range of finish, color, and appearance variations.
 - 1. Locate panels as indicated or, if not indicated, as directed by Architect.
 - 2. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
 - 3. Demolish and remove field sample panels when directed.
- E. Mockups: Prior to start of permanent installation, mockup polished concrete CON FIN-14 using same products and processes to be used in final Work. Utilize same personnel as will perform permanent Work,
 - 1. Location: Apply polished concrete finish at slab below walk-in cooler location.
 - 2. Coordinate with other Division 03 Work to install stand-alone mock-ups to verify selections made under sample submittal and to demonstrate methods and workmanship proposed for the project.
 - 3. Concrete slab must cure for a minimum of 28 days prior to start of mockup.
 - 4. Minimum Mockup Size: 100 sq. ft..
 - 5. Mockup lighting conditions under which permanent Work will be viewed.
 - 6. Demonstrate the proposed range of material characteristics and quality of application, including the following:
 - a. Matching of approved samples.
 - b. Uniformity and degree of aggregate exposure.
 - c. Uniformity and level of sheen.
 - d. Uniformity and saturation of coloring products.
 - 7. Notify Architect seven days in advance of dates and times when mockups will be constructed. Architect to be present for polishing and coloring procedure.
 - 8. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 - b. Contractor to notify installer 7 days prior to pour to schedule finish of mock-up.

9. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer labels indicating brand name and directions for storage, mixing with other components and application.
- B. Storage: Store materials in clean, dry area indoors in accordance with manufacturer's instructions and keep materials from freezing.
- C. Handling: Protect materials during handling and application to prevent contamination or damage.

1.9 FIELD CONDITIONS

- A. Environmental Limitations:
 1. Concrete must be cured a minimum of 28 days or as directed by the manufacturer before application of finish can begin.
 2. Comply with manufacturer's written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation and other conditions affecting installation performance.
- B. Substrate Condition and Protection: Protect areas to receive polished concrete finish at all times during construction; prior to, during, and after polishing procedures. Prevent oils, dirt, metal, excessive water and other potentially damaging materials from affecting the finished concrete surface.

PART 2 - PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

- A. Compatibility: Provide products that are compatible with one another and substrates indicated under conditions of service and application, as demonstrated by manufacturer of chemicals based on testing and field experience.
- B. Source Limitations: System must consist of components produced by a single manufacturer, or as recommended by stain manufacturer, and as approved by the Architect.
 1. Provide materials that are consistent from the same lot and batch for the entire project.
 2. Concrete must be delivered from the same batch plant throughout the entire job.
 3. Calcium chloride additives should not be used with colored concrete.
- C. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design system or approved equivalent products comprising a system by a single source.
 1. Advanced Floor Products.
 2. The Bomanite Company.
 3. H&C Decorative Concrete Products (Subsidiary of Sherwin-Williams).
 4. L & M Construction Chemicals (Division of Laticrete).
 5. L.M. Scofield Company.
- D. (CONC FIN-13) Polished Concrete Finishing System: Complete system including surface strippers and primers, densifier and hardener, stain repellent and sealer.
 1. Coordinate with Section 033000 - Cast-In-Place Concrete for integral color pigment.
 2. Basis of Design System: RetroPlate Concrete Polishing System by Advanced Floor Products, Inc..
 - a. Contact: Brian Boie, ICS Midwest, 612.805.6293
 3. Densifier: Odorless, 0 VOC sodium-based concrete densifier, permanent sealing, densifying, and hardening compound for concrete.
 - a. Product: RetroPlate 99.

4. Stain Repellant and Sealer: Water-based penetrating stain repellent and sealer as recommended in writing by system Manufacturer.

2.2 AUXILLIARY MATERIALS

- A. Joint Filler: Rapid setting, 100% solids, flexible, two-part polyurea joint filler.
 1. Product: CreteFill Pro 75 Polyurea Joint Filler by Curecrete Distribution, Inc.; or approved equal.
 2. Color: Manufacturer's standard gray, or as determined by architect.
 3. Performance Criteria:
 - a. Tensile Strength: ASTM D412 - 740psi
 - b. Shore "A" Hardness: ASTM D2240 - 75-77
 - c. Elongation: ASTM D412 - 290%

PART 3 - EXECUTION

3.1 EXAMINATION

- A. With Applicator present, examine concrete slab for compliance with requirements, installation tolerances and other conditions affecting performance.
 1. Notify Architect of conditions that would adversely affect installation or subsequent use.
 2. Repair or otherwise correct unsatisfactory conditions.
 3. Proceed with polishing procedures only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.
- B. Slab Requirements: Verify that slabs receiving polished concrete floor finish are in compliance with requirements of Section 033000 - Cast-In-Place-Concrete, in accordance with written recommendations and agreements resulting from pre-installation conference; and as follows:
 1. Minimum Compressive Strength: 4,000 psi at 28 day strength.
 2. Curing Method: Minimum 8 day water cured or dissipating curing compound applied.
 3. Slab Finish: Bull-floated, smooth, pan-finished (smooth power-troweled) floor from edge to edge, with no rough areas.
 4. Flatness and Levelness: Tested within 8 hours after completion of the final troweling operation according to ASTM E1155 *Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers*:

	Specified Overall Value	Minimum Local Value
FF Floor Flatness	45	35
FL Floor Levelness	30	20

3.2 PREPARATION

- A. Slab Repair: Employ same repair methods as demonstrated on mockup and approved by Architect.
 1. Mix patching compound or grout material with dust created by grinding operations, manufacturer's tint, or sand to match color of adjacent concrete surfaces.
 2. Fill surface imperfections including, but not limited to, holes, surface damage, small and micro cracks, air holes, pop-outs, and voids with grout to eliminate micro pitting in finished work.
 3. Work compound and treatment until color differences between concrete surface and filled surface imperfections are not reasonably noticeable when viewed from 10 feet away under lighting conditions that will be present after construction.
- B. Cleaning: Remove dirt, dust, rust, debris, oil, grease, curing agents, bond breakers, paint, coatings, and other surface contaminants which could adversely affect installation of polished concrete floor system.
 1. Remove dirt, stains, measurement markings, oversprayed materials, tread marks and footprints that would remain visible in final Work.

2. Verify that floor and joints are dry and free of debris and excessive dirt, dust, clay, sand and gravel
- C. Adjacent Surfaces: Protect adjacent surfaces as required to prevent damage by the concrete polishing procedure.

3.3 APPLICATION, GENERAL

- A. Apply polished concrete finish system to accepted and approved slab surfaces using methods required to match approved Mockup.
- B. Control and dispose of waste products produced by grinding and polishing operations.
- C. Dye: Apply penetrating dye for polished concrete in polishing sequence and according to manufacturer's written instructions.
- D. Densifier: Apply penetrating densifier and hardener in polishing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.
- E. Other Treatments: Apply sealer, stain protection, or other final treatments, if applicable.
- F. Neutralize and clean polished floor surfaces.

3.4 GRINDING

- A. Aggregate Exposure: Machine grind floor surfaces level, smooth and to depth required to reveal aggregate in accordance with CPAA class specified, and as selected by Architect to match approved mockup.
 1. Class B, Fine Aggregate (Salt-and-Pepper): Remove not more than 1/16 inch of concrete surface by grinding and polishing resulting in majority of exposure displaying fine aggregate with no, or small amount of, medium aggregate at random locations.
 - a. Approximate average size of exposed aggregate: 1/16-inch.

3.5 POLISHING

- A. Finished Gloss Level: In accordance with CPAA, and as selected by Architect to match approved mockup.
 1. Level 3: High-Gloss, Semi-Polished Appearance.
 - a. Reflective Clarity: 65.
 - b. Reflective Sheen: 35.
 2. Level 4: Very-High-Gloss, Highly-Polished Appearance.
 - a. Reflective Clarity: 85.
 - b. Reflective Sheen: 50.
- B. Measurement: Test surfaces prior to application of sealers.
 1. Reflective Clarity (Distinctness-Of-Image): ASTM D5767 - Standard Test Methods for Instrumental Measurement of Distinctness-of-Image Gloss of Coating Surfaces; when viewed 5 feet above and perpendicular to a surface, the degree of sharpness and crispness of the reflection of the overhead objects.
 2. Reflective Sheen: ASTM D523 Standard Test Method for Specular Gloss; when viewed at 20 feet from and at an angle to a surface, the degree of gloss reflected from the surface.

3.6 JOINT TREATMENT

- A. Fill construction joints and cracks with filler products as specified in accordance with manufacturer's instructions colored to match with concrete color as specified by architect.

3.7 FIELD QUALITY CONTROL

- A. Inspect completed polished concrete floor system with Owner, Contractor, Architect, and Installer.
- B. Slip Resistance: Achieve following coefficient of friction by field quality control when tested in compliance with ASTM C1028:

1. ANSI B101.1 Static Coefficient of Friction: Minimum of 0.50 for level floor surfaces.
- C. Review procedures with Architect to correct unacceptable areas of completed polished concrete floor system.

3.8 INSTALLED WORK

- A. Repair: Repair damaged areas of completed polished concrete floor system to satisfaction of Architect.
- B. Clean: Immediately remove mortar splatter, spilled liquids, oil, grease, paint, coatings, and other surface contaminants which could adversely affect completed polished concrete floor system.
- C. Protection: Protect finished Work during remainder of construction.

END OF SECTION

SECTION 034500 ARCHITECTURAL PRECAST CONCRETE

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Precast architectural concrete units (APC-1).
 - 2. Supports, anchors, and attachments.

1.2 COORDINATION

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Design Mixes: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings:
 - 1. Coordinated Shop Drawings: Prior to submitting shop drawings, coordinate with shop drawings for glazed curtain wall. Verify rough openings and connections and indicate confirmed dimensions and details.
 - 2. Indicate separate face and backup mix locations and thicknesses, if applicable.
 - 3. Indicate welded connections by AWS standard symbols. Detail loose and cast-in hardware, inserts, connections, and joints, including accessories.
 - 4. Indicate locations and details of anchorage devices to be embedded in other construction.
- D. (APC-1) Finish Sample: For each type of finish indicated on exposed surfaces of precast structural concrete units with architectural finish, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 26.5 by 48 inches.
 - 1. Where other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- B. Welding certificates.
- C. Source quality-control test reports.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm that complies with the following requirements and is experienced in manufacturing precast architectural concrete units similar to those indicated for this Project and with a record of successful in-service performance.
 - 1. Assumes responsibility for engineering precast architectural concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
 - 2. Participates in PCI's Plant Certification program and is designated a PCI-certified plant for Group A, Category A1--Architectural Cladding and Load Bearing Units.

- B. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 to conduct the testing indicated, as documented according to ASTM E 548.
- C. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- D. Installer Qualifications: An experienced installer who has completed precast architectural concrete work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance
- E. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel"; and AWS D1.4, "Structural Welding Code--Reinforcing Steel."
- F. Mockups: Coordinate with Section 014339 - Mockups for integrated exterior wall mockup.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect in accordance with manufacturer's recommendations.
- B. Handle precast members to position, consistent with their shape and design. Lift and support only from support points.
 - 1. Lifting or Handling Equipment: Capable of maintaining units during manufacture, storage, transportation, erection, and in position for fastening.
- C. Protect edges of members to prevent staining, chipping, or spalling of concrete.

PART 2 PRODUCTS

2.1 ARCHITECTURAL PRECAST CONCRETE

- A. Fabricators:
 - 1. <Insert Regional Fabricators>
 - 2. American Artstone.
 - 3. Gage Brothers Concrete Products, Inc..
 - 4. Hanson Structural Precast Midwest, Inc., Maple Grove, MN.
 - 5. IPC, Inc., Iowa Falls, IA.
 - 6. Wells Concrete Products Co., Wells, MN.
- B. (APC-1) Architectural Precast Concrete Units: Surface finish and dark integral color matching Architect's sample.
 - 1. Basis of Design: 13-11 MAE (Acid Etched) with dark aggregate by American Artstone.

2.2 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type III, gray or white, of same type, brand, and source.
- B. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S.
 - 1. Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining.
 - a. Gradation: To match design reference sample.
 - 2. Fine Aggregates: Selected, natural or manufactured sand of the same material as coarse aggregate, unless otherwise approved by Architect.
 - a. Provide aggregates that are acceptable for acid wash finish, without discoloring or dissolving.
- C. Coloring Admixture: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures, temperature stable, nonfading, and alkali resistant.

- D. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.

2.3 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A 615, Grade 60, deformed.
- B. Plain-Steel Welded Wire Fabric: ASTM A 185, fabricated from galvanized steel wire into flat sheets.
- C. Supports: Manufacturer's bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire fabric in place according to CRSI's "Manual of Standard Practice," PCI MNL 117, and as follows:
 - 1. For uncoated reinforcement, use CRSI Class 1 plastic-protected bar supports.

2.4 ANCHORS AND FASTENERS

- A. (APCA-1) Fabricate anchors from stainless steel, ASTM A 240 or ASTM A 666, Type 304; temper as required to support loads imposed without exceeding allowable design stresses. Fabricate dowels and pins for anchors from stainless steel, ASTM A 276, Type 304.

2.5 CONCRETE MIXES

- A. Prepare design mixes for each type of concrete required.
 - 1. Limit use of fly ash and silica fume to not exceed, in aggregate, 25 percent of portland cement by weight.
- B. Design mixes may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast architectural concrete fabricator's option.
- C. Limit water-soluble chloride ions to the maximum percentage by weight of cement permitted by ACI 318.
- D. Normal-Weight Concrete Face and Backup Mixes: Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 6000 psi.
 - 2. Maximum Water-Cementitious Materials Ratio: 0.45.
- E. Water absorption: Not to exceed 5 percent to 6 percent by weight; except between 3 percent to 4 percent for sloping surfaces (sills), for improved weathering staining resistance, tested according to PCI MNL 117.
- F. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- G. When included in design mixes, add other admixtures to concrete mixes according to manufacturer's written instructions.

2.6 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
- B. Furnish loose steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast architectural concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in precast architectural concrete units to receive windows, cramps, dowels, reglets, waterstops, flashings, and other similar work as indicated.

- D. Cast-in openings larger than 10 inches in any dimension.
- E. Reinforcement: Comply with recommendations in CRSI's "Manual of Standard Practice" and PCI MNL 117 for fabricating, placing, and supporting reinforcement.
 - 1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete.
 - 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 - 3. Place reinforcement to maintain at least 3/4-inch minimum coverage. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 - 4. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
- F. Reinforce precast architectural concrete units to resist handling, transportation, and erection stresses.
- G. Mix concrete according to PCI MNL 117 and requirements in this Section. After concrete batching, no additional water may be added.
- H. Place face mix to a minimum thickness of 3 inches.
- I. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units. Comply with requirements in PCI MNL 117 for measuring, mixing, transporting, and placing concrete.
 - 1. Place backup concrete to ensure bond with face mix concrete.
- J. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items. Use equipment and procedures complying with PCI MNL 117.
- K. Identify pickup points of precast architectural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each precast architectural concrete unit on a surface that will not show in finished structure.
- L. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture.
- M. Discard precast architectural concrete units that are warped, cracked, broken, spalled, stained, or otherwise defective unless repairs are approved by Architect.
- N. Fabricate precast architectural concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.
- O. Engraved Precast Concrete Cornerstone: Fabricate and install custom engraved panels as shown, with all components and accessories for complete installed assembly.
 - 1. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into panel surface indicated to produce precisely formed copy, incised to uniform depth.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Do not install precast concrete units until supporting concrete has attained minimum design compressive strength.

- C. Provide for erection procedures and induced loads during erection. Maintain temporary bracing in place until final support is provided.

3.2 INSTALLATION

- A. Install clips, hangers, and other accessories required for connecting precast architectural concrete units to supporting members and backup materials.
- B. Install precast architectural concrete according to reviewed shop drawings and manufacturer instructions. Provide temporary supports and bracing as required to maintain position, stability, and alignment as units are being permanently connected.
 - 1. Install bearing pads as precast concrete units are being erected.
 - 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 - 3. Remove projecting hoisting devices and use sand-cement grout to fill voids within recessed hoisting devices flush with surface of concrete.
- C. Anchor precast architectural concrete units in position by bolting, welding, grouting, or as otherwise indicated. Remove temporary shims, wedges, and spacers as soon as possible after anchoring and grouting are completed.
- D. Welding: Perform welding in compliance with AWS D1.1 and AWS D1.4, with qualified welders.
 - 1. Protect precast architectural concrete units and bearing pads from damage by field welding or cutting operations and provide noncombustible shields as required.
 - 2. Repair damaged steel surfaces by cleaning and repriming damaged painted surfaces.
- E. At bolted connections, use lock washers or other acceptable means to prevent loosening of nuts.
- F. Grouting Connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.3 FIELD QUALITY CONTROL

- A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.
- B. Field welds and connections using high-strength bolts will be subject to tests and inspections.
- C. Testing agency will report test results promptly and in writing to Contractor and Architect.
- D. Remove and replace work that does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.4 INSTALLED WORK

- A. Protection: Protect members from damage, excessive soiling at grade, run-off from roofs and other construction operations which could spray or flow on to precast panels.
 - 1. Provide noncombustible shields during welding operations.
- B. Damaged Work:
 - 1. If permitted by Architect, repair exposed exterior surfaces of precast architectural concrete units to match color, texture, and uniformity of surrounding precast architectural concrete.
 - 2. Remove and replace damaged precast architectural concrete units if repairs are not allowed or if they do not comply with architect's requirements.

- C. Cleaning: Clean exposed surfaces of precast concrete units after erection to remove weld marks, other markings, dirt, and stains.
1. Wash and rinse according to precast concrete fabricator's written recommendations. Protect other work from staining or damage due to cleaning operations.
 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes.

END OF SECTION

SECTION 042000 UNIT MASONRY

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Clay face brick (FBR).
2. Mortar and Masonry Grout:
 - a. Testing of mortar and masonry grout.
 - b. Admixtures for mortar and masonry grout.
3. Reinforcement and Anchoring Materials:
 - a. Steel reinforcement bars.
 - b. Masonry-joint reinforcement.
 - c. Brick ties and anchors (BT).
4. Drainage:
 - a. Through-wall flashing (TWF)
 - b. Weep systems (WPS).
5. Miscellaneous masonry accessories (MA).

B. Related Requirements:

1. Section 014533 - Structural Testing and Special Inspections.
2. Section 033000 - Cast-In-Place Concrete: For installation of inserts that are to be embedded in concrete or masonry, flashing reglets, and similar items to be used by Installer for anchoring, supporting, and flashing.
3. Section 051200 - Structural Steel Framing items to be built into masonry work.
4. Section 055000 - Metal Fabrications: Steel lintels, shelf angles, installation of metal fabrications including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
5. Section 076200 - Sheet Metal Flashing and Trim: Reglets to be built in masonry work.
6. Section 079000 - Joint Protection: Sealants for expansion and contraction joints.

1.2 ACTION SUBMITTALS

A. Product Data: Product data for each type of masonry unit and accessory, including manufacturer's installation recommendations.

B. Shop Drawings:

1. Masonry Units: Show sizes, profiles, coursing, locations of special shapes.
 - a. Include building elevations showing layout of units and locations of joints and anchors.
2. Show locations, types and quantities of bolsters, spacers, chairs, support bars and other accessories.
3. Expansion joint layout for masonry veneer.
4. Mockup shop drawings.

C. Samples:

1. Face Brick: Submit samples demonstrating each color and blended color range.
2. Mortar Samples: For each color of mortar required. Label Samples to indicate types and amounts of pigments used. Make Samples using same sand and mortar ingredients to be used on Project.
3. Sanded Sealant Joint Samples: Coordinate with Section 079000 - Joint Sealants for sanded sealant joints required to match mortar joints.
4. Masonry Accessories: Submit samples of each type of embedded accessory.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

- B. Material Certificates: For each type and size of the following:
1. Masonry Units:
 - a. Include data on material properties and material test reports substantiating compliance with requirements.
 - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C 67.
 - d. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
 2. Cementitious materials. Include name of manufacturer, brand name, and type.
 3. Mortar admixtures.
 4. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 5. Grout mixes. Include description of type and proportions of ingredients.
 6. Reinforcement bars.
 7. Joint reinforcement.
 8. Anchors, ties, and metal accessories.
- C. Mix Designs and Preconstruction Test Data: Include description of type and proportions of ingredients and state building components in which each will be used.
1. Mortar: Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109 for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
 2. Grout: Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.
 - a. Use proportion specification of ASTM C476 as a minimum criterion and design for minimum compressive strength of 3,000psi when tested in accordance with ASTM C1019.
 3. Masonry Unit Statement of Compressive Strength: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

1.4 QUALITY ASSURANCE

- A. Pre-Installation Conference: Conduct conference at Project site to comply with requirements in Section 013100 - Project Management and Coordination.
- B. Installer Qualifications: Engage an experienced masonry installer to perform work of this Section. Firm shall have completed work similar in material, design, and extent to that indicated for this Project with a record of successful in-service performance.
- C. Sample Panel Mockups: Build sample panel for each type of exposed unit masonry, approximately 48 inches long by 96 inches high, to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution. Include the following in sample panel:
1. Mortar joints representing each mortar color.
 2. Obtain Architect's acceptance of sample panels for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Architect in writing.
- D. Integrated Mockup: Prior to installation of unit masonry work, coordinate with Work of other Sections and construct integrated mockup in accordance with Section 014339 - Mockups, using materials and methods required for final Work, to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Mockup Pre-Installation Conference: Before beginning mock-up construction and installation, conduct pre-installation conference with, installer, Architect, Owner and other interested parties to review procedures, schedules, and coordination of curtain wall installation with other elements of Work.
 2. Build mockups of typical exterior wall area, including the following:

- a. Facebrick.
 - b. Trim units.
 - c. Mortar joints, demonstrating each type of mortar color.
 - d. Sanded sealant joints.
 - e. Window opening with moisture barrier terminations shown.
 - f. Back-up wall, including metal studs, sheathing, veneer anchors, flashing, and weep holes in veneer wall mockup.
3. Obtain Architect's acceptance of visual qualities of mock-up before start of masonry work. Provide separate mock-up panel for each type of exposed unit masonry work.
- a. Approval of mockups is for color, texture, and blending of face brick; relationship of mortar and sealant colors to brick colors; tooling of joints; and aesthetic qualities of workmanship.
 - b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - c. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
 - 1) Protect accepted mockups from the elements with weather-resistant membrane.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
- B. Storage:
1. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
 2. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
 3. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
 4. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.6 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
1. Extend cover a minimum of 48 inches down both sides and hold cover securely in place.
 2. Maintain protective boards at exposed external corners which may be damaged by construction activities. Provide such protection without damaging completed work.
 3. Provide temporary bracing during erection of concrete block work. Maintain in place until building structure provides permanent bracing.
 4. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least 3 days after building masonry walls or columns.
 5. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
 - a. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 - b. Protect sills, ledges, and projections from mortar droppings.
 - c. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - d. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

- B. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. When ambient temperature is below 40 deg F comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- C. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
- D. Keep cavities and joints clear of mortar and trash.

PART 2 PRODUCTS

2.1 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.
- B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source for each different product required for each continuous surface or visually related surfaces.
- C. Appearance Requirements of Exposed Masonry: Provide masonry units of uniform color and texture matching the range represented by Architect's sample.
 - 1. Architect reserves the right to reject unit masonry manufacturer if, in Architect's opinion, unit quality, color or texture is unacceptable with design intent.
 - 2. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample for color, finish, and other aesthetic characteristics, as determined by the Architect.
 - a. Architect's decision is final on whether or not a proposed product matches.
 - 3. Appearance requirements may be waived by Architect for concealed units.
- D. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work.
- E. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated. Where required by Authorities Having Jurisdiction, units shall be listed and labeled by a qualified testing agency acceptable to Authorities Having Jurisdiction.

2.2 FACE BRICK UNITS

- A. (FBR) Face Brick: ASTM C216, Grade SW, Type FBS
 - 1. Basis of Design: Interstate Brick.
- B. Schedule:
 - 1. FBR-1: Lighter, limestone color
 - 2. FBR-2: Darker, gray color, ironspot
 - 3. FBR-3: Same blend as FBR-1, special unit size
 - 4. Bond: As shown..
- C. Special Shapes: Provide shapes indicated on Drawings and for special applications , including; where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels; where shapes produced by sawing would result in sawed surfaces being exposed to view. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.

2.3 LINTELS

- A. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Section 033000 - Cast-in-Place Concrete, and with reinforcing bars indicated.
- B. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.
- C. Built-Up Structural Steel Lintel: Refer to Section 051200 - Structural Steel Framing.
- D. Loose Steel Lintels: Refer to Section 055000 - Metal Fabrications.

2.4 MORTAR MATERIALS

- A. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.
- B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction.
 - 1. Provide natural color or white cement as required to produce mortar color indicated.
 - 2. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.
 - 3. non-staining
 - 4. without air-entrainment.
 - 5. Use same brand of cement, lime and aggregate throughout project to insure uniform mortar colors.
- C. Hydrated Lime: ASTM C 207, Type S without air-entrainment.
- D. Mortar Cement: ASTM C 1329.
- E. Masonry Cement: Not allowed.
- F. Colored Cement Mortar Products: Packaged, pre-mixed blend made from portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 - 1. Color: As selected from manufacturer's full color range.
 - 2. Formulate blend as required to produce color indicated.
 - 3. Pigments shall not exceed 10 percent of portland cement by weight.
- G. Aggregate for Mortar (Sand): ASTM C 144, and as follows:
 - 1. For joints less than 1/4 inch use aggregate graded with 100 percent passing No. 16 sieve.
 - 2. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 - 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
 - 4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- H. Water: Potable.

2.5 REINFORCEMENT

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Heckman Building Products.
 - 2. Hohmann and Barnard Incorporated.
 - 3. AA Wire Products Co.
- B. Uncoated-Steel Reinforcement Bars: ASTM A 615 or ASTM A 996, Grade 60.
- C. Epoxy Coated Reinforcement Bars: ASTM A 775 or ASTM A 934, epoxy coated, with less than 2 percent damaged coating in each 12-inch bar length.

1. Epoxy-Coated Supports and Tie Wire: For epoxy-coated reinforcement, use epoxy coated or other dielectric-polymer-coated wire bar supports.
 2. Epoxy-Coated Steel Reinforcement Touch-up Coating: 3M Scotchkote 213PC or liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement and complying with ASTM A 775.
- D. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
- E. Wire Bar Type Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place; manufactured according to CRSI's "Manual of Standard Practice".
- F. Horizontal Masonry-Joint Reinforcement: ASTM A 951.
1. Interior Walls: Mill- or Hot-dip galvanized carbon steel.
 2. Exterior Walls: Hot-dip galvanized carbon steel.
 3. Wire Size for Side Rods and Cross Rods: 0.148-inch diameter, minimum.
 4. Wire Size for Veneer Ties: 0.187-inch diameter, minimum.
 5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
 6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.
 7. (HZRE-1) Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods. Continuous wire joint reinforcing with 9 gauge side rods and crossrods. Use prefabricated corners and tees at wall intersections.
 - a. Exterior: Hot dipped galvanized wire ASTM A 153, Class B-2 (1.5 oz. PSF).
 - b. Interior: Mill galvanized wire ASTM A641. Class 1 (0.40 minimum zinc coating).

2.6 ANCHORS AND FASTENERS

- A. Materials:
1. Stainless-Steel Wire: ASTM A 580, Type 304.
 2. Stainless-Steel Sheet: ASTM A 240, Type 304.
- B. Size: Sufficient to extend at least halfway, but not less than 1-1/2 inches, through stone masonry and with at least 5/8-inch cover on outside face.
- C. Wire Veneer Anchors: Wire ties formed from W1.7 or 0.148-inch-diameter, stainless-steel wire.
- D. Stainless-Steel Drill Screws for Steel Stud Backup: Proprietary fastener consisting of carbon-steel drill point and 300 Series stainless-steel shank, complying with ASTM C 954 except manufactured with hex washer head and neoprene washer, No. 10 by length required to penetrate steel stud flange with not less than three exposed threads.
- E. Stainless Steel Tapping Screws for CMU Backup: Self-tapping screws with specially designed threads for anchoring into masonry and concrete, with hex washer head 1/4-inch diameter by as required to embed 1-1/2-inch into substrate material.
- F. Adjustable, Screw-Attached Veneer Anchors: Units consisting of a wire tie section and a metal anchor section that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over concrete sheathing to metal studs, and as follows:
1. Manufacturers and Products:
 - a. Hohmann & Barnard, Inc.; X-Seal Anchor or similar product approved by Architect.
 - b. Wire-Bond.
- G. (BT-1) Brick Veneer Anchors and Ties: Stainless steel.
1. Anchors for Concrete Backup Wall: 2-Seal Thermal Concrete Wing Nut Anchor by Hohmann & Barnard, Inc..
 2. Anchor for Steel Stud Backup Wall: 2-Seal Thermal Wing Nut Anchor by Hohmann & Barnard, Inc..
 3. Tie for Concrete Backup Wall: Thermal Concrete 2-Seal Tie by Hohmann & Barnard, Inc..
 4. Tie for Steel Stud Backup Wall: Thermal 2-Seal Tie by Hohmann & Barnard, Inc..

2.7 FLASHING AND WEEP SYSTEMS

- A. (TWF-1) Through-Wall Flexible Membrane Flashing: Self-adhering elastomeric thermoplastic composite flashing product, 40 mil thick, consisting of a polyester-reinforced ethylene interpolymer alloy, and with pressure sensitive clear adhesive. Provide type that is compatible with MB as specified in Section 072700 - Air & Moisture Barrier.
1. Products and Manufacturers:
 - a. Thru-Wall Flashing by DuPont
 - b. Flex-Flash by Hohmann & Barnard, Inc..
 - c. Hyload Cloaked Flashing System by Hyload, Inc...
 2. Termination Bars: Stainless steel bar predrilled at 8 inches on center
 - a. Size: 1/8 inch thick by 1-1/2 inches high by 8 feet long
 - b. Fasteners: Stainless steel
 - c. Product and Manufacturer: D/A 1510 by Dur-O-Wal
 3. Factory-formed extruded drip edge, 45 mils: Flex-Flash Drip Edge by Hohmann and Barnard, Inc..
 4. Adhesives and Primers for Flashings: Flashing manufacturer's standard products or products recommended by the flashing manufacturer for bonding flashing sheets to each other and to substrates.
 5. Sealant: Flashing manufacturer's standard products or products recommended by the flashing manufacturer to seal seam edges and terminations.
- B. (WPS-1) Rope Wick Weep System: Cavity drainage fabric with cotton rope wicks at head joints for use in cavity wall construction.
1. Cavity Drainage Fabric: Non-woven polyethylene mesh, 2 inch thick (more than one layer may be needed to achieve 2 inch depth), to prevent mortar droppings from blocking weep holes.
 - a. Acceptable Product and Manufacturer: Mortar Net by Mortar Net Incorporated.
 2. Rope Wicks: 100 percent cotton fiber stranded rope, 3/8 inch diameter, 24 inches long
- C. (WPS-2) Cellular Plastic Weep/Vent: One-piece, extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch less than depth of masonry unit, in color selected from manufacturer's complete range.
1. Manufacturers and Products:
 - a. Advanced Building Products Inc.; Mortar Maze weep vent.
 - b. Blok-Lok Limited; Cell-Vent.
 - c. Dayton Superior Corporation, Dur-O-Wal Division; Cell Vents.
 - d. Heckmann Building Products Inc.; No. 85 Cell Vent.
 - e. Hohmann & Barnard, Inc.; Quadro-Vent.
 - f. Wire-Bond; Cell Vent.
- D. (WPS-3) Mesh Cavity Drainage: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
1. Manufacturers and Products:
 - a. Advanced Building Products Inc.; Mortar Break.
 - b. CavClear/Archovations, Inc.; CavClear Masonry Mat.
 - c. Dur-O-Wal, a Dayton Superior Company; Polytite MortarStop.
 - d. Mortar Net USA, Ltd.; Mortar Net.

2.8 MASONRY ACCESSORIES

- A. (MA-1) Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
1. Product and Manufacturer: RS Series Rubber Control Joints by Hohmann and Barnard, Inc..
- B. (MA-2) Deflection Material: Pre-molded compressible filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene or urethane.
1. Product and Manufacturer: NS Closed Cell Neoprene Sponge by Hohmann and Barnard, Inc..

- C. (MA-3) Column Wrap: Open cell polyurethane foam, 1/4 inch thick.
- D. (MA-4) Control Joint Bond Breaker:
 - 1. Type: 6 mil thick polyethylene film.
 - 2. Type: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).
- E. Masonry Cleaner: Use masonry cleaner to clean all exposed masonry work. Type of cleaner as recommended by manufacturer for each type of masonry material.
 - 1. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
 - a. Basis of Design: Sure Klean masonry cleaner by PROSOCO Incorporated.
 - b. Other Acceptable Manufacturers:
 - 1) American Building Restoration Products, Inc., Franklin, WI.
 - 2) L&M Chemicals,
 - 3) Diedrich Technologies, Inc., Oak Creek, WI.
- F. Clay Face Brick Sealer: Silane/Siloxane-Blend, Penetrating Water Repellent: Clear, silane and siloxane blend with 400 g/L or less of VOCs.
 - 1. Low odor and alkaline stable.
 - 2. Basis of Design: Sure Klean Weather Seal Siloxane PD by Prosoco Inc..

2.9 MORTAR MIXES

- A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.
 - 1. Use portland cement-lime mortar, unless otherwise indicated.
 - 2. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, or other admixtures unless otherwise indicated.
 - 3. Do not use anti-freeze compounds to lower freezing point of mortar.
 - 4. Do not use calcium chloride in mortar or grout.
 - 5. Use mortar ingredients that will not produce efflorescence.
 - 6. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.
 - 7. Colored Mortar:
 - a. Pigments shall not exceed 10 percent of portland cement by weight.
 - b. Mix to match Architect's sample.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. Mortar Mixes:
 - 1. Mortar for Non-Load Bearing Unit Masonry: ASTM C270, type as scheduled using Proportion or Property specification.
 - 2. Mortar for Loadbearing Unit Masonry (indicated on structural drawings): ASTM C270, type as scheduled using Property specification.
- D. Schedule of Mortar Types: Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry:
 - 1. Exterior, above-grade, face brick veneer, non-load-bearing walls: Type S.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
 - 2. Verify that foundations are within tolerances specified.
 - 3. Verify that reinforcing dowels are properly placed.
 - 4. Verify that substrates are free of substances that impair mortar bond.
- B. Examine rough-in and built-in construction for piping systems to verify actual locations of piping connections. Verify that items built-in by other trades are properly located and sized.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 MIXING MORTAR

- A. Mixing Masonry Mortar: Thoroughly mix in accordance with TMS 602-11 / ACI 530.1 / ASCE 6-11 in quantities needed for immediate use,
 - 1. Admixtures: Add in accordance with manufacturer's recommendations. Ensure uniformity of mix and colorations.
 - a. Consult with and follow manufacturer's directions on use, mix designs and procedures, quantity and mixing of admixtures and various conditions affecting mixing and pouring. Show proposed admixtures on mix designs and do not use unless shown.
 - 2. Ensure that sand is uniformly damp immediately before mixing
 - 3. Maintain workability of mortar by remixing or re-tempering. Discard mortar which has begun to stiffen or is not used with 2 1/2 hours after initial mixing.

3.3 INSTALLATION, GENERAL

- A. Layout: Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets.
 - 1. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
 - 2. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
 - 3. Place masonry in accordance with lines and levels indicated on drawings. Lay from exposed side, plumb, level and true to modular dimensions.
 - 4. Thickness: Build masonry walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
 - 5. Build chases and recesses to accommodate items specified in this and other Sections.
 - 6. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
- B. Bond Pattern: Unless otherwise indicated, lay exposed masonry in running bond, lapping not less than 4 inches. Bond and interlock each course of each wythe at corners.
 - 1. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- C. Exposed Units: Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
- D. Built-In Work: As work progresses, build-in items as indicated and required, including, hollow metal frames, window frames, steel angle lintels, nailing strips, anchor bolts, plates, sleeves, hangers, supports, and other items supplied by other trades.

1. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.
 2. Wherever bolts, brackets and similar anchor items are cast-in masonry, fill voids in masonry with mortar to adequately anchor and transmit loads.
 3. Build-in items plumb and true.
 4. Do not build-in organic materials which will be subjected to rot or deterioration.
 5. Fill in solidly with masonry around built-in items.
- E. Anchoring Masonry to Structure: Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
1. Provide an open space between masonry and structural steel or concrete as shown, unless otherwise indicated. Keep open space free of mortar and other rigid materials.
 2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
 3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.
- F. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

3.4 TOLERANCES

- A. Dimensions and Locations of Elements:
1. Dimensions in Cross Section or Elevation: Do not vary by more than plus 1/2 inch or minus 1/4 inch.
 2. Location of Elements in Plan: Do not vary from that indicated by more than plus or minus 1/2 inch.
 3. Location of Elements in Elevation: Do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.
- B. Lines and Levels:
1. Bed Joints and Top Surfaces of Bearing Walls: Do not vary from level by more than 1/4 inch in 10 feet, or 1/2-inch maximum.
 2. Conspicuous Horizontal Lines (such as lintels, sills, parapets, and reveals): Do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
 3. Vertical Lines and Surfaces: Do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
 4. Conspicuous Vertical Lines (such as external corners, door jambs, reveals, and expansion and control joints): Do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
 5. Lines and Surfaces: Do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
 6. Vertical Alignment of Exposed Head Joints: Do not vary from plumb by more than 1/4 inch in 10 feet or 1/2-inch maximum.
 7. Faces of Adjacent Exposed Masonry Units: Do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.
 8. Concrete Block to Receive Direct-Applied Finishes: Lay block plumb, with flush mortar joints and with maximum surface variation of 1/8 inch in 10 feet.
- C. Joints:
1. Bed Joints: Do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
 2. Exposed Bed Joints: Do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
 3. Head and Collar Joints: Do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
 4. Exposed Head Joints: Do not vary from thickness indicated by more than plus or minus 1/8 inch.

5. Exposed Head Joints and Bed Joints of Stacked Bond: Do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.5 MORTAR BEDDING AND JOINTING

- A. Laying Face Brick: Lay units with completely filled bed and head joint, except at expansion and control joints. Butter ends with sufficient mortar to fill head joints and shove into place. Do not slush head joints.
 1. Lay out to eliminate brick less than one-half length.
 2. Do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.
 3. Bevel rear of bed joint at cavity to exclude mortar from protruding into cavity.
 4. Buttering corners of joints, deep or excessive furrowing of mortar joints is not permitted.
 5. Do not shift or tap masonry after mortar has taken initial set. Where adjustment must be made, remove mortar and replace.
- B. Mortar Joint Tooling for Face Brick: Provide special raked as formed by special joint tool:
 1. Basis of Design: Raked Joint Tool by Brick Tech Architectural.
 2. Tool exposed joints when thumbprint hard, using a jointer larger than joint.
 3. Rake out mortar in preparation for application of sealants, where required.
- C. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

3.6 ANCHORED MASONRY VENEERS

- A. Anchoring At Backup Wall: Anchor masonry veneers to back-up wall with masonry-veneer anchors to comply with the following requirements:
 1. Fasten anchors to backup wall with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
 2. Embed ties and continuous wire in masonry joints.
 3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
 4. Provide seismic anchors, as applicable.
- B. Anchor Spacing at Metal Stud Backup Wall: Space anchors as indicated, but not more than 18 inches o.c. vertically and 24 inches o.c. horizontally, with not less than one anchor for each 2 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.
- C. Anchor Spacing at CMU or Concrete Backup Wall: Space anchors as indicated, but not more than 16 inches o.c. vertically and 25 inches o.c. horizontally, with not less than one anchor for each 2.67 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 36 inches, around perimeter.
- D. Anchor Spacing at CMU or Concrete Backup Wall: Space anchors as indicated, but not more than 18 inches o.c. vertically and horizontally. Install additional anchors within 12 inches of openings and at intervals, not exceeding 24 inches, around perimeter.

3.7 MASONRY JOINT REINFORCEMENT

- A. Joint Reinforcement: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
 1. Space continuous joint reinforcement not more than 16 inches o.c vertically.
 2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
 3. Provide reinforcement not more than 8 inches above and below wall openings and extending 36 inches beyond openings in addition to continuous reinforcement.
 4. Place joint reinforcement at bed joint at top course of wall or partition, continuous full length of wall.
 5. At foundation walls with earth on both sides, provide reinforcement only at top 2 courses.
 6. Refer to Structural Drawings for locations of reinforcement bars within concrete masonry wall section.

7. Interrupt joint reinforcement at control and expansion joints, unless otherwise indicated.

3.8 CONTROL AND EXPANSION JOINTS

- A. Control Joints and Expansion Joints, General: Provide as indicated and where shown on Drawings, or if not shown, review locations with Architect prior to start of installation.
 1. Install control- and expansion-joint materials in unit masonry as masonry progresses.
 2. Form joints in CMU and face brick straight and true.
 3. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
 4. Unless otherwise shown on Structural Drawings, end reinforcing approximately one inch either side of joints.
- B. Expansion Joints at Face Brick:
 1. Provide control joints in brick work as indicated on Drawings, or if not shown, locate at 30 feet maximum for horizontal run of wall.
 - a. Corners: Provide at 2 feet from building corners if not shown on Drawings.
 2. Form open joint full depth of brick wythe and of width indicated, but not less than 3/8 inch for installation of sealant and backer rod specified in Section 079200 - Joint Sealants.
- C. Pressure-Relieving Joints: Provide horizontal, pressure-relieving joints by either leaving an airspace or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 - Joint Sealants, but not less than 3/8 inch.
 1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.
- D. Joint Fillers and Deflection Material: Install fillers in accordance with manufacturer's printed instructions. Compressible fillers shall be 50 percent larger than joint size.
 1. Set at proper depth or position in joint to coordinate with other work, including installation of bond breakers, backer rods and sealants.
 2. Do not leave voids or gaps between ends of joint filler units.
 3. Recess exposed edges or faces or compressible fillers slightly behind adjoining surfaces so that compressed units will not protrude from joint.

3.9 LINTELS

- A. Install steel lintels where indicated.
- B. Provide reinforced concrete block lintels over openings where indicated on drawings.
 1. Construct lintels and bond beams using concrete and reinforcing steel as specified on drawings. Erect on full even beds of mortar with reinforced grout filled jambs as indicated on the Drawings.
 2. For lintels, use reinforcement bars of full lengths only.
 3. Place and consolidate grout without disturbing reinforcing. Construct lintels on plank, adequately supported, joints equally spaced. Do not support lintels with hollow metal door frames. Fill spaces around built-in items solid with masonry and mortar unless otherwise indicated. Clean out spaces prior to pouring grout.
 4. Allow lintel to reach 90 percent design strength or 28 days before removing temporary supports. Remove units that show evidence of cracking.
 5. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.10 FLASHING, WEEP HOLES, AND CAVITY VENTS

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.
- B. Flashing Installation:
 1. Install flashing as brick is laid and protect from damage. Lap ends and seal, with laps in direction of moisture flow.
 - a. Adhesive apply and anchor flashing in place to prevent moisture from penetrating behind or under flashing.

- b. At flashing horizontal terminations, construct end dams one brick course in height with joints lapped and sealed.
 - 2. Attach flashing with termination bar to backup wall. Apply continuous bead of sealant along top of termination bar.
 - 3. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
 - 4. Form end dams with ends turned up minimum of 2-1/2 inches. Seal edges of end dam.
 - 5. Form inside and outside corners with additional piece of membrane. Comply with manufacturer's instructions on corner construction.
 - 6. Seal joints in flashing system with butyl rubber sealant.
 - 7. Repair membrane where bird mouths and improper installation creates openings in the membrane: Cut bird mouths and patch with membrane minimum of 6 inches each direction from cut and seal edges with sealant.
 - 8. Coordinate installation of through-wall flashing with installation of (MB-1) specified in Section 072700 - Air & Moisture Barriers.
 - 9. Place through wall flashings in accordance with manufacturer's recommendations.
 - 10. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape.
 - 11. (TWF-1) Flexible Flashing: Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall, and adhere flexible flashing to top of metal drip edge.
 - a. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall, and adhere flexible flashing to top of metal flashing termination.
 - b. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.
 - 12. Provide weep holes in head joints of first course of veneer masonry immediately above embedded flashing.
- C. (WPS-1) Rope Wicks: Install at 16 inches on center and extend other end up inside of back-up wall.
- 1. Install at head joint location, at bottom of cavity walls, and at lintels and relieving angles. Secure at 45 degree angle to back-up.
 - 2. Tie rope wicks to first row of masonry ties.
 - 3. Install cavity drainage fabric according to manufacturer instructions.
 - 4. Use wicking material to form weep holes above flashing under brick sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
 - 5. Trim wicking material flush with outside face of wall after mortar has set.

3.11 FIELD QUALITY CONTROL

- A. Testing and Inspecting: Owner will engage qualified special inspectors in accordance with Section 014533. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.
 - 1. Quality Assurance: Level **[B]** **[C]** in TMS 402/ACI 530/ASCE 5.
 - 2. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
 - 3. Place grout only after inspectors has verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
 - 4. Place grout only after inspectors have verified proportions of site-prepared grout.
- B. Testing Method:
 - 1. Unit Strength Method:
 - a. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.
 - b. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.
 - c. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

- d. Mortar Test (Property Specification): Perform tests of mortar and mortar materials for each mix provided, according to ASTM C 780.
 - 1) Compressive Strength: ASTM C 109
 - 2) Water Retention: ASTM C 1506
 - 3) Air Content: ASTM C91
 - e. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.
 - 2. Prism Test: For each type of construction provided, according to ASTM C 1314 at [7 days and at]28 days.
- C. Testing Frequency:
- 1. Preconstruction Testing: One set of tests.
 - 2. During Construction: One set of tests for each 5000 sq. ft. of wall area or portion thereof.

3.12 REPAIRING AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- C. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
 - 3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 - 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 - 5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
 - 6. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.
 - 7. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
 - 8. Clean stone trim to comply with stone supplier's written instructions.
 - 9. Clean limestone units to comply with recommendations in ILI's "Indiana Limestone Handbook."

3.13 INSTALLED WORK

- A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.
- B. Adequately brace all work to prevent damage of any kind. Mask, barricade or similarly protect work as required from damage during building operations. Protect installed material as necessary to prevent staining or damage from the elements.
- C. Provide temporary bracing of masonry during erection. Do not remove bracing until building structure provides permanent bracing.
- D. During erection, keep all walls dry by covering the top with a strong, waterproof membrane at each shutdown and the end of each day. Cover partially completed walls at all times when work is not in progress. Extend cover a minimum of 2 feet down both sides, and securely hold in place.

END OF SECTION

SECTION 042200 CONCRETE UNIT MASONRY

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Division 00 - Procurement and Contracting Requirements, and Division 01 - General Requirements, are hereby made part of this Section.

1.02 SECTION INCLUDES

- A. Brick veneer unit masonry.
- B. Concrete unit masonry.
- C. Decorative concrete unit masonry.
- D. Reinforced unit masonry.
- E. Concealed embedded flashing.

1.03 RELATED SECTIONS

- A. Section 07 2129.13 - Sprayed Polyurethane Insulation.
- B. Section 07 2100 - Thermal Insulation; for rigid insulation below flashing.

1.04 PRODUCTS FURNISHED BUT NOT INSTALLED

- A. Dovetail anchor slots installed under Section 03 3000 - Cast-In-Place Concrete.

1.05 PRODUCTS INSTALLED BUT NOT FURNISHED

- A. Steel lintels and shelf angles for unit masonry are specified in Section 05 5000 - Metal Fabrications.

1.07 SUBMITTALS

- A. See Section 01 3323 - Shop Drawings, Product Data, and Samples, for submittal procedures.
- B. Product Data: Provide manufacturer's product data for each different masonry unit, accessory and other manufactured product indicated.
- C. Shop Drawings: Submit shop drawings for fabrication and installation of the following: unit masonry reinforcing bars.
 - 1. Reinforcing Steel: Detail bending and Placement of masonry reinforcing bars. Comply with ACI 315 - Details and Detailing of Concrete Reinforcement.
 - 2. Fabricated Flashing: Details of corner units, end dam units, and other special applications.
- D. Samples: Submit full size samples of each different exposed brick masonry unit, all colored masonry mortar, and all accessories. Indicate full range of exposed color, texture and dimensions to be expected in completed work.
- E. Material Certificates:
 - 1. Submit material certificates for each different masonry product required signed by manufacturer and Contractor certifying each material complies with requirements.
 - 2. Fire-Rated Masonry: Submit certificates indicating compliance with equivalent thickness rating method as follows:
 - a. CMU: Chapter 3 of ACI 216.1.
 - b. Clay Masonry: Chapter 4 of ACI 216.1.
 - 3. Mix designs for mortar, standard grout and self-consolidating grout.

- F. Material Test Reports (prior to fabrication): Submit test reports from a qualified independent testing laboratory employed and paid by Contractor indicating and interpreting test results relative to compliance of mortar, grout mixes and masonry units with requirements indicated.
 - 1. Test Reports shall have been performed within 18 months of Contract date. Test Reports more than 18 months old are not acceptable.
- G. Material Test Reports After Material Fabrication for Clay Masonry: Submit test reports
 - 1. Test reports must be provided on from a qualified independent testing laboratory employed and paid by Contractor indicating and interpreting test results relative to compliance with requirements of ASTM C216 with C67
- H. Masonry Material Cleaning Plan: Include products and techniques for each masonry product and each assembly being constructed for this Project. Prior to submission, Cleaning Plan shall be signed and approved by:
 - 1. Contractor.
 - 2. Mason Contractor.
 - 3. All masonry unit manufacturers.
 - 4. Cleaning materials supplier and manufacturer.
 - 5. Cleaning Subcontractor.
- I. Weather Procedures Certification: Submit written Statement certifying construction procedures utilized for cold weather and hot weather conditions comply with requirements specified in referenced unit masonry standard.
- J. Foreman Certification: Copy of Foreman Certification for grouting reinforced masonry.

1.08 QUALITY ASSURANCE

- A. Industry Standards: Comply with recommendations of Brick Industry Association (BIA), National Concrete Masonry Association (NCMA), American Concrete Institute (ACI), and American Society of Civil Engineers (ASCE) as applicable.
- B. Foreman Certification: Masonry foreman responsible for placement of grouted reinforced masonry shall hold a current certification from Masonry Institute of Michigan (MIM) or International Masonry Institute (IMI) training program for reinforced unit masonry assemblies.
- C. Unit Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 "Specifications for Masonry Structures", except as otherwise indicated.
 - 1. Revise ACI 530.1/ASCE 6/TMS 602 to exclude Sections 1.4 and 1.7; Parts 2.1.2, 3.1.2 and 4.1.2; and Articles 1.5.1.2, 1.5.1.3, 2.1.1.1, 2.1.1.2 and 2.3.3.9, and to modify Article 2.1.1.4 by deleting requirement for installing vent pipes and conduits built into masonry.
- D. Material Test Reports on Clay Masonry products prior to delivery to site: Provide material test reports on actual clay masonry products that have been fabricated for the project. Provide tests per ASTM C216 sampled in accordance with ASTM C67. Architect will reject acceptance of brick outside of specified performance requirements. Provide a report on the following:
 - 1. Dimensional Tolerances
 - 2. Compressive Strength
 - 3. Hot Water Absorption
 - 4. Cold Water Absorption.
- E. Single-Source Responsibility for Masonry Units: Obtain exposed masonry units of uniform texture and color, or uniform blend within the accepted range for these characteristics, from one manufacturer for each different product required for each continuous surface or visually related surfaces.
- F. Single-Source Responsibility for Mortar Materials: Obtain mortar ingredients of uniform quality from one manufacturer for each cementitious component and from one source and producer for each aggregate.

1.09 MASONRY INSPECTION

- A. Inspections: Masonry work shall be inspected per MBC Chapter 17, ACI 530.1 - 1.5, 1.6, 2.3 and ASTM C 140.
 - 1. Inspections shall be performed by a Certified Masonry Inspector employed by an independent Testing/Inspection Agency acceptable to Architect.
 - 2. The following require special inspections:
 - a. Unit layup Periodic
 - b. Reinforcing bar placement: Periodic
 - c. Grout placement: Continuous
 - d. Other components as stated in Code.

1.10 MOCK-UP

- A. Field-Constructed Mock-Ups: Prior to installation of unit masonry, erect sample wall panels to further verify selections made under sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mock-up to comply with the following requirements, using materials indicated for final unit of work:
 - 1. Locate mock-up on site as directed by Architect.
 - 2. Size: Approximately 8 feet long by 6 feet high.
 - 3. Typical exterior face brick wall; include face and backup wythes, and through wall flashing, as well as accessories utilizing each brick type in pattern directed by Architect.
 - 4. Typical exterior brick-veneer wall; include face brick, cold formed metal studs, sheathing, air infiltration barrier, veneer ties, flashing, weep holes, and cavity drainage material.
 - 5. Notify Architect one week in advance of the date and time when mock-up will be erected.
 - 6. Protect mock-up from the elements with weather-resistant membrane.
 - 7. Retain and maintain mock-up during construction in undisturbed condition as standard for judging completed unit masonry work.
 - a. When directed, demolish and remove mock-up from Project site.
- B. Grout Demonstration Panel: For self-consolidating grout, construct a separate "Grout Demonstration Panel". The panel shall be representative of the actual wall construction.
 - 1. Evaluation Criteria for panel shall include the following:
 - a. Compressive strength.
 - b. Bond to masonry units.
 - c. Grout consolidation.

1.11 PRE-INSTALLATION CONFERENCE

- A. Schedule a pre-installation conference at Cass Ave, Detroit MI-48201, minimum two weeks prior to start of masonry work, with the following parties in attendance.
 - 1. Owner's Representative.
 - 2. Architect.
 - 3. Contractor.
 - 4. Masonry Contractor, including Project Foreman.
 - 5. Masonry Inspector.
 - 6. Testing Laboratory.
 - 7. Authorities having jurisdiction.
 - 8. Other interested parties.
- B. Review methods and procedures related to masonry construction including, but not limited to, the following:
 - 1. Review submittals, including
 - a. Brick.

- b. CMU.
 - c. Reinforcing steel shop drawings.
 - d. Masonry accessories.
 - e. CMU/precast concrete lintels.
 - f. Grout type, proportions, and mix designs.
2. Review
 - a. Masonry inspection procedures.
 - b. Grout and grouting procedures.
 - c. Mortar and grout testing procedures.
 - d. Vertical and horizontal steel reinforcing shop drawings, splice lengths, and bar positioners.
 - e. Movement joint locations and details.
 - f. Flashing details.
 - g. Hot/cold weather procedures.
 - h. Approved Masonry Material Cleaning Plan.
 - i. Coordination issues with other trades.
 - j. Protection of and scheduling of non-masonry construction that will interfere with masonry work.
 - k. Job-Site storage and staging areas.
 3. Review mock-ups for workmanship and materials.
 4. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 5. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions.
- C. Contractor shall record discussion, including agreement or disagreement on significant matters. Furnish copies of report to all parties present within 5 days after meeting date.
1. If substantial disagreements exist at conclusion of meeting, determine how disagreements will be resolved, and set date and time to reconvene meeting.

1.12 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver masonry materials to project site in undamaged condition.
- B. Store masonry units off the ground, under cover, and in a dry location to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, and other causes. If units become wet, do not place until units are in an air-dried condition.
- C. Store cementitious materials off the ground, under cover, and in dry location.
- D. Store aggregate where grading and other required characteristics can be maintained and contamination avoided.
- E. Store masonry accessories including metal items to prevent corrosion and accumulation of dirt and oil.

1.13 PROJECT CONDITIONS

- A. Protection of Masonry: During erection, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 1. Extend cover minimum 24 inches down both sides and hold cover securely in place.
 2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover minimum 24 inches down face next to constructed wythe and hold cover in place.

- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least 3 days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar and soil from staining the face of masonry to be left exposed or painted. Remove immediately any grout, mortar and soil that comes in contact with such masonry.
 - 1. Protect base of walls from rain-splashed mud and mortar spatter by means of coverings spread on ground and over wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes from mortar droppings.

1.14 ENVIRONMENTAL REQUIREMENTS

- A. Cold Weather Construction: Comply with referenced standard and the following:
 - 1. Do not use frozen materials or materials mixed or coated with ice or frost.
 - 2. Do not build on frozen subgrade or setting beds.
 - 3. Do not lay masonry units that are wet or frozen.
 - 4. Remove and replace masonry damaged by freezing conditions. Replaced work shall match in-place work.
- B. Hot Weather Construction: Comply with referenced standard and the following:
 - 1. Protect unit masonry work when temperature and humidity cause excessive evaporation of water from mortar and grout.
 - 2. Provide artificial shade and windbreaks as required.
 - 3. Do not proceed with masonry work when temperatures exceed 100 degF.

PART 2 PRODUCTS

2.01 BRICK MASONRY UNITS

- A. General: Comply with referenced standards and other requirements indicated below applicable to each form of brick unit required.
- B. Provide special brick shapes as follows:
 - 1. For applications requiring brick of form, size and finish on exposed surfaces which cannot be produced from standard brick sizes by sawing.
 - 2. For applications where stretcher units cannot accommodate special conditions including those at corners, movement joints, bond beams, sashes and lintels.
 - 3. For "Lip Brick" applications at lintels, shelf angles, and similar locations.
 - 4. For applications where shapes produced by sawing would leave sawed surfaces exposed to view.
 - 5. For sills, caps, rowlocks, and similar applications resulting in exposure of brick surfaces which otherwise would be concealed from view, provide uncured or unfroged units with all exposed surfaces finished.
 - 6. Provide mitered and epoxied bricks as required to achieve configurations indicated on Drawings.
- C. Face Brick (Type A): ASTM C 216 and as follows: Provide test reports as indicated in Part One Quality Control.
 - 1. Provide brick units tested per ASTM C 67, and rated "Non-Effloresced".
 - 2. Grade: SW.
 - 3. Type: FBX.
 - 4. Compressive Strength: 13,858 psi, average, per ASTM C 67.
 - 5. Size: Modular; 3 5/8 inches thick by 7 5/8 inches high by 7 5/8 inches long.
 - 6. Colors/Textures: W56 / Velour

7. Basis of Design: Glen Gary Brick Co. Hanley plant available through Brick Tech Architectural Inc. 3040 11 Mile Rd, Berkley, MI 48072. Phone: 248-548-0777.
- D. Face Brick (Type B): ASTM C 216 and as follows: Provide test reports as indicated in Part One Quality Control.
1. Provide brick units tested per ASTM C 67, and rated "Non-Effloresced".
 2. Grade: SW.
 3. Type: FBX.
 4. Compressive Strength: 11,113 psi, average, per ASTM C 67.
 5. Size: Modular; 3 5/8 inches by 2 1/4 inches by 7 5/8 inches
 6. Colors/Textures: Black Diamond / Velour
 7. Basis of Design: Cloud Ceramics Inc. available through Brick Tech Architectural Inc. 3040 11 Mile Rd. Berkley, MI 48072 Phone: 248-548-0777.

2.02 CONCRETE MASONRY UNITS

- A. General: Comply with requirements indicated below applicable to each form of concrete masonry unit required.
1. Provide special shapes where indicated and as follows:
 - a. For lintels, corners, jambs, sash, control joints, headers, bonding, and other special conditions.
 - b. Bullnose units for exposed outside corners unless otherwise indicated.
 2. Size: Manufacturer to specified dimensions of 3/8 inch less than nominal widths by nominal heights by nominal lengths indicated on Drawings.
 3. Core Construction: Two or three at Contractor's option unless otherwise shown. Coordinate with wall reinforcement spacing.
 4. Exposed Faces: Manufacturer's standard color and texture unless noted otherwise.
- B. Hollow Load-Bearing Concrete Masonry Units: ASTM C 90, and as follows:
1. Minimum compressive prism strength: 2000 psi.
 2. Weight classification: Medium weight.
 3. Weight classification: Normal weight.
- C. Solid Load-Bearing Concrete Masonry Units: ASTM C 90, and as follows:
1. Minimum compressive prism strength: 2000 psi.
 2. Weight classification: Normal weight.
- D. Decorative Concrete Masonry Units (DCMU): ASTM C 90, and as follows:
1. Minimum compressive prism strength: 2000 psi.
 2. Weight classification: Normal weight.
 3. Finish: Exposed faces of the following descriptions matching color, pattern, and texture of Architect's sample.
 - a. Ground finish and integral color with center score.
 - b. Color: National Block Co.; "Perma Grind Flax" 3900 Ford Road, Westland, MI. 48185. Phone Number: 734-721-4056.
 4. Apply one coat of sealer to face of decorative units at factory.
 - a. Factory to furnish sufficient quantity of sealer for one field applied coat of sealer to be applied after walls are constructed and cleaned.
 5. Integral Water Repellant at Exterior CMU: Provide units produced with liquid polymeric, integral water-repellant admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested as a wall assembly made with mortar containing integral water-repellant manufacturer's mortar additive, per ASTM E 514, with test period extended to 24 hours, show no visible water or leaks on the back of test specimen.
 6. Use water repellent admixtures for masonry units, mortar and grout by a single manufacturer.

7. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Decorative Concrete Masonry Units:
 - 1) Best Block Company.
 - 2) Grand Blanc Cement Products.
 - 3) National Block Company.
 - b. Integral Water Repellant:
 - 1) BASF; Rheopel Plus
 - 2) W. R. Grace & Co.; Dry Block.

2.03 CONCRETE AND MASONRY LINTELS

- A. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam concrete masonry units with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.
 1. Prefabricated lintels shall conform to ASTM C 1623.

2.04 MORTAR AND GROUT MATERIALS

- A. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold weather construction. Provide natural or white color cement as required to produce mortar color indicated.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Masonry Cement: ASTM C 91.
- D. Aggregate for Mortar: ASTM C 144; for joints less than 1/4 inch, use aggregate graded with 100 percent passing No. 16 sieve.
- E. Aggregate for Grout: ASTM C 404.
- F. Water: Clean and potable.
- G. Water-Repellant Admixture: Liquid water-repellant mortar admixture intended for use with CMU, containing same integral water repellant by same manufacturer.

2.05 REINFORCING STEEL

- A. General: Provide reinforcing steel complying with requirements of referenced unit masonry standard and with this article.
- B. Steel Reinforcing Bars: Billet steel, ASTM A 615, Grade 60.
 1. Reinforcing Bars Positioners: Provide reinforcing bar positioners to assist with reinforcing placement in the center of the masonry unit.

2.06 JOINT REINFORCEMENT

- A. General: Provide joint reinforcement per ASTM A 951, formed from the following:
 1. Galvanized carbon steel wire: ASTM A 82, galvanized per ASTM A 153, Class B-2 coating, for interior and exterior walls.
- B. Description: Welded-wire units prefabricated with deformed continuous side rods and plain cross rods into straight lengths of not less than 10 feet, complying with requirements indicated below.
 1. Wire Diameter for Side Rods: 0.1483 inch (9 gage).

2. Wire Diameter for Cross Rods: 0.1483 inch (9 gage).
3. Wire Diameter for Eyes and Pintles: 3/16 inch.
4. For single-wythe masonry provide type as follows with single pair of side rods:
 - a. Ladder design with perpendicular cross rods spaced not more than 16 inches o.c.
5. For multiwythe masonry provide type as follows:
 - a. Cavity Masonry Walls.
 - 1) Ladder design with perpendicular side rods and adjustable double eye and pintle type ties.
 - (a) Provide one side rod for each face shell of hollow masonry units more than 4 inches in nominal width.
 - (b) Perpendicular cross rods spaced not more than 16 inches o.c.
 - (c) Adjustable eye and pintle ties spaced not more than 16 inches o.c.
- C. Manufacturers: Subject to compliance with requirements, provide joint reinforcement by one of the following:
 1. Heckman Building Products, Inc.
 2. Hohmann & Barnard, Inc.
 3. Wire-Bond

2.07 TIES AND ANCHORS, GENERAL

- A. General: Provide ties and anchors specified in subsequent articles that comply with requirements for metal and size of referenced unit masonry standard and of this article.
- B. Galvanized Carbon Steel Wire: ASTM A 82, galvanized per ASTM A 153, Class B-2 coating.
 1. Wire Diameter: 0.1875 inch.
- C. Galvanized Steel Sheet: ASTM A 366 (commercial quality) cold-rolled carbon steel sheet, hot-dip galvanized after fabrication per ASTM A 924, Class B2 (for unit lengths over 15 inches) and Class B3 (for unit lengths under 15 inches) and Class B3 (for unit lengths under 15 inches), for sheet metal ties and anchors.
 1. Sheet Thickness: 0.0747 inch (14 gage).
- D. Galvanized Heavy-Thickness Steel Sheet: ASTM A 635 (commercial quality) hot-rolled carbon steel sheet hot-dip galvanized after fabrication per ASTM A 924, Class B3, for rigid anchors fabricated from steel sheet or strip with a thickness of 0.180 inch and greater.
- E. Manufacturers: Subject to compliance with requirements, provide products of the following:
 1. Heckman Building Products, Inc.
 2. Hohmann & Barnard, Inc.
 3. Wire-Bond

2.08 BENT WIRE TIES

- A. Individual units prefabricated from bent wire to comply with requirements indicated below.
- B. Tie Shape for Hollow Masonry Units Laid with Cell Vertical: Rectangular with closed ends and not less than 4 inches wide.
- C. Tie Shape for Solid Masonry Unit Construction: Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches long.
- D. Type of Masonry Where Coursing Between Wythes Align: Unit ties bent from one piece of wire.
- E. Type for Masonry Where Coursing Between Wythes Does Not Align: Adjustable ties composed of two parts, one with pintles, the other with eyes, maximum misalignment 1-1/4 inches.
- F. Type for Masonry Where Wythes Are Different Materials: Adjustable ties composed of two parts, one with pintles, the other with eyes, maximum misalignment 1-1/4 inches.

2.09 FLEXIBLE ANCHORS FOR CONNECTING TO STEEL FRAME

- A. Adjustable Anchors for Connecting to Structure: Provide two-piece assembly that allows vertical and horizontal movement but resists tension and compression forces perpendicular to plane of wall.
 - 1. Anchor Section: 14 gage or 1/8 inch thick by 7 inches high with 1 inch bend for welding to beam. Slot for wire tie is 5 inches high positioned within 2 inches of the inside face of masonry.
 - a. Heckman; No. 308 Receptacle Slot Anchor.
 - 2. Tie Section: Rectangular-shaped wire tie, 3 or 4 inches wide sized to extend within 2 inch of masonry face, made from 0.1875-inch-diameter, hot-dip galvanized steel wire.
 - a. Heckman; No. 314 Tie Clip Anchor.
- B. Joint Stabilizing Anchors: Single-piece assembly with sliding rods held in receiver which allows vertical and horizontal movement but resists tension and compression forces perpendicular to plane of wall.
 - 1. Receiver Section: Fabricated with stainless steel 1/32 inch sheet steel sleeves, one side embedded in masonry, the other connected to the steel frame with self tapping screws for full capacity of the anchor assembly.
 - 2. Tie Section: Two 8 gage stainless wires encased in plastic sleeves held in the receiver section.
 - a. Hohmann & Barnard; Slip-Set Stabilizer.
 - b. Wire-Bond; No. 1700.

2.10 RIGID ANCHORS

- A. Provide straps of form and length indicated, fabricated from metal strips of the following width and thickness:
 - 1. 1-1/2 inches wide by 1/4 inch thick.
 - 2. Galvanize per ASTM A 153.

2.11 ADJUSTABLE MASONRY VENEER ANCHORS

- A. Dovetail Masonry Veneer Anchors: Units consisting of a metal dovetail shaped clip and wire tie.
 - 1. Wire Tie Shape: Triangular.
 - 2. Wire Tie Length: As required to extend 1-1/2 inches into masonry wythe of veneer face.
- B. Products: Subject to compliance with requirements, provide the following:
 - 1. Dovetail Masonry Veneer Anchors:
 - a. Heckman Building Products, Inc.; 103 Dovetail Triangular Wire Tie.
 - b. Hohmann and Barnard, Inc.; 315 Flexible Dovetail Brick Tie.
 - c. Wire-Bond; No. 2102 with Triangular Tie.

2.12 POSTINSTALLED ANCHORS

- A. Chemical, expansion or undercut anchors as indicated or required, with capability to sustain, without failure, load imposed within factors of safety indicated, as determined by testing per ASTM E 488, conducted by a qualified independent testing laboratory.
 - 1. Corrosion Protection: Stainless steel components per ASTM F 593 and ASTM F 594, Group 1, alloy 304 or 316 for bolts and nuts; alloy 304 or 316 anchors.
- B. For Postinstalled Anchors in Concrete: Capability to sustain, without failure, a load equal to 4 times load imposed by masonry.

- C. For Postinstalled Anchors in Grouted Concrete Masonry Units: Capability to sustain, without failure, a load equal to 6 times load imposed by masonry, per ASTM E 488.

2.13 EMBEDDED FLASHING MATERIALS

- A. Metal Drip Edges: ASTM A 167, Type 304, stainless steel, 0.0156 inches thick.
 - 1. Metal Configuration: Extend at least 3 inches horizontally into wall and 1/2 inch out from exterior face of wall with outer edge bent down 20 degrees and hemmed.
 - 2. Sealant : One part non-skinning butyl sealant conforming to ASTM 1311.
- B. Sheet Metal Flashing: Fabricate from the following metal complying with requirements specified in Section 07 6200 - Sheet Metal Flashing and Trim, and as follows:
 - 1. Stainless Steel: 0.0156 inch thick.
 - 2. Galvanized Sheet Steel: 0.0276 inch thick.
 - 3. Fabricate through-wall metal flashings embedded in masonry with ribs formed in dovetail pattern at 3 inch intervals along length of flashing to provide a three-way integral mortar bond and weep-hole drainage.
- C. Membrane flashing - Laminated Flashing: Manufacturer's standard asphalt-free laminate flashing of type indicated below:
 - 1. Stainless Steel-Fabric Laminate: Stainless steel sheet, laminated to a polymer scrim with asphalt free adhesive.
 - a. Stainless steel type: 304, ASTM A167.
 - b. Fabric: Polymer fabric; laminated back face of stainless steel core.
 - c. Size: Manufacturer's standard width rolls.
 - 2. Provide prefabricated inside corners, outside corners and end dams in lieu of field fabricated inside corners, outside corners and end dams at contractor's option.
- D. Sealant for Flashing: One-part non-skinning butyl per ASTM C 1311.

2.14 MISCELLANEOUS MASONRY ACCESSORIES

- A. Bond Breaker Strips: Asphalt-saturated organic roofing per ASTM D 226, Type I (No. 15 asphalt felt).
- B. Preformed Control-Joint Gaskets: Designed to fit standard sash block unit and maintain lateral stability in masonry wall; size and configuration as indicated.
 - 1. Styrene-Butadiene Rubber: ASTM D 2000, Designation M2AA-805.
 - 2. Polyvinyl Chloride: ASTM D 2287, General Purpose Grade, Type PVC-65406.
- C. Isolation Material: Asphalt impregnated boxboard.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cranco Industries; Brak-Bond.
 - b. Williams Products; Column Box Board
- D. Reglets: Minimum 26 ga. stainless steel, Type 304. Provide reglet with angled slot and foam filler designed for embedment in precast concrete.
 - 1. Product: Subject to compliance with requirements, provide the following
 - a. Heckman Building Products; No. 231 Stay-Put Flashing Reglet.
- E. Grout Retainer: Mesh screen, width of CMU less 1 inch, for use at bottom of open cells of CMU to retain grout without use of special shaped unit.
- F. Dovetail Anchor Slots: Minimum 22 ga. stainless steel, Type 304. Provide 1 inch by 1 inch slot with 5/8 inch throat opening. Fill slot with temporary foam filler to prevent intrusion of concrete or debris.
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Heckman Building Products, Inc.; No. 100 Dovetail Slot.
 - b. Hohmann and Barnard, Inc.; No. 305 Dovetail Slot.

- c. Wire-Bond; No. 1304 Dovetail Slot.
- G. Cavity Drainage Material: Reticulated, non-absorbent mesh, made from polyethylene strands and shaped to maintain drainage at weep holes without being clogged with mortar droppings.
 - 1. Provide thickness to fill cavity, but not less than 2 inch thickness.
 - 2. Subject to compliance with requirements, provide the following:
 - a. Mortar Net USA Ltd.; Mortar Net.
- H. Weep Vents: 1/2 inch thick, non-absorbent 200 denier polyester mesh with 90 percent open weave.
 - 1. Color: As selected by Architect.
 - 2. Products: Subject to compliance with requirements, provide the following:
 - a. Mortar Net USA Ltd.; Mortar Net Weep Vents.
 - b. CavClear Inc.; CavClear Weep Vents.

2.15 MASONRY CLEANERS

- A. Job-Mixed Detergent Solution: Solution of trisodium phosphate (1/2 cup dry measure) and laundry detergent (1/2 cup dry measure) dissolved in one gallon of water.
- B. Proprietary Acidic Cleaner: Manufacturer's standard-strength, general purpose cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry surfaces of type indicated below without discoloring or damaging masonry surfaces; expressly approved for intended use by manufacturer of masonry units being cleaned.
 - 1. For masonry not subject to metallic oxidation stains, use formulation consisting of a concentrated blend of surface-acting acids, chelating, and wetting agents.
 - 2. For dark colored masonry not subject to metallic oxidation stains, use formulation consisting of a liquid blend of surface-acting acids and special inhibitors.
 - 3. For masonry subject to metallic oxidation stains, use formulation consisting of a liquid blend of organic and inorganic acids and special inhibitors.
 - 4. Product: Subject to compliance with requirements, provide the following:
 - a. ProSoCo, Inc.; Sure Klean No. 600 Detergent
 - b. ProSoCo, Inc.; Sure Klean No. 101 Lime Solvent.
 - c. ProSoCo, Inc.; Sure Klean Vana Trol

2.16 MORTAR AND GROUT MIXES

- A. General: Do not add admixtures including coloring pigments, air-entraining agents, accelerating or retarding agents, anti-freeze compounds, or other admixtures, unless otherwise indicated.
 - 1. Do not use calcium chloride in mortar or grout.
- B. Mortar for Unit Masonry: ASTM C 270, Property Specification.
 - 1. Use Type M or S mortar for all masonry below grade.
 - 2. Use Type S mortar for all masonry above grade.
 - 3. Use Type N mortar for exterior above grade veneer walls and parapets, interior load bearing and non-load bearing partitions, and other uses not indicated.
 - 4. Use Type S mortar for reinforced masonry.
- C. Standard Grout Mix: ASTM C 476.
 - 1. Fine or coarse grout per ACI 530.1/ASCE 6/TMS 602, Table 1.15.1, Grout Space Requirements, based on height and CMU cell size.
 - 2. Provide grout with slump of 8 inches to 11 inches, per ASTM C 143.
 - 3. Provide 3,000 psi, 28 day compressive strength unless otherwise indicated.
 - 4. Grout for hollow metal door frames slump must not exceed 4 inches, per ASTM C143. Hand trowel grout into frames, do not pump.

- D. Self-Consolidating Grout Mix: Material requirements of ASTM C 476.
 - 1. Provide fine or coarse grout.
 - 2. Minimum Compressive Strength of 3,000 psi, 28 day compressive strength.
 - 3. Has a slump flow of 24 to 30 inches per ASTM C 1611, within 10 minutes.
 - a. No bleed water at edge of pat.
 - b. No clumps of aggregate.
 - 4. Has a Visual Stability Index (VSI) less than or equal to 1 per ASTM C 1611, Appendix X.1.
 - 5. Job-Site proportioning of self-consolidating grout is NOT PERMITTED.
 - 6. Field addition of water and admixtures NOT PERMITTED.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other specific conditions, and other conditions affecting performance of unit masonry.
- B. Examine rough-in and built-in construction to verify actual locations of piping connections prior to installation.
- C. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. Comply with ACI 530/ASCE 5/TMS 402 and ACI 530.1/ASCE 6/TMS 602, except where exceeded by Contract Documents.
- B. Thickness:
 - 1. Build cavity and composite walls and other masonry construction to full thickness shown.
 - 2. Build single-wythe walls to actual thickness of masonry units, using units of nominal thickness indicated.
- C. Build chases and recesses as shown or required to accommodate items specified in this and other Sections of the Specifications. Provide not less than 8 inches of masonry between chase or recess and jamb of openings and between adjacent chases and recesses.
- D. Leave opening for equipment to be installed before completion of masonry. After installation of equipment, complete masonry to match construction immediately adjacent to the opening.
- E. Cut masonry units with motor-driven saws to provide clean, sharp, unchipped edges. Cut units as required to provide continuous pattern and to fit adjoining construction. Use full-size units without cutting where possible.
- F. Anchor Bolts: Set 3/4" diameter anchor bolts at exterior and interior bearing walls as indicated on structural drawings.
- G. Cleaning Reinforcing: Remove rust, mud, ice and other coatings from reinforcing prior to placing.

3.03 CONSTRUCTION TOLERANCES

- A. Comply with construction tolerances of ACI 530.1/ASCE 6/TMS 602.
 - 1. For vertical lines, such as vertical corners, door jambs, reveals, and movement joints: Maximum from plumb; 1/4 inch in 20 feet.
 - 2. For horizontal lines, such as lintels, sills, parapets, and reveals: Maximum from level; 1/4 inch in 20 feet.
 - 3. Joint Thickness:

- a. Bed Joints: Plus or minus 1/8 inch.
- b. Head Joints: Minus 1/8 inch, plus 1/4 inch.

3.04 LAYING MASONRY WALLS

- A. Lay out of walls in advance for accurate spacing of surface bond patterns with uniform joint widths and for accurate location openings, movement type joints, returns and offsets. Avoid the use of less-than-half size units at corners, jambs and where possible at other locations.
- B. Lay up walls to comply with specified construction tolerances, with courses accurately spaced and coordinated with other construction.
- C. Bond Pattern for Exposed Masonry: Lay exposed masonry in the following bond patterns unless indicated otherwise; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
 - 1. Brick: Standard 1/2 running bond.
 - 2. Standard CMU: Standard 1/2 running bond.
 - 3. Decorative CMU: 1/4 running bond.
- D. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 2 inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
- E. Stopping and Resuming Work: In each course, rack back 1/2 unit length for one-half running bond or 1/3 unit length for one-third running bond; do not tooth. Clean exposed surfaces of set masonry, wet clay masonry units lightly (if required) and remove loose masonry units and mortar prior to laying fresh masonry.
- F. Built-In Work: As construction progresses, build-in items specified under this and other Sections of the Specifications. Fill in solidly with mortar around built-in items.
 - 1. Fill space between hollow metal frames and masonry solidly with mortar, unless otherwise indicated.
 - 2. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
 - 3. Fill cores in hollow concrete masonry units with grout 3 courses (24 inches) under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.
- G. Non-loadbearing Interior Partitions: Build full height of story to underside of solid floor or roof structure above and as follows:
 - 1. Install pressure-relieving joint filler in joint between top of partition and underside of structure above.

3.05 MORTAR BEDDING AND JOINTING

- A. Lay hollow concrete masonry units as follows:
 - 1. With full mortar coverage on horizontal and vertical face shells.
 - 2. Bed webs in mortar in starting course on footings and in all courses of piers, columns and pilasters, and where adjacent to cells or cavities to be filled with grout.
 - 3. For starting course on footings where cells are not grouted, spread out mortar bed, including areas under cells.
 - 4. Maintain joint widths indicated, except for minor variations required to maintain bond alignment. If joint width not indicated, use 3/8 inch width.
 - a. Joint Width Tolerance: Plus 1/16 inch, minus 0.
 - 5. Point score joints in DCMU with mortar to match standard tooled mortar joints.
- B. Lay brick masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not furrow bed joints or slush joints.
 - 1. At cavity walls, slope beds toward cavity to minimize mortar protrusions into cavity. As work progresses, trowel mortar fins protruding into cavity flat against face of brick.

- C. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness, unless otherwise indicated.
- D. Cut joints flush for masonry walls to be concealed or to be covered by other materials, unless otherwise indicated.
- E. Lay concrete unit masonry using beveling technique described in BIA Technical Note No. 21C.

3.06 BONDING OF MULTI-WYTHE MASONRY

- A. Bond multiwythe walls together using one of the following methods:
 1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 1.77 sq. ft. of wall area spaced not to exceed 16 inches o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.
 - a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.
 - b. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type ties to allow for differential movement regardless of whether bed joints align.
 2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
 - a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.
 - b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.
 - c. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement with continuous horizontal wire in back-up wythe attached to adjustable eye and pintle type ties to allow for differential movement regardless of whether bed joints align.

3.07 CAVITIES/AIR SPACES

- A. Keep cavities/air spaces clean of mortar droppings and other materials during construction. Strike joints facing cavities/air spaces flush.
- B. Tie exterior wythe to backup with continuous horizontal joint reinforcing or individual metal ties as shown.
- C. Place cavity drainage material immediately above embedded flashing.

3.08 HORIZONTAL JOINT REINFORCEMENT

- A. General: Provide continuous horizontal joint reinforcement as indicated. Where there are dissimilar masonry materials install continuous horizontal joint reinforcement in horizontal joint between those materials. Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inches elsewhere. Lap reinforcing minimum 6 inches.
 1. Space reinforcement maximum 16 inches o.c. vertically.
 2. Space reinforcement maximum 8 inches o.c. vertically, in foundation walls and parapet walls.
 3. Provide reinforcement maximum 8 inches above and below wall openings and extending minimum 12 inches beyond openings.
 4. Provide reinforcement at all joints between brick veneer and cast stone and manufactured stone masonry.

- B. Cut or interrupt joint reinforcement at control and expansion joints, unless otherwise indicated.
- C. Provide continuity at corners and wall intersections by use of prefabricated "L" and "T" sections.
- D. Cut and bend reinforcement units as directed by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.09 ANCHORING MASONRY TO STRUCTURAL MEMBERS

- A. Anchor masonry to structural members where masonry abuts faces of structural members to comply with the following:
 - 1. Provide an open space not less than 1 inch in width between masonry and structural member, unless otherwise indicated. Keep open space free of mortar or other rigid materials.
 - 2. Anchor masonry to structural members with flexible anchors embedded in masonry joints and attached to structure.
 - 3. Space anchors as indicated, but not less than 24 inches o.c. vertically and 32 inches o.c. horizontally.

3.10 ANCHORING SINGLE-WYTHE MASONRY VENEER

- A. Anchor single-wythe masonry veneer to concrete with masonry veneer anchors to comply with the following requirements:
 - 1. Place dovetail of each anchor section into vertical dovetail shaped slots in concrete substrate.
 - 2. Embed tie section in masonry joint. Provide not less than 1-inch air space between back of masonry veneer wythe and concrete substrate.
 - 3. Space anchors as indicated but not more than 16 inches o.c. vertically with not less than one anchor for each two square feet of wall area.

3.11 MOVEMENT JOINTS

- A. Install control and expansion joints in unit masonry assemblies where indicated. Build in related items as masonry progresses. Do not form a continuous span through movement joints unless provisions are made to prevent in-plane restraint of wall or partition movement.
- B. Form control joints in concrete masonry as follows, using bond breaker strips and filled joint:
 - 1. Location and spacing of control joints shall comply with industry standards.
 - 2. Fit bond breaker strips into hollow contour in ends of block units on one side of control joint. Fill the resultant core with grout and rake joints in exposed faces.
 - 3. Install preformed control-joint gaskets designed to fit standard sash block.
- C. Form expansion joints in brick as follows:
 - 1. Build in joint filler materials where indicated.
 - 2. Form open joint of width indicated, but not less than 3/8 inch wide for installation of sealant and backer rod as specified in Section 07 92 00 - Joint Sealants. Maintain joint free and clear of mortar.
- D. Build in horizontal pressure-relieving joints where indicated; construct joints by either leaving an air space or inserting nonmetallic 50 percent compressible joint filler of width required to permit installation of sealant and backer rod specified in Section 07 92 00 - Joint Sealants.
 - 1. Locate horizontal pressure-relieving joints beneath shelf angles supporting masonry veneer and attached to structure behind masonry veneer.

3.12 LINTELS

- A. Install steel lintels where indicated.
- B. Provide masonry lintels where shown and wherever openings of more than 1'-0" for brick size units and 2'-0" for block size units are shown without structural steel or other supporting lintels.
 - 1. Provide prefabricated lintels per ASTM C 1623, or formed-in-place masonry lintels. Temporarily support formed-in-place lintels.
 - a. For hollow concrete masonry unit walls, use specially formed bond beam units with reinforcement bars placed as indicated and filled with course grout.
- C. Provide minimum bearing at 8 inches at each jamb, unless otherwise indicated.

3.13 FLASHING, WEEP HOLES, AND VENTS

- A. Install embedded flashing and weep holes in masonry at base of walls, shelf angles, lintels, ledges, other obstructions to the downward flow of water in wall, and where indicated.
- B. Prepare masonry surfaces smooth and free from projections that could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with adhesive/sealant/tape as recommended by flashing manufacturer before covering with mortar.
- C. Install flashings as follows:
 - 1. At lintels and shelf angles, extend flashing minimum 4 inches into masonry at each end. Extend flashing from exterior face of outer wythe of masonry, through the outer wythe, turned up a minimum of 12 inches, and behind vapor retarder.
 - a. Where interior surface of inner wythe is concealed by furring, carry flashing completely through the inner wythe and turn up approximately 2 inches, unless otherwise indicated.
 - 2. At heads and sills, extend flashing a minimum 4 inches into masonry at each end. Turn up ends not less than 2 inches to form an end dam. Where using stainless steel fabric flashing form end dams from stainless steel sheet metal.
 - 3. At base of masonry cavity walls, extend flashing from exterior face of exterior wythe, through exterior wythe, up face of interior wythe at least 8 inches and fasten with a termination bar. Fasten to face of interior wythe with termination bar.
 - 4. At step flashing, turn up ends not less than 2 inches to form an end dam, at the ends of each step. Where using stainless steel fabric flashing form end dams from stainless steel metal.
 - 5. Extend sheet metal flashings 1/2 inch beyond face of wall and turn down to form a drip. At sheet metal flashings within 42 inches of grade only, trim flashing flush with the face of the wall.
 - a. Drip edges extending from face of wall shall be hemmed.
 - 6. Provide bead of butyl sealant at top of all termination bars.
- D. Install reglets and nailers for flashing and other related construction where shown to be built into masonry.

3.14 REINFORCED UNIT MASONRY INSTALLATION

- A. Install reinforced unit masonry to comply with requirements of referenced unit masonry standard.
- B. Temporary Formwork and Shores: Construct formwork and shores to support reinforced masonry elements during construction.

1. Construct formwork to conform to shape, line, and dimensions shown. Make sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
 2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other temporary loads placed on them during construction.
- C. Temporary Wind Bracing
1. Provide temporary masonry wall bracing to MIOSHA Construction Safety Standards, Part 2: Masonry Wall Bracing.
 2. The limited access zone shall be equal to the height of the wall to be constructed plus four feet, and shall run the entire length of wall.
 3. Provide temporary wind bracing at masonry foundation walls and at other interior and exterior masonry free-standing walls exceeding 8'-0" in height according to MOSHA maximum unsupported wall heights.
 4. Bracing may be of metal or wood material capable of resisting uniform lateral wind pressures of 70 miles per hour.
 5. Engineer and construct temporary wind bracing system as part of base contract.
- D. Placing Reinforcement: Comply with ACI 530.1/ASCE 6/TMS 602.
- E. Grouting: Do not place grout until entire height of masonry to be grouted has attained sufficient strength to resist grout pressure.
1. Grout cores of all masonry at locations of vertical reinforcement, bond beams, bearing plates, anchors and embedded items.
 2. Comply with ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
 3. Vertical grout pour heights:
 - a. Standard Grout: Not more than 48 inches.
 - b. Self-Consolidating Grout: As determined with "Grout Demonstration Panel".

3.15 PARTITION IDENTIFICATION

- A. Place identification on all partitions indicated on Drawings as requiring opening protectives, including walls having a required fire or smoke rating.
- B. Identification shall be located in accessible concealed floor, floor-ceiling or attic spaces and as follows:
 1. Locate: Within 15 feet of the end of each wall and at intervals not exceeding 30 feet measured horizontally along wall or partition.
 2. Lettering: Not less than 3 inches in height with a minimum stroke width of 3/8 inches. Use a color that contrasts with the substrate and incorporate the same rating/designation as indicated on drawings and include the suggested wording " FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS".

3.16 FIELD QUALITY CONTROL

- A. Inspectors: Owner will engage qualified independent inspectors to perform inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform inspections.
 1. Place grout only after inspectors have verified compliance of grout spaces and grades, sizes, and locations of reinforcement.
- B. Testing Agency: Contractor will engage a qualified independent testing and inspecting agency to perform field tests and inspections indicated below and prepare test reports. Perform inspections as required to satisfy Section 1.6 of the 2005 MSJC Code, Level 3 Quality Assurance. Allow inspectors access to scaffolding and work areas, as needed to perform inspections.
 1. Payment for these services will be made by Owner.

2. Place grout only after inspectors have verified compliance of grout spaces and grades, sizes, and locations of reinforcement.
 3. Retesting of materials failing to comply with specified requirements shall be done at Contractor's expense.
- C. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.
 - D. Clay Masonry Unit Test: For each type of unit provided, per ASTM C 67.
 - E. Concrete Masonry Unit Test: For each type of unit provided, per ASTM C 140.
 - F. Mortar Test (Property Specification): For each mix provided, per ASTM C 780.
 - G. Grout Test (Compressive Strength): For each mix provided, per ASTM C 1019.
 - H. Self-Consolidating Grout: As delivered to site, verification of slump flow and Visual Stability Index (VSI) per ASTM C 1611.

3.17 REPAIRING, POINTING AND CLEANING

- A. Remove and replace masonry units that are loose chipped, broken, stained, or otherwise damaged or if units do not match adjoining units. Install new units to match adjoining units and in fresh mortar or grout, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge any voids or holes, except weep holes, and completely fill with mortar. Point-up all joints including corners, openings, and adjacent construction to provide a neat, uniform appearance. Prepare joints for application of sealants.
- C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears prior to tooling joints.
- D. Final cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 1. Remove large mortar particles by hand with wooden paddles and non-metallic scrape hoes or chisels.
 2. Comply with manufacturer's specifications and recommendations for use of masonry cleaner products.
 3. Test cleaning methods on sample wall panel; leave 1/2 panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
 4. Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering with liquid strippable masking agent, polyethylene film, or waterproof masking tape.
 5. Wet wall surface with water prior to application of cleaners; remove cleaners promptly by rinsing thoroughly with clean water.
 6. Clean brick by means of bucket and brush hand-cleaning method described in BIA Technical Note No. 20 Revised, first using job-mixed detergent solution. If result is not satisfactory, use proprietary acidic cleaner applied in compliance with directions of acidic cleaner manufacturer.
 7. Clean concrete masonry by means of cleaning method indicated in NCMA TEK 8-2 applicable to type of stain present on exposed surfaces.
- E. Protection: Provide final protection and maintain conditions, in manner acceptable to installer to ensure unit masonry is without damage and deterioration at time of Substantial Completion.

3.18 SEALER

- A. Apply one coat of sealer to decorative masonry unit walls after cleaning.
- B. Apply sealer in conformance with manufacturer's recommendations.

END OF SECTION 04 2000

END OF SECTION

SECTION 051200 STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Structural steel.
- 2. Prefabricated building columns.
- 3. Field-installed shear connectors.
- 4. Grout.

- B. Related Requirements:

- 1. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
- 2. Section 053100 "Steel Decking" for field installation of shear connectors through deck.
- 3. Section 055000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame miscellaneous steel fabrications and other steel items not defined as structural steel.

1.3 DEFINITIONS

- A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."
- B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.
- C. Heavy Sections: Rolled and built-up sections as follows:
 - 1. Shapes included in ASTM A6/A6M with flanges thicker than 1-1/2 inches (38 mm).
 - 2. Column base plates thicker than 2 inches (50 mm).

1.4 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Cass Ave, Detroit MI-48201

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
- C. Shop Drawings: Show fabrication of structural-steel components.
 - 1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
 - 2. Include embedment Drawings.
 - 3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
 - 4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
- D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:
 - 1. Power source (constant current or constant voltage).
 - 2. Electrode manufacturer and trade name, for demand critical welds.
- E. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and fabricator.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- D. Mill test reports for structural steel, including chemical and physical properties.
- E. Product Test Reports: For the following:
 - 1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
 - 2. Direct-tension indicators.
 - 3. Tension-control, high-strength, bolt-nut-washer assemblies.
 - 4. Shear stud connectors.
 - 5. Shop primers.

- 6. Nonshrink grout.
- F. Survey of existing conditions.
- G. Source quality-control reports.
- H. Field quality-control and special inspection reports.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.
- B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.
- C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement P2 or to SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."
- D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.
- E. Comply with applicable provisions of the following specifications and documents:
 - 1. AISC 303.
 - 2. AISC 341 and AISC 341s1.
 - 3. AISC 360.
 - 4. RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
 - 1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
- B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
 - 1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
 - 2. Clean and relubricate bolts and nuts that become dry or rusty before use.
 - 3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125/F3125M, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Connections: Provide details of simple shear connections required by the Contract Documents to be selected or completed by structural-steel fabricator to withstand loads indicated and comply with other information and restrictions indicated.
 - 1. Select and complete connections using schematic details indicated and AISC 360.
 - 2. Use Allowable Stress Design; data are given at service-load level.
 - 3. Design composite floor beams for design 75% of the uniform load carrying capacity published in table in the AISC code or the reaction indicated on the framing plans, whichever is greater. No connection shall have a capacity less than 6000 pounds.
 - 4. Design Roof beams for 50% of the uniform load carrying capacity published in table in the AISC code or the reaction indicated on the framing plans, whichever is greater. NO connection shall have a capacity less than 6000 pounds.
- B. Moment Connections: Type FR, fully restrained.
- C. Construction: Combined system of moment frame, braced frame, and shear walls.

2.2 STRUCTURAL-STEEL MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **25** percent.
- B. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than the following:
 - 1. W-Shapes: 60 percent.
 - 2. Channels, Angles 60 percent.
 - 3. Plate and Bar: 25 percent.
 - 4. Cold-Formed Hollow Structural Sections: 25 percent.
 - 5. Steel Pipe: 25 percent.
 - 6. All Other Steel Materials: 25 percent.
- C. W-Shapes: ASTM A992/A992M Or ASTM A572/A572M, Grade 50.
- D. Channels, Angles: ASTM A36/A36M , Grade 36.
- E. Plate and Bar: ASTM A36/A36M, Grade 36.
- F. Cold-Formed Hollow Structural Sections: ASTM A500/A500M, Grade B, structural tubing.
- G. Steel Pipe: ASTM A53/A53M, Type E or Type S, Grade B.
 - 1. Weight Class: Standard.
 - 2. Finish: Black, except where indicated to be galvanized.
- H. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS, CONNECTORS, AND ANCHORS

- A. High-Strength Bolts, Nuts, and Washers: ASTM A325 (Grade A325M), Type 1, heavy-hex steel structural bolts; ASTM A563, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.
1. Direct-Tension Indicators: ASTM F959/F959M, Type 325-1, compressible-washer type with plain finish.
- B. High-Strength Bolts, Nuts, and Washers: ASTM A490, Type 1, heavy-hex steel structural bolts or Grade F2280 tension-control, bolt-nut-washer assemblies with splined ends; ASTM A563, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.
1. Direct-Tension Indicators: ASTM F959/F959M, Type 490-1, compressible-washer type with plain finish.
- C. Slip Critical Bolted Connections: Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Grade F1852, Type 1, heavy-hex or round head assemblies consisting of steel structural bolts with splined ends; ASTM A563, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
1. Finish: Plain.
- D. Shear Connectors: ASTM A108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.
- E. Unheaded Anchor Rods: ASTM F1554, Grade 36 or ASTM F1554, Grade 55, weldable as indicated.
1. Configuration: Hooked typically, straight as indicated.
 2. Nuts: ASTM A563 (ASTM A563M) heavy hex carbon steel.
 3. Plate Washers: ASTM A36/A36M carbon steel. Coordinate requirements with ANSI/AISC 360.J9 and AISC Manual of Steel Construction Table 14-2.
 4. Washers: ASTM F436, Type 1, hardened carbon steel.
 5. Finish: Plain.
- F. Headed Anchor Rods: ASTM F1554, Grade 36 or ASTM F1554, Grade 55, weldable, straight.
1. Nuts: ASTM A563 heavy-hex carbon steel.
 2. Plate Washers: ASTM A36/A36M carbon steel.
 3. Washers: ASTM F436, Type 1, hardened carbon steel.
 4. Finish: Plain.
- G. Threaded Rods: ASTM A36/A36M Typically or ASTM A572/A572M, Grade 50 as indicated.
1. Nuts: ASTM A563 heavy-hex carbon steel.
 2. Washers: ASTM A36/A36M carbon steel.
 3. Finish: Plain.
- H. **Clevises and Turnbuckles**]: Made from cold-finished carbon steel bars, ASTM A108, Grade 1035.
- I. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A108, Grade 1030.
- J. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A108, Grade 1018.

K. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Fluorocarbon Company Limited.
2. Mating Surfaces: PTFE and PTFE.
3. Coefficient of Friction: Not more than 0.03.
4. Design Load: Not less than 2,000 psi.
5. Total Movement Capability: 2 inches

2.4 PRIMER

- A. Primer: SSPC-Paint 23, latex primer.
- B. Galvanize miscellaneous framing and supports where exposed to the elements such at the Building Exterior as well as interior locations which are humid or corrosive.
- C. Preparation and Coating over Galvanized Steel:
 1. Preparation: All galvanized metal receiving additional coats shall be tested by use of a copper sulfate test. This includes using a 10% solution of copper sulfate dissolved in water and applied to the galvanized surface. The reaction time between the copper sulfate and zinc should result in turning the galvanized area black within 15 seconds or less. If the reaction takes longer than 15 seconds, further cleaning is required as follows:
 - a. Preparation for TNEMEC paints: Apply Oakite CrysCoat 747 or 747 LTS as recommended by manufacturer. Allow to dry and air chuck entire prepared area removing excess materials.
 - b. Preparation for Wasser paints: Apply Great Lakes Clean and Etch or Oakite 747 as recommended by manufacturer followed by a thorough rinse.
 2. Primer:
 - a. TNEMEC: One (1) coat TNEMEC Series N 27 S.T. Typoxy @ 2.0 to 4.0 mil DFT.
 - b. Wasser: One (1) coat of Wasser MC-CR @ 3.0-4.0 mils DFT.
 3. For warranty purposes, the Contractor shall insure that the intermediate and finish coats specified in Division 9 "Painting" and the applied primer specified above are from the same
- D. Galvanizing Repair Paint: MPI#18, MPI#19, SSPC-Paint 20 or ASTM A780.

2.5 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.6 FABRICATION

- A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.
 1. Camber structural-steel members where indicated.
 2. Fabricate beams with rolling camber up.
 3. Identify high-strength structural steel according to ASTM A6/A6M and maintain markings until structural steel has been erected.

4. Mark and match-mark materials for field assembly.
 5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.
- B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.
1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.
- C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.
- D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.
- E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 3, "Power Tool Cleaning."
- F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.
- G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.
1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
 2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
 3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.7 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts" for type of bolt and type of joint specified.
1. Joint Type: Snug tightened unless noted Pretensioned or Slip critical on the drawings.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.8 SHOP PRIMING

- A. Shop prime steel surfaces except the following:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
 2. Surfaces to be field welded.
 3. Surfaces of high-strength bolted, slip-critical connections.
 4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
 5. Galvanized surfaces.
 6. Surfaces enclosed in interior construction.

- B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
 - 1. SSPC-SP 3, "Power Tool Cleaning."
- C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
 - 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.
- D. Painting: Prepare steel and apply a one-coat, nonasphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils

2.9 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M.
 - 1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.
 - 2. Galvanize lintels, shelf angles and welded door frames attached to structural-steel frame and located in exterior walls.

2.10 SOURCE QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.
 - 1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections
- B. Correct deficiencies in work that test reports and inspections indicate does not comply with the contract documents.
- C. Bolted Connections: shop-bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts."
- D. Welded Connections: Visually inspect shop-welded connections according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
 - 1. Liquid Penetrant Inspection: ASTM E165.
 - 2. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
 - 3. Ultrasonic Inspection: ASTM E164.
 - 4. Radiographic Inspection: ASTM E94.
- E. In addition to visual inspection, test and inspect shop-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
- B. Baseplates, Bearing Plates, and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
1. Set plates for structural members on wedges, shims, or setting nuts as required.
 2. Weld plate washers to top of baseplate.
 3. Pretension anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

- D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure.
 - 2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.
- E. Splice members only where indicated.
- F. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.
- G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.
- H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: Snug tightened unless noted Pretensioned or Slip critical on the drawings.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 - 1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
 - 2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.
 - 3. Verify that weld sizes, fabrication sequence, and equipment used for architecturally exposed structural steel will limit distortions to allowable tolerance.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage qualified special inspector to perform the following special inspections:
 - 1. Verify structural-steel materials and inspect steel frame joint details.
 - 2. Verify weld materials and inspect welds.
 - 3. Verify connection materials and inspect high-strength bolted connections.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Bolted Connections: Field-bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts."
- D. Welded Connections: Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
 - a. Liquid Penetrant Inspection: ASTM E165.
 - b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
 - c. Ultrasonic Inspection: ASTM E164.
 - d. Radiographic Inspection: ASTM E94.
- E. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:
 1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.
- F. Correct deficiencies in work that test reports and inspections indicate does not comply with the contract documents.
- G. Additional inspecting, at Contractor's expense, will be performed to determine compliance of the corrected work with specified requirements.
- H. Test results and inspection reports shall be reported in writing to Architect, Contractor, and Authorities having jurisdiction within 48 hours of testing.

3.6 REPAIRS AND PROTECTION

- A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A780/A780M.
- B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

END OF SECTION 051200

END OF SECTION

SECTION 052100 STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. K-series steel joists.
 - 2. KCS-type K-series steel joists.
 - 3. Long-span steel joists LH and DLH.
 - 4. Joist accessories.
- B. Related Sections include the following:
 - 1. Division 04 Section "Unit Masonry" for installing bearing plates in unit masonry.
 - 2. Division 5 Section "Metal Fabrications" for furnishing steel bearing plates.

1.3 DEFINITIONS

- A. SJI "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."
- B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support non-uniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.
- B. Structural Performance: Provide joists and connections capable of withstanding a net uplift force of 12 pounds per square foot.
- C. Design special joists to withstand design loads with live load deflections no greater than the following:
 - 1. Floor Joists: Vertical deflection of 1/360 of the span.
 - 2. Roof Joists: Vertical deflection of 1/360 where a plaster ceiling is attached or suspended; 1/240 of the span for all other cases.
 - 3.

1.5 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data: For each type of joist, accessory, and product indicated.
- C. Shop Drawings: Show layout, designation, number, type, location, and spacings of joists. Include joining and anchorage details, bracing, bridging, joist accessories; splice and connection locations and details; and attachments to other construction.
 - 1. Indicate locations and details of bearing plates to be embedded in other construction.

2. Comprehensive engineering analysis and design of joists including diagrams, geometry, chord and web sizes and stress state of each member.
 3. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.
- D. Welding certificates.
- E. Manufacturer Certificates: Signed by manufacturers certifying that joists comply with requirements.
- F. Mill Certificates: Signed by bolt manufacturers certifying that bolts comply with requirements.
- G. Qualification Data: For manufacturer and professional engineer.
- H. Research/Evaluation Reports: Evidence of steel joists' compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables of SJI "Specifications."
1. Manufacturer must be certified by SJI to manufacture joists complying with SJI standard specifications and load tables.
 2. Assumes responsibility for engineering special joists to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
 3. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of joists that are similar to those indicated for this Project in material, design, and extent.
- B. SJI Specifications: Comply with standard specifications in SJI's "Specifications" that are applicable to types of joists indicated.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle joists as recommended in SJI's "Specifications."
- B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel: Comply with SJI's "Specifications" for web and steel-angle chord members.
- B. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A, carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.
1. Finish: Plain, uncoated.
- C. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.
1. Finish: Plain.
- D. Welding Electrodes: Comply with AWS standards.

2.2 PRIMERS

- A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

2.3 K-SERIES STEEL JOISTS

- A. Manufacture steel joists of type indicated according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, under-slung ends, and parallel top chord.
 - 1. Joist Type: K-series steel joists and KCS-type K-series steel joists.
- B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.
- C. Comply with AWS requirements and procedures for shop welding, appearance, quality of welds, and methods used in correcting welding work.
- D. Provide holes in chord members for connecting and securing other construction to joists.
- E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."
- F. Camber joists according to SJI's "Specifications."
- G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 LONG-SPAN STEEL JOISTS

- A. Manufacture steel joists according to "Standard Specifications for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows:
 - 1. Joist Type: LH-series steel joists and DLH-series steel joists.
 - 2. End Arrangement: Underslung.
 - 3. Top-Chord Arrangement:
 - a. LH: Parallel.
 - b. DLH: Paralel.
- B. Comply with AWS requirements and procedures for shop welding, appearance, quality of welds, and methods used in correcting welding work.
- C. Provide holes in chord members for connecting and securing other construction to joists.
- D. Camber long-span steel joists according to SJI's "Specifications."
- E. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

F.

2.5 JOIST ACCESSORIES

- A. Bridging: Provide bridging anchors and number of rows of horizontal and/or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.
 - 1. Bridging, including bolted x-bridging, indicated on the plans where it would not normally be required, shall be provided to supplement continuity of the lateral bracing system to:

- a. Support perimeter conventional framing, beams, posts for roof screens, etc.
 - b. Offset bridging lines at roof openings, mechanical ductwork, etc.
- B. Steel bearing plates with integral anchorages are specified in Division 05 Section "Metal Fabrications."
- C. Supply miscellaneous accessories, including splice plates and bolts required by joist manufacturer to complete joist installation.

2.6 CLEANING AND SHOP PAINTING

- A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by power-tool cleaning, SSPC-SP 3.
- B. Apply 1 coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Do not install joists until supporting construction is in place and secured.
- B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written recommendations, and requirements in this Section.
1. Before installation, splice joists delivered to Project site in more than one piece.
 2. Space, adjust, and align joists accurately in location before permanently fastening.
 3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
 4. Do not connect bottom chord extensions to columns unless specifically indicated on the Drawings. If a connection is specified, delay rigidly connecting bottom-chord extensions to columns or supports until dead loads have been applied.
- C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
- D. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.
- E. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Construction Manager/Owner will engage a qualified independent testing and inspecting agency to inspect field welds and bolted connections and to perform field tests and inspections and prepare test and inspection reports.
- B. Field welds will be visually inspected according to AWS D1.1/D1.1M.
- C. In addition to visual inspection, field welds will be tested according to AWS D1.1/D1.1M and the following procedures, as applicable:
 - 1. Radiographic Testing: ASTM E 94.
 - 2. Magnetic Particle Inspection: ASTM E 709.
 - 3. Ultrasonic Testing: ASTM E 164.
 - 4. Liquid Penetrant Inspection: ASTM E 165.
- D. Bolted connections will be visually inspected.
 - 1. High-strength, field-bolted connections will be tested and verified according to procedures in RCSC's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts."
- E. Correct deficiencies in Work that test and inspection reports have indicated are not in compliance with specified requirements.
- F. Additional testing will be performed to determine compliance of corrected Work with specified requirements.
- G. Test results and Inspection Reports shall be reported in writing to Architect, Contractor, and Authorities having jurisdiction within 48 hours of testing.

3.4 REPAIRS AND PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Touchup Painting: After installation, promptly clean, prepare, and prime or re-prime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.
 - 1. Clean and prepare surfaces by hand-tool cleaning, SSPC-SP 2, or power-tool cleaning, SSPC-SP 3.
 - 2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.
- C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, to ensure joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 053100 STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Roof deck.
 - 2. Composite floor deck.
 - 3. Non-composite form deck.
- B. Related Sections include the following:
 - 1. Division 03 Section "Cast-in-Place Concrete" for concrete fill.
 - 2. Division 05 Section "Structural Steel Framing" for shop- and field-welded shear connectors and field installed puddle welds.
 - 3. Division 05 Section "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.

1.3 DEFINITIONS

- A. Action Submittals: Mandatory submittals by the Sub-Contractor which require action on the part of the General Contractor, Construction Manager and Design Professional.
 - 1. General Contractor and Construction Manager: Review, Stamp and Forward to the Design Professional.
 - 2. Design Professional: Review, Stamp and Return to the General Contractor or Construction Manager.
- B. Informational Submittals: Mandatory submittals by the Sub-Contractor to the General Contractor, Construction Manager and Design Professional which are not returned but kept by each for their project record.

1.4 ACTION SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Shop Drawings: Show layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.5 INFORMATIONAL SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data: For each type of deck, accessory, and product indicated.
- C. Product Certificates: For each type of steel deck, signed by product manufacturer.

- D. Welding certificates.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
 - 1. Power-actuated mechanical fasteners.
- F. Research/Evaluation Reports: For steel deck.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."
- B. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
- B. Delivery:
 - 1. Steel roof deck units shall be delivered to the job site in manufacturer's original, unopened bundles, containers and/or packaging.
 - 2. Steel roof deck bundle labels shall clearly indicate:
 - a. Product description.
 - b. Manufacturer.
 - c. Bundle weight.
 - d. Number of pieces.
 - e. Length.
 - f. Bundle number.
 - g. SDI approved installation safety warnings.
 - 3. Note on shipper's bill of lading any material damage or shortages, before signing for material and notify the deck supplier immediately.
- C. Storage:
 - 1. Store materials in accordance with manufacturer's instructions.
 - 2. Protect materials from corrosion, deformation, and other damage.
 - 3. Store deck bundles off ground, with one end elevated to provide drainage.
 - 4. Protect bundles against condensation with ventilated waterproof covering.
 - 5. Stack bundles to prevent tipping, sliding, rolling, shifting, or material damage.
 - 6. Check bundles for tightness and retighten as necessary to prevent wind from loosening sheets or working bundles apart.
 - 7. Place deck bundles near main supporting beam at column or wall on building frame.
 - 8. Do not place bundles on unbolted frames or on unattached or un-bridged joists.
 - 9. Ensure structural frame is properly braced to receive bundles.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Steel Deck:

- a. ASC Profiles, Inc.
- b. Canam Steel Corp.;The Canam Manac Group.
- c. Consolidated Systems, Inc.
- d. DACS, Inc.
- e. D-Mac Industries Inc.
- f. Epic Metals Corporation.
- g. Marlyn Steel Decks, Inc.
- h. New Millennium Building Systems, LLC.
- i. Nucor Corp.; Vulcraft Division.
- j. Roof Deck, Inc.
- k. United Steel Deck, Inc.
- l. Valley Joist; Division of EBSCO Industries, Inc.
- m. Vercor Manufacturing Co.
- n. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

2.2 MATERIALS

A. Steel: Comply with AISI and SDI's "Specifications" for deck design and fabrication.

2.3 ROOF DECK

A. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:

1. Galvanized Steel Sheet: ASTM A 63/A 653M, Structural Steel (SS), Grade 33, G60 zinc coating.
2. Deck Profile: Type WR, wide rib.
3. Profile Depth: 1-1/2 inches.
4. Design Uncoated-Steel Thickness: As indicated.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.4 COMPOSITE FLOOR DECK

A. Composite Steel Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 30, with the minimum section properties indicated, and with the following:

1. Galvanized Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33, G60 zinc coating.
2. Profile Depth: 2 inches and 3 inches.
3. Design Uncoated-Steel Thickness: As indicated.
4. Span Condition: Triple span or more.

2.5 NON-COMPOSITE FORM DECK

- A. Non-composite Steel Form Deck: Fabricate ribbed-steel sheet non-composite form-deck panels to comply with "SDI Specifications and Commentary for Non-composite Steel Form Deck," in SDI Publication No. 30, with the minimum section properties indicated, and with the following:
 - 1. Galvanized Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33, G60 zinc coating.
 - 2. Profile Depth: 2 inches and 3 inches.
 - 3. Design Uncoated-Steel Thickness: As indicated.
 - 4. Span Condition:
 - a. Typically: Triple span or more.
 - b. At Entrance Slabs: Single span unless noted otherwise.
 - 5. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.6 ACCESSORIES

- A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
- B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
- C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
- D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
- F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 30 for overhang and slab depth.
- G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck, unless otherwise indicated.
- H. Flat Sump Plate: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.
- I. Galvanizing Repair Paint: ASTM A 780 or SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 INSTALLATION, GENERAL

- A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 30, manufacturer's written instructions, and requirements in this Section.
- B. Install temporary shoring before placing deck panels, if required to meet deflection limitations.
- C. Locate deck bundles to prevent overloading of supporting members.

- D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
- E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
- F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
- G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
- H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
 - 1. Use correct welding heat as required to avoid burning completely through deck and support beams or joists. Welds installed in this fashion will be rejected and repaired, including reinforcement of supporting beams or joists, at the Contractor's expense.
- I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions in order to meet or exceed diaphragm strength obtained by specified welding pattern. Submit proposed mechanical fastening pattern to the Engineer for review prior to deck installation.

3.3 ROOF-DECK INSTALLATION

- A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:
 - 1. Weld Diameter: 3/4 inch, nominal.
 - 2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds as indicated, but not less than 12 inches apart in the field of roof and 6 inches apart in roof corners and perimeter, based on roof-area definitions in FMG Loss Prevention Data Sheet 1-28.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals as indicated, but not exceeding the lesser of 1/3 of the span and as follows:
 - 1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:
 - 1. End Joints: Lapped 2 inches minimum.
- D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld flanges to top of deck. Space welds not more than 12 inches apart with at least one weld at each corner.
 - 1. Install reinforcing channels or zees in ribs to span between supports and weld.
- E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld to substrate to provide a complete deck installation.
 - 1. Weld cover plates at changes in direction of roof-deck panels, unless otherwise indicated.

3.4 FLOOR-DECK INSTALLATION

- A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
 - 1. Weld Diameter: 3/4 inch, nominal.
 - 2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 inches apart, but not more than 18 inches apart.
 - 3. Weld Spacing: Space and locate welds as indicated.
 - 4. Provide powder actuated pins or nails to connect form to supporting foundation walls at entrance slabs.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or 36 inches, and as follows:
 - 1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2inches, with end joints as follows:
 - 1. End Joints: Lapped at non-composite deck.
 - 2. End Joints: Butted at composite deck.
- D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations, unless otherwise indicated.
- E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Construction Manager/Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
 - 1. Compliance standard: ANSI/SDI QA/QC-2011 Standard for Quality Control and Quality Assurance for Installation of Steel Deck.
- B. Field welds will be subject to inspection.
 - 1. Inspector is to note and reject all unsatisfactory puddle welds including those in which excessive welding heat has been used resulting in the deck and/or supporting beams or joists being burnt through.
 - 2. Rejected welds must be repaired including reinforcement of supporting beams or joists, at the Contractor's expense.
 - 3. The final Inspection Report shall note compliance with the specified size, spacing and quality of all puddle welds.
- C. Sidelap connections will be subject to inspection.
 - 1. Inspector is to note and reject all sidelap spacing conditions which do not comply with the specified spacing.
 - 2. Rejected sidelap locations shall be repaired by adding additional sidelap connectors.
 - 3. The final Inspection Report shall note compliance with the specified spacing and quality of all sidelap connections.
- D. Remove and replace work that does not comply with specified requirements.
- E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

- F. Test results and Inspection Reports shall be reported in writing to Architect, Contractor, and Authorities having jurisdiction within 48 hours of testing.

3.6 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 054000 COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior structural and non-structural steel stud framing systems.
 - 2. Interior load-bearing framing systems.
 - 3. Cold-formed steel framing, including:
 - a. Studs (STL STUD-1).
 - b. Furring (STL FURG).
 - 4. Exterior wall and soffit sheathing (GYP SHTG-1).
 - 5. Engineering required to comply with specified performance requirements.
- B. Related Sections:
 - 1. Section 092220 - Non-Structural Metal Framing: For interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.

1.2 ACTION SUBMITTALS

- A. Product Data: For products not specifically listed in the specification, submit manufacturer's technical datasheet indicating compliance with project requirements. For products listed in the specification, submit a list identifying products incorporated into the project. If multiple products of a given type are used, indicate portion of project for which each was used.
- B. Shop Drawings: Submit in accordance with Section 013300.
 - 1. Shop drawings shall be signed and sealed by a qualified Professional Engineer.
 - 2. Show layout, spacings, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining Work.
- C. Delegated Design Submittal and Shop Drawings: Where professional design services or certifications by a qualified Professional Engineer are specifically required of the Contractor by the Contract Documents, submit shop drawings submittal package with the delegated design submittal requirements in accordance with Section 013300 - Submittal Procedures.
- D. Calculations: Upon request from the Architect/Engineer only, Contractor shall submit calculations in accordance with Section 013300 – Submittal Procedures.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each product used on Project,
 - 1. Mill certificates or data indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
 - 2. Testing to be performed by a qualified independent testing agency.
- B. Research Reports: For non-standard cold-formed steel framing, from ICC-ES.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed cold-formed metal framing similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code - Steel."

2. AWS D1.3, "Structural Welding Code - Sheet Steel."

- C. Inspection and Quality Control: Steel framing manufacturer shall provide qualified representative for periodic on-site review of fabrication and installation in accordance with manufacturer's recommendations.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.

PART 2 PRODUCTS

2.1 DESIGN CRITERIA AND PERFORMANCE REQUIREMENTS

- A. Contractor shall engage a qualified Professional Engineer to provide delegated design services in accordance with Section 013300 – Submittal Procedures
- B. Specifications and Standards: Unless more stringent requirements are indicated, comply with AISI S100 and AISI S200 Series.
- C. Structural Performance: Design cold-formed metal framing and connections in accordance with applicable codes and standards, capable of withstanding project design loads, within limits and under conditions indicated, without excessive stress or deflection.
1. Design Loads: Design and construct cold-formed metal framing, including anchorages, to withstand applied loads:
 - a. Dead Loads, Live Loads, and Other Project Loads: As indicated on Construction Documents.
 - b. Wind Loads: Provisions of ASCE 7-10 as shown on Construction Documents.
 2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
 - a. Lateral Deflection of Studs Under Design Loading:
 - 1) Masonry Veneer Backup: Deflection not over $L/600$ of their unsupported height.
 - 2) Metal Panel Veneer Backup: Deflection not over $L/240$ of their unsupported height.
 - b. Vertical Deflection of Joists Under Design Loading:
 - 1) Floor Members: Live Load deflection not over $L/360$ or Total Load Deflection not over $L/240$ of their unsupported length.
 - 2) Ceiling Joist Framing: Vertical deflection of $1/360$ of the span for live loads and $1/240$ for total loads of the span.
 - c. Suspended metal stud framing systems shall support system dead loads, live loads, and wind loads with adequate attachment to main structure without distortion to the anchorage assembly.
 3. Building Movement:
 - a. Structural Support Movement: Design system to accommodate anticipated vertical interstory differential live load deflection of $1/2$ inch minimum upward and downward, in addition to anticipated thermal movement.
 - b. Sidesway Movement: System to accommodate anticipated interstory differential drift of $H/400$ in any horizontal direction.
 - c. Thermal Movement: System to provide for expansion and contraction within system components caused by cycling temperature change without causing detrimental effects to system or components.
 - 1) Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
 4. Connections: Design connections to structure to support own weight and to withstand design loads without damage, deflection, overstressing, failure or other detrimental effects on connections or assembly components.
 - a. Be responsible for design loads tributary to lateral and vertical connections to structural frame in accordance with the work of registered Structural Engineer.

5. Studs and track receiving anchors for other system components such as window and/or louver attachments shall be of adequate strength and gauge to support the loads of these attachments including prying, pullout, and twisting forces caused by eccentric loading conditions.
 6. Bridging: Provide bridging for walls that will be unsheathed.
- D. Fire-Test-Response Characteristics: Where metal framing is part of a fire-resistance-rated assembly, provide framing identical to that of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
1. Fire-Resistance Ratings: Indicated by GA File Numbers in GA-600, "Fire Resistance Design Manual," or by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.

2.2 COLD-FORMED STEEL FRAMING

- A. Steel Sheet for Framing Components: ASTM A 1003, Structural Grade, Type H; with G90 protective zinc coating, and as follows:
1. Grade: ST33H, unless indicated otherwise.
- B. (STL STUD-1) Structural Steel Studs: ASTM C 955, C-shaped stud, punched, with stiffened flanges.
1. Minimum Base-Metal Thickness: 0.0538 inch.
 2. Web Depth: As indicated, and not less than 6 inches.
 3. Flange Width: As indicated, and not less than 1-5/8 inches.
- C. (STL STUD-2) Steel Studs for Interior Load-Bearing Wall: ASTM C 955, C-shaped stud, punched, with stiffened flanges.
1. Minimum Base-Metal Thickness: 0.0538 inch.
 2. Web Depth and Flange Width: As indicated on Structural Drawings.
- D. (STL JOIST-1) Structural Steel Stud Joist: ASTM C 955, C-shaped stud, punched, with stiffened flanges.
1. Grade: ST50H.
 2. Minimum Base-Metal Thickness: 0.0538 inch.
 3. Web Depth: As indicated, and not less than 6 inches.
 4. Flange Width: As indicated, and not less than 1-5/8 inches.
- E. (STL FURG-1) Hat-Shaped Furring Channels: ASTM C 955.
1. Minimum Base-Metal Thickness: 0.0428 inch.
 2. Depth: As shown.
- F. (STL FURG-2) Z-Shaped Furring: ASTM C 955.
1. Minimum Base-Metal Thickness: 0.0329 inch.
 2. Depth: As shown.
- G. Steel Track: ASTM C 955, U-shaped track, of web depths indicated, unpunched, with straight flanges, complying with , and as follows.
1. Minimum Base-Metal Thickness: 0.0538 inch.
 2. Web Depth: As indicated, and not less than 6 inches.
 3. Flange Width: As indicated, and not less than 1-1/4 inches.
- H. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads, and as follows.
1. Minimum Uncoated-Steel Thickness: 0.0566 inch, unless otherwise indicated or necessary for engineering.
 2. Flange Width: Minimum of 2 inches vertical deflection of 1/2 inch. Provide greater width for greater deflections or use double deflection track. Studs and track receiving anchors for other system components such as window and louver attachments shall be of adequate strength and gauge to support the loads of these attachments including prying, pullout, and twisting forces caused by eccentric loading conditions

- I. Framing Accessories: Fabricate steel-framing accessories from steel sheet, ASTM A 1003, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
 1. Supplementary framing.
 2. Bracing, bridging, and solid blocking.
 3. Web stiffeners.
 4. Anchor clips.
 5. End clips.
 6. Foundation clips.
 7. Gusset plates.
 8. Stud kickers, knee braces, and girts.
 9. Joist hangers and end closures.
 10. Hole reinforcing plates.
 11. Backer plates.
 12. Backer strap at termination bar.

2.3 ANCHORS, CLIPS, AND FASTENERS

- A. Steel Shapes and Clips: ASTM A36, zinc coated by hot-dip process according to ASTM A123.
- B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed, headless, hooked, bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A153, Class C.
- C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to resist applied loads as determined in accordance with ACI 318 Appendix D. Expansion anchors shall have a ICC-ES report indicating compliance with the governing code.
- D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.
- E. Mechanical Fasteners: Corrosion-resistant-coated, self-drilling, self-threading steel drill screws.
 1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.
- F. Welding Electrodes: Comply with AWS standards.
- G. Vertical Deflection Clips (Drift Clips): Manufacturer's standard bypass clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

2.4 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A780.
- B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C1107, with fluid consistency and 30-minute working time.
- C. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.5 SHEATHING AND ACCESSORIES

- A. (GYP SHTG-2) Glass-Mat-Faced Sheathing: ASTM C1177, Type X, 5/8 inch thick, high-moisture resistant board with water-resistant silicone or wax treated gypsum core and fiberglass reinforced faces manufactured in accordance with ASTM C1177 specially designed for exterior substrate.
 1. Manufacturers and Products:
 - a. Georgia-Pacific Gypsum: DensGlass Fireguard Sheathing.
 - b. Certainteed: GlasRoc Sheathing.

- c. USG: Securock Glass-Mat Sheathing.
 - d. National Gypsum: eXP Extended Exposure Sheathing.
 - e. Temple-Inland.
- B. Silicone Emulsion Sealant for Glass-Mat Gypsum Sheathing: Product complying with ASTM C834, compatible with sheathing tape and gypsum sheathing, recommended by sheathing and tape manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
- 1. Product: Subject to compliance with requirements, provide "Elmer's Siliconized Acrylic Latex Caulk" by Borden, Inc.
- C. Glass-Fiber Sheathing Tape for Glass-Mat Gypsum Sheathing: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads per inch, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing board and with a history of successful in-service use.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Perma-Tite Tape--PGM 207A; PermaGlas-Mesh, Inc.
 - b. Quik-Tape; Quik-Tape, Inc.
- D. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
- 1. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.

2.6 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
- 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by no fewer than three exposed screw threads.
 - 4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
- C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
- 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 - 2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Grout bearing surfaces uniform and level to ensure full contact of bearing flanges or track webs on supporting concrete or masonry construction.

3.3 INSTALLATION, GENERAL

- A. Cold-formed metal framing may be shop- or field-fabricated for installation, or it may be field assembled.
- B. Install cold-formed steel framing according to ASTM C1007 and to manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 - 1. Bolt or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.
- D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
 - 1. Cut framing members by sawing or shearing; do not torch cut.
 - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths, unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.
- H. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.
- I. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
 - 1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.4 FRAMING INSTALLATION

- A. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 - 1. Install single deep-leg deflection tracks and anchor to building structure.
 - 2. Install vertical deflection clips to structure and to studs, one per stud at each floor and roof level.
 - 3. Install continuous top and bottom tracks sized to match studs.
 - 4. Align tracks accurately and securely anchor at corners and ends, and at spacings as follows:
 - 5. Anchor Spacing: As shown on Shop Drawings.
- B. Squarely seat studs against webs of top and bottom tracks. Fasten both flanges of studs to top and bottom tracks. Space studs as follows:
 - 1. Stud Spacing: As required to meeting loading requirements but not over 16 inches on center.

- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
- D. Align studs vertically where wall-framing continuity is interrupted by floor framing. Where studs cannot be aligned, continuously reinforce track to transfer loads.
- E. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.
- F. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
 - 1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings.
 - 2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
- G. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
 - 1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.
- H. Install horizontal bridging in stud system, spaced apart at dimension indicated on Shop Drawings. Fasten at each stud intersection.
 - 1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of two screws into each flange of the clip angle.
- I. Install steel sheet diagonal bracing straps to both stud flanges, terminate at and fasten to reinforced top and bottom tracks. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
- J. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 JOIST INSTALLATION

- A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.
- B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.
 - 1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches.
 - 2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections as indicated on Shop Drawings.
 - 3. Joist Spacing: As shown.
- C. Frame openings with built-up joist headers consisting of joist and joist track, or another combination of connected joists if indicated.
- D. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement, or as indicated.
 - 1. Install web stiffeners to transfer axial loads of walls above.
- E. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as follows:
 - 1. Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.
 - 2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.

- F. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.
- G. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.6 GYPSUM SHEATHING INSTALLATION

- A. General: Install gypsum sheathing to comply with GA-253 and manufacturer's written instructions.
 - 1. Coordinate sheathing installation with flashing and joint sealant installation so these materials are installed in the sequence and manner that prevent exterior moisture from passing through completed exterior wall assembly.
 - 2. Do not bridge building expansion joints with sheathing; cut and space edges to match spacing of structural support elements.
 - 3. Cut boards at penetrations, edges, and other obstructions of the work; fit tightly against abutting construction, except provide a 3/8 inch setback where non-load-bearing construction abuts structural elements.
 - 4. Apply fasteners so screw heads bear tightly against face of sheathing boards but do not cut into facing.
- B. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent boards without forcing. Abut ends of boards over centers of studs, and stagger end joints of adjacent boards not less than one stud spacing. Attach boards at perimeter and within field of board to each steel stud.
 - 1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.
- C. Vertical Installation: Install 48 inch wide gypsum sheathing boards vertically with vertical edges centered over flanges of steel studs. Abut ends and edges of each board with those of adjacent boards. Screw-attach boards at perimeter and within field of board to each steel stud at approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.
- D. Seal or tape sheathing joints according to sheathing manufacturer's written instructions.
 - 1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
 - 2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

3.7 FIELD QUALITY CONTROL

- A. Testing and Inspection: Owner will engage qualified special inspectors in accordance with Section 014533.
 - 1. Qualifications: The minimum category of special inspector required to perform services outlined below are noted by qualifications in parentheses. The definitions of the categories of special inspector are included in Section 014533.
- B. Cold Formed Metal Framing Welds: Visually inspect 100% of welds for specified length, size and continuity in accordance with AWS D1.3 for metal less than 1/8 inch in thickness, for work designed as a structural element. (Technical I)
- C. Testing agency shall conduct and interpret tests and state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom.
- D. Provide access for testing agency to places where cold formed metal framing work is being fabricated or produced so that inspection and testing can be accomplished.
- E. Testing agency may inspect cold formed metal framing before shipment; however, Owner's Representative reserves right at any time before final acceptance, to reject material not complying with requirements.

- F. Correct deficiencies in work which inspections and test reports have indicated to be not in compliance with requirements when directed in writing by Architect or Owner.

3.8 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 054300 METAL SUPPORT ASSEMBLIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Slotted metal channel framing assemblies for support of equipment (MSA).
 - 2. Support system engineering and fabrication.
- B. Coordination:
 - 1. Section 054000 - Cold-Formed Metal Framing:

1.2 ACTION SUBMITTALS

- A. Product Data: For each system and component.
- B. Shop Drawings:
 - 1. Indicate plan layout, sections, typical elevations, anchoring methods.
- C. Delegated Design Submittal and Shop Drawings: Where professional design services or certifications by a qualified Professional Engineer are specifically required of the Contractor by the Contract Documents, submit shop drawings submittal package with the delegated design submittal requirements in accordance with Section 013300 - Submittal Procedures.

1.3 INFORMATIONAL SUBMITTALS

- A. Calculations: Upon request from the Architect/Engineer only, Contractor shall submit calculations in accordance with Section 013300 - Submittal Procedures.

1.4 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Not less than 10 years' experience in the actual production of specified products. Upon request, manufacturer shall submit proof of continuing quality assurance program and shall demonstrate experience with projects of similar size and scope.
- B. Manufacturer Quality Assurance Program: Upon request, manufacturer to submit mill test reports for material furnished to assure that material meets specification criteria.
 - 1. Specifications for Design of Cold Formed Steel Structural Members: AISI.
 - 2. Manual of Steel Construction: AISC.
 - 3. Welding: AWS

1.5 PROJECT CONDITIONS

- A. Field Measurements: Installer shall take field measurements to assure that support system can be installed without interference with structural framing, mechanical systems, plumbing, lighting, fire suppression systems or other obstructions.
- B. Coordination: Coordinate with architectural reflected ceiling plan and mechanical and electrical Drawings. Area directly above support shall be free and clear of obstructions to ensure the support system does not interfere with or dislocate other items. Coordinate with other contractors as required.

PART 2 PRODUCTS

2.1 STRUCTURAL DESIGN REQUIREMENTS

- A. Contractor shall engage a qualified Professional Engineer to provide delegated design services in accordance with Section 013300 - Submittal Procedures

- B. Structural Performance:
 1. Design metal framing channels, connectors, and all accessories to support loads indicated in the Construction Documents.
 2. Design connectors to transfer loads from metal support assemblies to supporting members.
- C. Design and construct system, including anchorage, to withstand forces imposed on support system from equipment attachment.
- D. Verify loading, deflection criteria and tolerance requirements of equipment or construction being supported.
- E. Verify bolting plate assembly requirements with equipment supplier.

2.2 PRODUCTS AND MANUFACTURERS

- A. Source Limitations: Provide complete support system, including framing members, hangers, fittings and hardware from single source from single manufacturer.
- B. Products and Manufacturers: Provide Basis of Design or equivalent products as approved by Architect by one of the following manufacturers:
 1. Cooper B-Line, Inc., a Division of Eaton
 2. Flex-Strut.
 3. G-Strut by Gregory Industries.
 4. Haydon Corporation.
 5. Hilti USA.
 6. Power-Strut.
 7. Unistrut Corporation.
 8. Wesanco, Inc..
- C. (MSA-1) Metal Support Assembly: Shop- or field-fabricated assembly consisting of continuous slot, bolted metal framing channels and all associated fittings and hardware.
- D. Locations/Applications Schedule:
 - 1.
- E. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
 1. Basis of Design: P1000 by Unistrut Corporation.
 2. Galvanized steel, ASTM A 653, structural steel, Grade 33, with G90 coating.
 3. Material: Cold-rolled steel, ASTM A 1008, structural steel, Grade 33; hot-dip galvanized after fabrication.
- F. Fittings: Formed or stamped steel nuts, bolts, washers and other devices designed to fit into channel slot and prevent slipping along channel.
 1. Fitting Material: ASTM A575, A576, A635 or A36.
 2. Bolt & Nut Material: Regular hexagon-head bolts, ASTM A307 Grade A; hex nuts ASTM A563; and where indicated, flat washers.
 3. Plain Washers: Round carbon steel, ASME B 18.22.1
 4. Lock Washers: Helical, spring type, carbon steel, ASME B 18.21.1
- G. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- H. Finishes:
 1. Concealed Framing Members: Electro-Deposition Acrylic Coating, ASTM B117 or Pre-galvanized per ASTM A653 G90.
 2. Concealed Fittings: Hot-dipped galvanized per ASTM A123 or A153.
 3. Exposed Framing Members: Electro-Deposition Acrylic Coating, ASTM B117.
 - a. Color: White (or other) to match suspended acoustical ceiling grid system color.
 4. Exposed Fittings: Finish to match exposed framing members.

2.3 INSTALLATION ACCESSORIES

- A. Embedded Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.
- B. Power-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- C. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- D. Expansion Anchors: Anchor bolt and sleeve assembly (carbon-steel components zinc-plated to comply with ASTM B633) with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E488, conducted by a qualified independent testing agency.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.
 - 1. Do not proceed until unsatisfactory conditions have been corrected.
- B. Field Measurements: Take field measurements; report interferences with structural framing, mechanical systems, or other obstructions to Architect/Engineer and general contractor.

3.2 INSTALLATION

- A. Install equipment support system and accessories in accordance with reviewed Shop Drawings and manufacturer's printed instructions.
- B. Set system accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Tighten all connections to their recommended torque values.
- C. Provide anchorage devices and fasteners for securing equipment support systems to in-place construction.
 - 1. Attach to structure by means of imbedded concrete inserts, through bolts or by direct attachment to structural framing.

3.3 INSTALLED WORK

- A. Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to not less than 1-1/2 inches.
- C. Protection: Protect installed work from damage and alteration for remainder of construction.

END OF SECTION

SECTION 055000 METAL FABRICATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Miscellaneous metal, except structural steel framing as specified in Section 051200 and defined as structural steel in AISC "Code of Standard Practice":
 - a. Steel framing and supports for ceiling-hung toilet compartments, partitions, overhead doors and grilles, countertops, mechanical and electrical equipment, and other applications where framing and supports are not specified in other Sections.
 - b. Miscellaneous steel trim including steel angle corner guards, steel edgings, loading-dock edge angles, and support for elevator door sills.
 - c. Loose bearing and leveling plates for applications where they are not specified in other Sections.
2. Metal Fabrications:
 - a. Ships' ladder (MET FAB-1).
 - b. Straight Ladders (MET FAB-2) and (MET FAB-3).
 - c. Bollards (MET FAB-5).
 - d. Catwalk (MET FAB-14).
 - e. Lighting Support Rails (MET FAB-15).
 - f. Shelf Angles.
3. Surface preparation and priming for finishes on ferrous metal, performed in shop:
 - a. Surface preparation;
 - b. Galvanizing;
 - c. Shop primer for paint;
 - d. Shop primer for high-performance coatings;
4. Engineering required to comply with specified performance requirements.

1.2 ACTION SUBMITTALS

- A. Shop Drawings: Indicate dimensions, description of materials and finishes; include plans, elevations, sections, and details of metal stairs and ladders and their connections and reactions to building structure. Show anchorage and accessory items. Provide templates for anchors and bolts specified for installation under other Sections, and installation procedures, including specific requirements indicated.
 1. Construction details, sizes of metal sections, thickness of metals, profiles, attachments, dimensions and field joints, method of support from structure, and finishes.
 2. Work to be built-in or provided by other Sections.
 3. Welding: Indicate welded connections, both shop and field, using standard AWS welding symbols. Indicate net weld lengths.
- B. Delegated Design Submittal and Shop Drawings: Where professional design services or certifications by a qualified Professional Engineer are specifically required of the Contractor by the Contract Documents, submit shop drawings submittal package with the delegated design submittal requirements in accordance with Section 013300 - Submittal Procedures.
- C. Calculations: Upon request from the Architect/Engineer only, Contractor shall submit calculations in accordance with Section 013300 - Submittal Procedures.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

- A. Fabricator Qualifications: Firm experienced in producing metal stairs similar to those indicated for this Project and with record of successful in-service performance, as well as sufficient production capacity to product required units.
- B. Installer Qualifications: Arrange for metal stairs specified in this Section to be fabricated and installed by same firm.
- C. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code-Sheet Steel."
- D. Mockup: Prior to commencing fabrication of final work, build mockup of (MET FAB-25) to demonstrate constructability and execution of fabrication.

1.5 HANDLING AND STORAGE

- A. Load, unload, handle and store work in manner that will not bend, deform or otherwise damage metal. Store so metal and shop coats will not be subject to weather or moisture, store off ground and provide covering for metal in storage.

1.6 COORDINATION

- A. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, temples, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 PRODUCTS

2.1 STRUCTURAL PERFORMANCE REQUIREMENTS

- A. Contractor shall engage a qualified Professional Engineer to provide delegated design services in accordance with Section 013300 - Submittal Procedures
- B. Structural Performance of Ships' Ladders: Provide metal stairs and ship's ladders capable of withstanding following structural loads without exceeding allowable design working stress of materials involved, including anchors and connections. Apply each load to produce maximum stress in each component of metal stairs.
 - 1. Treads and Platforms of Metal Stairs: Capable of withstanding uniform live load of 100 lb/sq ft or concentrated load of 300 lbs. on area of 4 sq. in., whichever produces greater stress.
 - 2. Stair Framing: Capable of withstanding stresses resulting from loads specified above in addition to stresses resulting from railing system loads.
 - 3. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch, whichever is less.
- C. Structural Performance of Straight Ladders: Provide side rails and rungs capable of withstanding following structural loads without exceeding the allowable working stress of materials and connections.
 - 1. Single concentrated live load of 250 lbf applied at point that will cause the maximum stress in the member being considered.
 - 2. Distributed live load of 30 lbf per foot applied along the height of the ladder.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

2.2 MATERIALS AND ACCESSORIES

- A. Materials, General:
 - 1. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Steel:

1. Steel Pickets, Plates, Shapes and Bars: ASTM A36; square corners and edges.
2. Bars: Hot-rolled, carbon steel complying with ASTM A 29, Grade 1010; square corners and edges.
3. Steel Tubing: ASTM A500 or ASTM A 513; square corners and edges.
4. Steel Pipe: ASTM A53, Type S, Grade A, standard weight and extra-strong as required, galvanized and plain.
5. Galvanized Sheet Metal: ASTM A526 or A527, G-90 coating designation with both sides of metal prime painted.
6. Galvanizing: ASTM A123, hot dip galvanizing, thickness Grade 55 unless otherwise indicated.

C. Welding Materials: Applicable AWS D1.1, type required for materials being welded.

D. Fasteners: Provide zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 25 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required

1. Bolts, Nuts and Washers: High strength steel hexagon-head bolts, ASTM A307, Grade A; with hex nuts, ASTM A563; and, where indicated, flat washers.
2. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, load equal to 6 times load imposed when installed in unit masonry and equal to 4 times load imposed when installed in concrete, as determined by testing per ASTM E488, conducted by qualified independent testing agency.
 - a. Material: Carbon-steel components zinc-plated to comply with ASTM B633, Class Fe/Zn 5.
3. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47 malleable iron or ASTM A 27 cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329

E. Concrete Materials and Properties: Comply with requirements in Section 033000 - Cast-in-Place Concrete.

2.3 METAL FABRICATIONS AND ASSEMBLIES

A. (MET FAB-1) Ships Ladders: Fabricate steel ships ladders of open-type construction with channel or plate stringers, pipe and tube railings, and bar grating treads, unless otherwise indicated. Provide brackets and fittings for installation.

1. Comply with ANSI A14.3, unless otherwise indicated.
2. Angle of Inclination: 60 degree angle from floor.
3. Treads 24 inches long and approximately 6 inches wide.
4. Handrails: 1-1/2 inch diameter pipe or tube.
5. Finish: Shop-applied primer.

B. (MET FAB-2) Interior Steel Ladder:

1. Comply with ANSI A14.3, unless otherwise indicated.
2. Height as indicated on Drawings.
3. Siderails: Continuous, 3/8 by 2-1/2 inch steel flat bars, with eased edges. Space siderails 16 inches apart, unless otherwise indicated.
4. Rungs: 3/4 inch diameter steel bars at 12 inches on center.
5. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
6. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
7. Support each ladder at top and bottom, and not more than 60 inches o.c. with welded or bolted steel brackets.
8. Finish: Shop-applied primer.

C. (MET FAB-3) Exterior Steel Roof Ladder:

1. Comply with ANSI A14.3, unless otherwise indicated.
2. Height and profile as indicated on the Drawings.

3. Siderails: Continuous, 3/8 by 2-1/2-inch steel flat bars, with eased edges, and curved over the top to provide support. Space siderails 16 inches apart, unless otherwise indicated.
 4. Rungs: 3/4 inch diameter steel bars at 12 inches (305 mm) on center.
 5. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 6. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
 7. Support each ladder at top and bottom, and not more than 60 inches o.c. with welded or bolted steel brackets.
 8. Galvanize exterior roof ladders, including brackets and fasteners.
 9. Ladder Safety Cages: Provide safety cages for ladders over 20 feet, in accordance with OSHA requirements.
 - a. Fabricate ladder safety cages to comply with ANSI A14.3. Assemble by welding or with stainless-steel fasteners.
 - b. Provide primary hoops at tops and bottoms of cages and spaced not more than 20 feet o.c. Provide secondary intermediate hoops spaced not more than 48 inches o.c. between primary hoops.
 - c. Fasten assembled safety cage to ladder rails and adjacent construction by welding or with stainless-steel fasteners, unless otherwise indicated.
- D. (MET FAB-5) Bollards Imbedded in Concrete: Hot-dipped galvanized steel pipe, 6 inch dia., 7 feet long, concrete filled, crowned cap, prime paint finish only the exposed top 3'-6".
1. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.
 2. Fill bollards solidly with concrete, mounding top surface to shed water.
 3. Finish: Shop-prime for high-performance coating (HPC).
- E. (MET FAB-14) Catwalk:
- F. (MET FAB-15) Lighting Support Pipe Rail: ASTM A 53, Schedule 80, 1-1/2 inch i.d.; and stand-offs fabricated from steel shapes, as shown.
1. Finish: Shop-prime for painted finish (PT).
- G. Shelf Angles and Relief Angles: Fabricate shelf angles and relief angles from steel angles of sizes indicated and for attachment to steel and concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.
1. Provide mitered and welded units at corners.
 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.
 3. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
 4. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.
 5. Finishes:
 - a. Exterior Walls, Concealed: Galvanized.
 - b. Exterior Walls, Exposed: Galvanized, high-performance coating (HPC).
 - c. Interior: Shop-applied primer and field-painted (PT).

2.4 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
 - 1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.
- J. Miscellaneous Framing and Supports: Fabricate from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
 - 1. Fabricate units from slotted channel framing where indicated.
 - 2. Furnish inserts for units installed after concrete is placed.

2.5 FINISHING

- A. Comply with NAAMM'S "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- B. Stainless Steel:
 - 1. Finish designations prefixed by AISI shall conform with the system established by the American Iron and Steel Institute for designating finishes for stainless steel sheet.
 - 2. Bright, Directional Polish: AISI No. 4 finish.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
 - 1. Hot Dip Galvanizing for Shapes and Plates: ASTM A123, for galvanizing both fabricated and unfabricated iron and steel products made of uncoated rolled, pressed, and forged shapes, plates, bars, and strips 0.0299 inch thick and heavier.
 - 2. Hot Dip Galvanizing for Bolts and Similar Threaded Fasteners: ASTM A153, for galvanizing steel and iron hardware.
 - 3. Galvanizing Touch-Up Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed products:
 - 1. Exterior (SSPC Zone 1B): SSPC SP 6/NACE No. 3, "Commercial Blast Cleaning."

2. Interior (SSPC Zone 1A): SSPC SP 3, "Power Tool Cleaning."
 3. Do not apply primer to galvanized surfaces.
- E. Shop-Applied Primer and Field-Applied High-Performance Coating (HPC): Coordinate with Section 099600 - High-Performance Coatings.
- F. Shop-Applied Primer and Field-Applied Paint (PT) or Epoxy Paint (PTE): Coordinate with Section 099000 - Painting.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which miscellaneous metal items are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Provide setting drawings, diagrams, templates, instructions and directions for installation of anchorages, such as concrete inserts, anchor bolts, and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.
- B. Provide anchorage devices and fasteners where necessary for securing miscellaneous metal items to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws and other connectors as required.
- C. Perform cutting, drilling and fitting required for installation of miscellaneous metal items. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry or similar construction.
- D. Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind joints smooth and touch up shop paint coat. Do not weld, cut or abrade surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.
- E. Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, and methods used in correcting welding work.
- F. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide minimum dry film thickness of 2 mils.

3.3 INSTALLATION OF METAL BAR GRATINGS

- A. General: Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.
- B. Attach removable units to supporting members with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.
- C. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting as indicated above.

END OF SECTION

SECTION 055005
MISCELLANEOUS METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Steel framing and supports for ceiling-hung toilet compartments.
 - 2. Steel framing and supports for operable partitions.
 - 3. Steel framing and supports for countertops.
 - 4. Steel framing and supports for mechanical and electrical equipment.
 - 5. Steel framing and supports for applications where framing and supports are not specified in other Sections.
 - 6. Shelf angles.
 - 7. Loose bearing and leveling plates.
 - 8. Metal ladders.
- B. Products furnished, but not installed, under this Section include the following:
 - 1. Loose steel lintels.
 - 2. Anchor bolts, steel pipe sleeves, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
- C. Related Sections include the following:
 - 1. Division 03 Section "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, wedge-type inserts and other items indicated to be cast into concrete.
 - 2. Division 04 Section "Unit Masonry" for installing loose lintels, anchor bolts, and other items indicated to be built into unit masonry.
 - 3. Division 05 Section "Structural Steel Framing."
 - 4. Division 05 Section "Metal Stairs."
 - 5. Division 05 Section "Pipe and Tube Railings."
 - 6. Division 05 Section "Decorative Metal Railings."

1.3 DEFINITIONS

- A. Action Submittals: Mandatory submittals by the Sub-Contractor which require action on the part of the General Contractor, Construction Manager and Design Professional.
 - 1. General Contractor and Construction Manager: Review, Stamp and Forward to the Design Professional.
 - 2. Design Professional: Review, Stamp and Return to the General Contractor or Construction Manager.
- B. Informational Submittals: Mandatory submittals by the Sub-Contractor to the General Contractor, Construction Manager and Design Professional which are not returned but kept by each for their project record.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Ladders: Provide ladders capable of withstanding the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.

1.5 ACTION SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Shop Drawings: Show fabrication and installation details for metal fabrications.
 - 1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
 - 2. Provide templates for anchors and bolts specified for installation under other Sections.

1.6 INFORMATIONAL SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data: For the following:
 - 1. Paint products.
 - 2. Grout.
- C. Welding certificates.

1.7 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code--Steel."
 - 2. AWS D1.3, "Structural Welding Code--Sheet Steel."

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions.
 - 2. Provide allowance for trimming and fitting at site.

1.9 COORDINATION

- A. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- B. Coordinate installation of steel weld plates and angles for casting into concrete that are specified

in this Section but required for work of another Section. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Products: Subject to compliance with requirements, provide one of the products specified.
 - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.3 FERROUS METALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Steel Tubing: ASTM A 500, cold-formed steel tubing.
- C. Steel Pipe: ASTM A 53/A 53M, standard weight (Schedule 40), unless another weight is indicated or required by structural loads.
- D. Slotted Channel Framing: Cold-formed metal channels with continuous slot complying with MFMA-3.
 - 1. Size of Channels: 1-5/8
 - 2. Depth of Channels: As required by field and framing conditions.
 - 3. Material: Galvanized steel complying with ASTM A 653/A 653M, commercial steel, Type B, with G90 coating.
 - 4. Nominal thickness: As required by field and framing conditions.

2.4 FASTENERS

- A. General: Unless otherwise indicated, provide Type 304 or 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at exterior walls. Provide stainless-steel fasteners for fastening aluminum. Select fasteners for type, grade, and class required.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F 1554, Grade 36.
 - 1. Provide hot-dip or mechanically deposited, zinc-coated anchor bolts where item being fastened is indicated to be galvanized.
- D. Lag Bolts: ASME B18.2.1.
- E. Wood Screws: Flat head, ASME B18.6.1.
- F. Plain Washers: Round, ASME B18.22.1.
- G. Lock Washers: Helical, spring type, ASME B18.21.1.
- H. Undercut or Adhesive Anchors: Anchor bolt and sleeve assembly with capability to sustain,

without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

1. Material for Anchors in Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.
2. Material for Anchors in Exterior Locations: Alloy Group 1 or 2 stainless-steel bolts complying with ASTM F 593 and nuts complying with ASTM F 594.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79.
 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- E. Non-shrink, Nonmetallic Grout: Factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.6 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work true to line and level with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts, unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring

devices to secure metal fabrications rigidly in place and to support indicated loads.

1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.7 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction, unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction retained by framing and supports. Cut, drill, and tap units to receive hardware, hangers, and similar items.
 1. Fabricate units from slotted channel framing where indicated.
 2. Furnish inserts if units are installed after concrete is placed.
- C. Fabricate supports for ceiling-hung toilet compartments from continuous steel beams or channels of sizes indicated with attached bearing plates, anchors, and braces as indicated.
- D. Fabricate supports for operable partitions from continuous steel beams of sizes indicated with attached bearing plates, anchors, and braces as indicated. Drill bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.
- E. Galvanize miscellaneous framing and supports where exposed to the elements such as at the Building Exterior as well as interior locations which are humid or corrosive.

2.8 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Weld adjoining members together to form a single unit where indicated.
- B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span but not less than 8 inches, unless otherwise indicated.
- C. Galvanize loose steel lintels located in exterior walls.

2.9 SHELF ANGLES

- A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.
 1. Provide mitered and welded units at corners.
 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. Galvanize shelf angles located in exterior walls.
- D. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.10 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
- B. Galvanize plates after fabrication.

2.11 METAL LADDERS

- A. General:
 - 1. Comply with ANSI A14.3, unless otherwise indicated.
 - 2. For elevator pit ladders, comply with ASME A17.1.
 - 3. Space siderails 18 inches apart, unless otherwise indicated.
 - 4. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted brackets, made from same metal as ladder.
- B. Steel Ladders:
 - 1. Siderails: Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.
 - 2. Rungs: 3/4-inch- diameter steel bars.
 - 3. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 - 4. Provide non-slip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
 - 5. Galvanize exterior ladders and interior ladders, where indicated, including brackets and fasteners.

2.12 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal fabrications after assembly.

2.13 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
 - 1. ASTM A 123/A 123M, for galvanizing steel and iron products.
 - 2. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
- B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed metal fabrications:
 - 1. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interiors (SSPC Zone 1A): SSPC-SP 3, "Power Tool Cleaning."
- C. Shop Priming: Apply shop primer to uncoated surfaces of metal fabrications, except those with galvanized finishes and those to be embedded in concrete, sprayed-on fireproofing, or masonry, unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag bolts, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- F. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for operable partitions securely to and rigidly brace from building structure.
- C. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.
 - 1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.
- D. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installing Bearing and Leveling Plates" Article.
 - 1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.3 INSTALLING BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have

been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.

1. Use non-shrink grout, either metallic or nonmetallic, in concealed locations where not exposed to moisture; use non-shrink, nonmetallic grout in exposed locations, unless otherwise indicated.
2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

END OF SECTION

SECTION 055100 METAL STAIRS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior exit stair assemblies (MET STAIR-1).
 - 2. Engineering required to comply with specified performance requirements.

1.2 ACTION SUBMITTALS

- A. Shop Drawings: Indicate dimensions, description of materials and finishes; include plans, elevations, sections, and details of metal stairs and ladders and their connections and reactions to building structure. Show anchorage and accessory items. Provide templates for anchors and bolts specified for installation under other Sections, and installation procedures, including specific requirements indicated.
 - 1. Construction details, sizes of metal sections, thickness of metals, profiles, attachments, dimensions and field joints, method of support from structure, and finishes.
 - 2. Work to be built-in or provided by other Sections.
 - 3. Welding: Indicate welded connections, both shop and field, using standard AWS welding symbols. Indicate net weld lengths.
 - 4. Delegated Design Submittal and Shop Drawings: Where professional design services or certifications by a qualified Professional Engineer are specifically required of the Contractor by the Contract Documents, submit shop drawings submittal package with the delegated design submittal requirements in accordance with Section 013300 - Submittal Procedures.
- B. Calculations: Upon request from the Architect/Engineer only, Contractor shall submit calculations in accordance with Section 013300 - Submittal Procedures.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.4 QUALITY ASSURANCE

- A. Fabricator Qualifications: Firm experienced in producing metal stairs similar to those indicated for this Project and with record of successful in-service performance, as well as sufficient production capacity to product required units.
- B. Installer Qualifications: Arrange for metal stairs specified in this Section to be fabricated and installed by same firm.
- C. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code-Sheet Steel."

1.5 COORDINATION

- A. Coordinate installation of anchorages for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 PRODUCTS

2.1 STRUCTURAL PERFORMANCE REQUIREMENTS

- A. Contractor shall engage a qualified Professional Engineer to provide delegated design services in accordance with Section 013300 - Submittal Procedures
- B. Structural Performance of Stairs: Provide metal stairs and ship's ladders capable of withstanding following structural loads without exceeding allowable design working stress of materials involved, including anchors and connections. Apply each load to produce maximum stress in each component of metal stairs.
 - 1. Treads and Platforms of Metal Stairs: Capable of withstanding uniform live load of 100 lb/sq ft or concentrated load of 300 lbs. on area of 4 sq. in., whichever produces greater stress.
 - 2. Stair Framing: Capable of withstanding stresses resulting from loads specified above in addition to stresses resulting from railing system loads.
 - 3. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch, whichever is less.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

2.2 METAL STAIRS

- A. (MET STAIR-1) Metal Stair Assemblies: Provide complete systems including stringers, framing, stair treads, platforms, decks, landings, connections and other components necessary for the support and installation of fabricated assemblies.
 - 1. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Commercial Class, unless more stringent requirements are indicated.
 - 2. Stringers: Fabricate stringers of steel plates and channels, as indicated. Provide closures for exposed ends of channel stringers.
 - a. Weld stringers to headers; weld framing members to stringers and headers.
 - 3. Subplatforms: Construct platforms of steel plate or channel framing members as indicated on Drawings and as needed to comply with performance requirements.
 - 4. Fabrication of Stairs and Landings:
 - a. Fabricate stairs with closed risers and treads of pan construction.
 - b. Form treads and risers from sheet stock.
 - c. Properly secure tread pans to stringers with clip angles welded in place.
 - d. Form stringers of rolled steel channels or steel plate sections, as required to meet performance requirements. Weld fascia plates of minimum 14 gage thick sheet stock across channel toes, where applicable.
 - e. Form landings of sheet stock. Reinforce underside of landings with angles, tees as required.
 - f. Fabricate stairs, landings and component connections to support live loads of minimum 100 lb./sq.ft. with deflection of stairs and landings not exceeding 1/360 of span when underside is to be finished with gypsum board and 1/240 of span when underside is not being finished.

2.3 MATERIALS

- A. Materials, General:
 - 1. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
 - 2. Recycled Content of Ferrous Metals: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- B. Steel:

1. Rolled-Steel Floor Plate: ASTM A 786 rolled from plate complying with ASTM A 36 or ASTM A 283, Grade C or D.
 2. Sections, Plates, Sheet and Bars: Structural quality steel; ASTM A36 and ASTM A440 where high strength steel is required.
 3. Steel Plates, Shapes and Bars: ASTM A36.
 4. Steel Tubing: ASTM A501 or ASTM A500.
 5. Steel Pipe: ASTM A53, Type S, Grade A, standard weight and extra-strong as required, galvanized and plain.
 6. Galvanized Sheet Metal: ASTM A526 or A527, G-90 coating designation with both sides of metal prime painted.
 7. Galvanizing: ASTM A123, hot dip galvanizing, thickness Grade 55 unless otherwise indicated.
- C. Welding Materials: Applicable AWS D1.1, type required for materials being welded.
- D. Fasteners: Provide zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 25 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required
1. Bolts, Nuts and Washers: High strength steel hexagon-head bolts, ASTM A307, Grade A; with hex nuts, ASTM A563; and, where indicated, flat washers.
 2. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, load equal to 6 times load imposed when installed in unit masonry and equal to 4 times load imposed when installed in concrete, as determined by testing per ASTM E488, conducted by qualified independent testing agency.
 - a. Material: Carbon-steel components zinc-plated to comply with ASTM B633, Class Fe/Zn 5.
 3. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47 malleable iron or ASTM A 27 cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329
- E. Concrete Materials and Properties: Comply with requirements in Section 033000 - Cast-in-Place Concrete for normal-weight, ready-mixed concrete with minimum 28-day compressive strength of 3000 psi, unless higher strengths are indicated.

2.4 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

- H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
 - 1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.
- J. Miscellaneous Framing and Supports: Fabricate from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
 - 1. Fabricate units from slotted channel framing where indicated.
 - 2. Furnish inserts for units installed after concrete is placed.

2.5 FINISHING

- A. Comply with NAAMM'S "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- B. Stainless Steel:
 - 1. Finish designations prefixed by AISI shall conform with the system established by the American Iron and Steel Institute for designating finishes for stainless steel sheet.
 - 2. Bright, Directional Polish: AISI No. 4 finish.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
 - 1. Hot Dip Galvanizing for Shapes and Plates: ASTM A123, for galvanizing both fabricated and unfabricated iron and steel products made of uncoated rolled, pressed, and forged shapes, plates, bars, and strips 0.0299 inch thick and heavier.
 - 2. Hot Dip Galvanizing for Bolts and Similar Threaded Fasteners: ASTM A153, for galvanizing steel and iron hardware.
 - 3. Galvanizing Touch-Up Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
 - 4. At railings to be hot-dipped galvanized after fabrication: Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- D. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed products:
 - 1. Exterior (SSPC Zone 1B): SSPC SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interior (SSPC Zone 1A): SSPC SP 3, "Power Tool Cleaning."
 - 3. Do not apply primer to galvanized surfaces.
- E. Shop-Applied Primer and Field-Applied Paint (PT) or Epoxy Paint (PTE): Coordinate with Section 099000 - Painting.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which miscellaneous metal items are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Provide setting drawings, diagrams, templates, instructions and directions for installation of anchorages, such as concrete inserts, anchor bolts, and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.
- B. Provide anchorage devices and fasteners where necessary for securing miscellaneous metal items to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws and other connectors as required.
- C. Perform cutting, drilling and fitting required for installation of miscellaneous metal items. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry or similar construction.
- D. Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind joints smooth and touch up shop paint coat. Do not weld, cut or abrade surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.
- E. Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, and methods used in correcting welding work.
- F. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide minimum dry film thickness of 2 mils.

3.3 INSTALLING METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.
- G. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."
 - 1. Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.
- H. Install precast concrete treads with adhesive supplied by manufacturer.

END OF SECTION

SECTION 055200 METAL RAILINGS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Guard rails and handrails for exit stair assemblies (MET RAIL).

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.3 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Manufacturer's product lines of mechanically connected railings.
 - 2. Railing brackets.
 - 3. Grout, anchoring cement, and paint products.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- C. Delegated-Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Handrails and Railings: Provide handrails and railings capable of withstanding following structural loads without exceeding allowable design working stress of materials for handrails, railings, anchors, and connections:
 - 1. Top Rail of Guards: Capable of withstanding following loads applied as indicated:
 - a. Concentrated load of 200 lbf applied at any point and in any direction.
 - b. Linear load of 50 plf applied in any direction, not concurrent with above load.
 - 2. Handrails Not Serving as Top Rails: Capable of withstanding following loads applied as indicated:
 - a. Concentrated load of 200 lbf applied at any point and in any direction.
 - b. Linear load of 50 plf applied in any direction, not concurrent with above load.

2.2 STEEL HANDRAILS

- A. Configurations: As indicated on Drawings and as follows:
 - 1. MET RAIL-1: Exit stair handrail, steel pipe, PT-11 finish
 - 2. MET RAIL-2: Exit stair guardrail, steel tube, PT-11 finish
 - 3. MET RAIL-3: Wall-mounted steel pipe handrail, PT-11 finish
 - 4. MET RAIL-6: Under-stair barrier rail; steel bar, PT-11 finish
 - 5. MET RAIL-7: Gate, self-closing, steel bar, PT-11 finish
- B. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- C. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
- D. Tubing: ASTM A 500 (cold formed) or ASTM A 513.
- E. Pipe: ASTM A 53, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 - 1. Provide galvanized finish for exterior installations and where indicated.
- F. Plates, Shapes, and Bars: ASTM A 36.
- G. Cast Iron: Either gray iron, ASTM A 48, or malleable iron, ASTM A 47, unless otherwise indicated.

2.3 AUXILLIARY MATERIALS

- A. Fasteners for Ungalvanized-Steel Railings: Plated steel fasteners complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 for zinc coating.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Post-Installed Anchors: Capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
- D. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

- F. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

2.4 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water. Provide weep holes where water may accumulate.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- I. Form Changes in Direction as Follows: As detailed.
- J. Close exposed ends of railing members with prefabricated end fittings.
- K. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.
- L. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
- M. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

2.5 FINISHING

- A. Comply with NAAMM'S "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed products:
 - 1. Exterior (SSPC Zone 1B): SSPC SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Interior (SSPC Zone 1A): SSPC SP 3, "Power Tool Cleaning."
 - 3. Do not apply primer to galvanized surfaces.

- C. Shop-Applied Primer and Field-Applied High-Performance Coating (HPC): Coordinate with Section 099600 - High-Performance Coatings.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which miscellaneous metal items are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Provide setting drawings, diagrams, templates, instructions and directions for installation of anchorages, such as concrete inserts, anchor bolts, and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.
- B. Provide anchorage devices and fasteners where necessary for securing miscellaneous metal items to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws and other connectors as required.
- C. Perform cutting, drilling and fitting required for installation of miscellaneous metal items. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry or similar construction.
- D. Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind joints smooth and touch up shop paint coat. Do not weld, cut or abrade surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.
- E. Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, and methods used in correcting welding work.
- F. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide minimum dry film thickness of 2 mils.

3.3 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION

SECTION 057000 ORNAMENTAL METAL

1.1 SUMMARY

- A. Section Includes: (ORN MET)

1.2 COORDINATION

- A. Coordinate installation of anchorages for ornamental metal.
 - 1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
 - 2. Deliver such items to Project site in time for installation.
- B. Coordinate work directly with other trades as necessary to insure proper fitting, joining to or clearance of their work.
 - 1. Furnish or exchange shop drawings and resolve required dimensions and details.
 - 2. Ship work to others as necessary and pay cost of such shipping.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Indicate component details, materials, finishes, connecting, and joining methods, and relationship to adjoining work.
 - 2. Include plans, elevations, sections, and details of screen panels and accessories:
 - 3. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories. Provide graphic elements and layout for each sign.
- B. Samples: Submit samples of each ORN MET material and finish.

1.4 QUALITY ASSURANCE

- A. Fabricator and Installer Qualifications: Fabricators and Installers that are well-established and experienced fabricator and installer, acceptable to Owner and Architect, employing skilled workers to custom-fabricate and install Work similar to that required for this Project, whose Work meets or exceeds quality requirements specified, and whose completed Work has a record of successful in-service performance.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code - Steel."
 - 2. AWS D1.2, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6, "Structural Welding Code - Stainless Steel."
- C. Mockups and Fabrication Samples: Build mockups to verify selections made under Sample submittals to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Fabricate and install mockup of assembly using materials indicated for the completed Work.
 - 2. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 - 3. Demonstrate the proposed range of aesthetic effects and workmanship, installation and finishes.
 - 4. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 - 5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
- D. Pre-Fabrication and Pre-Installation Conference: Prior to commence of fabrication, conduct a conference to ensure understanding of Construction Documents, design intent, installation, and coordination of Work by multiple subcontractors.

1. Attendees: Contractor, Architect, installers, fabricators, and manufacturer's representatives who are involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow.
2. Suggested Agenda Items:
 - a. Contract Documents comprehension; design intent; alternates; related RFI's.
 - b. Fabricator's and Manufacturer's written recommendations; materials options; required performance results.
 - c. Submittals; shop drawings; samples; mockups.
 - d. Delineation of responsibilities for deferred design, fabrication and installation; coordination with other Work.
 - e. Installation procedures; possible conflicts; compatibility issues.
 - f. Delivery of materials and fabrications ready for installation; scheduling of deliveries; space and access limitations; protection of adjacent Work.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store decorative metal in a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
- B. Deliver and store cast-metal products in wooden crates surrounded by enough packing material to ensure that products are not cracked or otherwise damaged.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.

1.7 WARRANTY

- A. Warranty: Fabricator and installer agree to repair or replace components of ornamental metal assemblies that do not comply with requirements or that fail in materials or installation quality within specified warranty period.
 1. Failures including but not limited to the following:
 - a. Deterioration resulting from U.V. and weather exposure,
 - b. Structural failures including rupturing, cracking, or puncturing.
 - c. Deterioration of materials beyond normal weathering.
 2. Provide warranty covering panel fabrication defects and loss of specified physical and performance properties, when panels are installed in accordance with manufacturer's requirements.
 3. Provide warranty covering cost of panel removal and installation of replacement panels.
 4. Warranty Period: 10 years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: 10 years from date of Substantial Completion.

PART 1 PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. General: Provide ornamental metalwork composed of metals of forms and types which comply with requirements of referenced standards and which are free from surface blemishes where exposed to view in finished unit.
 1. Exposed to view surfaces exhibiting pitting, seam marks, roller marks, □oil canning,□ stains, discolorations or other imperfections on finished units are not acceptable.

- B. Refer to Drawings for configurations.
- C. Not Permitted: Vibration harmonics; noises caused by movement of components; vibration transmitted to other building elements; loosening, weakening, or fracturing of attachments or components of system.
 - 1. Testing of the mock-up in a qualified acoustic testing laboratory may be conducted at the Owner's discretion.
- D. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1.

2.2 INTERIOR FABRICATIONS

- A. (ORN MET-1) Fin-Tube Enclosure: Prefinished, aluminum plate, ASTM B 209; partially perforated as shown; custom formed to shape as shown on Drawings; concealed attachment.
 - 1. Aluminum Sheet: 0.125 inch thick, tension-leveled, smooth aluminum sheet, ASTM B 209.
 - 2. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.
 - b. Anodize after perforation.
 - 3. Perforation:
 - a. Pattern: Hole shape, size, and spacing as selected by Architect.
 - b. Extent of Pattern: Partial, as shown.
 - c. Minimum Open Area: 45 percent.
- B. (ORN MET-3) Flush Formed Steel Panel with Blackened Finish: Custom-fabricated, flush formed panels with return at walls & ceilings, as shown on Drawings; protective clear coating w/matte sheen; adhered or concealed fastening.
 - 1. Panel Configuration:
 - a. Profile: Flush
 - b. Depth: 1 inch, unless shown otherwise.
 - c. Sizes: As indicated on Drawings.
 - 2. Steel Sheet: 22 ga. steel sheet, ASTM A 36.
 - 3. Finish: Special blackened finish, matching Architect's sample, and clear protective coating.
 - a. Clear Coating: As recommended by fabricator to be compatible with blackened finish, for the purpose of protecting finish from rubbing off when contacted.
 - 4. Coordinate with Section 064000 - Architectural Woodwork for WD FAB-1 sliding pocket doors with ORN MET-3 facing.
- C. (ORN MET-4) Expanded Metal Ceiling Panels: Formed expanded [steel/aluminum] panels w/return,
 - 1. ___" sheet thickness, ___"x___" openings,
 - 2. shop-applied painted finish TBD,
 - 3. Backer:
 - a. fire-rated MDF backer
 - b. painted finish
- D. (ORN MET-5) Wall Base: Metal angle,
 - 1. 1/4" thick,
 - 2. metal plate, 16 ga.
 - 3. welds ground smooth
 - 4. PT-11

2.3 EXTERIOR SCRIM ASSEMBLY WITH DIMENSION LETTERS

- A. ORN MET-6: Stainless steel mesh, ___ by GKD, gold colored _____ finish TBD; anchored at top & bottom to continuous concealed steel supports; two-part (front & back), laser-cut stainless steel plate letters, concealed clipped to mesh
- B. Dimension Letters: Two-piece (front and back) cut-out characters with uniform faces; square-cut, smooth edges; precisely formed lines and profiles; and as follows:
 - 1. Material: Sheet or plate stainless steel.

2. Thickness: **[0.125 inch] [0.25 inch]** .
3. Integral Stainless-Steel Finish: [No. 4] [No. 8] [Match Architect's sample] [As selected by Architect from full range of industry finishes].
4. Mounting: Concealed, stainless-steel clip through mesh.
5. Character Height: As indicated.
6. Typeface: To be determined.
7. Message: <insert building name>

C. ALTERNATE: Illuminated LED mesh by GKD

2.4 ACCESSORIES

- A. Fasteners: Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless otherwise indicated.
 1. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.
 2. Provide flat-head machine screws for exposed fasteners unless otherwise indicated.
- B. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.
- C. Structural Anchors: For applications indicated to comply with certain design loads, provide anchors with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
 1. Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
 2. Stainless Steel Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.
- D. Sound-Deadening Materials:
 1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
 2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.
 3. Gaskets: As required to seal joints in decorative formed metal and to prevent vibration; as recommended by fabricator.
- E. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of metal to be welded, complying with applicable AWS specifications, and as required for color match, strength and compatibility in fabricated items.
- F. Nongaseous grout complying with CE CRD C621. Provide grout specifically recommended by manufacturer for interior and exterior applications of type specified in this section.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 FABRICATION

- A. General: Provide ornamental metalwork composed of metals of forms and types which comply with requirements of referenced standards and which are free from surface blemishes where exposed to view in finished unit.
 1. Exposed to view surfaces exhibiting pitting, seam marks, roller marks, oil-canning, stains, discolorations or other imperfections on finished units are not acceptable.
 2. Refer to Drawings for configurations.
- B. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

1. Verify dimensions on site prior to shop fabrication.
- C. Form ornamental metalwork to required shapes and sizes, with true curves, and angles. Provide components in sizes and profiles indicated, but not less than required to comply with requirements indicated for structural performance.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
- E. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
- F. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- G. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- H. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.
- I. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- J. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as needed to receive finish hardware, screws, and similar items unless otherwise indicated.
- K. Nonwelded Connections: Fabricate railing systems and handrails for interconnection of members by means of concealed mechanical fasteners and fittings unless otherwise indicated.
 1. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
- L. Welded Connections: Comply with AWS for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded joints of welding flux, and dress on exposed and contact surfaces.
 1. Weld corners and seams continuously and in accordance with recommendations of AWS.
 2. Grind exposed welds smooth and flush, to match and blend with adjoining surface.
 3. Discoloration of finished surfaces is not acceptable.
- M. Dissimilar Surfaces:
 1. Bituminous Paint: Coat metals in contact with concrete, masonry, or other dissimilar surfaces with bituminous paint.
 2. Primer: Prime metals in contact with dissimilar metals with primer.
- N. Finish exposed surfaces to smooth, sharp, well-defined lines and arises.
- O. Form panel miters and copes to be tight fitting, square and in true alignment. Close exposed corners and seams by forming procedures or by welding, brazing or soldering and grinding smooth and flush on exposed surfaces. For exposed metal finishes, use filler metals that will blend and match sheet metal being joined. Comply with recommendations of AWS and NAAMM for welding, brazing and soldering.
- P. Consider clearances with adjacent materials and provide correct procedures for erection. Provide supports, anchoring devices, anchor bolts, screws, clips, seals and gaskets, and other accessories.

2.6 FINISHING

- A. Comply with NAAMM'S "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

- B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed products:
 - 1. Interior (SSPC Zone 1A): SSPC SP 3, "Power Tool Cleaning."
- C. Shop-Applied Primer and Field-Applied High-Performance Coating (HPC): Coordinate with Section 099600 - High-Performance Coatings.
- D. Shop-Applied Primer and Field-Applied Paint (PT) or Epoxy Paint (PTE): Coordinate with Section 099000 - Painting.

PART 2 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions and directions for installation of items having integral anchors which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

3.3 INSTALLATION

- A. Provide anchorage devices and fasteners where needed to secure decorative metal to in-place construction.
- B. Perform cutting, drilling, and fitting required to install decorative metal. Set products accurately in location, alignment, and elevation, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.
- C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.
- D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.
- F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
 - 1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
- G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding and requirements for welding and for finishing welded connections in "Fabrication, General" Article. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
- H. Field Brazing: Comply with requirements for brazing and for finishing brazed connections in "Fabrication, General" Article. Braze connections that are not to be left as exposed joints but cannot be shop brazed because of shipping size limitations.
- I. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.4 INSTALLED WORK

- A. Final Cleaning of Bronze: Apply second coat of microcrystalline wax at time of Substantial Completion.
- B. Final Cleaning, Waxing, Polishing of Bronze: Wax and polish to high-gloss sheen.
- C. Protect finishes of ornamental metalwork from damage during construction period by use of temporary protective coverings approved by ornamental metalwork fabricator. Remove protective covering at time of Substantial Completion.
- D. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items which cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units as required.

END OF SECTION

SECTION 057200 ORNAMENTAL RAILINGS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Custom ornamental handrail and guardrail assemblies (ORN RAIL).
2. Engineering required to comply with specified performance requirements.

1.2 ACTION SUBMITTALS

A. Product Data: Submit product data for each product used in ornamental metalwork, including finishing materials and methods.

B. Shop Drawings:

1. Indicate design criteria and applied loads for which the ornamental stair systems have been designed.
2. Clearly indicate magnitude and location of all forces transferred to the primary building structure by cold-formed metal framing system. Loads shall be provided as unfactored values determined in accordance with ASCE 7-10.
3. Indicate fabrication and installation of ornamental metalwork, including plans, elevations and details of components and attachments to other units of work. Indicate materials, profiles of each ornamental metalwork member and fitting, joinery, finishes, fasteners, anchorages and accessory items.
4. Include setting drawings, templates and directions for location and installation of items and anchor bolts and other anchorage devices to be installed as unit of work of other sections.
5. Shop drawings shall be signed and sealed by the qualified Professional Engineer responsible for their preparation.
6. Deferred-Design Submittal: Submit shop drawings to Authority Having Jurisdiction for approval prior to commencing with this work on-site.

C. Fabrication Samples: Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Samples need not be full height. Prepare samples of metal of same alloy and gauge to be used for Work. Fabrication shall include the following components:

1. All vertical and horizontal rails.
2. Welded and brazed connections.
3. Fittings and brackets.
4. Infill panels.
5. Informational Submittals

D. Installer's Certificate: Signed by manufacture certifying the welders comply with requirements specified under Quality Assurance article.

E. Calculations: Signed engineering calculations prepared by the qualified Professional Engineer shall be submitted upon written request from the Architect/Engineer. Calculations shall indicate structural integrity of members, anchors, fasteners and connections to building structure, in accordance with specified criteria.

1. Engineering Responsibility: Calculations shall be reviewed for stated design assumptions, general compliance to specified requirements, and forces imposed on structure. The accuracy of the design calculations shall be the sole responsibility of the Contractor's Professional Engineer.
2. Submitted calculations that have not been requested by the Architect/Engineer shall be returned without review.

1.3 QUALITY ASSURANCE

- A. Fabricator Qualifications: Firm experienced in successfully producing ornamental metalwork similar to that indicated for this Project, with sufficient production capacity to produce required units without causing delay in Work.
- B. Installer Qualifications: Arrange for installation of ornamental metalwork specified in this section by same firm that fabricated unit.
- C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of Minnesota and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of ornamental metal railings that are similar to those indicated for this Project in material, design, and extent
- D. Qualify welding processes and welding operators in accordance with the following:
 - 1. AWS D1.1 Structural Welding Code - Steel.
 - 2. AWS D1.6, "Structural Welding Code - Stainless Steel."
 - 3. Certify that each welder employed in unit of work of this section has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.
 - 4. Testing for recertification is Contractor's responsibility.
- E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build full-height mockups, not less than 24 inches long; consisting of two posts, top rail, infill panels and anchorage components; for each of the following ORN RAIL configurations:
 - a. ORN RAIL-3.
 - b. ORN RAIL-4.
 - c. ORN RAIL-5.
 - d. ORN RAIL-6.
 - e. ORN RAIL-7.
 - f. ORN RAIL-8.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.5 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not suit structural performance requirements.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design railings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1. Structural Performance of Handrails and Railings: Provide handrails and railings capable of withstanding the following structural loads without exceeding allowable design working stress of materials for railings, anchors, and connections:
 2. Top Rail of Guards:
 - a. Concentrated load of 200 lbf applied at any point and in any direction.
 - b. Linear load of 50 plf applied in any direction, not concurrent with above load.
 3. Handrails Not Serving as Top Rails:
 - a. Concentrated load of 200 lbf applied at any point and in any direction.
 - b. Linear load of 50 plf applied in any direction, not concurrent with above load.
 4. *Railing at Audio Porch (ORN RAIL-__)*:
 - a. *Capable of withstanding dead load of countertop, support brackets and audio equipment, plus concentrated rail loads specified above.*
 - b. *Capable of withstanding dead load of countertop, support brackets and audio equipment, plus a concentrated person load of 250 lbf applied downward at any point on countertop; not concurrent with other concentrated rail loads specified above.*
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

2.2 ORNAMENTAL RAILINGS

- A. Dimensions and Configurations: As shown on Drawings and as described below.
- B. (ORN RAIL-3) Wood Handrails: Solid hardwood (WD-1) handrail, 1-1/2 inch outside diameter, on continuous steel bar spline; attached with brackets.
 1. Wood Type and Finish: Hardwood (WD-1) as specified in Section 064000 - Architectural Woodwork.
 2. Mounting Brackets: Solid steel rod, 3/8-inch diameter; welded, ground smooth. Welded attachment to posts.
- C. ORN RAIL-4: Handrail, wall-mounted, steel bar, PT-__ finish
- D. ORN RAIL-6: Handrail, floor-mounted (sleeve), steel bar posts & [pipe] top rail, PT-__ finish
- E. ORN RAIL-7: Removable pit guardrail, floor-mounted, concealed steel framing, interlocks, WD FAB-3 cladding, solid WD-2 cap
- F. ORN RAIL-8: Removable lift guardrail, floor-mounted to stage lift platform, steel bar, PT-__ finish

2.3 MATERIALS

- A. Materials, General:
 1. Metal Surfaces: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
 2. Recycled Content of Ferrous Metals: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- B. Steel:
 1. Steel Pickets, Plates, Shapes and Bars: ASTM A36; square corners and edges.
 2. Bars: Hot-rolled, carbon steel complying with ASTM A 29, Grade 1010; square corners and edges.
 3. Steel Tubing: ASTM A500 or ASTM A 513; square corners and edges.
 4. Steel Pipe: ASTM A53, Type S, Grade A, standard weight and extra-strong as required, galvanized and plain.
 5. Perforated Metal Plate: Cold-rolled steel sheet, ASTM A 1008, or hot-rolled steel sheet, ASTM A 1011, commercial steel Type B.
 - a. Thickness:
 - b. Perforations: 1/4-inch holes 3/8 inch o.c. in staggered rows.

- C. Aluminum Channel for Glass Guardrails: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
 - 1. Extruded Bars and Shapes, ASTM B 221, Alloy 6063-T5/T52.
- D. Hardwood for Railings: (WD-1) as specified in Section 064000 - Architectural Woodwork.

2.4 ACCESSORIES

- A. Fasteners and Anchors: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
 - 1. Stainless-Steel Components: Type 304 stainless-steel fasteners.
 - 2. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed.
 - 3. Galvanized-Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
 - 4. Dissimilar Metals: Provide Type 304 stainless-steel fasteners where indicated and where dissimilar metals are connected. Where dissimilar metals are connected, provide neoprene spacer or washer for isolation.
- B. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- C. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- D. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. At exterior locations, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.5 FINISHES

- A. Shop-Applied Primer: Coordinate and comply with the following applicable specifications Sections for primer materials, surface preparation and application:
 - 1. Paint (PT) or Epoxy Paint (PTE): Section 099000 - Painting.
 - 2. High-Performance Coating (HPC): Section 099600 - High-Performance Coatings.
- B. Powder-Coat Finish: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:
 - 1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 - 2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
 - 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils.
 - 4. Color: Custom color as selected by Architect..

2.6 FABRICATION

- A. Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
 - 1. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
 - 2. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

3. Form work true to line and level with accurate angles and surfaces.
- B. Connections: Fabricate railings with welded connections to greatest extent possible, and mechanical connections as necessary for fabrication and installation.
1. Welded Connections: Comply with AWS for recommended practices in shop welding. Weld behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded joints of flux, and dress exposed and contact surfaces.
 - a. Grind exposed welds smooth and flush, to match and blend with adjoining surface.
 - b. Discoloration of finished surfaces is not acceptable.
 2. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - a. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
 - b. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
 3. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- C. Finishing: Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise shown and specified.
1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
 2. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 3. Fabricate with exposed surfaces smooth, square, and free of surface blemishes, including pitting, rust and scale seam marks, roller marks, rolled trade names, and roughness.
 - a. Remove blemishes by filling, grinding, or by welding and grinding, prior to cleaning, treating, and shop priming.
 - b. Comply with fabrication requirements, including tolerance limits, of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for Architecturally Exposed Structural Steel.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide necessary anchors, plates, angles, hangers and struts as required for connecting stairs to the structure.
- D. Ensure alignment with adjacent construction. Coordinate with related work to ensure no interruption in installation.
- E. Perform necessary cutting and altering for installation of work of other sections. Do not perform any other additional cutting without review of Architect.
- F. Field bolt and weld to match standard of shop bolting and welding. Hide bolts and screws whenever possible. Where not hidden, use flush countersunk fastenings, unless indicated otherwise. Make mechanically fastened joints flush hairline butted. Grind welds smooth and flush.

3.3 INSTALLED WORK

- A. Glass Railings: Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
- B. Cleaning:
 - 1. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.
 - 2. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
 - 3. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
 - 4. Clean wood rails by wiping with a damp cloth and then wiping dry.
- C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099000 - Painting or Section 099600 - High Performance Coatings.
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
- E. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- F. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 061000 ROUGH CARPENTRY

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Concealed carpentry work not specified in other Sections and not used as exposed work, including:
1. Miscellaneous wood framing and concealed wood blocking and nailers (WD BLKG-1).
 2. Wood sheathing (WD SHTG).
 3. Preservative treatment (PPT).
 4. Fire-retardant treatment (FRT).
 5. Anchors nails, bolts, and screws.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1.3 INFORMATIONAL SUBMITTALS

- A. Certificates:
1. Submit letter certifying that lumber is kiln-dried to 15 - 19 percent moisture content, well-seasoned, grade marked, trademarked and free from warp.
 2. Submit letter from treatment plant certifying that chemicals and process used and net amount of salts retained are in conformance with specified standards
 3. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - a. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 4. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - a. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
 - b. Submit letter certifying that fire-retardant treatment materials comply with requirements herein stated and local authorities having jurisdiction and that treatment will not bleed through finished surfaces.

1.4 QUALITY ASSURANCE

- A. Lumber Standard:
1. Comply with U.S. Dept. of Commerce Product Standard PS 20, including moisture content and actual sizes related to indicated nominal sizes.
 2. Comply with Standard Grading Rules No. 16 for West Coast Lumber.
 3. Comply with American Softwood Lumber Standard and with application grading rules of inspection agencies certified by American Lumber Standard Committee's (ALSC) Board of Review.
 4. Comply with lumber producer's inspection agency grading rules certified as conforming to "National Grading Rules for Dimension Lumber" established under Section 10 of PS 20 and local code standard.
- B. Plywood Standard: Comply with U. S. Product Standard PS 1-74/ANSI A199.1; and Grades and Specifications, Performance-Rated Panels and Specifications by APA – The Engineered Wood Association local code standard. Each construction and industrial panel shall bear APA trademark and appropriate identification.

- C. Mat-Formed Particleboard: Comply with ANSI A208.1. Provide particleboard bearing NPA grade marking.
- D. Lumber: Factory-mark each piece of lumber with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying agency, grade, species, moisture content at time of surfacing and mill.
 - 1. Seasoning: Kiln-dry lumber to 15 - 19 percent moisture content, well-seasoned, grade marked, trademarked and free from warp.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Inspect wood materials for conformance to specified grades, species, and treatment at time of delivery to Project site.
 - 1. Reject and return unsatisfactory wood materials.
- B. Provide facilities for handling and storage of materials to prevent damage to edges, ends and surfaces.
- C. Keep carpentry materials dry.
 - 1. Store lumber and plywood in stacks with provision for air circulation within stacks.
 - 2. Protect bottom of stacks against contact with damp surfaces. Protect exposed materials against weather.
 - 3. Stack materials minimum 12 inches off ground, or if on concrete slab-on-grade, minimum 1-1/2 inches, fully protected from weather.
 - 4. Provide for air circulation within and around stacks and under temporary coverings.
- D. Place spacers between each bundle of pressure treated materials treated with waterborne chemicals to provide air circulation.

1.6 PROJECT CONDITIONS

- A. Environmental Impact: Products containing following materials will not be permitted:
 - 1. Urea Formaldehyde.
 - 2. Chromium in wood pressure treatment products.
 - 3. Arsenic.

1.7 COORDINATION

- A. Coordination: Fit carpentry work to other work; scribe and cope as required for accurate fit, show location of furring, nailers, blocking, grounds and similar supports to allow attachment of other work.
 - 1. Coordinate work directly with other subcontractors as necessary to insure proper fitting, joining or to clearances of other work. Obtain templates as required to insure proper fitting.

PART 2 PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

- A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
 - 3. Provide dressed lumber, S4S, unless otherwise indicated.
- B. Maximum Moisture Content of Lumber: 15 percent maximum, unless otherwise indicated.

- C. Engineered Wood Products: Provide engineered wood products acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.
 - 1. Allowable Design Stresses: Provide engineered wood products with allowable design stresses, as published by manufacturer, that meet or exceed those indicated. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.
 - 2. Engineered Wood Products, General: Products shall [contain no urea formaldehyde.] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]

2.2 LUMBER

- A. Dimension Lumber: Finished 4 sides, 15 percent maximum moisture content. Mark lumber "S-DRY".
 - 1. Light Framing: Construction grade Douglas Fir or Southern Pine, appearance grades where exposed.
 - 2. Boards: Construction grade.
- B. (WD BLKG-1) Miscellaneous Lumber: Lumber for support or attachment of other construction, including rooftop equipment curbs and support bases, cant strips, bucks, nailers, blocking, furring, grounds, stripping and similar members.
 - 1. Grade: No. 3 or standard grade.
 - 2. Moisture content of 19 percent maximum for lumber items not specified to have wood preservative treatment.

2.3 WOOD SHEATHING

- A. (WD SHTG-1) Concealed Sheathing: APA, C-D touch-sanded plugged. Exposure 1, 3/4 inch, FRT, square edge, Douglas Fir.
- B. (WD SHTG-2) Concealed Sheathing: APA C-D EXT touch-sanded plugged. Exposure Exterior, 3/4 inch, PPT, square edge, Douglas Fir.
- C. (WD SHTG-3) Concealed Sheathing: APA EXT, Rated Structural 1, touch sanded, Exposure 1, 23/32 or 3/4 inch depending on availability, square edge, Douglas Fir.
- D. (WD SHTG-4) Concealed Sheathing: APA, C-D touch-sanded plugged. Exposure 1, 1/2 inch, FRT, square edge, Douglas Fir.
- E. (WD SHTG-5) Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde, with Class B or Class A Flame Spread Rating; 3/4-inch thick.
- F. (WD SHTG-9): 3/4" plywood, FRT, PT finish
- G. (WD SHTG-12) Pegboard: 1/4-inch tempered hardboard.

2.4 PRESERVATIVE PRESSURE TREATMENT

- A. Preservative Pressure Treatment: Comply with AWWA Standard U1, Use Category (UC2).
 - 1. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
 - 2. Preservative Chemicals: Alkaline Copper Quaternary (ACQ) or other waterborne preservative type as listed in Section 4 of AWWA Standards U1, excluding those that contain arsenic or chromium; and acceptable to authorities having jurisdiction.
 - a. Field-Applied Treatment: Provide same preservative chemical type as used for factory treatment, or compatible with factory treatment, for application to field-cut surfaces of preservative-treated lumber.
 - 3. Extent of Treatment: Wood nailers and blocking in contact with cementitious materials, and plywood at parapets, and as indicated on Drawings.

2.5 FIRE-RETARDANT TREATMENT AND TREATED MATERIALS

- A. General: Provide materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
 - 1. Extent of Treatment: Treat all rough carpentry, unless otherwise indicated.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
 - 1. Complete fabrication prior to treatment to minimize cutting and jointing after treatment.
 - 2. Coat surfaces cut after treatment with heavy brush coat of same fire-retardant chemical.
 - 3. After treatment: Material shall be dried to an average moisture content of 15 percent or less for plywood and 19 percent or less for other lumber.
 - 4. Do not use twisted, warped, bowed or otherwise damaged or defective pieces.
- C. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency. Each piece to bear:
 - 1. UL FR-S rating (flame spread and smoke developed less than 25),
 - 2. Complying with extended 30-minute tunnel test, ASTM E84 or UL 723
 - 3. Meet interior Type A requirements in AWPA Standard C-20 for lumber and C-27 for plywood.
 - 4. And shall be registered for use as a wood preservative by the U.S. Environmental Protection Agency.

2.6 ROUGH HARDWARE, FASTENERS AND ANCHORAGE DEVICES

- A. Extent: Provide rough hardware required, including nails, screws, bolts, lag screws, cinch anchors, toggle bolts, shot anchors and similar items.
- B. General: Provide proper size and type for use intended and for materials to be fastened.
 - 1. Install adequate hardware to insure substantial and positive anchorage.
 - 2. Use galvanized for exterior locations and high humidity locations and treated wood, plain finish for other interior locations.
 - 3. Fasteners, hangers and bearing plates used on or in connection with treated wood shall comply with IBC 2304.9.
- C. Nails: Conform to materials standards established under FS FF-N-105.
 - 1. At exterior work, use galvanized steel nails.
 - 2. Refer to IBC Nailing Schedule for quality and size.
- D. Mechanical Fasteners for Wood Decking: Swaneze stainless steel decking screws.

2.7 TAPES, SEALANTS AND MISCELLANEOUS

- A. Adhesive: As recommended by manufacturer of product to be applied for surface material to give permanent adhesion, with material remaining flat to back surface. Comply with local code standards.
 - 1. Comply with APA AFG-01 for adhesive for use with type of construction panel indicated.
 - 2. Exterior: Phenolic resin waterproof glue.
 - 3. Interior: Water-resistant casein and other adhesives suited for particular use.
- B. Expansion Material: Dow Chemical Ethafoam. Use where expansion joint material is indicated and not installed under other sections.
- C. Concealed Sealants: Polyisobutylene sealant
- D. Soft Gasket or Urethane Insulation:
 - 1. Product: "Shok-Pak" flexible semi- closed cell urethane.
 - a. Distributor: Brock-White Company, Minneapolis, Minnesota.

2. Provide 1/2 inch thicker than joint where foam tape, foam gasket and urethane insulation is indicated and not provided under other sections.
 3. Location: At gaps between framing and other materials.
- E. Sill Sealer Gaskets:
1. Glass-fiber resilient insulation, fabricated in strip form for use as a sill sealer.
 2. Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to suit width of sill members indicated.

PART 3 EXECUTION

3.1 FURRING, STRIPPING, GROUNDS AND BACKING

- A. Install plumb, level, true and square. Anchor substantially for permanent installation. Set and shim to straight edge so finish wall is true and straight.
- B. Provide grounds and backing as shown or required. Blocking as required or shown on drawings for plumbing fixtures, brackets, drapery rods, window and door frames, built-in furniture and other woodwork, both interior and exterior.
- C. Allow for finishes and shim out to form level surfaces. Verify ground sizes and locations before installation.

3.2 INSTALLATION OF SHEATHING

- A. Install plywood in accordance with Plywood Construction Guide by APA – The Engineered Wood Association.
- B. Place roof and wall sheathing with end joints staggered. Secure sheets over firm bearing.
 1. Maintain minimum 1/16 inch and maximum 1/8 inch spacing between joints on walls. Place perpendicular to framing members.
- C. Comply with roofing manufacturer's requirements for sheathing attachments.

3.3 SITE TREATMENT OF WOOD MATERIALS

- A. Comply with AWPA M4 for applying field treatment to field-cut surfaces of preservative-treated lumber.
 1. Apply preservative treatment in accordance with manufacturer's printed instructions.
 2. Allow preservative to dry prior to erecting members.

END OF SECTION

SECTION 064000 ARCHITECTURAL WOODWORK

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Prefinished wood materials (WD-1), (WD-2) and (WD-5).
 - 2.
 3. Wood-Veneer-Faced Cabinetwork.
 4. Plastic-Laminate-Faced Cabinets and Countertops (PLAM).
 5. Solid Surface Fabrications (SSF).
 6. Wall-Mounted Work Surfaces, Shelves on Brackets and Standards.
 7. Installation Accessories, Anchors and Adhesives.
 8. Requirements for Fabrication and Installation.

1.2 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate work directly with Work of other Sections as necessary to ensure proper fitting, joining or required clearances of other work.
1. Exchange and coordinate shop drawings and templates.
 2. Coordinate fabrication schedule.
 3. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that cabinets can be supported and installed as indicated.
- B. Veneer Selection Conference: Prior to Pre-Fabrication Conference, conduct conference at veneer supplier's site at which veneer flitches are made available to Architect to select actual flitches to be used on Project for the purpose of establishing acceptable range of aesthetic qualities, identifying flitches of consistent appearance and designating groups of flitches for specific applications and locations on Project.
1. Attendees: Veneer supplier, woodwork Fabricator and Installer, wood door Manufacturer, Contractor, Construction Manager and Architect.

1.3 ACTION SUBMITTALS

- A. Product Data: For each material and product to complete Work, including; solid hardwood, panel and veneer wood products, core materials, high-pressure decorative laminate, solid-surfacing, fire-retardant-treated materials, cabinetwork and hardware, components for wood fabrications, accessories and finishing materials.
- B. Shop Drawings: Indicate dimensions, descriptions of materials and finishes, general construction, specific modifications, component connections, anchorage methods, hardware, and installation procedures, including specific requirements where indicated.
1. Coordinated Shop Drawings: Coordinate Shop Drawings with shop drawings of other Sections of related Work.
 2. Indicate materials and wood species, component profiles, fastening, jointing, details, finishes and accessories.
 3. For *(WD FAB-1,4,5,6,8)* and other Work to receive matched wood veneers, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 4. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 5. Indicate special requirements for field assembly and installation, including field connection locations, required clearances and tolerances.
 6. Indicate provisions for attachment of architectural woodwork and other components performed by others in the field.
 7. Indicate locations of plumbing and electrical service field conditions.

- C. Samples: Submit full-size units or Samples of sizes indicated, prepared from same material to be used for the Work, with shop-applied transparent finish, that show full range of color and texture variations expected.
 - 1. Hardwood with Transparent Finish (WD-1) and (WD-2): Submit set of at least three units exhibiting approximate limits of variations in color, pattern, texture, or other characteristics inherent in material or product. Apply finish to all faces and edges.
 - a. Solid Hardwood with: 3" wide by 12" long,
 - b. Hardwood Veneer: 12" by 12", representative of and selected from actual flitches to be used for Project.
 - 2. Hardwood Veneered Panels with Transparent Finish for (WD FAB-1,4,5,6,8): 48 inches by 48 inches, with veneers representative of and selected from actual flitches to be used for Project. Include at least one face-veneer seam and finish as specified.
 - 3. Other Wood and Surfacing Samples: Submit 12 by 12 inch sample for each type, color and finish, with one edge treatment or profile as specified.
 - a. (WD-5) Woodwork with Opaque Finish.
 - b. (PLAM) Plastic Laminates .
 - c. (SSF) Solid Surfacing.
 - 4. Cabinetwork Unit Samples: Units may be used as part of work if approved.
 - a. Base cabinet with door, drawer, countertop and hardware.
 - b. Wall-hung upper cabinet with door and shelf.
 - 5. Accessories and Hardware: Submit samples of hardware, accessories, and components of wood fabrications and casework.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Fabricator and Installer.
- B. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
- C. Site Conditions Reports: Relative humidity and temperature readings taken before, during and after installation. Include readings taken in areas where woodwork is stored on site prior to installation.

1.5 QUALITY ASSURANCE

- A. Fabricator and Installer Qualifications:
 - 1. Fabricator Qualifications: A well-established and experienced fabricator, acceptable to Owner and Architect, employing skilled workers to custom-fabricate millwork, casework and other architectural woodwork similar to that required for this Project, whose Work meets or exceeds quality requirements of specified NAAWS Grade, and whose completed Work has a record of successful in-service performance.
 - 2. Installer Qualifications: A well-established installer with experience installing millwork, casework, finish carpentry work, and other custom-fabricated woodwork similar to that required for this Project, whose Work meets or exceeds quality requirements of specified NAAWS Grade, and whose completed Work has a record of successful in-service performance.
 - 3. Architect reserves the right to reject woodwork fabricator if it is Architect's opinion that previous performance by fabricator has been unsatisfactory, or if any of the following will not result in required quality within time required for completion:
 - a. Shop capacity.
 - b. Experience of workers.
 - c. Equipment or supply of material.
 - d. Previous performance by fabricator has been unsatisfactory.
- B. Welding Qualifications: Qualify procedures and personnel in accordance with American Welding Society's AWS D1 "Structural Welding Code."

1.6 MOCKUPS

- A. Mockups: Construct mockups, using same materials to be used for permanent construction, to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution of final Work. Provide the following mockups as described below and as directed by Architect.
1. Submit mockup shop drawings to Architect.
 2. Mockup will serve as Architects review of aesthetic effects and workmanship.
 3. Final selection of materials, system components, configuration, design and other performance and appearance criteria are subject to modification based on review of submittals and mockups.
 4. Obtain Architect's approval of mockups before starting permanent work, fabrication, or permanent construction. Allow 10 days for initial review and each re-review of mockups.
 5. Maintain and protect undisturbed approved mockups throughout construction to serve as a standard for judging completed Work.
 6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- B. Integrated Mockup of Wood Fabrications (WD FAB-2M), Wood Flooring (WDF-1) and Coved Base: Construct full-scale assemblies in shop or in-place at Project site, including:
1. Complete acoustic shell wagon substructure, with fully-operating casters and hardware.
 2. Coordinate with Section 116116 - Adjustable Acoustic Assemblies.
 3. Architectural woodwork, ornamental metal panels and fabric scrim attached to wagon substructure.
 4. Integrated lighting assemblies, if applicable. Coordinate with Section 260961.
 5. Mockup adjacent construction for the purpose of assessing fit and alignment of moveable assembly, and to establish tolerances for final installed Work.
 6. Mockup floor-mounted steel plate guides and guides anchored to structure that receive steel plate guides at top of assembly.
 7. Mockup wood flooring system (WDF) directly beneath (WD FAB) assemblies and extending in front of assemblies, for the purpose of providing floor space for testing and evaluating functional characteristics during typical operations. Architect to determined square footage and extent necessary to test.
 8. Functional characteristics to be tested and evaluated by Owner's personnel, Architect's theatre consultant, Construction Manager and Architect. Architect will make final decision for approval of mockup.
 9. Test mockup for compliance with acoustic requirements. Consult Owner's acoustic consultant for test method. Owner's acoustic consultant to be present during testing.

1.7 SITE CONDITIONS

- A. Delivery, Handling and Storage: Protect woodwork items from damage, dust and dirt. Do not deliver, receive, store or install woodwork materials until storage and installation areas are conditioned in accordance with requirements and recommendations of NAAWS.
- B. Environmental Requirements: Use permanent HVAC system or provide temporary systems and controls to establish and maintain site conditions complying with specified requirements.
1. Do not deliver, receive, store or install architectural woodwork until building is enclosed, wet work is complete, and temporary or permanent HVAC systems are operating in areas where woodwork is stored and installed, and are maintaining temperature and relative humidity at occupancy levels and within the following ranges during the remainder of the construction phase:
 - a. Temperature Range: Between 60 and 90 deg F.
 - b. Relative Humidity Range: Between 45 and 55 percent.
 2. Fluctuation of Temperature and Relative Humidity Levels: Maintain operation and control of heating, cooling, humidity, ventilation, temporary barriers and similar facilities continuously on a 24-hour basis to avoid rapidly fluctuating ambient levels.
 - a. Do not exceed 15 percent fluctuation over any portion of a 7-day period. Do not exceed 25 percent fluctuation over any portion of a 28-day period.

3. Site Conditions Report: Monitor temperature and relative humidity in areas where woodwork is stored and installed at Project site. Measure and record temperature and relative humidity prior to delivery, throughout storage period and installation, and after installation until time of Substantial Completion. Report recorded values in accordance with Submittals requirements.
- C. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
 2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 PRODUCTS

2.1 ARCHITECTURAL WOODWORK, GENERAL

- A. Quality Standards: Provide custom-fabricated architectural woodwork, casework, millwork and other assemblies that are fabricated and installed in accordance with the *North American Architectural Woodwork Standards, Adopted and Published jointly by Architectural Woodwork Institute, Architectural Woodwork Manufacturer's Association of Canada and Woodwork Institute - Current Edition* (NAAWS).
1. Comply with requirements of specified NAAWS Grade except where more stringent requirements are indicated in the Contract Documents.
- B. Acoustical Performance Requirements for Architectural Woodwork in Acoustically-Critical Spaces:
1. Comply with requirements of Section 018122 - Facility Acoustic Performance Requirements.
 2. The following characteristics are not acceptable or permitted in final installed Work:
 - a. Vibration harmonics, buzzing, rattling or squeaking.
 - b. Noises caused by movement of components;
 - c. Loosening, weakening, or fracturing of system components or attachments.

2.2 WOOD MATERIALS

- A. Wood Materials, General:
1. Provide specified wood and other materials recommended by fabricator and in compliance with specified NAAWS Grade.
 2. Fire-Retardant-Treated Materials: Where fire-retardant-treated materials are indicated, use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Wood Moisture Content: 5 to 10 percent.
 4. Provide wood products made with binder containing no urea formaldehyde,
 5. Dimensions: As indicated on Drawings.
 6. Sheathing Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- B. Miscellaneous Lumber: DOC PS 20 and applicable grading rules of inspection agencies certified by ALSC's Board of Review.
- C. Dimension Lumber Items: Standard, Stud, or No. 3 grade lumber .
- D. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.
1. Class B or Class A Flame Spread Rating: Vesta FR by Sierra Pine.
 2. Class C Flame Spread Rating: Arreis by Sierra Pine.
- E. Hardboard: AHA A135.4.
- F. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.

- G. Softwood Plywood: DOC PS 1, exterior.
- H. Veneer-Faced Plywood: HPVA HP-1, made with adhesive containing no urea formaldehyde.
- I. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.
- J. (WD-1) and (WD-2) Hardwood for Transparent Finish: Match Architect's sample.
 - 1. Source Limitations: The intent of this requirement is to ensure matching of wood species and finishes by providing solid wood and wood veneers of like species from a single source with resources to provide materials of consistent quality in appearance and physical properties, and by shop-finishing woodwork in single shop using one process for each finish type.
 - a. Engage a qualified woodworking firm to assume undivided responsibility for finishing all WD-1 and WD-2 woodwork.
 - b. Supply wood veneer facing materials for wood doors required to be matched with architectural woodwork.
 - c. Minimum Quality Standard: NAAWS Premium Grade.
- K. WD-1: Red oak, rift-sliced veneer, rift-sawn solid; stain & clear finish
- L. WD-2: Red oak, rift-sliced veneer, rift-sawn solid; stain & clear finish
- M. WD-3: [New/Reclaimed] wood, milled & prefinished. [Source for reclaimed / Species of new] wood and finishes TBD
 - 1. Shop-Applied Transparent Finish: NAAWS System 5 Conversion Varnish.
 - a. Minimum Quality Standard: NAAWS Premium Grade.
 - b. Pre-finish woodwork at shop, defer only final touchup, cleaning, and polishing until after installation.
 - c. Finish all surfaces, faces and edges of woodwork. Back-prime concealed surfaces with two coats of sealer or primer.
 - d. Sheen: Matching Architect's sample.
 - 2. Veneer Matching:
 - a. Matching of Adjacent Veneer Leaves: Book match.
 - b. Matching within Panel Face: Center-balance match.
 - c. Panel-Matching Method: Blueprint-matched panels and components within each separate area.
 - d. Vertical Panel-Matching Method: Continuous match; veneer leaves of upper panels are continuations of veneer leaves of lower panels. At wood panel transoms over wood doors, provide continuous match between door and transom (If applicable).
 - e. Door Face Veneers: Supply book-matched wood veneers to Section 081400 - Wood Doors.
 - 3. Solid Hardwood Trim on Wood Fabrications: Match trim for compatibility of grain and color to itself and with veneers.
- N. WD-4: MDF or solid wood, spray-applied finish, varying sheens
- O. (WD-5) Wood Materials for Opaque Painted Finish:
 - 1. Wood Type: Natural Birch or Poplar.
 - 2. Field-Finishing: Shop-apply primer compatible with finishing system in accordance with Section 099000 - Painting.
 - 3. Prefinished: Spray-apply primer and finish coats in shop, defer only final touchup, cleaning, and polishing until after installation.
 - a. Minimum Quality Standard: NAAWS Premium Grade.
 - b. Sheen: Matching Architect's sample.
 - 4. Finish all exposed surfaces, faces and edges of woodwork. Back-prime concealed surfaces with two coats of sealer or primer.

2.3 COMPONENTS & ACCESSORIES

- A. Steel Sub-Framing and Supports: Welded steel framing and bracing as shown on Structural Drawings and as specified in Section 055000 - Metal Fabrications.
 - 1. Grind welded joints smooth.

2. Finish: Shop-primed and painted, color as selected by Architect. Coordinate with Section 099000 - Painting.
- B. Anchors and Accessories: Stainless steel eye-bolt anchors, washers and other fabrication and installation accessories as shown; or other types as required by design engineer and approved by Architect.
 - C. Fasteners:
 1. Flathead Hex Wood Screw, black.
 2. Stainless steel fasteners with resilient neoprene washer.
 - D. Installation Accessories: Provide assembly hardware as shown on Drawings, or as recommended by Fabricator and approved by Architect.
 1. Mechanical Fasteners and Anchors: Use material, type, size and finish required for each substrate for secure anchorage and as recommended by architectural woodwork fabricator and installer.
 - a. Provide concealed anchors unless otherwise indicated.
 - b. Provide metal expansion sleeves or expansion bolts for post-installed anchors.
 - c. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
 2. Adhesives: Do not use adhesives that contain urea formaldehyde. VOC Limits for Installation Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine covered board, metal, unsupported vinyl, rubber, or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
 - b. Wood Glues: 30 g/L.
 - c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Contact Adhesive: 80 g/L.

2.4 WOOD FABRICATIONS

- A. Architectural Woodwork Fabrications, General: Custom-fabricate, finish and install complete assemblies as indicated in Construction Documents and approved Submittals, including all components and accessories required for complete fabrication and installation. Coordinate with Work of other Sections as indicated and as required to complete the Work.
 1. Quality Standard: NAAWS Premium Grade.
 2. Dimensions and Configurations: As specified below and as indicated on Drawings.
 3. Hardware and Accessories: Provide all assembly components, as indicated in approved Submittals, for complete installation and operability.
- B. WD FAB-1: Sliding pocket doors with ORN MET-3 faces, hardware
- C. WD FAB-2: Wood Donor Wall: TBD
- D. WD FAB-3: Flush Wood Panels: Vertically-oriented installation, WD-2 veneer over MDF core (acoustically-reflective)
- E. WD FAB-4: Articulated Wood Panels: Vertically-oriented WD-4 ribs, of varying widths and depths, built-up to create relief patterns as indicated (acoustically-diffusive)
- F. WD FAB-5: Wood Baffle Ceiling: Built-up MDF, PT-5 finish
- G. WD FAB-6: Proscenium Grillage: Vertically-oriented, solid WD-5 dowels of varying diameters, PT-4/5/6 of various sheens; fastened rigidly, with varying spacing, to steel support framing behind. Provide all accessories required for sound & vibration control.
- H. Fabrication Adhesives: Type as recommended by woodwork fabricator and adhesive manufacturer for intended use. Do not use adhesives that contain urea formaldehyde.
- I. Mounting Accessories:
 1. Provide concealed mounting as shown on Drawings.

2. Furring, Blocking, Shims, and Hanging Strips: Kiln dried to less than 15 percent moisture content.
 3. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors.
- J. Concealed Fasteners for Panels: Provide corrosion resistant stainless steel, Type 316, mechanical fasteners meeting panel manufacturer's requirements for fasteners to be used with metal mounting frame.
- K. Finish Carpentry: Prefabricated or field-built custom interior carpentry millwork complying with NAAWS Premium Grade for construction, finishes, installation, and other requirements.
1. (WDB-1) Wood Wall Base: Solid WD-1, in profile and dimensions as shown on Drawings.
 2. (WDB-2) Wood Wall Base: Solid WD-2, in profile and dimensions as shown on Drawings.
 3. (WDB-5) Wood Wall Base: Solid WD-5, in profile and dimensions as shown on Drawings.

2.5 CABINETS AND COUNTERTOPS

- A. Wood Veneer-Faced Cabinets with Transparent Finish:
1. Minimum Quality Standard: NAAWS Custom Grade.
 2. Type of Construction: Frameless.
 3. Door and Drawer Front Style: Flush overlay.
 4. Exposed, Semi-Exposed and Non-Exposed Wood Components: WD-1 and WD-2, as indicated on Drawings. Comply with veneer matching requirements as indicated in approved Shop Drawings.
 5. Minimum Quality Standard: NAAWS Custom Grade.
 6. Type of Construction: Frameless.
 7. Door and Drawer Front Style: Flush overlay.
 8. Exposed, Semi-Exposed and Non-Exposed Wood Components: WD-5, as indicated on Drawings.
- B. Plastic-Laminate-Faced Cabinets:
1. Minimum Quality Standard: NAAWS Custom Grade.
 2. (PLAM) Basis of Design: Refer to Material Identification List.
 3. Type of Construction: Frameless.
 4. Door and Drawer Front Style: Flush overlay.
 5. Cabinet, Door, and Drawer Front Interface Style: Flush overlay.
 6. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by woodwork quality standard.
- C. Plastic-Laminate-Faced Countertops:
1. Minimum Quality Standard: NAAWS Premium Grade.
 2. (PLAM) Basis of Design: Refer to Material Identification List.
 3. High-Pressure Decorative Laminate: NEMA LD 3, Grade HGS ; post forming grade (0.039" thick) High Pressure laminate counter top.
 4. Edge Treatment: Post-formed, matching laminate in color, pattern, and finish.

2.6 SOLID SURFACE FABRICATIONS

- A. (SSF) Basis of Design: As indicated on Material Identification List.
- B. Resinous Solid Surface: Homogeneous solid sheets of filled plastic resin complying with ANSI SS1.
- C. Quartz Agglomerate Solid Surface: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with the "Physical Characteristics of Materials" Article of ANSI SS1.
- D. Adhesives, Sealants and Sealers: Comply with manufacturer's written instructions for adhesives, sealants and sealers. Do not use adhesives that contain urea formaldehyde.
1. Sealant: Silicone sealant as recommended by panel manufacturer for application to substrate.
 2. Sealers: As recommended by panel manufacturer for application to substrate.

3. VOC Limits for Installation Adhesives and Glues, and for Primers and Sealers: Use installation adhesives with VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 4. Fabrication: Prefabricate countertops in one piece with shop-fabricated edges. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, joining and finishing.
- E. Fabrication: Fabricate countertops in shop to greatest degree possible, in one piece with shop-applied eased edges, and in accordance with the following requirements, unless otherwise shown on Drawings.
1. Configurations: As shown.
 2. Backsplash: Standard single length solid surface pieces; longest length possible to minimize joints. Where indicated provide countertop with coved backsplash.
 3. Inside Corners: Square.
 4. Sinks: Install integral sink bowls in countertops in the shop.

2.7 WALL-MOUNTED SHELVES

- A. Brackets for Wall-Mounted Countertops and Shelves:
1. Provide mounting brackets as shown on Drawings, in size and weight capacity required for use.
 - a. Coordinate with Sections 054000, 055000, 061000, 092216 and other applicable Sections for concealed backing, support and anchoring as shown on Drawings.
 2. Steel Supports for Lavatory and Workstations: Provide custom fabricated steel supports in compliance with Section 055000 - Metal Fabrications. Provide in sizes and shapes as shown on Drawings.
 - a. Steel Tubing: ASTM A501 or ASTM A500.
 - b. Steel Bar: ASTM A36.
 - c. Finish: Prefinished or shop-primed for field finish.
 3. (BKT-1) Countertop Brackets: 5mm thick steel bar with 3/4 inch steel strut, holds 1000 lb. per pair, finish in epoxy coated finish in color as indicated or selected.
 - a. Basis of Design: KV 208 550 Ultimate L-Bracket Series.
 4. (BKT-2) Workstation Brackets: 1/8 inch steel; 1-1/2 inch forms with multiple 1/4 inch mounting holes per side; reversible; color as selected by Architect from manufacturer's standard colors.
 - a. Sizes: As required by application.
 - b. Capacity: 1,000 pounds minimum.
- B. Adjustable Shelf Brackets and Standards: Heavy-duty, 12 ga. steel, zinc-plated.
1. Basis of Design: Series 1752A by McMaster-Carr.
 2. Standards: Single-slotted standard. Spacing of standards not to exceed 18 inches.
 3. Brackets: 540 lbs capacity per pair.
 4. (B&S-1) Configuration: 3/4"t x 12"d PLAM shelf; painted steel HD brackets

2.8 CABINET HARDWARE AND ACCESSORIES

- A. Hinges:
1. (HDWR-H1): BHMA A156.9, B01361, fixed pin, five knuckle steel hinges, dull chrome, 2-3/4 inch by 0.095 thick.
 2. (HDWR-H2): BHMA A 156.9 B01602, concealed, all-metal hinges, 110 degree opening (unless otherwise noted) self-closing, 3-way adjustable
 - a. Basis of Design: Grass Nexis.
 - b. Provide 3 per leaf over 48 inches high, 2 per leaf elsewhere.
 - c. Closers: Provide Quiet Soft-Cushion Closers: Nexis G-Force Soft Closer.
- B. Door and Drawer Pulls:
1. (HDWR-P3): 106.74.913 by Häfele, aluminum, matte silver finish.
- C. Drawer Slides: BHMA A156.9, cold rolled steel, zinc plated with positive stop and full extension. Provide products with rolling steel balls, nylon rollers meeting or exceeding the following requirements, unless otherwise indicated:
1. (HDWR-S1): Minimum 75 lb. load rating, for use at drawers 16-inches wide or less.

2. (HDWR-S2): Minimum 100 lb. load rating, for use at drawers 24-inches wide or less.
 3. (HDWR-S3): Minimum 150 lb. load rating, for use at drawers greater than 24-inches wide, at deep drawers, and drawers with file folder racks.
- D. Door Locks: BHMA A156.11, E07121.
- E. Drawer Locks: BHMA A156.11, E07041.
- F. Shelf Rests, Typical: BHMA A156.9, B04013.
- G. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.
- H. Cable Passage Grommets: Provide cord grommets in sizes shown, and in color as selected by Architect.
1. (GROM-1) Plastic Grommet Liner and Cap: SG Series or EDP Series by Doug Mockett.
 2. (GROM-2) Aluminum Grommet, No Cap: MG Series by Doug Mockett.
 3. (GROM-3) Wood Grommet Cap, No Liner: WG Series by Doug Mockett, matching (WD-___).
 4. (GROM-4) Aluminum Grommet in Solid Surface: MM Series by Doug Mockett, MM-4 satin chrome.
 5. (GROM-5) Type: TG Series by Doug Mockett; White 95 or Black 90, as selected.
- I. Glass Lites for Cabinetwork Doors: (GL-1T) fully-tempered clear float glass; 1/4-inch thickness; ASTM C1036, Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), and heat-treated to comply with ASTM C1048, Kind FT (fully tempered); with ground and polished flat edges.

2.9 FABRICATION

- A. General: Fabricate Work of this Section using materials and methods in accordance with specified NAAWS Grade, and in accordance with reviewed Shop Drawings.
1. Complete fabrication in shop, including component assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site.
 2. Join and assemble work to provide durable, strong, rigid units that will not warp or rack during shipping and installation.
 3. Disassemble components only as necessary for shipment and installation. Allow for easy handling and passage through building openings.
 4. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 5. Woodwork in Spaces without Humidification Control: Fabricate Work as necessary to protect installed Work from moisture and damage due to movement and dimensional changes associated with fluctuating temperature and relative humidity levels during construction and after Substantial Completion.
- B. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- C. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- D. Metal Framing and Supports:
1. Welded Connections: Comply with AWS for recommended practices in shop welding. Weld behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded joints of flux, and dress exposed and contact surfaces.
 2. Non-Welded Connections: Fabricate for interconnection of members by means of mechanical fasteners and fittings unless otherwise indicated.
- E. Shop Finishing: Pre-finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
1. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural wood cabinets, as applicable to each unit of work.

2. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces. Concealed surfaces of plastic-laminate-clad paneling do not require backpriming when surfaced with plastic laminate.
3. Primer Application on Steel Framing: Apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examination and Acceptance of Conditions: Before proceeding with installation, take field measurements, examine substrates, measure temperature and relative humidity and other conditions.
 1. Verify that mechanical and electrical items affecting this section are properly placed, complete, and have been inspected by Architect prior to commencement of installation.
 2. Proceed with installation only after unsatisfactory conditions have been corrected and after building temperature and relative humidity are within specified range. Proceeding with the Work indicates acceptance of surfaces and site conditions.
- B. Material Moisture Content and Environmental Requirements: Install products at the time and under conditions that will ensure the best possible results and maintain conditions until Substantial Completion.
 1. Comply with recommendations of NAAWS.
 2. Conditioning: Before installation, condition wood materials and cabinets in accordance with specified site condition requirements.
 - a. Do not install unconditioned wood materials and assemblies.
 - b. Reject materials that are wet, moisture damaged or mold damaged.
- C. Substrate: Before proceeding with installation, examine substrate to receive work for compliance with requirements for installation tolerances and other conditions affecting performance. Installer must approve substrate prior to installation.
- D. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product.
 1. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication.
 2. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 3. Verify space requirements and dimensions of items shown diagrammatically on Drawings.

3.2 INSTALLATION

- A. General: Install architectural woodwork in accordance with North American Architectural Woodwork Standards (NAAWS) and in accordance with approved Shop Drawings.
 1. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
 2. Install free from hammer or tool marks, open joints, slivers or other defects detrimental to appearance or performance.
 3. Set plumb, level, square and true to dimensions shown and required. Allow for finishes and proper clearances where necessary. Use concealed shims where required for alignment.
 4. Tolerances: Install to tolerance of 1/8 inch in 96 inches for level and plumb. Install adjoining work with 1/32-inch maximum offset for flush installation and 1/16-inch maximum offset for reveal installation.
 5. Scribe and cut to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
 6. Coordinate with materials and systems in and adjacent to woodwork and provide cutouts for mechanical and electrical items that penetrate exposed surfaces of trim and rails.

7. Shop-Fabricated Work: Before installing, examine shop-fabricated work for completion. Assemble shop fabricated work and complete fabrication at Project site to the extent that it was not completed in the shop. Backprime unfinished surfaces that are concealed when installed.
 8. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, or too small to fabricate with proper jointing arrangements.
- B. Anchorage: Adequately anchor, fasten and support members to form secure, substantial and accurate work and to hold required dimensions and prevent twist.
1. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
 2. Provide blocking, attachment plates, anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work.
 3. Provide anchorage type required to accommodate expected movement of wood due to changes in relative humidity without permanent damage to the wood and other components.
- C. Fitting: Fit exposed connections together to form hairline joints. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect as determined by Architect.
1. Provide joints to accommodate expected movement and expansion of woodwork due to changes in relative humidity.
- D. Finish Carpentry, Millwork, Wall Base, Trim:
1. Anchor to blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing.
 2. Install with minimum number of joints possible, using full-length pieces to greatest extent possible.
 3. Miter corners, countersink nails, drill holes for nails in hardwood.
- E. Architectural Wood Fabrications: Install woodwork assemblies in accordance with approved Shop Drawings.
- F. Wood Panels: Anchor woodwork to supporting substrate with concealed panel-hanger clips and by blind nailing on backup strips, splined-connection strips, and similar associated trim and framing.
1. Do not face nail exposed surfaces unless otherwise indicated.
 2. Face-Nailing: Install prefinished boards with butt joints, and use finishing nails for exposed work. Finished work shall be free of hammer marks or open joints.
 - a. After installation of woodwork with exposed fasteners, fill exposed nail holes flush with matching filler, sand as needed and touch-up finishes.
- G. Solid Surfacing: Install solid surfacing in accordance with approved Shop Drawings and solid surfacing Manufacturer's written instructions and recommendations.
- H. Cabinetwork: Install cabinets in accordance with requirements of same NAAWS Grade as item was fabricated.
1. Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 2. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork. For shop finished items use filler matching finish of items being installed.
 3. Maintain veneer sequence matching of cabinets with transparent finish.
- I. Countertops: Anchor securely to base units and other support systems as indicated.
- J. Wall-Mounted Shelving and Work-Surfaces: Install standards, brackets and other supports according to manufacturer's written instructions. Fasten to framing members, wood sheathing, wood blocking or metal backing, or use toggle bolts or hollow wall anchors.

- K. Finishes: Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats including, back-priming, opaque paint, stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
 - 2. Refer to Section 099000 - Painting for final finishing of installed architectural woodwork not indicated to be shop finished, and for related brackets and other Work exposed to view.

3.3 INSTALLED WORK

- A. Damaged or Non-Compliant Woodwork: Remove and replace materials that are damaged or do not comply with requirements.
 - 1. Damaged woodwork may be repaired or refinished only when resulting repair work complies with requirements and shows no evidence of repair or refinishing, as determined by Architect.
 - 2. Remove and replace woodwork materials that are wet, moisture damaged, or mold damaged.
 - 3. Replace, at no additional cost to Owner, materials that are damaged or that cannot be cleaned to satisfaction of Owner.
- B. Adjusting: Adjust movable components of cabinetwork and woodwork assemblies to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range, and without binding or damaging assembly components. Lubricate hardware and moving parts. Adjust joinery for uniform appearance.
- C. Cleaning: Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period.
 - 1. Clean interior finish carpentry on exposed and semi-exposed surfaces.
 - 2. Restore damaged or soiled areas and touch up factory-applied finishes, if any.
 - 3. Clean cabinetwork, counters, shelves, hardware, fittings and fixtures.
- D. Protection: Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
 - 1. Protect installed products from damage from moisture, dust, dirt and from effects of weather and changing site conditions, throughout construction.
 - 2. Comply with specified requirements for temperature and relative humidity. Continue to take readings and report until Substantial Completion.
- E. Demonstration and Training: Instruct Owner's personnel to operate, adjust and maintain operable components of woodwork assemblies.

END OF SECTION

SECTION 071413
HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Reinforced rubberized-asphalt waterproofing system (WP-1).
 - 2. Protection and drainage course, rigid insulation and flashing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product, include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
 - 1. Detailed specification of construction and fabrication.
 - 2. Manufacturer's installation instructions, specifically written for this project including procedures and materials for flashing, splicing and bonding.
- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining waterproofing, and other termination conditions.
 - 1. Coordinate and provide transition details specific to Project between other adjacent materials including, but not limited to, existing Bentonite/Butyl and other existing waterproofing systems.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Field quality-control reports.
- C. Sample Warranties: For special warranties.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified firm that is approved, authorized, and/or licensed by waterproofing system manufacturer to install manufacturer's products and that is eligible to receive manufacturer's special warranty.
- B. Pre-Installation Conference:
 - 1. Conduct conference at Project site.
 - 2. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
- C. Coordination: Coordinate Work of this Section with Work of other Sections for construction of mockups and for construction of permanent assemblies as indicated in the Construction Documents.
 - 1. Coordinate Work of different Sections that depend on each other for proper installation, connection, and operation.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
- B. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- C. Protect stored materials from direct sunlight.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below 0 deg F.
 - 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace waterproofing and sheet flashings that do not comply with requirements or that fail to remain watertight within specified warranty period.
 - 1. Warranty Period: 10 years from date of Substantial Completion.
- B. Special Installer's Warranty: Specified form signed by Installer, covering Work of this Section, for warranty period of two years.
 - 1. Warranty includes removing and reinstalling protection board, drainage panels, and insulation.

PART 2 PRODUCTS

2.1 WATERPROOFING SYSTEM

- A. Source Limitations: Provide components and accessories; including waterproofing membrane, sheet flashings, protection course, drainage course and insulation; by a single Manufacturer or as approved by Manufacturer for complete warranted waterproofing system.
- B. Material Compatibility: Waterproofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by waterproofing manufacturer based on testing and field experience.
- C. Performance Requirements: Installed waterproofing system shall withstand thermally induced movement and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Waterproofing system shall remain watertight.
- D. (WP-1) Waterproofing System:
 - 1. Surface Conditioner.
 - 2. Waterproofing Membrane: Base coat of 90 mils thick hot fluid-applied rubberized asphalt; embedded reinforcing for 100 percent coverage, 60 mils embedded uncured neoprene sheet reinforcing at corners; coat of 90 mils hot fluid-applied rubberized asphalt.
 - 3. Drainage Course: 1/4-inch thick HDPE with filter fabric.
 - 4. Insulation: Extruded-polystyrene board.
- E. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.
 - 1. Basis of Design: Monolithic Membrane 6125EV by American Hydrotech.
 - 2. Other Products and Manufacturers:
 - a. Ram Tough 250 by Barrett.
 - b. CCW-500R by Carlisle Coatings and Waterproofing.
 - c. 790-11 by Henry Company.
 - d. Tremproof 6100 by Tremco.
- F. Auxiliary Materials: Provide materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing.
 - 1. Primer: ASTM D 41, asphaltic primer,
 - 2. Elastomeric Sheet: 50 mil minimum thickness, uncured neoprene sheet, as recommended by waterproofing system manufacturer.
 - 3. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum termination bars; approximately 1 by 1/8 inch thick; with stainless-steel anchors.
 - 4. Sealants and Accessories: Manufacturer's recommended sealants and accessories.

- 5. Reinforcing Fabric: Manufacturer's recommended, spun-bonded polyester fabric.
- G. Protection Course: Semi-rigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners, conforming to ASTM D 6506.
- H. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve, laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm/ft..
- I. (INSUL-1) Unfaced Wall Insulation Drainage Panels: As specified in Section 072100 - Thermal Insulation.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 - 2. Ensure substrate is clean and free of depressions, waves or projections and is properly sloped to drainage locations.
 - a. Finish texture of concrete substrate: Wood float finish.
 - 3. Ensure curbs, pipes, sleeves, ducts, and vents through substrate are solidly set.
 - 4. Do not proceed until unsatisfactory conditions have been corrected.
- B. Verify moisture content of substrate to ensure current moisture content is within membrane manufacturer's requirements.
 - 1. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - 2. Provide additional drying techniques or equipment to obtain compliance.
- C. Bond Test: Apply a test patch of waterproofing membrane to the surface and check its adhesion, per manufacturer's recommendations.

3.2 SURFACE PREPARATION

- A. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.

3.3 JOINTS, CRACKS, AND TERMINATIONS

- A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
 - 1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
 - 2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond roof drains and penetrations.
- B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.4 FLASHING INSTALLATION

- A. Install elastomeric sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
- B. Prime substrate with asphalt primer.
- C. Install elastomeric sheet and adhere to substrates in a layer of hot rubberized asphalt.
- D. Extend elastomeric sheet up walls or parapets a minimum of 8 inches above plaza-deck pavers and 6 inches onto deck to be waterproofed.
- E. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of waterproofing.

3.5 MEMBRANE APPLICATION

- A. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow it to dry.
- B. Heat and apply rubberized asphalt according to manufacturer's written instructions.
 1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
- C. Start application with manufacturer's authorized representative present.
- D. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils; embed reinforcing fabric, overlapping sheets 2 inches; spread another 125-mil- thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.
- E. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
- F. Cover waterproofing with protection course with overlapped joints before membrane is subject to backfilling.

3.6 PROTECTION COURSE INSTALLATION

- A. Install protection board over membrane as soon as system will allow.
- B. Cover waterproofing with protection course with overlapped joints before membrane is subject to construction or foot traffic.

3.7 DRAINAGE PANEL INSTALLATION

- A. After electronic membrane integrity tests, specified under Field Quality Control below, are completed, install drainage board over membrane and protection board.
- B. Place and secure drainage composite with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed drainage composite during subsequent construction.

3.8 INSULATION INSTALLATION

- A. Install **[one or more layers of board insulation to achieve required thickness] [and] [insulation drainage panels]** over waterproofed surfaces. Cut and fit to within 3/4 inch of projections and penetrations.

- B. On vertical surfaces, set insulation units into rubberized asphalt according to manufacturer's written instructions.

3.9 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Membrane manufacturer's technical representative shall provide following field services during installation.
 - 1. Pre-form a pre-installation examination and acceptance of substrate and surface preparation for each stage. Issue report.
 - 2. Be present at initial start-up for each process. Confirm application rates and techniques. Issue report.
 - 3. Issue summary report at completion of installation indicating manufacturer's acceptance of installed system and warranty conditions.
- B. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.

3.10 INSTALLED WORK

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Protect installed insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 071700 BENTONITE WATERPROOFING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bentonite and HDPE waterproofing system (WP-2).
 - 2. Bentonite waterproofing accessories.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and installation instructions.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Include installation details for waterproofing, penetrations, and interface with other work.
- C. Samples: Submit sample of bentonite waterproofing panel in accordance with Section 013300.
 - 1. Waterproofing: 6 inches square.
 - 2. Protection Course: 6 inches square.
 - 3. Molded-Sheet Drainage Panels: 6 inches square.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of waterproofing material.
- B. Preconstruction Test Reports: For water samples taken at Project site along with recommendations resulting from these tests.
- C. Field quality-control reports.
- D. Sample Warranty: For manufacturer's special warranty.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer, with a minimum of 2 years' experience in installing bentonite clay waterproofing products
- B. Pre-Installation Conference: Conduct conference at Project site. Review waterproofing requirements, including surface preparation, substrate condition and pretreatment, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
- C. Mockups: Build mockups to set quality standards for fabrication and installation.
 - 1. Build mockup of installation on typical vertical and horizontal surfaces, 10 sq. ft. in size.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- D. Preinstallation Conference: Conduct conference at Project site.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original unopened and undamaged containers.
- B. Store materials in a dry, well-ventilated space.
- C. Remove and replace bentonite materials that have been prematurely exposed to moisture.

1.6 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit bentonite waterproofing to be installed according to manufacturer's written instructions and warranty requirements.
 - 1. Do not apply waterproofing materials to surfaces where ice or frost is visible. Do not apply bentonite waterproofing materials in areas with standing water.
 - 2. Do not place bentonite clay products in panel or composite form on damp surfaces unless such practice is approved in writing by manufacturer.

1.7 WARRANTY

- A. Special Warranty: Manufacturer and Contractor agree to provide labor and materials to repair or replace waterproofing components that do not comply with specified performance requirements or that fail in materials or workmanship within specified warranty period, and to provide such corrections at no cost to Owner and without disruption of Owner's daily operations.
 - 1. Warranty that installed waterproofing system shall be free of defects including waterproofing failure resulting from substrate cracking up to 1/8 inch.
 - 2. Manufacturer's standard warranty covering materials.
 - 3. Applicator's standard warranty covering workmanship.
 - 4. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 WATERPROOFING SYSTEMS

- A. Provide complete waterproofing system in accordance with waterproofing Manufacturer's recommendations and requirements for warranty..
- B. Source Limitations: Provide system components and accessories by waterproofing Manufacturer or as approved by manufacturer, including bentonite clay granules, mastic, drainage composites, and other accessories.
- C. Material Compatibility: Waterproofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by waterproofing manufacturer based on testing and field experience.
- D. Performance Requirements: Installed waterproofing system shall withstand thermally induced movement and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Waterproofing system shall remain watertight.

2.2 COMPOSITE HDPE/BENTONITE WATERPROOFING

- A. (WP-2) Provide one of the following as suited for application and Project conditions:
 - 1. Composite HDPE/Bentonite Membrane:
 - a. Minimum 90-mil- thick membrane consisting of a 12-mil- thick, HDPE geomembrane liner bonded to a layer of bentonite clay granules 78 mils thick.
 - b. Puncture Resistance: 169 lbf according to ASTM E 154.
 - c. Vapor Permeance: 0.030 perms according to ASTM E 96.
 - d. Products and Manufacturers:
 - 1) Swelltite by CETCO.
 - 2) TegraTite by TegraSeal.
 - 3) Paraseal by Tremco.
 - 2. Composite HDPE/Bentonite Membrane with Protective Facing:
 - a. Minimum 170-mil- thick membrane consisting of HDPE geomembrane liner bonded to a layer of bentonite clay granules and with a spun polypropylene facing.
 - b. Puncture Resistance: 155 lbf according to ASTM E 154.
 - c. Vapor Permeance: 0.031 perms according to ASTM E 96.
 - d. Manufacturers and Products:
 - 1) TegraTite Plus by TegraSeal.
 - 2) Paraseal LG by Tremco.

2.3 INSTALLATION ACCESSORIES

- A. Granular Bentonite: Sodium bentonite clay containing a minimum of 90 percent montmorillonite (hydrated aluminum silicate), with a minimum of 90 percent passing a No. 20 sieve.
- B. Granular Bentonite Tubes: Manufacturer's standard 2-inch- diameter, water-soluble tube containing approximately 1.5 lb/ft. of bentonite; hermetically sealed; designed specifically for placing on wall footings at line of joint with exterior base of wall.
- C. Bentonite Mastic: Trowelable consistency, bentonite compound, specifically formulated for application at joints and penetrations.
- D. Termination Bar: Formed-stainless-steel bars with upper flange to receive sealant.
- E. Sealants: As recommended in writing by waterproofing manufacturer. Comply with requirements specified in Section 079000 - Joint Protection.
- F. Tapes: Waterproofing manufacturer's recommended tape for joints between sheets, membranes, or panels.
- G. Adhesive: Water-based adhesive used to secure waterproofing to both vertical and horizontal surfaces.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate preparations affecting performance of bentonite waterproofing.
- B. Verify that substrate is complete and that work that will penetrate waterproofing is complete and rigidly installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate work in the vicinity of waterproofing to ensure proper conditions for installing the waterproofing system and to prevent damage to waterproofing after installation.
- B. Formed Concrete Surfaces: Remove fins and projections. Fill voids, rock pockets, form-tie holes, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
- C. Horizontal Concrete Surfaces: Remove debris, standing water, oily substances, mud, and similar substances that could impair the bonding ability of concrete or the effectiveness of waterproofing. Fill voids, cracks greater than 1/8 inch, honeycomb areas, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
- D. Excavation Support and Protection System: If water is seeping, use plastic protection sheets or other suitable means to prevent wetting the bentonite waterproofing. Fill minor gaps and spaces 1/8 inch wide or wider with wood, metal, concrete, or other appropriate filling material. Cover or fill large voids and crevices with cement mortar according to manufacturer's written instructions.

3.3 INSTALLATION, GENERAL

- A. Prepare substrates, voids, cracks, and cavities; and install waterproofing and accessories according to manufacturer's written instructions.
 - 1. Before installing, verify the correct side of waterproofing that shall face substrate surface.
 - 2. Apply granular bentonite around penetrations in horizontal surfaces and changes in plane according to manufacturer's details in preparation for bentonite tubes and mastic.
 - 3. Apply bentonite tubes, bentonite mastic, or both at changes of plane, construction joints in substrate, projections, and penetrations.

4. Prime concrete substrates. Primer may be omitted on concrete surfaces that comply with manufacturer's written requirements for dryness, surface texture, and freedom from imperfections.
- B. Apply bentonite tubes continuously on footing against base of wall to be waterproofed.
 - C. Protect waterproofing from damage and wetting before and during subsequent construction operations. Repair punctures, tears, and cuts.
 - D. Install protection course before backfilling or placing overburden when recommended in writing by waterproofing manufacturer.
 - E. Place and secure molded-sheet drainage panels according to manufacturer's written instructions. Use adhesives or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

3.4 COMPOSITE HDPE/BENTONITE MEMBRANE INSTALLATION (WP-2)

- A. General: Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of 4 inches. Stagger end joints between membranes a minimum of 24 inches. Seal joints with permanent seam tape.
- B. Below Structural Slabs-on-Grade: Apply waterproofing membrane with HDPE side down and staple ends and edges.
 1. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of 8 inches up or beyond perimeter slab forms.
 2. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
- C. Slabs: Starting at lowest point, install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of 2 inches.
- D. Concrete Walls: Apply mastic around penetrations and form continuous 2-inch cant at intersection of footings and walls with mastic.
 1. Starting at lowest point, install a layer of waterproofing membrane horizontally, extending a minimum of 6 inches onto the footing. Lap membrane ends and edges a minimum of 2 inches.
 2. Secure membrane to wall with continuous adhesive or washer-headed fasteners, and tape terminations of membrane at grade.
 3. Termination at Grade: Extend waterproofing membrane to finish grade as indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
- E. Excavation Support and Protection (Permanent Shoring): Cut, clean, and treat tiebacks and similar projections. Encase tieback heads, rods, nuts, and plates according to waterproofing manufacturer's written instructions for each configuration. If water is present, cover shoring and lagging with plastic protection sheets; remove plastic sheets before placing concrete.
 1. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped minimum of 4 inches and nailed to shoring.
 2. Inspect and repair waterproofing membrane after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.

3.5 FIELD QUALITY CONTROL

- A. Inspection: Arrange for manufacturer's representative to inspect completed waterproofing installation before covering with other construction and provide written report that installation complies with manufacturer's written instructions.
 1. Remove and replace applications of bentonite waterproofing where inspection indicates that it does not comply with specified requirements.

3.6 INSTALLED WORK

- A. Protect installed waterproofing from precipitation or ground water until concrete pour is completed. Pour concrete as waterproofing installation is completed.

- B. Protect waterproofing from damage by concrete pour or other causes. Repair damage areas prior to concrete pour.

END OF SECTION

SECTION 072100 THERMAL INSULATION

1.1 SUMMARY

- A. Section Includes:
 1. Extruded-polystyrene board (INSUL-1).
 2. Mineral wool batts (INSUL-24).
 3. Spray-foam insulation (INSUL-30).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect plastic insulation as follows:
 1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 1 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide insulation and related materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
 1. Surface-Burning Characteristics: ASTM E84.
 2. Fire-Resistance Ratings: ASTM E119.
 3. Combustion Characteristics: ASTM E136.

B. INSUL-26: Mineral-fiber, semi-rigid board; RockWool CavityRock

C. INSUL-30: Polyurethane foam, spray-applied, closed-cell

2.2 EXTRUDED-POLYSTYRENE BOARD INSULATION

- A. (INSUL-1) Extruded Polystyrene Board Drainage Panels (Below Grade): ASTM C 578, Type IV, 25-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
 1. Surface Burning Characteristics: Maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84.
 2. Products and Manufacturers:
 - a. Styrofoam SE by Dow Chemical.
 - b. Foamular 250 by Owens Corning.
 - c. Certifoam by DiversiFoam Products.
 - d. GreenGuard CM by Pactiv Building Products.

2.3 SEMI-RIGID MINERAL WOOL

- A. (INSUL-26) Mineral Wool Rigid Board Insulation: ASTM C 612, Type IVB, dual-density, semi-rigid mineral fiber board.
 - 1. Basis of Design: CavityRock by Roxul Inc..
 - 2. Performance Requirements:
 - a. Thermal Resistance, ASTM C518: R-value per inch at 75° F = 4.3 hr. ft². F/BTU.
 - b. Moisture Absorption, ASTM C1104: 0.07 percent, maximum.
 - c. Combustibility, ASTM E136: Non-combustible.
 - d. Flame Spread Index, ASTM E84: 0, maximum.
 - e. Smoke Developed Index, ASTM E84: 0, maximum.

2.4 SPRAY POLYURETHANE FOAM INSULATION

- A. (INSUL-30) Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II.
 - 1. Manufacturers:
 - a. BASF Corporation.
 - b. Dow Chemical Company .
 - c. Henry Company.
 - 2. Minimum density of 1.5 lb/cu. ft., thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F.
 - 3. Fire Characteristics per ASTM E84:
 - a. Maximum flame-spread of 75
 - b. Maximum smoke-developed indices of 450

2.5 INSULATION FASTENERS

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Adhesively Attached, Spindle-Type Anchors:
 - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
 - b. Eckel Industries of Canada Limited; Stic-Klip Type N Fasteners.
 - c. Gemco; Spindle Type.
 - 2. Adhesively Attached, Angle-Shaped, Spindle-Type Anchor:
 - a. Gemco; 90-Degree Insulation Hangers.
 - 3. Insulation-Retaining Washers:
 - a. AGM Industries, Inc.; RC150.
 - b. AGM Industries, Inc.; SC150.
 - c. Gemco; Dome-Cap.
 - d. Gemco; R-150.
 - e. Gemco; S-150.
 - 4. Insulation Standoff:
 - a. Gemco; Clutch Clip.
 - 5. Anchor Adhesives:
 - a. AGM Industries, Inc.; TACTOO Adhesive.
 - b. Eckel Industries of Canada Limited; Stic-Klip Type S Adhesive.
 - c. Gemco; Tuff Bond Hanger Adhesive.
- B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of thickness indicated securely in position indicated with self-locking washer in place; and complying with the following requirements:
 - 1. Plate: Perforated galvanized carbon-steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
 - 2. Spindle: Copper-coated, low carbon steel, fully annealed, 0.105 inch (2.67 mm) in diameter, length to suit depth of insulation indicated.
- C. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of thickness indicated securely in position indicated with self-locking washer in place; and complying with the following requirements:
 - 1. Angle: Formed from 0.030-inch- (0.762-mm-) thick, perforated, galvanized carbon-steel sheet with each leg 2 inches (50 mm) square.

- 2. Spindle: Copper-coated, low carbon steel, fully annealed, 0.105 inch (2.67 mm) in diameter, length to suit depth of insulation indicated.
- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of dimension indicated between face of insulation and substrate to which anchor is attached.
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

PART 2 EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.2 INSTALLATION

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.
- B. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.
- C. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- D. Cut and trim insulation neatly to fit spaces. Butt edges and ends tight. Fit insulation tight against mechanical, electrical and other items which protrude through plane of insulation.
- E. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- F. Water-Piping Coordination: If water piping is located on inside of insulated exterior walls, coordinate location of piping to ensure that it is placed on warm side of insulation and insulation encapsulates piping.
- G. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
 - 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application.
 - 2. Apply insulation standoffs to each spindle to create cavity width indicated on Drawings between concrete substrate and insulation.
 - 3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation.
 - 4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.
- H. Adhesive Installation: Install with adhesive or press into tacky waterproofing or dampproofing according to manufacturer's written instructions.
- I. Rigid Board Installation: Install rigid insulation to maintain continuous and complete thermal protection for building spaces and elements.
 - 1. Install pads of adhesive spaced approximately 24 inches o.c. both ways on inside face and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates.
 - 2. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 042000 - Unit Masonry.

3.3 INSTALLED WORK

- A. Protection: Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 072700 AIR & MOISTURE BARRIER

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Complete air- and moisture-barrier assembly, including accessories and materials to bridge and seal air leakage pathways and gaps (AB-1).
- B. Related Sections
 - 1. Section 042000 - Unit Masonry: Coordinate compatibility with through-wall flashing.
 - 2. Section 076200 - Flashing and Sheet Metal.

1.2 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.3 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's instructions for surface conditioner compatibility, primer, mastic, membrane, temperature range for application of barrier materials.
- B. Shop Drawings: For complete moisture barrier assemblies.
 - 1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 2. Include details of interfaces with other materials that form part of air barrier.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.
- B. Compatibility:

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."
- C. Pre-Installation Conference: Prior to installation of barrier, conduct pre-installation conference at project site.
 - 1. Attendance: Contractor, job superintendent, subcontractors, supplier and manufacturer's technical representative.
 - 2. Agenda: Cover installation and coordination procedures, protective measures and related conditions.
 - 3. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.
- D. Mockups: Build mockups to set quality standards for materials and execution.

1. Build integrated mockups of exterior wall assembly, 150 sq. ft., incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.
 1. Bond Strength: Test for cohesive and adhesive strength according to ASTM E 736. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 2. Density: Test for density according to ASTM E 605. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 3. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with fireproofing.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, obtain applied-fireproofing manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

1.7 PROJECT CONDITIONS

- A. Do not apply barrier during inclement weather or when air temperature is below 40 degrees F., unless manufacturer's written application instructions indicate otherwise.
- B. Do not apply barrier to damp, frozen, dirty, dusty, or surfaces unacceptable to manufacturer.

1.8 WARRANTY

- A. Warranty shall provide for making good, within period of 3 years, at no cost to Owner, failures of barrier to resist penetration of water, except where such failures are:
 1. Result of structural failures of building.
 2. Cracking of membrane due to temperature or shrinkage is not considered as structural failure.
- B. Repair and make good barrier membrane and pay for and repair or replace affected or damaged materials or surfaces at no cost to Owner.

1.9 COORDINATION

- A. Coordinate installation of moisture barrier with other systems including interface conditions at window and door openings, and to other waterproofing systems.
- B. Coordinate installation of assembly over moisture barrier to protect moisture barrier from UV exposure.

PART 2 PRODUCTS

2.1 ASSEMBLY REQUIREMENTS

- A. General: Provide complete air- and moisture-barrier assembly meeting the following performance requirements:
 1. Performs as a drainage plane flashed to discharge liquid-water caused by incidental condensation or water penetration to the exterior.
 2. Performs as a continuous air-barrier and vapor-barrier.

3. Accommodates substrate movement, sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing and through-wall flashing, and transitions at perimeter conditions without deterioration and without air leakage exceeding specified limits.
 4. System Air Leakage Limit, ASTM E 283 or ASTM E 783: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft..
- B. Source Limitations: Obtain primary moisture barrier assembly materials and accessories from single source from single manufacturer.
- C. Material Compatibility: Assembly materials shall be compatible with one another and with adjacent materials, as demonstrated by manufacturer based on testing and field experience.

2.2 VAPOR, WATER & AIR BARRIER

- A. (AB-1) Modified Bituminous Sheet: 40-mil- thick, self-adhering sheet consisting of 36 mils of rubberized asphalt laminated to a 4-mil- thick, cross-laminated polyethylene film with release liner on adhesive side; formulated for application with primer that complies with VOC limits of authorities having jurisdiction.
1. Physical and Performance Properties:
 - a. Air Permeance, ASTM E 2178: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference.
 - b. Water Vapor Permeance, ASTM E 96, Water Method: Maximum 0.10 perm.
 - c. Tensile Strength, ASTM D 412, Die C: Minimum 250 psi.
 - d. Ultimate Elongation, ASTM D 412, Die C: Minimum 200 percent.
 - e. Puncture Resistance, ASTM E 154: Minimum 40 lbf.
 - f. Water Absorption, ASTM D 570: Maximum 0.15 percent weight gain after 48-hour immersion at 70 deg F.
 2. Products and Manufacturers:
 - a. Perm-A-Barrier Wall Membrane by Grace Construction Products.
 - b. CCW-705 by Carlisle Coatings & Waterproofing.
 - c. PW 100/40 AVB by Protecto Wrap Company.
 - d. Sealtight Air-Shield by W. R. Meadows Inc..
 - e. ExoAir 110/110LT by Tremco.
 - f. Blueskin SA by Henry Company.

2.3 ASSEMBLY ACCESSORIES

- A. General: Provide compatible assembly components recommended by membrane manufacturer to produce a complete air- and moisture-barrier assembly.
- B. Cleaner: As recommended by membrane manufacturer to clean substrates and surfaces to be lapped.
- C. Primer: Use manufacturer's recommended solvent-based or water-based primers for concrete and concrete masonry substrates or glass-matt faced sheathing.
- D. Flashing and Other Assembly Components:
 1. Substrate-Patching Membrane
 2. Crack Treatment Strips
 3. Joint Reinforcing Strips
 4. Counterflashing Strips
 5. Roof Termination Strips: For terminating at compatible roofing membrane.
 6. Opening Termination Strips: For terminating at windows, doors, curtain walls, and storefront systems.
 7. Termination Mastic.
 8. Adhesives and Tapes.
- E. Joint Sealant: Provide joint sealants in compliance with Section 079200 - Joint Sealants.
- F. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, 1.5- to 2.0-lb/cu. ft. density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

- G. Stainless-Steel Sheet: ASTM A 240, Type 304, 0.0250 inch thick, and Series 300 stainless-steel fasteners.

2.4 **FLUID-APPLIED MOISTURE BARRIER S#7**

- A. (MB-4) Fluid-Applied, Vapor-Retarding Moisture Barrier: Elastomeric, modified bituminous or synthetic polymer (rubber) membrane; minimum dry film thickness of 40 mils.
 - 1. Physical and Performance Properties:
 - a. Air Permeance, ASTM E 2178: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference.
 - b. Water Vapor Permeance, ASTM E 96: Maximum 0.10 perm.
 - c. Ultimate Elongation, ASTM D 412, Die C: Minimum 500 percent.
 - 2. Products and Manufacturers:
 - a. Elastomeric, Modified Bituminous Membrane:
 - 1) Air-Bloc 06 WB by Henry Company.
 - b. Synthetic Rubber Membrane:
 - 1) Air-Bloc, 21S, by Henry Company
 - 2) Perm-A-Barrier Liquid by Grace Construction Products.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that concrete has cured and aged for minimum time period recommended by barrier manufacturer.
 - 3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - 4. Verify that masonry joints are flush and completely filled with mortar.
 - 5. Verify that sleeves, ties, and other penetrating components that pass through surfaces to receive barrier are rigidly installed.
 - 6. Verify that surfaces are free of cracks, depressions, waves or projections which may be detrimental to successful installation.
 - 7. Ensure that exterior sheathing panels are stabilized with corners and edges fastened with appropriate screws.
- B. Proceed with installation only after unsatisfactory conditions have been corrected. Starting Work of this Section means acceptance of substrate and site conditions.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for moisture barrier application.
 - 1. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 2. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
 - 3. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- B. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- C. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for moisture barrier membrane.
- D. Joint and Crack Treatment: Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Bridge and cover isolation joints, expansion joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with overlapping modified bituminous strips.
2. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.
3. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

3.3 INSTALLATION, GENERAL

- A. Transition Strips: Install strips, transition strips, and accessory materials according to manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 1. Where directed by manufacturer's written instructions, apply before or after application of membrane to create a shingle effect and maintain continuity of the air barrier assembly from top to bottom of structure.
 2. Coordinate with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 3. Use transition membranes to tie into opening frames, spandrel panels, floor intersections and changes in substrates.
 4. Apply in accordance with manufacturer's instructions, positioning, lapping, sealing and protecting as required.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
- C. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply so that a minimum of 3 inches of coverage is achieved over each substrate..
- D. Seal top of through-wall flashings to moisture barrier with an additional 6-inch- wide.
 1. At Non-Metallic Through Wall Flashing: Use modified bituminous strip.

3.4 INSTALLATION OF SHEET MEMBRANE

- A. General: Install sheet membrane moisture barrier and accessory materials according to manufacturer's written instructions and according to recommendations in ASTM D 6135.
 1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application. Do not install low-temperature sheet if ambient or substrate temperature is higher than 60 deg F.
- B. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
 1. Install modified bituminous strips centered over vertical inside corners. Install 3/4-inch fillets of termination mastic on horizontal inside corners.
- C. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations with termination mastic and according to ASTM D 6135.
- D. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.
 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- E. Apply and firmly adhere modified bituminous sheets horizontally over area to receive air barrier. Accurately align sheets and maintain uniform 2-1/2-inch- minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.
 1. Apply sheets in a shingled manner to shed water without interception by any exposed sheet edges.
 2. Roll sheets firmly to enhance adhesion to substrate.

- F. Apply continuous modified bituminous sheets over modified bituminous strips bridging substrate cracks, construction, and contraction joints.
- G. CMU: Install barrier sheet horizontally against the CMU beginning at base of wall. Align top edge of air-barrier sheet immediately below protruding masonry ties or joint reinforcement or ties, and firmly adhere in place.
 - 1. Overlap horizontally adjacent sheets a minimum of 2 inches and roll seams.
 - 2. Apply overlapping sheets with bottom edge slit to fit around masonry reinforcing or ties. Roll firmly into place.
 - 3. Seal around masonry reinforcing or ties and penetrations with termination mastic.
 - 4. Continue the membrane into all openings in the wall, such as doors and windows, and terminate at points to maintain an airtight barrier that is not visible from interior.
- H. Seal exposed edges of sheet at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- I. Connect and seal exterior wall air-barrier membrane continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- J. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition material or flashing so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.
 - 1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.
 - 2. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at 6 inches o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
 - 3. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and membrane.
- K. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of air-barrier membrane with foam sealant.
- L. At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.
- M. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- N. Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending 6 inches beyond repaired areas in all directions.
- O. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- P. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.5 INSTALLATION OF FLUID-APPLIED MEMBRANE

- A. General: Apply fluid-applied moisture barrier in accordance with manufacturer's written instructions to achieve a continuous unbroken air-barrier membrane.
 - 1. Mask off adjoining surfaces not covered by barrier to prevent spillage and overspray affecting other construction.
 - 2. Apply fluid barrier material within manufacturer's recommended application temperature ranges.
 - 3. Apply to dry film thickness in accordance with manufacturer's instructions.
- B. Membrane Air Barriers: Apply a to substrates according to the following thickness. Apply in full contact around protrusions such as masonry ties.

- C. Apply strip and transition strip a minimum of 1 inch onto cured air-barrier material or strip and transition strip over cured air-barrier material overlapping 3 inches onto each surface according to air-barrier manufacturer's written instructions.
- D. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- E. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2. Continuous structural support of air-barrier system has been provided.
 - 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 - 4. Site conditions for application temperature and dryness of substrates have been maintained.
 - 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 - 6. Surfaces have been primed, if applicable.
 - 7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
 - 8. Termination mastic has been applied on cut edges.
 - 9. Strips and transition strips have been firmly adhered to substrate.
 - 10. Compatible materials have been used.
 - 11. Transitions at changes in direction and structural support at gaps have been provided.
 - 12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 - 13. All penetrations have been sealed.
- C. Tests: As determined by Owner's testing agency from among the following tests:
 - 1. Quantitative Air-Leakage Testing: Air-barrier assemblies will be tested for air leakage according to ASTM E 783.
 - 2. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of 30 lbf/sq. in. according to ASTM D 4541 for each 600 sq. ft. of installed air barrier or part thereof.
- D. Air barriers will be considered defective if they do not pass tests and inspections.
 - 1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 - 2. Remove and replace deficient air-barrier components for retesting as specified above.
- E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.7 CLEANING AND PROTECTION

- A. Protect moisture barrier assembly from damage during application and for remainder of construction period; in accordance with manufacturer's written instructions.
 - 1. Protect barrier from contact with incompatible materials and sealants not approved by barrier manufacturer.
 - 2. Protect barrier from exposure to UV light and harmful weather exposure as required by manufacturer.
 - 3. If exposed to UV light or to harmful weather for more than 30 days, remove and replace barrier; or, as approved by moisture barrier manufacturer, repair and prepare the overexposed membrane and install additional, full-thickness, barrier in accordance with manufacturer's written recommendations.

- B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 074200 METAL PANELS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. (MP-1) Flush Formed Aluminum Plate Panels.
 - 2. (MP-2) Formed Box-Rib-Profile Panels.
 - 3. (MP-4) Flush Formed Aluminum Sheet Panels.
 - 4. Framing and accessories for metal panels.
 - 5. Engineering required to comply with specified performance requirements.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
- B. Shop Drawings: Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
 - 1. Indicate dimensions, panel layout, construction details, method of anchorage, method of installation.
 - 2. Panel layout to match layout as indicated on Drawings.
- C. Delegated Design Submittal and Shop Drawings: Where professional design services or certifications by a qualified Professional Engineer are specifically required of the Contractor by the Contract Documents, submit shop drawings submittal package with the delegated design submittal requirements in accordance with Section 013300 - Submittal Procedures.
- D. Calculations: Upon request from the Architect/Engineer only, Contractor shall submit calculations in accordance with Section 013300 – Submittal Procedures.
- E. Samples:
 - 1. Metal Panels: 36 inches long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.3 INFORMATIONAL SUBMITTALS

- A. Samples: Submit color samples for selection in accordance with Section 013300.
 - 1. Metal Panels: 36 inches long by actual panel width. Include fasteners, closures, and other metal panel accessories.
- B. Qualification Data: For fabricator and installer.

1.4 QUALITY ASSURANCE

- A. Panel system fabricator and attachment system shall be approved by the panel manufacturer.
- B. Fabricator and Installer Qualifications: A single entity, well-established and experienced in metal panel fabrication and installation, acceptable to Owner and Architect, employing skilled workers who custom-fabricate and install metal panels similar to those required for this Project and whose work has a record of successful in-service performance.
 - 1. Installer Qualifications: Fabricator of metal panels for this project.
 - 2. Experience: Having successfully completed a minimum of 10 previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.
 - 3. Architect reserves the right to reject metal panel fabricator if it is Architect's opinion that previous performance by fabricator has been unsatisfactory, or if any of the following will not result in required quality within time required for completion:

- a. Shop capacity and capabilities.
 - b. Experience of workers.
 - c. Installation capabilities and equipment.
 - d. Quality or supply of material.
- C. Mockups: Fabricate and erect in place. Mock-up to illustrate shape, joints, anchoring and attachment points, perforations and finish in accordance with approved sample.
- 1. Joints Included in Mock-Up: Outside corner with corner bar typical in-field joint, in-field joint with snap cover, inside corner, expansion joints.
 - 2. Obtain Architect's acceptance of visual qualities of mock-ups before start of work. Accepted unit establishes minimum standard for work. Unit may be incorporated into work.

1.5 ENVIRONMENTAL CONDITIONS

- A. Field Measurements: should be taken prior to the completion of shop fabrication whenever possible. However, coordinate fabrication schedule with construction progress as directed by the Contractor to avoid delay of work. Field fabrication may be allowed to ensure proper fit. However, field fabrication shall be kept to an absolute minimum with the majority of the fabrication being done under controlled shop conditions.
- B. Verify dimensions by field measurement before panel fabrication. Design units to provide for adjustment and fitting of components during field installation. Preassemble units at shop to minimize mechanical joints, splicing and field assembly of units.

1.6 COORDINATION

- A. Coordinate work directly with other trades as necessary to insure proper fitting, joining or to clearances of other work. Obtain templates as required to insure proper fitting. Verify dimensions and exchange shop drawings.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panels and sub-framing systems that fail in materials or workmanship within specified warranty period.
- 1. Failures including but not limited to the following:
 - a. Deterioration resulting from U.V. and weather exposure,
 - b. Structural failures including rupturing, cracking, or puncturing.
 - c. Deterioration of materials beyond normal weathering.
 - 2. Provide warranty covering panel fabrication defects and loss of specified physical and performance properties, when panels are installed in accordance with manufacturer's requirements.
 - 3. Provide warranty covering cost of panel removal and installation of replacement panels.
 - 4. Warranty Period: 10 years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
- 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Contractor shall engage a qualified Professional Engineer to provide delegated design services in accordance with Section 013300 – Submittal Procedures

- B. Structural Performance: Design panels and connections in accordance with applicable codes and standards, capable of withstanding project design loads, within limits and under conditions indicated, without excessive stress or deflection.
 - 1. Design Loads: Design and construct metal panel, including anchorages, to withstand attached dead loads, live loads and the following wind:
 - a. Dead Loads, Live Loads, and Other Project Loads: As indicated on Construction Documents.
 - b. Wind Loads: Provisions of ASCE 7-10 as indicated in the Construction Documents.
 - 2. All other related items that are shop or field fastened to panels for purposes of placing and anchoring panels; clip angles and other members used to connect panels to structural steel or backup and shim, bolts, nuts, girts and steel angle clips at concealed connections.
 - 3. System to accommodate movement of components without buckling, undue stress on fasteners, or other detrimental effects, when subject to seasonal temperature ranges.
- C. Thermal Movement: System to provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F without causing detrimental effects to system or components.
- D. Not Permitted: Vibration harmonics; wind whistles; noises caused by thermal movement; thermal movement transmitted to other building elements; loosening, weakening or fracturing of attachments or components of system.

2.2 CUSTOM FORMED METAL PANELS

- A. Single Source Responsibility: Provide metal panel products by a single firm for each type of metal panel.
- B. (MP-1) Flush Formed Aluminum Plate Panels: Custom-fabricated aluminum plate panels, fabricated from single sheets of aluminum formed into profile for installation method indicated. Include attachment assembly components and panel stiffeners as required.
 - 1. Panel Profile: Flush profile as shown on Drawings.
 - 2. Panel Depth: As shown.
 - 3. Panel Sizes: Varying, as shown.
 - 4. Aluminum Sheet: 0.125 inch thick, tension-leveled, smooth aluminum sheet, ASTM B 209.
 - 5. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.
 - 6. Panel Sizes: Varying, as shown.
- C. (MP-2) Formed Box-Rib-Profile Panels: Box-shaped (90-degree) ribs, with interlocking tongue and groove joints, installed with concealed clip fasteners. Include attachment assembly components and accessories.
 - 1. Basis of Design: Morin Matrix Series, MX 1.0.
 - 2. Aluminum Sheet: 0.063 inch thick, tension-leveled, smooth aluminum sheet, ASTM B 209.
 - 3. Panel Configuration:
 - a. Profiles: Multiple, as selected by Architect from Manufacturer's full range.
 - b. Panel Width and Length: As shown.
 - c. Panel Depth: 1-1/2 inch.
 - d. Rib Orientation: As shown.
 - 4. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.
- D. (MP-4) Flush Formed Aluminum Sheet Panels: Custom-fabricated formed aluminum sheet panels fabricated from single sheets of aluminum formed into profile for installation method indicated. Include attachment assembly components and accessories.
 - 1. Panel Profile: Flush profile as shown on Drawings.
 - 2. Panel Depth: As shown.
 - 3. Panel Sizes: Varying, as shown.
 - 4. Aluminum Sheet: 0.063 inch thick, tension-leveled, smooth aluminum sheet, ASTM B 209.
 - 5. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.

2.3 PANEL SYSTEM COMPONENTS

- A. Wall Panel Accessories: Provide components required for a complete wall panel assembly including trim, copings, fascia, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of panels unless otherwise indicated.
- B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and finish indicated.
- C. Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653, G90 coating designation or ASTM A 792, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
 - 1. Subframing Anchors: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide EPDM or neoprene sealing washers.
 - a. Subframing-to-Concrete: Stainless steel or zinc-coated, self-tapping (Tapcon).
 - b. Subframing-to-Steel Stud: Zinc-coated, self-tapping
 - 2. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.
- D. Flashing and Trim: Formed from 0.018-inch-minimum thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish. Refer to Section 079000 - Joint Sealants.
 - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
 - 2. Joint Sealant for Exterior and Exposed Seals: ASTM C 920 silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain watertight; and as recommended in writing by metal panel manufacturer.
 - 3. Lap Sealant: Butyl-rubber-based, ASTM C 1311.

2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing.
 - 1. Comply with indicated profiles and with dimensional and structural requirements.
 - 2. Shop fabricate system and assemble units ready for installation.
 - 3. Panel fabricator shall field measure as required to insure level, square and true to line, installation.
- B. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.

5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Finishes for Concealed Surfaces: Comply with NAAMM's "Metal Finishes Manual" for recommendations for applying and designating finishes.
 1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 2. Concealed Steel Items: Galvanized in accordance with ANSI/ASTM A653 to 2.0 oz/sq ft primed with iron oxide paint.
 3. Apply one coat of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.
 4. Primer: FS TT-P-31; for shop application and field touch-up.
 5. Touch-Up Primer for Galvanized Surfaces: FS TT-P-641; TT-P-645.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of work.
 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
- B. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 1. Commence metal panel installation and install in presence of factory-authorized representative.
 2. Shim or otherwise plumb substrates receiving metal wall panels.
 3. Flash and seal metal wall panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.

4. Install screw fasteners in predrilled holes.
 5. Locate and space fastenings in uniform vertical and horizontal alignment.
 6. Install flashing and trim as metal wall panel work proceeds.
 7. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 8. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 9. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 10. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
- B. Fasteners: Use fasteners of type and size that will secure wall components in compliance with design load requirements, without corroding.
1. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized steel fasteners for surfaces exposed to the interior.
 2. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
 3. Copper Wall Panels: Use copper, stainless-steel or hardware-bronze fasteners.
 4. Stainless-Steel Wall Panels: Use stainless-steel fasteners.
 5. Conceal fasteners and expansion provisions, where possible, in exposed work and locate to minimize possibility of leakage.
- C. Metal Protection: Do not install metal wall panel system with non-compatible materials. Protect the metal wall panels from masonry and products containing lime by leaving the protective coating on the zinc until project and clean-up completion. Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.
- D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.
1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

3.3 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754, metal wall panel manufacturer's written recommendations, and approved Shop Drawings.
1. Install girts tight to moisture barrier (MB).
- C. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.4 TOLERANCES

- A. Panel Erection Tolerances: Erect formed metal panel sheet metal work plumb and true, in alignment and in relation to lines and dimensions shown. Variations of 1/8 inch in 10 feet, non-accumulative, is maximum permissible for plumb, warp, bow and alignment.
 - 1. Maximum Offset From True Alignment Between Adjacent Members Butting In Line: 1/16 inch.
 - 2. Maximum Variation from Plane or Location Indicated on Drawings: 1/8 inch.

3.5 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 075400 THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Fully-adhered TPO membrane roofing systems (TPO).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Base flashings and membrane terminations.
 - 2. Tapered insulation, including slopes.
 - 3. Roof plan showing orientation of steel roof deck and orientation of membrane roofing and fastening spacings and patterns for mechanically fastened membrane roofing.
 - 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer and manufacturer.
- B. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - 1. Submit evidence of compliance with performance requirements.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for membrane roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.5 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, and other components of membrane roofing system.
 - 2. Warranty Period: **20** years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.
 - 1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
 - 2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D 3746, ASTM D 4272, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.
- B. Wind Uplift Resistance: Design roofing system to resist wind uplift pressures in accordance with FM Global Requirements when tested according to FM Approvals 4474, UL 580, or UL 1897.

2.2 ROOFING SYSTEM, GENERAL

- A. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
- B. Source Limitations: Obtain roofing system components from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.
- C. Manufacturers: Provide Basis of Design or approved equivalent roofing system, from one of the following manufacturers:
 - 1. Carlisle SynTec Incorporated.
 - 2. Firestone Building Products Company.
 - 3. GAF Materials Corporation.
 - 4. GenFlex Roofing Systems.
 - 5. Johns Manville Roofing Systems
 - 6. Stevens Roofing Systems; Division of JPS Elastomerics.
 - 7. Versico Incorporated.
 - 8. Mule-Hide Products, Co..
- D. System Basis of Design: Sure-Weld TPO Fully-Adhered System by Carlisle Syntec.
- E. Roofing System Configurations: As indicated in Drawings and as follows:
 - 1. TPO-1: On concrete deck.
 - a. insulation,
 - b. protection board
 - c. adhered, reinforced TPO membrane, 60 mils (minimum), white;
 - 2. TPO-2: On metal deck
 - a. substrate board and vapor barrier
 - b. insulation,
 - c. protection board
 - d. adhered, reinforced TPO membrane, 60 mils (minimum), white;

2.3 ROOFING SYSTEM COMPONENTS

- A. Fleece-Backed Fabric-Reinforced Thermoplastic Polyolefin (TPO) Sheet: ASTM D 6878, internally fabric or scrim reinforced, fabric-backed TPO sheet.
 - 1. Membrane Thickness: 115 mils total, consisting of 60 mil TPO membrane and 55 mils fabric backing.
 - 2. Exposed Face Color: White, as selected by Architect.
- B. Rib Profiles: Sure-Weld TPO Contour Rib Profile by Carlisle Syntec.
- C. Cover (Protection) and Substrate Board: ASTM C 1177, glass-mat, water-resistant gypsum substrate, 1/2 inch thick.
 - 1. Product: Dens Deck by Georgia-Pacific Corporation.

- D. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.
 - 1. Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated.
 - 2. Roof Insulation: Provide preformed roof insulation boards manufactured or approved by TPO membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.
 - a. Average R-value: R-45 for roof insulation.
 - 3. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.
 - 4. Insulation Accessories: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.
 - a. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
 - b. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
- E. Vapor Barrier at Roof: ASTM D 1970 vapor barrier; 40 mils thick self-adhering composite sheet consisting of rubberized asphalt and woven polypropylene film; water-vapor transmission of no more than 0.10 perms when tested in accordance with ASTM E 96.
 - 1. Basis of Design: VapAir Seal 725TR by Carlisle Syntec Systems, or as recommended by Roofing Manufacturer.

2.4 AUXILIARY MEMBRANE ROOFING MATERIALS

- A. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.
 - 1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: Manufacturer's standard unreinforced thermoplastic polyolefin sheet flashing, 55 mils thick, minimum, of same color as sheet membrane.
- C. Bonding Adhesive: Manufacturer's standard.
- D. Slip Sheet: Manufacturer's standard, of thickness required for application.
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- F. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick, prepunched.
- G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.
- H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
 - 1. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Decking."
4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
5. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
6. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- D. Install acoustical roof deck rib insulation strips, specified in Division 05 Section "Steel Decking," according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

3.3 SUBSTRATE BOARD

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 1. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

3.4 VAPOR BARRIER INSTALLATION

- A. Laminate Sheet: Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches and 6 inches, respectively. Bond vapor retarder to substrate as follows:
 1. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.
 2. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

3.5 INSULATION INSTALLATION

- A. General: Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
 1. Install insulation adhesively or mechanically as recommended in writing by roofing system Manufacturer.
 2. Install tapered insulation under area of roofing to conform to slopes indicated.
 3. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 4. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
 5. Install with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.

6. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- B. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
 1. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. and allow primer to dry.
 2. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 3. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
 - C. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 1. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
 - D. Mechanically Fastened and Adhered Insulation: Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 1. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
 2. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 3. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
 - E. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together and fasten to roof deck as recommended in writing by roofing system Manufacturer.
 1. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

3.6 ADHERED MEMBRANE ROOFING INSTALLATION

- A. Base Flashing: Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
 1. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.
 2. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
 3. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
 4. Terminate and seal top of sheet flashings[and mechanically anchor to substrate through termination bars.
- B. Adhere membrane roofing over area to receive roofing and install according to membrane roofing system manufacturer's written instructions.
- C. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
- D. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- E. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.
- F. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roofing.
- G. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

- H. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
 - 2. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
- I. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
- J. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition[**and to not void warranty for existing membrane roofing system**].

3.7 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
- C. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 PROTECTING AND CLEANING

- A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 076200 SHEET METAL & FLASHING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Prefinished sheet metal flashing, roof edges and parapets, coping, expansion and contraction joint covers, parapet wall covers (SMF).
 - 2. Flexible membrane flashing (MEMB FLASH).

1.2 COORDINATION

- A. Coordinate with Section 074200- Metal Panels for copings and other sheet metal work by metal panel (MP) fabricator.
- B. Coordinate sheet metal layout and seams with penetrations and with joints and seams in adjacent materials.
- C. Coordinate sheet metal installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.
- D. Coordinate work of this section with interfacing and adjoining work for proper sequencing of each installation. Ensure best possible weather resistance and durability of work and protection of materials and finishes.

1.3 ACTION SUBMITTALS

- A. Product Data: For manufactured components. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory. Include identification of material, thickness, weight, and finish for each type.
- B. Shop Drawings: For sheet metal flashing and trim. Include plans, elevations, sections, and attachment details. Indicate installation layouts, expansion-joint locations, spacing of fasteners, cleats, clips, and other attachments. Distinguish between shop- and field-assembled work.
- C. Samples: For each type of sheet metal and finishes, 12 inches long by actual width of unit, including finished seam and in required profile.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator and manufacturers.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
- B. Pre-Installation Conference: Conduct a conference to review and discuss the following:
 - 1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
 - 3. Review requirements for insurance and certificates if applicable.
 - 4. Review sheet metal flashing observation and repair procedures after flashing installation.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping, and protect film from exposure to sunlight and high humidity.
- B. Do not store materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal materials away from uncured concrete and masonry.

1.7 WARRANTY

- A. Special Finish Warranty: Submit manufacturer's 20 year written warranty covering failure of the factory-applied exterior finish on sheet metal and agreeing to repair finish or replace sheet metal that evidences finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
- B. Weathertight Warranty: In which Installer agrees to repair or replace components of sheet metal flashing that fail in materials or workmanship within 5 years of Date of Substantial Completion. Failures include, but are not limited to, the following:
 1. Structural failures including, but not limited to, rupturing, cracking, or puncturing.
 2. Wrinkling or buckling.
 3. Loose parts.
 4. Failure to remain weathertight, including uncontrolled water leakage.
 5. Deterioration of metals, metal finishes, and other materials beyond normal weathering, including nonuniformity of color or finish.
 6. Galvanic action between sheet metal and dissimilar materials.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. FM Approvals Listing: Manufacture and install **copings and roof edge flashings** that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, **[Class 1-60] [Class 1-75] [Class 1-90] [Class 1-105] [Class 1-120]**. Identify materials with name of fabricator and design approved by FM Approvals.
- C. SPRI Wind Design Standard: Manufacture and install **copings and roof edge flashings** tested according to SPRI ES-1 and capable of resisting the following design pressure:
 1. Design Pressure: As indicated on Drawings.
- D. Thermal Movement: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- E. Install sheet metal and trim to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking and fastener disengagement.
- F. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.

2.2 ALUMINUM FLASHING

- A. (SMF-1) Aluminum Sheet Flashing: ASTM B 209, with smooth and flat surface, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required.
1. Thickness: 0.040 inch.
 2. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.
 3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.
 4. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

2.3 FLEXIBLE MEMBRANE FLASHING

- A. (MEMB FLASH-1) Self-Adhering, High-Temperature Sheet Membrane Flashing: Minimum 30 mils thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing and flashing. Provide primer according to written recommendations of underlayment manufacturer.
1. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F or higher.
 2. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F or lower.
 3. Manufacturers and Products:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW WIP 300HT
 - b. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRI WIP 300 High Temperature
 - c. Grace Construction Products; Grace Ultra.
 - d. Grace Construction Products; Grace Ice and Water Shield HT.
 - e. Henry Company; Blueskin PE200 HT.
 - f. Owens Corning; WeatherLock Metal High-Temperature Underlayment.
 - g. Protecto Wrap Company; Protecto Jiffy Seal Ice & Water Guard HT.
 - h. SDP Advanced Polymer Products Inc; Palisade SA-HT.
- B. (MEMB FLASH-2) EPDM Rubber Sheet Membrane Flashing: ASTM D 6134, Type I, 60-mil- thick flexible sheet, unreinforced, formed from EPDM.
1. Manufacturers:
 - a. Carlisle Coatings & Waterproofing Inc..
 - b. Firestone Building Products.
 - c. JohnsManville.
 - d. Versico.
 2. Accessories: Furnish auxiliary materials including sheet flashing and bonding adhesive, recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

2.4 ACCESSORIES

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal unless otherwise indicated.
- B. Anchorage: Nails and screws of hot dip zinc coated steel. Use screws where exposed anchorage is required. Screws minimum 1-1/2 inch long with neoprene washer under screw head. Exposed surfaces with finish to match color of sheet metal.
- C. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal[or manufactured item].
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
- E. Bituminous Coating: Cold-applied asphalt emulsion according to ASTM D 1187.

2.5 FABRICATION

- A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated. Fabricate items at the shop to greatest extent possible.
 - 1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 - 2. Obtain field measurements for accurate fit before shop fabrication.
 - 3. Form sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
 - 4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.
- B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
- C. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant.
- D. Expansion Provisions: Where lapped expansion provisions cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
- E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- F. Finishes:
 - 1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 3. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrate and conditions under which flashing and sheet metal work is to be performed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sheet metal work in accordance with reviewed shop drawings and Architectural Sheet Metal Manual with sharp clean breaks.
- B. Lower edge of flashing, counter flashing and exposed metal edges shall be turned back into hemmed edge.
- C. Flashing shall be securely fastened and water and weatherproof. Neatly install with sharp clean breaks. Metal work at roof shall meet roofer's requirements and approval.
- D. Butt and locked joint in metal work shall be watertight. Joints shall be lapped in direction of flow.
- E. Provide lead wedges where required to hold metal firmly in place.
- F. Install work with proper allowance for expansion and contraction from thermal changes.
- G. Prior to starting work, nailers and blocking shall be true to size and line and securely anchored. Do not proceed until corrections are made so straight, level, plumb and properly sized work results.

- H. Carefully form flashings, including at masonry, to conform to material dimensions as shown and according to field dimensions as verified.
- I. Join lengths of gutters and downspouts with formed seams sealed watertight. Flash and seal gutters to downspouts. Slope gutters to downspout.

3.3 LOCATION OF JOINTS IN METAL

- A. Center roof edge cover joints on other building features, symmetrical on facade, with joints not to exceed 10 feet o.c., as directed by Architect.
- B. Joints in other metal work may be placed where convenient to metal lengths, not to exceed 10 feet lengths.
- C. Cut metal for installations to maintain uniform 1/4 inch joint.

3.4 CONSTRUCTION OF END JOINTS

- A. Butt Joints with Backplate for Expansion: Provide backplates same gauge and metal as flashing, 6 inch wide (2-7/8 inch each side of joint) conforming to exact shape of back of metal and full profile of metal after forming (except hems).
 - 1. At both ends of each length of flashing metal, provide not less than 3 bent clips riveted near end, to receive backplate. Backplates are to slip under bent clips and shall form tight contact with flashing or cover metal.
 - 2. In installation, butter bed of sealant on backplate and slide section of metal onto backplate, such that backplate fits into clips to hold metal tight and in perfect alignment. Repeat until metal has been set. At joints, install screws with neoprene washers through backplate without fastening to metal flashing length. (Notch out ends of flashing metal to accommodate screw heads and to eliminate obstructions for metal expansion.) Provide screw with neoprene washer at center of each length of roof metal flashing. Provide keepers or cleats to keep metal in place.
- B. Locked Cover Strips: Cover strip shall have same profile as flashing and be formed with single lock seam to metal each side of joint. Locked seam joints shall have about 3/4 inch seam lock, with flashing spaced about 3/8 inch and shall permit movement at each joint.
- C. Lapped Joints: Lap 3 inches in direction of water flow. At counterflashings, lock bottom edges together.
- D. Sealant: Apply concealed sealant in accordance with requirements of Section 079000 - Joint Sealers.
- E. At corners, inside or outside type, provide neat corner sections built-up in shop; with soldered joints and follow profile of adjacent metal. No nails permitted at exposed surfaces of exposed roof metal, only screws shall be used. Set roof edges in cooperation with roofer. Form angles to lesser degrees than required to insure snug fit after installation.

3.5 MEMBRANE FLASHING

- A. Install membrane flashing over metal flashing with termination bar and sealant at top edge. Install membrane in accordance with manufacturer's directions to maintain watertight integrity of flashing materials and installation. Lengths shall be as long as possible by rolls of material. Lap ends minimum 2 inches, seal entire lap with adhesive and clean free of residue.

3.6 COUNTERFLASHING AND CURB FLASHING

- A. Install metal counterflashing after membrane flashing is installed. Secure with screws through neoprene washers and locate not to exceed 18 inches o.c. Lap joints and lock lower edges together.
- B. Install counterflashing to provide watertight closure over top of roofing flashing. Corners at curbs shall be sealed watertight. Height of counterflashing above membrane as indicated, with counterflashing carried down 45 degrees cant strip to about 1/2 inch above roof insulation. Bottom edge shall be hemmed to eliminate sharp edges.
- C. Counter-flash mechanical and electrical items projecting through membrane roofing.

3.7 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.8 INSTALLED WORK

- A. Cleaning: Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering. Clean off excess sealants.
- B. Protection: Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.
- C. Damaged Work: Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 077233 ROOF HATCHES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Prefabricated roof hatches and accessories for ships' ladder access (RH-1).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, materials, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.

1.3 QUALITY ASSURANCE

- A. Standards: Comply with the following:
 - 1. SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.
 - 2. NRCA's "Roofing and Waterproofing Manual" details for installing units.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Cover and curb shall be thermally broken to prevent heat transfer between interior and exterior surfaces.
- B. Entire assembly shall be weathertight with fully welded corner joints on cover and curb.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide Basis of Design or equivalent products by one of the following:
 - 1. Bilco Company.
 - 2. Milcor Incorporated
 - 3. Wasco Products
 - 4. Dur-Red Products
 - 5. J.L. Industries
 - 6. Nystrom Products.
 - 7. Babcock-Davis.

2.3 ROOF HATCHES

- A. (RH-1) Thermally-Broken Roof Hatch for Ships' Ladder Access: Pre-assembled, single-leaf aluminum roof-hatch units with thermally-separated lids and insulated curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, and integrally formed deck-mounting flange at perimeter bottom.
 - 1. Basis of Design: Type S-50TB by Bilco Company.
 - 2. Size: 30 inches by 96 inches.
 - 3. Modifications for Acoustic Performance: Provide continuous sound-seal gasket at cover perimeter.
- B. Cover: Shall be 11 gauge aluminum with a 5" beaded flange with formed reinforcing members. Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation. Cover shall have a heavy extruded EPDM rubber gasket bonded to the cover interior to assure a continuous seal when compressed to the top surface of the curb.

1. Cover insulation: Shall be 3" thick polyisocyanurate with an R-value = 18, fully covered and protected by an 18 gauge aluminum liner.
 2. Reinforced to support minimum live load of 40 psf with maximum deflection of 1/150th of the span or 20 psf wind uplift.
 3. Cover operation shall not be affected by temperature.
- C. Curb: Minimum height above roof membrane 12-inches, fabricated of 11 gauge aluminum. Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation. The curb shall be formed with a 5-1/2" flange with 7/16" holes provided for securing to the roof deck.
1. Equipped with an integral metal cap flashing of the same gage and material as the curb, fully welded at the corners, with flashing system, including stamped tabs, 6 inch on center, to be bent inward to hold roofing membrane securely in place.
 2. Curb Insulation: 3-inches polyisocyanurate, R-value of 18.
- D. Lifting mechanisms: Manufacturer's compression spring operators enclosed in telescopic tubes to provide, smooth, easy, and controlled cover operation throughout entire arc of opening and closing. Lower tube shall interlock with flanged support shoe.
- E. Hardware:
1. Hinges: Heavy pintle type.
 2. Cover: Equipped with a spring latch with interior and exterior turn handles.
 3. Roof scuttle: Equipped with interior and exterior padlock hasps.
 4. Latch strike: Stamped component bolted to the curb assembly.
 5. Cover: Automatically lock in the open position with a rigid hold open arm equipped with a 1 inch diameter red vinyl grip handle to permit easy release for closing. Bolted into heavy gage channel reinforcing welded to the underside of the cover and concealed within the insulation space.
 6. Compression spring tubes: Constructed of anti-corrosive composite material.
 7. Other hardware: Zinc plated and chromate sealed.
 8. Springs: Electrocoated acrylic finish for corrosion resistance.
- F. Finishes: Factory finish alkyd based red oxide primed steel. Refer to Section 099000 - Painting for painted finish.

PART 3 EXECUTION

3.1 INSPECTION

- A. Verify that roof hatch installation will not disrupt other trades. Verify that the substrate is dry, clean, and free of foreign matter. Report and correct defects prior to any installation.

3.2 INSTALLATION

- A. Install roof hatches in accordance with manufacturer's recommendations.
- B. Coordinate with installation of roofing system and related flashings. Provide weather tight installation.
- C. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.
- D. Test operate units and adjust for proper operation.
- E. Clean and lubricate joints and hardware.

END OF SECTION

SECTION 077236 SMOKE VENTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Prefabricated, acoustically-rated automatic smoke vents with upward acting doors, complete with support curb, operable hardware, counterflashings and automatic venting; and motorized operating system (SV-1).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of smoke vent indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For roof accessories. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
 - 1. Include diagrams for power, signal, and control wiring.
- C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.

1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
 - 4. Required clearances.
- B. Product Test Reports and Certificates: For each type of acoustic smoke vent assembly, for tests performed by a qualified testing agency.
 - 1. Submit certified copies of 1/3 Octave Band Transmission Loss test data and STC rating as issued by an accredited independent acoustical laboratory.
- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
 - 4. Required clearances.

1.4 QUALITY ASSURANCE

- A. Provide units which have been tested, listed and labeled by FM.
- B. Laboratory Certification: Acoustical testing of submitted doors assemblies shall be conducted in an accredited independent acoustical laboratory.
 - 1. Sound transmission loss values shall be determined in accordance with ASTM E90.
 - 2. Sound Transmission Class (STC) shall be determined in accordance with ASTM E413.

1.5 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane, base flashing and with interfacing and adjoining construction, to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
- C. Coordinate motorized operating system and accessory devices to be compatible, including:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.
- D. Coordinate features of motors, installed units, and accessory devices and features to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.6 MAINTENANCE AGREEMENT

- A. Continuing Maintenance Proposal: Submit proposal to the Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date of Substantial Completion.
 - 1. State services, obligations, conditions, and terms for agreement period and for future renewal options.
 - 2. Proposed maintenance agreement shall include _____, performed on schedule as recommended by supplier/installer.
 - 3. Maintenance Period: ____ years.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Covers shall be reinforced to support a minimum live load of 40 psf (195 kg/m²) with a maximum deflection of 1/150th of the span or 90 psf (439 kg/m²) wind uplift.
 - 2. Entire smoke vent shall be weathertight with fully welded corner joints on cover and curb.
 - 3. Sound Transmission Rating: Minimum STC-45 sound rating.
- B. Loads: Covers shall be reinforced to support a minimum live load of 40 psf with a maximum deflection of 1/150th of the span or 90 psf wind uplift.
 - 1. When release is actuated, lid shall open against 10 psf snow or wind load and lock in position
- C. Acoustical Performance Requirements: Provide smoke vent assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum ratings:
 - 1. Sound Transmission Class (STC) Rating per ASTM E413: STC 45, and with energy average over the 1/3 octave band center frequencies as follows:

Minimum Sound Transmission Loss (dB re 20 µPa) at Octave Band Center Frequency, Hz					
125	250	500	1000	2000	4000
28	39	42	43	46	51
 - 2. Outdoor-Indoor Transmission Class (OITC) Rating per ASTM E1332: OITC 37.
- D. Acoustical fire vents shall provide laboratory measured acoustic performance as follows:

Sound Transmission Class Rating	Minimum Sound Transmission Loss (dB re 20 μ Pa) at Octave Band Center Frequency ¹ , Hz					
	125	250	500	1000	2000	4000
STC 45	28	39	42	43	46	51

Note: 1. Energy average over the 1/3 octave band center frequencies.

- E. Sound Transmission Class (STC) ratings shall tested in accordance with latest version of ASTM-E90 and be determined according to ASTM E 413.
- F. Standards: Provide smoke vents that are::
 - 1. Tested and listed to comply with UL 793.
 - 2. Labeled by an approved testing agency in accordance with IBC section 1703.5.
 - 3. Manufactured, installed, tested and maintained in accordance with NFPA 204
 - 4. Tested, listed and labeled by FM Approvals.
- G. FM - Factory Mutual Research, as applicable to smoke vents.
- H. Source Limitations: Obtain steel acoustic smoke vent assemblies, including lids, curbs, sound control seals, hardware and other components from single source from single manufacturer.

2.2 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design or equivalent product as approved by Architect, by one of the following Manufacturers:
 - 1. Babcock-Davis.
 - 2. Bilco Company.
 - 3. Milcor Incorporated.
 - 4. Nystrom Building Products.
 - 5. Wasco Products.

2.3 ACOUSTICALLY-RATED SMOKE VENTS

- A. (SV-1) Hatch-Type Heat and Smoke Vents: Acoustically-rated, quad-leaf automatic hatch-type smoke vent; insulated double-walled upper (exterior) and lower (interior) door panels with continuous weathertight perimeter gaskets; equipped with automatic self-lifting mechanisms and UL-listed fusible links rated at 165 deg F; mounted on double-walled insulated curbs; equipped with electric motorized operating system.
 - 1. Basis of Design: Provide one of the following products for all smoke vents, with electric motor operating system as recommended by smoke vent Manufacturer.
 - a. Model ACDSH by Bilco Company.
 - b. Model U-LP by Milcor Inc..
 - 2. Size: 60 inches by 96 inches.
 - 3. Acoustic Rating: STC Rating 46 per ASTM E 413 and OITC (Outdoor-Indoor Transmission Class) rating of OITC 37 as tested in accordance with ASTM Standard E 1332.
 - 4. Heat and Smoke Vent Standard: Provide units that have been tested and listed to comply with UL 793 and are FM Approved.
 - a. Roof vents must be labeled by an approved testing agency as outline in IBC section 1703.5.
 - 5. Loads: Minimum 40-lbf/sq. ft. external live load and 30-lbf/sq. ft. internal uplift load.

2.4 COMPONENTS

- A. Covers, Upper (Exterior) and Lower (Interior): 14 gauge paint bond G-90 galvanized steel with a 5-inch beaded flange with formed reinforcing members.
 - 1. Gasket: PVC gaskets shall be permanently adhered to the underside of the covers and on top of the curb.
 - 2. Cover Insulation: Shall be fiberglass of 3" (76mm) in thickness, fully covered and protected by a 14 gauge paint bond G-90 galvanized steel liner.

3. Each upper cover shall be equipped with a positive automatic hold-open arm with red vinyl grip release, and a heavy extruded thermoplastic rubber gasket fitted into a retainer that is mechanically fastened to the interior of the cover to assure a continuous seal when compressed to the top surface of the curb.
 4. Each lower cover shall be continuously hinged and shall be 14 gauge paint bond G-90 galvanized steel prime painted. Insulation in the lower covers shall be glass fiber 2" thick fully covered and protected by a 22 gauge paint bond G-90 galvanized steel liner prime painted.
- B. Curb: Double-walled insulated curbs, welded or mechanically fastened and sealed corner joints, integral condensation gutter, and cap flashing.
1. Steel: 14 gauge galvanized steel inner curb, 14 gauge galvanized steel outer curb.
 2. Curb Insulation: 3-inches fiberglass insulation, fully enclosed by a 14 gauge paint bond G-90 galvanized steel liner.
- C. Hinge: Zinc plated steel tamper proof hinge contained within vent as part of spring assembly.
- D. Springs: High pressure gas springs enclosed in telescoping tubes, designed to open vent covers automatically against 10 pounds per square foot wind or snow load when released.
- E. Hardware: Manufacturer's standard, corrosion resistant or hot-dip galvanized; with hinges, hold-open devices, and independent manual-release devices for inside and outside operation of lids.
- F. Lifting Mechanisms: Corrosion resistant gas springs open covers automatically against a 10 lb/ft² snow/wind load; with built in dampers to assure a controlled rate of opening and automatically lock the covers in the full open position. Provide release mechanism to allow the covers to be closed.
- G. Latch Mechanism: 24 or 110-volt electric thermo-link release mechanism linked to alarm system to release vent electrically. Provide positive hold/release mechanism with a separate latching point for each cover controlled by a single UL listed 165°F fusible link. Fusible link shall be curb mounted on a non-hinged end to allow the latching mechanism to be easily reset from the roof level.
1. Provide cover-mounted rigging release devices, 165 degree fusible links, secure rigging underside of each cover.
 2. Design latching mechanisms to securely hold the covers in the closed position against wind uplift forces without overstressing fusible links.
- H. *Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.*
1. *Height: **42 inches** above finished roof deck.*
 2. *Posts and Rails: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches in diameter.*
 3. *Flat Bar: Galvanized steel, 2 inches high by 3/8 inch thick.*
 4. *Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.*
 5. *Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.*
 6. *Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.*
 7. *Fabricate joints exposed to weather to be watertight.*
 8. *Fasteners: Manufacturer's standard, finished to match railing system.*
 9. *Finish: [Manufacturer's standard]*
 - a. *Color: As selected by Architect from manufacturer's full range.*

2.5 ELECTRIC MOTOR OPERATING SYSTEM

- A. Provide operating system suitable for Project conditions, designed for smoke vent size, type, weight, and operation frequency; and in accordance with the following requirements:

- B. Motors: For each new smoke vent unit , provide two (2) single-phase, single-speed electric motors, with capacity and torque characteristics sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor; with manufacturer's standard weatherproof enclosures.
 - 1. Electrical Characteristics: 115 VAC motors with 24 VDC relay to allow electric actuation.
 - 2. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- C. Controls: For each new and existing smoke vent unit, provide one (1) wall-mounted three-button-operated station with dual contacts to operate both motors.
 - 1. Remote Control Station: Momentary-contact, three-button-operated with open, stop, and close function; located remotely at stage level.
 - 2. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
 - 3. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.
 - 4. Indicator Switches: Provide two (2) indicator switches per unit (1 per set of covers); enclosed type with top plunger actuator.
 - a. Indicator Switch Basis of Design: Model BZE6-2RQ by Honeywell, or Equal as approved by smoke vent manufacturer.

2.6 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
 - 1. Installation at Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is constant. Equip hatch with water diverter or cricket on side that obstructs water flow.
- B. Glass-Fiber Board Insulation: ASTM C 726, thickness as indicated.
- C. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
 - 1. Fasteners for Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153 or ASTM F 2329.
- D. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- E. Elastomeric Sealant: ASTM C 920, elastomeric polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions.

1. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
- C. Heat and Smoke Vent Installation: Install and test heat and smoke vents and their components for proper operation according to NFPA 204.

3.3 TESTING AND ADJUSTING

- A. Engage a factory-authorized service representative to perform startup service.
1. Perform installation and startup checks according to manufacturer's written instructions.
 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
1. Adjust exterior doors and components to be weather-resistant.
 2. Adjust seals to provide tight fit around entire perimeter.
- C. Adjust limit switches so covers do not over-open, and will close properly from the open position.
- D. Lubricate bearings and sliding parts as recommended by manufacturer.

END OF SECTION

SECTION 078100 APPLIED FIREPROOFING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Wet-mix sprayed fireproofing (FP-1).

1.2 ACTION SUBMITTALS

- A. Product Data: For products used.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Certificates: Provide certificates from fireproofing manufacturer, for each fireproofing product required, indicating that:
 1. Steel to receive sprayed fireproofing is unprimed or that sprayed fireproofing manufacturer certify primers applied to steel in shop or field are compatible with sprayed-on fireproofing and will not impair its performance under fire exposure for applications indicated, as provided by ASTM E119 test. Include test and other data as evidence. Coordinate with structural steel Sections.
 2. Each fireproofing product complies with specified product requirements and is suitable for use indicated.
 3. Sprayed fireproofing has been completed in accordance with requirements to provide necessary fire resistance ratings. Provide Ratings Certificate.

1.4 QUALITY ASSURANCE

- A. Fireproofing Installer: Licensed, qualified, experienced and approved by manufacturer to apply fireproofing materials as specified. Applicator to have been in continuous business for not less than the past 5 years. Applicator shall provide, in writing, names of previous projects, comparable in type and size, successfully completed on time.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.
 1. Bond Strength: Test for cohesive and adhesive strength according to ASTM E 736. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 2. Density: Test for density according to ASTM E 605. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 3. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with fireproofing.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, obtain applied-fireproofing manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

PART 2 PRODUCTS

2.1 SPRAY-APPLIED FIRE-RESISTIVE MATERIALS

- A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.
- B. Sprayed-on Fire-resistant Coating: Cementitious fireproofing, Wet-mix setting based type as defined by Underwriters Laboratories and free from asbestos, actinolite, amosite, anthophyllite, chrysotile and tremolite. No mineral fiber fireproofing allowed.

1. Cementitious Wet Mix Admixtures: Materials (with and without aggregate) which, when mixed in accordance with accompanying instructions forms a slurry or mortar providing properties necessary for conveyance and application to building structures.
 2. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E 119 or UL 263 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Steel members are to be considered unrestrained unless specifically noted otherwise.
 - b. UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor are not allowed.
 3. VOC Content: Products shall comply with VOC
- C. (FP-1) Standard Density: Meeting or exceeding 15 pounds per cubic foot per ASTM E605, no fungal growth per ASTM G21. For concealed locations and in plenum ceilings and above suspended ceilings.
1. Products and Manufacturers:
 - a. Monokote MK-6 by Grace Construction Products.
 - b. Pyrolite 15 by Carbolite Fireproof Products Division.
 - c. Cafco-300 by Isolotek.
 - d. Southwest Fireproofing Type 5GP by AD Fire Protection Systems.
- D. Auxiliary Fireproofing Materials: Provide type compatible with sprayed-on fireproofing products and substrate that are approved for use indicated by manufacturer of sprayed-on fireproofing, and are approved by nationally recognized testing laboratories or other testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance rated designs indicated.
- E. Substrate Primers: Type approved by manufacturer of sprayed-on fireproofing for substrate and for conditions of exposure indicated.
- F. Adhesive for Bonding Fireproofing: Type recommended by manufacturer of sprayed-on fireproofing manufacturer.
- G. Mixing: Perform mixing and preparation of materials at project using mechanical equipment, in accordance with manufacturer's printed directions to achieve performance criteria specified herein.

PART 3 EXECUTION

3.1 AREA PREPARATION

- A. Provide necessary measures for protection of workers and public, as required under regulation of U.S. Occupational Safety and Health Act (OSHA), and applicable local ordinances, and code regulations.
- B. Provide protection for workmen applying fireproofing and for other workers who are in vicinity of application of mixing operations. Provide necessary measures for protection of general public and for prevention of air pollution as required. Enclose exterior openings at areas where spray application will be in progress.
- C. Provide masking, drop cloths, or other satisfactory covering for materials which are not to receive fireproofing to prevent damage from contamination from overspray or fallout of materials.

3.2 EXAMINATION

- A. Examine surfaces to which this work is to be attached or applied and notify Architect if conditions exist which are detrimental to proper and expeditious installation of work. Starting of work shall imply acceptance of substrate for adhesion and performance of work as specified. Substrate is in satisfactory condition if it complies with following :
 1. Substrate complies with requirements of section in which substrate and related work is specified and is free of oil, grease, rolling compounds, incomplete primers, loose mill scale, dirt or other foreign substances capable of impairing bond of fireproofing with substrate under conditions of normal use or fire exposure.

2. Objects which will penetrate fireproofing, including clips, hangers, support sleeves and similar items have been securely attached to substrates.
 3. Substrates are not obstructed by ducts, piping, equipment and other suspended construction that could interfere with application of fireproofing and until it has dried.
- B. Cooperate with coordination and scheduling of work of this section with work of other sections so not to delay job progress.
 - C. Clips, hangers, supports, sleeves and other attachments to fireproofing bases, as covered under other sections of specifications, are to be placed by other trades prior to application of fireproofing material, where these materials can be anticipated in advance.
 - D. Ducts, piping or conduit or other suspended equipment that could interfere with uniform application of fireproofing material are to be positioned after application of sprayed fireproofing, unless fireproofing applicator agrees to their installation prior to fireproofing.
 - E. Prior to application of fireproofing material, ascertain that steel is acceptable to receive fireproofing. Steel shall be free of oil, grease, loose mill scale, or other substance that may impair proper adhesion.

3.3 SURFACE PREPARATION

- A. Clean surface to receive sprayed fireproofing to remove mill scale, dirt, grime, oil, grease, dust, loose rust, rolling compounds, incompatible primers and other foreign material which will impair satisfactory bonding of fireproofing to substrate.
- B. Cover other work which might be damaged by fallout or overspray of fireproofing materials during application. Provide temporary enclosure as may be required to confine operations, protect environment, and to ensure adequate ambient conditions for temperature and ventilation.
- C. Notify Contractor of surface condition which cannot be corrected by normal cleaning methods and requires correction of conditions prior to application of sprayed fireproofing.

3.4 APPLICATION

- A. Commencement of application of fireproofing shall be deemed as acceptance by applicator of suitability of surface to receive work and acceptance of responsibility for failure of bond between fireproofing and substrate.
- B. Apply spray fireproofing using manufacturer's authorized installer in accordance with manufacturer's directions and instructions and in conformance with city and state codes, regulations and requirements having jurisdiction. Qualified manufacturer's representative shall be present for initial application to guide and assist applicator's personnel.
- C. Sprayed Fireproofing: Apply to areas and surfaces which are scheduled to be fireproofed and to proper thicknesses to achieve fireproofing hours.
 1. Control thickness of fireproofing by utilizing workable depth gauge to assure that minimum thickness has been applied.
- D. Ventilation: Make provisions to properly dry fireproofing after application. In enclosed areas lacking natural ventilation, provide mechanical air circulation and ventilation.
- E. Equipment, Mixing and Application: In accordance with manufacturer's written specification and application instructions. Mechanically control material and water ratio on project site.
- F. Qualified Personnel: Provide to supervise application.
- G. Bonding Adhesive: Apply to underside of steel roof deck units which do not have concrete topping and where required by appropriate UL Design. Bonding adhesive is optional in other conditions unless recommended by manufacturer of sprayed fire protection material (SFRM). Apply bonding adhesives in accordance with manufacturer's written application instructions.
- H. Do not install fireproofing prior to completion of concrete work on steel pan stairs. Apply to underside of roof deck assemblies only after roofing system is complete and roof traffic has ceased.

- I. Cracking: No cracking of fireproofing material allowed per UL requirements. Repair cracks at no additional cost to Owner by removing existing fireproofing and reapplying

3.5 PATCHING, REPAIRING, CLEANING AND PROTECTION

- A. Perform patching and repairing of sprayed fireproofing, due to cutting by other trades, by fireproofing applicator. Work shall be paid for by trades that performed cutting, as directed and at no additional cost.
 1. Coordinate installation of fireproofing with other work in order to minimize need for other trades to cut or remove fireproofing. As other trades successively complete installations of their work, maintain protection of structure's fireproofing by patching areas which have been removed or damaged prior to concealment of fireproofing by other work.
- B. After completion of fireproofing work, remove equipment and clean walls, floors, equipment, pipes and conduit of over sprayed fireproofing materials.
- C. Cleaning: Immediately upon completion of sprayed operations in each containable area, remove over-spray and fall-out materials from surfaces of other work and clean exposed surfaces to remove evidence of soiling.
- D. Cure exposed wet-mix fireproofing materials in compliance with fireproofing manufacturer's recommendations to prevent premature drying.
- E. Protect fireproofing according to advice of fireproofing manufacturer and installer from damage resulting from construction operations or other causes so that fireproofing will be without damage or deterioration at time of Substantial Completion.

3.6 FIELD QUALITY CONTROL

- A. At Owner's option Architect may select, and Owner will pay, independent testing laboratory to sample and verify thickness and density of fireproofing in accordance with provisions of ASTM E605, and cohesion/adhesion as per ASTM E736.
 1. Minimum testing as follows:
 - a. Randomly Selected Bay: Test each fireproofed element for thickness and density as per ASTM E605 and displacement method per AWCI Tech Manual 12-A, 5.4.5.
 - b. Randomly Selected Typical Structural Elements: Test for cohesion/adhesion as per E736.
 - c. Perform minimum of 5 tests of each kind.
- B. Contractor and sub-contractor for this Section shall cooperate with testing agency in furnishing samples for testing, and other testing agency procedures.
 1. Should tested fireproofing fail to meet performance criteria, remove fireproofing, reinstall and retest at no additional cost to Owner.
 2. Correct unacceptable work and pay for further testing required to prove acceptability of installation.
 3. Patch test areas as required to re-establish fireproofing integrity.

END OF SECTION

SECTION 078400 PENETRATION FIRESTOPPING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Firestop joint sealant and backing, including intumescent elastomeric compounds and sealants.
 2. Rigid boards, forms, wraps and accessories.
 3. Fiber packing and fiber fill.
 4. Wool fiber insulation and fire-safing insulation.
 5. Other firestopping as indicated.

1.2 SUBMITTALS

- A. Product Data: Manufacturer's specifications and technical data for each material including the following.
1. Composition and limitations.
 2. Manufacturer's installation instructions.
 3. Furnish sleeve size schedule indicating size of penetrating item, insulation thickness (where applicable), and minimum annular space requirements.
- B. Proposed UL System Drawings - Special Installation Drawings: Prior to starting installation of firestopping, firestopping manufacturer and installer shall review specific conditions applicable for Project, and identify each condition for firestopping and prepare individual U.L. Designs or manufacturers engineering judgements identification numbers, and installation drawings for each condition.
1. Submit 3 Special Installation Drawings for each condition, 1 set for Owner, 1 set for Architect's File Copy, and 1 set for Building Official.
 2. Submit other information as may be requested by Building Official.
- C. Submit installer qualifications for each person installing firestopping systems.

1.3 QUALITY ASSURANCE

- A. Installer's Qualifications: Firm experienced in installation or application of systems similar in complexity to those required for this Project, plus the following.
1. Acceptable to or licensed by manufacturer, State or local authority where applicable.
 2. Not less than 2 years experience with systems.
 3. Successfully completed not less than 5 comparable scale projects using this system.
- B. Single Source Responsibility for Materials: Obtain firestopping materials from one manufacturer for entire project.
1. This does not restrict Contractor from subcontracting installation of firestopping to multiple subcontracts, but does require all installers do use the same manufacturer throughout the Project and be licensed by that manufacturer for the installation of firestopping.
- C. Field Samples: First two applications for each firestopping condition will be reviewed by Owner's Representative and the Architect, and when accepted by the local Building Official shall become a standard of performance for remaining Work.
1. Correct areas, modify method of application/installation, or adjust as directed by local code official to comply with specified requirements.
 2. Maintain field samples accessible to serve as a standard of quality for this Section.
- D. Fire-Test Response Characteristics: Provide through-penetration firestop systems that comply with the following requirements and those of this specification Section:
1. Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL, ITS, or another agency performing testing and follow-up inspection services for firestop systems acceptable to authorities having jurisdiction.

2. Through-penetration firestop systems are identical to those tested per ASTM E 814. Provide rated systems complying with the following requirements:
 - a. Through-penetration firestop system products bear classification marking of qualified testing and inspecting agency.
 - b. Through-penetration firestop systems correspond to those indicated by reference to through-penetration firestop system designations listed by the following:
 - 1) UL in "Fire Resistance Directory."
 - 2) ITS in "Directory of Listed Products."

1.4 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store and handle to prevent damage, staining and disfigurement in original, new, and unopened packages and containers bearing manufacturer's name and label identifying contents. Do not freeze.
- B. Where limited shelf life of product is noted by date on container or packing list, take note and do not use out of date material.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Store firestopping materials out of weather, in cool, dry place, out of direct sunlight, at temperatures below 90 degrees F, not less than 40 degrees F and as recommended by manufacturer.
- B. Use of Foam Products: Store unmixed liquid components in original, unopened containers at temperature of 65 to 80 degrees F for 12 hours minimum before use. Use forced air ventilation in areas having less than 2 cubic feet of free air for each pound of liquid mixture being foamed.

1.6 PROJECT CONDITIONS

- A. Environmental Requirements: Comply with fireproofing material manufacturer's recommendations for temperature and humidity conditions before, during, and after installation of fireproofing.
- B. Ventilation Requirements: Comply with fireproofing material manufacturer's recommendations during and after installation of fireproofing by natural or mechanical means.
- C. Sleeves: Unless otherwise called for, sleeves passing through walls, slabs, beams, bridging, columns, shall be minimum of 1/2 inch greater in inside diameter than external diameter of pipe passing through sleeves, or insulation diameter. Verify sleeve size required with manufacturer of firestopping used. Pipe insulation shall be continuous through sleeves. Space between sleeve and pipe or duct and annular opening space shall be provided with a firestop system. Notify Contractor immediately of deviation from above sleeving requirements.
- D. Fire Dampers: Firestopping of annular spaces around fire dampers shall be placed before installation of damper's anchoring flanges.

1.7 SEQUENCING

- A. Sequence and coordinate application of firestopping with other related work specified in other Sections to comply with the following requirements:
 1. Provide temporary enclosures to prevent deterioration of firestopping for interior applications due to exposure to unfavorable environmental conditions.
 2. Do not install enclosing or concealing construction until after firestopping has been applied, inspected, tested, and corrections have been made to any defective firestopping.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable manufacturers and products (FSTOP): Products listed in UL Fire Resistance Directory for UL System involved, that are manufactured by one of the following:
 1. 3M Fire Protection Products.
 2. Hilti Construction Chemicals, Inc.

3. Grace Construction Products
4. Nelson Firestop Products
5. Rectorseal Company
6. Specified Technologies Inc.
7. Tremco
8. US Gypsum Company

2.2 THROUGH-PENETRATION FIRESTOPPING OF FIRE RATED CONSTRUCTION

- A. Fire Rated Construction Design Requirements: Maintain barrier fire resistance ratings including resistance to cold smoke at all penetrations, connections with other surfaces or types of construction, at separations required to permit building movement and sound or vibration absorption, and at other construction gaps.
- B. Through-Penetration Fire Stopping Schedule: Assembly designs are specified generally under UL system categories by penetrating item. Manufacturers' product applications must have specific UL system designations. The schedules on the following page indicate which Series of UL Classified Through Penetration Fire Stopping (TPFS) assemblies are acceptable for this Project based on barrier type, construction and penetrant type. The TPFS Series listed are generic in nature; ex: Series C-AJ-2000 includes all designs from 2001 through 2999 from all manufacturers; note that each manufacturer has its own number for tested assemblies. The Contractor will select appropriate TPFS assemblies for each condition encountered.
- C. Refer to Schedule at the end of this section.
- D. Design of firestopping described by this Section is responsibility of Contractor. Individual through-penetration systems, construction-gap firestopping, through-penetration smoke-stopping, and construction-gap smoke-stopping will be selected by Contractor to meet requirements of Contract Documents and governing codes. Actual selection of individual designs or systems is responsibility of Contractor, and 'Single Source Responsibility for Materials' is required.
- E. Systems or devices listed in the UL Fire Resistance Directory under categories XHCR and XHEZ may be used, providing that they conform to the construction type, penetrant type, annular space requirements, and fire rating involved in each separate instance, and that the system be symmetrical for wall applications. Systems or devices must be asbestos-free.
 1. Additional requirements: Withstand the passage of cold smoke either as an inherent property of the product, or by the use of a separate product included as a part of the UL system or device, and designed to perform this function.

2.3 FIRESTOPPING, GENERAL

- A. Compatibility: Provide through-penetration firestop systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.
- B. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by the qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:
 1. Permanent forming/damming/backing materials, including the following:
 - a. Slag-/rock-wool-fiber insulation.
 - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
 - c. Fire-rated form board.
 - d. Fillers for sealants.
 2. Temporary forming materials.
 3. Substrate primers.
 4. Collars.
 5. Steel sleeves.

2.4 FILL MATERIALS

- A. General: Provide through-penetration firestop systems containing the types of fill materials indicated in the Through-Penetration Firestop System Schedule at the end of Part 3 by reference to the types of materials described in this Article. Fill materials are those referred to in directories of the referenced testing and inspecting agencies as fill, void, or cavity materials.
- B. At Noise Critical Spaces: Provide permanently non-hardening systems at penetrations through fire-rated partitions and slabs, and at head of fire-rated partitions.
 - 1. Gun or Trowel-Applied Intumescent Sealant: 3M "CPW-25WB+" or approved equal.
 - 2. Moldable Intumescent Putty: 3M "Moldable Fire Stop" or approved equal.
 - 3. Non-Intumescent Silicone Sealant: 3M "Silicone Fire Stop", USG "SmokeSeal" or approved equal) may be used in lieu of the sealant on foam rod in noise-sensitive fire-rated walls.
- C. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- D. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.
- E. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- F. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.
- G. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- H. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- I. Mortars: Prepackaged, dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- J. Pillows/Bags: Reusable, heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.
- K. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- L. Silicone Sealants: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
 - 1. Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.
 - 2. Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.
- M. Wiring devices: Ez-Path Fire Rated Pathway by Specified Technologies, Inc.
 - 1. Fire-rated wiring devices containing intumescent material that allows cable to pass through device and adjusts automatically to cable additions or removals.
 - 2. F Rating: Equal to rating of barrier in which device is installed.
 - 3. Capable of allowing a 0 to 100-percent visual fill of cables.
 - 4. Sufficient size to accommodate quantity and size of electrical wires and data cables required.
 - 5. Provide with steel wall plates allowing for single or multiple devices to be ganged together.

2.5 MIXING

- A. For those products requiring mixing before application, comply with through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing through-penetration firestop systems to comply with written recommendations of firestop system manufacturer and the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of through-penetration firestop systems.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with through-penetration firestop systems. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
 - 4. Do not allow caulks containing solvents to come in direct contact with plastic pipe.
- B. Priming: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.3 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

- A. General: Install through-penetration firestop systems to comply with "Performance Requirements" Article and firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.
- C. Install fill materials for firestop systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 INSTALLATION

- A. Use methods and materials indicated in firestopping systems shown in Referenced Standards.
- B. Install penetration seal materials in accordance with instructions in UL Building Materials Directory and in accordance with manufacturer's printed instructions.
- C. Install sealant, including forming, packing and other accessory materials to fill opening around services penetrating floors and walls to provide firestops with fire resistance ratings indicated for floor or wall assembly in which penetration occurs.
 - 1. Use masking tape to protect finished substrates and products adjacent to sealant materials.
 - 2. Apply sealant as specified under Section 079200 - Joint Protection, and as recommended by sealant manufacturer; apply bead to depth of 1-1/2 inches to fill void above support, or if mineral wool support is used to depth of 1/2 inch thick. Tool sealant immediately after application and before skin forms.

3. If using foam sealant, immediately after mixing, pour or inject liquid foam into penetration opening, not more than 1/3 full to compensate for expansion during cure or in strict accordance with sealant manufacturer's recommendations. Do not exceed measured snap time of foam sealant. Do not remove dams for 24 hours minimum to allow foam to fully cure.
- D. At sleeved pipes or other sleeved penetration, firestop annular space between sleeve and its contained pipe or duct with resilient firestopping sealant system to permit movement of pipe or duct without damage to firestopping sealant.
 - E. Seal holes and voids made by penetrations to ensure effective fire and smoke barrier.
 - F. Patch penetrations caused by cutting or presence of unused or abandoned openings or boxes using materials compatible with barrier construction and with fire rating equal to or greater than barrier rating.
 - G. For plumbing sleeves, construct time rated walls after placement of penetrating materials if possible, and to fit rated construction materials tightly to or directly upon material of penetration.
 - H. Large Openings: Close unused portions of large openings (annular spaces) made for later installation of pipes and ducts with solid fill equal to barrier rating or with applicable firestopping sealant system.
 1. Where both horizontal dimensions exceed 4 inches in structural floor openings, firestop annular spaces with concrete, or other rated assembly. Provide dowels and reinforcement, within such fill, equal to that specified for slab.
 2. In rated concrete or masonry wall openings where both height and width exceed thickness of rated materials, firestop annular spaces with masonry or other solid fill.
 3. Use fiber fill, solid fill or fiber packing to make up remainder of barrier thickness where required width of firestopping sealant system is less than barrier.
 - I. Install firestopping materials capable of supporting same loading as floor at floor openings more than four inches in width without penetrating item and subject to traffic or loading.
 - J. Install firestopping at least equal to barrier fire rating in and around penetrations of floor structures, exterior walls and interior walls noted as time rated fire barriers or smoke barriers.
 - K. Unused or abandoned openings or boxes or penetrations caused by cutting shall be patched with materials compatible with barrier construction and with fire rating equal to or greater than barrier fire-rating.
 - L. Use firestopping sealant systems at narrow spaces and at spaces with dimensions less than barrier thickness.
 - M. Fill void spaces completely with firestopping material.
 - N. Protect materials from damage on surfaces subject to traffic. Provide firestopping in floors flush with top of slab, sleeve or housekeeping pad.

3.5 IDENTIFICATION

- A. Identify through-penetration firestop systems with pressure-sensitive, self-adhesive, preprinted vinyl labels. Attach labels permanently to surfaces of penetrated construction on both sides of each firestop system installation where labels will be visible to anyone seeking to remove penetrating items or firestop systems. Include the following information on labels:

<p>Warning – Fire-stop System DO NOT DISTURB Notify Building Management of Any Damage</p> <p>Manufacturer's System No. _____ UL System No: _____ Contractor: _____ Date Installed: _____ Manufacturer: _____</p>

3.6 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified independent inspecting agency to inspect through-penetration firestop systems and to prepare test reports.
 - 1. Inspecting agency will state in each report whether inspected through-penetration firestop systems comply with or deviate from requirements.
- B. Proceed with enclosing through-penetration firestop systems with other construction only after inspection reports are issued.
- C. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements.
- D. Manufacturer's Field Services: Firestopping manufacturer's technical representative shall provide the following field services during application.
 - 1. Perform a pre-installation examination and acceptance of substrate and voids scheduled for firestopping. Issue report.
 - 2. Be present at initial start-up for each process. Confirm application techniques. Issue report.
 - 3. Issue a summary report at completion of installation indicating manufacturer's acceptance of installed system and compliance with UL Design requirements.

3.7 ADJUSTING AND CLEANING

- A. Clean up spills of liquid components.
- B. Neatly cut and trim materials.
- C. Remove equipment, materials and debris, leaving area in undamaged, clean condition.

3.8 SCHEDULE

THROUGH-PENETRATION UL CLASSIFICATION SYSTEM

Fire Stopping Systems

UL Classification System

		Construction Penetrated	Type Of Construction	System Identification
1	No Penetrating Items:	F, W, C	A, B, J, K, L	0001-0999
2	Metallic Pipes, Conduit or Tubing:	F, W, C	A, B, J, K, L	1001-1999
3	Nonmetallic Pipe, Conduit or Tubing:	F, W, C	A, B, J, K, L	2001-2999
4	Electric Cables:	F, W, C	A, B, J, K, L	3001-3999
5	Cable, Trays with Electric Cables:	F, W, C	A, B, J, K, L	4001-4999
6	Insulated Pipes:	F, W, C	A, B, J, K, L	5001-5999
7	Electrical Bussduct Penetrations:	F, W, C	A, B, J, K, L	6001-6999
8	Mechanical Ductwork Penetrations:	F, W, C	A, B, J, K, L	7001-7999
9	Multiple Penetrations Through Common Openings:	F, W, C	A, B, J, K, L	8000-8999

Construction Penetration

F	Floor penetration
W	Wall penetration
C	Either Wall or Floor Penetration

Type of Construction

A-	Concrete floors equal to or less than 5-inches thick
B-	Concrete floors greater than 5-inches thick
J-	Concrete or masonry walls equal to or less than 8-inches thick
K-	Concrete or masonry walls greater than 8-inches thick
L-	Framed walls

END OF SECTION

SECTION 078443 JOINT FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Fire-resistant joint systems (FRJS) for the following:
 - 1. Head-of-wall joints.
 - 2. Joints at cold formed exterior wall framing and floor slab.
 - 3. Joints between perimeter edge of fire-resistance-rated floor assemblies and back of non-fire-resistance-rated, exterior, glazed aluminum curtain walls.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For each fire-resistant joint system, show each kind of construction condition in which joints are installed and relationships to adjoining construction. Include fire-resistant joint system design designation of testing and inspecting agency acceptable to authorities having jurisdiction that demonstrates compliance with requirements for each condition indicated.
 - 1. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each fire-resistant joint system configuration for construction and penetrating items.
- C. Product Certificates: For each type of fire-resistant joint system, signed by product manufacturer.
- D. Qualification Data: For Installer.
- E. Compatibility and Adhesion Test Reports: From fire-resistant joint system manufacturer indicating the following:
 - 1. Materials forming joint substrates have been tested for compatibility and adhesion with fill materials.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- F. Research/Evaluation Reports: For each type of fire-resistant joint system.

1.3 QUALITY ASSURANCE

- A. Source Limitations: Obtain fire-resistant joint systems for each kind of joint and construction condition indicated through one source from a single manufacturer.
- B. Preconstruction Compatibility and Adhesion Testing: Submit to fire-resistant joint system manufacturers, for testing indicated below, samples of materials that will contact or affect fill materials.
 - 1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of fill materials to joint substrates.
 - a. Perform tests under environmental conditions replicating those that will exist during installation.
 - 2. Submit no fewer than nine pieces of each type of material, including joint substrates, forming materials, and miscellaneous materials.
 - 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 4. For materials failing tests, obtain fire-resistant joint system manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fire-resistant joint system products to Project site in original, unopened containers or packages with qualified testing and inspecting agency's classification marking applicable to Project and with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials for fire-resistant joint systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install fire-resistant joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistant joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Ventilate fire-resistant joint systems per manufacturer's written instructions by natural means or, if this is inadequate, forced-air circulation.

1.6 COORDINATION

- A. Coordinate construction of joints to ensure that fire-resistant joint systems are installed according to specified requirements.
- B. Coordinate sizing of joints to accommodate fire-resistant joint systems.
- C. Do not cover up fire-resistant joint system installations that will become concealed behind other construction until Owner's inspecting agency and building inspector, if required by authorities having jurisdiction, have examined each installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: For joints in the following constructions, provide fire-resistant joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistant joint systems are installed:
 - 1. Fire-resistance-rated load-bearing walls, including partitions, with fire-protection-rated openings.
 - 2. Fire-resistance-rated non-load-bearing walls, including partitions, with fire-protection-rated openings.
 - 3. Exterior curtain-wall assemblies and fire-resistance-rated floor assemblies.
 - 4. Exterior stud wall assemblies and fire-resistance-rated floor assemblies.
- B. Fire Resistance of Joint Systems: Assembly ratings (and movement capabilities) indicated, but with assembly ratings not less than that equaling or exceeding fire-resistance rating of constructions in which joints are located, as determined by UL 2079.
- C. Fire Resistance of Perimeter Fire-Containment Systems: Integrity and insulation ratings indicated as determined by UL 2079.
- D. Fire-Test-Response Characteristics: Provide fire-resistant joint systems that comply with the following requirements and those specified in "Performance Requirements" Article:
 - 1. Fire-resistance tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for fire-resistant joint systems acceptable to authorities having jurisdiction.
 - 2. Fire-resistant joint systems are identical to those tested per ICBO ES AC30 and are qualified for types of joints and joint movement capabilities indicated in a current Evaluation Report by the ICBO Evaluation Service.

3. (Fire-resistant joint systems are identical to those tested per UL 2079 [and ICBO ES AC30 and are qualified for joint movement capabilities indicated in a current ICBO Evaluation Report by the ICBO Evaluation Service].) Perimeter fire-containment systems are identical to those tested per UL 2079.] Provide rated systems complying with the following requirements:
 - a. Fire-resistant joint system products bear classification marking of qualified testing and inspecting agency.
 - b. Fire-resistant joint systems correspond to those indicated by referencing system designations listed by the following:
 - 1) UL in its "Fire Resistance Directory."

2.2 PRODUCTS AND MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 1. Basis-of-Design Products: The design for each fire-resistant joint system is based on products named in Part 2 articles. Subject to compliance with requirements, provide either the named products or comparable products by one of the following:
 - a. Fire-resistant joint systems:
 - 1) 3M Fire Protection Products Systems, Inc.
 - 2) Specified Technologies, Inc.
 - 3) A/D Fire Protection Systems Inc.
 - 4) Hilti, Inc.
 - 5) RectorSeal Corporation (The)
 - 6) United States Gypsum Company.
 - b. Perimeter Fire-Containment Systems:
 - 1) Specified Technologies Inc.
 - 2) United States Gypsum Company.
 - B. Compatibility: Provide fire-resistant joint systems that are compatible with joint substrates, under conditions of service and application, as demonstrated by fire-resistant joint system manufacturer based on testing and field experience.
 - C. Accessories: Provide components of fire-resistant joint systems, including forming materials, that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by fire-resistant joint system manufacturer and approved by the qualified testing and inspecting agency for systems indicated.

2.3 FIRE-RESISTANT JOINT SYSTEMS

- A. Where UL-classified fire-resistant joint systems are indicated, they refer to alphanumeric designations listed in UL's "Fire Resistance Directory" under product Category XHBN.
- B. (FRJS-1) Head-of-Wall, Fire-resistant joint system at interior partitions:
 1. Basis-of-Design UL-Classified Product: UL HW-D joint type or similar systems from Intertek to be selected based on actual conditions and subject to approval through submittals. Provide engineering judgment acceptable to Architect and authority having jurisdiction for head of wall conditions where a tested system is not available for the actual conditions.
 2. Assembly Rating: 1 hour or 2 hour to be consistent with wall ratings shown on Drawings.
 3. Nominal Joint Width: As shown.
 4. Movement Capabilities: Class II, 18.75 percent movement in compression and extension.
- C. (FRJS-4) Floor-to-Wall: Fire-rated concrete floor assembly to precast structural concrete wall.
 1. Basis-of-Design UL-Classified Product: UL FW-D joint type or similar systems from Omega point laboratory to be selected based on actual conditions and subject to approval through submittals. Provide engineering judgment acceptable to Architect and authority having jurisdiction for conditions where a tested system is not available for the actual conditions.
 2. Joint System: Utilizing 4 PCF mineral wool and non-hardening firestop sealant.
- D. (FRJS-5) Wall-to-Wall, Fire-resistant joint system at interior partitions:

1. Basis-of-Design UL-Classified Product: UL WW-S joint type or similar systems from Omega point laboratory to be selected based on actual conditions and subject to approval through submittals.
- E. (FRJS-6) Floor to Floor, Fire-resistant joint system at interior concrete floors:
1. Basis-of-Design UL-Classified Product: UL FF-D joint type or similar systems from Omega point laboratory to be selected based on actual conditions and subject to approval through submittals. .
 2. Product: CP-606 Flexible Firestop Sealant by Hilti.
 3. For use at slab isolation joints where fire-rating must be maintained, and for other joints that need a fire-rated acoustical sealant.

2.4 PERIMETER FIRE-CONTAINMENT SYSTEMS

- A. Where UL-classified perimeter fire-containment systems are indicated, they refer to alphanumeric designations listed in UL's "Fire Resistance Directory" under product Category XHDG.
- B. (FRJS-2) Perimeter Fire-Containment System at Curtain Walls
1. Basis-of-Design System: Provide CW-D type listed by UL or CEJ type listed by Intertek for joint conditions. Provide engineering judgment acceptable to Architect and authority having jurisdiction if a tested, listed system is not available.
 2. Assembly Rating: 1 hour or 2 hour to be consistent with assembly ratings shown on Drawings.
 3. Joint Width: As shown.
 4. Movement Capability: Joint system capable of withstanding total horizontal movement of 25 percent compression and elongation and a total vertical shear movement of 12.5 percent.
- C. (FRJS-3) Perimeter Fire-Containment System at Exterior Stud Walls
1. Basis-of-Design System: Provide CW-S type listed by UL or CEJ type listed by Intertek for joint conditions. Provide engineering judgment acceptable to Architect and authority having jurisdiction if a tested, listed system is not available.
 2. Assembly Rating: 1 hour or 2 hour to be consistent with assembly ratings shown on Drawings.
 3. Joint Width: As shown.
 4. Movement Capability: Joint system capable of withstanding total horizontal movement of 25 percent compression and elongation and a total vertical shear movement of 12.5 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean joints immediately before installing fire-resistant joint systems to comply with fire-resistant joint system manufacturer's written instructions and the following requirements:
1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by fire-resistant joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

- C. Masking Tape: Use masking tape to prevent fill materials of fire-resistant joint system from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from fire-resistant joint system materials.
 - 1. Remove tape as soon as possible without disturbing fire-resistant joint system's seal with substrates.

3.3 INSTALLATION

- A. General: Install fire-resistant joint systems to comply with Part 1 "Performance Requirements" Article and fire-resistant joint system manufacturer's written installation instructions for products and applications indicated.
- B. Install forming/packing/backing materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
- C. Install fill materials for fire-resistant joint systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings and forming/packing/backing materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply fill materials so they contact and adhere to substrates formed by joints.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified independent inspecting agency to inspect fire-resistant joint systems and to prepare inspection reports.
 - 1. Inspecting agency will state in each report whether inspected fire-resistant joint systems comply with or deviate from requirements.
- B. Proceed with enclosing fire-resistant joint systems with other construction only after inspection reports are issued and inspecting agency has approved installed fire-resistant joint systems.
- C. If deficiencies are found, repair or replace fire-resistant joint systems so they comply with requirements.

3.5 CLEANING AND PROTECTION

- A. Clean off excess fill materials adjacent to joints as Work progresses by methods and with cleaning materials that are approved in writing by fire-resistant joint system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure fire-resistant joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistant joint systems immediately and install new materials to produce fire-resistant joint systems complying with specified requirements.

END OF SECTION

SECTION 079100 PREFORMED JOINT SEALS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Preformed, foam joint seals (FGS-1).
 - 2. Preformed extruded-silicone joint seals (FGS-2).
- B. Related Requirements:
 - 1. Section 079200 - Joint Sealants: For liquid sealants applied over preformed seals in dual seal systems.

1.2 ACTION SUBMITTALS

- A. Product Data: For each preformed joint seal product.
- B. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for each product exposed to view.
- C. Samples for Verification: For each type and color of preformed joint seal required, provide Samples with joint seals in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint seals.
- D. Preformed Joint Seal Schedule: Include the following information:
 - 1. Joint seal location and designation.
 - 2. Joint width and movement capability.
 - 3. Joint seal manufacturer and product name.
 - 4. Joint seal color.

1.3 PROJECT CONDITIONS

- A. Joint Substrate Conditions: Do not proceed with joint installation until contaminants capable of interfering with their adhesion are removed from joint substrates.
- B. Compatibility and Adhesion Testing: Ascertain joint seal compatibility and adhesion with adjacent materials using laboratory testing procedures.

PART 2 PRODUCTS

2.1 PREFORMED JOINT SEALS

- A. Compatibility: Provide joint seal and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by manufacturer, based on testing and field experience.
- B. Colors: Colors as selected by Architect from manufacturer's standard colors. Acceptance of sealant will depend on range of standard colors available for selection.
- C. (FGS-1) Preformed Foam Joint Sealant: Manufacturer's standard preformed, precompressed, open-cell foam sealant manufactured from urethane foam with minimum density of 10 lb/cu. ft. and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths indicated; coated on one side with a pressure-sensitive adhesive and covered with protective wrapping.
 - 1. Manufacturers and Products:
 - a. Dayton Superior Specialty Chemicals; Polytite Standard.
 - b. EMSEAL Joint Systems, Ltd.; Emseal 25V.
 - c. Sandell Manufacturing Co., Inc.; Polyseal.
 - d. Schul International, Inc.; Sealite or Sealite 50N.

- e. Willseal USA, LLC; [Willseal 150 or Willseal 250.
- D. (FGS-2) Preformed Extruded Silicone Joint Sealants: Manufacturer's standard sealant consisting of precured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.
1. Manufacturers and Products:
 - a. Dow Corning Corporation; 123 Silicone Seal.
 - b. GE Advanced Materials - Silicones; UltraSpan US1100.
 - c. May National Associates, Inc.; Bondaflex Silbridge 300.
 - d. Pecora Corporation; Sil-Span.
 - e. Sealex, Inc.; ImmerSeal.

2.2 PREPARATORY MATERIALS

- A. Primer: Material recommended by preformed-joint-seal manufacturer for joint substrates indicated.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to preformed joint seal manufacturer, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces, and formulated to promote best adhesion to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with preformed joint seals and surfaces adjacent to joints.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive preformed joint seals, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting preformed-joint seal performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing preformed joint seals to comply with preformed joint seal manufacturer's written instructions and the following requirements:
 1. Remove all foreign material from joint substrates that could interfere with adhesion of preformed joint seal, including dust, paints (except for permanent protective coatings tested and approved for seal adhesion and compatibility by seal manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimal bond with preformed joint seals. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint seals. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.

- B. Joint Priming: Prime joint substrates where recommended by preformed joint seal manufacturer or as indicated by tests or prior experience. Apply primer to comply with joint seal manufacturer's written instructions. Confine primers to areas of joint seal bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of adhesive or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION

- A. General: Comply with preformed joint seal manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.
- B. Installation of Preformed, Foam Joint Seals:
 - 1. Install each length of seal immediately after removing protective wrapping.
 - 2. Firmly secure compressed joint seals to joint gap side to obtain full bond using exposed pressure-sensitive adhesive or field-applied adhesive as recommended by manufacturer.
 - 3. Do not pull or stretch material. Produce seal continuity at splices, ends, turns, and intersections of joints.
 - 4. For applications at low ambient temperatures, heat foam joint seal material in compliance with manufacturer's written instructions.
- C. Installation of Precured, Extruded-Silicone Joint Seals:
 - 1. Apply masking tape to each side of joint, outside of area to be covered by seal system.
 - 2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone seal system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch. Hold edge of sealant bead 1/4 inch inside masking tape.
 - 3. Press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact with substrate.
 - 4. Complete installation of seal system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

3.4 PROTECTION

- A. Protect preformed joint seals from damage resulting from construction operations or other causes so seals are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated seals immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 079200 JOINT SEALANTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Exterior and interior sealants.

1.2 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product.
 - 1. Submit Manufacturer's certifications that products comply with specified requirements and with local regulations for VOC content.
- B. Color Samples:
 - 1. Samples for Initial Selection: Manufacturer's color charts consisting of actual strips of cured sealants showing the full range of colors available for each product exposed to view.
 - 2. Samples for Verification: For each kind and color of joint sealant selected, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- C. Product Schedule: Cross-reference products using "SLNT" designation in Part 2 of this Section, with Sealant Schedule in Part 3 of this Section, to locations and applications. Indicate proposed product, product type and color.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Sample Warranties: For special warranties.
- C. Quality Control Submittals:
 - 1. Product Test Reports: For each kind of joint sealant.
 - 2. Preconstruction Laboratory Test Reports: From sealant manufacturer, indicating the following:
 - 3. Statement of qualification for manufacturers and installers.
 - 4. Statement of compliance for compatibility of sealant with adjacent materials and coatings.
 - 5. Field-Adhesion-Test Reports: For each sealant application tested.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Engage experienced Installer who has completed joint sealant applications similar in material, design, and extent to that indicated for Project that have resulted in construction with record of successful in-service performance.
- B. Provide materials for exterior envelope from a single manufacturer.
- C. Compatibility: Verify compatibility of silicone sealant with materials in contact with sealant. Provide list of stone materials and verify that silicone sealant will not stain or damage stone work.
- D. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to project site in original unopened containers or bundles with labels informing about manufacturer, product name and designation, color, expiration period for use, pot life, curing time and mixing instructions for multi component materials.
- B. Store and handle materials to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.6 PROJECT CONDITIONS

- A. Weather Conditions: Do not proceed with installation of sealant under adverse weather conditions, or when temperatures are below or above manufacturer's recommended limitations for installation.
 - 1. Proceed with work only when forecasted weather conditions are favorable for proper cure and development of high early bond strength.
 - 2. Wherever joint width is affected by ambient temperature variation, apply elastomeric sealant only when temperatures are in lower third of manufacturer's recommended installation temperature range, so that sealant will not be subjected to excessive elongation and bond stress at subsequent low temperatures.
- B. Joint Width Conditions: Do not proceed with installation of joint sealers when joint widths are less than allowed by joint sealer manufacturer for application indicated.
- C. Joint Substrate Conditions: Do not proceed with installation of joint sealers until contaminants capable of interfering with their adhesion are removed from joint substrates.
- D. Compatibility and Adhesion Testing: Ascertain sealant compatibility and adhesion with adjacent materials using laboratory testing procedures.

PART 2 PRODUCTS

2.1 SEALANT, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. Sealant Colors: In accordance with approved sealant color schedule.
 - 1. Colors as selected by Architect from manufacturer's standard colors. Acceptance of sealant will depend on range of standard colors available for selection.
 - 2. Custom Color:
- C. VOC Content of Interior Sealants: Provide sealants and sealant primers for use inside the weather-proofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Part 59, Subpart D (EPA Method 24):
 - 1. Architectural Sealants: 250 g/L.
 - 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 - 3. Sealant Primers for Porous Substrates: 775 g/L.

2.2 POLYURETHANE SEALANT

- A. (SLNT-1) 1-Part Polyurethane Sealants: Polyurethane based one part elastomeric sealant, complying with FS- TT-S-00230C, Type II Class A, with elongation and compression of not less than 25 percent. ASTM C920, Type S, Class 25, Grade NS.
 - 1. Acceptable Manufacturers and Products:
 - a. Sika Chemical Corporation: Sikaflex-1a.
 - b. BASF Building Systems: Sonolastic NP-1.
 - c. Tremco Incorporated: Dymonic.
 - d. Pecora Corporation: Dynatrol I.
 - e. Tremco Incorporated: Vulkem 116.
- B. (SLNT-2) 2-Part Polyurethane Sealant for Horizontal Applications: Self-leveling polyurethane based 2 part elastomeric sealant, complying with FS-TT-S-00227E, Type I, Class A, with shore A hardness of not less than 30 and elongation and compression of not less than 25 percent. ASTM C920, Type M, Class 25, Grade P.
 - 1. Acceptable Manufacturers and Products:
 - a. Tremco Incorporated: THC900.
 - b. BASF Building Systems: Sonolastic SL-2.
 - c. Pecora Corporation: Urexpan NR-200.

2.3 SILICONE SEALANT

- A. (SLNT-3) Low-Modulus Silicone Rubber Sealant: Silicone rubber based, one part neutral cure elastomeric sealant with plus 50 percent to minus 50 percent movement complying with FS-TT-S-001543, Class A, and recommended by manufacturer for joints.
1. Acceptable Manufacturers and Products:
 - a. General Electric: Silpruf SCS 2000.
 - b. Dow Corning Corporation: 795 Building Sealant.
 - c. BASF Building Systems: Sonolastic Omniseal or OmniPlus.
 - d. Pecora Corporation: 864 Silicone.
 - e. Tremco Construction Division: Spectrem 3.
- B. (SLNT-4) Medium-Modulus Silicone Rubber Sealant: Silicone rubber based, specifically designed for weatherproofing stone or other porous materials, two part moisture cure elastomeric sealant with plus 50 percent to minus 50 percent movement and recommended by manufacturer for stone joints.
1. Acceptable Manufacturers and Products:
 - a. General Electric: Silpruf SCS 2000.
 - b. Dow Corning Corporation: 756 Building Sealant.
 - c. Tremco Construction Division: Spectrem 2.
- C. (SLNT-5) Ultra Low-Modulus Silicone Rubber Sealant: Silicone rubber based, one part neutral cure elastomeric sealant with plus 100 percent to minus 50 percent movement complying with FS-TT-S-001543, Class A.
1. Acceptable Manufacturers and Products:
 - a. Dow Corning Corporation: 790 Building Sealant.
 - b. Tremco Construction Division: Spectrem 1.
- D. (SLNT-6) Silyl-Terminated Polyurethane Joint Sealant (STPU): ASTM C920, Type S, Grade NS, Class 12.5, for Us NT.
1. Product and Manufacturer:
 - a. Dymonic FC, by Tremco Incorporated:
 - b. Dyanflex SC, by Pecora Corporation
 2. Application: Adhering joint dowel pins at stonework.
- E. (SLNT-8) Silicone Sealant, Mildew-Resistant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.
1. DAP Inc.; 100 percent Silicone Kitchen and Bath Sealant.
 2. Dow Corning Corporation; Dow Corning 786.
 3. GE Silicones; a division of GE Specialty Materials; Sanitary 1700.
 4. Laticrete International, Inc.; Latasil Tile & Stone Sealant.
 5. Pecora Corporation; Pecora 898 Sanitary Silicone Sealant.
 6. Tremco Incorporated; Tremsil 600 White.
- F. (SLNT-9) Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT; field-tintable; non-staining.
1. Field-Tinted: Provide at locations as directed by Architect.
 - a. Basis of Design: Pecora Corporation; 890FTS.
 - b. Color: As selected by Architect to match masonry mortar joints.
 2. Field-Tinted and Textured: Provide at locations as directed by Architect.
 - a. Basis of Design: Pecora Corporation; 890FTS-TXTR.
 - b. Color: As selected by Architect to match masonry mortar joints.

2.4 ACRYLIC SEALANT

- A. (SLNT-7) Acrylic Sealants: General purpose, paintable acrylic-emulsion sealant. Caulk with approximately 12- 1/2 percent elongation complying with ASTM C834.
1. Acceptable Manufacturers and Products:

- a. Tremco Incorporated: Acrylic Latex 834.
- b. BASF Building Systems: Sonolac.
- c. Pecora Corporation: AC-20.

2.5 JOINT SEALANT BACKING

- A. Joint Sealant Backer Rod Manufacturers:
 1. Denver Foam, Backer Rod Manufacturing, Inc.
 2. Sonneborn Sonolastic, BASF Building Systems.
 3. Construction Foam Products, Nomaco Inc..
- B. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- C. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin), as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- D. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.6 PREPARATORY MATERIALS

- A. Joint Primer: Non-staining type recommended by sealant manufacturer to suit application.
- B. Joint Cleaner: Non-corrosive type recommended by sealant manufacturer; compatible with joint forming materials.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine joint surfaces, backing, and anchorage of units forming sealant rabbet, and conditions under which sealant work is to be performed. Do not proceed with sealant work until unsatisfactory conditions have been corrected.

3.2 JOINT SURFACE PREPARATION

- A. Clean joint surfaces immediately before installation of sealant. Remove dirt, insecure coatings, moisture and other substances which would interfere with bond of sealant.
- B. Etch concrete and masonry joint surfaces to remove excess alkalinity, unless sealant manufacturer's printed instructions indicate that alkalinity does not interfere with sealant bond and performance. Etch with 5 percent solution of muriatic acid; neutralize with dilute ammonia solution, rinse thoroughly with water and allow to dry before sealant application.
- C. Roughen joint surfaces on vitreous coated and similar non-porous materials, wherever sealant manufacturer's data indicates lower bond strength than for porous surfaces. Rub with fine abrasive cloth or steel wool to produce dull sheen.
- D. Ensure that joint forming materials are compatible with sealant.
- E. Examine joint dimensions and size materials to achieve required width/depth ratios. Use joint filler to achieve required joint depths, to allow sealants to perform properly.

3.3 SEALANT APPLICATION

- A. Apply sealant in accordance with manufacturer's printed instructions. Perform work in accordance with ASTM C804.
- B. Prime or seal joint surfaces. Do not allow primer/sealer to spill or migrate onto adjoining surfaces.

- C. Install sealant backer rod for liquid elastomeric sealant, except where recommended to be omitted by sealant manufacturer for application shown.
- D. Install bond breaker tape wherever required by manufacturer's recommendations to ensure that elastomeric sealant will perform properly.
- E. Employ only proven installation techniques, which will ensure that sealant will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of joint bond surfaces equally on opposite sides.
 - 1. Except as otherwise indicated, fill sealant rabbet to slightly concave surface, slightly below adjoining surfaces. Where horizontal joints are between horizontal surface and vertical surface, fill joint to form slight cove, so that joint will not trap moisture and dirt.
- F. Install sealant to depth as shown or, if not shown, as recommended by sealant manufacturer but within following general limitations, measured at center (thin) section of bead:
 - 1. For sidewalks, pavements and similar joints sealed with elastomeric sealant and subject to traffic and other abrasion and indentation exposures, fill joints to depth equal to 75 percent of joint width, but not more than 5/8 inch deep nor less than 3/8 inch deep.
 - 2. For normal moving joints sealed with elastomeric sealant, but not subject to traffic, fill joint to depth equal to 50 percent of joint width, but not more than 1/2 inch deep nor less than 1/4 inch deep.
- G. Interior joints not subject to movement, these are:
 - 1. Gypsum board to masonry joints.
 - 2. Gypsum board to hollow metal joints.
 - 3. Gypsum board to concrete joints.
- H. Do not allow sealant or compounds to overflow or flow onto adjoining surfaces, or to migrate into voids of adjoining surfaces including rough texture surfaces. Use masking tape or other precautionary devices to prevent staining of adjoining surfaces, by either primer/sealer or sealant.
- I. Remove excess and spillage of sealant promptly as work progresses. Clean adjoining surfaces by whatever means may be necessary to eliminate evidence of spillage, without damage to adjoining surfaces or finishes.
- J. Rope Wicks: Where wicks for weeping masonry cavity occur in sealant, cut wick flush with sealant face and do not seal wick ends.

3.4 FIELD QUALITY CONTROL

- A. Sealant Adhesion Field Test: Comply with following.
 - 1. Weathering Sealant Adhesion: After liquid-applied sealant is fully cured, perform sealant adhesion test according to sealant manufacturer's recommendations.

3.5 PROTECTION AND CLEANING

- A. Protect joint sealers during and after curing period from contact with contaminating operations or other causes so that they are without deterioration or damage at time of Substantial Completion.
 - 1. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealers immediately and reseal joints with new materials to produce joint sealer installations with repaired areas indistinguishable from original work.
- B. Clean off excess sealant or sealant smears adjacent to joints as work progresses by methods and with cleaning materials approved by manufacturers of joint sealers and of products in which joints occur.

3.6 JOINT-SEALANT SCHEDULE

- A. General: Provide sealant where indicated (SLNT) or as required to achieve a weather-tight assembly.
 - 1. Joint-Sealant Colors: As selected by Architect from manufacturer's full range of colors.

2. The following schedule is not intended to be all-inclusive and some may not be applicable to this Project.

B. Exterior Joints:

1. Horizontal Surfaces Subject to Traffic:
 - a. Joint Locations:
 - 1) Isolation and contraction joints in cast-in-place concrete slabs.
 - 2) Joints between plant-precaster architectural concrete paving units.
 - 3) Joints in stone paving units, including steps (where applicable).
 - 4) Tile control and expansion joints.
 - 5) Joints between different materials listed above.
 - 6) Other joints as indicated.
 - b. (SLNT-2): 2-Part polyurethane sealant, self-leveling, traffic grade, Class 25 .
2. Horizontal Surfaces Subject to Traffic and Water Immersion:
 - a. (SLNT-): Polyurethane sealant, submersible, multi-component, self-leveling traffic grade.
3. Vertical Surfaces and Horizontal Surfaces Not Subject to Traffic:
 - a. Joint Locations:
 - 1) Construction joints in cast-in-place concrete.
 - 2) Control and expansion joints in unit masonry.
 - 3) Joints between metal panels.
 - 4) Joints between different materials listed above.
 - b. (SLNT-3): Silicone single component, nonsag, neutral curing, Class 25
 - c. (SLNT-4): Silicone multicomponent, nonsag, neutral curing.
4. Perimeter joints between materials listed above and frames of doors, windows, and louvers:
 - a. (SLNT-4): Silicone multicomponent, nonsag, neutral curing.
5. Vertical Surfaces and Horizontal Surfaces Not Subject to Traffic:
 - a. Joint Locations:
 - 1) Unit Masonry Glazed Aluminum Framing System.
 - 2) Metal Panel to Glazed Aluminum Framing System.
 - b. (SLNT-5) Silicone Ultra Low-Modulus Silicone Rubber Sealant.
6. Vertical Surfaces and Horizontal Surfaces Not Subject to Traffic:
 - a. Joint Locations:
 - 1) Stone to Stone
 - 2) Stone to Masonry
 - 3) Cast Stone to Cast Stone
 - 4) Stone to Cast Stone
 - b. (SLNT-9): Silicone Single-Component, Nonsag, Neutral-Curing.

C. Interior Joints:

1. Horizontal Surfaces Subject to Traffic:
 - a. Joint Locations:
 - 1) Isolation joints in cast-in-place concrete slabs.
 - 2) Other joints as indicated.
 - b. (SLNT-2): 2-Part polyurethane sealant, self-leveling, traffic grade, Class 25 .
2. Vertical Surfaces and Horizontal Surfaces Not Subject to Traffic: Acrylic-based.
 - a. Control and expansion joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints of exterior openings where indicated.
 - c. Tile control and expansion joints.
 - d. Vertical joints on exposed surfaces of interior unit masonry, concrete, walls, and partitions.
 - 1) (CMU) to (CMU): Low modulus silicone sealant.
 - e. Perimeter joints between interior wall surfaces and frames of interior doors, windows and elevator entrances.
 - f. Joints between plant-precaster structural concrete units.

- g. Other joints as indicated.
- 3. Mildew-Resistant Sealant: Mildew resistant, single component, nonsag, neutral curing, Silicone.
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
 - b. Tile control and expansion joints where indicated.
 - c. Other joints as indicated.
- 4. Acoustic Joint Sealant: Acoustical. Refer to Section 092900 for acoustic sealant in gypsum board assemblies.

END OF SECTION

SECTION 079513 EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Joint cover assemblies (EXP JT).

1.2 ACTION SUBMITTALS

- A. Shop Drawings: Submit for each item of work in accordance with Section 013300. Indicate joint device profiles, dimensions, locations in the Work, affected adjacent construction, anchorage devices, available colors and finish, and locations of splices.
- B. Samples: Submit samples in accordance with Section 013300. Submit one 12 inch long sample of each joint, in size illustrating profile, dimension, color, and finish selected.
- C. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
 - 1. Manufacturer and model number for each expansion joint cover assembly.
 - 2. Expansion joint cover assembly location cross-referenced to Drawings.
 - 3. Nominal, minimum, and maximum joint width.
 - 4. Movement direction.
 - 5. Materials, colors, and finishes.
 - 6. Product options.
 - 7. Fire-resistance ratings.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: Installer of expansion control joints shall be approved by manufacturer of control joints.

PART 2 PRODUCTS

2.1 SYSTEM DESCRIPTION AND PERFORMANCE REQUIREMENTS

- A. Expansion Joint Systems: Provide expansion control systems of design, basic profile, materials, and operation indicated. Provide units with capability to accommodate variations in adjacent surfaces.
 - 1. Furnish units in longest practicable lengths to minimize field splicing. Install with hairline mitered corners where expansion control systems change direction or abut other materials.
 - 2. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion control systems.
 - 3. Source Limitations: Obtain each expansion control systems from single source from single manufacturer.
- B. Coordination: Coordinate installation of exterior wall and soffit expansion control systems with roof expansion control systems to ensure that wall transitions are watertight. Roof expansion joint assemblies are specified elsewhere.
- C. Fire Performance Characteristics: Where indicated, provide expansion joint cover assemblies identical to those of assemblies whose fire resistance has been determined per UL 2079, NFPA 251, or ASTM E119 and E814 including hose stream test at full-rated period by nationally recognized testing and inspecting organization or by another means, as acceptable to authorities having jurisdiction.

2.2 MANUFACTURERS

- A. Manufacturers: Provide Basis of Design or equivalent products by one of the following Manufacturers:
 - 1. Construction Specialties Group.
 - 2. MM Systems Corporation
 - 3. Balco Inc.
 - 4. Watson-Bowman-Acme Corporation
 - 5. Pawling Corporation
 - 6. Michael Rizza Company, Inc.
 - 7. Nystroms, Inc.
 - 8. InPro Corporation

2.3 EXPANSION JOINT SCHEDULE

- A. Exterior Joints: 2-inch joint width.
 - 1. EXP JT-___: Exterior, wall-to-wall, perpendicular
 - 2. EXP JT-___: Exterior, roof-to-wall
- B. Interior Joints: 2-inch joint width.
 - 1. EXP JT-___: Interior, floor-to-floor
 - 2. EXP JT-___: Interior, ceiling-to-ceiling
 - 3. EXP JT-___: Interior, wall-to-wall, abutted
 - 4. EXP JT-___: Interior, wall-to-wall, perpendicular

2.4 MATERIALS

- A. Aluminum: ASTM B 221, Alloy 6063-T5 for extrusions; ASTM B 209, Alloy 6061-T6 for sheet and plate. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Stainless Steel: ASTM A 240 or ASTM A 666, Type 304 for plates, sheet, and strips. Remove tool and die marks and stretch lines or blend into finish.

2.5 SEALS AND BARRIERS

- A. Extruded Preformed Seals: Single or multicellular elastomeric profiles as classified under ASTM D2000, designed with or without continuous, longitudinal, internal baffles. Formed to fit compatible frames.
 - 1. Resilient Filler: Elastomer; exhibiting Shore A hardness of durometer 65A.
 - 2. Color: As selected from manufacturer's standard colors.
- B. Elastomeric Seals: ASTM E 1783; preformed elastomeric membranes or extrusions to be installed in metal frames.
- C. Compression Seals: ASTM E 1612; preformed elastomeric extrusions having an internal baffle system and designed to function under compression.
- D. Cellular Foam Seals: Extruded, compressible foam designed to function under compression.
- E. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required fire-resistance rating.
- F. Moisture Barrier: Flexible elastomeric material, minimum 45 mils thick.

2.6 ACCESSORIES

- A. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.
- B. Elastomeric Concrete: Modified epoxy or polyurethane extended into a prepackaged aggregate blend, specifically designed for bonding to concrete substrates.

- C. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.1 PREPARATION

- A. Deliver inserts and rough-in frames to job site at appropriate time for building-in. Provide templates and rough-in measurements as required.
- B. Provide spall-free level, bottom blockout parallel to deck surface in concrete to dimensions indicated. Blockout shall be open and dry.
- C. Before starting work notify Architect in writing of conflicts detrimental to installation or operation of units.

3.2 INSTALLATION

- A. Install components in accordance with reviewed shop drawings and manufacturer's printed instructions.
- B. Prepare and place expansion joints in accordance with manufacturer's printed instructions.
- C. Install expansion joints true, plumb and level, flush with adjacent surfaces.
- D. Securely and rigidly anchor to substrate to prevent movement or misalignment.
- E. Installation of Fire Barriers: Install fire barriers in accordance with federal, state, and local building codes using manufacturer's recommended procedures. Install transition and end joints to provide continuous fire resistance and in accordance with manufacturer's instructions.
- F. Do not remove strippable protective material until finish work in adjacent areas is complete. protective material is removed, clean exposed metal surfaces to comply with manufacturer's instructions.
- G. Protect finished installation in accordance with Section 017700. Prevent traffic from crossing joints until entire assembly has cooled and is firmly cured.

END OF SECTION

SECTION 081113 HOLLOW METAL DOORS & FRAMES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Pressed steel hollow metal doors and frames.
 2. Fire-rated hollow metal doors and frames.
 3. Hollow metal glazed openings, and other hollow metal frames for glass.
 4. Rough bucks, frame reinforcing, door reinforcing, door insulation, closure panels, clip angles and anchorage.
 5. Factory prime paint finish.

1.2 COORDINATION

- A. Anchorages: Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Preparation for Hardware: Reinforced and machine hollow metal work for hardware specified in Sections 087100 and automatic door operators 087113.
1. Obtain templates, shop drawings, jigs, or materials, and a copy of the accepted Hardware Schedule from the hardware distributor.
 2. Templates: Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.
 3. Reinforcing: Reinforce the work of this Section to meet requirements for anchoring hardware using concealed fasteners.
- C. Existing Openings: Where new components are scheduled for application to existing openings or where modifications to existing doors and frames is required, field verify existing conditions by field measurements prior to ordering any material. Coordinate installation of frames, doors and door hardware to suit opening conditions and to provide for proper operation.
1. Contractor shall carefully protect existing doors, frames and hardware for all existing openings that will remain in the project.
 - a. Any material that is damaged or lost shall be replaced to match the existing similar items at no additional cost to the owner.
 - b. Doors and frames that are to be re-used shall be removed safely and stored in a secured area until re-installed at selected openings.
 - c. Coordinate with owner for any additional existing doors and/or frames that were removed and not used that they may want to be turned over to the owner with all operating parts and fasteners in working condition.
 - d. Any material that is ordered, and/or fabricated and will not fit into existing openings and is required for the intended use, such material shall be removed and replaced at no additional cost to the owner.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, core descriptions, fire-resistance ratings, temperature-rise ratings, and finishes.
- B. Shop Drawings: Include the following:
1. Elevations of each door type.
 2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 4. Locations of reinforcement and preparations for hardware.
 5. Details of each different wall opening condition.
 6. Details of anchorages, joints, field splices, and connections.

- 7. Details of accessories.
 - 8. Details of moldings, removable stops, and glazing.
 - 9. Details of conduit and preparations for power, signal, and control systems.
- C. Schedule: Provide a schedule, in electronic PDF format, of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each type of fire-rated hollow-metal door and frame assembly, for tests performed by a qualified testing agency.
- B. Oversize Construction Certification: For assemblies required to be fire-rated and exceeding limitations of labeled assemblies.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.
- D. Handle hollow metal with care to prevent damage to hollow metal and to factory-applied primer and galvanized coatings.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits indicated, based on testing at positive pressure according to NFPA 252 (neutral pressure at 40" above sill) or UL 10C.
 - 1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105. Provide smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.
 - 2. Oversize Fire-Rated Door Assemblies: For door assemblies required to be fire-rated and exceeding sizes of tested assemblies, provide certificate or label from approved independent testing and inspection agency, indicating that door and frame assembly conforms to requirements of design, materials and construction as established by individual listings for tested assemblies.
 - 3. Temperature Rise Rating: At stair enclosures, provide doors with Temperature Rise Rating of 450 degrees F maximum in 30 minutes of fire exposure.
- B. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

2.2 HOLLOW METAL

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ceco Door Products; an Assa Abloy Group company.
 - 2. Curries Company; an Assa Abloy Group company.
 - 3. Steelcraft; an Ingersoll-Rand company.

- B. Cold Rolled Steel Sheets: Cold formed, prime quality pickled, annealed stretcher level steel, free from scale, pitting or other surface defects, complying with ASTM A366.
- C. Galvanized Steel Sheets: ASTM A526 or A527, G60 zinc coating. Use galvanized steel sheets for exterior hollow metal doors, door frames and door louvers.
- D. Minimum gages of hollow metal are specified below. Provide heavier gage if required by details or specific condition. Entire frame and sidelight shall be of same gage.
 - 1. 14 gage: Exterior door frames, transom and sidelight frames.
 - 2. 16 gage: Exterior doors.
 - 3. 16 gage: Interior door frames, and glazed opening frames.
 - 4. 16 gage: Labeled frames (or heavier if required by label).
 - 5. 16 gage: Interior doors (or heavier if required by label).
 - 6. 16 gage: Trim members.

2.3 RELATED MATERIALS

- A. Steel Reinforcing: ASTM A36.
- B. Door Bumpers or Silencers: GJ-64.

2.4 HOLLOW METAL FRAMES

- A. General: Provide full profile welded frames, unless otherwise indicated. Where necessary, alternate details will be considered provided design intent is maintained. Consider and provide for erection methods. Refer to Openings Schedule for frame dimensions.
- B. Typical Reinforcing: Provide minimum hinge reinforcement 3/16 inch by 1-1/2 inch by 9 inch and lock strike reinforcement 3/16 inch by 1-1/2 inch by 4 inch long. Provide similar reinforcement for hardware items as required to adequately withstand stresses, minimum 12 gage, including channel reinforcement for door closers and closer arms, door holders and similar items. Provide reinforcement and clearances for concealed in-head bar closers and for mortise locks.
- C. Cover Plates: For hinge and strike plate cutouts, provide fully enclosed pressed steel cover boxes spot welded to frames behind mortises.
- D. Hardware: Mortise, reinforce, drill and tap for mortise hardware, except drilling and tapping for surface door closers, door closer brackets and adjusters shall be done in field.
- E. Anchorage: Provide standard and special anchorage items as required. Provide 12 gage angle clips at bottom of frames with punched holes for securing frames to floor, except where frames are secured entirely by rough bucks. Provide formed steel channel spreader at bottom of frames, removable without damaging frame. At masonry, provide anchors (about 2 inch by 10 inch) approximately 24 inches on center.
- F. Silencers: Provide specified silencers, except where stop does not occur and at smoke gasketed openings, 3 per jamb at single door and one for each door at double doors. Do not provide silencers on doors with sound gasketing.
- G. Extensions: Reinforce transom bars or mullions as necessary to provide rigid installation. Where required (as at multiple openings) to stabilize large frames, provide frame or mullion extensions to anchor to structure above, proper size to fit within overhead construction. Provide angle clips to fasten to structure.
- H. Mullions: Provide mullions, continuously reinforced, straight and without twist, of tubular design. For removable mullions provide fastenings of non-ferrous bolts at bottom, with sleeves at head of frame for mullion to clip over.
- I. Clearances: Provide and be responsible for proper clearances at metal frames, including for weatherstripping, soundstripping and smoke gasketing. Glass clearance shall be thickness of glass plus clearance each side (1/8 inch minimum exterior - 1/16 inch minimum interior), adjust for installation, glass thickness to allow for glazing and sealant. Where sealed double glazing is indicated, provide rebates minimum of 3/4 inch and provide 1/4 inch clearance at glass edges. Where units fit around concrete blocks (blocks built into frames) obtain actual dimensions of blocks being used to establish minimum clearances.

- J. Stops: Set with countersunk or Jackson head screws.
 - 1. Non-fire rated door frames scheduled to receive acoustical seals shall have a flat profile at the head and jamb, with the acoustical seals serving as stops. Fire rated frames shall utilize acoustical seals surface-mounted to the molded stops.
- K. Labeled Frames: Construct in accordance with requirements for labeled work. Attach proper U.L. label, Warnok Hersey. "B" labeled frames shall be 1-1/2 hour construction.
- L. Joinings: At frames with equal width jambs and head, neatly miter on face (except locations as at transom bars and at frames with large head members). Cope and butt stops. Weld length of entire joint, including face and flat intersections. Grind smooth, at other frames, provide same mitred joint wherever possible (at intersection of jamb-head or jamb-sill) and at other locations butt metal neatly and fully welded. All joints to be tight, neatly ground, puttied, and sanded smooth before priming.
- M. Workmanship: Fabricate so no grind marks, hollow or other out-of-plane areas are visible. At joints of intermediate members (as mullions and transom bars), provide tight joining, neatly accomplished without holes, burned out spots, weld build up or other defacing work. Fill to close cracks and to preserve shapes. Tightly fit loose stops, to hairline joints.
- N. Finish: Clean frames by degreasing process and apply thorough coating of baked-on primer, covering inside as well as outside surfaces. At galvanized frames, coat welds and other disrupted surface with zinc-rich paint containing not less than 90 percent zinc dust by weight.

2.5 FRAME ANCHORS

- A. Jamb Anchors:
 - 1. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
- B. Floor Anchors: Formed from same material as frames, not less than 0.042 inch thick, and as follows:
 - 1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
 - 2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.6 HOLLOW METAL DOORS

- A. Provide to design indicated including: Flush panel doors, flush panel with cut-out as indicated, stile and rail type, stile and rail with door louver. Use galvanized steel at exterior doors.
- B. Flush Doors: Reinforce, stiffen and sound deaden. Provide cut-outs for glass and louvers with stops as shown. Provide flush steel closure at top of exterior and interior doors and at bottom of exterior doors with drain holes in bottom closure. Provide seamless edge. Following door construction types are acceptable.
 - 1. Exterior Doors (and Interior Reinforced Doors): 16 gage steel stiffener reinforced vertically 6 inches o.c. full height and width, spot welded 5 inches o.c. to both face sheets. Stiffeners welded together top and bottom. Insulate with 2-1/2 lb density mineral wool insulation.
 - 2. Honeycomb Core Interior Doors (Typical): Impregnated Kraft honeycomb core completely filling inside of center panel and permanently laminated to inside face sheets.
 - 3. Door Construction: Manufacturer's standard honeycomb, polyurethane foamed in place, unitized steel grid, vertical steel stiffeners, or rigid mineral fiber core with internal sound deadener on inside of face sheets where appropriate in accordance with SDI standards.
- C. Stile and Rail Doors: Construct with equivalent reinforcing. Reinforce intersections of stiles and rails at stile type doors, to form rigid unit capable of withstanding severe abuse without racking or sagging.
- D. Labeled Doors: Insulate as required by Underwriters Laboratories. Build in special hardware and provide astragals as indicated. At one hour and at 1-1/2 hour doors at enclosures, maximum transmitted temperature end point shall not exceed 450 degrees F above ambient at end of 30 minutes of fire exposure specified in NFPA 252 and UL10 ABC as applicable.

- E. Seamless Vertical Edges: Construct doors with smooth flush surfaces, without visible joints or seams on exposed faces or stile edges. Interior and exterior door edge seams shall be full welded, except if polyurethane core is used for exterior, these doors shall have edges filled with body putty and ground smooth.
- F. Typical Reinforcement: Provide as required for hardware items. For lock reinforcement, provide manufacturer's standard reinforcement. Provide 12 gage reinforcement for escutcheons or roses. centering clips to hold lock case in alignment. For door checks, provide 3/16 inch channel type reinforcements, 3-1/2 inch deep by 14 inches long, or as required. Hinge reinforcement minimum 7 gage by 1-1/2 inch by 9 inch bar. Weld reinforcing to door. Reinforce doors for surface items such as surface and semi-concealed closers, brackets, surface holders and door stops. Drilling and tapping installation of these surface items shall be done in field by hardware installer.
- G. Special Reinforcing: At exterior doors, reinforce inside of door on hinge side with high frequency hinge preparation. Weld to door.
- H. Hardware: Mortise, reinforce, drill and tap for hardware furnished under Section 087000 - Hardware, except drilling and tapping for surface door closers, door closer brackets and adjusters shall be done in field. Obtain templates from hardware supplier.
- I. Finish: Provide prime coat finish on doors. Thoroughly clean off rust, grease and other impurities. Grind welds smooth, no marks shall show. Apply metallic filler as required to fill cracks and joints and to level any weld areas or similar imperfections. Sand filler coat smooth.
- J. Hollow Metal Panels: Same materials and constructed and finished in same way as specified for hollow metal doors.

2.7 FASTENINGS

- A. Provide fastenings, anchors and clips as required to secure hollow metal work in place. Provide Jackson head screws, or flatter. Dimple metal work to receive screw heads. Set stops and other non-structural fastenings with #6 Jackson head self-tapping screws.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine supporting structure and conditions under which hollow metal is to be installed. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install hollow metal in accordance with reviewed shop drawings and manufacturer's printed instructions. Securely fasten and anchor work in place without twists, warps, bulges or other unsatisfactory or defacing workmanship. Set hollow metal plumb, level, square to proper elevations, true to line and eye. Set clips and other anchors with Ramset "shot" anchors or drill in anchors as approved. Units and trim shall be fastened tightly together, with neat, uniform and tight joints.
- B. Placing Frames: Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces and spreaders leaving surfaces smooth and undamaged.
 1. At acoustic rated metal stud and gypsum board partitions, install insulation within frames.
 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
 3. Ceiling Struts: Extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction. Provide adjustable wedged or bolted anchorage to frame jamb members.
 4. Installation Tolerances: Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

- b. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs at floor.
- C. Place fire-rated frames in accordance with NFPA Standard #80.
- D. Door Installation: Fit hollow metal doors accurately in their respective frames, within following clearances: Jambs and head 3/32 inch, meeting edges pair of doors 1/8 inch, sill where no threshold or carpet 1/4 inch above finished floor, sill at threshold 3/4 inch maximum above finished floor, sill at carpet 1/4 inch above carpet. Place fire-rated doors with clearances as specified in NFPA Standard #80.
- 1. Provide undercut no greater than 3/8-inch at doors equipped with automatic sound seal door bottoms.

3.3 ADJUSTING AND CLEANING

- A. Prime Coat Touch-Up: Immediately after installation, sand smooth rusted or damaged areas of prime coat and apply touch-up of compatible air-drying primer.
- B. Protection Removal: Immediately before final inspection, remove protective wrappings from doors and frames.

END OF SECTION

SECTION 081400 WOOD DOORS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior solid core flush wood doors:
 - a. Fire-rated flush wood doors.
 - b. Non-rated flush wood doors.
 - 2. Shop-priming of field-painted doors.
 - 3. Factory finishing.
- B. Related Sections:
 - 1. Section 064000 - Architectural Woodwork: Wood veneer (WD-1).
 - 2. Section 081113 - Hollow Metal Doors and Frames.
 - 3. Section 087100 - Door Hardware.
 - 4. Section 088000 - Glazing: Glass and glazing for doors.
 - 5. Section 099000 - Painting: Painted finish.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of door. Include details of core and edge construction and trim for openings. Include factory-finishing specifications.
- B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:
 - 1. Dimensions and locations of blocking.
 - 2. Dimensions and locations of mortises and holes for hardware.
 - 3. Dimensions and locations of cutouts.
 - 4. Undercuts.
 - 5. Requirements for veneer matching.
 - 6. Doors to be factory finished and finish requirements.
 - 7. Fire-protection ratings for fire-rated doors.
- C. Samples:
 - 1. Wood Veneer with Transparent Finish: Provide set of 3 samples, approximately 8 by 10 inches, showing typical range of color and grain to be expected in finished work.

1.3 INFORMATIONAL SUBMITTALS

- A. Certification: Submit certification that doors and frames comply with NFPA 252 or UL-10.
- B. Field Conditions Reports.
- C. Sustainability Submittals: Submit required product data and documentation in accordance with Section 018113 - Sustainable Design Requirements and Section 013300 - Submittal Procedures:
 - 1. Product Data for LEED MRc 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
 - 2. Certificates for LEED MRc 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain of custody by an FSC-accredited certification body. Include statement indicating costs for each certified wood product.
 - 3. Product Data for LEED EQc 4.1: For adhesives and sealants used inside the weatherproofing system, including printed statement of VOC content.
 - 4. Product Data for LEED EQc 4.4: For composite wood and agrifiber, including printed statement of VOC content.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Protect wood doors from damage, dust and dirt. Do not deliver, receive, store or install wood doors until storage and installation areas are conditioned in accordance with requirements and recommendations of NAAWS.
- B. Comply with requirements of referenced standards and with manufacturer's written instructions.
- C. Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting
 - 1. Use opaque plastic sheeting for natural finished doors.
 - 2. Mark each door on top and bottom edges with opening number used on Shop Drawings
- D. Stack wood doors as recommended by door manufacturer.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver, receive, store or install architectural woodwork until building is enclosed, wet work is complete, and temporary or permanent HVAC systems are operating in areas where woodwork is stored and installed and are maintaining temperature and relative humidity at occupancy levels and within the following ranges during the remainder of the construction phase:
 - 1. Temperature Range: Between 60 and 90 deg F.
 - 2. Relative Humidity Range: Between 25 and 55 percent.
- B. Monitor, Record and Report: Monitor temperature and relative humidity in areas where woodwork is stored and installed at Project site. Record temperature and relative humidity prior to delivery, throughout storage period and installation, and after installation until time of Substantial Completion. Report recorded values in accordance with Submittals requirements.

1.6 WARRANTY

- A. Special Warranty: Signed by Manufacturer, Installer, and Contractor, in which Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
 - b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
 - 2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 - 3. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 - 1. Provide gasket as required by door manufacturer in compliance with UL10C, Category A.
 - 2. Oversized Fire-Rated Door Assemblies: For door assemblies exceeding sizes of tested assemblies, provide oversize fire door label or certificate of inspection, from a testing and inspecting agency acceptable to authorities having jurisdiction, stating that doors comply with requirements of design, materials, and construction.
 - 3. Fire-Rated Wood Door and Frame Assemblies: Provide wood doors and frames which are identical in materials and construction to units tested in door and frame assemblies in accordance ASTM E152 and which are labeled and listed for ratings indicated by UL or other testing and inspection agency acceptable to authorities having jurisdiction.
 - 4. Temperature Rise Rating: [Where indicated] [At vertical exit enclosures and exit passageways], provide doors which have Temperature Rise Rating of 450 degrees F maximum in 30 minutes of fire exposure.

- B. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

2.2 WOOD DOORS, GENERAL

- A. Quality Standards: Provide wood doors fabricated and installed in accordance with specified Grade classification of the *North American Architectural Woodwork Standards, Adopted and Published jointly by Architectural Woodwork Institute, Architectural Woodwork Manufacturer's Association of Canada and Woodwork Institute - Current Edition (NAAWS)*
 - 1. Comply with NAAWS Premium Grade, except where more stringent requirements are indicated in the Contract Documents.
- B. Material Requirements for Sustainability:
 - 1. Forest Certification: Provide doors made with cores and veneers of wood products obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
 - 2. Low-Emitting Adhesives and Binders: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.
 - 3. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
- C. Source Limitations: Obtain flush wood doors from single manufacturer.
- D. Manufacturers:
 - 1. Eggers Industries
 - 2. Marshfield Door Systems
 - 3. Algoma Group
- E. WDMA I.S.1-A Performance Grade: Extra Heavy Duty.
- F. Structural-Composite-Lumber-Core for Non-Fire-Rated Doors: WDMA I.S.10.
 - 1. Screw Withdrawal: 700 lbf at faces, 400 lbf at edges.
- G. Mineral-Core for Fire-Rated Doors: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
 - 1. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated.
 - 2. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.
- H. Construction: Five plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before veneering. Faces are bonded to core using a hot press.
- I. Adhesives: Type I per WDMA TM-6, waterproof.

2.3 DOOR FACING AND FINISHES

- A. Wood-Veneer Faced Doors with Transparent Finish: NAAWS Premium grade, with Grade AA faces, 1/50 inch thick before final sanding.
 - 1. Wood Species, Cut and Finish: (WD-1), as specified in Section 064000 - Architectural Woodwork.
 - 2. Veneer Matching:
 - a. Match between Veneer Leaves: Book match.
 - b. Assembly of Veneer Leaves on Door Faces: Balance match.
 - c. Pair and Set Match: Provide for doors hung in same opening.
 - d. Room Match: Match door faces within each separate room or area of building.
 - e. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in Section 064000 - Architectural Woodwork.
 - f. Exposed Vertical and Top Edges: Same species as faces.
 - 3. Transparent Finish: Shop-applied, NAAWS Premium Grade, System 5 Conversion Varnish.

- a. Shop Priming for Transparent Finish: Shop prime faces and all four edges with stain, other required pretreatments, and first coat of transparent finish. Seal edges of cutouts and mortises with first coat of finish.
 - b. Sheen: Matching Architect's sample.
- B. Doors with Opaque Painted Finish: (WD-5) as specified in Section 064000 - Architectural Woodwork.
- 1. Shop Priming of Field-Applied Opaque Finish: Shop prime faces, all four edges, edges of cutouts, and mortises with one coat of wood primer specified in Section 099000 - Painting.

2.4 ACCESSORIES

- A. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.
- 1. Facing and Crossband Adhesive: Type 1 waterproof.
 - 2. Door Construction: Type 2.
- B. Lite Kit: Provide frames that are flush to face of door, in species of wood to match face of door or veneer wrapped mineral core for fire rated doors.

2.5 FABRICATION

- A. Fabricate wood doors in accordance with requirements of specified NAAWS Grade.
- B. Fabricate Work of this Section using materials, methods and quality control procedures necessary for installed units to withstand dimensional changes that can be expected resulting from temperature and humidity variations at project location when interior spaces do not have humidity control. Seal each surface to help mitigate dimensional change resulting from temperature and humidity variations.
- C. Fabricate and label fire-rated doors in accordance with requirements of Underwriters' Laboratories (UL), UL-10C, Category A Positive Pressure, with intumescent required for compliance contained within the door (concealed) and requiring no additional installation of intumescent products.
- D. Fabricate doors with hardware blocking as follows:
- 1. Provide head and sill rails on all doors.
 - 2. Provide adequate blocking for doors specified with concealed overhead stops and surface mounted closers.
 - 3. Provide lock-block at fire-rated, mineral core doors at latch side only.
 - 4. Provide cross blocking only when exit devices are specified for door.
 - 5. Provide hook block for pivots, or when floor bolts are specified under Section 087100 - Door Hardware.
- E. Provide doors with minimum 1-1/4 inch thick edge strips, of wood species to match face veneers except as required for UL rating.
- F. Make cut-outs and provide stops for glass and louvers. Seal cut-outs prior to installation of moldings.
- 1. For full light doors: Provide cut out from flush wood door, with vertical grain direction.
- G. Bevel strike edge of single acting doors 1/8 inch in 2 inches. Radius strike edge of double-acting swing doors 2-1/8 inches.
- H. Prepare doors to receive hardware. Refer to Section 087100 – Door Hardware and NFPA 80 for hardware requirements including UL-10C.
- 1. Factory pre-machine doors for all mortised hardware, including pilot holes for hinge screws and lock fronts.
 - 2. Prefit and bevel to net opening size less approximately 3/16 inch in width and provide 1/4 inch clearance above finished floor, unless otherwise indicated on drawings.
 - 3. Slightly ease vertical edges.

- I. Fire-Rated Pair of Doors; greater than 20 minute: If astragal is required, to comply with fire rated labeling requirements for pairs of fire rated doors, provide door manufacturer's standard tested astragal.
 1. Shop apply astragals.
 2. Shop apply matching veneer wrap to conceal metal astragal at wood faced doors.
 3. Install concealed intumescent seals per UL-10C where required by code.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examination and Acceptance of Conditions: Before proceeding with installation, examine openings to receive wood doors and other conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 2. Material Moisture Content and Environmental Requirements: Comply with recommendations of NAAWS.
 - c. Do not install woodwork that has not been conditioned to average prevailing humidity conditions in installation areas.
 3. Reject doors with defects.
 4. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions. Architectural woodwork Installer shall approve substrate prior to installation.

3.2 INSTALLATION

- A. Hardware: For installation, refer to Section 087100 - Door Hardware.
- B. Installation Instructions: Install doors to comply with manufacturer's written instructions, referenced quality standard, and as indicated.
 1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
 2. Install smoke- and draft-control doors according to NFPA 105.
- C. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal cut surfaces after fitting and machining.
 1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold.
 2. Comply with NFPA 80 for fire-rated doors.
 3. Factory-Finished, Job-Fitted Doors: Restore finish before installation if fitting or machining is required at Project site.
- D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- E. Wood Doors with Sound Seals: Undercut of door shall be 3/8-inch maximum for doors to be equipped with automatic door bottoms (sound seals).
- F. Ensure that smoke and sound gaskets are in-place before prefinished door installation.

3.3 INSTALLED WORK

- A. Damaged or Non-Compliant Work: Remove and replace materials that are damaged or do not comply with requirements.
 1. Damaged finish may be repaired or refinished if resulting repair work complies with requirements and shows no evidence of repair or refinishing.
- B. Adjusting: Adjust movable components to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range, and without binding or damaging assembly components.

1. Lubricate hardware and moving parts in accordance with Manufacturer's written instructions.
 2. Operation: Rehang or replace doors that do not swing or operate freely.
- C. Cleaning: Clean and maintain installed work as frequently as necessary through the remainder of the construction period.
- D. Protection: Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
1. At clear finished doors, do not partially cover door surfaces with paper, cardboard, or other opaque covering that will create uneven aging of wood veneer.
- E. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 083100 ACCESS DOORS & PANELS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Access panels (AP).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of door and frame indicated. Include construction details relative to materials, individual components and profiles, finishes, and fire ratings (if required) for access doors and frames.
- B. Schedule: Provide complete access panel schedule, including types, general locations, sizes, construction details, latching or locking provisions, and other data pertinent to installation.

1.3 COORDINATION

- A. Access Panel Schedule: Determine specific locations and sizes for access doors needed to gain access to concealed equipment, and indicate on schedule specified in "Submittals" Article.
- B. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed equipment, and indicate on schedule specified in "Submittals" Article.

PART 2 PRODUCTS

2.1 PERFORMANCEREQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection and temperature-rise limit ratings indicated, according to NFPA 252 or UL 10B.

2.2 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design or approved equivalent by one of the following manufacturers:
 1. Acudor Products Inc.
 2. Babcock-Davis
 3. Balco
 4. Cesco Access Products
 5. J.L. Industries
 6. Karp Associates Inc.
 7. Milcor Inc.
 8. Nystrom Building Products
 9. Williams Brothers Corporation of America

2.3 ACCESS PANELS

- A. General:
 1. Sizes: As shown on Drawings.
 2. Latch and Lock Hardware:
 - a. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
 - b. Keys: Furnish two keys per lock and key all locks alike.
 3. Accessories: Provide accessories as required for complete and operable installation.
 - a. Expansion shields
 - b. Steel frame
 - c. Continuous steel hinge
 - d. Automatic closing and locking device

- e. Flush key operated cylinder lock
 - f. Anchorage
- B. (AP-1) Non-Rated Steel Access Door with Exposed Flanges: General purpose flush access door with exposed flanges; face of door flush with frame, with 1-inch exposed flange and concealed, removable, button hinge.
- 1. Steel Sheet:
 - a. Door Material: Nominal 0.062 inch (16 gauge). Fold on all four sides for structural rigidity.
 - b. Frame Material: Nominal 0.062 inch, (16 gauge). Provide 1/4-inch mounting holes and easy install tabs.
 - c. Finish: Paintable powder-coat, white.
- C. (AP-3) Non-Rated Steel Access Door with Concealed Flanges and Gypsum Board Insert: General purpose flush access door with a flange that will accept drywall compound for a concealed frame appearance; door face recessed to accept gypsum board insert; concealed mudded-in flange and concealed hinge.
- 1. Steel Sheet:
 - a. Door Material: Nominal 0.062 inch (16 gauge). Fold on all four sides for structural rigidity.
 - b. Frame Material: Nominal 0.062 inch, (16 gauge). Provide 1/4-inch mounting holes and easy install tabs.
 - c. Finish: Paintable powder-coat, white.
- D. (AP-4) Non-Rated Stainless Steel Access Door with Exposed Flanges: General purpose flush access door with exposed flanges; face of door flush with frame, with 1-inch exposed flange and concealed, removable, button hinge.
- 1. Stainless-Steel Sheet, Type 304:
 - a. Door Material: Nominal 0.063 inch (16 gauge).
 - b. Frame Material: Nominal 0.063 inch (16 gauge).
 - c. Finish: No. 4 finish.
- E. Hinges: Concealed spring, button type, to allow for door removal.

2.4 MATERIALS

- A. Materials:
 - 1. Aluminum Sheet for Door: Nominal 0.045 inch, with mill finish.
- B. Steel Plates, Shapes, and Bars: ASTM A 36.
- C. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879, with cold-rolled steel sheet substrate complying with ASTM A 1008, Commercial Steel (CS), exposed.
- D. Metallic-Coated Steel Sheet: ASTM A 653, Commercial Steel (CS), Type B; with minimum G60 or A60 metallic coating.
- E. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, [Type 304] [Type 316]. Remove tool and die marks and stretch lines, or blend into finish.
- F. Aluminum Extrusions: ASTM B 221, Alloy 6063.
- G. Aluminum Sheet: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- H. Frame Anchors: Same material as door face.
- I. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.5 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
 - 1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
 - 2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.

2.6 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Deliver inserts and rough-in frames to job site at appropriate time for building-in. Provide templates and rough-in measurements as required.
- B. Before starting work notify Architect in writing of conflicts detrimental to installation or operation of units.
- C. Verify with Architect location of access panels.
- D. Advise installers of other work about specific requirements relating to access door and floor door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.3 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access panels and frames, and floor doors and frames.
- B. Install plumb, square and level, securely fastened, properly anchored and ready for full, complete operation and use.
- C. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- D. Install access doors with trimless frames and floor doors flush with adjacent finish surfaces or recessed to receive finish material.
- E. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION

SECTION 083323 OVERHEAD COILING DOORS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Motor-operated, insulated overhead coiling doors (CD-1) and (CD-2).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling door and accessory. Include the following:
 - 1. Construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
 - 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Show locations of controls, locking devices and other accessories.
 - 3. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples: For each type of exposed finish required, prepared on 12-inch long curtain slats.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.
 - 1. Smoke Control: Provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to UL 1784; with maximum air-leakage rate of 3.0 cfm/sq. ft. of door opening at 0.10-inch wg for both ambient and elevated temperature tests.
- B. Regulatory Requirements: Comply with applicable requirements of the laws, codes, ordinances and regulations of federal, state and municipal authorities having jurisdiction.

2.2 PRODUCTS AND MANUFACTURERS

- A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
 - 1. Obtain operators and controls from overhead coiling door manufacturer.
- B. Manufacturers: Subject to compliance with requirements, provide Basis of Design or equivalent products by one of the following:

1. Cookson Company.
2. Cornell Iron Works, Inc.
3. McKeon Rolling Steel Door Company, Inc.
4. Metro Door.
5. Overhead Door Corporation.
6. Raynor.

2.3 COILING DOOR

- A. (CD-1) and (CD-2) Insulated, Motor-Operated, Overhead Coiling Door:
 1. Products and Manufacturers:
 - a. Thermiser Insulated Door Model ESD20 by Cornell Iron Works.
 - b. Type FMWI by Cookson Company.
 2. Aluminum Door Curtain Slats: ASTM B 209 sheet or ASTM B 221 extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch; and as required.
 3. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84 or UL 723. Enclose insulation completely within slat faces.
 4. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.
 5. Hood: Match curtain material and finish.
 - a. Shape: Square.
 - b. Mounting: Face of wall.
 - c. Locking Devices: Equip door with locking device assembly; inside and outside with cylinders .
 6. Finishes: Manufacturer's powder-coated finish, custom color matching color (PT) as shown on Door and Frame Schedule on Sheet A080.
 - a. Hot dipped galvanized G-90 coating consistent with ASTM A-653.
 - b. Bonderized coating for prime coat adhesion.
 - c. Corrosion inhibiting primer .2 mils per side.
 - d. Thermo-setting polyester top coat with a minimum thickness of .6 mils each side.
 7. Electric Door Operator:
 - a. Operator Location: Top of hood.
 - b. Motor Exposure: Interior.
 - c. Emergency Manual Operation: Push-up type.
 - d. Obstruction-Detection Device: Automatic photoelectric sensor; self-monitoring type.
 - 1) Sensor Edge Bulb Color: As selected by Architect from manufacturer's full range.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and field conditions to which this work is to be performed and notify architect if conditions of surfaces exist which are detrimental to proper installation and timely completion of work.
- B. Verify all dimensions taken at job site affecting the work. Notify the architect in any instance where dimensions vary.
- C. Coordinate and schedule work under this section with work of other sections so as not to delay job progress.

3.2 INSTALLATION

- A. Perform installation using only factory approved and certified representatives of the door manufacturer.

- B. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- C. Install overhead coiling doors, hoods, and operators at the mounting locations indicated for each door.
- D. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
- E. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.
- F. Adjust door installation to provide uniform clearances and smooth non-binding operation.
- G. Install wiring in accordance with applicable local codes and the National Electrical Code Standard. Materials shall be UL listed.
- H. Test door closing sequence when activated by the building's fire alarm system. Reset door after successful test.

3.3 INSTALLED WORK

- A. Remove, repair or replace materials which have been damaged in any way.
- B. Start-Up Service: Engage a factory-authorized service representative to perform startup service.
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Adjusting: Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
 - 1. Lubricate bearings and sliding parts as recommended by manufacturer.
- D. Demonstration: Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.
- E. Cleaning: Clean surfaces of grime and dirt using acceptable and recommended means and methods.
- F. Protection: Protect installed work using adequate and suitable means during and after installation until accepted by owner.

END OF SECTION

SECTION 083473 SOUND CONTROL DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Metal sound control doors, door frames, glass and glazing, perimeter sealing devices, door hinges and accessories (SCDA).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include sound ratings, construction details, material descriptions, core descriptions and finishes.
- B. Shop Drawings: For fabrication and installation of door panels, door frames, hardware, and acoustical seals, including:
 - 1. Elevations of each door design.
 - 2. Details of sound control seals, door bottoms, and thresholds.
 - 3. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
 - 4. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 - 5. Locations of reinforcements and preparations for hardware.
 - 6. Each different wall opening condition.
 - 7. Anchorages, joints, field splices, and connections.
 - 8. Accessories, moldings, removable stops, and glazing.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of sound control door assembly.
- B. Product Test Reports: For each sound control door assembly, for tests performed by a qualified testing agency.
 - 1. Submit certified copies of 1/3 Octave Band Transmission Loss test data and STC rating as issued by an accredited independent acoustical laboratory.
- C. Schedule: Provide a schedule of sound control door assemblies prepared using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.

1.4 QUALITY ASSURANCE

- A. Laboratory Certification: Acoustical testing of submitted doors assemblies shall be conducted in an accredited independent acoustical laboratory. Sound transmission loss values shall be determined in accordance with ASTM E90-90. Sound Transmission Class (STC) shall be determined in accordance with ASTM E413-87.
- B. Certification of acoustical tests must be submitted by Contractor for approval prior to installation.
- C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- D. Acoustical Testing Agency Qualifications: An independent agency accredited as an acoustical laboratory according to the National Voluntary Laboratory Accreditation Program of NIST.
- E. Fabrication shall not proceed until written approval of Submittal has been issued.
- F. Door Weight: The force in pounds required to open and operate each door panel shall be in accordance with the requirements of the Americans with Disabilities Act.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Avoid the use of nonvented plastic.

1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

1.6 COORDINATION

- A. Coordinate installation of anchorages for sound control door assemblies. Furnish setting drawings, templates, and directions for installing anchorages. Deliver sleeves, inserts, anchor bolts, and items with integral anchors to Project site in time for installation.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of sound control door assemblies that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Failure to meet sound rating requirements.
 - b. Faulty operation of sound seals.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
 2. Warranty Period: Five years from date of Substantial Completion.

1.8 FIELD QUALITY CONTROL

- A. Refer to Field Quality Control article in Part 3.
- B. Contractor shall guarantee acoustical performance in the field of the Sound Retardant Steel Doors. The acoustical performance rating in the field shall not be less than a Noise Isolation Class (NIC) 5 dB lower than the laboratory STC rating of the door assembly when tested in the field in accordance with the noise reduction test procedure ASTM 336-75.
- C. The field test will be conducted by the Architect's acoustical consultant. The manufacturer's representatives should be present to observe testing procedures and conditions. Approval of test data to be given by Architect or representative of Architect.
- D. The requirement that the Contractor, at the time of bidding, submit certification of STC rating as obtained in an accredited acoustical laboratory, is mandatory. The guarantee of the achievement of acoustical performance of the NIC rating in the field will not be accepted as a substitute for the laboratory test certification. Complete compliance with the acoustical performance specifications, both laboratory and field, is required of the Contractor to be eligible as a bidder on the furnishing and installation of the Sound Retardant Steel Doors.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Acoustic Performance: Provide pre-hung sound control door and frame assemblies with sound rating specified, as calculated by ASTM E 413 when tested in an operable condition according to ASTM E 90; and identical to those of assemblies tested as sound-retardant units by an acoustical testing agency.
 1. (SCDA-1) Sound Rating: STC 51; with and a minimum 28 dB at the 125 Hz 1/3-octave band.
- B. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 1. Smoke- and Draft Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

2.2 PRODUCTS AND MANUFACTURERS

- A. Source Limitations: Obtain steel sound control door assemblies, including doors, frames, sound control seals, hinges, thresholds, and other items essential for sound control, from single source from single manufacturer.
- B. (SCDA-1) Sound Control Door Assemblies: Acoustically-tested and rated assembly, consisting of steel frames with pre-hung, factory-adjusted steel doors, factory-installed hardware, including cam-lift hinges, continuous sound gasketing, threshold and other door hardware as scheduled. Provide factory-installed glazing as scheduled. Provide fire-rated assembly as scheduled.
- C. Basis of Design: Subject to compliance with specified requirements, provide one of the following:
 - 1. QuietSwing Series - Architectural Sound Control Doors by Noise Barriers, LLC.
 - 2. Acoustical Door by Wenger Corporation / JR Clancy.
 - 3. Noise-Lock by IAC Acoustics.

2.3 FRAMES

- A. Frames: Fabricate sound control door frames with corners mitered, reinforced, and continuously welded the full depth and width of frame. Fabricate according to NAAMM-HMMA 865.
 - 1. Weld frames according to NAAMM-HMMA 820.
 - 2. Exterior Frames: Fabricate from metallic-coated steel sheet 0.079-inch nominal thickness or thicker as required to provide STC rating indicated.
 - 3. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075-inch nominal thickness or thicker as required to provide STC rating indicated.
 - 4. Hardware Reinforcement: Fabricate according to NAAMM-HMMA 865 of same material as face sheets.
 - 5. Head Reinforcement: Metallic-coated steel channel or angle stiffener, 0.108-inch nominal thickness. Provide for grouted frames installed in masonry openings greater than 48 inches
 - 6. Jamb and Floor Anchors: As recommended by door assembly manufacturer.
 - 7. Ceiling Struts: Minimum 3/8-inch-thick by 2-inch- wide uncoated steel unless otherwise indicated.
 - 8. Plaster Guards: Metallic-coated steel sheet, not less than 0.026 inch thick. Provide at grouted frames.
- B. Frame Fabrication: Fabricate sound control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
 - 1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
 - 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 - 4. Jamb Anchors: Provide number and spacing of anchors as recommended by door assembly manufacturer.
 - 5. Head Reinforcement: For grouted frames more than 48 inches wide, weld continuous head reinforcement to back of frame at head full width of opening.
 - 6. Hardware Preparation: Factory prepare sound control frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping.
 - a. Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
 - 7. Plaster Guards: Weld guards to frame at back of hardware cutouts and glazing-stop screw and sound control seal preparations to close off interior of openings in frames to be grouted.
 - 8. Tolerances: Fabricate frames to tolerances indicated in NAAMM-HMMA 865.

- C. Shop Primer Finish: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

2.4 STEEL DOORS

- A. Doors: Flush-design sound control doors, [thickness as required to provide STC rating, of seamless construction; with manufacturer's standard sound-retardant core as required to provide STC and fire rating indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges. Fabricate according to NAAMM-HMMA 865.
 - 1. Interior Doors: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.048-inch nominal thickness or thicker as required to achieve STC rating indicated.
 - 2. Core: Manufacturer's standard sound control core.
 - 3. Loose Stops for Glazed Lites in Doors: Same material as face sheets.
 - 4. Top and Bottom Channels: Closed with continuous channels of same material as face sheets, spot welded to face sheets not more than 6 inches o.c.
 - 5. Hardware Reinforcement: Same material as face sheets.
- B. Materials:
 - 1. Cold-Rolled Steel Sheet: ASTM A 1008, Commercial Steel (CS), Type B, suitable for exposed applications.
 - 2. Glazing: As required by sound control door assembly manufacturer to comply with sound control and fire-rated-door labeling requirements.
- C. Door Fabrication: Sound control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 - 1. Comply with requirements in NFPA 80 for fire-rated and smoke control doors.
 - 2. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
 - 3. Glazed Lites: Factory install glazed lites according to requirements of tested assembly to achieve STC rating indicated. Provide fixed stops and moldings welded on secure side of door.
 - 4. Hardware Preparation: Factory prepare sound control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping.
 - a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate door hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
 - 5. Tolerances: Fabricate doors to tolerances indicated in NAAMM-HMMA 865.
- D. Shop Primer Finish: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

2.5 HARDWARE

- A. Sound Control Door Hardware: Manufacturer's standard sound control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC and fire rating indicated.
 - 1. Head and Jamb Seals: One of the following:
 - a. Neoprene Compression Seals: One-piece units consisting of closed-cell sponge neoprene seal held in place by metal retainer, with retainer cover of same material as door frame; attached to door frame with concealed screws.
 - b. Silicone Compression Seals: One-piece units consisting of silicone compression bulb and stabilizer flange; attached to door frame adhesively.
 - c. Magnetic Seals: One-piece units consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer, with retainer cover of same material as door frame; attached to door frame with concealed screws.
 - 2. Door Bottoms: Neoprene or silicone gasket held in place by metal housing; mortised into bottom edge of door.

3. Cam-Lift Hinges: Full-mortise template type that raises door 1/2 inch when door is fully open; with hardened pin; fabricated from stainless steel.
4. Thresholds: Flat, smooth, unfluted type as recommended by manufacturer; fabricated from **[clear-anodized aluminum] [stainless steel]**.
 - a. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities].

2.6 INSTALLATION ACCESSORIES

- A. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.
- B. Grout: Comply with ASTM C 476, with a slump of not more than 4 inches as measured according to ASTM C 143.
- C. Corrosion-Resistant Coating For Grouted Frames: Cold-applied asphalt mastic, compounded for 15-mildry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of sound control door frame connections before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prior to installation, adjust and securely brace sound control door frames to the following tolerances:
 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- B. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install sound control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.
- B. Frame Installation: Install sound control door frames in sizes and profiles indicated.
 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-rated openings, install frames according to NFPA 80.
 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 3. Metal-Stud Partitions: Fully fill frames with mineral-fiber insulation.
 4. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

5. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 6. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.
 7. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
 8. Installation Tolerances: Adjust sound control door frames for squareness, alignment, twist, and plumbness to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Doors: Fit sound control doors accurately in frames, within clearances indicated below. Shim as necessary.
1. Non-Fire-Rated Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
 - a. Jambs: 1/8 inch.
 - b. Head with Butt Hinges: 1/8 inch.
 - c. Head with Cam-Lift Hinges: As required by manufacturer, but not more than 3/8 inch.
 - d. Sill: Manufacturer's standard.
 - e. Between Edges of Pairs of Doors: 1/8 inch.
 2. Fire-Rated Doors: Install fire-rated doors with clearances according to NFPA 80.
- D. Sound Control Seals: Where seals have been factory prefit and preinstalled and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.
- E. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.
- F. Thresholds: Set thresholds in full bed of sealant complying with requirements in Section 079200 - Joint Sealants.
- G. Glazing: Comply with installation requirements in Section 088000 - Glazing and with sound control door assembly manufacturer's written instructions.
1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency for Field Testing: Engage Architect's Acoustics Consultant to perform tests and inspections.
1. Acoustical testing and inspecting agency shall select one sound control door(s) at random from sound control door assemblies that are completely installed for testing.
 2. Field tests shall be conducted according to ASTM E 336, with results calculated according to ASTM E 413. Acceptable field NIC values shall be within 5 dB of laboratory STC values.
 3. Inspection Report: Acoustical testing agency shall submit report in writing to Architect and Contractor within 24 hours after testing.
 4. If tested door fails, replace or rework all sound control door assemblies to bring them into compliance at Contractor's expense.
 - a. Additional testing and inspecting at Contractor's expense will be performed to determine if replaced or additional work complies with specified requirements.
- B. Prepare test and inspection reports.

3.5 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and adjust seals, door bottoms, and other sound control hardware items right before final inspection. Leave work in complete and proper operating condition.
- B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
 - 1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.
- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible, rust-inhibitive, air-drying primer.
- D. Metallic-Coated Surfaces: Clean abraded areas of doors and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION

SECTION 083474 SOUND CONTROL SLIDING DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Pre-fabricated and factory-tested sound control door assemblies of single-leaf sliding/rolling doors, door frames, perimeter sealing devices, door hardware and accessories (SCDA-____).
 - 1. All components shall be supplied by the single manufacturer, and shall comply with the specified laboratory acoustical ratings as tabulated at end of this section.
 - 2. Door manufacturer's representative to be present during installation and final check-out by architect and acoustical consultant.
- B. Related Sections:
 - 1. Section 081113 - Hollow Metal Doors and Frames.
 - 2. Section 087100 - Door Hardware.
 - 3. Section 099000 - Painting: Finish painting.

1.2 SUBMITTALS

- A. Product Data:
 - 1. Summary of forces and loads imposed on walls by sliding doors.
 - 2. Fire-Rated Doors: Include description of fire-release system including testing and resetting instructions.
 - 3. Oversized Special-Purpose Fire Door Assembly Certification: For door assemblies required to be fire rated and that exceed size limitations of labeled assemblies, signed by authorized representative of testing agency.
 - 4. Submit certified copies of 1/3 Octave Band Transmission Loss test data and STC rating as issued by an accredited independent acoustical laboratory. All testing shall be in accordance with ASTM E90 latest version.
 - 5. Field performance data tested by an independent laboratory or consultant, in accordance with ASTM E336, shall be submitted showing compliance with specified values
- B. Shop Drawings: Submit Shop Drawings for fabrication and installation of door panels, door frames, hardware, accessories, and acoustical seals. Shop drawings shall included detail assembly drawings, showing the complete installation, a listing of materials, surface finishes, fabricating assembly and installation tolerances. No Shop Drawing shall be submitted which shows details or components that deviate from those shown or described on Construction Documents. A request for deviations must be submitted in writing to Architect for review and approval.
- C. Submit letter of certification stating that partition framing is suitable for the installation and proper operation and performance of the door systems. Installation of doors constitutes acceptance of suitability of partition framing.
- D. Submit with proposal a Schedule indicating a comparison of the Acoustical Performance and hardware requirements of these Specifications with the Acoustical Performance and hardware offered in the proposal.

1.3 QUALITY ASSURANCE

- A. The manufacturer of Sound Control Door Assemblies shall have a minimum 5 years experience in the fabrication and installation of acoustically-rated door assemblies similar to those of this Section.
- B. Door manufacturer will be responsible for all details associated with the door and closure/locking and security systems hardware to achieve acoustical performance; including full perimeter of door and frame.

- C. Laboratory Certification: Acoustical testing of submitted doors assemblies shall be conducted in an accredited independent acoustical laboratory. Sound transmission loss values shall be determined in accordance with ASTM E90-90. Sound Transmission Class (STC) shall be determined in accordance with ASTM E413-87.
- D. Certification of acoustical tests must be submitted by Contractor for approval prior to installation.
- E. The Contractor shall employ an organization and personnel who are trained and skilled mechanics with previous experience in the installation of similar precision fabricated assemblies.
- F. Fabrication shall not proceed until written approval of Submittal has been issued.
- G. The force in pounds required to open and operate each door panel shall be in accordance with the requirements of the Americans with Disabilities Act.
- H. Manufacturer shall provide on-site instruction to Contractor for installation and review installation of each door to ensure field acoustic performance is achieved. Should field testing by Acoustic Consultant find doors to be deficient of field performance criteria, doors shall be remediated at no cost to the Owner.

1.4 ACOUSTICAL FIELD CERTIFICATION

- A. Contractor shall guarantee acoustical performance in the field of the Sound Retardant Steel Doors, as indicated in this Specification. The acoustical performance rating in the field shall not be less than a Noise Isolation Class (NIC) 2 dB lower than the laboratory STC rating of the door assembly when tested in the field in accordance with the noise reduction test procedure ASTM 336-75.
- B. The field test will be conducted by the Architect's acoustical consultant. The manufacturer's representatives should be present to observe testing procedures and conditions. Approval of test data to be given by Architect or representative of Architect.
- C. The requirement that the Contractor, at the time of bidding, submit certification of STC rating as obtained in an accredited acoustical laboratory, is mandatory. The guarantee of the achievement of acoustical performance of the NIC rating in the field will not be accepted as a substitute for the laboratory test certification. Complete compliance with the acoustical performance specifications, both laboratory and field, is required of the Contractor to be eligible as a bidder on the furnishing and installation of the Sound Retardant Steel Doors.

1.5 PRODUCT HANDLING

- A. Deliver hollow metal work crated to provide protection during job storage. Use all means necessary to protect the material of this Section before, during and after installation and to protect the installed work and materials of all other trades. Inspect for damage prior to installation. Minor cosmetic damage may be repaired on jobsite on approval; otherwise, replace damaged item. Frames and doors which arrive on site bent, warped, or otherwise unsuitable for installation and acoustic performance shall be rejected and complete replacement provided.

1.6 WARRANTY

- A. Upon completion of work of this Section, and as a condition of its acceptance, deliver to the Architect six copies of the manufacturer's standard written two-year warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 and UL 10B.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 SYSTEM DESCRIPTION

- A. Custom-Fabricated, STC-Rated, Oversized Rolling Panel Doors:
- B. Basis of Design:
 - 1. Noise Barriers
 - 2. Wenger Corporation/JR Clancy
 - 3. IAC Acoustics
- C. SCDA-10
 - 1. Acoustically-Rated: STC-50
 - 2. Manually-Operated
 - 3. Finish: PT.
- D. SCDA-11:
 - 1. Acoustically-Rated: STC-50
 - 2. Fire-Rated: 120 minutes
 - 3. Manually-Operated
 - 4. Finish: PT.

2.3 MATERIALS

- A. Steel Plate, Shapes, and Bars: ASTM A 36.
- B. Steel Sheets: ASTM A 1008, Commercial Steel (CS), or Drawing Steel (DS), Type B, cold rolled; exposed, matte finish.
- C. Metallic-Coated Steel Sheet: ASTM A 653, Commercial Steel (CS), Type B, with A90 zinc-iron-alloy (galvannealed) coating or G60 zinc coating; restricted flatness.
- D. Stainless-Steel Sheets: ASTM A 240, Type 304; stretcher-leveled standard of flatness; No. 4 finish.
- E. Hardware and Fasteners:
 - 1. Hot-dip galvanize according to ASTM A 153 where units are used on galvanized-steel exterior doors
 - 2. Stainless steel.

2.4 FABRICATION

- A. Fabricate sliding metal fire door assemblies rigid, neat in appearance, and free of defects, warp, or buckle. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Factory prepare sliding metal fire door assemblies and frames to receive hardware and accessories including cutouts, reinforcements, mortising, drilling, and tapping.

2.5 STEEL FINISHES

- A. Factory Prime Finish: Immediately after surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Examine floor under door to confirm that floor is level for the full travel of door.
2. Examine wall where track assembly mounts and area behind door to confirm that wall is smooth and in same plane for the full travel of door.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install sliding metal fire doors according to NFPA 80 and manufacturer's written instructions for type of door operation indicated and fire-protection rating required.

1. Interface fire-detection devices with building's fire-alarm system.

B. Drill necessary holes cleanly, with no broken areas or spalls, for installation of fasteners in concrete or masonry. Remove and replace damaged masonry as directed.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections:

1. Test door closing when activated by detector or alarm-connected, fire-release system. Reset door-closing mechanism after successful test.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Sliding metal fire door will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ACOUSTICAL TESTING INSPECTION

A. The manufacturer's representative shall visit the site to make final adjustments to the door and acoustical seals as needed to ensure no acoustical leaks around the door assembly and through seal areas.

B. Field Certification: Vendor shall provide doors to meet acoustical performance of the products in the field. The minimum performance rating of each door shall be as follows:

Door Acoustical Performance		
Door	Laboratory Ratings (ASTM E90)	Field Ratings (ASTM E336)
	STC ⁽¹⁾	NIC ⁽³⁾
	51	49

⁽¹⁾Sound Transmission Class

⁽²⁾Transmission Loss

⁽³⁾Noise Isolation Class

⁽⁴⁾Noise Reduction

⁽⁵⁾Tested nominally 5 feet from each side of door.

C. Field tests to be conducted by the manufacturer's representative to verify acoustical performance. Field tests to be conducted in accordance with E336 for Noise Reduction.

D. All corrections to address sound leaks uncovered by the testing shall be the responsibility of the Contractor, along with subsequent tests.

- E. At completion of the project, the door manufacturer's representative shall submit letter to the construction manager that installation and adjustment is complete and in accordance with approved Shop Drawings and Contract Documents, and that acoustical performance complies with specifications.

3.5 ADJUSTING

- A. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.

3.6 CLEANING

- A. Clean surfaces and refinish abraded or damaged surfaces to match factory finish.

END OF SECTION

SECTION 084400
ALUMINUM CURTAIN WALLS, STOREFRONTS & ENTRANCES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Glazed aluminum-framed curtain walls, storefronts and entrances (AFS).
 - 2. Anchors, brackets, reinforcements and attachments.
 - 3. Design and fabrication of system with required reinforcement to meet design intent of systems specified and performance required.
 - 4. Field testing of glazed aluminum curtain walls.
 - 5. Engineering required to comply with specified performance requirements.

1.2 COORDINATION

- A. Pre-installation Conference: Before beginning curtain wall installation, conduct pre-installation conference at Project site with curtain wall system manufacturer, installer, Architect, Owner and other interested parties to review procedures, schedules, and coordination of curtain wall installation with other elements of Work.
- B. Field Measurements: Verify actual supporting and adjoining construction by field measurements before fabrication; and indicate recorded measurements on final Shop Drawings.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: By system manufacturer shall include the following:
 - 1. Provide shop drawings signed and sealed by qualified professional engineer responsible for their preparation licensed in the State of Texas.
 - a. Shop drawings shall clearly define the design criteria and applied loads for which the system has been designed.
 - b. Shop drawings shall clearly indicate magnitude and location of all forces transferred to the primary building structure by system. Loads shall be provided as unfactored values determined in accordance with ASCE 7-10.
 - 2. Plans, elevations, and sections.
 - 3. System and component dimensions.
 - 4. Details of components within assembly.
 - 5. Framed opening requirements and tolerances.
 - 6. Fasteners and attachments clearly indicating reactions to supporting elements and assumed eccentricities.
 - 7. Glass and infills.
 - 8. Anticipated deflection under load.
 - 9. Affected related work.
 - 10. Expansion and contraction joint locations and details.
 - 11. Drainage details and flow diagrams.
 - 12. Field welding.
 - 13. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 - 14. Deferred-Design Submittal: Submit shop drawings to Authority Having Jurisdiction for approval prior to commencing with this work on-site.
- C. Samples: Submit samples illustrating prefinished aluminum surface, specified glass and insulated infill panels, including glazing edge and corner, and glazing materials.
- D. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:

1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- E. Manufacturer's Thermal Analysis: Submit report of thermal analysis performed by Manufacturer for this Project, evaluating the surface temperatures and dew point of installed and glazed curtain wall system, under typical conditions temperature, relative humidity and wind speed. Performance requirement of no condensation under the following conditions:
1. Exterior Dry Bulb Temperature: 10 degrees F.
 2. Interior Dry Bulb Temperature: 74 degrees F.
 3. Relative Humidity: 35 percent.
- F. Certifications:
1. Manufacturer certificate signed by manufacturer certifying compliance with requirements of Quality Assurance article.
 2. Installer certificates signed by manufacturer certifying that installer complies with requirements of Quality Assurance article.
 3. Professional Engineer certificate signed by manufacturer certifying that Professional Engineer complies with requirements of Quality Assurance article.

1.4 INFORMATIONAL SUBMITTALS

- A. Calculations: Signed engineering calculations prepared by the qualified Professional Engineer shall be submitted upon written request from the Architect/Engineer. Calculations shall indicate structural integrity of members, anchors, fasteners and connections to building structure, in accordance with specified criteria.
1. Engineering Responsibility: Calculations shall be reviewed for stated design assumptions, general compliance to specified requirements, and forces imposed on structure. The accuracy of the design calculations shall be the sole responsibility of the Contractor's Professional Engineer.
 2. Submitted calculations that have not been requested by the Architect/Engineer shall be returned without review.

1.5 QUALITY ASSURANCE

- A. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of Michigan, with a minimum of 10 years' experience in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of glazed aluminum curtain wall systems that are similar to those indicated for this Project in material, design, and extent.
- B. Manufacturer and Fabricator Qualifications: A firm experienced in manufacturing and fabricating glazing systems similar to those indicated for this Project, having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project, being familiar with special requirements indicated; having complied with requirements of authorities having jurisdiction, and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Installer Qualifications: A firm or individual certified by fabricator and manufacturer, having successfully completed installation, erection or assembly of a minimum of five previous projects similar in nature, size, and extent to this Project, whose work has resulted in construction with a record of successful in-service performance.
- D. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code – Aluminum".
- E. Structural-Sealant Glazing: Comply with ASTM C 1401 for design and installation of curtain wall assemblies.

1.6 MOCKUPS

- A. Mock-Up Pre-Installation Conference: Before beginning curtain wall mock-up construction and installation, conduct pre-installation conference at Project site with curtain wall system manufacturer, installer, Architect, Owner and other interested parties to review procedures, schedules, and coordination of curtain wall installation with other elements of Work.
 - 1. Provide system sample for pre-installation meeting.
- B. Provide mock-ups of curtain wall system in accordance with Contract Documents to be field-tested for air and water infiltration.
 - 1. Architect will observe complete installation of curtain wall mock-up.
 - 2. Mock-up shall including intermediate mullion, sill muntin, and vision glass light.
 - 3. Coordinate with Work of other sections to include adjacent assemblies required to be included in mock-up and in accordance with Section 014339.
 - 4. Mock-ups to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 5. Mock-ups to demonstrate component assembly including integral glazing materials, weep drainage system, attachments, and anchors.

1.7 WARRANTY

- A. Provide manufacturer's warranty for 10 years on materials and 5 years on installation and workmanship.
- B. Provide written warranty in form acceptable to Owner jointly signed by manufacturer, installer and Contractor warranting work to be watertight, free from defective materials, defective workmanship, glass breakage due to defective design, and agreeing to replace components which fail within warranty period.
- C. Warranty Coverage: Cover complete system for failure to meet specified requirements, including ability to exclude exterior moisture from interior.
 - 1. Complete watertight and airtight system installation within specified tolerances.
 - 2. System is structurally sound and free from distortion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 - Quality Requirements, to design glazing systems.
- B. General Performance: Comply with performance requirements specified, as determined by testing of glazing systems representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Maintain continuous air and vapor barrier throughout assembly primarily in line with (inside) pane of glass and heal bead of glazing sealant.
 - 2. Glazed aluminum framing systems shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 3. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Structural Loads: Design and construct curtainwall system, including anchorages, to withstand dead loads of curtainwall system and wind loads caused by pressure and suction of wind acting normal to plane of wall as calculated in accordance with requirements of authorities having jurisdiction or ANSI/ASCE 7-10, whichever are more stringent.

1. Wind Load Provisions of ANSI/ASCE 7-10 as shown on Structural Drawings.
- D. Deflection of Framing Members: At design wind pressure, as follows:
1. Deflection Normal to Wall Plane: When subjected to design wind loads or concentrated maintenance loads shall be limited to following:
 - a. Spans up to 13 feet-6 inches: limit deflection to $L/175$.
 - b. Spans greater than 13 feet-6 inches: limit deflection to $L/240$ plus 1/4 inch.
 - c. Cantilevered members: limit deflection to lesser of $2L/175$ or 3/4 inch.
 - d. No permanent deformation in excess of 0.2 percent of its span.
 - e. The deflection of any member (such as vertical jambs) shall not impair the function of system or damage any joint seals as warranted by the manufacturer.
 2. Deflection Parallel to Glazing Plane: Shall not exceed an amount which will reduce the glass bite below 75 percent of design dimension, and member shall have a minimum 1/8 inch clearance between itself and edge of fixed panel, glass or fixed part immediately below.
 - a. Structural Support Movement: System to accommodate anticipated interstory differential live load vertical movement of 5/16 inch (downward) in addition to anticipated thermal movement.
 - b. Sidesway Movement: System to accommodate anticipated interstory differential drift of $H/400$ in any horizontal direction.
- E. Air Infiltration: Test according to ASTM E 283 and applicable AAMA methods for infiltration as follows:
1. Fixed Framing and Glass Area: Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft..
 2. Pair of Entrance Doors: Maximum air leakage of 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
 3. Single Entrance Doors: Maximum air leakage of 0.5 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
- F. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft..
 2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- G. Energy Performance Requirements: Certify and label energy performance according to NFRC as follows:
1. Maximum Thermal Transmittance (U-factor) Fixed Glazing and Framing: 0.38 Btu/sq. ft. x h x deg F, as determined according to NFRC 100.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.40 as determined according to NFRC 200.
 3. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than 48 as determined according to NFRC 500.
- H. Noise Reduction: Test according to ASTM E 90, with ratings determined by ASTM E 1332, as follows:
1. Outdoor-Indoor Transmission Class (OITC): Minimum 30.
- I. Thermal Movement: System to provide for expansion and contraction within system components caused by cycling temperature change without causing detrimental effects to system or components.
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- J. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed assemblies without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
1. Structural Sealant Joint Design:

- a. Designed to carry gravity loads of glazing.
- b. Designed to produce tensile or shear stress of less than 20 psi.
- c. Design reviewed and approved by structural-sealant manufacturer.
- 2. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
- K. Entrances: Provide entrance doors with jamb and head frames which comply with requirements indicated below for transmission characteristics and test methods.
 - 1. Air Leakage: Air infiltration per linear foot of perimeter crack of not more than 0.50 CFM for single doors and 1.0 CFM for pairs of doors per ASTM E283 at pressure differential of 1.567 psf.
 - 2. Thermal Transmittance: U-value of not more than 0.77 Btu per AAMA 1503.
 - 3. Condensation Resistance: Not less than 48 CRF per AAMA 1503.

2.2 BASIS OF DESIGN SYSTEMS

- A. Single Source Responsibility: To ensure quality of appearance and performance, obtain materials for all glazed framing systems specified in this Section from a single manufacturer, capable of providing all specified systems with same profile dimensions and extrusion profiles as Basis of Design.
- B. Manufacturers: Subject to specified requirement, provide Basis of Design or equivalent system as approved by Architect:
 - 1. EFCO Corporation.
 - 2. Kawneer Company .
 - 3. Wausau Window and Wall Systems.
 - 4. Oldcastle BuildingEnvelope.
 - 5. YKK AP America Inc..
- C. Aluminum Curtain Wall Systems: High-performance extruded profile aluminum framing, thermally-broken with interior tubular section insulated from exterior pressure plate; matching stops and mullion caps; with structural-sealant-glazed where indicated; special mullion cap profiles as indicated; internal weep drainage system; glass and glazing, doors and door frames.
 - 1. Basis of Design: 1600 UT Wall by Kawneer.
 - 2. Configurations:
 - a. (AFS-1): Lobby curtain wall with reinforced mullions, special shape caps and SSG.
 - b. (AFS-2): all SSG curtain wall .
 - c. (AFS-3): Curtain wall with 6" deep caps.
 - 3. Finish: Color Anodized, AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, matching Architect's sample.
- D. Aluminum Storefront Systems: Thermally-broken aluminum framing and entrances, designed to accept 1 inch glazing material; matching stops and mullion caps; with structural-sealant-glazed where indicated.
 - 1. Basis of Design: TriFab 451 UT by Kawneer.
 - 2. Configurations:
 - a. (AFS-4): Storefront at South elevation
 - b. (AFS-5): Entrance doors at vestibule and South elevation
 - 3. Finish: Color Anodized, AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, matching Architect's sample.
- E. Entrances: Curtain wall Manufacturer's standard glazed entrance doors for manual-swing operation.
 - 1. Profiles: 4" wide medium stiles and top rail, and 10" bottom rail.
 - 2. Door Construction: 1-3/4-inch overall depth, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.

- a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
- b. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.
3. Framing Members: Manufacturer's standard extruded aluminum, minimum 0.125 inch thick and reinforced as required to support imposed loads.
 - a. Nominal Size: As indicated on Drawings.
 - b. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.
4. Finish: Color Anodized, AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, matching Architect's sample.
5. Entrance Door Hardware: As specified in Section 087100 - Door Hardware.

2.3 SYSTEM COMPONENTS & MATERIALS

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.
 2. Jamb Receptors: Provide as shown on Drawings.
 3. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Sheet and Plate: ASTM B 209.
 - b. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
 - c. Extruded Structural Pipe and Tubes: ASTM B 429.
 - d. Structural Profiles: ASTM B 308/B 308M.
 4. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- B. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
 1. Structural Shapes, Plates, and Bars: ASTM A 36.
 2. Cold-Rolled Sheet and Strip: ASTM A 611.
 3. Hot-Rolled Sheet and Strip: ASTM A 570.

Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

 4. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 5. Reinforce members as required to receive fastener threads.
 6. Fasteners Exposed to Weather: 300 Series stainless steel, type and size recommended by curtain wall manufacturer with exposed portions matching finish curtain wall system.
 7. Silicone Sheet Flashing: Extruded or preformed silicone weather-barrier transition sheet recommended by curtain wall manufacture.
- C. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.
- D. Accessories:
 1. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
 2. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

3. Sealant: Comply with Section 079000 - Joint Protection for weatherseal sealant and backing rod.
- E. Insulated Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
 1. Overall Panel Thickness: As indicated.
 2. Exterior Skin, Both Faces: Aluminum sheet, Manufacturer's standard thickness for finish and texture indicated.
 - a. Texture: Smooth.
 3. Thermal Insulation Core: Manufacturer's standard rigid, closed-cell, polyisocyanurate board.
 4. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
- F. Glazing: Comply with Section 088000 - Glazing for the following:
 1. Glass and Glazing
 2. Glazing Gaskets
 3. Glazing Sealants
 4. Structural Glazing Sealants

2.4 FABRICATION

- A. Aluminum Framing: Fabricate framing components that, when assembled, have the following characteristics:
 1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical and thermal isolation of glazing from framing members.
 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from exterior.
 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
 7. Components curved to indicated radii.
 8. Conceal fasteners wherever possible.
 9. Reinforce work as necessary for performance requirements, and for support to structure.
 10. Separate dissimilar metals and aluminum in contact with concrete utilizing protective coating or preformed separators, which will prevent contact and corrosion.
 11. Comply with Section 088000 for glazing requirements.
 12. Shop-fabricate and assemble to greatest extent possible.
 13. Maintain accurate relation of planes and angles, with hairline fit of contacting members.
 14. Seal horizontals and direct moisture accumulation to exterior.
 15. Provide flashings and other materials used internally or externally that are corrosive resistant, non-staining, non-bleeding and compatible with adjoining materials.
 16. Provide manufacturer's extrusions and accessories to accommodate expansion and contraction due to temperature changes without detrimental to appearance or performance.
- B. Welding:
 1. Comply with recommendations of the American Welding Society.
 2. Use recommended electrodes and methods to avoid distortion and discoloration.
 3. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 4. Grind exposed welds smooth and flush with adjacent surfaces; restore mechanical finish.
- C. Flashing: Form from sheet aluminum with same finish as extruded sections. Apply finish after fabrication. Material thickness as required to suit condition without deflection or "oil-canning".
- D. Entrances:

1. Door Frames: Fabricate tubular and channel frame assemblies, as indicated, with either welded or mechanical joints in accordance with manufacturer's standards, reinforced as necessary to support required loads Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
 - a. At exterior doors, provide compression weather stripping at fixed stops.
 - b. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.
 2. Stile-and-Rail Doors: Provide tubular frame members, fabricated with mechanical joints using heavy inserted reinforcing plates and concealed tie-rods or j-bolts, or fabricate with structurally welded joints, at manufacturer's option. Reinforce doors as required for installing entrance door hardware.
 - a. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
 - b. At exterior doors, provide weather sweeps applied to door bottoms.
 3. Glazing: Fabricate doors to facilitate replacement of glass or panels, without disassembly of door stiles and rails. Provide snap-on extruded aluminum glazing stops, with exterior stops anchored for non-removal.
 4. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
- E. Form or extrude aluminum shapes before finishing.
- F. Other Finishes:
1. Concealed Steel Items: Galvanized in accordance with ANSI/ASTM A653 to 2.0 oz/sq ft primed with iron oxide paint.
 2. Apply one coat of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.
 3. Primer: FS TT-P-31; for shop application and field touch-up.
 4. Touch-Up Primer for Galvanized Surfaces: FS TT-P-641; TT-P-645.

2.5 SOURCE QUALITY CONTROL

- A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Verify wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.
 2. Proceed with installation only after unsatisfactory conditions have been corrected.
 3. Beginning of installation means acceptance of existing conditions.

3.2 PREPARATION

- A. Coordinate dimensions, tolerances, and method of attachment with other work.
 1. Variation from Plane: 0.06 inches every 3 feet maximum or 0.25 inches per 100 feet, whichever is less.
 2. Misalignment of Two Adjoining Members Abutting in Plane: 0.015 inches.
- B. Prepare surfaces that are in contact with structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Install components plumb and level, securely anchored, and without warp, twist or other distortion.
 - a. Maintain assembly dimensional tolerances, aligning with adjacent work.
5. Install components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
6. Adjust weather-stripping contact and hardware movement to provide specified performance and proper operation.
7. Provide thermal isolation where components penetrate insulation.
8. Coordinate attachment and seal of air and vapor retarder materials. Install sill flashings.
9. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Anchorage: Provide alignment attachments and shims required to permanently fasten system to building structure as indicated on Shop Drawings.

1. Use method of attachment to structure permitting sufficient adjustment to accommodate construction tolerances and irregularities.
2. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
3. Provide separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

D. Welding: Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.

1. Do not cut, trim, weld or braze component parts during erection in manner which would damage finish, decrease strength, or result in visual imperfection or failure in performance. Return component parts which require alteration to shop prefabrication, if possible, or for replacement with new parts.

E. Install glass and glazing and glazed-in metal panels in accordance with Section 088000.

F. Install perimeter sealant and backing materials in accordance with Section 079000.

G. Erection Tolerances: Install structural-sealant-glazed curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.4 FIELD TESTING

- A. Field Quality Control, General: Perform field quality control testing to measure performance of installed curtain wall assemblies and to set standards for workmanship and quality of subsequent assembly installation.
 - 1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
 - 2. Reports: Prepare test and inspection reports. Submit in accordance with Section 013300.
 - 3. Repair areas damaged by testing.
 - 4. Curtain walls will be considered defective if they do not pass tests and inspections.
- B. Test Areas: Perform the following tests on integrated mockup or on representative area of installed curtain wall, in location and of size as determined by the Architect. Test area shall include perimeter caulking, typical splices, frame intersections, and at least 2 entire lites containing an intermediate horizontal member (if applicable).
- C. Air Infiltration and Water Penetration Tests: Perform field testing in accordance with AAMA 503, using same minimum static-air-pressure differential as used for laboratory testing. No field reduction allowed.
 - 1. Complete a minimum of three successful tests for both air infiltration and water penetration, achieving satisfactory results and meeting specified requirements.
 - 2. Retesting: Make corrections to and retest area until satisfactory results are achieved.
 - 3. Field Testing Performance Requirements:
 - a. Air Infiltration: Maximum allowable rate of air leakage shall not exceed 0.06 CFM per square foot.
 - b. Water Penetration: No evidence of water penetration.
- D. Structural-Sealant Adhesion Test: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.

3.5 INSTALLED WORK

- A. Protection: Provide final protection and maintain conditions in a manner acceptable to the Installer, that shall ensure that the glazed wood curtain walls shall be without damage at time of Substantial Completion.
 - 1. Protective Coverings: Protect the work for the duration of construction. Such protection shall avoid development of non-uniformity in finishes, shall not impart a residue which would adversely affect the adhesion of sealants, nor cause other deleterious effects in the work. Temporarily remove such protection when requested by the Architect for inspection of finishes, and completely remove protection when no longer required.
- B. Maintenance Instructions: Instruct the Owner's personnel who will be responsible for window washing and snow removal after the time of final acceptance.

END OF SECTION

SECTION 084520
TRANSLUCENT FIBERGLASS PANEL ASSEMBLIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Aluminum-framed wall assemblies incorporating translucent fiberglass-sandwich panels (_____).
 2. Anchors, brackets, and attachments.
 3. Flashings to adjoining work.
 4. Perimeter sealant.

2.1 SUBMITTALS

- A. Shop Drawings and Product Data: Submit in accordance with Section 013300.
1. Include system and component dimensions; component within assembly; framed opening requirements and tolerances; anchorage and fasteners; affected related work; expansion and contraction joint locations and details; and drainage details.
 2. Exchange shop drawings with fabricators of related adjacent materials.
 3. Structural calculations available upon request by A/E.
- B. Samples: Submit in accordance with Section 013300. Submit samples illustrating prefinished aluminum surface, specified panel with skins, including glazing edge and corner.
- C. Fabrication Samples: Of each framing system intersection and adjacent panels, made from 12-inch lengths of full-size framing members and showing details of the following:
1. Joinery.
 2. Anchorage.
 3. Expansion provisions.
 4. Fiberglass-sandwich panels.
 5. Flashing and drainage.
- D. Qualification Data: For qualified **Installer, manufacturer**.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for panel assemblies.
- F. Field quality-control reports.
- G. Maintenance Data: For panel assemblies to include in maintenance manuals.

1.2 QUALITY ASSURANCE

- A. Manufacturer Qualifications: For fiberglass-sandwich panels, a qualified manufacturer whose facilities, processes, and products are monitored by an independent, accredited quality-control agency for compliance with applicable requirements in ICC-ES AC04, "Sandwich Panels," or ICC-ES AC177, "Translucent Fiberglass Reinforced Plastic (FRP) Faced Panel Wall, Roof and Skylight Systems."
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of panel assemblies required for this Project.
1. One Installer for Total System: Company authorized by system manufacturer.
- C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical panel assemblies as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.3 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of panel assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - c. Water leakage.
 - 2. Warranty Period: Five years from date of Substantial Completion.
- B. Special Fiberglass-Sandwich-Panel Warranty: Manufacturer's standard form in which manufacturer agrees to replace panels that exhibit defects in materials or workmanship.
 - 1. Defects include, but are not limited to, the following:
 - a. Fiberbloom.
 - b. Delamination of coating, if any, from exterior face sheet.
 - c. Color change exceeding requirements.
 - d. Delamination of panel face sheets from panel cores.
 - 2. Warranty Period: 10 years from date of Substantial Completion.
- C. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
 - 1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
 - 2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Fiberglass-sandwich-panel assemblies shall withstand the effects of the following forces without failure due to defective manufacture, fabrication, installation, or other defects in construction:
 - 1. Structural loads.
 - 2. Thermal movements.
 - 3. Movements of supporting structure.
- B. System to provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F without causing detrimental effects to system or components.
- C. Design and size members to withstand dead loads and live loads caused by snow, hail, and pressure and suction of wind acting vertically as calculated in accordance with Uniform Building Code. System must be designed by licensed engineer registered in State of **[insert name of State]**.
- D. System to accommodate, without damage to system or components, or deterioration of perimeter seal: Movement within system; movement between system and perimeter framing components; dynamic loading and release of loads; and deflection of structural support framing.
- E. Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior.

2.2 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers:
 - 1. Kalwall Corporation.
 - 2. Major Industries, Inc.
 - 3. Skywall Translucent Systems; Vistawall Group (The).
 - 4. Structures Unlimited, Inc.

2.3 TRANSLUCENT WALL PANEL ASSEMBLIES

- A. (TSPA-1) Wall Panel Assembly: Including translucent fiberglass-sandwich panels and thermally-broken extruded aluminum framing.
 - 1. Basis of Design: Kalwall.
- B. Panels: Assembly of uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of thermally-broken grid core.
 - 1. Thickness: 2.75 inches.
 - 2. Grid Pattern: Grid Core Vertikal Grid Pattern.
- C. Frame Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
 - 1. Construction: Thermally broken, extruded aluminum.
- D. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B 209.
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - 3. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
 - 4. Structural Profiles: ASTM B 308/B 308M.
- E. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.
- F. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.
 - 1. At closures, retaining caps, or battens, use ASTM A 193/A 193M, 300 series stainless-steel screws.
 - 2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.

2.4 ALUMINUM FRAMING SYSTEMS

- A. Framing Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
 - 1. Construction: Thermally broken, extruded aluminum.
- B. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B 209.
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 - 4. Structural Profiles: ASTM B 308.
- C. Finish:
 - 1. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 - 2. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: [Light bronze] [Medium bronze] [Dark bronze] [Champagne] [Black] [Match Architect's sample] [As selected by Architect from full range of industry colors and color densities].
 - 3. High-Performance Fluoropolymer Finish: AAMA 2605, multi-coat system containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat [and clear topcoat].
 - a. Two-Coat System: Primer and color coat.
 - b. Three-Coat System: Primer, color coat, and clear topcoat.
 - c. Two-Coat Mica System: Primer and color coat with suspended mica flakes.
 - d. Three-Coat Metallic System: Primer, color coat with suspended metallic flakes, and clear topcoat.

- e. Color and Gloss: [Custom color matching PT-___] [Custom color matching Architect's sample] [As selected by Architect from manufacturer's full range].
- D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.
- E. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.
 - 1. At closures, retaining caps, or battens, use ASTM A 193/A 193M, 300 series stainless-steel screws.
 - 2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.
- F. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.
- G. Anchor Bolts: ASTM A 307, Grade A, galvanized steel.
- H. Concealed Flashing: Corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- I. Exposed Flashing and Closures: Aluminum sheet, finished to match framing.
- J. Framing Gaskets: Manufacturer's standard.
- K. Framing-System Sealants: As recommended in writing by manufacturer.
- L. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 FABRICATION

- A. Frame System Fabrication:
 - 1. Fabricate components before finishing.
 - 2. Fabricate components that, when assembled, have the following characteristics:
 - a. Profiles that are sharp, straight, and free of defects or deformations.
 - b. Accurately fitted joints with ends coped or mitered.
 - c. Internal guttering systems or other means to drain water passing through joints, condensation occurring within components, and moisture migrating within assembly to exterior.
 - 3. Fabricate sill closures with weep holes and for installation as continuous component.
 - 4. Reinforce components as required to receive fastener threads.
- B. Panel Fabrication: Factory assemble and seal panels.
 - 1. Laminate face sheets to grid core under a controlled process using heat and pressure to produce straight adhesive bonding lines that cover width of core members and that have sharp edges.
 - a. White spots indicating lack of bond at intersections of grid-core members are limited in number to four for every 40 sq. ft. of panel and limited in diameter to 3/64 inch.
 - 2. Fabricate with grid pattern that is symmetrical about centerlines of each panel.
 - 3. Fabricate panel to allow condensation within panel to escape.
 - 4. Reinforce panel corners.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Installation, General:
 - 1. Comply with manufacturer's written instructions.
 - 2. Do not install damaged components.
 - 3. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 - 4. Rigidly secure nonmovement joints.
 - 5. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and immobilization of moving joints.
 - 6. Seal joints watertight unless otherwise indicated.
- B. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with corrosion-resistant coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
- C. Install continuous aluminum sill closures with weatherproof expansion joints and locked and sealed corners. Locate weep holes at rafters.
- D. Install components to drain water passing through joints, condensation occurring within aluminum members and panels, and moisture migrating within assembly to exterior.
- E. Install components plumb and true in alignment with established lines and elevations.

END OF SECTION

SECTION 085673 SOUND CONTROL WINDOW UNITS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Factory-glazed, acoustically-rated window units (SCWU).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes for aluminum windows.
- B. Shop Drawings: Showing installation details, elevations and details of all unit sections, hardware and accessories, anchorage and hardware.

1.3 INFORMATIONAL SUBMITTALS

- A. STC Certification and Test Reports: Submit certification of Sound Transmission Class (STC) rating, along with transmission loss values within individual 1/3 octave band frequencies, for all acoustical doors with glazing and other details, performed by an accredited independent acoustical laboratory. Testing shall be in accordance with the latest version of ASTM-E90.
- B. Letter of certification stating that partition framing is suitable for the installation and proper operation and acoustic performance.
- C. Field quality-control reports.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting this performance by test reports, and calculations.
- B. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products in manufacturer's original packaging. Store materials indoors in location that is secure, dry, and has stable temperature. Handle in accordance with manufacturer's instructions to prevent damage.
- B. Use special care in handling to prevent twisting, warping, nicking, and other damage.

1.6 SITE CONDITIONS

- A. Field Measurements: Where work is indicated to fit to other construction, verify dimensions of other construction by field measurement before fabrication and indicate measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the work.
 - 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurement before being enclosed and indicate measurements on shop drawings.

1.7 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure to meet performance requirements.
 - b. Structural failures including excessive deflection, water leakage, condensation, and air infiltration.

- c. Faulty operation of movable sash and hardware.
- d. Deterioration of materials and finishes beyond normal weathering.
- e. Failure of insulating glass.

PART 2 PRODUCTS

2.1 SOUND-CONTROL ALUMINUM WINDOWS

- A. Single Source: All components to be products supplied by the single manufacturer, and shall comply with specified laboratory acoustical ratings as tabulated at end of this section.
- B. Manufacturers:
 - 1. Milco
 - 2. Mon-Ray Inc;
 - 3. Peerless Products
 - 4. St.Cloud Windows.
- C. Factory-glazed aluminum-framed sound-control window units, conforming to or exceeding HS-DW-C25 and specified requirements.
- D. Aluminum-framed, factory-glazed window units; acoustically tested & rated; prefinished matte black;
 - 1. Basis of Design: DeVAC 600 Series by Mon-Ray Inc.
- E. (SCWU-1) Fixed Frame: Aluminum-framed unit with fixed frame; factory-glazed with laminated glass; installed vertically at 5-degree angle in wall assembly.
 - 1. Sound Transmission Class (STC): Rated for not less than STC 45 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
 - 2. Basis of Design: DeVAC 650-AL by Mon-Ray Inc..
- F. (SCWU-2) Double-Glazed Unit with Sliding Sashes(: Aluminum-framed unit with sliding sashes; factory-glazed with laminated glass; installed vertically at 5-degree angle in wall assembly.
 - 1. Sound Transmission Class (STC): Rated for not less than STC 50 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
 - 2. Basis of Design: DeVAC 650-AL by Mon-Ray Inc..
- G. Frames and Sashes: Extruded aluminum shapes, aluminum alloy 6063-T6 Architectural Grade homogenized aluminum primary billet, minimum nominal wall thickness of .062", except frame sills which have a nominal wall thickness of .093" in the primary walls and track.
- H. Finishes: Provide with Manufacturer's standard color-anodized or fluoropolymer finish, and in accordance with the following:
 - 1. Color Anodized Finish: Class I, AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte.
 - 2. Fluoropolymer Finish: High-performance, two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat.
 - 3. Color: Matching PT-3 (Black).
- I. Glazing: Sash shall be factory glazed with the following:
 - 1. Operable Sections: **3/8-inch** laminated glass (**STC 36**) plus 1/4-inch plate glass (**STC 31**) separated by the air space shown on the drawings.
 - 2. Fixed Section: **1/2-inch** thick monolithic projection quality glass as specified.
 - 3. Clear annealed glass, ASTM C 1036, Type 1, Class 1, q3. Kind: Fully tempered [where indicated on Drawings].
 - 4. **(GL-5)** and **(GL-5T)** Glass at **Projection Booth**: Lite shall be laminated, **ultra-clear, low-iron** float glass with a visible light transmission exceeding 90% through a 6.0mm test sample.
 - a. Configuration: Laminated glass unit, nominally **1/2-inch** thick comprising two sheets of clear float glass, 1/4-inch thick, bond laminated with a 0.030" thick polyvinyl butyral interlayer.

- b. Bonding process must exclude dirt, air pockets and foreign substances. Inclusions shall not exceed 3 psc/kg. The glass shall be select glazing quality (q3), Type I, Class I, free of defects that would affect normal viewing.
 - c. Edges shall be flame polished and beveled. Both sides of the glass shall have an anti-reflective coating such that residual reflection when viewed at a 90o angle shall be less than 1%.
 - d. Basis of Design Glass: Amiran Low-Iron Glass by Schott North America, Inc.
- J. Weather-stripping: Double weather-stripped silicoated woven pile with mylar side fins or center fins.
- 1. Silicone treated; UV stabilized polypropylene pile with an integral polypropylene fin running through the center; bonded to a non-shrinking backing, which shall slide into extruded ports in the aluminum frame and sash. All weather-strip shall be staked in place.
 - 2. Vinyl weather-stripping will not be accepted.
- K. Hardware: Spring loaded stainless steel plunger lock. Interior meeting rails to have continuous grip rails.
- L. Sealant: Non-hardening acoustic sealant as specified in Section 092900 - Gypsum Board.

2.2 FABRICATION

- A. Window Unit Construction: Identical to that of the acoustically tested unit.
- B. Shop-fabricate complete unit, including glazing.
- 1. Entire unit including frame, seals, glass and mullions shall be factory fabricated and shipped to site ready for installation in roughed opening.
 - 2. Window system shall include: glass, steel framing and trim, and all accessory items as shown on the drawings and required for a complete installation, including caulking and anchorage to adjacent construction.
- C. Framing: Continuous extrusions, square cut at corners and precision machined, with continuous non-conductive rigid vinyl thermal barrier.
- 1. Corners fastened with minimum of four stainless steel screws.
 - 2. Sill is tubular and weeped to prevent the accumulation of moisture or debris. The weep system allows drainage of water from cavities in sill.
 - 3. Sill section allows for anchorage without bridging thermal barrier.
- D. Sash: Hollow tubular extrusions, square cut and milled to allow telescoped joints at each corner.
- 1. Screws, axles and pins are stainless steel.
 - 2. Sashes are removable from inside, without tools, for cleaning.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examination and Acceptance of Conditions: Before proceeding with installation, examine conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- 1. Space Requirements: Take field measurements as required to fit the Work properly. Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E 2112.

1. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction to produce weathertight construction.
 2. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
 3. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Attachment: Provide blocking, attachment plates, anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.
- D. Sealant: Seal joints between windows and surrounding construction with non-hardening sealant.
1. Provide joint backing in all joints where a suitable backstop to receive sealant is otherwise not available.
 2. Pack joints with joint backing to provide depth equal to 1/2 of width. Caulk joint width cannot be less than 1/4" nor more than 1/2" unless recommended otherwise by the manufacturer.

3.3 INSTALLED WORK

- A. Adjusting Operable Components: Adjust movable components of assembly to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range, and without binding or damaging assembly components. Lubricate hardware and moving parts.
- B. Cleaning: Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period.
- C. Protection: Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 087100 – DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

- B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Automatic operators.
4. Cylinders specified for doors in other sections.

- C. Related Sections:

1. Division 01 Section "Sustainable Design Requirements" for additional LEED documentation and requirements.
2. Division 08 Section "Hollow Metal Doors and Frames".
3. Division 08 Section "Flush Wood Doors".
4. Division 08 Section "Aluminum-Framed Entrances and Storefronts".
5. Division 28 Section "Access Control".

- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. Michigan Building Code 2015, Local Amendments.

- E. Standards: All hardware specified herein shall comply with the following industry standards:

1. ANSI/BHMA Certified Product Standards - A156 Series
2. UL10C – Positive Pressure Fire Tests of Door Assemblies

1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
 3. Content: Include the following information:
 - a. Type, style, function, size, label, hand, and finish of each door hardware item.
 - b. Manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
 - e. Explanation of abbreviations, symbols, and codes contained in schedule.
 - f. Mounting locations for door hardware.
 - g. Door and frame sizes and materials.
 - h. Warranty information for each product.
 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
 - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
 - b. Complete (risers, point-to-point) access control system block wiring diagrams.
 - c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.
- D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- E. Informational Submittals:
1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.
- F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.
- 1.4 QUALITY ASSURANCE
- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.
- D. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
 2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.
- E. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

- F. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
 2. Plans for existing and future key system expansion.
 3. Requirements for key control storage and software.
 4. Installation of permanent keys, cylinder cores and software.
 5. Address and requirements for delivery of keys.
- G. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
 2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
 3. Review sequence of operation narratives for each unique access controlled opening.
 4. Review and finalize construction schedule and verify availability of materials.
 5. Review the required inspecting, testing, commissioning, and demonstration procedures
- H. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
 - 1. Structural failures including excessive deflection, cracking, or breakage.
 - 2. Faulty operation of the hardware.
 - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 4. Electrical component defects and failures within the systems operation.
- C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.
- D. Special Warranty Periods:
 - 1. Ten years for mortise locks and latches.
 - 2. Five years for exit hardware.
 - 3. Twenty five years for manual surface door closer bodies.
 - 4. Twenty five years for manual surface door closer bodies.
 - 5. Twenty five years for manual surface door closer bodies.
 - 6. Five years for motorized electric latch retraction exit devices.
 - 7. Two years for electromechanical door hardware.

1.8 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

- A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.
- B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:
 - 1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.
- C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

- A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
 - 1. Quantity: Provide the following hinge quantity:
 - a. Two Hinges: For doors with heights up to 60 inches.
 - b. Three Hinges: For doors with heights 61 to 90 inches.
 - c. Four Hinges: For doors with heights 91 to 120 inches.
 - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
 - 2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
 - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
 - b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.
 - 3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
 - a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
 - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
 - 4. Hinge Options: Comply with the following:

- a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.
5. Manufacturers:
- a. Hager Companies (HA).
 - b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK).
 - c. Stanley Hardware (ST).
- B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 certified continuous geared hinge. with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.
1. Manufacturers:
- a. Hager Companies (HA).
 - b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK).
 - c. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
 - d. Stanley Hardware (ST).
- C. Pin and Barrel Continuous Hinges: ANSI/BHMA A156.26 Grade 1-600 certified pin and barrel continuous hinges with minimum 14 gauge Type 304 stainless steel hinge leaves, concealed teflon coated stainless pin, and twin self lubricated nylon bearings at each knuckle separation. Factory trim hinges to suit door height and prepare for electrical cut-outs.
1. Manufacturers:
- a. Hager Companies (HA).
 - b. Markar Products; ASSA ABLOY Architectural Door Accessories (MR).
 - c. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK).
 - d. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
 - e. Stanley Hardware (ST).

2.3 POWER TRANSFER DEVICES

- A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
1. Manufacturers:
- a. Securitron (SU) - EL-CEPT Series.
 - b. Stanley Hardware (ST) EPT-12C Series.
 - c. Von Duprin (VD) - EPT-10 Series.

- B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
1. Provide one each of the following tools as part of the base bid contract:
 - a. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) - Electrical Connecting Kit: QC-R001.
 - b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) - Connector Hand Tool: QC-R003.
 2. Manufacturers:
 - a. Hager Companies (HA) - Quick Connect.
 - b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) – QC-C Series.
 - c. Stanley Hardware (ST) – WH Series.

2.4 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.
1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
 2. Furnish dust proof strikes for bottom bolts.
 3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
 4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
 5. Manufacturers:
 - a. Burns Manufacturing (BU).
 - b. Ives (IV).
 - c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
- B. Coordinators: ANSI/BHMA A156.3 certified door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.
1. Manufacturers:
 - a. Burns Manufacturing (BU).
 - b. Ives (IV).
 - c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

- C. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
 2. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
 3. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
 4. Manufacturers:
 - a. Hiawatha, Inc. (HI).
 - b. Ives (IV).
 - c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.5 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
1. Manufacturers:
 - a. Stanley Best (BE).
 - b. No Substitution.
- B. Cylinders: Original manufacturer cylinders complying with the following:
1. Mortise Type: Threaded cylinders with rings and cams to suit hardware application.
 2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
 3. Bored-Lock Type: Cylinders with tailpieces to suit locks.
 4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
 5. Keyway: Match Facility Standard.
- C. Permanent Cores: Manufacturer's standard; finish face to match lockset; complying with the following:
1. Interchangeable Cores: Core insert, removable by use of a special key; usable with other manufacturers' cylinders.
- D. Keying System: Each type of lock and cylinders to be factory keyed.
1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.
 2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
 3. Existing System: Key locks to Owner's existing system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Three (3).
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).
4. Construction Control Keys (where required): Two (2).
5. Permanent Control Keys (where required): Two (2).

F. Construction Keying: Provide temporary keyed construction cores.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.6 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 certified. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

1. Mortise locks to be certified Security Grade 1.
2. Extended cycle test: Locks to have been cycle tested in ordinance with ANSI/BHMA 156.13 requirements to 10 million cycles.
3. Manufacturers:
 - a. Corbin Russwin Hardware (RU) – ML2000 Series.
 - b. Stanley Best (BE) – 40H-UN Series.

2.7 ELECTROMECHANICAL LOCKING DEVICES

A. Electromechanical Mortise Locksets, Grade 1 (Heavy Duty): Subject to same compliance standards and requirements as mechanical mortise locksets, electrified locksets to be of type and design as specified below.

1. Electrified Lock Options: Where indicated in the Hardware Sets, provide electrified options including: outside door lock/unlock trim control, latchbolt and lock/unlock status monitoring, deadbolt monitoring, and request-to-exit signaling. Support end-of-line resistors contained within the lock case. Unless otherwise indicated, provide electrified locksets standard as fail secure.
2. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
3. Manufacturers:
 - a. Corbin Russwin Hardware (RU) - ML20900 Series.

- b. Stanley Best (BE) - 40HW EL/EU Series.

2.8 LOCK AND LATCH STRIKES

- A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
 - 1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
 - 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
 - 3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
 - 4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.
- B. Standards: Comply with the following:
 - 1. Strikes for Mortise Locks and Latches: BHMA A156.13.
 - 2. Strikes for Bored Locks and Latches: BHMA A156.2.
 - 3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
 - 4. Dustproof Strikes: BHMA A156.16.

2.9 CONVENTIONAL EXIT DEVICES

- A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:
 - 1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
 - 2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
 - 3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
 - 4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
 - 5. Flush End Caps: Provide flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.

6. Electromechanical Options: Subject to same compliance standards and requirements as mechanical exit devices, electrified devices to be of type and design as specified in hardware sets. Include any specific controllers when conventional power supplies are not sufficient to provide the proper inrush current.
 7. Motorized Electric Latch Retraction: Devices with an electric latch retraction feature must use motors which have a maximum current draw of 600mA. Solenoid driven latch retraction is not acceptable.
 8. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
 - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
 - b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
 9. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
 10. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
 11. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
 12. Rail Sizing: Provide exit device rails factory sized for proper door width application.
 13. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.
- B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.
1. Manufacturers:
 - a. Sargent Manufacturing (SA) - 80 Series.
 - b. Von Duprin (VD) - 35A/98 XP Series.

2.10 DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.
 2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.
 4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.
 5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
 6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
 7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.
- B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.
1. Manufacturers:
 - a. Corbin Russwin Hardware (RU) - DC6000 Series.
 - b. LCN Closers (LC) - 4040 Series.
 - c. Norton Door Controls (NO) - 7500 Series.

2.11 ELECTROMECHANICAL DOOR OPERATORS

- A. General: Provide low energy operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for compliance with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation devices.
1. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
- B. Standard: Certified ANSI/BHMA A156.19.
- C. Performance Requirements:
1. Opening Force if Power Fails: Not more than 15 lbf required to release a latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.
 2. Entrapment Protection: Not more than 15 lbf required to prevent stopped door from closing or opening.

- D. Configuration: Surface mounted or in-ground as required. Door operators to control single swinging and pair of swinging doors.
- E. Operation: Power opening and spring closing operation capable of meeting ANSI A117.1 accessibility guideline. Provide time delay for door to remain open before initiating closing cycle as required by ANSI/BHMA A156.19.
- F. Features: Operator units to have full feature adjustments for door opening and closing force and speed, backcheck, motor assist acceleration from 0 to 30 seconds, time delay, vestibule interface delay, obstruction recycle, and hold open time from 0 up to 30 seconds.
- G. Provide outputs and relays on board the operator to allow for coordination of exit device latch retraction, electric strikes, magnetic locks, card readers, safety and motion sensors and specified auxiliary contacts.
- H. Brackets and Reinforcements: Manufacturer's standard, fabricated from aluminum with nonferrous shims for aligning system components.

2.12 ELECTROHYDRAULIC DOOR OPERATORS

- A. General: Provide low energy operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for compliance with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation devices.
 - 1. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
- B. Standard: Certified ANSI/BHMA A156.19.
- C. Performance Requirements:
 - 1. Opening Force if Power Fails: Not more than 15 lbf required to release a latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.
 - 2. Entrapment Protection: Not more than 15 lbf required to prevent stopped door from closing or opening.
- D. Configuration: Surface mounted or in-ground as required. Door operators to control single swinging and pair of swinging doors.
- E. Operation: Power opening and spring closing operation capable of meeting ANSI A117.1 accessibility guideline. Provide time delay for door to remain open before initiating closing cycle as required by ANSI/BHMA A156.19. When not in automatic mode, door operator to function as manual door closer with fully adjustable opening and closing forces, with or without electrical power.
- F. Features: Operator units to have full feature adjustments for door opening and closing force and speed, backcheck, motor assist acceleration from 0 to 30 seconds, time delay, vestibule interface delay, obstruction recycle, and hold open time from 0 up to 30 seconds.

- G. Provide outputs and relays on board the operator to allow for coordination of exit device latch retraction, electric strikes, magnetic locks, card readers, safety and motion sensors and specified auxiliary contacts.
- H. Brackets and Reinforcements: Manufacturer's standard, fabricated from aluminum with nonferrous shims for aligning system components.
- I. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Dorma Products (DO) - ED800 Series.
 - 2. LCN Closers (LC) - 4640 Series.

2.13 SURFACE MOUNTED CLOSER HOLDERS

- A. Electromagnetic Door Holders: Certified ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate 12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button.
 - 1. Manufacturers:
 - a. LCN Door Closers (LC) - SEM7800 Series.
 - b. Rixson (RF) - 980/990 Series.

2.14 ARCHITECTURAL TRIM

- A. Door Protective Trim
 - 1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
 - 2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
 - 3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
 - 4. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop), fabricated from the following:
 - a. Stainless Steel: 300 grade, 050-inch thick.
 - 5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
 - 6. Manufacturers:

- a. Hiawatha, Inc. (HI).
- b. Ives (IV).
- c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.15 DOOR STOPS AND HOLDERS

- A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.
- B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
 1. Manufacturers:
 - a. Hiawatha, Inc. (HI).
 - b. Ives (IV).
 - c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
- C. Overhead Door Stops and Holders: ANSI/BHMA A156.6, Grade 1 certified overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
 1. Manufacturers:
 - a. Glynn Johnson (GJ).
 - b. Rixson Door Controls (RF).

2.16 ARCHITECTURAL SEALS

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
 1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.
- D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.
- E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
- F. Manufacturers:
 1. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
 2. Reese Enterprises, Inc. (RE).

2.17 ELECTRONIC ACCESSORIES

- A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.
 1. Manufacturers:
 - a. Sentrol (SN) – 1076D (double pole / double throw).
- B. Power Supplies: Provide Nationally Recognized Testing Laboratory Listed 12VDC or 24VDC (field selectable) filtered and regulated power supplies. Include battery backup option with integral battery charging capability in addition to operating the DC load in event of line voltage failure. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.
 1. Manufacturers:
 - a. Security Door Controls (SD) - 630 Series.
 - b. Securitron (SU) - BPS Series.
 - c. Von Duprin (VD) - PS.

2.18 FABRICATION

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.19 FINISHES

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.
- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
 - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
 - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 - 2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
 - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."

4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
- D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."
- E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

- A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

- A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
- B. The supplier is responsible for handing and sizing all products and providing the correct option for the appropriate door type and material where more than one is presented in the hardware sets. Quantities listed are for each pair of doors, or for each single door.
- C. Manufacturer's Abbreviations:
 - 1. MK - McKinney
 - 2. PE - Pemko
 - 3. MR - Markar
 - 4. RO - Rockwood
 - 5. SA - Sargent
 - 6. RU - Corbin Russwin
 - 7. SU - Securitron
 - 8. BE - dormakaba Best
 - 9. RF - Rixson
 - 10. LC - LCN Closers
 - 11. OT - OTHER
 - 12. NO - Norton

Hardware Sets

Set: 1.0

Doors: 134EE

1 Continuous Hinge	CFM-SLF-HD1 x PT		PE
1 Exit Device (nightlatch)	LC 16 43 55 56 8804	US32D	SA □
1 Mort. Cylinder	- match Owner's existing Best key system	626	BE
1 Rim Cylinder	- match Owner's existing Best key system	626	BE
1 Pull	RM201 Mtg-Type 12XHD	US32D-316	RO
1 Conc Overhead Stop	6-X36	630	RF
1 Surface Closer	DC8220 top jamb x mounting plate to suit application	689	RU
1 Threshold	1715AK MSES25SS		PE

1 Weatherstrip	- integral within construction of door and frame assembly	00
1 Sweep	29326CNB x TKSP8	PE
1 Door Contact	1076D (DPDT)	OT
1 Electric Power Transfer	EL-CEPT	SU <input type="checkbox"/>
1 ElectroLynx Harness	QC-C1500P (power transfer or electric strike to junction box above)	MK <input type="checkbox"/>
1 ElectroLynx Harness	QC-C (power transfer to exit device rail)	MK <input type="checkbox"/>
1 Intercom System	- Provided by Security Contractor	OT
1 Linear Power Supply	BPS-24-2 (electric latch retraction)	SU <input type="checkbox"/>
1 Card Reader	- Provided by Security Contractor	00

Notes: Door normally closed and locked. Key override outside retracts latch bolt of exit device. Valid use of card reader outside or activation of remote switch (intercom system) will electronically retract latch of exit device to gain entry. Exit device equipped with signal switch in push rail to act as shunt fo door monitoring upon egress. Free egress always permitted.

1 ElectroLynx Harness	QC-C1500P (power transfer or electric strike to junction box above)		MK <input type="checkbox"/>
1 ElectroLynx Harness	QC-C (power transfer to exit device rail)		MK <input type="checkbox"/>
1 Actuator Switch	ADA1019-3 - DPDT switch		NO
1 Pedestal	- to house card reader and exterior ADA operator switch		OT

1 Door Switch	505 (6" x 6")	NO	<input type="checkbox"/>
1 Linear Power Supply	BPS-24-2 (electric latch retraction)	SU	<input type="checkbox"/>
1 Card Reader	- Provided by Security Contractor	00	

Notes: Door normally closed and locked. Key override outside retracts latch bolt of exit device. Valid use of card reader outside will electronically retract latch of exit device. Door may be unlocked (latch retracted electronically) upon schedule as determined in access control system. Exit device equipped with signal switch in push rail to act as shunt for door monitoring upon egress. Outside ADA actuator switch will not cycle automatic operator unless latch bolt is retracted (may utilize latch bolt monitor switch for this function). Inside ADA actuator switch automatically retracts latch of exit device and cycles automatic operator. Free egress always permitted.

2 Silencer	608 / 609		RO

Notes: Function: Latch bolt operated by key outside or lever inside. Outside lever always rigid. Inside lever always free for egress.

Set: 66.0

Doors: 185B

2 Continuous Hinge	HG305 x AS	630	MR
2 Pull Plate	BF 111x70B	US32D	RO
2 Push Plate	70F	US32D	RO
2 Surf Overhead Hold Open	9-X26	652	RF
2 Surface Closer	DC6220 top jamb x mounting plate to suit application	689	RU
2 Armor Plate	K1050 36" high 4BE CSK	US32D	RO
2 Silencer	608 / 609		RO

END OF SECTION 087100

SECTION 087900 OPERATOR SWITCH BOLLARDS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Manufactured metal bollards for mounting door operator switches and other access control equipment (DR BOL).
- B. Related Sections:
 - 1. Section 055000 - Metal Fabrications: Fabricated steel channel or tube bollards.
 - 2. Section 057000 - Ornamental Metal: Fabricated stainless steel channel or tube bollard.

1.2 COORDINATION

- A. Bollards for Access Control Hardware: Coordinate with Work of the following Sections for access equipment, conduit and connection requirements, and installation coordination.
 - 1. Section 033000 - Cast-In-Place Concrete
 - 2. Section 084229 - Automatic Entrances.
 - 3. Section 087100 - Door Hardware
 - 4. Section 087113 - Automatic Door Operators
 - 5. Division 28 - Electronic Safety and Security
 - 6. Division 32 - Sitework Concrete

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include technical data and tested physical and performance properties.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments, hardware and other components.
 - 1. Include diagrams for power and control wiring, and for electronic access controls.
 - 2. Indicate special tolerances and erection requirements.
- C. Samples: For each exposed metal type and finish, 6 inches by 6 inches.

PART 2 PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers: Subject to specified requirements, provide Basis of Design or approved equivalent product by one of the listed manufacturers.
 - 1. brp by bison
 - 2. Canterbury International
 - 3. Columbia Cascade Company
 - 4. Creative Pipe, Inc.
 - 5. Dero Bike Rack Co.
 - 6. DuMor Inc.
 - 7. FairWeather Site Furnishings
 - 8. Huntco Supply, LLC
 - 9. Keystone Ridge Designs, Inc.
 - 10. L. A. Steelcraft Products.
 - 11. Maglin Site Furniture Inc.
 - 12. Thomas Steele
 - 13. Urban Accessories, Inc.
 - 14. Victor Stanley, Inc.
 - 15. Wikk Industries.

2.2 BOLLARDS FOR ACCESS CONTROL EQUIPMENT

- A. (DR BOL-1) Bollard for Access Control Equipment: Manufactured metal bollards for surface-mounted door actuators, card-readers and other access control equipment. Provide bollards with cutouts to accommodate conduit and wiring.
1. Basis of Design: _____
 2. Shape: [Square] [Rectangle] [Round].
 3. Size: ___ inches by ___ inches.
 4. Height: [As shown on Drawings] [42 inches exposed, 12 inches recessed in ground, 54 inches total height.]
 5. Aluminum: [**Extruded aluminum bars, profiles or tube, ASTM B 221**] [**Structural aluminum pipe or tube, ASTM B 429**], alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
1. Color: Black, as selected by Architect from full range of industry colors and color densities].
- C. Mounting Type: [**Surface flange anchored at finished grade to substrate indicated**] [**Surface flange anchored below finished grade to substrate indicated**] [**Bolted to embedded anchor bolts**] [**Cast in concrete slab**].
1. Surface-Mounted: Fabricate bollards with 3/8-inch- thick baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch anchor bolts.
 - a. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.
 2. Embedded: Fabricate embedded bollards as shown on Drawings. Coordinate with Section 033000 - Cast-In-Place and Concrete or Section 321313 - Sitework Concrete.

2.3 INSTALLATION ACCESSORIES

- A. Installation Accessories: Provide all accessories necessary for complete installation of bollards.
- B. Anchors, Fasteners, Fittings, and Hardware: [**Stainless steel**] [**Galvanized steel**] [**Manufacturer's standard, corrosion-resistant-coated or noncorrodible materials**].
- C. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107; recommended in writing by manufacturer, for exterior applications.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine site conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
1. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 INSTALLATION

- A. Anchor bollards with [**expansion anchors**] [**anchor bolts**] [**through bolts**]. Provide four 3/4-inch bolts at each bollard unless otherwise indicated.
1. Embed anchor bolts at least 4 inches in concrete.
- B. Anchor bollards in concrete [**with pipe sleeves preset and anchored into concrete**] [**in formed or core-drilled holes not less than 8 inches deep and 3/4 inch larger than bollard**]. Fill annular space around bollard solidly with nonshrink grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward bollard.

- C. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

END OF SECTION

SECTION 088000 GLAZING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Monolithic glass (GL-1) and (GL-2)
 - 2. Special monolithic glass (GL-5).
 - 3. Laminated glass (GL-17), (GL-18) and (GL-20).
 - 4. Insulating laminated glass (GL-21) and (GL-22).
 - 5. Unframed mirrors (GL-91).
 - 6. Glazing accessories.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Review curtain wall and window shop drawings and submit acceptance of details as suitable for proposed glass products.
- C. Samples: For each type of product; 12 inches square.
- D. Calculations: Structural design shall be performed by a Professional Engineer, licensed in the state where Project is located. Signed engineering calculations shall be submitted to Architect/Engineer
 - 1. Structural design calculations are required per IBC Section 2403, for glass not supported on 4 sides, including glass supports and framing, indicating structural integrity of glass size, glass support members, anchors, fasteners and connections to building, in accordance with specified criteria.
 - 2. Structural design calculations for seismic design forces and relative displacements are required for glass in glazed curtain walls, glazed storefronts and glazed partitions in accordance with Section 017325.
 - 3. Engineering Responsibility: Calculations shall be reviewed for stated design assumptions, general compliance to specified requirements, and forces imposed on glass structure. The accuracy of the design calculations shall be the sole responsibility of the Contractor's Professional Engineer.

1.3 INFORMATIONAL SUBMITTALS

- A. Insulating Glass Certification: Submit data verifying compliance with IGCC, Class A level.
- B. Compatibility Certification: After testing and review, certify compatibility of materials in contact and in close proximity to glazing sealant materials.
- C. Wind Pressure and Thermal Stress Analysis: Submit thermal stress analysis of glass where thermal stress may occur.
- D. Qualification Data: For Installer.
- E. Product Certificates: For glass and glazing products, from manufacturer.
- F. Preconstruction adhesion and compatibility test report.
- G. Sample Warranties: For special warranties.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance; and who employs glass installers for this Project who are certified under the National Glass Association Glazier Certification Program as Level 2 (Senior Glaziers) or Level 3 (Master Glaziers).
- B. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the inspecting and testing agency, Insulating Glass Certification Council.
- C. Mockups: Before glazing, build mockups for each glass product indicated below to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mockups in the combination with curtain wall mockup requirements.
 - 2. Build mockups with the glass to match glazing systems required for Project, including typical lite size, framing systems, and glazing methods:
 - 3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 - 4. Obtain Architect's approval of mockups before starting fabrication.
 - 5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 6. Demolish and remove mockups when directed.

1.1 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
 - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 - 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
 - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.2 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.3 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1.4 GLASS WARRANTY

- A. Warranty for Insulating Units: Warranty sealed insulating glass units for minimum period of ten (10) years, with manufacturer's replacement guarantee, covering as minimum: Defective or failure of seal; material vision obstruction as result of dust collection or film formation between panels or other similar failure and the following specific conditions:

1. Reflective glass whose reflective coating cracks, peels or discolors shall be replaced at no charge (material only) for minimum ten (10) year period beginning on date of Substantial Completion.
 2. In addition to replacement of insulated units, provide removal and reinstallation of new units without cost to Owner during first five (5) years of guarantee.
- B. Laminated Glass Warranty: Laminated glass that delaminates shall be replaced at no charge (material only) for minimum 5 years beginning on date of Substantial Completion.
- C. Glazing installer shall coordinate glass and glazing installation with framing systems, and install glass and glazing in accordance with manufacturer's instructions, so that guarantee is maintained.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Glass Design: Glass thicknesses indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites for various size openings in nominal thicknesses indicated, but not less than thicknesses complying with ASTM E 1300 and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
1. Specified Design Wind Loads: Determine design wind loads applicable to Project from basic wind speed indicated in miles per hour at 33 feet above grade, according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 6.4.2, "Analytic Procedure," based on mean roof heights above grade indicated on Drawings.
 2. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - a. Load Duration: 60 seconds or less.
 3. Maximum Lateral Deflection: For the following types of glass supported on all four edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
 - a. For monolithic-glass lites heat treated to resist wind loads.
 - b. For insulating glass.
 - c. For laminated-glass lites.
 4. Minimum Glass Thickness for Exterior Lites: Not less than 6 mm.
 5. Thickness of Tinted and Heat-Absorbing Glass: Provide the same thickness for each tint color indicated throughout Project.
- C. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F , ambient; 180 deg F, material surfaces.
- D. Thermal and Optical Performance Properties: Provide glass with performance properties specified based on manufacturer's published test data, as determined according to procedures indicated below:
1. For monolithic-glass lites, properties are based on units with lites 6 mm thick.
 2. For laminated-glass lites, properties are based on products of construction indicated.
 3. For insulating-glass units, properties are based on units with lites 6 mm thick and a nominal 1/2"- wide interspace.
 4. Center-of-Glass U-Values: NFRC 100 methodology using LBL-35298 WINDOW 4.1 computer program, expressed as Btu/ sq. ft. x h x deg F .
 5. Center-of-Glass Solar Heat Gain Coefficient: NFRC 200 methodology using LBL-35298 WINDOW 4.1 computer program.
 6. Solar Optical Properties: NFRC 300

- E. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

2.2 MANUFACTURERS

- A. Single Source Responsibility: Provide materials obtained from one source for each type of insulating glass and glazing product indicated.
- B. Manufacturers for Glass Substrate:
 - 1. AFG Industries.
 - 2. ACH.
 - 3. Guardian Industries Corp..
 - 4. Pilkington North America, Inc..
 - 5. Viracon.
 - 6. Vitro Architectural Glass (formerly PPG).
- C. Fabricators for Insulating Glass Units: Refer to Basis of Design in Part 2.
- D. Fabricators for Specialty Glass and Specialty Glass Units: As specified with individual glass type descriptions.

2.3 MONOLITHIC GLASS

- A. Monolithic Glass, General:
 - 1. Specified glass thickness and thickness of individual glass plies are minimum.
 - 2. Provide heat-strengthened as required for wind pressure or thermal stress.
 - 3. Provide fully-tempered complying with ASTM C1048, Kind FT (fully tempered), as required to comply with safety code requirements and as indicated with "T" in the Material Identification Abbreviation.
 - 4. Provide safety glazing labeling, as applicable.
- B. (GL-1) Clear Float Glass: 1/4-inch; ASTM C1036, Type I (transparent glass, flat), Class 1 (clear), Quality-Q3 (glazing select).
- C. (GL-1T) Clear Fully-Tempered Float Glass: 1/4-inch; ASTM C1036, Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), and heat-treated to comply with ASTM C1048, Kind FT (fully tempered).
- D. (GL-2T) Clear Fully-Tempered Float Glass: 1/2-inch; ASTM C1036, Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), and heat-treated to comply with ASTM C1048, Kind FT (fully tempered).
- E. (GL-5) Non-Reflective, Ultra-Clear Glass:
 - 1. Glass Substrate: 3/8-inch thick, ultra-clear, low-iron float glass with a visible light transmission exceeding 90 percent through a 6.0mm test sample. Inclusions shall not exceed 3 psc/kg. The glass shall be select glazing quality (q3), Type I, Class I, free of defects that affect normal viewing.
 - 2. Anti-Reflective Coating: On each face, providing residual reflection of less than 1 percent when viewed at a 90 degree angle.
 - 3. Basis of Design: Amiran Low-Iron Glass by Schott North America, Inc.

2.4 LAMINATED GLASS

- A. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
 - 1. Construction: Laminate glass with polyvinyl butyral (PVB) interlayer complying with interlayer manufacturer's written recommendations.
 - 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 - 3. Edges ground smooth for exposed conditions.

- B. (GL-12) Laminated Clear Glass: 1/2-inch unit consisting of 2 plies of 1/4-inch, heat-treated clear glass laminated with 0.090" clear PVB Interlayer.

2.5 INSULATING GLASS UNITS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
1. Specified glass thickness are minimum.
 2. Provide heat-strengthened lites as required for wind pressure or thermal stress.
 3. Provide fully-tempered complying with ASTM C1048, Kind FT (fully tempered), as required to comply with safety code requirements.
 - a. Provide safety glazing labeling, as applicable.
 4. Desiccant: Molecular sieve or silica gel, or blend of both.
 5. Dual Seal: Provide Manufacturer's standard silicone and polyisobutylene dual sealing system. Provide black colored silicone, unless noted otherwise.
 6. Spacer:
 - a. Aluminum, finish as specified below.
 - b. Stainless Steel
 - c. Viracon ExtremEdge warm edge spacer.
 7. Glass type locations as indicated on Drawings.
- B. Basis of Design for Insulated Glass Types: Provide materials obtained from one source for each type of insulating glass and glazing product indicated.
1. Basis of Design Warm-Edge Spacer: 17/32 inch actual thickness.
 2. Product and Manufacturer: Solarscreen VNE 1-63 by Viracon, Inc..
 - a. Visible Transmittance: 62 percent.
 - b. Ultraviolet Transmission: 5 percent.
 - c. Nighttime Winter U-value: 0.25
 - d. Solar Heat Gain Coefficient: 0.28
 3. Other Product and Manufacturer: Solarban 70XL on Starphire glass, by Oldcastle Glass.
 - a. Visible transmittance: 64 percent.
 - b. Ultraviolet Transmission: 6 percent.
 - c. Nighttime Winter U-value: 0.28
 - d. Solar Heat Gain Coefficient: 0.27
- C. (GL-21) Insulating Vision Glass:
1. Glazing Unit Thickness: 1 inch.
 2. Outboard Lite: 1/4 inch, clear; heat-treated.
 - a. High-performance low-emissivity coating applied to No. 2 surface.
 3. Airspace: 1/2 inch, argon-filled, with black painted stainless steel spacer..
 4. Inboard Lite: 1/4 inch, clear; heat-treated.
- D. (GL-21T) Insulating Vision Glass, Fully-Tempered:
1. Glazing Unit Thickness: 1 inch.
 2. Outboard Lite: 1/4-inch, clear; fully-tempered
 - a. High-performance low-emissivity coating applied to No. 2 surface.
 3. Airspace: 1/2 inch, argon-filled, with black painted stainless steel spacer.
 4. Inboard Lite: 1/4 inch, clear; fully-tempered.

2.6 MIRRORS

- A. Glass Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.
- B. (GL-91) Clear Unframed Glass Mirrors: 1/4" thick; ASTM C1503, Mirror Select Glazing Quality. Provide 5 year warranty.
1. Edge Treatment: Polished mitered edges.
 2. Mounting Accessories: Brushed stainless steel (Type 302) mirror clips similar to KV277 at bottom and KV278 at top where indicated.

3. Concealed Fasteners: Mirror mastic as recommended for applicable for specific substrate and mirror configuration, unless otherwise indicated.

2.7 ACCESSORIES

- A. Framing for Butt Glazing: Aluminum or stainless steel angles as indicated. Anchor to ceiling and floor substrates with appropriate fasteners in locations as indicated.
- B. Setting Blocks: Neoprene, 80 to 90 shore "A" durometer hardness, chemically compatible with glazing sealant or compound, length as recommended by glass manufacturer.
- C. Spacers and Shims: Neoprene, 40 to 50 shore "A" durometer hardness, chemically compatible with glazing sealant or compound, length as recommended by glass manufacturer.
- D. Glazing Tape: Butyl or silicone preshimmied tape similar to Tremco 440 Tape.

2.8 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
 1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.
- C. High-Bond Structural Glazing Tape: Pressure-sensitive, conformable acrylic closed-cell foam tape with high-performance acrylic adhesive on both faces, 2.3 mm thick, black color.
 1. Basis of Design for Product Type and Performance: B23F VHB Tape by 3M.
 2. Provide Basis of Design product or other product as recommended by tape Manufacturer for intended use.

2.9 GLAZING SEALANTS

- A. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 1. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
 - a. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
 - b. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
- B. Adhesion Testing: Prior to application of sealants, test each application condition to ensure sealant satisfactorily adheres to substrate.
 1. Conduct test in field or by submission of representative substrate sample to manufacturer for factory test.
 2. Apply sealant to sample substrate and perform hand-pull tab test in accordance with ASTM C1193, Method A.
 3. Determine if primer is required. If so, re-test using primer.
 4. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.

- C. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 - 1. Compatibility Testing: Prior to application of sealants, test gaskets, spacers, setting blocks, and other glazing accessories being provided for project to determine compatibility with structural silicone sealants.
 - a. Submit representative samples of accessories to manufacturer for factory testing.
 - b. Perform testing in accordance with ASTM C1087.
 - c. Incompatible accessories shall be replaced with ones recommended by and tested by manufacturer as acceptable.
- D. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT, G, A, and O; SWRI validation.
 - 1. Basis of Design Product: Dow Corning Corporation, 795 Silicone Building Sealant
- E. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT, G, and A; SWRI validation.
 - 1. Basis of Design Product: Dow Corning Corporation, 995 Silicone Structural Sealant
- F. Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT, G, and A.
 - 1. Basis of Design Product: Dow Corning Corporation, 999-A Silicone Building & Glazing Sealant.

2.10 FABRICATION

- A. Heat-Treated Float Glass: ASTM C 1048. Fabricate using horizontal roller heating process only. Roll wave distortion parallel to bottom edge of glass as installed. Deviation from flatness at any peak (peak to valley deviation): shall not exceed 0.003 inches in the center of a lite and shall not exceed 0.008 inches within 10.5 inches of the leading or trailing edge.
- B. Fully tempered (FT) glass shall be heat soak tested to eliminate the potential of spontaneous breakage due to nickel-sulfite inclusions or other defects that can affect glass performance in place.
- C. Insulating Glass Units:
 - 1. Fabricate using both primary and secondary seals and as otherwise required to comply with the IGCC CBA classification.
 - 2. Fabricate using glass from the same manufacturer throughout the Project.
 - 3. Seal Construction: Dual seal design with primary seal of PIB and Silicone Secondary Seal, unless specifically indicated otherwise.
- D. Butt-Glazed Glass: Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.
 - 1. Verify glazing channels are free of burrs, irregularities, and debris.
 - 2. Verify glass is free of edge damage or face imperfections.
 - 3. Inspect door and frames to determine that frames, sash, and stops are set true and straight. Sash rabbets and stops shall be clean and dry at time of glazing.
 - 4. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of installation means acceptance of substrate.

3.2 PREPARATION

- A. Provide glass manufacturer's recommended edge clearances when sizing glass.
- B. Remove protective coatings from surfaces to be glazed.
- C. Clean glass and glazing surfaces to remove dust, oil, and contaminants, and wipe dry.
- D. Verify measurements of sash and openings at Project.
 - 1. Dimensions shown or indicated are given only as a guide for estimating purposes, and actual size shall be determined by measurement of the actual openings. Accurately cut glass to fit openings with proper clearances and setting block height.
- E. Coordinate with and check Shop Drawings furnished by other suppliers of Work affecting this Section to avoid field installation problems.
- F. Before glazing metal sash, remove oil, lacquer, or other material to which the compound will not readily adhere or which will tend to delaminate from metal and cause a leak through the glazing seal.

3.3 INSTALLATION

- A. Comply with glass fabricators recommendations.
- B. Except where curtain wall, window, entrance or glass manufacturer recommends otherwise, comply with Flat Glass Marketing Association (FGMA) Sealant Manual and FGMA Glazing Manual.
- C. Glaze insulated units as recommended by glass and frame manufacturers.
- D. Do not apply glazing materials at temperatures below manufacturer's recommendations or to damp or frosted surfaces. Apply glazing material according to the manufacturer's instructions using proper primers as required.
- E. Set glass using neoprene setting blocks and spacers to insure proper edge clearance and uniform beads of compound. Clearances shall conform to FGMA Glazing Manual requirements. Center glass in glazing rabbets.
 - 1. Butt glazing requirements: Apply mildew resistant silicone sealant to flush depth of joint as indicated by sealant manufacturer.
- F. Check openings to confirm proper clearance at perimeters and between glass and stops.
 - 1. Clean surfaces of rabbet (including stops) and surface of glass which will come into contact with sealant. Use solvents and methods which insure clean, dry surfaces without film or foreign material when sealant is placed.
- G. Remove and replace glazing beads carefully to avoid marking or defacing any portion of frame, sash, or fastenings.
 - 1. Set glass in full bed of glazing tape or sealant. Clean glazing material after stops are installed. Clean excess compound, etc. from glass after setting in conformance with glass manufacturer's recommendations.
 - 2. If recommended prime surfaces prior to glazing.
- H. Set glass with reams (waves) running horizontally. Set glass with factory attached labels in place.
- I. Setting Blocks: Place setting blocks at locations recommended by glass manufacturer, generally between 1/4 points and 6 inches from corner, except at glazed doors.
 - 1. At glazed doors, provide one block at sill, located 3 inches up from edge of glass at hinge side; one block at hinge side jamb, located 3 inches up from lower edge of glass; one block at head, located 3 inches from edge of glass at latch side of door; and, one block at jamb at lock side of door, located 3 inches down from edge of glass at top corner.
 - 2. Use blocks of length required to properly support glass. Offset approximately 1 inch from shims.
- J. Glass Installation in Hollow Metal Frames:
 - 1. Glaze frames using pre-shimmed tape on both sides. Firmly glaze in place with joints sealed, free of rattles.

2. Set glass on setting blocks with a full bed of sealant or glazing tape.
- K. Glass Installation in Aluminum Frames:
1. Glaze aluminum frames using preformed EPDM elastomeric glazing extrusion separately or in combination with sealant and pre-shimmed glazing tape in compliance with aluminum frame supplier's recommendations.
 2. Set glass on setting blocks as recommended by manufacturer.
 3. Apply tape and/or sealant to produce uniform sight line even with frame.
 4. Set glass in gaskets with corners sealed.
- L. Glazing Sealant: Along entire bottom edge of light, and up at least 6 inches at each jamb, gun in continuous full bed of sealant to fill voids.
1. Fill entire space, full width of pane, full depth of glass, with sufficient sealant to form heel along inside face and edge of glass.
 2. At other edges (top and sides) gun in continuous heel bead of sealant along edges of glass perimeter to set stop against and into, acting as fill between glass and stop.
 3. Immediately after setting glass, at entire perimeter of glass, gun in sealant between stop and glass so space above spacer is completely filled, without voids.
 4. Place sealant flush with daylight edge of stops, with slight watershed at exterior. Provide straight, smooth surface meeting at opening corners with sharp intersection.
 5. Leave no sealant on exposed surfaces of stops and glass.
- M. Apply structural sealant carefully in uniform thickness pushing bead ahead of nozzle and making sure that entire cavity is filled. Air pockets or voids along edges are not acceptable.
1. Tool joint immediately after application.
 2. Tool neatly, forcing sealant into contact with joint sides, eliminating internal voids and insuring good substrate contact.
 3. Do not tool with soap or detergent solutions.
 4. Install silicone structural butt glazing system in accordance with manufacturer's printed instructions.
- N. Mirror installation: As indicated.
1. Adhere mirrors to substrate with mirror mastic.

3.4 CLEANING

- A. Remove surplus materials.
- B. Final cleaning of glass by Contractor.

END OF SECTION

SECTION 089100 LOUVERS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Shop-fabricated, fixed, extruded aluminum louvers and frames (LVR).
 - 2. Attachment hardware.
- B. Related Sections:
 - 1. Section 055000 - Metal Fabrications: Steel support framing.
 - 2. Section 084400 - Aluminum Curtain Walls, Storefronts and Entrances.
 - 3. Division 23 - Mechanical: Attachment of ducting and blanking out unused louver area.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
 - 1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion. Include Details to illustrate how the louver frame interfaces and seals to the adjacent primary air and water barrier line.
 - a. Locate primary seal on the louver frame to the interior of the frame.
 - b. The base flashing is to be full depth with end dams to collect and weep moisture to the exterior.
- C. Samples: For each type of metal finish required.

1.3 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.2, "Structural Welding Code - Aluminum."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - 3. AWS D1.6, "Structural Welding Code - Stainless Steel."

1.4 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.5 WARRANTY

- A. Special Finish Warranty: Provide Manufacturer's standard 20-year warranty against failure or excessive fading of powder coat finish.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Design and fabricate exterior wall louvers in accordance with AMCA Standard 500 and comply with AMCA Certified Ratings Program.
- B. SMACNA Standard: Comply with SMACNA Architectural Sheet Metal Manual recommendations for fabrication, construction details, and installation procedures.
- C. Not Permitted: Vibration harmonics; wind whistles; noises caused by thermal movement; thermal movement transmitted to other building elements; loosening, weakening or fracturing of attachments or components of system.

- D. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural performance requirements and design criteria indicated.
- E. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 - 1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
- F. Windborne-Debris-Impact Resistance: Louvers located within 30 feet of grade shall pass basic-protection, large-missile testing requirements in ASTM E 1996 for **Wind Zone 1** when tested according to ASTM E 1886. Test specimens shall be no smaller in width and length than louvers indicated for use on Project.
- G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- H. Source Limitations: Obtain louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.
- I. Subject to compliance with specified requirement, provide Basis of Design or provide equivalent products by one of the following:
 - 1. Airo-lite Company
 - 2. Construction Specialties, Inc.
 - 3. Greenheck Fan Corporation
 - 4. Industrial Louvers, Inc.
 - 5. Nystrom Building Products.
 - 6. Ruskin Company; Tomkins PLC.
- J. (LVR-1) Extruded Aluminum, **Vertical** Blade Louver: Prefinished, shop-assembled, wind-driven-rain-resistant, vertically-oriented drainable-blade louvers.
 - 1. Basis of Design: Type RSV-5700 by Construction Specialties, Inc..
 - 2. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5, T-52, or T6.
 - 3. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
 - 4. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: Black, as selected by Architect.

2.2 FASTENERS, COMPONENTS AND ACCESSORIES

- A. Provide fasteners and anchors; screening, flashing and blank-off panel components; and other installation and support accessories required for complete installed assembly.
- B. Fasteners: Aluminum or 300 series stainless-steel fasteners, types and sizes to suit unit installation conditions.
- C. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed for masonry, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- D. Bird Screen: 5/8-inch flattened expanded aluminum mesh, with 0.050-inch extruded aluminum frame.
- E. Sill Flashing: Formed from min. 0.050 inch aluminum, with welded side panels
- F. Blank-Off Panels, Uninsulated: Metal sheet attached to back of louver.
 - 1. Aluminum sheet for aluminum louvers, not less than 0.050-inch nominal thickness.
 - 2. Panel Finish: Same finish type applied to louvers, but black color.
 - 3. Attach blank-off panels with fasteners as recommended by louver manufacturer.

- G. Blank-Off Panels, Insulated: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.
 - 1. Thickness: 2 inches.
 - 2. Metal Facing Sheets: Aluminum sheet, not less than 0.032-inch nominal thickness.
 - 3. Insulating Core: Closed-cell polyisocyanurate.
 - 4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard channel frames, with corners mitered and with same finish as panels.
 - 5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
 - 6. Attach blank-off panels with fasteners as recommended by louver manufacturer.
- H. Steel Shapes: ASTM A36.
- I. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.3 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
- C. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer.
 - 1. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.
- D. Provide subsills made of same material as louvers or extended sills for recessed louvers.
- E. Join frame members to each other and to fixed louver blades with fillet welds concealed from view unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
 - 1. Install bird screens fixed to interior.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

- E. Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- F. Set and tie in to flashings to ensure diversion of moisture to exterior.
 - 1. Locate primary seal on the louver frame to the interior of the frame.
 - 2. Provide full-depth base flashing with end dams to collect and weep moisture to the exterior.
- G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required.
 - 1. Comply with Section 079200 - Joint Protection for sealants applied during louver installation.

3.4 INSTALLED WORK

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION

SECTION 092200 NON-STRUCTURAL METAL FRAMING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Non-structural metal framing systems for interior assemblies, including:
 - a. Interior partitions.
 - b. Interior suspended ceiling and soffit systems.
 - c. Shaft wall systems.
 - 2. Load-bearing steel framing systems supporting ACOUST-A and ACOUST-B ceiling types.
- B. Related Sections:
 - 1. Section 018122 - Facility Acoustic Performance Requirements.
 - 2. Section 054000 - Cold-Formed Metal Framing: For interior framing members carrying a lateral (transverse) load exceeding 10 lb/ft², a superimposed vertical load exceeding 100 lbf/ft, or a superimposed vertical load exceeding 200 lbs; and members exceeding maximum heights, spans or spacing for non-structural framing as indicated in ASTM C 754 Tables 1-7.
 - 3. Section 134833 - Sound & Vibration Control: For (SVC) components.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Submit statement indicating that metal stud manufacturer has reviewed Project documents and that framing supplied conforms to specified requirements.
 - 2. Evaluation Reports: ICC-ES reports for metal studs and tracks, indicating compliance with specified requirements and building code in effect.
- B. EQ Stud Submittals: Comply with the following if submitting EQ studs.
 - 1. Submit statement indicating that metal stud manufacturer has reviewed Project documents and that framing supplied conforms to specified requirements.
 - 2. Submit list of completed projects of similar project type and similar wall loading where specific product recommended has been used.
 - 3. Submit material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - 4. Evaluation Reports: ICC-ES reports for metal studs and tracks, indicating compliance with specified requirements and building code in effect.

1.3 INFORMATIONAL SUBMITTALS

- A. Shop Drawings: Submit in accordance with Section 013300, indicating light gauge framing system. Indicate by plan and elevation, stud framing (spacing, sizes, thicknesses and types), openings, bracing and blocking, fastening and anchorage, strapping, bridging, connection details and reinforcement.
- B. Calculations: Structural design for metal studs supporting ACOUST-A and ACOUST-B ceiling types shall be performed by a Professional Engineer, licensed in the State of Texas, indicating structural integrity of members, anchors, fasteners and connections to building structure, in accordance with specified criteria. Signed engineering calculations shall be submitted to Architect/Engineer upon request.
 - 1. Engineering Responsibility: Calculations shall be reviewed for stated design assumptions, general compliance to specified requirements, and forces imposed on structure. The accuracy of the design calculations shall be the sole responsibility of the Contractor's Professional Engineer.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with applicable reference standards unless otherwise indicated.

- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of Texas and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent
- C. Pre-Installation Conference: Convene a pre-installation meeting at the beginning of the project to review acoustically-rated construction requirements and to coordinate penetrations.
 - 1. Architect, Contractor, Owner's representative and each trade that may need to penetrate acoustically rated construction or will be involved in construction of acoustically rated partitions and related systems must attend.
 - 2. Review layouts and routing for potential penetrating items, discuss reducing or eliminating penetrating items by considering alternate routing, review construction requirements, details and specifications for acoustically rated construction.
 - 3. A follow-up meeting should be scheduled as needed.
 - 4. This meeting can occur in conjunction with a regular construction progress meeting.
 - 5. Publish meeting minutes highlighting topics discussed, actions items and decision made.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Design framing systems in accordance with American Iron and Steel Institute *AISI Standard S220-11 North American Specification for the Design of Cold-Formed Steel Framing - NonStructural Members*, except as otherwise shown or specified.
- B. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing metal framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.
- C. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- D. Shaft Wall Assemblies: Provide stud shaft wall system designed and tested by manufacturer to withstand lateral loading (air pressure) of 10 lbs per sq ft for maximum wall height required, and with deflection limited to 1/240 of partition height. (Refer to Section 092900 - Gypsum Board for shaft wall construction).
- E. Studs and Joists Supporting Acoustic Wall and Ceiling Assemblies:
 - 1. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design joists and walls supporting ceiling type ACOUST-A and ACOUST-B.
 - 2. Structural Performance Requirements: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated. Provide in accordance with applicable codes and standards to safely support dead load of attached materials and a lateral unbalanced pressure of 5 pounds per square foot without excessive stress or deflection with following stipulation:
 - a. Metal Studs: Provide metal framings depths indicated in the drawings. Revise spacing and thickness of studs and joists as required to meet the stated load and deflection criteria.
 - 1) Stud Spacing: As required to meeting loading requirements but not over 16 inches on center.
 - 2) Stud Thickness: 33 mil minimum base metal thickness or as required to meet stated load and deflection requirements.
 - 3) Design joists supporting ceilings for a maximum deflection of 1/240th the joist span.
 - b. Bridging: Provide as required for walls that will be sheathed on only one side.
 - c. Lateral Bracing: Provide as required to limit deflection of wall and ceiling assemblies to 1/400th the height of the assembly.
 - d. Attachment to structure: Provide attachments to primary building structure without overload or distortion of metal studs, attachment elements, or building structure.
 - 3. Design light gage framing members in accordance with AISI "Specifications for Design of Cold-Formed Steel Structural Members"

- F. Acoustic Shelf Assembly in Concert Hall: Provide metal framing capable of withstanding design loads within limits and under conditions indicated. Design in accordance with applicable codes and standards to safely support point loads of 200 lbs, without excessive stress or deflection.

2.2 FRAMING SYSTEMS

- A. Framing Members, General: Comply with ASTM C754 for conditions indicated.
 - 1. Provide framing type, weight, grade and finish of materials in accordance with Manufacturer's recommendations, except where otherwise required by governing regulations and applicable standards.
 - 2. Provide clips, fasteners, ties, reinforcing, flat strap and backing plates, stiffeners, shoes, tracks, hangers, brackets, anchors, accessories, and trim as recommended by Manufacturer for application indicated.
 - 3. Steel Sheet Components: ASTM C 645, fabricated of steel meeting requirements of ASTM A1003.
 - 4. Protective Coating (Minimum): ASTM A653, G40 hot-dip galvanized zinc coating or coating with G40 equivalent corrosion resistance.
 - 5. Recycled Content of Steel Products: Provide products with average recycled content of steel products such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- B. (MET STUD-1) Metal Studs and Runners: ASTM C645, and meeting or exceeding flexural strength, allowable bending moment, and screw pull-out of a standard 33 mil thick stud.
- C. (MET STUD-2) Shaft Wall Metal Studs: ASTM C645, steel C-H, C-T or I studs hot-dipped galvanized.
- D. Double-Runners: ASTM C645 slip-type head joint; inside runner with 2-inch-deep flanges, and outer runner sized to friction fit inside runner.
- E. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- F. Firestop Track: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
- G. Furring and Bracing Members: Provide members with protective galvanized coating, in depths as indicated.
 - 1. (MET FURG-1) Hat-Shaped, Rigid Furring Channels: ASTM C645; with minimum base-metal thickness of 0.033 inch
 - 2. (MET FURG-2) Z-Shaped Furring: With slotted or nonslotted web; with minimum base-metal thickness of 0.027 inch.
 - 3. (MET FURG-3) Cold-Rolled Steel Channels: Channel bridging, furring channels, carrying channels, steel channel stiffeners and braces; with minimum base-metal thickness of 0.054 inch.
 - 4. (MET FURG-4) Resilient Furring Channels: Asymmetrical steel sheet members, with face attached to single flange by a slotted leg (web), designed to reduce sound transmission.
- H. Galvanized Flat Strap and Backing Plate at Interior Stud Walls: Steel sheet for blocking and bracing in length and width indicated.
 - 1. Minimum Base-Metal Thicknesses:
 - a. Typical: 0.054 inch.
 - b. For Heavy Equipment and Grab Bar Locations: 0.068 inch.
 - 2. Where Wood Backing and Blocking is Indicated: Refer to Section 061000 for wood requirements. Provide fire-resistant treatment.

2.3 SUSPENSION SYSTEMS

- A. Components, General: Comply with ASTM C754 for conditions indicated.
- B. Furring Channels: As specified above.

- C. Tie Wire: ASTM A641, Class 1 zinc coating, soft temper, 0.0625 inch diameter wire, or double strand of 0.0475 inch diameter wire.
- D. Hanger Attachment Anchors in Concrete: Fabricated from corrosion-resistant materials with holes or loops for attaching hanger wires and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E488 by a qualified independent testing agency.
 - 1. Cast-in-place anchor, designed for attachment to concrete forms.
 - 2. Postinstalled, chemical anchor.
 - 3. Postinstalled, expansion anchor.
- E. Wire Hangers: ASTM A641, Class 1 zinc coating, soft temper, 0.162 inch diameter.
- F. Rod Hangers: ASTM A510, mild carbon steel; ASTM A153, hot-dip galvanized; 0.25 inch diameter.
- G. Manufactured Suspension Grid System for Ceilings and Soffits: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
 - 1. Products and Manufacturers:
 - a. Drywall Grid Systems by Armstrong World Industries, Inc.;
 - b. Drywall Grid Systems by Chicago Metallic Corporation;
 - c. Drywall Suspension System by USG Corporation.

2.4 AUXILIARY MATERIALS

- A. Fasteners: Galvanized steel fasteners of type, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates; and of length suitable for adequate penetration of substrate
- B. Asphalt Protection Strips: Strip of 15 lb. asphalt saturated felt at intersection of partitions and masonry walls.
- C. Isolation Strip: Provide one of the following:
 - 1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.
 - 2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.
- D. Acoustic Sealant: In accordance with Section 092900 - Gypsum Board.
- E. Sound and Vibration Control Components: See Section 134813 - Manufactured Sound & Vibration Control Components for resilient ceiling hangers, sway braces, wall isolators and similar sound and vibration control components (SVC) for acoustically-critical wall and ceiling assemblies.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:

1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

- A. Installation Standards: ASTM C 754.
 1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.
 2. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C 1063 that apply to framing installation.
 3. Gypsum Plaster Assemblies: Also comply with requirements in ASTM C 841 that apply to framing installation.
 4. Gypsum Veneer Plaster Assemblies: Also comply with requirements in ASTM C 844 that apply to framing installation.
- B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Install bracing at terminations in assemblies.
- C. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.
- D. Sound and Vibration Control Components (SVC): Install in accordance with manufacturer's instructions and as specified in Section 134833.
- E. Installation Tolerance: Install each steel framing and furring member so fastening surfaces vary not more than 1/8 inch from plane formed by faces of adjacent framing.

3.4 FRAMING INSTALLATION

- A. Framing Installation, General:
 1. Partition Heights: Extend partition stud system through suspended ceilings to structural support above, except where indicated to terminate at ceiling.
 - a. Provide additional bracing for partitions extending above ceiling where indicated.
 - b. Continue framing around ducts penetrating partitions above ceiling.
 2. Coordinate erection of studs with installation of service utilities. Align stud web openings. Coordinate installation of bucks, anchors, blocking, electrical and mechanical work which is to be placed in or behind partition framing. Allow such items to be installed after framing is complete.
 3. Isolate stud system from transfer of structural loading to system, both horizontally and vertically. Provide slip or cushioned joints to attain lateral support and avoid axial loading.
 4. Reinforce stud partitions and provide additional metal studs as indicated and required for installation of wall cabinets, wall mounted equipment, wall mounted mechanical and electrical fixtures, accessories, shelves and shelf standards. Provide thick steel plate to span minimum of 3 studs for installation of mirrors, toilet accessories or grab bars.
 5. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 6. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
- B. Runners and Tracks: Secure runner tracks to floor and ceiling construction, and to structure above ceilings as recommended by manufacturer, with fastener spacing not to exceed 24 inches o.c.
 1. Runner Tracks: Provide continuous track sized to match studs. Align runner tracks accurately to partition layout at both floor and ceiling. Provide fasteners at corners and ends of runner tracks.

2. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 3. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 4. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
- C. Metal Studs: Install studs vertically at 16 inches o.c., unless otherwise indicated, and not more than 2 inches from abutting construction, each side of openings, and at corners.
1. Install metal studs in floor and ceiling runner tracks. Secure studs to runners. Anchor light gauge screw-type partition studs to runner tracks by screwing opposite flanges top and bottom, except screw end studs to both tracks at both flanges.
 2. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
 3. Provide additional studs at exterior corners and 2 inches from inside corners, terminations of partitions, and both sides of control joints.
 4. Where partitions abut other construction, provide vertical runner track securely attached to construction.
 5. Use full length studs between runner tracks.
 6. Stud Splicing: Not permitted.
- D. Door Openings:
1. Frame door openings with vertical studs attached to each jamb of door frame.
 2. Provide additional studs 2 inches from jamb studs.
 3. Frame head of door with horizontal section of runner track attached to jamb studs and provide vertical studs cut to fit between head and ceiling tracks and attach to tracks.
 4. Provide 3/4 inch cold-rolled steel channel stiffener at 6 inches above door head extending at least 2 stud spaces beyond jamb studs, and attach to studs.
 5. Fit runners under and above openings, secure intermediate studs at spacing of wall studs. Brace stud framing system and make rigid.
- E. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
- F. Wall Furring Installation:
1. Erect wall furring directly attached to concrete block and concrete walls.
 2. Erect furring channels horizontally or vertically as indicated. Secure in place on alternate channel flanges at maximum 24 inches on center.
 3. Space furring channels maximum 24 inches on center, not more than 4 inches from floor and ceiling lines or abutting walls.
 4. Erect freestanding metal stud framing by means of adjustable furring brackets in accordance with manufacturer's directions.
 5. Splicing Members: Lap furring members 8 inches and runner channels 12 inches and wire-tie near each end of lap.

3.5 SHAFT WALL INSTALLATION

- A. Shaft Wall Installation, General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and ASTM C 754 other than stud-spacing requirements.
1. Anchor components to comply with ratings and performance requirements, and with governing regulations.
 2. Isolate shaft system from transfer of structural loading to system, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral support and avoid axial loading.
 3. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.

- B. Supplementary Framing: Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
- C. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
- D. Sprayed Fire-Resistive Materials: Coordinate gypsum board shaft system work with sprayed-on fireproofing of structure, so that both remain complete and undamaged. Patch or replace sprayed-on fireproofing removed or damaged during installation of shaft framing system.

3.6 SUSPENSION SYSTEM INSTALLATION

- A. Suspended Assemblies, General: ASTM C 754.
 - 1. Install ceiling framing independent of walls, columns, and above ceiling work.
 - 2. Do not bridge building expansion joints with support system.
 - 3. Installation Tolerances: Install steel framing components for suspended ceilings so members for panel attachment are level to within 1/8 inch in 12 feet measured lengthwise on each member transversely between parallel members.
- B. Hangers: Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 1. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 - a. Space hanger wires 48 inches o.c. along carrying channels and within 6 inches of ends of channel run. Anchor hanger wires to supporting structure. Do not attach hangers to metal deck tabs.
 - 2. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 - 3. Coordinate location of hangers with other work.
 - a. Do not attach hangers to steel roof deck.
 - b. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
 - c. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
 - d. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- C. Carrying Channels: Position channels at proper height and level, and secure with hanger wires.
 - 1. Space main carrying channels at maximum 48 inches on center, not more than 6 inches from perimeter walls.
 - 2. Lap splices minimum 12 inches and secure together 2 inches from each end of splice. Provide clearance between channels and abutting walls or partitions.
- D. Furring Channels: Comply with Gypsum Association GA-203.
 - 1. Place furring channels perpendicular to carrying channels at 16 inches on center not more than 6 inches from perimeter walls.
 - 2. Lap splices minimum 8 inches and secure together one inch from each end of splice.
 - 3. Provide clearance between furring and abutting walls or partitions. Secure furring to carrying channels with clips.
 - 4. Frame both sides of joints with furring and other supports.
 - 5. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Lateral Bracing: Laterally brace entire suspension system where required. Reinforce openings in ceiling suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing. Extend bracing minimum 24 inches past each end of openings.

3.7 GRID SUSPENSION SYSTEM INSTALLATION

- A. Suspension Grid Systems: Install in accordance with Manufacturer's instructions.
 - 1. Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces.
 - 2. Install main beams and cross tees at the on center spacing required for ceiling loading, and location of in-ceiling services.
 - 3. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
 - 4. Provide additional bracing as required by code.
- B. Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces.
- C. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

END OF SECTION

SECTION 092900 GYPSUM BOARD

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior gypsum board (GYP BD).
 - 2. Acoustic insulation (INSUL-40) and sealant.
 - 3. Gypsum assembly accessories (GYPA).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For accessories exposed to view in final installation.
 - 1. Trim Accessories: Full-size Sample in 12-inch- long length for each trim accessory indicated.

1.3 QUALITY ASSURANCE

- A. Pre-installation Conference: Convene a pre-installation meeting at the beginning of the project to review acoustically rated construction requirements and to coordinate penetrations.
 - 1. Architect, Contractor, Owner's representative and each trade that may need to penetrate acoustically rated construction or will be involved in construction of acoustically rated partitions and related systems must attend.
 - 2. Review layouts and routing for potential penetrating items, discuss reducing or eliminating penetrating items by considering alternate routing, review construction requirements, details and specifications for acoustically rated construction.
 - 3. A follow-up meeting should be scheduled as needed.
 - 4. his meeting can occur in conjunction with a regular construction progress meeting.
 - 5. Publish meeting minutes highlighting topics discussed, actions items and decision made.
- B. Mockups: Before beginning gypsum board installation scheduled to receive Level 5 Finish, install panel mockup, 48 inches wide by 96 inches tall, demonstrating at least 2 vertical and 2 horizontal joints, for Architects review of aesthetic effects workmanship.
 - 1. Apply or install final finish indicated, including painting, on exposed surfaces for review of mockups.
 - 2. Simulate finished lighting conditions for review of mockups.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage.
 - 1. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements and recommendations of gypsum board manufacturer, for environmental conditions before, during and after application of gypsum board.
 - 1. Cold Weather Protection: When ambient outdoor temperatures are below 55 degrees F maintain continuous, uniform, comfortable building working temperatures of not less than 55 degrees F for minimum period of 48 hours prior to, during and following application of gypsum board and joint treatment materials or bonding of adhesives.

2. Ventilation: Ventilate building spaces as required to remove water in excess of that required for drying of joint treatment material immediately after its application. Avoid drafts during dry, hot weather to prevent too rapid drying.
- B. Damaged Materials: Do not install panels that are wet, moisture damaged, and mold damaged.
1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
1. Fire-Resistance-Rated Assemblies: Indicated by design designations from UL's "Fire Resistance Directory." GA-600, "Fire Resistance Design Manual."
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
1. STC-Rated Assemblies: Indicated by design designations from GA-600, "Fire Resistance Design Manual."
- C. Shaft Wall Assemblies: Provide gypsum board shaft wall system design and tested by manufacturer to withstand lateral loading (air pressure) of 10 lbs per sq ft for maximum wall height required, and with deflection limited to 1/240.
1. Refer to Section 092216 - Non-Structural Metal Framing for shaft wall studs.

2.2 GYPSUM PANEL PRODUCTS

- A. Gypsum Board Products, General: In accordance with ASTM C 1396, and other specified requirements, and as follows:
1. Provide products that do not contain asbestos.
 2. Provide products in accordance with recommendations of GA 216 - Application and Finishing of Gypsum Panel Products.
 3. Provide products in maximum lengths and widths available to minimize joints and to correspond with support system indicated.
- B. (GYP BD) Gypsum Wallboard:
1. Acceptable Manufacturer's:
 - a. United States Gypsum.
 - b. National Gypsum Company.
 - c. Georgia-Pacific.
 - d. CertainTeed Corporation.
 - e. Temple-Inland.
- C. (GYP BD-1) Fire-Rated Board: Type X, 5/8 inch thick.
- D. (GYP BD-2) Moisture- and Mold-Resistant Board, Type X: With moisture- and mold-resistant paper surfaces and core. Provide mold and water-resistant gypsum board as required by local building code and as indicated
1. Thickness: 5/8 inch.
 2. Mold Resistance: ASTM D 3273, score of 10.
 3. Products and Manufacturers:
 - a. ProRoc M2Tech by CertainTeed.
 - b. ToughRock Mold-Guard by Georgia-Pacific.

- c. Sheetrock Mold Tough Firecode by United States Gypsum (USG).
- E. (GYP BD-21) Gypsum Shaft Liner: One inch thick shaft wall liner panel with moisture resistant paper facing. Square edges designed for installation into I, C-H, E, or H metal studs.
 - 1. Acceptable Manufacturer, Paper Faced: ASTM C1396.
 - a. United States Gypsum Company: SHEETROCK Brand Gypsum Liner Panels.
 - b. National Gypsum Company: Gold Bond Brand Fire-Shield Shaftliner.
 - c. G-P Gypsum Corp.: ToughRock Shaftliner.
 - 2. Acceptable Manufacturer, Moisture and Mold Resistant Paper Faced, ASTM D3273 score of 10:
 - a. United States Gypsum Company: SHEETROCK Brand Mold Tough Gypsum Liner Panels.
 - b. National Gypsum Company: Gold Bond Brand Fire-Shield Shaftliner XP.
 - c. CertainTeed Corp.: M2Tech Shaftliner Type X.
 - 3. Acceptable Manufacturer, Glass Mat Faced, ASTM C1658:
 - a. CertainTeed Corp.: GlasRock Shaftliner Type X.
 - b. G-P Gypsum Co.: DensGlass Shaftliner.
 - c. National Gypsum Company: eXP Shaftliner.
 - d. United States Gypsum Company: SHEETROCK Brand Glass-Mat Liner Panels.
- F. (GYP BD-35) Abuse-Resistant Mold-Resistant Board: ASTM C1396, ASTM D3272 score of 10 and ASTM C1629 for abuse resistance, manufactured to produce greater resistance to surface abrasion and indentation than standard gypsum panels.
 - 1. Products:
 - a. National Gypsum Company; Gold Bond Brand Hi-Abuse XP Gypsum Board.
 - b. United States Gypsum Co.; SHEETROCK Brand Mold Tough Abuse-Resistant Firecode X Panels.
 - c. CertainTeed Corp.: AirRenew Extreme Abuse Gypsum Board.
 - 2. ASTM C1629: Surface Abrasion Level 3, Indentation Level 1, Soft Body Impact Level 2.
 - 3. Core: 5/8 inch, Type X.
 - 4. Long Edges: Tapered.

2.3 TILE BACKER BOARDS

- A. General: Provide mold- and water-resistant tile backer boards specified.
 - 1. Mold Resistance Requirement: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
 - 2. Provide cementitious tile backer boards for tile installation at showers and other high-moisture areas, and as indicated on Drawings.
 - 3. Contractor's Option: Provide water-resistant gypsum backing boards in lieu of cementitious backer boards for applications other than showers or high-moisture areas, and as submitted to and accepted by Architect.
- B. (GYP BD-23) Cementitious Backer Board: ANSI A118.9 and ASTM C 1325, aggregated portland cement board, reinforced with imbedded glass-fiber mesh at both faces and at long edges.
 - 1. Core: 1/2 inch thick.
 - 2. Edges: Square and smooth, reinforced.
 - 3. Manufacturers and Products:
 - a. Custom Building Products; Wonderboard.
 - b. USG Corporation; DUROCK Cement Board.
 - c. National Gypsum Company; PermaBase Cement Board.
- C. Tile Backer Board Accessories:
 - 1. Fasteners: As recommended by backer board manufacturer.
 - 2. Tile-Setting Mortar for Joint Treatment: As specified with Section 093000 - Tiling.
 - 3. Joint Tape: Alkali-resistant fiberglass mesh tape, 2-inches wide, or as recommended by backer board manufacturer.
 - 4. Sealants: As specified in Section 079200 - Joint Sealants .

2.4 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475.
- B. Corner Trim, Edge Trim, Inside Corner Trim for Abuse Resistant Gypsum Board:
 - 1. Provide fully bonded paper faced and joint tape backed copolymer tapered plastic trim at abuse resistant gypsum board.
 - 2. Provide corner trim as recommended by manufacturer for each condition.
 - 3. Manufacturer: Drywall Systems International No-Coat.
- C. Joint Tape:
 - 1. Interior Gypsum Wallboard: Paper.
 - 2. Tile Backing Panels: As recommended by panel manufacturer.
- D. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
 - 1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
 - 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.
 - 3. Fill Coat: For second coat, use drying-type, all-purpose compound.
 - 4. Finish Coat: For third coat, use drying-type, all-purpose compound.
 - 5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound, or high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat compound to produce Level 5 finish.

2.5 ACOUSTICAL INSULATION AND SEALANT

- A. (INSUL-40) Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 - 1. Provide at interior partitions. Glass fiber insulation is not allowed at interior partitions.
 - 2. Density: 2.5 pcf
 - 3. Thickness: Same as stud depth or as indicated.
 - 4. Width of Batts: Center to center dimension of metal studs and full face to face at other voids.
 - 5. Manufacturers:
 - a. Fibrex Insulations Inc.
 - b. Owens Corning; SAFB-MW
 - c. Roxul Inc.; AFB
 - d. USG; Thermafiber.
 - e. Rockwool
- B. Acoustical Sealant : Provide one of the following unless otherwise required to meet requirements of referenced STC rating. Provide low emitting sealants meeting SCQAMD rules.
 - 1. Acoustical Sealant for Exposed and Concealed Joints: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C 834 and ASTM C 919 that effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
 - a. Pecora AC-20 FTR Acoustical and Insulation Sealant.
 - b. United States Gypsum Co. SHEETROCK Acoustical Sealant.
 - c. Hilti Incorporated CP 506 Acoustical Sealant
 - 2. Acoustical Sealant for Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission.
 - a. Non-hardening polyurethane type, ASTM C920, Type M, Class 25, Grade NS: Tremco Dymeric 511; or approved equal.
 - b. Non-hardening polysulphide type, ASTM C920, one-part: Pecora GC-9; or approved equal.

- c. Non-hardening silicone type, ASTM C920, Type S, Class 25, Grade NS, one-part, low modulus type: GE Silpruf, Dow Corning 790, Tremco Spectrum 1, Pecora 864, or approved equal.
- d. Fire-Rated Joint Sealant: (FRJS) as specified in Section 078443 - Joint Firestopping.
- 3. Provide moldable putty type products acceptable to meet or exceed STC rating at service boxes.
- C. Closed-Cell Tape Sponge Neoprene: Press-on Products, No. P-8200 or P-8100, or approved equal.
- D. Foam Backer Rod: Closed cell polyethylene, ASTM C962: by ITP, Nomeco, or approved equal.

2.6 VAPOR RETARDERS AND ACCESSORIES

- A. (VR-1) Polyethylene Vapor Retarder: ASTM D 4397, 6 mils thick, with maximum permeance rating of 0.13 perm.
- B. Seam Tape at Vapor Retarders:
 - 1. Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
 - 2. Minimum: 2 inches wide.

2.7 ACCESSORIES

- A. (GYPA) Extruded Aluminum Profile Trim, Reveals, and Moldings: Alloy 6063-T5, ASTM B 221; Finish: field-painted to match adjacent wall. Provide corrosion-resistant primer compatible with joint compound and finish materials specified.
 - 1. Profile Schedule:
 - a. (GYPA-1) 'J' Molding: JDM Series by Fry Reglet.
 - b. (GYPA-2) Corner Trim: DMCT Series by Fry Reglet.
 - c. (GYPA-3) 'Z' Reveal: DRMZ Series by Fry Reglet.
 - d. (GYPA-4) 'F' Reveal: DRMF or FDM Series by Fry Reglet.
 - e. (GYPA-5) Wall Molding End Closure: DMEC-4625 by Fry Reglet.
 - 2. Manufacturers: Provide specified products or equivalent products by one of the following:
 - a. Gordon Incorporated
 - b. Fry Reglet Corporation
 - c. Pittcon Industries
- B. Fasteners and Anchorages: GA 216, type and size as recommended by wallboard manufacturer.
- C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
 - 1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
 - 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- D. Trim Accessories: ASTM C 1047, galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized steel sheet.
- E. Control Joints: Dietrich Zinc Control Joint No. 093
- F. Joint Treatment: USG Perf-A-Tape joint system.
- G. Adhesive: USG Durabond, as recommended by wallboard manufacturer for wood framing.
- H. Laminating Adhesive: Joint compound or adhesive as recommended by wallboard manufacturer for laminating gypsum board face layer to gypsum board base layer.
- I. Joint Sealant: As specified in Section 079000 - Joint Protection.

PART 3 EXECUTION

3.1 GYPSUM BOARD INSTALLATION

- A. Install and finish gypsum board and accessories in accordance with manufacturer's printed instructions and comply with recommendations of GA 216 and ASTM C840, including appendixes. Verify control joint locations at walls and ceilings with Architect.
- B. Minimize butt joints by using gypsum board of maximum length possible. If cut butt joints are unavoidable, locate end butt joints as far from center of walls or ceilings as possible and stagger not less than 12 inches in alternate courses of board.
- C. Do not install imperfect, damaged, damp or wet gypsum board.
- D. Butt boards together for light contact at edges or ends with not more than 1/16 inch open space between boards. Do not force into place.
- E. Locate edges and joints over supports or back-blocking except in horizontal applications. Position gypsum board so that both tapered edge joints and cut edges abut. Do not place tapered edges against cut edges or ends. Stagger vertical joints over different studs on opposite sides of partition/walls.
 - 1. Form curved surfaces by carefully bending and fastening board to smooth even curve, free of flat or distorted areas and other imperfections. Comply with manufacturer's instructions for dampening of sheets or scoring of back face, if required to form to radius shown.
 - 2. Hold gypsum board 1/4 inch above floor at each type of partition.
- F. Install solid and semisolid drywall partitions made-up of coreboard or gypsum board studs with face courses of exposed gypsum board, laminated with both adhesive and screws.
- G. Isolate gypsum surfaces with control joints or other stress relief where:
 - 1. Partition or furring abuts structural element (except floor) or dissimilar wall or ceiling.
 - 2. Ceiling abuts structural element, dissimilar wall or partition or other vertical penetration.
 - 3. Construction changes within plane of partition or ceiling.
 - 4. Partition or furring run exceeds 30 feet.
 - 5. Ceiling dimensions exceed 30 feet in either direction.
 - 6. Wings of "L", "U" and "T" shaped ceiling areas are joined.
 - 7. Expansion joints occur in exterior wall if expansion joints are not used.
 - 8. Where control joint is near a door opening, locate and align control joint with edge of door frame.
 - a. Ceiling height door frames may be used as control joints.
 - b. Where door frames are less than ceiling height, extend control joints to ceiling from both corners
 - 9. Review location of joints with Architect.
- H. Cover both faces of steel stud partition framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect open concrete coffers, concrete joists, and other structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by coffers, joists, and other structural members; allow 1/4- to 3/8-inch- wide joints to install sealant.
- I. Provide perimeter isolation where non-load-bearing partitions abut structural decks or ceilings, or vertical structural elements. Allow not less than 1/4 inch, or more than 1/2 inch gap between gypsum and structure. Finish edges of face layer with casing bead. Seal space between casing bead and structure with continuous acoustical sealant bead. Do not attach board directly to tracks.

- J. Cutting, Fitting and Trimming: Accurately measure and precut gypsum drywall units prior to installation. Make cuts from face side by scoring and snapping away from face side or by sawing. Completely cut paper on back face; do not break paper by tearing. Maintain close tolerances for accurate fit at joints between sheets and at framed openings, and allow for covering of edges of cut-outs with plates and escutcheons. Cut edges smooth as required for neat and accurate fit.
- K. Begin fastening from center portion of sheet and work toward edges and ends. Ensure contact of drywall with supports by applying pressure on surface adjacent to fastener being driven. Do not locate fasteners closer than 3/8 inch from edges or ends of sheets. Drive with shank approximately perpendicular to drywall surface.
- L. Drive screws with power screwdriver recommended by drywall manufacturer. Do not hammer drive screws. Set screw heads slightly below surface of drywall, but do not break or strip paper face around screw. Stagger screws on edges and ends of adjacent sheets.
- M. For fire-rated Walls: Fasten to metal framing and furring with screws. Comply with drywall manufacturer's instructions and UL requirements for fastening, but do not exceed 8 inches on center at perimeter and 12 inches on center spacing at the field. Space fasteners not less than 1/4 inch from edges and ends of gypsum drywall.
 - 1. For Non-rated Walls: Fasten perimeter and field at 12 inches on center.
 - 2. For multilayer fire-rated walls: Comply with UL requirements.
 - 3. For Acoustical Walls: Comply with fire-rated wall UL requirements.
- N. Multilayer Application on Partitions/Walls: Apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 - 1. Z-Furring Members: Apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
- O. Multilayer Fastening Methods: Fasten base layers and face layers separately to supports with screws.

3.2 ACOUSTICALLY RATED PARTITIONS

- A. Where acoustically rated partitions are shown, provide complete air tight, acoustical rated assembly meeting or exceeding requirements of Sound Transmission Class (STC) ratings per manufacturer's requirements and GA 600 for sound control requirements.
- B. Do not penetrate acoustically rated partitions without authorization from Architect.
- C. Stagger joints between layers of gypsum board and install gypsum board to be continuous between adjacent rooms.
- D. Fit gypsum board tightly around structural elements.
- E. Install continuous acoustical sealant at:
 - 1. Entire perimeter of wall on each side of top, bottom and side of walls.
 - 2. Intersection at change of plane and change of material.
 - 3. Gaps between service outlets and gypsum board
 - 4. Each penetration.
 - 5. Structural elements.
 - 6. All penetrations of partition, wall, and floor construction by ductwork, conduit, piping, or structure.
 - 7. All termination of partitions enclosing Noise Critical Spaces to abutting construction (e.g. partitions, structure, etc.)
 - 8. Both sides of door frames to abutting construction where doors are scheduled to have acoustical seals.
 - 9. Both sides of window frames to adjacent construction.
 - 10. Perimeter of and penetrations through sound isolating ceilings, roof systems, and floor systems.

- F. Seal entire back of service boxes.
- G. Seal gaps around penetrations as follows:
 1. One inch or less gap filled tightly with batt insulation and apply sealant.
 2. One inch or greater gap fill with acoustical insulation and moldable putty.
- H. Backer Rod shall be used in all joints, product to be constructed of closed cell foam, or appropriate resilient material for sealant. Dimension shall be minimum 30% greater than joint width, unless otherwise indicated on details.

3.3 INSTALLATION OF TILE BACKER BOARD

- A. Comply with manufacturer's written instructions for installation and finishing.
 1. Cementitious Backer Boards: ANSI A108.11.
 2. Install backerboard, leaving a 1/8-inch to 3/16-inch gap at all joints and corners. Stagger board joints with those of adjacent rows.
 3. Fasten backerboard every 8-inches o.c. along framing members.
 4. Fill gaps solid with latex Portland cement mortar and embed 2-inch alkali resistant fiberglass tape.
- B. Tape joints in backer board as recommended by board manufacturer. Seal ends, cut-edges and penetrations of each piece with tile setting mortar or water-resistant adhesive, and then immediately imbed tape and level joints.
- C. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.4 VAPOR RETARDER INSTALLATION

- A. General: Extend vapor retarder to extremities of areas to be protected from vapor transmission. Secure in place with adhesives or other anchorage system as indicated.
- B. At Open Framing: Seal vertical joints in vapor retarders over framing by lapping not less than two wall studs. Fasten vapor retarders to framing at top, end, and bottom edges; at perimeter of wall openings; and at lap joints. Space fasteners 16 inches o.c.
- C. Seal overlapping joints in vapor retarders with adhesives or vapor-retarder tape according to vapor-retarder manufacturer's instructions.
 1. Seal butt joints and fastener penetrations with vapor-retarder tape.
 2. Locate all joints over framing members or other solid substrates.
- D. Firmly attach vapor retarders to substrates with mechanical fasteners or adhesives as recommended by vapor-retarder manufacturer.
- E. Seal end laps and terminations after each day's work with trowelled bead of mastic. Lap sides 2-1/2 inches minimum and ends 6 inches.
- F. Seal ends and edges to each other and to adjoining surfaces with uniform fillet bead of sealant. Extend vapor retarder to perimeter of windows and door frames and other items interrupting plane of membrane.
 1. Imbed vapor retarder in sealant and tape edge to window or door frame.
- G. Apply heavy pressure to membrane at top and bottom terminations with back of utility knife to assure positive adhesion at edge.
 1. Roll membrane firmly and completely, immediately after each sheet is applied.
- H. Lap joints on sloped substrate in direction of drainage.
- I. Work out air bubbles, wrinkles, and fishmouths. Firmly press sheet into place without stretching.
- J. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarder.
- K. After installation protect membrane from damage.

- L. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarder.

3.5 ACCESSORIES INSTALLATION

- A. Acoustical Insulation: Install blankets in accordance with manufacturer's printed instructions, with tight joints in blanket units. Use tape, adhesive or staples to hold blankets in place.
 - 1. Place acoustical insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions and tight to items passing through partitions.
- B. Drywall Sealant: Seal perimeter of sound-rated partitions by filling open space between drywall and floor or ceiling construction with continuous bead of sealant. Fill open spaces between drywall and fixtures, cabinets and other flush or penetrating items with continuous bead of sealant. Seal sides and back of electrical boxes to completely close up openings and joints. Seal perimeter of wallboard shaft wall where it abuts other work.
 - 1. Apply joint sealant in accordance with Section 079000 - Joint Protection.
- C. Adhesive Application: Use adhesive recommended by manufacturer for type of substrate indicated. Prepare substrate and laminate wallboard in accordance with manufacturer's printed instructions. Provide temporary fasteners or bracing as recommended until adhesive sets.
- D. Reinforce external corners of drywall with metal corner bead. Securely fasten metal corner beads, edge trim casing beads and control joints.

3.6 SHAFT WALL INSTALLATION

- A. Anchor and fasten materials and components to comply with ratings and performance requirements, and to comply with governing regulations.
- B. Coordinate gypsum board shaft system work with sprayed-on fireproofing of structure, so that both remain complete and undamaged. Patch or replace sprayed-on fireproofing removed or damaged during installation of shaft system.
- C. Seal perimeter of each section of gypsum board shaft work where it abuts other work. Install second bead of acoustical sealant in location and manner which will prevent dislocation by air pressure differential between shaft and external spaces. Seal joints and penetrations in work; comply with manufacturer's instructions.

3.7 FINISHING

- A. Finish exposed drywall surfaces with joints, corners and exposed edges reinforced or trimmed and with joints, fastener heads, trim accessory flanges and surface defects filled with joint compound in accordance with drywall manufacturer's recommendations for smooth, flush surface. Form true, level or plumb lines, without joints, fastener heads, flanges of trim accessories or defects visible after application of field-applied decoration. Exposed metal trim (not filled) will not be acceptable.
- B. Use joint tape to reinforce joints formed by tapered edges or butt ends of drywall units and at interior corners and angles. Set tape in joint compound and apply skim coat over tape in one application. Do not use topping or finishing compounds for setting of tapes.
- C. At field-built demountable partitions, apply filament tape to joints prior to application of joint compound, leaving a tail of unfastened tape approximately 1/2 inch either at bottom of partition (to be concealed by base) or above finished ceiling.
- D. Apply joint compound to joint. Apply joint compound to fill holes left from removal of screws at intermediate studs. Finish gypsum drywall thereafter, including sanding of final coat, in accordance with ASTM C840.
- E. Where open spaces of more than 1/16 inch width occur between abutting drywall units, except at control joints, prefill joints with joint compound and allow prefill to dry before application of joint tape.
- F. Finish Levels of Joints in Interior Gypsum Board Work:

1. Level 0: No taping, finishing, or accessories required.
 - a. Use above suspended ceilings and within other concealed spaces, unless assembly is fire rated, sound rated, sound or smoke controlled, or unless space serves as air plenum.
 2. Level 1: At joints and interior angles embed tape in joint compound. Leave surface free of excess joint compound. Tool marks and ridges are acceptable.
 3. Level 2: At joints and interior angles embed tape in joint compound with one separate coat of joint compound applied over joints, angles, fastener heads, and accessories.
 - a. Use for mold and water resistant gypsum board indicated for use as a substrate for ceramic tile.
 - b. Use for gypsum board indicated for use as a substrate for wood paneling or acoustical panels.
 - c. Use above suspended ceilings and within other concealed spaces if gypsum board assembly is fire rated, sound rated, sound or smoke controlled, or space serves as air plenum.
 4. Level 3: At joints and interior angles embed tape in joint compound with 2 separate coats of joint compound applied over joints, angles, fastener heads, and accessories. Apply joint compound smooth and free of tool marks and ridges.
 - a. Use where heavy grade wall covering is final decoration.
 - b. Use where gypsum board is base for acoustical ceiling tile.
 5. Level 4: At joints and interior angles embed tape in joint compound with 3 separate coats of joint compound applied over joints, angles, fastener heads, and accessories. Apply joint compound smooth and free of tool marks and ridges.
 - a. Use for all locations, except those indicated for other finish levels.
 6. Level 5: At joints and interior angles embed tape in joint compound with 3 separate coats of joint compound applied over joints, angles, fastener heads, and accessories. Apply thin skim coat, as specified in Joint Treatment Materials Article above, to entire surface. Leave surface smooth and free of tool marks and ridges.
 - a. Use where semi-gloss or gloss finish coatings are final decoration.
 - b. Use for 2 story walls with direct natural day lighting (Lobbies, Entries, Rooms with large day lighting and long walls perpendicular to windows).
 - c. Use at ceilings in Lobbies, assembly areas with direct natural day lighting.
 - d. Use where skim coat finish is indicated.
- G. Cementitious Backer Units: Finish according to manufacturer's written instructions.
- H. Glass-Mat, Water-Resistant Backing Panels: Finish according to manufacturer's written instructions.

3.8 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 093000 TILING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Tile Materials.
 - 2. Mortar Materials.
 - 3. Grout Materials.
 - 4. Waterproofing and Crack Isolation Membrane
 - 5. Tiling Accessories.
 - 6. Installation Procedures.

1.2 ACTION SUBMITTALS

- A. Shop Drawings: Indicate tile patterns and accessory locations; width and locations of control, isolation, contraction and expansion joints in tile surface.
- B. Samples: For color selection and appearance acceptance.
 - 1. Full-size units of each type and size of tile and for each color and finish.
 - 2. Grout color samples..
 - 3. Full-size units of each type of ceramic tile accessory (CTA). Provide linear trim and profiles, 6 inches long.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: For each tile-setting and -grouting products.

1.4 CLOSEOUT SUBMITTALS

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Engage installer who has minimum 5 years' experience and who has completed tile installations similar in material, design, and extent to that indicated for this Project and with record of successful in-service performance.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.
- E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.7 PROJECT CONDITIONS

- A. Provide sufficient heat and ventilation in areas where work of this section is being performed, so as to allow ceramic tile to properly set. Take precautionary measures necessary to ensure that excessive temperature changes do not occur.
- B. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 PRODUCTS

2.1 TILE MATERIALS

- A. Source Limitations for Tile: Obtain tile of each type and color or finish from one source or producer, and from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- B. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Ceramic Tile: Standard Grade complying with ANSI A137.1. All-purpose porcelain type units with manufacturer's standard back-mounting.
 - 1. Refer to Material Identification List for product selections and product information such as colors, finishes, and accessories. General product type and materials information as specified herein.
 - a. (CTF) Ceramic Floor Tiles.
 - b. (CTW) Ceramic Wall Tiles.
 - c. (CTB) Ceramic Wall Base Tiles.
 - 2. Tile Trim and Special Shapes: Rounded external corners and trim shapes at head, jamb and sills of openings.
 - 3. Slip-Resistant Units: Abrasive-surfaced tile with aluminum oxide abrasive uniformly distributed on face of tile to achieve minimum coefficient of friction of 0.60, ASTM C1028. Provide where indicated.

2.2 SETTING MATERIALS

- A. Tile-Setting System Manufacturer: Provide complete tile-setting system consisting of materials by a single Manufacturer. Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer. Provide tile setting system by one of the following:
 - 1. Custom Building Products.
 - 2. LATICRETE International Inc..
 - 3. MAPEI Corporation.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.
- C. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
 - 1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils thick.
 - 2. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
 - 3. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.

- D. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4, consisting of the following:
 - 1. Prepackaged dry-mortar mix containing dry, redispersible, ethylene vinyl acetate additive to which only water must be added at Project site.
 - 2. Prepackaged dry-mortar mix combined with styrene-butadiene-rubber liquid-latex additive.
 - a. For wall applications, provide nonsagging mortar that complies with Paragraph F-4.6.1 in addition to the other requirements in ANSI A118.4.
 - 3. Flexible Latex-Cement Mortar: Add flexible latex additive to dry mortar mix as recommended by porcelain tile manufacturer.
- E. Polymer-Modified Cement Grout: ANSI A118.7. Provide Either ethylene vinyl acetate, in dry, redispersible form, prepackaged with other dry ingredients; or acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix. Color as indicated.
 - 1. Color: As selected by Architect from manufacturer's full range to match tile.
- F. Epoxy Grout Materials:
 - 1. Water-Cleanable, Tile-Setting and -Grouting Epoxy: ANSI A118.3.
 - 2. Chemical-Resistant, Water-Cleanable, Tile-Setting and -Grouting Epoxy: ANSI A118.3.
 - 3. Color: As selected by Architect from manufacturer's full range to match tile.
- G. Grout Sealer: Provide grout sealer compatible with grout materials as recommended by grout manufacturer.
- H. Sanded Polymer-Modified Portland Cement Grout: ANSI A118.6 and ANSI 118.7; and meeting the requirements of ISO 13007 Classification CG2WAF.
 - 1. Product and Manufacturer: Ultracolor Plus by Mapei.
 - 2. Use sanded polymer-modified cement grout for setting (CTF-1), (CTF-2), and (CFT-3).
 - 3. Color: Custom colors as selected by Architect.

2.3 ACCESSORIES

- A. (CTA) Ceramic Tile Trim and Transition Strips:
 - 1. Basis of Design: As indicated on Material Identification List.
- B. (CTA-10) Fluid-Applied Waterproofing and Crack Isolation Membrane System: Provide continuous and seamless waterproofing and crack isolation system, including premixed or single-component self-curing liquid-latex rubber or elastomeric-polymer membrane; complying with ANSI A118.10 for waterproofing and ANSI 118.12 for crack isolation; ASTM C627 Extra Heavy Service rating; IAPMO-approved as shower pan liner; and recommended by the manufacturer for the application indicated.
 - 1. Products and Manufacturers:
 - a. Redgard Waterproofing and Crack Prevention Membrane by Custom Building Products
 - b. Hydro Ban by Laticrete International, Inc..
 - c. Mapelastic AquaDefense by Mapei Corporation.
 - 2. Pre-treat control joints and cracks in accordance with membrane manufacturer's instructions.
 - 3. Provide reinforcement and accessories as recommended by manufacturer for complete system.
- C. Solid Polymer Thresholds: Made from homogeneous solid sheets of filled plastic resin complying with material and performance requirements in ANSI Z124.3, for Type 5 or Type 6, without pre-coated finish. Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
 - 1. Basis of Design: As indicated on Material Identification List.
- D. Sealant: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Section 079000 - Joint Sealants.
 - 1. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
 - 3. Provide sanded elastomeric joints to match sanded grout joints.
- E. Sealant and Backer Rod: As specified in Section 079000 - Joint Protection.

2.4 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
 1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 2. Verify that concrete substrates for tile floors comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare surfaces to receive tile as recommended by mortar or adhesive manufacturer; and in compliance with TCA's "Handbook for Ceramic Tile Installation".
 1. Roughen surfaces that are glossy or which have loose surface material by sanding or scarifying.
 2. Remove surface material that is not compatible with adhesive.
 3. Use primer when recommended by adhesive manufacturer.
 4. Clean thoroughly to remove oil, dirt and dust.
- B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot toward drains.

3.3 TILE INSTALLATION

- A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
 1. Achieve 100 percent bond in tile work. Back butter units 12 inch by 12 inch and larger.
- B. Extend tile work into recesses and under equipment and fixtures, to form complete covering without interruptions. Terminate work neatly at obstructions, edges and corners without disruption of pattern or joint alignment.
- C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Grind cut edges of tile abutting trim, finish or built-in items for straight, aligned joints.
 1. Fit tile closely to electrical outlets, piping and fixtures so that plates, collars or covers overlap tile.

- D. Perimeter: Provide for expansion at perimeter with non-grouted and non-sealed perimeter expansion joint.
- E. Expansion Joints: Locate expansion joints and other sealant filled joints, including control, contraction and isolation joints, where indicated, or if not indicated, at spacings and locations recommended in TCA Handbook for Ceramic Tile Installation, and approved by Architect.
 - 1. Width of expansion joints in tile to match width of aligned joints in substrate slab.
- F. Grout Jointing Pattern: Unless otherwise shown, lay ceramic tile in grid pattern. Align joints when adjoining tiles on floor, base, walls and trim are same size. Layout tile work and center tile fields both directions in each space or on each wall area.
 - 1. Adjust to minimize tile cutting. Provide uniform joint width.
 - 2. Provide 1/8 inch wide joints.
- G. Apply grout sealer as recommended by sealer and grout material manufacturers.

3.4 INSTALLED WORK

- A. Clean grout and setting materials from face of tile while materials are workable. Leave tile face clean and free of foreign matter.
- B. Unglazed tile may be cleaned with acid solutions only when permitted by tile and grout manufacturer's printed instructions, but not sooner than 10 days after installation.
- C. Leave finished installation clean and free of cracked, chipped, broken, unbonded, or otherwise defective tile work.
- D. Protect installed tile work with heavy covering during construction period to prevent damage and wear. Setting materials for large format tile require longer curing time.

END OF SECTION

SECTION 095100 ACOUSTICAL CEILINGS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Acoustical panel ceilings and exposed suspension system (ACT).
 - 2. Acoustical panel perimeter trim (ACTR).

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
 - 1. Ceiling suspension members.
 - 2. Method of attaching hangers to building structure.
 - 3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 - 4. Minimum Drawing Scale: 1/8 inch equals 1 foot.
- C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
 - 1. Acoustical Panel: Set of manufacturers standard size samples of each type, color, pattern, and texture.
 - 2. Exposed Suspension System Members, Moldings, and Trim: Set of 12 inch long samples of each type, finish, and color.

1.3 QUALITY ASSURANCE

- A. Ceilings and Interior Systems Contractors Association (CISCA): Acoustical Ceilings, Use and Practice.
- B. Installer's Qualifications: Firm experienced in application or installation of systems similar in complexity to those required for this Project, including specific requirements indicated.
 - 1. Acceptable to or licensed by manufacturer
- C. Coordination of Work: Coordinate layout and installation of acoustical ceiling units and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system components and partition system.
- D. Source Limitations for Ceiling Units and Suspension Systems: Obtain each acoustical ceiling panel and suspension system from one source with resources to provide products of consistent quality in appearance and physical properties without delaying Work.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.5 ENVIRONMENTAL CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
 - 1. Install ceiling tile after carpeting and other interior materials that off-gas has been installed and odors and VOC fumes have dissipated.
 - 2. Permit wet work to dry prior to commencement of installation.
- B. Maintain uniform temperatures of minimum 60 degrees F and humidity as recommended by acoustical ceiling manufacturer prior to, during and after installation.

1.6 COORDINATION

- A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.7 EXTRA MATERIALS

- A. Provide extra one percent of each type of acoustical ceiling unit to Owner for replacement.

PART 2 PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers: Provide specified Basis of Design or approved equivalent product by one of the following:
 - 1. Armstrong World Industries, Inc.;
 - 2. USG Interiors, Inc.;
 - 3. Ecophon CertainTeed, Inc.;
 - 4. Chicago Metallic Corporation;
- B. (ACT) Basis-of-Design: As indicated on the Material Identification List.

2.2 SUSPENSION SYSTEM

- A. Metal Suspension System: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.
 - 1. Provide manufacturer's standard aluminum grid system where indicated on Room Finish Schedule.
 - 2. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
 - 3. Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.
 - 4. Double-Web, Exposed Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than G30 coating designation, with prefinished metal caps on flanges.
 - a. Structural Classification: Intermediate-duty system.
 - b. Face Design: Flat, flush.
 - c. Cap Material: Steel cold-rolled sheet.
 - d. Face Width: As indicated on Material Identification list.
 - 5. Wire for Hangers and Ties: ASTM A 641, Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least time three design load, but not less than 12 gauge.
- B. Accessories: Provide stabilizer bars, furring clips, splices, edge moldings and hold down clips as required to complete and complement suspended ceiling grid system.

1. Flexible Moldings: Flexmold steel and vinyl flex moldings by Kenebeck, white semi-gloss finish.
 2. Attachment Devices: Size for five times design load indicated in ASTM C 635, Table 1, Direct Hung unless otherwise indicated.
 3. Edge Moldings and Trim: Provide Roll-formed sheet metal type in profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations, [formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners, and complying with seismic design requirements.
 4. Touch-up Paint: Manufacturer's touch-up paint for field cut tegular or other reveal edge tiles.
- C. Carrying Channels and Hangers: Primed steel, size and type to suit application and to rigidly secure complete acoustic unit ceiling system, with maximum deflection of 1/360.
- D. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

2.3 METAL EDGE MOLDINGS AND TRIM

- A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
1. (ACTR-1) Basis of Design: Axiom by Armstrong. See Material Identification List for more information.
 2. Provide manufacturer's edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners unless otherwise indicated.
 3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

2.4 ACOUSTICAL CEILING PANELS

- A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance, unless otherwise indicated.
1. Recycled Content: Provide acoustical panels with recycled content such that postconsumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 40 percent by weight.
 2. Surface-Burning Characteristics: Provide acoustical panels with surface-burning characteristics complying with ASTM E 1264 for Class A materials with flame spread of 0-25, as determined by testing identical products per ASTM E 84.
- B. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and structural framing to which ceiling system attaches or abuts, with Installer present, for compliance with requirements specified in this and other sections that affect installation and anchorage of ceiling system. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less-than-half-width units at borders, and comply with reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C636 and seismic requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
 - 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, post-installed mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 - 6. Do not attach hangers to steel deck tabs.
 - 7. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 - a. Provide alternate framing method if structural members are spaced too far apart.
 - 8. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
- C. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
 - 1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 - 2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
 - 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- D. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- E. Tolerances: Erect ceiling system level within 1/8 inch in 12'-0" in any direction.

3.4 ACOUSTICAL PANEL INSTALLATION

- A. Fit acoustic lay-in panels in place, free from damaged edges or other defects detrimental to appearance and function. Lay directional patterned tile one way with pattern parallel to shortest room axis.
 - 1. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
 - 2. Field recess units with tegular or reveal edge at border or ceiling edge.
 - 3. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
- B. Install lay-in panels level, in uniform plane and free from twist, warp and dents with straight joints, edges in alignment, and edges and corners flush.

3.5 ADJUST AND CLEAN

- A. Adjust sags or twists that develop in ceiling systems and replace part which is damaged or faulty.

- B. Clean exposed surfaces of acoustical ceilings, including trim, edge moldings, and suspension members; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage.
 - 1. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 096001 FLOORING TRANSITION STRIPS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Transition strips (TRS).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Initial Selection: For each type of transition strip indicated.
- C. Product Schedule & Layout: Use same designations indicated on Drawings.

1.3 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Resilient Transition Strips: Furnish not less than 10 percent of total length installed, for each profile type and color.

1.4 COORDINATION & FIELD CONDITIONS

- A. Coordinate installation of floor transitions strips with installation of associated floor finishes. Install flooring after other finishing operations, including painting, have been completed. Close spaces to traffic during installation.

PART 2 PRODUCTS

2.1 FLOORING TRANSITION STRIPS

- A. (TRS) Flooring Transition Strips: As indicated on Material Identification List.

2.2 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by flooring manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by product manufacturers to suit flooring and substrate conditions indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient sheet flooring.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

END OF SECTION

SECTION 096400 WOOD FLOORING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Field-finished hardwood strip flooring systems (WDF-1) and (WDF-2).

1.2 ACTION SUBMITTALS

- A. Product Data: For each material and floor system component.
- B. Shop Drawings: For each type of floor assembly and accessory. Include plans, sections, and attachment details. Include expansion provisions and trim details.
- C. Samples: Approximately 18 inches by 18 inches, constructed of hardwood strips of specified type, thickness, width and finish, demonstrating the full range of expected color and texture variations.
 - 1. Coordinate with Section 064000 for submittal of samples for concurrent review of materials by Architect.
 - 2. Flooring System Cutaway Sample: For (WDF), 12 inches square (minimum), including all flooring system components.

1.3 INFORMATIONAL SUBMITTALS

- A. Site Conditions Reports: Relative humidity and temperature readings taken before, during and after installation. Include readings taken in areas where woodwork is stored on site prior to installation.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Hardwood Strips: Equal to 2 percent of amount installed for each type, color, and finish of wood flooring indicated.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced Installer who has completed wood flooring installations similar in material, design, and extent to that indicated for this Project and whose work has resulted in installations with a record of successful in-service performance.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 FIELD CONDITIONS

- A. Delivery, Handling and Storage: Protect woodwork items from damage, dust and dirt. Do not deliver, receive, store or install woodwork materials until storage and installation areas are conditioned in accordance with requirements and recommendations of NAAWS.
- B. Environmental Requirements: Use permanent HVAC system or provide temporary systems and controls to establish and maintain site conditions complying with specified requirements.
 - 1. Do not deliver, receive, store or install architectural woodwork until building is enclosed, wet work is complete, and temporary or permanent HVAC systems are operating in areas where woodwork is stored and installed and are maintaining temperature and relative humidity at occupancy levels and within the following ranges during the remainder of the construction phase:
 - a. Temperature Range: Between 60 and 90 deg F.

- b. Relative Humidity Range: Between 45 and 55 percent.
- 2. Fluctuation of Temperature and Relative Humidity Levels:
 - a. Do not exceed 15 percent fluctuation over any portion of a 7-day period and not to exceed 25 percent fluctuation over any portion of a 28-day period.
 - b. Maintain operation and control of heating, cooling, humidity, ventilation, temporary barriers and similar facilities continuously on a 24-hour basis to avoid rapidly fluctuating ambient levels.
- 3. Site Conditions Report: Monitor temperature and relative humidity in areas where woodwork is stored and installed at Project site. Record temperature and relative humidity prior to delivery, throughout storage period and installation, and after installation until time of Substantial Completion. Report recorded values in accordance with Submittals requirements.

PART 2 PRODUCTS

2.1 WOOD FLOORING, GENERAL

- A. Source Limitations: For wood flooring, obtain each species, grade, and cut of wood from one source with resources to provide materials and products of consistent quality in appearance and physical properties.
- B. Hardwood Flooring: Comply with NWFA A500 for species, grade, and cut.

2.2 FLOORING SYSTEM CONFIGURATIONS

- A. WDF-1: Hardwood flooring over subfloor; 2-1/4"w x 3/4" T&G rift-cut white oak WD-1 strips, field-finished; 1 layer 3/4" T&G plywood, wood 2x4 sleepers, resilient isolation pads, vapor barrier
- B. WDF-2: Hardboard panel flooring over subfloor; 1 layer 1/4" tempered hardboard, 1 layer 3/4" T&G plywood, 1 layer 3/4" plywood, wood 2x4 sleepers, resilient isolation pads, vapor barrier (over slab-on-grade)
- C. WDF-3: Hardboard panel flooring over subfloor; 1 layer 1/4" tempered hardboard, 1 layer 3/4" T&G plywood, 1 layer 3/4" plywood, wood 2x4 sleepers, resilient isolation pads (over elevated slab)

2.3 FLOORING SYSTEM COMPONENTS

- A. Solid-Wood Hardwood: Kiln dried to 6 to 9 percent maximum moisture content, tongue and groove and end matched, and with backs channeled (kerfed) for stress relief.
 - 1. Species, Cut & Finish: White oak, quarter sawn, stain and transparent finish to match WD-1 as specified in Section 064000.
 - 2. Profile: Tongue and groove.
 - 3. Face Width: 2-1/4 inches.
 - 4. Thickness: 3/4 inch.
 - 5. Lengths: Random-length strips complying with applicable grading rules.
 - 6. Finish: Urethane finish system.
- B. Urethane Finish System: Complete water-based system of compatible components that is recommended by finish manufacturer for application indicated.
 - 1. Finish Coats: Formulated for multi-coat application on wood flooring.
 - 2. Manufacturers:
 - a. Basic Coatings, Inc.
 - b. BonaKemi USA Inc.;
 - c. Dura Seal, Sherwin-Williams Company;
 - 3. Wood Filler: Compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved Samples, provide pigmented filler.
 - 4. Stain: Penetrating and nonfading type, matching Architect's sample for (WD-1).
 - 5. Floor Sealer: Pliable, penetrating type.
- C. Plywood Subfloor: Tongue and groove, Group 1, EXT-APA B-B, with special solid jointed core construction (B-Grade); installed with staggered joints.

- D. Building Paper Slip Sheet: Red-rosin type building paper, 3 lb/100 sq. ft. minimum weight.
- E. Sleepers: Douglas Fir, WCLA, kiln-dried, S4S, preservative treated with Dry-Vac treatment, with resilient pads attached to bottom side. Use where indicated at wood flooring.
- F. Vapor Barrier:
 1. Basis of Design: VersaShield MBX by GCP Applied Technologies.
 2. Water Vapor Permeance: 0.05 maximum grain $\text{h}^{-1} \text{ft}^{-2} \text{inHg}^{-1}$ per ASTM E96.
 3. Thickness: 28 mils.

2.4 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by wood flooring manufacturer.
- B. Fasteners: As recommended by manufacturer, but not less than that recommended in NWFA's "Installation Guidelines: Wood Flooring."
- C. Wood Flooring Adhesive: Mastic recommended by flooring and adhesive manufacturers for application indicated.
 1. Use adhesives that have a VOC content of not more than 100 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Cork Expansion Strip: Composition cork strip.
- E. Solid Wood Trim, Vents and Grilles: Of same species and grade as wood flooring and in sizes indicated on Drawings.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of wood flooring.
 1. Slab Depression: Verify slab surface is level, maintaining a consistent slab depression of 2-3/4 inches measured from surface of adjacent terrazzo.
 2. Grind high spots and fill low spots to produce a maximum 1/8-inch deviation in any direction when checked with a 10-foot straight edge.
 3. Use trowel-applied leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
 4. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
- C. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 1. Tramex Concrete Moisture Encounter: 4.5 percent maximum moisture reading on the upper scale.
 2. Polyfilm Tests: Apply a 36-inch square piece of polyethylene film to concrete and seal perimeter with moisture resistant tape. Let sit undisturbed for 24 hours. If concrete has darkened or condensation has developed upon examination after 24 hours, perform tests in accordance with ASTM F 1869 Calcium Chloride or ASTM F2170 In-situ method.
 3. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
 4. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 5. Perform additional moisture tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

- D. Broom and vacuum substrates immediately prior to product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in NWFA's "Installation Guidelines."
- B. Vapor Barrier: Install in accordance with vapor barrier Manufacturer's written instructions.
- C. Wood Sleepers and Subfloor: Install according to requirements in Section 061000 - Rough Carpentry.
- D. Solid-Wood Flooring: Blind nail or staple flooring to substrate.
- E. Provide expansion space at walls and other obstructions and terminations of flooring of not less than 3/4 inch.

3.3 FIELD FINISHING

- A. Machine-sand flooring to remove offsets, ridges, cups, and sanding-machine marks that are noticeable after finishing. Vacuum and tack with a clean cloth immediately before applying finish.
 - 1. Comply with applicable recommendations in NWFA's "Installation Guidelines."
- B. Fill open-grained hardwood and repair wood flooring defects.
- C. Apply floor-finish materials in number of coats recommended by finish manufacturer for application indicated, but not less than one coat of floor sealer and three finish coats.
 - 1. Apply stains to achieve an even color distribution matching approved Samples.
 - 2. For water-based finishes, use finishing methods recommended by finish manufacturer to minimize grain raise.
- D. Cover wood flooring before finishing.
- E. Do not cover wood flooring after finishing until finish reaches full cure, and not before seven days after applying last finish coat.

3.4 INSTALLED WORK

- A. Protect installed wood flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.
 - 1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION

SECTION 096500 RESILIENT FLOORING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resilient floor tile (RFT).
 - 2. Resilient sheet flooring (RSF).
 - 3. Resilient wall base (RB).
 - 4. Installation accessories.
- B. Related Sections:
 - 1. Section 033000 - Cast-In-Place Concrete: Substrate preparation.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For each exposed product and for each color and texture specified, not less than 12 inches long.

1.3 INFORMATIONAL SUBMITTALS

- A. Slab Moisture Content and Calcium Chloride Test Results.
- B. Compatibility Certification: Submit approval documentation by both flooring manufacturer and adhesive manufacturer as compatible with substrate, flooring, project conditions, use, expected traffic, equipment loads and surface conditions including alkalinity, moisture emission levels, slab relative humidity, and other factors that may affect flooring and adhesive performance.
- C. Maintenance Instructions: Submit manufacturer's written instructions for recommended maintenance practices for each type of resilient flooring.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. (RB-1) Resilient Base: Furnish not less than 5 percent of total linear feet installed.
 - 2. Other Replacement Materials: Furnish not less than one percent of total project quantity of each type, size and color of material to Owner for replacement materials. Clearly identify each container of replacement materials.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation.

1.6 FIELD CONDITIONS

- A. Deliver resilient flooring materials in manufacturer's protective packaging. Store and handle flooring with care to prevent damage.
- B. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor coverings during the following time periods:
 - 1. 72 hours before installation.
 - 2. During installation.
 - 3. 72 hours after installation.

- C. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- D. Install floor coverings after other finishing operations, including painting, have been completed.
- E. Close spaces to traffic during floor covering installation and for 72 hours after floor covering installation.
- F. General Contractor shall be responsible for conducting one calcium chloride test for every 1,000 square feet (minimum of 3 tests) to insure concrete moisture emissions do not exceed 5.0 lbs per 1,000 square feet within a 24-hour period.

PART 2 PRODUCTS

2.1 RESILIENT PRODUCTS

- A. Single Source: Provide each type of resilient flooring produced by single manufacturer, single run.
- B. (RFT) Linoleum Floor Tile: ASTM F 2195, Type II, linoleum floor tile with special backing.
 - 1. Basis of Design: As indicated on Material Identification Codes List.
- C. (RSF) Linoleum Sheet Flooring: ASTM F 2034, Type III, linoleum sheet with special backing.
 - 1. Basis of Design: As indicated on Material Identification Codes List.
- D. (RB) Rubber Wall Base: ASTM F 1861, Type TS, Group 1, Styles A and B. Provide in 120-foot long rolls. Provide standard top-set cove base, except provide straight base at carpet.
 - 1. Basis of Design: As indicated on Material Identification Codes List.
 - 2. ASTM E 84; Class B rating with smoke density of 150-200.
- E. (RTS) Resilient Floor Finish Transition Strips:
 - 1. Basis of Design: As indicated on Material Identification Codes List.

2.2 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Skim Coat: Portland cement-based, trowel-applied skim coat intended for thin application over rough or abrasive surfaces to create a smooth prepared surface to receive resilient flooring.
 - 1. Extent: At stair treads and landings in P1, P2 and P3.
 - 2. Primer: As recommended by and manufactured by concrete topping Manufacturer.
 - 3. Aggregate: Well washed, graded, fine gravel or larger aggregate as recommended by Manufacturer.
- C. Adhesives: Water-resistant type recommended by manufacturer to suit resilient products and substrate conditions indicated.
 - 1. VOC Content: Comply with the following limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. VCT Adhesives: Not more than 50 g/L.
 - b. Cove Base Adhesives: Not more than 50 g/L.
 - c. Rubber Floor Adhesives: Not more than 60 g/L.
- D. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.
- E. Sealer and Wax: Type recommended by resilient flooring material manufacturer for material type and location.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with floor covering adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 - 4. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum 75 percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor coverings until they are same temperature as space where they are to be installed.
 - 1. Move floor coverings and installation materials into spaces where they will be installed at least 72 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

- G. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 INSTALLED WORK

- A. Comply with manufacturer's written instructions for cleaning and protection of floor coverings.
- B. Perform the following operations immediately after completing floor covering installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from floor coverings before applying liquid floor polish.

END OF SECTION

SECTION 096723 RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Waterproof resinous flooring system (RES-1).
 - 2. Preparation of concrete substrate to receive resinous flooring.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product specified. Include manufacturer's technical data, installation instructions, and recommendations for each resinous flooring component required
- B. Samples for Initial Selection: Submit samples representing standard color range.
- C. Samples: Provide samples for each resinous flooring system required, 6 inches square, applied by Installer for this Work to a rigid backing, in color, texture, and finish indicated. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of flooring systems required for this Project.
 - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
- B. Preinstallation Conference: Conduct conference at Project site.
- C. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Apply full-thickness mockups on 48-inch- square floor area selected by Architect.
 - a. Include 48-inch length of integral cove base with inside[and outside] corner.
 - 2. Simulate finished lighting conditions for Architect's review of mockups.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 DELIVERY, STORAGE, HANDLING

- A. Store materials in dry, protected area with minimum temperature of 55 degrees F and away from fires or open flames.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring installation.
- B. Lighting: Provide uniform and sufficient lighting in areas of installation.
- C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application, unless manufacturer recommends a longer period.
- D. Ventilate area in which flooring is being applied as required.

1.6 COORDINATION

- A. Concrete Curing: Coordinate curing methods with manufacturer's requirements for substrate compatibility.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Source Limitations: Obtain primary elastomeric flooring materials including primers, resins, hardening agents, grouting coats, topcoats, finish and sealing coats from single manufacturer with not less than 3 years of successful experience in supplying principal materials for work of type described in this section.
 - 1. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
- B. Flammability: Self-extinguishing according to ASTM D 635.
- C. Product shall withstand anticipated traffic and be VOC compliant product.

2.2 MANUFACTURERS

- A. Subject to compliance with requirements, provide Basis of Design or equivalent flooring system by one of the following manufacturers and as approved by Architect:
 - 1. BASF Construction Chemicals, Inc.; BASF Building Systems.
 - 2. Crossfield Products Corp.; Dex-O-Tex.
 - 3. DUDICK Inc.
 - 4. International Coatings Inc.
 - 5. Micor Company, Inc.
 - 6. NEOGARD; Division of JONES-BLAIR.
 - 7. PPG Industries, Inc.
 - 8. Rust-Oleum Corporation.
 - 9. Sherwin-Williams Company; General Polymers.
 - 10. Stonhard, Inc.
 - 11. Tennant Company
 - 12. Tnemec Company, Inc.
 - 13. Valspar Flooring.
 - 14. Or Approved Equal.

2.3 WATERPROOF RESINOUS FLOORING SYSTEMS

- A. (RES-1) Waterproof Resinous Flooring: Trowel-applied, multi-layer, seamless, waterproofing flooring system consisting of waterproof membrane and waterproof base reinforced with embedded polypropylene mesh fabric with integral cove base and finish coat of a pigmented acrylic topping. Provide slip resistance surface meeting local code requirements.
 - 1. Basis of Design: Dex-O-Tex M-E Floor waterproofing by Crossfield Products Corporation.
 - 2. Configuration:
 - a. Color: Manufacturer's standard color as selected by Architect.
 - b. Thickness: 3/32 inch.
 - c. Base: Integral cove bases.
 - 3. Performance Requirements:
 - a. Water Transmission Resistance: Sample subjected to 50 pounds per inch water pressure for 60 minutes: No transmission.
 - b. Microbial Resistance (ASTM G21): Passes
 - c. Flammability (ASTM D635): Self-Extinguishing Bonded to Concrete.

2.4 SUBSTRATE PREPARATION MATERIALS

- A. Moisture Vapor Control: Provide Manufacturer's moisture mitigation primer as recommended in writing by flooring system Manufacturer.
- B. Patching and Fill Material: Resinous product of or approved by resinous waterproof flooring manufacturer and recommended by manufacturer for application indicated.
- C. Joint Sealant: Provide sealant type recommended or produced by resinous flooring manufacturer for type of service and joint condition indicated, and compatible with resinous floor system.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Ensure that subfloor is clean, dry, hard, sound, and free of oils or other substance which would affect proper bonding and curing.
- B. Substrate shall be above 50 degrees F, dry and free of excessive water vapor transmission with a relative humidity below 85 percent.
- C. Moisture Vapor Transmission: Perform Calcium Chloride test per ASTM F1869-04 to determine moisture vapor emission levels prior to application. If results exceed 3 pounds per 1000 square feet in 24 hours, apply manufacturer's recommended vapor control product and retest until results are within 3 pound limit. If test results exceed 15 pounds per 1000 square feet in 24 hours, consult resinous flooring manufacturer before applying vapor control products. Perform test after surface cleaning is performed. Notify Architect immediately of test results.
- D. Verify that all floor penetrations are sealed.

3.2 SUBSTRATE PREPARATION

- A. Concrete Substrates, General: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 - 1. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and re-circulates the shot by vacuum pickup.
 - 2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.
 - 3. Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated.
 - 4. Strip all concrete cracks, construction joints with 10 inch wide elastomeric membrane with polypropylene fabric reinforcing.
- B. Moisture Testing: Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
 - 1. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. of slab area in 24 hours.
 - 2. Perform plastic sheet test, ASTM D 4263. Proceed with application only after testing indicates absence of moisture in substrates.
 - 3. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
- C. Alkalinity and Adhesion Testing: Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.
- D. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written instructions.
- E. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.
- F. Keyways: Saw-cut key ways into concrete substrate in accordance with Manufacturer's written recommendations.

3.3 APPLICATION

- A. General: Apply components of flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
 - 1. Coordinate application of components to provide optimum adhesion of resinous waterproof flooring system to substrate and optimum intercoat adhesion.

2. Cure resinous components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
 3. At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
 4. Apply system with sufficient texture to slip resistance required by local code and provide surface texture to allow ease of cleaning.
- B. Primer: Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Waterproofing: Apply waterproofing membrane, where indicated, in manufacturer's recommended thickness.
1. Apply waterproofing membrane to integral cove base substrates.
- D. Reinforcement: Apply reinforcing membrane to [substrate cracks] [entire substrate surface].
- E. Coatings: Apply coatings in thickness indicated. When cured, sand to remove trowel marks and roughness.
1. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness indicated for flooring system.
 2. Troweled or Screeded Body Coats: Apply troweled or screeded body coats in thickness indicated for flooring system. Hand or power trowel and grout to fill voids. When body coats are cured, remove trowel marks and roughness using method recommended by manufacturer.
 3. Grout Coat: Apply grout coat, of type recommended by resinous flooring manufacturer, to fill voids in surface of final body coat.
 4. Topcoats: Apply topcoats in number indicated for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface indicated.
- F. Aggregates: Broadcast aggregates at rate recommended by manufacturer and, after resin is cured, remove excess aggregates to provide surface texture indicated.
- G. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
1. Integral Cove Base Height: As shown, see Drawings.

3.4 FIELD QUALITY CONTROL

- A. Waterproofing: Verify waterproof integrity of waterproof system.
1. On completion of installation of membrane, dam areas in preparation for flood testing.
 2. Flood area to minimum depth of one inch with clean water. After 48 hours, check for leaks.
 3. If leaking is found, patch using same waterproofing materials; repeat flood-test.
 4. When area is proved watertight, drain water and remove dam.
- B. Material Sampling: Owner may at any time and any number of times during resinous flooring application require material samples for testing for compliance with requirements.
1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reapply flooring materials to comply with requirements.
- C. Prepare test and inspection reports.

3.5 INSTALLED WORK

- A. Protection: Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION

SECTION 096800 CARPETING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Carpet tiles (CPT-__).
2. Sheet carpet (CPT-__).
3. Installation accessories.

B. Related Sections:

1. Section 033000 - Cast-in-Place Concrete: Finish troweling of concrete floor slabs.
2. Section 087100 - Door Hardware: Thresholds for door openings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written data on physical characteristics and durability.
2. Include manufacturer's written installation recommendations for each type of substrate.

B. Shop Drawings: For carpet installation, showing the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
2. Carpet type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Transition details to other flooring materials.

C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Carpet: 12-inch- square Sample.
2. Carpet Tile: Full-size Sample.
3. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- long Samples.
4. Carpet Cushion: 6-inch- square Sample.
5. Carpet Seam: 6-inch Sample.

1.3 INFORMATIONAL SUBMITTALS

A. Compatibility Certification: Submit approval documentation by both flooring manufacturer and adhesive manufacturer as compatible with substrate, flooring, project conditions, use, expected traffic, equipment loads and surface conditions including alkalinity, moisture emission levels, slab relative humidity, and other factors that may affect flooring and adhesive performance.

1.4 CLOSEOUTSUBMITTALS

A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to finishes and performances. Including cleaning and stain-removal products and procedures.

B. Extra Materials: Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels clearly describing contents.

1. Carpet Tiles: Before installation begins, furnish quantity of full-size units equal to 5 percent of amount installed.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Engage experienced Installer who is certified by Floor Covering Installation Board (FCIB) or who can demonstrate compliance with FCIB certification program requirements.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Comply with the Carpet and Rug Institute's CRI 104, Section 5: "Storage Handling."
- B. Deliver materials to Project site in original wrappings and containers, labeled with identification of manufacturer, brand name, and lot number.
- C. Store materials on-site in original undamaged packages, inside well-ventilated area protected from weather, moisture, soilage, extreme temperatures, and humidity. Lay flat, with continuous blocking off ground.

1.7 PROJECT CONDITIONS

- A. Comply with CRI 104, Section 6: "Site Conditions."
- B. Space Enclosures and Environmental Limitations: Do not install carpet until space is enclosed and weatherproof, wet-work in space is completed and nominally dry, work above ceilings is complete, and ambient temperature and humidity conditions are and will be continuously maintained at values near those indicated for final occupancy.
- C. Subfloor Moisture Conditions: Moisture emission rate of not more than 3 lb/1000 sq. ft/24 hours when tested by calcium chloride moisture test in compliance with CRI 104, 6.2.1, with subfloor temperature not less than 55 degrees F.
- D. Subfloor Alkalinity Conditions: pH range of 5 to 9 when subfloor is wetted with potable water and pHdrion paper is applied.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide carpet with following fire-test-response characteristics as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify carpet with appropriate markings of applicable testing and inspecting agency.
 1. Surface Flammability: Passes CPSC 16 CFR, Part 1630.
 2. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm per ASTM E648.
 3. Flame Spread: 25 or less per ASTM E84.
 4. Smoke Developed: 450 or less per ASTM E84.

2.2 CARPETING

- A. Single-Source Responsibility: Obtain each type of carpet from one source and by single manufacturer.
- B. (CPT) Basis of Design Carpet Tiles: As indicated on Material Identification List.

2.3 INSTALLATION ACCESSORIES

- A. Trowel-Applied Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.
- B. Concrete-Slab Primer: Non-staining type as recommended by carpet manufacturer.

- C. Adhesive: Water-resistant, mildew-resistant, nonstaining type recommended and approved by flooring manufacturer to suit products and subfloor conditions indicated and to comply with flammability requirements for installed carpet as recommended by carpet manufacturer.
 - 1. Releasable, pressure sensitive type adhesive shall be water-based and allow for removal without damage to carpet or substrate and leave no residue.
 - 2. Adhesive and Sealant VOC Limits: According to South Coast Air Quality Management District Rule 1168 and GS-36 for aerosols. VOC Limits: As tested using U.S. EPA Reference Test Method 24 and as defined by South Coast Air Quality Management District Rules: SCAQMD Rule 1168, Adhesive and Sealant Applications.
- D. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.
 - 1. Adhesive Seam Sealer: (For 6 foot roll goods) As required, provide adhesive seam sealer certified in writing by the manufacturer as compatible with carpet backing. Seam sealer shall have minimum five year manufacturer's guarantee. Sealer shall create a 100% chemical weld at the seam site to provide a monolithic installation with a moisture barrier.
- E. (TRS) Transition Strips: Refer to Material Identification List and to Drawings for type and color selected. Provide in profile and with finish as indicated by specified product, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance.
- B. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 - Cast-in-Place Concrete and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
- C. Floor Substrate Criteria: Ensure concrete floors are dry and meet moisture conditions required by flooring and adhesive manufacturer's and exhibit negative alkalinity, carbonization or dusting.
 - 1. Remove curing agents and other surface residue that may negatively affect adhesion or flooring installation and performance..
 - 2. Moisture vapor emissions do not exceed 75 percent RH when tested in accordance with ASTM F2170 unless otherwise required by finished flooring and adhesive manufacturer.
 - 3. Moisture in concrete slab conditions up to 3lb. per 1,000 sq. ft. per 24 hours when tested with a prepackaged calcium chloride crystal kit performed in accordance with ASTM F1869 unless otherwise required by finished flooring and adhesive manufacturer.
 - 4. Concrete slab alkalinity conditions up to a pH of 6-9 when tested in accordance with ASTM F710 with in-situ monitoring, unless otherwise required by finished flooring and adhesive manufacturer.
 - 5. Maintain testing records and submit along with warranties for Project Record Documents.
- D. Slab Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - 1. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
 - 2. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
 - 3. Perform additional moisture tests recommended in writing by adhesive and carpet manufacturers.
 - 4. Proceed with installation only after substrates pass testing.

3.2 PREPARATION

- A. General: Comply with CRI's "CRI Carpet Installation Standard" and with carpet manufacturer's written installation instructions for preparing substrates.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch, unless more stringent requirements are required by manufacturer's written instructions.
- C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet manufacturers.

3.3 INSTALLATION

- A. Comply with CRI's "CRI Carpet Installation Standard" and written installation instructions by carpet and adhesive manufacturers.
 - 1. Installation Method: Glue-down method as recommended in writing by carpet manufacturer
 - 2. Maintain dye-lot integrity. Do not mix dye lots in same area.
 - 3. Install pattern parallel to walls and borders.
- B. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
- C. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

3.4 INSTALLED WORK

- A. Cleaning: Perform the following operations immediately after installing carpet:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
 - 2. Remove yarns that protrude from carpet surface.
 - 3. Vacuum carpet using commercial machine with face-beater element.
- B. Protection: Protect installed carpet to comply with CRI's "CRI Carpet Installation Standard."

END OF SECTION

SECTION 097200 WALL COVERINGS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes :Vinyl wall covering with custom graphics (VWC-1).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include data on physical characteristics, durability, fade resistance, and flame-resistance characteristics.
- B. Shop Drawings: Show location and extent of each wall-covering type.
 - 1. Indicate pattern placement, seams and termination points.
- C. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36-inches long.
 - 1. Wall-Covering Sample: From same production run to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Schedule: For wall coverings.
- B. Maintenance Data: For wall coverings to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer's Qualifications: Firm with not less than 5 years experiences in installation of systems similar in complexity to those required for this Project, including specific requirements indicated.
 - 1. Acceptable to or licensed by manufacturer.
 - 2. Successfully completed not less than 5 comparable scale projects using this system.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packing and Shipping: Deliver products in original unopened packaging with legible manufacturer's identification.
- B. Storage and Protection: Comply with manufacturer's recommendations.
 - 1. Store in a cool, dry place out of direct sunlight.
 - 2. Protect from damage by the elements and construction procedures.
 - 3. Store at temperature above 40 degrees F.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Lighting: Do not install wall covering until a permanent level of lighting is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

1.7 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Wall-Covering Materials: For each type, full-size units equal to [5] percent of amount installed.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Surface-Burning Characteristics: As follows, per ASTM E 84:
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 2. Fire-Growth Contribution: Textile wall coverings tested according to NFPA 265 and complying with Method A test protocol in IBC 2000, Section 803.5.1.

2.2 VINYL WALL COVERING

- A. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design or equivalent product, as approved by Architect.
 1. Basis of Design: As indicated on Material Identification List on Drawings.

2.3 INSTALLATION ACCESSORIES

- A. Adhesive: Mildew-resistant, non-staining adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.
 1. Adhesive shall have a VOC content of 50 g/L or less.
- B. Primer/Sealer: Mildew resistant, complying with requirements in Section 099000 - Painting and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.
- C. Seam Tape: As recommended in writing by wall-covering manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Schedule installation of wall covering at appropriate time during progress of work to prevent damage during construction and movement of materials.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.
- C. Fill seams, joints, nicks, gouges and other minor imperfections of substrate wall surfaces with latex block filler. Sand smooth flush with surface.
 1. Follow with prime coat of sealer recommended by wall covering manufacturer.
- D. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
 2. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.

3. Metals: If not factory primed, clean and apply metal as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
 4. Gypsum Board Substrate:
 - a. Tape and sand gypsum board assemblies in accordance with Section 092900 – Gypsum Board to achieve smooth and flat substrate for cork wall covering.
 - b. Prime gypsum board surfaces receiving wall covering as recommended by manufacturer.
 5. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- E. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.
 - F. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
 - G. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.3 WALL-COVERING INSTALLATION

- A. General: Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated except where more stringent requirements apply.
- B. Cut wall-covering strips in roll number sequence. Change roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.
 1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.
- D. Install wall covering with no gaps or overlaps, no lifted or curling edges, and no visible shrinkage.
- E. Install seams vertical and plumb at least 6 inches from outside corners and **[3 inches] [6 inches]** from inside corners unless a change of pattern or color exists at corner. No horizontal seams are permitted.
- F. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- G. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without any overlay or spacing between strips.

3.4 CLEANING

- A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.
- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION

SECTION 097700 FIBERGLASS-REINFORCED PANELS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Fiberglass-reinforced plastic panels and accessories (FRP-1).

1.2 SUBMITTALS

- A. Product Data: For each type of fiberglass-reinforced panel indicated,
 - 1. Include installation instructions, construction details, weights, individual components, profiles and finishes.
 - 2. Maintenance Manual.
- B. Samples: Two 8 inch by 10 inch samples of each type of panel, 10 inch length of each type of trim and molding, fastener.
- C. Shop Drawings: Indicate and dimension locations of joints, fastener attachments.
 - 1. Show fabrication and installation details not shown on product data.
 - 2. Show profiles, thicknesses, joints, tolerances and anchorage details.
 - 3. Show connections to wall mounted items: cutouts for grilles.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed fiber glass-reinforced panel installations similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

1.4 PROJECT CONDITIONS

- A. During installation and for not less than 48 hours before, maintain ambient temperature and relative humidity within limits required by type of adhesive used.
- B. Allow no containers of adhesive to be opened until potential sources of flame or spark have been shut down or extinguished and until warnings against their ignition during adhesive application have been posted.
- C. Provide ventilation to disperse fumes during application of solvent-based adhesive.
- D. Field Measurements: Where fiber glass-reinforced panels are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating products without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.5 COORDINATION

- A. Coordinate layout and installation of fiber glass-reinforced panels and attachment system components with other construction, including partition assemblies.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test Response Characteristics: Provide fiber glass-reinforced panels with the following surface-burning characteristics as determined by testing identical products per ASTM E84 by UL or another independent testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Flame Spread: 25 or less.
 - 2. Smoke Developed: 450 or less.

2.2 FIBERGLASS-REINFORCED PLASTIC PANELS

- A. Products and Manufacturers: Provide Basis of Design or equivalent product by one of the following manufacturers:
 - 1. Glasbord with Surfaseal by Crane Composites.
 - 2. Structoglas by Crane Composites.
 - 3. Marlite FRP by Marlite.
 - 4. Fiber-Lite by Nudo Products, Inc..
- B. (FRP-1) Fiberglass-Reinforced Panels: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
 - 1. Basis of Design: Refer to Material Identification List.
 - 2. Nominal Thickness: 0.090 inch.
 - 3. Panel Finish: Smooth or Embossed (Pebble Texture) as selected by Architect.
 - 4. Color: White.

2.3 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard two-piece, snap-on vinyl extrusions designed to cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
- B. Adhesive: As recommended by panel manufacturer for application to substrate.
 - 1. VOC Content: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Sealant: Single-component, mildew-resistant silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 079000 - Joint Protection.
 - 1. VOC Content: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Exposed Fasteners: Non-corrosive nylon drive rivets as recommended by panel manufacturer.
- E. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Examine back-up surfaces to determine that corners are plumb and straight, surfaces are smooth, uniform, clean and free from foreign matter, nails countersunk, joints and cracks filled flush and smooth with adjoining surface.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Preparation for Adhesive Application:

1. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
 2. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
 3. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.
- B. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- C. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels and so that trimmed panels at corners are not less than 12 inches wide, or as shown on Drawings.
1. Mark plumb lines on substrate at trim accessory and panel joint locations for accurate installation.
 2. Locate trim accessories and panel joints to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

- A. Install fiberglass-reinforced paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
1. Drill oversized fastener holes in panels and center fasteners in holes.
 2. Apply sealant to fastener holes before installing fasteners.
- D. Install trim accessories with [adhesive] [and] [nails].
- E. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
- F. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- G. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- H. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION

SECTION 098000 ACOUSTIC SURFACE TREATMENTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fabric-wrapped acoustic panels (AST-1) and (AST-2).
 - 2. Surface-applied sound-absorbing insulation panel (AST11) thru (AST-14).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of fabric facing, panel edge, core material, and mounting indicated.
- B. Shop Drawings: Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge and core materials.
 - 1. Layout include elevations showing panel sizes and direction of fabric weave and pattern matching.
- C. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Electrical outlets, switches, and thermostats.
 - 2. Items penetrating or covered by sound-absorbing panels.
 - 3. Suspended ceiling components above ceiling units.
 - 4. Structural members to which suspension devices will be attached.
- D. Samples:
 - 1. Assembled Fabric-Wrapped Panels (AST-1) and (AST-2): Submit two assembled panels for each AST type, approximately 12 by 12 inches, including panel core, edges, fabric facing and mounting hardware.
 - 2. Direct-Applied Insulation (AST-4) and (AST-5): Submit two samples, 12 inches by 12 inches.

2.1 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Field Test Reports: For Adhesion and compatibility testing.
- C. Product Certificates: For each type of sound-absorbing wall unit, from manufacturer.

2.2 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each product.
- B. Maintenance Material Submittals: Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fabric: For each fabric, color, and pattern installed, provide length equal to 5 percent of amount installed, full width of bolt.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by Manufacturer of acoustic treatment.
- B. Mockups: Before installing acoustical wall panels, build mock-ups for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.
 - 1. Build mockup of two (2) ceiling panels (AST-1), minimum 48 inches by full width of space between precast concrete T's, installed in-place as shown on Drawings.

2. Obtain Architect's approval of mock-ups before starting acoustical wall panel fabrication.
3. Maintain mock-ups during construction in an undisturbed condition as standard for judging completed Work.

C. Preconstruction Adhesion and Compatibility Testing:

1. Bond Strength: Test for cohesive and adhesive strength according to ASTM E 736.
2. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
3. For materials failing tests, obtain manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

1.4 FIELD CONDITIONS

- A. Delivery, Storage and Handling: Do not deliver or install acoustic treatments until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Site Requirements:
1. Condition spaces and surfaces receiving insulation in accordance with Manufacturer's written recommendations
 2. Protect absorptive acoustic treatments from exposure to airborne odors, such as tobacco smoke, and install under conditions free from odor contamination of ambient air.
- C. Field Measurements: Verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings.

1.5 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to the following:
 - a. Acoustical performance.
 - b. Fabric sagging, distorting, or releasing from edges.
 - c. Warping of core.
 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide sound-absorbing wall units meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: As determined by testing per ASTM E 84.
 2. Flame-Spread Index: 25 or less.
 3. Smoke-Developed Index: 450 or less.
 4. Fire Growth Contribution: Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265.

2.2 FABRIC-WRAPPED PANELS

- A. Manufacturers: Subject to compliance with requirements, provide Basis of Design or equivalent product by one of the following manufacturers:
1. Capaul
 2. Conwed Designscape.
 3. Decoustics Limited.
 4. Kinetics Noise Control, Inc..
 5. RPG Inc..
 6. Wall Technology, Inc.

- B. (AST-1) Fabric-Wrapped, Tackable Wall Panels: Fixed panels consisting of acoustically-transparent fabric facing stretched over sound-absorbing core panel with tackable facer.
 - 1. Basis of Design: AP by Decoustics.
 - 2. Thickness: 1-inch.
 - 3. Fabric Facing: As indicated on Material Identification List.
 - 4. Core: Glass-fiber board, ASTM C 612, of type standard with manufacturer, nominal density of 6 to 7 lb/cu. ft..
 - 5. Attachment: Back-mounted with manufacturer's metal clips or bar hangers.
- C. (AST-2a) and (AST-2b) Fabric--Wrapped Panels, Impact-Resistant: Fixed panels consisting of acoustically-transparent fabric facing stretched over sound-absorbing core panel.
 - 1. Basis of Design: HIR by Decoustics.
 - 2. Thickness: 2-inch.
 - 3. Fabric Facing: As indicated on Material Identification List.
 - 4. Core: Glass-fiber board, ASTM C 612, of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft. unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
 - 5. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: 1/16- to 1/8-inch- thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.
 - 6. Attachment: Back-mounted with manufacturer's standard metal clips for ceiling mounting.
- D. Fabrication: Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
 - 1. Edge Construction: Manufacturer's standard chemically hardened core with no frame.
 - 2. Edge Profile: Square.
 - 3. Corner Detail in Elevation: Square with continuous edge profile indicated.
 - 4. Panel Width and Height: As indicated on Drawings.
 - 5. Fabric Facing: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
 - a. Square Corners: Tailor corners.
 - b. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
 - c. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.
 - 6. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for thickness, edge straightness, overall length and width, and squareness from corner to corner.

2.3 SURFACE-APPLIED ACOUSTIC INSULATION

- A. (AST-11) (AST-12) (AST-13) (AST-14)) Black Glass-Fiber Board Insulation: ASTM C 612, Type IA; faced on one side with black glass-fiber mat or black polymer finish; maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
 - 1. Products and Manufacturers:
 - a. Permacote Linacoustic R-300 by Johns Manville;
 - b. SelectSound Black Acoustic Board by Owens Corning;
 - 2. Acoustical Performance: Sound absorption NRC of 0.95 to 1.00 according to ASTM C 423 for Type A mounting according to ASTM E 795.
 - 3. Nominal Density: 3 lb/cu. ft..
 - 4. Thickness: 2 inches.
 - 5. Finish: Matte black, unstamped.
 - 6. Mounting: Mechanical or Adhesive, as shown.
 - 7. Mechanical Fasteners:
 - a. Gemco Type 0912 Insulation hanger with perforated base and S-250 self locking washer (black) and black dome cap from Goodloe E. Moore, Danville, IL
 - b. Eckoustic-Klip from Eckel Industries, Cambridge, MA
 - c. INC Stick-Pin from Industrial Noise Control, Addison, IL

8. Adhesives: Use only adhesives that have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting performance of sound-absorbing ceiling units.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF FABRIC-WRAPPED PANELS

- A. Install acoustical panels and accessories in accordance with reviewed shop drawings and manufacturer's printed instructions.
- B. Install units in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- C. Comply with sound-absorbing wall unit manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- D. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- E. Provide for shimming and adjustments as required to maintain consistent alignment of joints and of finished panel faces.
- F. Coordinate installation of panel suspension system with work of other trades.
- G. Align fabric pattern and grain with adjacent units.
- H. Installation Tolerances:
 - 1. Variation from Alignment with Surfaces: Plus or minus 1/16 inch .
 - 2. Variation from Level or Slope: Plus or minus 1/16 inch .
 - 3. Variation of Panel Butt Joints from Hairline: Not more than 1/16 inch wide.

3.3 INSTALLATION OF DIRECTLY ATTACHED ACOUSTICAL INSULATION

- A. Adhesive Installation: Install acoustical insulation by bonding or stapling to substrate, using method recommended in writing by Manufacturer for Project conditions.
- B. Maintain tight butt joints, aligned in both directions and coordinated with ceiling fixtures.

3.4 INSTALLED WORK

- A. Cleaning: Remove dust and other foreign materials according to manufacturer's written instructions.
- B. Protection: Protect surfaces from damage and soiling until project substantial completion.
- C. Replacement: At no additional cost, replace damaged materials and materials that cannot be cleaned to satisfaction of Owner.

END OF SECTION

SECTION 099000 PAINTING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Painting and finishing of new and existing materials (PT)
 - 2. Preparation of surfaces for painting and finishing.
 - 3. Repainting and refinishing of existing surfaces as indicated and as specified in Section 017329 - Cutting and Patching. Preparation of existing surfaces for repainting and refinishing.

1.2 ACTION SUBMITTALS

- A. Product Data: For each paint system specified, all coats, including block fillers and primers.
 - 1. Submit Manufacturer's certifications that products comply with specified requirements and with local regulations for VOC content.
- B. Samples: Submit three 4 inch by 6 inch samples of each specified finish to be reviewed for color and sheen. Architect reserves right to select color or finish from any manufacturer, herein specified, as necessary to achieve desired color or finish.
- C. Product Schedule: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.3 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.
 - 1. Quantity: Furnish Owner with extra paint materials in quantities indicated below:
 - a. Interior, Paint: 3 gal. of each color applied.
 - b. Exterior, Paint: 3 gal. of each color applied.

1.4 QUALITY ASSURANCE

- A. Single-Source Responsibility: Provide primers and undercoat paint produced by same manufacturer as finish coats.
- B. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
- C. Applicator Qualifications: Engage experienced applicator who has completed painting system applications similar in material and extent to that indicated for this Project with record of successful in-service performance.
- D. Job Site Sample Areas: Make sample application of high performance epoxy coating on project surfaces to the extent of one system on one wall of one room as directed by Architect.
 - 1. Obtain acceptance of sample field application before making additional applications.
 - 2. Accomplish work to equal or exceed standards established by approved samples. Protect and maintain approved field samples through completion of project.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, color designation and instructions for mixing or reducing.
- B. Provide adequate storage facilities. Store paint materials at minimum ambient temperature of 45 degrees F in well ventilated area. Restrict storage to paint materials and related equipment.

- C. Take precautionary measures to prevent fire hazards and spontaneous combustion. Comply with health and fire regulations.

1.6 PROJECT CONDITIONS

- A. Environmental Requirements: Comply with manufacturer's recommendations as to environmental conditions under which painting and finishing can be applied. Do not apply finish in areas where dust is being generated.
- B. Measure moisture content of surfaces using electronic moisture meter. Do not apply finishes unless moisture contents of surfaces are below following maximums:
 - 1. Gypsum Wallboard: 12 percent.
 - 2. Masonry, Concrete and Concrete Block: 12 percent.
 - 3. Interior Wood: 15 percent.
- C. Ensure surface temperature and surrounding air temperature is above 40 degrees F before applying finishes. Minimum application temperature for latex paints for interior work shall be 45 degrees F and 50 degrees F for exterior work. Minimum application temperature for transparent finish shall be 65 degrees F, or surface and air temperature shall be 5 degrees above dew point.
- D. Provide adequate continuous ventilation and sufficient heating facilities to maintain temperatures above 45 degrees F for 24 hours before, during and 48 hours after application of finishes.
- E. Provide minimum 25 foot candles of lighting on surfaces to be finished.

PART 2 PRODUCTS

2.1 PRODUCT REQUIREMENTS

- A. Approved Manufacturer: Benjamin Moore Paints.
- B. Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- C. Single-Source Responsibility: Provide primers and undercoat coating produced by same manufacturer as finish coats.
- D. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
- E. VOC Content of Field-Applied Interior Paints and Coatings: Provide products that comply with the following limits for VOC content, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24); these requirements do not apply to paints and coatings that are applied in a fabrication or finishing shop:
 - 1. Flat Paints and Coatings: 50 g/L.
 - 2. Nonflat Paints and Coatings: 150 g/L.
 - 3. Dry-Fog Coatings: 400 g/L.
 - 4. Primers, Sealers, and Undercoaters: 200 g/L.
 - 5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
 - 6. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
 - 7. Pretreatment Wash Primers: 420 g/L.
 - 8. Floor Coatings: 100 g/L.
 - 9. Shellacs, Clear: 730 g/L.
 - 10. Shellacs, Pigmented: 550 g/L.
- F. Painting and Finishing Schedules: Refer to Painting and Finishing Schedules in Part 3 of this Section.
 - 1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

2. Sheen: When one of following terms is used to denote specific sheen for coating listed, following index shall apply:
 - a. Flat: Less than 15 units based on 85 degrees of sheen.
 - b. Eggshell: 5 to 20 units based on 60 degrees of sheen.
 - c. Satin/Low Lustre: 15 to 35 units based on 60 degrees of sheen.
 - d. Semi-gloss: 30 to 65 units based on 60 degrees of sheen.
 - e. Gloss: Above 65 units based on 60 degrees of sheen.
- G. (PT) and (PTE) Paint Colors: Provide specified color in paint type as scheduled in this Section
 1. Refer to Material Identification List for color selections.

2.2 MIXING AND TINTING

- A. Deliver paints ready-mixed to job site.
- B. Job mixing and job tinting is not acceptable.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine surfaces to receive paint and transparent finishes for conditions that would adversely affect execution, permanence or quality of work and which cannot be put into acceptable condition through preparatory work. Do not proceed with surface preparation or coating application until conditions are suitable.

3.2 PREPARATION OF SURFACES

- A. Perform preparation and cleaning procedures in accordance with paint manufacturer's instructions and as specified, for each particular substrate condition.
 1. Remove mildew, by scrubbing with solution of detergent, bleach and warm water. Rinse with clean water and allow surface to dry completely.
 2. Provide barrier coats over incompatible primers or remove and reprime as required. Notify Architect in writing of anticipated problems in using specified coating systems with substrate primed by others.
- B. Remove hardware, hardware accessories, plates, lighting fixtures, and similar items in-place and not to be finish painted, or provide surface-applied protection prior to surface preparation and painting operations. Remove, if necessary, for complete painting of items and adjacent surfaces. Following completion of painting of each space or area, reinstall removed items by workmen skilled in trades involved.
- C. Clean surfaces to be painted before applying paint or surface treatment. Remove oil and grease with clean cloths and cleaning solvents prior to mechanical cleaning. Program cleaning and painting so that dust and other contaminants from cleaning process will not fall in wet, newly painted surfaces.
 1. Remove dirt, grease and oil from canvas and cotton insulated coverings.
- D. Cementitious Materials: Prepare cementitious surfaces of concrete, concrete block and cement plaster to be painted by removing efflorescence, chalk, dust, dirt, grease, oils, and by roughening as required to remove glaze. Determine alkalinity and moisture content of surfaces to be painted by performing appropriate tests. If surfaces are found to be sufficiently alkaline to cause blistering and burning of finish paint, correct this condition before application of paint.
 1. Remove contamination, acid etch and rinse new concrete floors with clear water. Ensure required acid alkali balance is achieved. Allow to thoroughly dry. Repeat procedure if necessary to achieve a medium sandpaper-like profile.
 2. Remove dirt, loose mortar, scale, powder and other foreign matter from concrete and concrete block surfaces which are to be painted or to receive clear seal. Remove oil and grease with solution of trisodium phosphate, rinse well and allow to thoroughly dry.

3. Remove stains from concrete and concrete block surfaces caused by weathering of corroding metals with solution of sodium metasilicate after being thoroughly wetted with water. Allow to thoroughly dry.
- E. Gypsum Wallboard: Remove contamination from gypsum wallboard surfaces and prime to show defects, if any. Paint after defects have been remedied.
- F. Plaster Surfaces: Fill hairline cracks, small holes and imperfections on plaster surfaces with patching plaster. Smooth off to match adjacent surfaces. Wash and neutralize high alkali surfaces where they occur.
- G. Galvanized Surfaces: Clean free of oil and surface contaminates with acceptable non-petroleum based solvent.
- H. Ferrous Metals: Clean non-galvanized, ferrous surfaces that have not been shop-coated of oil, grease, dirt, loose mill scale and other foreign substances by solvent or mechanical cleaning, complying with Steel Structures Painting Council (SSPC)-SP3.
 1. Touch-up shop-applied prime coats which have damaged or bare areas. Wire-brush, solvent-clean, and touch-up with same primer as shop coat.
 2. Clean unprimed steel surfaces by washing with solvent. Apply treatment of phosphoric acid solution, ensuring weld joints, bolts and nuts are similarly cleaned. Prime surfaces to indicate defects, if any. Paint after defects have been remedied.
 3. Sand and scrape shop primed steel surfaces to remove loose primer and rust. Feather out edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Prime steel including shop primed steels.
- I. Wood: Clean wood surfaces to be painted of dirt, oil, or other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sandpaper smooth those finished surfaces exposed to view, and dust off.
 1. Prime or seal wood required to be job painted immediately upon delivery to job. Prime edges, ends, faces, undersides, and backsides of such wood.
 2. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood-filler. Sandpaper smooth when dried.
- J. Existing Surfaces to be Repainted or Refinished: Wash surfaces to remove grease, oil, soil or other matter which will interfere with proper bond of new materials. Scrape and wire brush loose or flaking paint. Fill cracks, voids or other defects.

3.3 MATERIALS PREPARATION

- A. Mix and prepare painting materials and transparent finish materials in accordance with manufacturer's directions.
- B. Store materials not in actual use in tightly covered containers. Maintain containers used in storage, mixing, and application of paint in clean condition, free of foreign materials and residue.
- C. Stir materials before application to produce mixture of uniform density, and as required during application of materials. Do not stir any film that may form on surface into material. Remove film and, if necessary, strain material before using.

3.4 APPLICATION

- A. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
 1. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
 2. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
 3. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.
 4. Apply each coat at proper consistency.
 5. Each coat of paint shall be slightly darker than preceding coat unless otherwise approved by Architect.

6. Provide finish coats which are compatible with prime paints used.
- B. Do not apply succeeding coats until previous coat has completely dried. Sand between each enamel or varnish coat application with fine sandpaper, or rub surfaces with pumice stone where required to produce even, smooth surface in accordance with coating manufacturer's directions.
 1. Allow each coat of finish to dry before following coat is applied, unless directed otherwise by manufacturer.
- C. Apply additional coats when undercoats, stains, or other conditions show through final coat of paint, until paint film is of uniform finish, color and appearance. Give special attention to insure that surfaces, including edges, corners, crevices, welds, and exposed fasteners receive film thickness equivalent to that of flat surfaces.
- D. Finish doors on tops, bottoms, and side edges same as exterior faces, unless otherwise indicated.
- E. Film Thickness: Apply materials in accordance to paint manufacturer's recommendations and spreading rates to provide total dry film thickness as recommended.
 1. Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated
 2. Use precision instruments designed for measuring and evaluation wet and dry films of paints and coatings.
 3. Results measuring less than recommended thickness will require additional material application.
 4. Use of poor hiding colors may require application of additional coats in order to achieve proper coverage and hiding.
- F. Apply first-coat material to surfaces that have been cleaned, pre-treated or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
- G. Allow sufficient time between successive coatings to permit proper drying. Do not recoat until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and application of another coat of paint does not cause lifting or loss of adhesion of undercoat.
- H. Prime Coats: Recoat primed and sealed walls and ceilings where there is evidence of suction spots or unsealed areas in first coat, to assure finish coat with no burn-through or other defects due to insufficient sealing.
- I. Stipple Enamel Finish: Roll and redistribute paint to even and fine texture. Leave no evidence of rolling such as laps, irregularities in texture, skid marks, or other surface imperfections.
- J. Transparent Finish: On exposed portions, use multiple coats to produce glass-smooth surface film continuity of even luster. Provide finish free of laps, cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, or other surface imperfections. Provide satin finish for final coats, unless otherwise indicated.
- K. Repainting of Existing Surfaces: Where repainting of existing surfaces is required, repaint wall and ceiling surfaces in their entirety, patch or spot painting is not acceptable.
- L. Paint surfaces behind movable equipment or furniture same as similar exposed surfaces. Paint surfaces behind permanently-fixed equipment or furniture with prime coat only.
- M. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

3.5 MECHANICAL AND ELECTRICAL EQUIPMENT

- A. Refer to mechanical and electrical documents with respect to field painting and finishing requirements. Painting of mechanical and electrical work is not required in pipe chases, tunnels, and mechanical rooms with unpainted walls.
- B. Remove grilles, covers and access panels for mechanical and electrical systems from location and paint separately.
- C. Finish paint primed equipment to color selected.

- D. Prime and paint insulated and bare pipes, conduits, boxes, insulated and bare ducts, hangers, brackets, collars and supports, except where items are plated or covered with prefinished coating, or where they are not in finished space or room.
- E. Paint interior surfaces of air ducts, convector and baseboard heating cabinets that are visible through grilles and louvers before installation of equipment with 1 coat of flat black paint, to limit of sight line. Paint dampers exposed immediately behind louvers, grilles, convector and baseboard cabinets to match face panels.
- F. Paint exposed piping, insulated piping and conduit occurring in finished areas. Color and texture to match adjacent surfaces.
- G. Paint both sides and edges of plywood backboards for electrical equipment before installing backboards and mounting equipment on them.

3.6 CLEANING

- A. As work proceeds and upon completion, promptly remove paint where spilled, splashed or spattered. Touch up and restore damaged or defaced painted areas.
- B. During progress of work keep premises free from unnecessary accumulation of tools, equipment, surplus materials and debris. Remove at end of each workday.
- C. Upon completion of work clean window glass and other paint-spattered surfaces and leave premises neat and clean, to satisfaction of Architect.

3.7 PROTECTION

- A. Adequately cover or otherwise protect finished work of other trades and other surfaces from paint and damage. Repair damage as result of inadequate or unsuitable protection as acceptable to Architect.
 - 1. Furnish sufficient drop cloths, shields and protective equipment to prevent spray or droppings from fouling surfaces not being painted and in particular, surfaces within storage and preparation area.
- B. Place cotton waste, cloths and material which may constitute fire hazard in closed metal containers and remove daily from site.
- C. Remove electrical plates, surface hardware, fittings and fastenings, prior to painting operations. These items shall be carefully stored, cleaned and replaced on completion of work in each area. Do not use solvent to clean hardware that may remove permanent lacquer finish.
- D. Provide "Wet Paint" signs as required to protect newly painted finishes. Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations.

3.8 EXTERIOR PAINTING AND FINISHING SCHEDULE

- A. Non-Ferrous Metal Surfaces (Galvanized):
 - 1. Surfaces Included:
 - a. Steel lintels, lintel plates, relieving angles.
 - b. Hollow metal doors and frames.
 - 2. Waterborne System (Low-VOC): Waterborne Acrylic Gloss Enamel over Waterborne Metal Primer.
 - a. Primer: 1 coat Direct to Metal Primer and Flat Finish (or 1 coat touch-up if preprimed).
 - b. Finish: 2 coats High Performance Waterborne Acrylic Semi-Gloss Enamel #4216HP Series.
- B. Ferrous Metal Surfaces (Steel, Iron):
 - 1. Surfaces Included:
 - a. Roof ventilators, roof vents.
 - b. Metal roof stacks.
 - c. Metal roof hatches.
 - d. Exterior ferrous metal.

2. Waterborne System (Low-VOC): Waterborne Acrylic Gloss Enamel over Waterborne Metal Primer.
 - a. Primer: 1 coat Direct to Metal Primer and Flat Finish (or 1 coat touch-up if preprimed).
 - b. Finish: 2 coats High Performance Waterborne Acrylic Semi-Gloss Enamel.
- C. Concrete Masonry Surfaces:
1. Surfaces Included: Walls.
 2. Water Based System (Low VOC): 100 percent Acrylic Latex Finish over Heavy Duty Acrylic Block Filler.
 - a. Block Filler: 1 coat Heavy Duty Acrylic Block Filler.
 - b. Finish: 2 coats Exterior Acrylic Satin Finish.

3.9 INTERIOR PAINTING AND FINISHING SCHEDULE

- A. Concrete Unit Masonry Surfaces:
1. Surfaces Included: Walls.
 2. Waterborne Low VOC, Low Odor System: Low VOC, Low Odor Acrylic Finish over Latex Block Filler, not less than 35 percent solids, ammonia free coating.
 - a. Block Filler: 1 coat Heavy Duty Acrylic Block /Filler.
 - b. Finish: 2 coats Interior Eggshell Enamel.
- B. Ferrous and Non-Ferrous Metal Surfaces:
1. Surfaces Included:
 - a. Hollow metal doors and frames.
 - b. Steel stairs, ladders and railings.
 - c. Pre-painted surfaces.
 - d. Prime painted hardware.
 - e. Radiator, convectector and other heating unit covers.
 - f. Uninsulated piping and ductwork.
 - g. Metal access panels.
 - h. Metal louvers and grilles.
 - i. Electric panels (over factory finish).
 - j. Fire horns.
 - k. Metal supports for counters, benches and shelves.
 - l. Exposed and miscellaneous metals.
 - m. Other exposed to view interior ferrous metals not factory finished.
 2. Waterborne Zero VOC, Low Odor System: Acrylic over Waterborne Metal Primer.
 - a. Primer: 1 coat Direct to Metal Primer & Flat Finish.
 - b. Finish: 2 coats Benjamin Moore Natura Eggshell #513.
- C. Gypsum Wallboard Surfaces:
1. Surfaces Included:
 - a. Gypsum wallboard, including over skim coat of joint compound.
 - b. Apply additional coat of primer under deep tone finish paint.
 - c. Sheens - General: Unless noted otherwise on Room Finish Schedule.
 - 1) Walls: Eggshell
 - 2) Ceilings and Soffits: Flat
 - 3) Walls where indicated on Room Finish Schedule: Semi-gloss.
 - 4) microbial growth resistant finish #16-551 Series - (2.0 - 3.0 mils dry thick).
 2. Waterborne Zero VOC, Low Odor System: Acrylic Finish over Acrylic Primer.
 - a. Primer: 1 coat Benjamin Moore Natura Primer #511.
 - b. Finish: 2 coats Benjamin Moore Natura Eggshell #513, Flat #512 and Semi-Gloss *514.
- D. Gypsum Wallboard Surfaces for A/V Projection:
1. Surface Prep: Provide GA Level 5 finish.
 2. Paint Basis of Design: PT-8, as Screen Goo Projection Screen Coatings (PT-8). Apply in accordance with Manufacturer's instructions and recommendations.
- E. Wood Surfaces Painted:
1. Surfaces Included:

- a. Wood for paint finish.
 - b. Concealed surfaces of wood items to be back-primed
 - 2. Waterborne Zero VOC, Low Odor System: Acrylic Finish over Acrylic Latex Wood Undercoater.
 - a. Primer: 1 coat Interior Water-Based Primer.
 - b. Finish: 2 coats Interior Eggshell Enamel.
- F. Insulated items in rooms with painted walls:
- 1. Surfaces Included:
 - a. Piping, ducts, tanks, and equipment.
 - 2. Waterborne System: Premium Quality Acrylic Latex finish over Vapor Barrier Primer.
 - a. Primer: 1 coat Vapor Barrier Primer Sealer.
 - b. Finish:
 - 1) 2 coats Interior Latex Eggshell.
 - 2) 2 coats Latex Flat Finish.
- G. Black Enamel Finish:
- 1. Surfaces Included:
 - a. Duct throats for visible distance but not less than approximately 24 inches behind supply or return air grilles, registers, louvers.
 - b. Wood blocking exposed at reveals.
 - 2. Water Based Systems (Low-VOC): Acrylic Latex Finish.
 - a. Finish: 1 coat Interior Latex Flat Black Finish.
- H. Metal Ceilings:
- 1. Coordinate with Division 05 for shop-applied primer.
 - 2. Surfaces Included:
 - a. Bar joist, decking and supports.
 - b. Galvanized ductwork.
 - c. Other overhead metal surfaces.
 - 3. Dry Fall Spray-Applied Waterborne Systems: Waterborne Dryfall over Waterborne Metal Primer
 - a. Primer (touch-up if pre-primed): 1 coat.
 - b. Finish: 1 coat S-W Waterborne Acrylic Dry Fall.
- I. Insulation-Wrapped Piping and Equipment:
- 1. Surfaces Included: Piping, ducts, tanks, and equipment.
 - 2. Waterborne System: Premium Quality Acrylic Latex finish over -Acrylic Primer.
 - a. Primer: 1 coat.
 - b. Finish: 2 coats.

3.10 REPAINTING OF EXISTING SURFACES

- A. Existing Surfaces:
- 1. Surfaces Included:
 - a. Existing surfaces where indicated to be repainted.
 - b. Existing metal lockers (casework) (metal toilet compartments) where indicated to be repainted.
 - 2. Low-VOC Latex System:
 - a. Primer/Finish: 2 coats paint similar to type listed above.
 - 3. Electrostatic System:
 - a. Primer/Finish: 2 coats electrostatic paint finish.

END OF SECTION

SECTION 099600 HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. High-performance coatings (HPC) for metal surfaces.
 - 2. Surface preparation.

1.2 ACTION SUBMITTALS

- A. Product Data: For each coating system specified, all coats, including fillers and primers.
 - 1. Submit Manufacturer's certifications that products comply with specified requirements and with local regulations for VOC content.
- B. Samples: Submit three 4 inch by 6 inch samples of each specified finish to be reviewed for color and sheen. Architect reserves right to select color or finish from any manufacturer, herein specified, as necessary to achieve desired color or finish.
- C. Product Schedule: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.3 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Leave on premises, where directed by Architect, not less than 1 unopened gallon of each color used.
- C. Tightly seal containers and clearly label for identification.

1.4 QUALITY ASSURANCE

- A. Coordination of Work: Review other sections in which primers are provided to ensure compatibility of total systems for various substrates.
 - 1. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
- B. Approved Applicator: Applicator shall have not less than 3 years of successful experience in installation of similar coating systems and shall be certified in writing as manufacturer's licensed or approved applicator.
- C. Owner reserves the right to have testing agency test materials used as often as deemed necessary during period when coatings are being applied to ensure that product materials being used comply with specified requirements.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver coating materials in sealed original labeled containers, bearing manufacturer's name, type of coating, brand name, color designation and instructions for mixing or reducing.
- B. Provide adequate storage facilities. Store coating materials at minimum ambient temperature of 45 degrees F. in well ventilated area. Restrict storage to coating materials and related equipment.
- C. Take precautionary measures to prevent fire hazards and spontaneous combustion. Comply with health and fire regulations.

1.6 PROJECT CONDITIONS

- A. Environmental Requirements: Comply with manufacturer's recommendations for environmental conditions under which coating and finishing can be applied.
 - 1. Do not apply finish in areas where dust is being generated.
- B. Ensure surface temperature or surrounding air temperature is between 50 degrees F. and 90 degrees F. before applying finishes.
 - 1. Minimum application temperature for exterior work is 50 degrees F.
- C. Provide adequate continuous ventilation and sufficient heating facilities to maintain temperatures above 45 degrees F. for 24 hours before, during and 48 hours after application of finishes.
- D. Provide minimum 25 foot candles of lighting on surfaces to be finished.

PART 2 - PRODUCTS

2.1 PRODUCT REQUIREMENTS

- A. Acceptable Manufacturers:
 - 1. Tnemec Company, Inc.,
 - 2. Sherwin Williams,
 - 3. ICI/Dulux,
 - 4. Pittsburg Paints,
- B. Compatibility: Provide materials that are compatible with one another and substrates indicated under conditions of service and application, as demonstrated by manufacturer of coating system based on testing and field experience.
- C. Single-Source Responsibility: Provide primers and undercoat coating produced by same manufacturer as finish coats.
- D. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction, and, for interior coatings applied at project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)].
 - 1. Flat Paints and Coatings: 50 g/L.
 - 2. Nonflat Paints and Coatings: 150 g/L.
 - 3. Primers, Sealers, and Undercoaters: 200 g/L.
 - 4. Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: 250 g/L.
 - 5. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
 - 6. Pre-Treatment Wash Primers: 420 g/L.
 - 7. Floor Coatings: 100 g/L.
 - 8. Shellacs, Clear: 730 g/L.
 - 9. Shellacs, Pigmented: 550 g/L.
- E. (HPC) Colors: Provide high-performance coating type as specified in this Section, in color as indicated on the Material Identification List and matching corresponding paint color (PT).

2.2 COATINGS SCHEDULE

- A. Interior Steel, Non-Galvanized: Interior ferrous metal surfaces including stairs and railings, metal fabrications.
 - 1. Surface Preparation: Solvent cleaning and sweep blast cleaning as recommended by system Manufacturer and as specified in Part 3 of this Section. Touch-up non-galvanized steel surfaces with high-zinc coating.
 - 2. System: Zinc-rich primer, epoxy build-coats, urethane finish.
 - a. Primer: Series 27WB Typoxy by Tnemec.
 - 1) Application: 4.0 to 6.0 dry mils.
 - b. Intermediate: Series 27WB Typoxy by Tnemec.
 - 1) Application: 4.0 to 6.0 dry mils.
 - c. Finish: Series 1080 Endura-Shield by Tnemec.
 - 1) Application: 2.0 to 3.0 dry mils.

- 2) Sheen: Eggshell.
 - d. System Total Dry Film Thickness: 10 to 15 dry mils.
- B. Interior and Exterior Galvanized Steel: Including railings, metal fabrications, exposed steel angles and lintels, bollards.
- 1. Surface Preparation: Solvent cleaning and sweep blast cleaning as recommended by system Manufacturer and as specified in Part 3 of this Section. Touch-up non-galvanized steel surfaces with high-zinc coating.
 - 2. System: Zinc-rich urethane base, water-based epoxy build coat, polyurethane finish.
 - a. Primer: Series 94-H₂O Hydro-Zinc by Tnemec.
 - 1) Application: 2.5 to 3.5 dry mils.
 - b. Intermediate: Series 27WB Typoxy by Tnemec.
 - 1) Application: 4.0 to 6.0 dry mils.
 - c. Finish: Series 1095 Endura-Shield by Tnemec.
 - 1) Application: 2.0 to 3.0 dry mils.
 - 2) Sheen: Gloss.
 - d. System Total Dry Film Thickness: 8.5 to 12.5 dry mils.

2.3 MIXING AND TINTING

- A. Deliver coatings and enamel ready-mixed to job site. Accomplish job mixing and job tinting only as approved by Manufacturer. Use tinting materials recommended by Manufacturer for specified system and application.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine surfaces to receive high performance coatings for conditions that would adversely affect execution, permanence or quality of work and which cannot be put into acceptable condition through preparatory work.
 - 1. Do not proceed with surface preparation or coating application until conditions are suitable.
- B. Adequately cover or otherwise protect finished work of other trades and other surfaces from coating and damage.
- C. Remove surface hardware, fittings and fastenings, prior to coating operations. These items shall be carefully stored, cleaned and replaced on completion of work in each area.

3.2 PREPARATION OF SURFACES

- A. Perform preparation and cleaning procedures in accordance with coating manufacturer's instructions and as specified, for each particular substrate condition.
 - 1. Remove mildew, by scrubbing with solution of detergent, bleach and warm water.
 - a. Rinse with clean water and allow surface to dry completely.
 - 2. Remove surface contamination from aluminum surfaces requiring finish by steam, high pressure water or solvent washing.
 - a. Apply etching primer or acid etch.
 - b. Apply coating immediately if acid etching.
 - 3. Provide barrier coats over incompatible primers or remove and reprime as required.
 - a. Notify Architect in writing of anticipated problems in using specified coating systems with substrate primed by others.
- B. Finishes for steel labeled Architecturally Exposed Steel shall comply with these additional requirements: smooth exposed surface and edges, including welds, by grinding and fill depressions, voids and holes with weld material and/or auto body filler, sand smooth, prime and coat.
- C. Clean surfaces to be coated before applying coating or surface treatment. Remove oil and grease with clean cloths and cleaning solvents prior to mechanical cleaning.

1. Program cleaning and coating so that dust and other contaminants from cleaning process will not fall in wet, newly coated surfaces.
 - a. Apply compatible sealer or primer.
- D. Equipment used for blast cleaning shall be of type that has proper oil and water filters and traps on compressors and/or tanks so that sandblasting material is not being re-contaminated by oil and water in the air blast.
- E. Ferrous Metals: Clean non-galvanized, ferrous surfaces that have not been shop-coated of oil, grease, loose mill scale and other foreign substances by solvent or mechanical cleaning, complying with Steel Structures Painting Council (SSPC)-SP6.
 1. Touch-up shop-applied prime coats which have damaged or bare areas. Wire-brush, solvent clean, and touch-up with same primer as shop coat.
 - a. Clean unprimed steel surfaces by washing with solvent. Apply treatment of phosphoric acid solution, ensuring weld joints, bolts and nuts are similarly cleaned.
 - b. Prime surfaces to indicate defects. Coat after defects have been remedied.
 - c. Sand and scrape shop primed steel surfaces to remove loose primer and rust. Feather out edges to make touch-up patches inconspicuous.
 - d. Clean surfaces with solvent. Prime bare steel surfaces. (Prime steel including shop primed steels.)
- F. Strictly adhere to all finish manufacturers recommendations for preparation of each specific type of substrate.
- G. Remove finish hardware, fixture covers, and accessories and store.
- H. Protect adjacent surfaces and materials not receiving coating from spatter and overspray; mask if necessary to provide adequate protection. Repair damage.

3.3 MATERIALS PREPARATION

- A. Mix and prepare coating materials and transparent finish materials in accordance with manufacturer's directions.
- B. Store materials not in actual use in tightly covered containers.
 1. Maintain containers used in storage, mixing, and application of coating in clean condition, free of foreign materials and residue.
- C. Stir materials before application to produce mixture of uniform density, and as required during application of materials.
 1. Do not stir film which may form on surface into material.
 2. Remove film and, if necessary, strain material before using.

3.4 APPLICATION

- A. Schedule Coatings: Apply first coat to surfaces that have been cleaned, pre-treated or otherwise prepared for coating as soon as practicable after preparation and before subsequent surface deterioration.
 1. Number of coats and film thickness required is the same regardless of application method employed.
- B. Apply high performance coating with brush, roller, spray, or other acceptable practice in accordance with manufacturer's directions.
 1. Use brushes best suited for type of material being applied. Use rollers of carpet, velvet back, or high pile sheep wool recommended by coating manufacturer for material and texture required.
 - a. Apply each coat at proper consistency.
 - b. Each coat shall be slightly darker than preceding coat unless otherwise approved by Architect.
 - c. Provide finish coats which are compatible with prime coatings used.
- C. Do not apply succeeding coats until previous coat has completely dried, unless directed otherwise by manufacturer.

1. Sand between each enamel or varnish coat application with fine sandpaper, or rub surfaces with pumice stone where required to produce even, smooth surface in accordance with coating manufacturer's directions.
- D. Apply additional coats when undercoats, or other conditions show through final coat, until coating film is of uniform finish, color and appearance.
1. Give special attention to insure that surfaces, including edges, corners, crevices, welds, and exposed fasteners receive film thickness equivalent to that of flat surfaces.
 - a. Apply each material at not less than manufacturer's recommended spreading rate, to provide total dry film thickness as recommended.
 - b. Apply first-coat material to surfaces that have been cleaned, pre-treated or otherwise prepared for coating as soon as practicable after preparation and before subsequent surface deterioration.
- E. Allow sufficient time between successive coatings to permit proper drying.
1. Do not recoat until coat has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and application of another coat does not cause lifting or loss of adhesion of undercoat.
- F. Prime Coats: Recoat primed and sealed areas where there is evidence of suction spots or unsealed areas in first coat, to assure finish coat with no burn-through or other defects due to insufficient sealing.
- G. Stipple Enamel Finish: Roll and redistribute coating to even and fine texture. Leave no evidence of rolling such as laps, irregularities in texture, skid marks, or other surface imperfections.
- H. Brush Application: Brush-out and work brush coats onto surfaces in even film.
1. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropeyness, or other surface imperfections will not be acceptable.
 2. Neatly draw glass and color break lines.

3.5 INSTALLED WORK

- A. Cleaning: As work proceeds, promptly remove coating where over-sprayed, splashed, spattered or spilled.
- B. Repair: Touch-up and restore damaged.
- C. Provide "Wet Paint" signs as required to protect newly coated finishes. Remove temporary protective wrappings provided by others for protection of their work after completion of coating operations.

END OF SECTION

SECTION 101100 VISUAL DISPLAY BOARDS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Markerboards (MKBD).
 - 2. Tackboards (TKBD).

1.2 ACTION SUBMITTALS

- A. Product Data: For each display board specified.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Show location of panel joints.
 - 2. Show location of special-purpose graphics for visual display surfaces.
 - 3. Include sections of typical trim members.
- C. Samples: For each type of visual display surface indicated and as follows:
 - 1. Visual Display Surface: Not less than 8-1/2 by 11 inches, mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
 - 2. Trim: 6-inch- long sections of each trim profile.
 - 3. Accessories: Full-size Sample of each type of accessory.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative of motor-operated, sliding visual display unit manufacturer for installation and maintenance of units required for this Project.
- B. Mockups: Construct mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 WARRANTY

- A. Warranty Period: Lifetime, unlimited warranty.
- B. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer's standard form in which manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Surfaces lose original writing and erasing qualities.
 - b. Surfaces become slick or shiny.
 - c. Surfaces exhibit crazing, cracking, or flaking.
 - 2. Warranty Period: 50 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MARKERBOARDS

- A. Manufacturers:
 - 1. Claridge Products.
 - 2. PolyVision,
 - 3. ADP Lemco Incorporated.

- B. (MKBD-1) Porcelain-Enamel Marker Boards: Balanced, high-pressure, factory-laminated marker board assembly of three-ply construction consisting of backing sheet, core material, and porcelain-enamel face sheet.
 - 1. Basis of Design: Series 110 by PolyVision Corporation.
 - 2. Porcelain-Enamel Face Sheet: Manufacturer's standard steel sheet with porcelain-enamel coating fused to steel; uncoated thickness indicated.
 - a. Matte Finish: Low reflective; marker wipes clean with dry cloth or standard eraser.
 - b. Color: Custom color as selected by Architect.
 - 3. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard moisture-barrier backing.
 - 4. Laminating Adhesive: Manufacturer's standard, moisture-resistant thermoplastic type.
 - 5. Extruded Aluminum: ASTM B 221, Alloy 6063; clear anodic finish, AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

2.2 TACKBOARDS

- A. Manufacturers:
 - 1. PolyVision,
 - 2. ADP Lemco Incorporated.
- B. (TKBD-1) Sealed Composition Cork: 1/4 inch thick seamless sheet bulletin board cork with washable vinyl finish, of composition cork compressed with resinous binder and integral color throughout entire thickness and laminated to burlap backing.
 - 1. Flame Spread Rating: Complying with ASTM E84, with flame spread rating of 65.
 - 2. Color: See Material Identification List.
- C. Extruded Aluminum J-Trim: ASTM B 221, Alloy 6063; clear anodic finish, AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

2.3 INSTALLATION ACCESSORIES

- A. Mechanical Fasteners: Stainless steel standoffs, 2-inches diameter, 1/2-inch standoff, resilient gasket.
- B. Adhesive: Install using adhesive as recommended by marker board Manufacturer, or as follows:
 - 1. GE Silglaze II.
 - 2. GE Silpruf.
 - 3. Dow Corning 795.
 - 4. Dow Corning 995, concealed metal mounting hardware.

2.4 FABRICATION

- A. Porcelain-Enamel Visual Display Assemblies: Laminate porcelain-enamel face sheet and backing sheet to core material under heat and pressure with manufacturer's standard flexible, waterproof adhesive.
- B. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board.
- C. Aluminum Frames and Trim: Fabricate units straight and of single lengths, keeping joints to a minimum. Miter corners to a neat, hairline closure.
 - 1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display units at manufacturer's factory before shipment.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which visual display boards are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install visual display boards in accordance with reviewed shop drawings and manufacturer's printed instructions. Keep perimeter lines straight, plumb and level.
- B. Provide grounds, clips, backing, brackets, anchors, trim and accessories. Use splines at joints to maintain surface alignment and smooth joints.
- C. Clean units in accordance with manufacturer's instructions.

END OF SECTION

SECTION 102100 TOILET COMPARTMENTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Solid plastic toilet compartments and urinal screens (T COMP-3).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.
- B. Shop Drawings: For toilet compartments.
 - 1. Include plans, elevations, sections, details, and attachment details.
 - 2. Show locations of cutouts for compartment-mounted toilet accessories.
 - 3. Show locations of centerlines of toilet fixtures.
 - 4. Show locations of floor drains.
 - 5. Show overhead support or bracing locations.
- C. Samples: For each type of toilet compartment material indicated. Each type of material, color, and finish required for toilet compartments, prepared on 6-inch- square Samples of same thickness and material indicated for Work.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For toilet compartments to include in maintenance manuals.

1.4 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities for toilet compartments designated as accessible.

2.2 MANUFACTURERS

- A. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design or equivalent product, approved by Architect, by one of the following Manufacturers:
 - 1. Metpar Steel Products.
 - 2. Accurate Partitions.
 - 3. Bradley Corporation.
 - 4. Scranton Products.

2.3 SOLID-PLASTIC TOILET COMPARTMENTS

- A. (T COMP-3) Basis of Design: Floor-mounted, overhead-braced solid plastic toilet enclosures and wall-hung urinal screens.
 - 1. Basis of Design: FP-500 Corinthian by Metpar Steel Products; with Type WH urinal screens.
 - 2. Other Products:
 - a. Solid High-Density Polyethylene (HDPE): Hiney-Hiders Poly-Mar HD by Scranton Products.

- b. Solid Color Reinforced Composite (SCRC): Sierra Series by Bobrick.
- B. Door, Panel, Screen, and Pilaster Construction: Constructed of two sheets of 1/8 inch thick high density polyethylene (HDPE), thermoformed with touch points into single engineered panel, with structural inserts on top and middle rails. Waterproof and nonabsorbent, with self-lubricating surface, resistant to marks by pens, pencils, markers, and other writing instruments.
 - 1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
 - 2. Color and Pattern: One color and pattern as selected by Architect from manufacturer's full range.
- C. Headrail: Heavy-duty extruded aluminum, anti-grip design, integrated curtain track, clear anodized finish, fastened to headrail bracket with stainless steel tamper resistant Torx head sex bolt and at top of pilaster with stainless steel tamper resistant Torx head screws.
 - 1. Headrail Brackets: 20 gage stainless steel, satin finish, secured to wall with stainless steel tamper resistant Torx head screws.

2.4 HARDWARE AND ACCESSORIES

- A. Hardware and Accessories: Manufacturer's heavy-duty operating hardware and accessories.
- B. Hinges: Manufacturer's minimum 0.062-inch-thick stainless-steel continuous, cam type that swings to a closed or partially open position allowing emergency access by lifting door. Mount with through-bolts.
- C. Latch and Keeper: Manufacturer's heavy-duty surface-mounted cast-stainless-steel latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through-bolts.
- D. Coat Hook: Manufacturer's heavy-duty combination cast-stainless-steel hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories. Mount with through-bolts.
 - 1. Provide coat hook at inside of stall doors.
- E. Door Bumper: Manufacturer's heavy-duty rubber-tipped cast-stainless-steel bumper at out-swinging doors. Mount with through-bolts.
- F. Door Pull: Manufacturer's heavy-duty cast-stainless-steel pull at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through-bolts.
- G. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.5 FABRICATION

- A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.
 - 1. Provide formed and closed edges for doors, panels and pilasters. Miter and weld corners and grind smooth.
 - 2. Provide internal reinforcement in areas of attached hardware and fittings. Mark locations of reinforcement for partition mounted toilet accessories.
- B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
 - 1. Confirm location and adequacy of blocking and supports required for installation.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Examine site conditions to which work is to be applied. Do not proceed with work until unsatisfactory conditions have been corrected.
 - 1. Take site dimensions affecting this work.
 - 2. Ensure correct spacing of plumbing fixtures.
 - 3. Ensure correct location of built-in framing, anchorage, and bracing, where required.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
 - 1. Maximum Clearances:
 - a. Pilasters and Panels: 1/2 inch.
 - b. Panels and Walls: 1 inch.
 - 2. Install partitions secure, plumb, level, and square.
 - 3. Provide for adjustment for floor variations with screw jack through steel saddles integral with pilaster. Conceal floor fastenings with stainless steel shoes.
 - 4. Full-Height Brackets: Secure panels to walls and to pilasters with intermittent brackets.
 - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Ceiling-Hung Units: Secure pilasters to supporting structure and level, plumb, and tighten. Hang doors and adjust so bottoms of doors are level with bottoms of pilasters when doors are in closed position.
- C. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- D. Floor-Anchored Units: Set pilasters with anchors penetrating not less than 2 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.
- E. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.
- F. Hardware:
 - 1. Equip each door with hinges; one door latch, or at accessible stalls, one accessible use door latch and one door pull; and one coat hook and bumper.
 - 2. Install door strike keeper with door bumper on each pilaster in alignment with door latch.
 - 3. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

3.3 CLEANING

- A. Field touch-up of scratches or defaced enamel finish will not be permitted. Damaged, scratched or marred defective materials will be rejected, and shall be replaced with new materials.

B. Remove protective maskings. Clean surfaces free of oil and imperfections.

END OF SECTION

SECTION 102600 WALL & DOOR PROTECTION

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wall corner guards (WCG).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For each type of wall and door protection showing locations and extent.
- C. Samples: For each type of impact-resistant wall-protection unit indicated, in each color and texture specified. Include Samples of accent strips and accessories to verify color selection.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Deliver wall and corner guards in manufacturer's protective covering. Handle finished surfaces with care to prevent damage.

PART 2 PRODUCTS

2.1 METAL WALL CORNER GUARDS

- A. Manufacturers:
 - 1. Koroguard.
 - 2. Wilkinson Company.
 - 3. MM Systems Corp.
 - 4. K.J.Miller Corp.
 - 5. Stylmark
 - 6. C/S Group.
- B. (WCG-4) Surface-Mounted, Metal Corner Guards: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
 - 1. Material: **Stainless-steel sheet**, [Type 304] [Type 430].
 - a. Thickness: Minimum [0.0500 inch] [0.0625 inch] [0.0781 inch].
 - b. Finish: [Directional satin, No. 4] [Bright annealed].
 - 2. Wing Size: Nominal [1-1/2 by 1-1/2 inches] [2-1/2 by 2-1/2 inches] [3-1/2 by 3-1/2 inches].
 - 3. Corner Radius: [1/8 inch] [3/4 inch].
 - 4. Mounting: [Flat-head, countersunk screws through factory-drilled mounting holes] [Oval head, countersunk screws through factory-drilled mounting holes] [Adhesive].

2.2 ACCESSORIES

- A. Attachment Hardware: As recommended by manufacturer for wall construction type.
- B. Aluminum Retainers: Extruded 6063-T6 alloy aluminum retainers. Minimum strength and durability properties complying with ASTM B221.
- C. Fasteners: Non-corrosive and compatible with aluminum retainers, supplied by wall protection manufacturer.
- D. Trim and Accessories: Edge and corner trim as required for a complete finished installation as approved by Architect.
- E. Adhesive: Type recommended by manufacturer for use with material being adhered to substrate indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions in which wall surface protection components and wall protection systems will be installed.
 - 1. *Complete finishing operations, including painting, before beginning installation of wall surface protection system materials.*
- B. Wall surfaces to receive impact-resistant wall covering materials shall be dry and free from dirt, grease, loose paint and scale.
- C. Do not proceed with installations until unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prior to installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. Install wall protection and corner guards and accessories in accordance with reviewed shop drawings and manufacturer's printed instructions.
- B. Install true, plumb and level, securely and rigidly anchored to substrate.
- C. Do not install damaged materials with chips, cracks, voids, or stains left exposed to view.
- D. Provide mounting hardware, splices, anchors and other accessories for complete system.

3.4 CLEANING

- A. Immediately upon completion of installation, clean plastic covers and accessories using standard ammonia based household cleaning agent. Clean metal components in accordance with manufacturer's recommendations.
- B. Remove excess adhesive using methods and materials recommended by manufacturer.
- C. Remove surplus materials, rubbish and debris resulting from installation upon completion of work and leave areas of installation in neat, clean condition.

END OF SECTION

SECTION 102813 TOILET ACCESSORIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Washroom accessories.
 - 2. Hand dryers.
 - 3. Custodial accessories.
 - 4. Installation of Owner-furnished accessories (OFCl).
- B. Related Sections:
 - 1. Section 088000 - Glazing: Glass mirrors.
 - 2. Section 092216 - Non-Structural Metal Stud Framing: Metal anchor reinforcement in walls.

1.2 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include the following:
 - 1. Construction details and dimensions.
 - 2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 - 3. Material and finish descriptions.
 - 4. Features that will be included for Project.
 - 5. Manufacturer's warranty.
 - 6. Installation Templates: Provide setting drawings where cutouts are required in other work, including templates, substrate preparation instructions, and directions for preparing cutouts and installing anchorage devices.
- B. Samples:
 - 1. Finish Samples: Submit samples of each exposed finish type.
 - 2. Unit Samples: Full size, for each accessory item to verify design, operation, and finish requirements. Approved full-size Samples will be returned and may be used in the Work.
- C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
 - 1. Identify locations using room designations indicated.
 - 2. Identify products using designations indicated.
- D. Maintenance Data: For toilet and bath accessories to include in maintenance manuals.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Do not deliver accessories to site until rooms in which they are to be installed are ready to receive them.
- B. Pack accessories individually in manner to protect accessory and its finish.

1.5 WARRANTY

- A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 15 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PRODUCT REQUIREMENTS

- A. Product Options: Accessory requirements, including those for materials, finishes, dimensions, capacities, and performance, are established by specified Basis of Design products.
 - 1. Products of other manufacturers listed in Part 2 with equal characteristics, as judged solely by Architect, may be provided.
 - 2. Do not modify aesthetic effects, as judged solely by Architect, except with Architect's approval. Where modifications are proposed, submit comprehensive explanatory data to Architect for review.
- B. Source Limitations: For products listed together in the same Part 2 articles, obtain products from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Basis of Design: Subject to compliance with requirements, provide accessories by one of the following:
 - 1. Washroom Equipment:
 - a. Bobrick Washroom Equipment Inc.
 - b. American Specialties Inc.
 - c. Bradley Corporation
 - d. GAMCO
 - e. Tork
 - 2. Warm-Air Dryers:
 - a. Bobrick Washroom Equipment, Inc.
 - b. Excel Dryer Corporation.
 - c. World Dryer.

2.2 MATERIALS

- A. Stainless Steel: ASTM A 666, Type 304, with No. 4 finish (satin), in 0.0312-inch minimum nominal thickness, unless otherwise indicated..
- B. Steel Sheet: ASTM A 1008, Designation CS (cold rolled, commercial steel), 0.036-inch minimum nominal thickness.
- C. Sheet Steel: ASTM A 366, cold rolled, commercial quality, 0.0359-inch minimum nominal thickness; surface preparation and metal pretreatment as required for applied finish.
- D. Galvanized Steel Sheet: ASTM A 653, G60.
- E. Chrome Plating: ASTM B 456, Service Condition Number SC 2 (moderate service).
- F. ABS Plastic: Acrylonitrile-butadiene-styrene resin formulation.
- G. Mirror Glass: ASTM C 1036, Type I, Class 1, Quality q2, nominal 6.0 mm thick, with silvering, electroplated copper coating, and protective organic coating complying with FS DD-M-411.
 - 1. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

- H. Fasteners and Mounting Devices: Provide concealed fasteners where possible.
 - 1. Where fasteners remain exposed to view, provide tamper-resistant and theft-resistant fasteners, of material and finish to match accessory unit.
 - 2. Screws, bolts, and other devices of same material as unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.
 - 3. Galvanized Steel Mounting Devices: ASTM A 153, hot-dip galvanized after fabrication
- I. Fasteners, Screws, and Bolts: Hot dip galvanized.
- J. Expansion Shields: Fiber, lead or rubber as recommended by accessory manufacturer for component and substrate. Provide exposed fasteners with finish to match accessories.
- K. Adhesive: Epoxy type contact cement.

2.3 GENERAL ACCESSORIES

- A. (BA-1) Mop and Broom Holder with Shelf: 3 holders, 36 inches long.
 - 1. Product and Manufacturer: No.9983 by Bradley.
- B. (CH-1) Coat Hook: Single Prong Robe Hook, Matte Nickel.
 - 1. Product and Manufacturer: No.B59103Z-SN-C by Liberty Hardware.
- C. (CH-2) Hat and Coat Hook:
 - 1. Product and Manufacturer: No.9134 by Bradley.

2.4 WASHROOM ACCESSORIES

- A. (GB) Grab Bars: In accordance with ADA guidelines, capable of withstanding downward load of 250 lbf when tested according to ASTM F 446.
 - 1. Basis of Design:
 - a. Bobrick B-6806 Series.
 - b. Bradley 812 Series
 - 2. Material and Finish: Type 304 stainless steel pipe, 18 ga., 1-1/2" outer diameter, with satin finish on ends and slip-resistant texture in grip area.
 - 3. Mounting: Flanges with concealed fasteners and gasketed stainless steel escutcheon.
 - 4. Configurations: As indicated on Drawings. Refer to grab bar schedule in Drawings.
- B. (MIR-1) Framed Mirrors Without Shelf: sizes as indicated.
 - 1. Product and Manufacturer: B-290 Series by Bobrick.
- C. (PTC-1) Paper Towel Roll Dispensers: Surface-mounted, ABS plastic, black..
 - 1. Product and Manufacturer: No.5510282 by Tork.
- D. Paper Towel Dispensers and Waste Receptacles: Dispenses C-fold, multifold and single fold. Surface mounted, stainless steel.
 - 1. Product and Manufacturer: B-39003 by Bobrick.
- E. Paper Towel Dispensers and Waste Receptacles: with stainless steel skirt for surface mounting; Dispenses C-fold, multifold and single fold. Surface mounted, stainless steel.
 - 1. Product and Manufacturer: B-390039 by Bobrick.
- F. Paper Towel Dispenser: Singlefold only, stainless steel.
 - 1. Product and Manufacturer: Continental Mfg.Co. #630C
- G. (SDISP-1) Soap Dispenser: Surface-mounted, ABS plastic, black.
 - 1. Product and Manufacturer: No.570028A Elevation Liquid Soap Dispenser by Tork.
- H. Soap Dispensers: Plastic hand soap dispensers with mounting holes. The dispensers will receive prepackaged 800 ml liquid soap cartons and may take 1000 ml cartons.
 - 1. Product and Manufacturer: Johnson Soft Care Elite System [DermaCare Hand Care]
- I. (SNC-2) Sanitary Napkin/Tampon Dispensers: 50 cent operation, recessed mounted.
 - 1. Product and Manufacturer: B-3706 by Bobrick.

- J. (SND-2) Sanitary Napkin Disposal: Surface-mounted, stainless steel.
 - 1. Product and Manufacturer: B-245 by Bobrick.
- K. (TPH-1) Toilet Paper Holder: Surface-mounted, roll-in-reserve dispenser, ABS plastic, black.
 - 1. Product and Manufacturer: No.55TR by Tork.
- L. Water Closet Tissue Dispenser: Enclosed Box Type.
 - 1. Product and Manufacturer: Bobrick #B-3888 Contura Multi-roll with plated steel dispensing mechanism for recessed areas
 - 2. Product and Manufacturer: Bobrick #B-2888 Contura Multi-roll with plated steel dispensing mechanism for surface mount areas
- M. Water Closet Tissue Dispenser: Single open roll type.
 - 1. Product and Manufacturer: Palmer Fixture Company #TP-202 Single Holder Hinged roller pin, security roller, noncontrolled delivery, surface mount. Mount two single fixtures per stall
 - 2. Product and Manufacturer: Bobrick #B-2730 Removable, security pin, non controlled delivery. Mount two single fixtures per stall
- N. (WRC-1) Waste Receptacle: Stainless steel recessed frame and waste receptacle.
 - 1. Product and Manufacturer: No.309051 H1 System by Tork..

2.5 FABRICATION

- A. General:
 - 1. Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
 - 2. Shop assemble components and package complete with anchors and fittings.
 - 3. Keys: Provide universal keys for internal access to accessories for servicing and resupplying.
- B. General: Names or labels are not permitted on exposed faces of accessories. On interior surface not exposed to view or on back surface of each accessory, provide printed, waterproof label or stamped nameplate indicating manufacturer's name and product model number.
- C. Surface-Mounted Toilet Accessories: Unless otherwise indicated, fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with continuous stainless-steel hinge. Provide concealed anchorage where possible.
- D. Recessed Toilet Accessories: Unless otherwise indicated, fabricate units of all-welded construction, without mitered corners. Hang doors and access panels with full-length, stainless-steel hinge. Provide anchorage that is fully concealed when unit is closed.
- E. Framed Glass-Mirror Units: Fabricate frames for glass-mirror units to accommodate glass edge protection material. Provide mirror backing and support system that permits rigid, tamper-resistant glass installation and prevents moisture accumulation.
- F. Provide galvanized steel backing sheet, not less than 0.034 inch and full mirror size, with non-absorptive filler material. Corrugated cardboard is not an acceptable filler material.
- G. Mirror-Unit Hangers: Provide mirror-unit mounting system that permits rigid, tamper- and theft-resistant installation, as follows:
 - 1. One-piece, galvanized steel, wall-hanger device with spring-action locking mechanism to hold mirror unit in position with no exposed screws or bolts.
 - 2. Heavy-duty wall brackets of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.
- H. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 EXECUTION

3.1 PREPARATION

- A. Deliver inserts and rough-in frames to jobsite at appropriate time for building-in. Provide templates and rough-in measurements as required.
- B. Before starting work notify Architect in writing of conflicts detrimental to installation or operation of units.
- C. Verify exact location of accessories with Architect. Verify blocking is in place prior to gypsum board installation.
- D. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to assure proper operation and servicing of accessory units.

3.2 INSTALLATION

- A. Locate toilet accessories in accordance with requirements of Texas Accessibility Standards (TAS).
- B. Install fixtures, accessories and items in accordance with manufacturer's printed instructions.
- C. Install true, plumb and level, securely and rigidly anchored to substrate and sealed to protect structural elements of wall from moisture.
- D. Use tamper proof (security) type fasteners.

3.3 ADJUSTING AND CLEANING

- A. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly. Replace damaged or defective items.
- B. Clean and polish exposed surfaces in accordance with manufacturer's recommendations after removing labels and protective coatings.

END OF SECTION

SECTION 104400 FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fire extinguishers (FE).
 - 2. Fire extinguisher cabinets (FEC)
 - 3. Fire department key box (FDKB).
 - 4. Wall brackets and other accessories.
- B. Related Sections:
 - 1. Section 099000 - Painting.
 - 2. Division 21 - Fire Suppression: Fire protection system.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Fire Extinguishers: Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher.
 - 2. Fire-Protection Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
- B. Shop Drawings: For fire-protection cabinets. Include plans, elevations, sections, details, and attachments to other work.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Deliver firefighting devices in manufacturer's protective packaging as required by project sequencing for installation. Fill and service extinguishers as required before installation.
- B. Store and handle with care to prevent damage.

1.4 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate with Divisions 21, 26 and 28 as needed for connection of key box to building emergency alarm system.
- C. Fire Department Key Box Coordination:
 - 1. Coordinate with local emergency departments for master keying.
 - 2. Coordinate with building alarm system.
 - 3. Coordinate with Section 087100 - Door Hardware.

1.5 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of portable fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
 - 2. UL-Listed Products: Provide fire extinguishers which are UL-listed and bear UL "Listing Mark" for type, rating, and classification of extinguisher indicated.
 - 3. FM-Listed Products: Provide fire extinguishers which are approved by Factory Mutual Research for type, rating and classification of extinguisher indicated, carrying appropriate FM marking.
- B. Cabinets in Fire-Rated Walls: Provide Manufacturer's fire-rated cabinets, listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.

2.2 PRODUCTS AND MANUFACTURERS

- A. Basis of Design: The design for each fire extinguisher is based on the product named. Other products subject to compliance with the requirements in this Section, and as approved by Architect.
 - 1. JL Industries
 - 2. Larsen's Manufacturing
 - 3. Potter Roemer, Div. of Smith Industries, Inc.
 - 4. Kidde Fyrnetics.
 - 5. Nystrom Building Products.

2.3 FIRE EXTINGUISHERS

- A. Multipurpose Dry-Chemical Type in Steel Container: Monoammonium phosphate-based dry chemical in enameled-steel container; for Class A, B C fires; charged and bearing inspection tag with charge date; and as follows:
 - 1. (FE-2) 5 lb. Extinguisher: UL-rated 3-A:40-B:C.
 - a. Basis of Design: Cosmic 5E by JL Industries.
- B. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 - 1. Color: Black.

2.4 FIRE EXTINGUISHER CABINETS

- A. (FEC-1) Recessed Steel Cabinet with Flat Trim:
 - 1. Basis of Design: Ambassador Series 1015F17 by JL Industries.
 - 2. Door Style and Material: Full glass.
 - 3. Glass Type: Clear, tempered glass
 - 4. Latch: Magnetic catch.
 - 5. Finish: Baked enamel finish in color as selected by Architect. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - a. Provide manufacturer's standard.
 - b. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.
 - 6. Identification: Horizontal die-cut lettering complying with authorities having jurisdiction for letter style, size, spacing, and location.
- B. (FEC-2) Surface-Mounted Steel Cabinet:
 - 1. Basis of Design: Ambassador Series 1013F17 by JL Industries.
 - 2. Door Style and Material: Full glass.
 - 3. Glass Type: Clear, tempered glass
 - 4. Latch: Magnetic catch.

5. Finish: Baked enamel finish in color as selected by Architect. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - a. Provide manufacturer's standard.
 - b. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.
6. Identification: Horizontal die-cut lettering complying with authorities having jurisdiction for letter style, size, spacing, and location.

2.5 EMERGENCY KEY BOX

- A. (FDKB-1) Surface-Mounted Emergency Key Box: Surface-mounted box with gasketed weather-resistant hinged door.
 1. Basis of Design: Knox-Box 3275 by Knox Company
 2. Finish: Manufacturer's standard finish in black color as selected by Architect.

2.6 FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
 1. Weld joints and grind smooth.
 2. Provide factory-drilled mounting holes.
 3. Prepare doors and frames to receive locks.
 4. Install door locks at factory.
- B. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch-thick, cold-rolled steel sheet lined with minimum 5/8-inch-thick, fire-barrier material. Provide factory-drilled mounting holes.
- C. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.
 1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
 2. Miter and weld perimeter door frames.
- D. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for hose valves and cabinets to verify actual locations of piping connections before cabinet installation.
- B. Examine walls and partitions for suitable framing depth and blocking where recessed and semi-recessed cabinets will be installed.
- C. Examine fire extinguishers for proper charging and tagging.
 1. Remove and replace damaged, defective, or undercharged units.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fire protection specialties and accessories according to reviewed shop drawings and manufacturer instructions.
- B. Fire-Protection Cabinets: Fasten fire-protection cabinets to structure, square and plumb.
 1. Provide inside latch and lock for break-glass panels.
 2. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.

1. Install cabinet with not more than 1/16-inch tolerance between pipe OD and knockout OD. Center pipe within knockout.
 2. Seal through penetrations with firestopping sealant as specified in Section 078440 - Firestopping.
- C. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.
- D. Install in locations and at mounting heights indicated or, if not indicated, at heights to comply with applicable regulations of governing authorities.
- E. Prepare recesses in walls for cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.

3.3 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection specialties are installed, unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet manufacturer.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 105113 METAL LOCKERS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Welded metal locker units with hinged doors (LKR-1).
 - 2. Base, top and filler panels.
 - 3. Hooks, latches, and hardware.
 - 4. Attachment hardware.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of metal locker.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker and bench.
- B. Shop Drawings: For metal lockers.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Show locker trim and accessories.
 - 3. Include locker identification system and numbering sequence.
- C. Samples: For each exposed finish type..

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: Engage experienced Installer who is authorized representative of metal locker manufacturer for installation of type of lockers required for this Project.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Do not deliver lockers until spaces to receive them are clean, dry and ready for locker installation.
- B. Protect lockers from damage during delivery, handling, storage, and installation.
- C. Deliver master keys, control keys, and combination control charts to Owner.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain metal lockers, locker benches, and accessories from single source from single locker manufacturer.
 - 1. Obtain locks from single lock manufacturer.
- B. Manufacturers: Provide Basis of Design or approved equal by one of the following manufacturers:
 - 1. Republic Steel.
 - 2. Hallowell.
 - 3. Interior Medart.
 - 4. Lyon Metal Products.
 - 5. Penco Products.
 - 6. List Industries.

2.2 METAL LOCKERS

- A. (LKR) Metal Lockers: Welded corridor lockers, prefinished, on continuous zee base, with sloped tops and vented doors.
 - 1. Configurations: Multi-tiered configurations as shown on Drawings.
 - a. LKR-1: double-tier, painted finish, white
 - b. LKR-2: single tier, 18"x18"x72", painted finish, white
 - 2. Basis of Design: Standard Lockers by Lyon Metal Products.
- B. Continuous Zee Base: Fabricated in manufacturer's standard thickness, but not less than 0.060-inch nominal-thickness steel sheet, height as shown on Drawings. Provide matching end caps.
- C. Cold-Rolled Steel Sheet: ASTM A 1008, Commercial Steel (CS), Type B, suitable for exposed applications.
- D. Factory-Finish: Baked enamel or powder coat.
 - 1. Color: Custom color as indicated on Material Identification List (PT).
- E. Doors: One piece; fabricated from 0.075-inch nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.
 - 1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches wide; welded to inner face of doors.
 - 2. Door Style: Unperforated panel.
- F. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
 - 1. Tops, Bottoms, and Sides: 0.060-inch nominal thickness.
 - 2. Backs: 0.048-inch nominal thickness.
 - 3. Shelves: 0.060-inch nominal thickness, with double bend at front and single bend at sides and back.
- G. Frames: Channel formed; fabricated from 0.060-inch nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.
- H. Hinges: Manufacturer's standard, steel, continuous or knuckle type. Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
- I. Projecting Door Handle and Latch: Finger-lift latch control designed for use with either built-in combination locks or padlocks; positive automatic latching, chromium plated; pry and vandal resistant.
 - 1. Latch Hooks: Equip doors 48 inches and higher with three latch hooks and doors less than 48 inches high with two latch hooks; fabricated from 0.105-inch nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
 - 2. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
- J. Identification Plates: Manufacturer's standard, etched, embossed, or stamped aluminum plates, with numbers and letters at least 3/8 inch high. Provide each locker with an identification plate.
- K. Hooks: Manufacturer's standard ball-pointed type, aluminum or steel; zinc plated. Provide one double-prong ceiling hook and two single-prong wall hooks for each locker.
- L. Combination Padlocks: Provided by Owner or User.
- M. Continuous Sloping Tops: Fabricated from nominal 18 ga. steel sheet, with a pitch of approximately 20 degrees. Finish into inside corners and provide vertical exposed endcaps.
- N. Boxed End Panels: Fabricated from 0.048-inch nominal-thickness steel sheet.
- O. Filler Panels: Fabricated from 0.048-inch nominal-thickness steel sheet; 2 inch filler at endwalls, and inside corners.

2.3 INSTALLATION ACCESSORIES

- A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
- B. Anchors: Material, type, and size required for secure anchorage to each substrate.
 - 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls, and elsewhere as indicated, for corrosion resistance.
 - 2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.4 FABRICATION

- A. Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
- B. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
 - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
 - 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- C. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments. Factory weld frame members of each metal locker together to form a rigid, one-piece assembly.
- D. Accessible Lockers: Fabricate as follows:
 - 1. Locate bottom shelf no lower than 15 inches above the floor.
 - 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install lockers level, plumb, and true; shim as required, using concealed shims.
 - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
- B. Welded Lockers: Connect groups together with standard fasteners, with no exposed fasteners on face frames.
- C. Identification Plates: Identify metal lockers with identification indicated on Drawings.
 - 1. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
 - 2. Attach plates to upper shelf of each open-front metal locker, centered, with a least two aluminum rivets.
- D. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
 - 1. Attach recess trim to recessed metal lockers with concealed clips.
 - 2. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.

- 3. Attach sloping-top units to metal lockers, with closures at exposed ends.
- E. Freestanding Locker Benches: Place benches in locations indicated on Drawings.

3.3 INSTALLED WORK

- A. Repair: Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.
- B. Adjusting: Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding.
- C. Protection: Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.

END OF SECTION

SECTION 112326 COMMERCIAL WASHERS AND EXTRACTORS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Washer, dryer and accessories.
- B. Laundry Appliances
 - 1. **VOC EQ-11: Clothes washer**
 - 2. **VOC EQ-12: Clothes dryer**

1.2 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
- B. Coordination Drawings: Indicate locations of laundry equipment and connections to utilities, and clearance requirements for equipment access and maintenance.
- C. Operation and Maintenance Data: For laundry equipment to include in emergency, operation, and maintenance manuals. Include a schedule with the following:
 - 1. Designation indicated on Drawings.
 - 2. Manufacturer's name and model number.
 - 3. List of factory-authorized service agencies including their addresses and telephone numbers.

1.3 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintains a service center capable of providing training, parts, and emergency maintenance repairs.
- B. Installer Qualifications: An employer of workers trained and approved by manufacturer for installation and maintenance of units required for this Project.

1.4 DELIVERY AND STORAGE

- A. Deliver appliances to Project site in manufacturer's undamaged protective packaging.
- B. Delay delivery of appliances until utility rough-in is complete and construction in spaces to receive appliances is substantially complete and ready for installation.

1.5 WARRANTIES

- A. Submit written warranties executed by manufacturer of each appliance specified agreeing to repair or replace units or components that fail in materials or workmanship within specified warranty period.
- B. Washer Extractor Parts Only: Manufacturer's standard form in which manufacturer agrees to repair or replace any part of the equipment assembly that fails within specified warranty period.
 - 1. Warranty Period: Three years from date of Substantial Completion.
- C. Dryer Tumbler Parts Only: Manufacturer's standard form in which manufacturer agrees to repair or replace any part of the equipment assembly that fails within specified warranty period.
 - 1. Warranty Period: Three years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

- A. Regulatory Requirements: Comply with the following:

1. NFPA: Provide electrical appliances listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. ANSI: Provide gas-burning appliances that comply with ANSI Z21 Series standards.
3. UL Certification: Provide electric equipment and components that are evaluated by UL for fire, and electric shock according to applicable safety standards and that are UL certified for compliance and labeled for intended use.
4. NFPA 54 - National Fuel Gas Code.
5. NFPA 70 - National Electrical Code.
6. Washer-Extractor: Listed with ETL, ISO 9001 & 14001 Quality and Environmental Impact Standards.
7. Clothes Dryer: UL Listed.

2.2 PRODUCTS AND MANUFACTURERS

- A. Basis-of-Design Products: Subject to compliance with requirements, provide product indicated or comparable product by one of the following:
1. Alliance Laundry Systems,
 2. Dexter Laundry,
 3. General Electric,
 4. Huebsch ,
 5. Maytag,
 6. Speed Queen ,
 7. Unimac,
 8. Whirlpool.

2.3 WASHER/EXTRACTOR

- A. Washer Basis-of-Design Product: Model EXSM680 by Wascomat Laundry Equipment.
1. Type: Freestanding, front-loading washer with programmable controls.
 - a. Stainless steel front panel and side panels.
 - b. Standard 4-compartment liquid or powder supply.
 2. Capacity:
 - a. Weight: 80 lbs
 - b. Volume: 12.4 cubic feet.
 3. Dimensions:
 - a. Height: 61 13/16 inches.
 - b. Depth: 43 1/2 inches.
 - c. Width: 42 11/16 inches.
 - d. Door Opening Diameter: 21 1/16 inches.
 4. Control System: Wascomat "Selecta20". Preprogrammed with 20 wash cycles.
 5. Electric Power:
 - a. Voltage, Frequency, Phase: 208-240 V, 60 Hz, single phase.
 - b. Full Load / Circuit Breaker: 12.0A / 15A.
 6. Water Connections and Pressure:
 - a. Inlets: 3/4 inch. Two hot, one cold.
 - b. Flow (gal/min at 45 psi): 16 gal/min.
 - c. Recommended Water Pressure: 30 - 90 psi.

2.4 DRYER/EXTRACTOR

- A. Dryer Basis-of-Design Product: Model TD75 by Wascomat Laundry Equipment.
1. Type: Freestanding, front-loading, gas heat dryer.
 - a. [Residual Moisture Control (RMC).]
 2. Capacity: 75 lbs.
 3. Dimensions:
 - a. Height: 78 9/16 inches.
 - b. Depth: 53 15/16 inches.
 - c. Width: 37 13/16 inches.
 - d. Door Opening Diameter: 31 7/8 inches.

4. Control System: Wascomat "Selecta II OPL".
5. Gas-Dryer Power: [208-240 V, 60 Hz, single phase.] [208-240 V, 60 Hz, 3 phase.]
 - a. Gas: 151200 Btu / hr.
 - b. Airflow: 647 cubic feet per minute.
 - c. Full Load / Circuit Breaker: [8.3A / 15A (single phase)] [4.8A/15A (3 phase)].
6. Gas Connection and Pressure:
 - a. Gas Connection: 3/4 NPT.
 - b. Natural Gas Pressure: 3.5 - 10 inches H₂O / mbar.
7. Exhaust Connection and Pressure:
 - a. Exhaust Duct Diameter: 8 inches.
 - b. Exhaust Pressure: Maximum of 1.30 inches H₂O / mbar.

2.5 SOUND ISOLATION

- A. Isolate appliances from rigid contact with floor with Mason Type W neoprene pad mounts under feet.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. General: Comply with manufacturer's written instructions.
- B. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- C. Utilities: See Divisions 22 and 26 for plumbing and electrical requirements.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 3. Operational Test: After installation, start units to confirm proper operation.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- C. An appliance will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

SECTION 115700 VOCATIONAL SHOP EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1.
- B. Related Sections: Divisions 22, 23 & 26 specifications for equipment venting, gas and utility connections, power and controls.

1.2 COORDINATION

- A. Division 26: for power, wiring.

1.3 SUBMITTALS

- A. Product Data: Manufacturer's specifications and technical data including performance, construction and fabrication information.
 - 1. Equipment Options and Accessories: Submit to Owner for approval prior to purchase of equipment.
- B. Shop Drawings: Indicate dimensions, description of materials and finishes, general construction, specific modifications, component connections, anchorage methods, hardware, and installation procedures, including specific requirements indicated.

1.4 QUALITY ASSURANCE

- A. Installer's Qualifications: Firm with not less than 5 years experiences in installation of systems similar in complexity to those required for this Project, including specific requirements indicated.
 - 1. Acceptable to or licensed by manufacturer.
 - 2. Successfully completed not less than 5 comparable scale projects using this system.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packing and Shipping: Deliver products in original unopened packaging with legible manufacturer's identification.
- B. Storage and Protection: Comply with manufacturer's recommendations.
- C. Protect from damage by the elements and construction procedures.

1.6 WARRANTY

- A. Manufacturer shall warrant installed system for a period of 5 years from Date of Substantial Completion.
- B. Prior to purchase of specified equipment, coordinate equipment options and accessories with Owner.

1.7 SERVICE CONTRACT

- A. Service Contract: Submit service contract to Owner in writing including separate cost of service contract and for 1 year service covering installed systems, which would commence immediately after expiration of warranty period, with separate costs for "on-call" service for in-house and in-shop work.

PART 2 - PRODUCTS

2.1 EQUIPMENT REQUIREMENTS

- A. Electrical Equipment: Provide equipment suitable for use with electrical system indicated on drawings. Provide electrical components including motor, disconnect switches, motor controllers, motor control devices, electrical circuits, and connections which conform to requirements of NAPA 70, whether or not electrical items are furnished as part of the equipment components assemblies. Provide electrical wiring, conduit and electrical devices necessary for installation and operation of systems and equipment furnished.
- B. Manufactured Products: Manufacturer of equipment assemblies, which include components made by others, shall assume complete responsibility for the final assembled unit.
 1. Components of assembled unit need not be products of single manufacturer.
 2. Constituent parts that are alike shall be products of single manufacturer.
 3. Components shall be compatible with each other and with total assembly for intended service.
- C. Safety Devices: Fully enclose and guard exposed belts, chains, pulleys, couplings, shafts, gears, and other moving parts in accordance with ANSI pamphlet B15-1 irrespective of height above floor. Guards shall be of cast iron, sheet metal or wire mesh. Rigidly and suitable secure parts of guard so as to be readily removable without disassembling pipes and fittings on equipment.

2.2 DUST CURTAIN

- A. Performance Requirements: NFPA fire-retardant, CFM fire-retardant.
- B. (VOC EQ-1) Dust Curtain: Manually-operated.
 1. Basis of Design: Welding Curtain Walls by AKON, LLC.
 2. Layout: Straight.
 3. Curtain: 14 mil vinyl.
 - a. Total Height: 12 feet 0 inches.
 - b. Bottom 48-inches opaque, middle 48-inches transparent, top 48-inches opaque.
 - c. Chain-weighted bottom hem.
 - d. Other Options: [Floor sweep] [Magnet seal] [Velcro seal] [Floor anchor straps]
- C. Track: Manufacturer's suspended ceiling track, with threaded rod mounting.

2.3 SPRAY HOOD

- A. (VOC EQ-2) Walk-in Spray Hood:
 1. Basis of Design: Open Front Booth, IB Series, by Col-Met Engineered Finishing Solutions.

2.4 METAL DUST COLLECTORS

- A. (VOC EQ-3) Metal Dust Collector:
 1. Basis of Design: No. JDC-501, Cabinet Dust Collector for Metal, 115/230V, 1HP, by Jet Tools.
- B. (VOC EQ-4) Metal Dust Collector Stand for Bench Grinder:
 1. Basis of Design: No. JDCS-505, Metal Dust Collector Stand, 115V by Jet Tools.

2.5 WELDING FUME HOODS

- A. (VOC EQ-5) Wall-Mounted Welding Fume Hood:
 1. Basis of Design: Model SS-400-SKY by Sentry Air Systems, Inc..

- B. (VOC EQ-6) Portable Welding Fume Hood:
 - 1. Basis of Design: Model 500/550 HD Welding Fume Extractor, Micro-Pleat Series 1, by Sentry Air Systems, Inc..

2.6 WOOD DUST COLLECTORS

- A. (VOC EQ-7) Portable Wood Dust Collectors:
 - 1. Basis of Design:

2.7 DYE VATS

- A. (VOC EQ-8) Dye Vat:
 - 1. Basis of Design: Groen Floor Kettle, Stationary Electric Model EE, by Unified Brands.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with manufacturer's recommendations.

3.2 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

3.3 INSTALLED WORK

- A. Adjust: Make necessary adjustments of equipment to ensure smooth and accurate operation.
- B. Demonstration: Engage a factory service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment.
 - 1. Train Owner's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
 - 2. Review data in maintenance manuals. Refer to Division 1 Section "Closeout Procedures."

END OF SECTION

SECTION 116123 THEATRICAL PLATFORMS

PART 1 General

1.1 SUMMARY

- A. The work in this section includes Theatrical Platforming (TP) systems and equipment within the following spaces and associated support areas:
 - 1. Studio Theatre
 - 2. Valade Jazz Center
- B. Section Includes
 - 1. Major Systems and Equipment: furnish and install the following major elements and associated accessories:
 - a. Staging and Seating Riser System
 - 1) Platform decks with aluminum frames
 - 2) Understructure
 - 3) Step units and railings
 - 4) Closure panels
 - 5) Masking Skirts
 - 6) Aisle Lights
 - (a) Transport carts
 - (b) Spare parts
 - 2. Work Results:
 - a. The equipment installed as part of this Section shall result in a complete and working theatrical platforming system.
 - b. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related drawings.
 - c. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
 - C. Related Requirements
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
 - 2. Examine Contract Documents for requirements that directly affect or are affected by Work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - c. Division 04 – Masonry
 - d. Division 05 – Metals
 - e. Division 09 – Finishes
 - f. Division 12 – Furnishings
 - 1) Section 127100 – Portable Seating

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 - 1. Provide Unit Price for <TBD>.
- C. Alternates
 - 1. Provide separate price information for material and labor associated with the following equipment and systems:

- a. <<TBD>>
2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. CWANA – Complete with All Necessary Accessories

B. Definitions

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. "Architect": All references to the "Architect", Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. "Theatre Consultant": Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. "Other Project Consultants": Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. "Contractor": Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
 - f. "Owner": Authorized personnel representing Wayne State University.
 - g. "Furnish": Purchase and/or fabricate and deliver to project site.
 - h. "Install": Physically install the items in their proper location(s) on the project site.
 - i. "Provide": Furnish and install.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

B. Pre-installation Meeting:

1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.

C. Sequencing

1. The installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work in this section may be installed, including:
 - a. Painting
 - b. Finishing of floors and finishes

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system.
- H. Product Data
 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- I. Shop Drawings
 1. Provide shop drawings on D size minimum (24" x 36") sheets.
 2. Include a cover sheet with a drawing index including sheet number and title for each sheet in the set.
 3. Provide ¼" = 1'-0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity which may affect work of this Section.
 4. Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
 5. Provide requisite schematics, plans and sections indicating assembly and installation of components.
 6. Provide plans and area calculations of all elements in storage.
 7. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 8. Indicate all elements with appropriate safety factors and/or safety equipment.
 9. Indicate recommended load limits for each element in the system with loading requirements.
 10. All elements shall be engineered, approved and drawings stamped by a Professional Engineer licensed in the project jurisdiction. The engineer shall verify that the equipment supplied under this section meets or exceeds the design criteria of this specification.
 11. Provide a full Bill of Materials to be supplied, including quantities, manufacturer, manufacturer's part number, reference to applicable drawings, etc.
- J. Samples
 1. Submit sample items for approval within 14 days of Architect's written request. These items may include, but are not limited to:
 - a. Standard basic components, decking section (corner cut section), tubing, feet, locking pins and hardware.

K. Certificates

1. Provide manufacturer's certificates stating materials meet fire performance characteristics as specified herein.

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents:

1. Submit documents in accordance with Division 01 – General Requirements
2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
3. Within 60 days of acceptance testing, submit one (1) set of reproducible “as built and approved” drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
4. Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement or maintenance.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
6. Certificates of flame resistance as required herein.
7. Warranties as required herein.
8. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
9. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
10. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Materials:

1. Furnish a package of extra materials to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. 4 locator plates of each type used in system
 - b. 8 locking pins of each type in the system, with cable tethers having uncrimped fittings
 - c. 8 threaded foot assemblies
2. Furnish heavy duty storage box with hinged interlocking covers to contain all above spare parts.

1.8 QUALITY ASSURANCE

A. Regulatory Requirements:

1. Refer to Division 01 – General Requirements.

B. Qualifications

1. All equipment and installation is to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication of theatrical platform equipment, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Contractor's business.
2. The Contractor shall have been continuously engaged in the fabrication and installation of theatrical platform systems for no less than five years.

3. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of work of this contract.
4. Contractor is responsible for proper installation, operation and safety of all component equipment.
5. Equipment must be procured as specified. Non-specified items may be procured from any nationally recognized manufacturer.
6. Special fabrication such as architectural metalworking and millwork may be done by others. Such subcontracting must be approval by the Architect at the time of bid and/or as part of the submittal process. Responsibility in all respects shall be that of the Contractor.
7. The Contractor shall verify all system design loads.
8. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 1. All equipment shall be appropriately and substantially packed for shipment.
 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
 3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 2. The Contractor shall be responsible for acceptance of the Theatrical Platform System components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protection
 1. Upon delivery, the materials shall be stored under cover in a clean and dry location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
 2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions
 1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions and/or corrections are to be requested prior to fabrication.
- B. Field Measurements
 1. Field measurements shall be taken prior to preparation of final shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
 2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.

- B. The Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.

PART 2 Products

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and services of this section shall be by one of the following contractors:

Staging Concepts
8400 Wyoming Avenue North, Suite 100
Minneapolis, MN 55445
Tel: (800) 337-5339

Staging Dimensions, Inc.
31 Blevins Drive Suite A
New Castle, DE 19720
Tel: (866) 591-3471

StageRight Corporation
495 Pioneer Parkway
Clare, MI 48617
Tel: (800) 438-4499

Wenger Corporation
555 Park Drive
Owatonna, MN 55060
Tel: (507) 455-4100

- B. Substitution Limitations

1. Any contractor who wishes to be listed and has not been pre-approved must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, and supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.

- h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
- 2. Standards of Acceptance:
 - a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

2.2 SYSTEMS DESCRIPTION

- A. All components in the system shall be portable and shall be designed to minimize setup, take down, and transition time.
- B. The platforms are intended for interior use only.
- C. Studio Theatre
 - 1. Staging and Seating Riser System:
 - a. Modular platform system for use as staging and/or seating risers in multiple configurations, including the layouts shown in the project drawings. The platform system will consist of portable interlocking decks, interchangeable support structure, and accessories.
 - b. The platform heights can be varied by means of interchangeable sets of legs.
 - c. Each platform shall be provided with discrete understructure. Bridging understructure is not acceptable.
 - d. Understructures shall have Acme-thread feet allowing +/- 3" of leveling adjustment.
 - e. Accessories including guard rails, hand rails, closure panels, step units, masking skirts, and aisle lights to accommodate the configurations indicated in the drawings.
 - f. Transport carts for storage of platform system components and accessories.
- D. Valade Jazz Center
 - 1. Staging and Seating Riser System:
 - a. Modular platform system for use as staging and/or seating risers in multiple configurations, including the layouts shown in the project drawings. The platform system will consist of portable interlocking decks, interchangeable support structure, and accessories.
 - b. The platform heights can be varied by means of interchangeable sets of legs.
 - c. Each platform shall be provided with discrete understructure. Bridging understructure is not acceptable.
 - d. Understructures shall have Acme-thread feet allowing +/- 3" of leveling adjustment.
 - e. Accessories including guard rails, hand rails, closure panels, step units, masking skirts, and aisle lights to accommodate the configurations indicated in the drawings.
 - f. Transport carts for storage of platform system components and accessories.

2.3 DESIGN CRITERIA

- A. Platform System:
 - 1. Capacities
 - a. Uniform load-bearing capability at full height - 125 lbs./sq. ft. live load
 - b. Point load at deck surface - 1250 lbs./sq. inch.
 - c. Lateral load-bearing capability - 5% sway load.
 - 2. Platforms, regardless of height, will have no lateral movement.
 - a. For height configurations that require cross-bracing for added stability, the Contractor shall provide an adequate modular bracing device that will satisfy the demands of the live load requirements herein. The cross-bracing members shall not conflict with the legs of adjacent platforms and shall be in keeping with the construction methods described herein.
 - 3. Platforms shall be interlocking side-to-side and front-to-back by means of a connection device that cannot be compromised by the rigors of performer movement or audience loading. Positive interlock shall be assured between adjacent platforms whether they are at equal or dissimilar heights.
 - 4. The support system shall be fabricated in such a manner that the platform may be disassembled for repairs. The Contractor shall be obliged to make all parts available to the purchaser. Mechanically connected construction which cannot be repaired on site is not acceptable.
 - 5. No component requiring manual lifting shall weigh more than 150 lbs.

2.4 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
2. All equipment to have pertinent labels.
3. Structural metal elements to be steel, extruded aluminum, or equal.
4. All corners, joints, etc. to be die-cast aluminum, or equal.

B. Hardware

1. All mounting hardware to be included.
2. All bolts and fasteners must be Grade 5 or better.
3. All bolted attachments to have lock washers or other self-locking fasteners.
4. Elements to be fastened with removable fasteners, no welds, so that components may be easily repaired. Platform decks excepted.

C. Finishes

1. Exposed surfaces to be finished flat black.
2. Fabric:
 - a. Materials shall be either IFR polyester to conform to local, state, and national codes. Affidavits from fabric manufacturer, jobber or other agent required to attest flame resistance of the fabrics and methods used shall accompany drapery upon delivery.

2.5 EQUIPMENT AND COMPONENTS

A. Platform Decks

1. Provide portable, structural platforms consisting of a plywood and hardboard finish on an extruded aluminum frame.
2. Platform decks shall be single-sided:
 - a. Finish layer to be painted double tempered hardboard or tempered plyon.
 - 1) Paint shall be Rosco Tough Prime, flat black
 - b. There shall be no irregularities or protrusions beyond the surface plane, which shall be completely flat. Holes or permeations shall not exceed ¼" in any dimension. Surface shall be non-reflective and able to withstand mopping.
3. Frame shall be constructed of extruded structural aluminum and finished with baked-on matte black epoxy paint. The extrusion shall be a box design for maximum strength and rigidity, with lip to protect the top surface edge and grooves to interconnect platforms and additional accessories. The overall thickness of the frame shall not be greater than 4".
4. Deck units shall be provided with sockets to accept detachable legs.
5. Provide acoustic dampening at undersides of platforms.
6. The total weight of each platform deck shall not exceed 150 lbs.
7. Provide in quantities required for configurations of the system as shown on drawings (not simultaneously).
8. Provide:
 - a. Staging Concepts SC90 Deck
 - b. Or Approved Equal

B. Understructure

1. Provide independent understructure to support individual platform decks as described above.
2. Legs shall positively lock into place at sockets permanently mounted on the underside of the platform decks.
3. Legs shall be fabricated from structural aluminum tubes in lengths to provide installed platform heights as indicated on the drawings.
 - a. Variable height legs, where required, shall be adjustable in increments as indicated on drawings.
4. Legs shall be joined and stabilized, when required, by cross bracing comprised of aluminum tubing and formed steel brackets. Installation of the bracing components shall not require the use of special tools.

5. Legs shall have Acme-threaded leveling feet which provide an additional 3" of height adjustment.
 6. All components of the understructure shall be finished with baked-on matte black epoxy paint.
 7. Provide in quantities and lengths required for configurations of the system as shown on drawings (not simultaneously).
- C. Guard Rails
1. Provide guard rails and hand rails as shown on the drawings.
 2. Provide positive attachment to platform and/or step unit edge via hand-operated clamps.
 3. All components shall be finished with baked-on matte black epoxy paint.
 4. Provide with all necessary hardware and attachments.
 5. Provide guard rails in quantities required for configurations of the system as shown on drawings (not simultaneously).
- D. Step Units
1. Provide step units as shown on the drawings.
 2. Step units shall meet same loading criteria as platform system.
 3. Box construction with finish fascia on all exposed sides.
 - a. Finish surface shall be of the same material as platform decks, finished flat black.
 - b. Support fascia at perimeter and center of each step.
 4. Provide positive attachment between step units and platform decks.
 5. Provide with all necessary hardware and attachments.
 6. Provide in quantities required for configurations of the system as shown on drawings (not simultaneously).
- E. Closure Panels
1. Provide continuous closure panels to fill in vertical openings at platform faces, and between platform levels when used at alternate heights.
 2. Panels shall prevent chair legs from slipping off the platform decks as well as prevent sightlines through the platforms to the understructure.
 3. Panels shall have positive attachment to platform frame.
 4. Exposed finish side shall be of the same material as platform decks, finished flat black.
 5. Provide in quantities required for configurations of the system as shown on drawings (not simultaneously).
- F. Masking Skirts
1. Provide fabric skirting to mask sides and back of understructure of seating riser system.
 2. Panels shall be no longer than 2x the long dimension of a deck. Attach to deck perimeter with heavy-duty hook and loop fasteners or tight fitting clips.
 3. Fabric shall be inherently flame retardant and shall be a polyester-based woven product.
 4. Masking panels shall be constructed without fullness and hemmed on all edges.
 5. Color shall be black.
- G. Aisle Lights
1. Provide UL approved low voltage warm white LED aisle lighting fixtures for installation centered in face of intermediate aisle risers.
 2. Provide nose mounted low voltage fixture. Provide required transformers to be mounted within the platform system.
 - a. Aisle lighting shall comply with all local codes with respect to egress path lighting of 0.2 footcandles, continuous along the entire egress path, or as required for public assembly seating at the time of contract.
 3. Step lights shall be provided on intermediate steps and at aisle closure panels.
- H. Transport Carts
1. Provide a sufficient quantity of transport carts to allow for the complete storage of all system components. This shall include, but is not limited to:
 - a. Platform decks
 - b. Support structure
 - c. Railings

- d. Closure panels
 - e. Step Units
 - f. Accessories and tools
2. Provide carts of welded steel construction, finished flat black.
 3. Provide stackable carts with fork lift sleeves.
 4. Provide carts in Manufacturer's standard sizes.
 5. Carts must be able to fit through standard doorways to access storage areas.
 6. Provide heavy duty 6", 900lb. capacity casters. Casters must operate smoothly over hard, carpeted, or paved surfaces.

2.6 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine-finish all operating parts to standard trade tolerances, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of the "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction (AISC).

PART 3 Execution

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.2 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- C. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- D. Coordinate work with all other trades to avoid causing delays in construction schedule.
- E. All field welding requires prior approval of the Architect and Contractor's Structural Engineer.
- F. Carry out approved field welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- G. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Architect's prior approval for cutting and drilling of existing structural work.

3.3 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Arrange for all tests and inspections required by the General Requirements.

3.4 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent Contract Drawings prior to the demonstration indicated herein.

3.5 CLEANING

- A. Touch up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.6 CLOSEOUT ACTIVITIES

- A. Demonstration
 1. Upon completion of installation work required by the work of this Section, the Contractor will notify the Architect that the work is complete, conforms to specification and is ready for Demonstration.
 2. Installed equipment to be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 3. Platforms shall be set up in a specified configuration for review.
 4. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 5. Costs of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.
- B. Training
 1. Following the equipment demonstration, inspection and final adjustments, provide an instruction session to the Owner's staff or representatives on the safe operation, care and maintenance of the system.
 - a. Instruction shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts, and operating procedure to obtain maximum usage of system.
 - b. Provide adequate training time for all configurations to be assembled, disassembled and returned to storage.
 2. Schedule the instruction session in conformance with the project construction schedule and the availability of the Owner.
 3. Instruction will be by technical staff of the Contractor.

3.7 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean components thoroughly prior to the demonstration session.

END OF SECTION

SECTION 116133 THEATRICAL RIGGING

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes Theatrical Rigging (TR) systems and equipment within the following spaces and associated support areas:
1. Proscenium Theatre
 2. Studio Theatre
 3. Valade Jazz Center
- B. Section Includes
1. Major Systems and Equipment: furnish and install the following major elements and associated accessories:
 - a. Counterweight Rigging System
 - 1) Locking rail
 - 2) Belaying pins
 - 3) Index Lights
 - b. Proscenium safety curtain with lineshaft winch
 - c. Stage Traveler Track assemblies
 - d. Rope rigging for multi-cable management
 - e. Zero fleet hoist
 - f. Zero fleet hoist with integrated structural backbone
 - g. Rigging Control System
 - h. Pipe Grid
 - i. Walk-Draw Drapery Track
 - j. Miscellaneous rigging equipment and accessories
 2. Work Results:
 - a. The equipment installed as part of this Section shall result in a complete and working theatrical rigging system.
 - b. Provide fully coordinated and engineered equipment, installation, supervision and commissioning for systems and associated accessories as required for each space.
 - c. Provide supervision of Theatrical Rigging Systems low voltage signal cable pulling, termination and testing by the Division 26 Electrical Contractor.
 - d. Provide coordination of conduit, backboxes and AC power wiring provided by the Division 26 Electrical Contractor.
 - e. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related drawings.
 - f. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
 3. Delegated Design:
 - a. Provide design for the means of fastening, suspension and support of the work of this Section.
 - b. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related Drawings.
- C. Products Supplied But Not Installed Under This Section
1. The following equipment supplied under this Section shall be installed and/or terminated under Division 26:
 - a. Operating gallery LED index strip light
 - b. Motor Control Centers (MCC)
 - c. Motion Control Racks (MCR)
 - d. Rigging control system devices including but not limited to control panels, limit switches, detection and safety devices

- e. Low Voltage/Control Wireways for automated hoists
- f. Line Voltage Wireways for automated hoists
- 2. Termination of control system conductors shall be made by Division 26 under the direct onsite supervision of the Contractor.
- 3. If not internal to the equipment, controls, safety and limit switch devices are installed under this Section. Final terminations to the devices are made under Division 26.

D. Related Requirements

- 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
- 2. Examine Contract Documents for requirements that directly affect or are affected by work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - c. Division 04 – Masonry
 - d. Division 05 – Metals
 - e. Division 09 – Finishes
 - f. Division 11 – Equipment
 - 1) Section 116113 – Orchestra Shell Enclosure
 - 2) Section 116143 – Theatrical Drapery
 - 3) Section 116163 – Theatrical Lighting Dimming and Control
 - 4) Section 116183 – Theatrical Audio Video Systems
 - g. Division 21 – Fire Suppression
 - h. Division 22 – Plumbing
 - i. Division 23 – Heating, Ventilating and Air Conditioning
 - j. Division 26 – Electrical
 - 1) Section 265561 – Theatrical Systems Electrical Requirements
 - 2) General requirements for all Electrical work, including installation of system cable trays, terminal cabinets, empty conduit, junction/pull boxes and back boxes for system devices and panels (Division 26).
 - 3) Electrical terminations (AC power and grounding only) to all equipment racks and AC power receptacles (Division 26).
 - 4) Provision and installation of all conduit and back boxes (Division 26).
 - 5) Electrical services and main circuit protection (Division 26).
 - 6) Distribution system equipment (Division 26).
 - 7) Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation.
 - 8) Terminations and testing of system continuity.
 - k. Division 27 – Communications
 - 1) Structured cabling systems
 - 2) At common facility panels, coordinate receptacles for building standard communications systems.
 - l. Division 28 – Electronic Safety and Security

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 - 1. Provide price to Owner for five year maintenance agreement on winches. Price to include emergency site service (post warranty period), one one-day session of additional operator training per year, and replacement of parts due to failure under normal usage.
- C. Alternates
 - 1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. <<TBD>>

2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. Paint Shop – Motorized Batten and related infrastructure

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. MCC – Motor Control Center
 - b. ACC – Automation Control Console
 - c. MCR – Motion Control Rack
 - d. SWL – Safe Working Load

B. Definitions:

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theatre Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location(s) on the project site.
 - i. “Provide”: Furnish and install.
2. Definitions of Technical Terms:
 - a. “Safe Working Load”: The load that can be applied to the system by the end user.
 - b. “System Load”: Sum of the Safe Working Load and the weight of the load carrying device. The maximum load which can be safely handled by the machinery installation under normal operating conditions, not taking dynamic forces into consideration.
 - c. “Dynamic Force”: Forces exerted on the structure or machine that are the result of the movement patterns of the load and system component parts.
 - d. “Design Load”: Sum of the System Load and the loads due to dynamic forces.
 - e. “Category 0 Stop”: An uncontrolled stop resulting from loss of power to the machine actuators at any time during its movement.
 - f. “Category 1 Stop”: A controlled stop that allows power to the machine actuators to achieve a safe stop, and then removes power from the machine actuators when the stop is achieved.
 - g. “Category 2 Stop”: A controlled stop that leaves power left available to the machine actuators.
 - h. “Initial Limit”: The mechanical limit switch connected to the electrical system in such a manner as to prevent further movement in the over travel direction. It shall be a Category 2 stop and allow the user to operate the system in the opposite direction.

- i. "Ultimate Limit": The mechanical limit switch is a positive break mechanical limit switch, which executes a Category 1 stop. NOTE: The Ultimate Limit switch shall be located in such a manner that, should the Initial Limit fail to operate, if the machinery strikes the Ultimate Limit at maximum speed all components of the machine shall come to a complete stop before the over travel results in mechanical damage.
- j. "Fleet Angle": The angle formed between the wire rope and the centerline of a sheave or drum as the wire rope traverses to another sheave or fixed point.
- k. "Zero Fleet Winch": A hoist in which the line pays off the drum at the exact same location at all times, thereby maintaining a fleet angle of zero (0) degrees.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.
6. The following standards apply to the work of this Section. It remains the Contractor's responsibility to confirm and comply with all industry standards that are applicable to the work of this Section.
 - a. ASTM International
 - 1) ASTM A36 for structural steel shapes
 - 2) ASTM A47 for malleable iron casting
 - 3) ASTM A48 for gray iron casting
 - 4) ASTM A1011 for side plates
 - b. American National Standards Institute (ANSI):
 - 1) ANSI B18.2.1&2 for square and hex bolts and nuts
 - 2) ANSI-Z535 – System load and safety signage
 - 3) ANSI E1.6-1 Entertainment Technology – Powered Hoist Systems
 - 4) ANSI E1.4-1 Entertainment Technology – Manual Counterweight Rigging Systems
 - 5) ANSI E1.22 Entertainment Technology – Fire Safety Curtain Systems
 - c. American Iron and Steel Institute (AISI):
 - 1) AISI 1045 for steel shafts
 - d. National Fire Protection Association (NFPA)
 - 1) NFPA 70 - National Electrical Code
 - e. National Electrical Manufacturers Association (NEMA)
 - 1) NEMA WC 63.1 (2005) Twisted Pair Premise Voice and Data Communications Cables
 - 2) NEMA WC 66 (2001;Errata 2003) Category 6 and Category 7 100 Ohm Shielded and Unshielded Twisted Pairs
 - f. Underwriters Laboratories Incorporated (UL)
 - 1) UL/IEC 61508A Functional Safety of Electrical/Electronic/Programmable Electronic Safety-related Systems
 - 2) UL 1666 (2000; Rev thru Jul 2002) Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts
 - 3) UL 467 (2004) Standard for Grounding and Bonding Equipment
 - 4) UL 50 (2003; R 2005) Standard for Enclosures for Electrical Equipment
 - 5) UL 969 (1995; rev Thru Dec 2006) Marking and Labeling Systems

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

B. Pre-installation Meeting:

1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.

C. Sequencing

1. The installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work in this section may be installed, including:
 - a. Principal foundation work (see Architectural Drawings)
 - b. Installation of associated electrical work (see Electrical Drawings)
 - c. Installation of HVAC work in ceilings (see Mechanical Drawings)
 - d. Painting
 - e. Finishing of floors and finishes
 - f. Electromechanical and electronic equipment installation shall proceed after environmental site conditions are met. Refer to paragraph 1.10-B for class requirements.

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system. In addition, the Manufacturer shall indicate maximum accepted wire size as it relates to termination points on their equipment.
- H. Verify wire type, count, and routing for all required data wiring between all components to allow for proper conduit sizing and routing by Division 26. Verify and coordinate all line voltage power input required by systems components that shall be provided under Division 26.
- I. Prior to fabrication, it shall be the responsibility of the contractor to provide a complete submittal for approval within 90 days of award of contract.
- J. Product Data
 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- K. Shop Drawings
 1. Provide shop drawings on D size minimum (24" x 36") sheets.
 2. Include a cover sheet with a drawing index including sheet number and title for each sheet in the set.
 3. Provide ¼" = 1'-0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity which may affect work of this Section.
 4. Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
 5. Provide requisite schematics, plans and sections indicating assembly and installation of components.

6. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 7. Indicate all elements with appropriate safety factors and/or safety equipment.
 8. Indicate recommended load limits for each element in the system with loading requirements.
 9. Indicate Safe Working Load for each element in the system with loading requirements.
 10. Provide power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components. These shall be provided within 30 days of Contract Award.
 11. Provide a full Bill of Materials to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
- L. Samples
1. Submit sample items including, but not limited to:
 - a. Samples of pipe grid hanging hardware and connections, pipe grid junction hardware.
 - b. Samples of drapery tracks and associated hardware.
 2. Additional samples must be submitted within 14 days of Architect's written request.
- M. Certificates
1. Provide a Certificate of Training for each participant at the conclusion of Owner instruction sessions.
- N. Delegated Design Submittals
1. Provide drawings and calculations meeting the review requirements of the authorities having jurisdiction, stamped and wet signed by a Professional Engineer licensed in the project jurisdiction for work of the specific type performed.
 2. Engineered drawings shall be provided to the Architect and Theatre Consultant for review of coordination and compliance to this Section.
 3. Engineered drawings shall be provided to the Structural Engineer of record for this project. The engineer of record will review the loads imposed on the structure by this equipment and compare those loads to allowable structural loading.
 4. Engineered drawings shall be provided to the Authority Having Jurisdiction for this facility. The AHJ will review the drawings for compliance with local codes. In all cases code compliance is the responsibility of the Contractor.
- O. Test and Evaluation Reports
1. Test Procedures
 - a. Provide test procedures for all custom motor drive assemblies.
 - b. The test procedures shall describe in detail all of the necessary operations to perform verification through a test. A test procedure shall be produced for every verification test required and shall contain the following information:
 - 1) Scope of the test: the test shall be described and the intended result shall be listed.
 - 2) Application Documents: all the documents referred to in the test procedure shall be listed.
 - 3) Test conditions: all applicable requirements needed to correctly perform the test shall be listed and detailed (for example: special environmental conditions, dedicated tools, test rigs, special requirements on the tested items, calibration requirements, etc.)
 - 4) Test procedure: all operations required to perform the test shall be detailed.
 - 5) Test results presentation: the procedures to process the raw data for final presentation of the test results shall be described.
 2. Test Reports
 - a. Winches: Provide a load testing report for every winch and component part installed in the automated system based on Safe Working Load.
 - 1) Static loading of primary brake to 1.25 x SWL for a minimum of 10 minutes
 - 2) Static loading of secondary brake to 1.25 x SWL for a minimum of 10 minutes
 - 3) Dynamic test of primary brake to 1.1 x SWL (drop test)
 - 4) Dynamic test of secondary brake to 1.1 x SWL (drop test)
 - 5) Full speed E-Stop test with 1.0 x SWL
 - 6) Test all limits at full speed with 1.0 x SWL

P. Source Quality Control Submittals

1. The Contractor shall supply as part of the submittal process the following Source Quality Control documents which must contain, at minimum:
 - a. Serial number of hoist
 - b. Motor drive serial number
 - c. Batch number of major components
 - d. Name of person conducting the QC test
 - e. Date the test was conducted
 - f. List of mechanical tests conducted
 - g. List of electrical tests conducted

Q. Special Procedure Submittals

1. Installation/Erection Plan
 - a. The Contractor shall supply as part of the submittal process the following Installation/Erection Plan documents which must contain, at minimum:
 - 1) Required path to site of work, including maximum loads applied to floor in that path
 - 2) Maximum size and weight of pieces to be moved along the path
 - 3) Required erection machinery, including lifts, hoists, etc., including the maximum loads applied to the floor and lift points in the erection area
 - 4) Erection Plan: the plan shall outline the construction methods, erection sequence, erection bracing, temporary bracing if required, equipment required and other engineering details necessary for shipping, erecting and maintaining stability of the equipment detailed in this section
2. Training
 - a. To ensure proper training of the user group, the Contractor shall supply as part of the submittal process the following training documentation:
 - 1) Training syllabus
 - 2) Training guide (bound hard copy)
 - 3) Training guide (hands on system training)
 - 4) Testing document for confirmation of understanding
 - 5) DVD/ MPG video training file
 - b. These shall be provided two (2) months prior to completion.

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents:

1. Submit documents in accordance with Division 01 – General Requirements
2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
3. Within 60 days of acceptance testing, submit one (1) set of reproducible “as built and approved” drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
4. Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement or maintenance.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 - e. Deliver all copies of approved Operations Manual to Owner during instruction session, and review it as part of that session.
5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
6. Certificates as required herein.
7. Warranties as required herein.

B. Maintenance Contract

1. Refer to 3.10 – Maintenance.
 2. Submit maintenance contract proposal for Owner and Theatre Consultant review no later than one month prior to substantial completion.
- C. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- D. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
- E. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts

1. Furnish the following user-serviceable components as spare parts for major electronics assemblies:
 - a. Furnish 3 spare fuses of each type in the system
 - b. Furnish 1 spare breaker of each type in the system
 - c. Furnish 4 spare keys of each type in the system
 - d. Furnish 2 spare sets of winch control connection cables
 - e. Furnish 1 spare e-stop master controller card
 - f. Furnish 1 spare winch drive motion controller card
2. Motors and complete motor drives shall not be provided but shall be available within 24-hours of notice to manufacturer.

B. Extra Stock Materials:

1. Deliver stock of maintenance material to Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. Furnish 12 compression sleeves of each type in the system.
 - b. Furnish 4 shackles of each type in the system.
 - c. Furnish 12 thimbles of each type in the system.
 - d. Furnish 12 bolts and nylock nuts of each type in the system.
 - e. Furnish 12 lockwashers of each type in the system.
 - f. Furnish 4 turnbuckles of each type in the system.
 - g. Furnish 1 master track carrier of each type in the system.
 - h. Furnish 4 other track carriers of each type in the system.

1.8 QUALITY ASSURANCE

A. Regulatory Requirements:

1. Refer to Division 01 – General Requirements.

B. Qualifications

1. All equipment and installation to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication, assembly and integration of theatrical rigging equipment, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Contractor's business.
2. The Contractor's Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the Contractor. The Project Manager shall be the primary conduit for all information between the supplier of this equipment and the General Contractor. All information given to the Project Manager shall be considered as given to the Contractor.
3. The Contractor shall have been continuously engaged in the fabrication, integration and installation of theatrical rigging systems for no less than five years.
4. The Contractor shall have, at the time of bid, a current Contractor's License and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of work of this contract.

5. Contractor is responsible for proper installation, operation and safety of all component equipment.
 - a. Equipment must be procured as specified. Non-specified items may be procured from any nationally recognized manufacturer.
 - b. Metalworking may be done by others. Responsibility in all respects shall be that of the Contractor.
6. The Contractor shall verify all system design loads.
7. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 1. All equipment shall be appropriately and substantially packed for shipment.
 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
 3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 2. The Contractor shall be responsible for acceptance of the Theatrical Rigging System components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protection
 1. Upon delivery, the materials shall be stored under cover in a clean and dry location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
 2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions
 1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions and/or corrections are to be requested prior to fabrication.
- B. Environmental Requirements
 1. Equipment is classified according to its susceptibility to construction conditions that may affect its operation. Classes shall be defined by the following paragraphs:
 - a. Class 1:
 - 1) Cable and distribution apparatus, structural elements, electrical back boxes, face plates, terminal boxes, and empty equipment rack frames may be stored in weather protected spaces under "normal" construction site conditions provided that no electronic components are contained within devices, storage boxes are sturdy and well-sealed, and equipment is protected with impermeate inner plastic sheeting.

- 2) Contractor may install this class of equipment in weather-protected spaces under "normal" construction site conditions provided that equipment is protected from dust and moisture by sturdy imperforate plastic sheeting and completely covered with corrugated cardboard held securely in place by duct tape. Cardboard covers shall not be removed until area is broom cleaned. Under no circumstances shall equipment remain uncovered overnight during installation or while work which causes high dust or moisture levels in area of placement is taking place.
- b. Class 2:
- 1) Control panels, spare parts, test and other equipment (except as listed under Class 3) not subject to damage by concrete dust or dirt shall be stored and protected per Class 1 devices.
 - 2) Contractor shall not install equipment in this class until area of installation is broom cleaned, "blown" clean with pressurized air, mopped, air conditioned and secure. Contractor may install control panels with electronic components under Class 1 conditions, but electronic components must be removed and not installed until area of installation meets Class 2 conditions.
- c. Class 3:
- 1) Control consoles, filled equipment racks and other electronic equipment shall not be shipped to site until the rack and control rooms are finished, air conditioned, dust free, broom and mop cleaned, secure, and in all respects complete and ready for occupation.
 - 2) This class of equipment shall not be unpacked until the system is complete in all other respects. Under no circumstances may any equipment in this class be removed from the rack and control rooms into or through spaces which are not cleaned, air conditioned, and complete.

C. Field Measurements

1. Field measurements shall be taken prior to preparation of final shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.
- B. The Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of the installation services provided under this Section for a period of one (1) year following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.
- D. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.
- E. During the Warranty Period, for each product that uses software, furnish manufacturer's software updates to the Owner for installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the Contractor may install elements as manufactured by the following, or an approved equal:
 1. Counterweight Rigging Systems

- a. Automatic Devices Company (ADC)
- b. H & H Specialties Inc.
- c. J.R. Clancy, Inc.
- 2. Track Systems
 - a. H & H Specialties Inc.
 - b. Automatic Devices Company (ADC)
 - c. Gerriets
 - d. Triple E
- 3. Motorized Zero-Fleet Hoist
 - a. J.R. Clancy, Inc.
 - b. ETC Rigging
- 4. Motorized Rigging Control Systems
 - a. J.R. Clancy, Inc.
 - b. ETC Rigging
- B. Manufacturers shall provide the Warranty and Maintenance services specified herein as applicable to their products.
- C. Manufacturers shall engineer, design, produce shop drawings and fabricate all custom equipment required in this section.

2.2 SYSTEMS DESCRIPTION

- A. The following performance spaces shall contain the following major system components listed below and as shown on the TR-series drawings:
 - 1. Proscenium Theatre
 - a. Counterweight System:
 - 1) Structural performance for this entire system must be fully documented under the direct supervision of a Structural Engineer registered in the State of Michigan. The Contractor's engineer shall design and/or select all elements and their connections to meet or exceed the International Building Code.
 - 2) The rigging system shall include provisions for basic hanging, shifting and storing of scenery, stage draperies, masking and elements of the stage lighting systems.
 - 3) The rigging system is highly integrated with the structural steel of the fly tower. See structural Drawings and Specifications for details.
 - 4) The counterweight system shall be a single purchase, "tee" bar guide as detailed in the drawings. See drawings for layout. Operation of the counterweight system shall be from locking rail on the stage floor. The battens shall travel as indicated on the drawings.
 - 5) The technical galleries at stage left and right shall permit the random use of rope line rigging to be spotted on the gridiron at any point above the stage. The loading gallery shall provide access to the counterweight arbors when a batten is being loaded.
 - b. Proscenium Safety Curtain
 - 1) Straight lift proscenium safety curtain with lineshaft winch, smoke pocket, pull station, rate of rise detector, fusible links, and associated hardware.
 - c. Cable Management systems
 - 1) Cable cradles, manual hemp lines, and floor mounted hemp blocks will be included for management of electrical multi-cables.
 - d. Fixed Speaker rigging
 - 1) Provide and install the rigging components necessary to rig the **overhead** speaker clusters
 - e. Portable Capstan Winch
 - f. Stage Traveler Track assemblies
 - 1) Main Drape traveler track shall be furnished for manual, bi-parting, back-packing curtains.
 - 2) Side Tab traveler tracks shall be furnished for manual back-packing curtains.
 - g. Rigging Control System
 - 1) Provide a control system for the motorized theatrical rigging equipment as indicated on the drawings and as detailed herein.

- 2) Additional control system components:
 - (a) Motor control cabinets (MCC)
 - (b) Motion Control Racks (MCR)
 - (c) Control points and E-Stop
 - (d) Hand held control pendant
 - (e) Control pendant receptacles
 - (f) Control for all motors herein
 - h. Acoustic Drapery Track
 - 1) Walk-draw track assembly
 - 2. Studio Theatre
 - a. Tension Wire Grid
 - b. Demountable dead hung drapery pipe battens
 - 3. Valade Jazz Center
 - a. Zero Fleet Motorized Batten System
 - b. Rigging Control System
 - c. Fixed Speaker rigging
 - 1) Provide and install the rigging components necessary to rig the **overhead** speaker clusters
 - d. Acoustic Traveler Track assemblies
 - 1) Acoustic backdrop drape traveler track shall be furnished for manual, bi-parting, back-packing curtains.
 - 4. Paint Shop
 - a. Zero Fleet Motorized Batten System with Integrated Structural Backbone
 - b. Rigging Control System
 - c. Pipe Grid
- B. State of the Art Development
 - 1. The Contractor shall furnish only the manufacturer's latest developed appropriate products. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Architect and make the newer product available to the Owner for acceptance. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the Owner at no additional cost.
 - 2. Should product recall by the Manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the Owner at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.
 - 3. Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the job site.
 - 4. Equipment defect or intended recall shall not relieve the Contractor from his contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Architect by express carrier. Arrangement for alternate product shall be made at this time.
- C. Substitutions
 - 1. All requests for variations from the specified materials and products will be reviewed by the Architect according to the procedures outlined in Division 01.
 - 2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.
 - 3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.
 - 4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested in order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.

5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.3 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
2. All equipment to have pertinent labels.

B. Materials shall conform to the following minimum standard specifications:

1. AISI 1045 for steel shafts
2. ASTM A36 for structural steel shapes
3. ASTM A47 for malleable iron casting
4. ASTM A48 for gray iron casting
5. ASTM A1011 for side plates
6. ANSI B18.2.1&2 for square and hex bolts and nuts

C. Hardware

1. All mounting hardware to be included.
2. All bolts and fasteners must be Grade 5 or better.
3. All bolted attachments to have lock washers or other self-locking fasteners.

D. Electrical

1. All internal wiring shall be factory completed and clearly marked. All field connections shall be by compression connector, terminal strip or other device specified herein. All terminal strip connections shall be clearly labeled as to terminal designation. Insulated wire ferrules are to be used whenever possible for wire termination. Wire nut splices not permitted.
2. All wire sizes and insulation to comply with Underwriters Laboratory and all applicable standards and local codes.
3. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.

E. Design Factors

1. Overhead rigging elements to be designed with a mechanical safety factor of their minimum breaking strength.
 - a. Wire rope: 8:1
 - b. Terminating hardware: 5:1
 - c. Batten clamps: 5:1
2. All drive components shall be designed with a safety factor 3X.
3. Bearings shall be designed with a 2X rating, full speed / 2000 hours.

2.4 COUNTERWEIGHT RIGGING SYSTEM

A. Tee Bar Guide Tracks

1. Provide tee bar guide track.
2. Provide new continuous floor batten and continuous top and bottom stop batten of 2" x 2" x ¼" steel angle, (see TR series drawings). Continuous bumper strips of 2" x 2" hardwood with neoprene pads bolted to the stop battens. Neoprene bumpers shall be flat head screwed with ferrules to hardwood at 4" o.c. Stop battens bolted to each tee with one 3/8" diameter bolt. Bumper strips at electric battens to limit high trim coincident with cable pick-up maximum travel.

B. Arbors

1. Size and weight capacity per schedule on Drawings.

2. Arbor top and bottom to be either steel plate formed channel with forged eyes for each lift line and for hand lines, approved steel forgings with integral eyelets, or approved welded assembly. Bottom plates threaded for connecting tension rods.
3. Arbor top and bottom joined on tee bar side by not less than 3" x 1/2" cold rolled steel (CRS) vertical flat bar fastened top and bottom by 2 3/8" bolts and tack welded.
4. Provide tee bar guide shoes mounted top and bottom of tie bar. Each to be 2 pieces of 5/16" UHMW separated by 5/16" UHMW spacer (or as required to properly fit the existing tee bar). Full width 3/16" steel reinforcing plate on front and back. Arbors over 15'-0" in length shall have an intermediate guide shoe attached to the steel back bar. Delrin shoes required for aluminum tees.
5. Provide two 3/4" high tensile strength threaded connecting rods between top and bottom spaced to fit counterweight slots. Fastened with 2 nuts and 1 lock washer each side of top and bottom.
6. Provide 12 gauge, 2" x 12" spreader plates to slip on connecting rods. Top spreader plate with spring keeper on front rod and locking stop collar on back rod. Provide 1 spreader plate for each 3'-0" of arbor height plus top spreader.
7. Provide forged eye as shown on the Drawings for utilization of capstan winch.
8. Provide metal angle iron "counterweight spacers" on any arbor where, after the pipe weight is installed, the counterweight is not level with the loading gallery. In all cases, on each arbor, the pipe weight must be level with the loading gallery.

C. Counterweights

1. Provide standard "U" slotted smooth flame-cut steel weights. All counterweight to fit all arbors (as set to set clearances allow) unless otherwise noted. Weights to be ground free of burrs or any sharp edges or protrusions. Weight to have diagonal cut at opposite corners. Provide the following sized weights:
 - a. 6" wide counterweight:
 - 1) 11 pound weights 1/2" thick by 6" wide by nominally 14" long
 - (a) Provide 5%
 - 2) 22 pound weights 1" thick by 6" wide by nominally 14" long
 - (a) Provide 95%
2. Provide counterweight for the following:
 - a. Pipe weight for general purpose linesets
 - b. Pipe weight for fixed electric battens
 - c. Main Drape and Valance
 - d. 60% of total system working load limit capacity
 - 1) Approximately 52,000 lbs.
3. All weights to be painted with shop coat of flat grey alkyd primer, Benjamin Moore Corotech Alkyd Shop Coat Primer or equal.
 - a. All pipe weight to be completely painted bright yellow.
4. After painting the counterweight shall be distributed:
 - a. 90% at the loading gallery
 - b. 10% at the stage floor
5. Provide necessary thinner sheet steel weights for fine trimming of Main Drape.
6. Batten balance and other permanent weights for all linesets to be permanently held in arbor by 2 bands standard mechanically locked steel strapping. Paint strapped weights bright yellow for identification.

D. Lift Lines:

1. Oil-free, zinc coated, 1/4", 7x19 aircraft cable. 7,000 lbs. minimum breaking strength for general linesets.
2. Pipe batten connection by:
 - a. Pipe clamp
 - b. Rated hot dip galvanized jaw/jaw (cotter pin type) turnbuckle with 6" of take-up, lock nuts, lock washers and safety wire mouse (after adjustment).
 - c. Wire rope thimble
 - d. Copper compression sleeves installed as per manufacturer's recommendation.
 - e. Dress cable ends using black heat shrink tubing.

3. Arbor connections by:
 - a. Thimble
 - b. Rated galvanized shackle, cotter pin type with cotters on inward side.
 - c. Copper compression sleeves installed as per manufacturer's recommendation.
 - d. Dress cable ends using black heat shrink tubing.
 - e. Adjust lengths of lift lines to trim batten parallel to stage floor at low trim height as indicated on the Drawings.
- E. Pipe Battens
1. Provide pipe battens complete with couplings, connectors and fittings as indicated on the Drawings. Pipe to be of 1½" nominal Schedule 40 black iron pipe as per standard industry practice.
 2. Batten segments and couplings to be secured with 5/16" bolts, lock washers and nuts.
 3. Batten ends to be covered with yellow vinyl caps to protect individuals from contact with cut pipe ends.
 4. Battens to be painted with flat black enamel.
 5. Battens to be marked with a 1" wide white stripe on centerline only, full circumference around pipe. Battens to be marked with 1'-0" measured increments from end to end. All markings to be in yellow enamel paint.
- F. Operating (Hand) Lines
1. Unspliced ¾" first grade line of filament and staple/spun polyester wrapped fibrillated polyolefin. Three-Strand Composite Multiline II, color standard white as manufactured by New England Rope or equal. Clean of slivers and foreign materials.
 2. Dead tie with bowline at top, use 2 tight fitting half hitches after passing through eye at bottom of arbor, tape ends, or dress top with 2 removable nylon tie wraps.
 3. Adjust length for proper tension block takeup after initial line stretch. Bottom of floor block to be approximately 9" above counterweight pit slab at time at final checkout.
- G. Counterweight Locking Rails
1. Continuous 4" x 6" x ¼" steel tube locking rail, running the full length of the tee bar system. Drill for rope locks on required centers to match all tee bar spacing. Drill tube at 4'-0" centers to accept standard belaying pins. Provide 3" square steel engaging tube for capstan winch.
 2. Provide (1) complete locking rail at the stage floor level. Refer to Drawings.
 3. Rail stanchions of 3" square tube, not more than 5'-0" on center. Anchor to stage floor to withstand upward force of 350 lbs. per foot on rail.
 4. Continuous white acrylic index strip as indicated on the Drawings.
 5. Provide neoprene handle bumper on rail or integrated with rope lock (see below).
 6. Provide lineset labeling on the onstage face of the locking rail.
- H. Rope Locks
1. Steel, quick-acting eccentric levers. Heat treated steel cams.
 2. Cast iron bodies acceptable (#30 gray iron).
 3. Provide 3/8" lock adjustment set screw.
 4. Slip ring to hold lever in locked position.
 5. Provide 3/8" bolts to locking rail positioning lock on axis of arbor.
 6. Operating handle and slip ring to be plastic covered.
 7. All internal parts to operate silently. Provide internal neoprene pads and nylon cam shims.
 8. Provide one rope lock per lineset as indicated in the Drawings for each tee bar space.
 9. Provide one high quality, all keyed alike, padlock per each rope lock.
- I. Tension Blocks
1. Provide 10" diameter cast #30 gray iron sheave, turned and grooved for ¾" hand line, press-fitted with precision ball bearings.
 2. Provide 5/8" minimum steel shafts held by self-locking hex nuts.
 3. Steel housing or cast iron weighing, with sheave, not less than 30 pounds to maintain hand line tension.
 4. Two UHMW and neoprene guide assemblies with ¼" steel full width backing plates on both sides of shoes, as for arbors, for free riding attachment to tee bar tracks.

J. Head Blocks

1. Heavy-duty machined cast ductile iron or #30 gray iron sheave turned and grooved for steel cable lift lines and for 3/4" operating line. Pitch diameter to be matched for steel cable and rope. Grooves to have 1/64" tolerance.
2. See schedule on Drawings for the number of grooves in each head block.
3. Sheaves to have 4" machine faced hubs bored for 2 press-fitted Timkin 7204-B cup and 07100 preloaded cone roller, (no known equal). Alternates require specific approval.
4. Shafts of 1" diameter steel, locked to side plate, with adjustment nut factory tightened to manufacturer's torque specifications and locked to shaft by cotter pin or self-locking nut.
5. Sides not less than 3/16" CRS plate, welded and riveted to 1½" x 2" x ¼" steel base angles with 1½" legs horizontal, turned in and cut to clear vertical lines on 6-line+ sets. Base angle legs shall be turned out for 4-line sets. Side plates to span past edges of head block beam flanges by at least 1½". Side plates to span base angle cut and head block beam flanges by at least 1½".
6. Sides joined into rigid assembly by at least five 3/8" bolts with spacer pipes located where appropriate to retain cables in sheave grooves.
7. Head block sheave to be 12" in diameter, typical, unless otherwise noted on the Drawings.
8. Head blocks attached to the head block beam by double 2" x ¼" clips with forged offset or space plate for thickness of beam flange. Clips bolted to block by 2 ½" bolts with nuts and lockwashers.

K. Loft Blocks:

1. Machined, cast ductile iron or #30 gray iron sheaves, 8" diameter, turned and grooved for one ¼" steel cable. 1/64" groove tolerance.
2. Sheaves bored and press-fitted with double sealed precision ball bearing assemblies. SKF 60 Series 2 RS or equal.
3. Shafts of 5/8" diameter steel locked to side plate, with adjustment nut factory set for proper shaft and bearing adjustment and locked in place.
4. Side plates not less than 10 gauge CRS plate.
5. Base angles shall be 1½" x 1½" x ¼", with legs turned out.
6. Sides joined by five 5/16" bolts with pipe spacers same as head blocks located where appropriate to retain cables in sheave grooves and fully enclose sheave.
7. Idler sheaves (4" minimum diameter) may be of high strength nylon grooved for ¼" steel cable. Precision ball bearings. Provide spacers as required to locate sheaves ½" on center, sheave to sheave. Each loft block shall have one idler for each cable which passes it. Use of sag bars are not permitted.
8. Short line loft blocks to be multigroove sheaves with 1 groove for each pickup cable in set. Construction shall be similar to that indicated for the head block above, without the groove for the operating line.
9. Loft blocks attached with pivot bracket with a pair of 1½" x 1½" x ¼" angles that bolt to loft block base angles and a pair of 1½" x 1½" x ¼" angles attached to roof beams with double 2" X 1¼" clips with forge offset or spacer plate for thickness of beam flange. A ¾" diameter threaded rod to connect the two sets of angles and provides the pivot point. Clips bolted to angle by 2 - 7/16" bolts at each side.

L. Index Strip Light

1. Provide LED index strip light with 2 alternating circuits (white and blue). Fixtures will be dimmable LED, alternating white frosted and blue frosted. Index strip to be full length of locking rail. Suspend from outrigger batten as indicated in the Drawings. Mount the strip lights prior to connection by Division 26.
2. Provide local dimmers of appropriate voltage and capacity for each of the two circuits. Installation by Division 26.

M. Outrigger Battens:

1. Provide bracket support for index strip lights at the locking rail as indicated above and as shown on Drawings.
2. Outrigger batten and index strip light support brackets may not be fastened to the tee bar guide tracks.

N. Counterweight System Labeling

1. The linesets shall be labeled with the designations indicated on the Drawings in the following locations:
 - a. The onstage face of the locking rail.
 - b. The onstage flange of the counterweight head block well buck beam.
 - c. The upper offstage railing of the loading gallery.
 - d. Pipe ends
2. Labels shall be painted with enamel paint on structure using stencils or by a professional sign painter.

O. System Signage:

1. Provide signage indicating system load data for each of the following locations:
 - a. Stage Level
 - b. Loading Gallery
2. System data shall include:
 - a. "When Working on Galleries: Fall Protection Required When Loading/Unloading Counterweights from Arbors"
 - b. Working Load Limit and total load capacity of general purpose sets
 - c. Working Load Limit and total load capacity of fixed electric sets
 - d. Weight per each size of counterweight
3. Signage shall be made of 1/8" aluminum, painted finish.
 - a. Block lettering of 1/4" high minimum letters.

P. Wooden Belaying Pins

1. Pins shall be 21" long by 1-5/32" in diameter with a shoulder and handgrip at the top.
2. Belaying pins shall be machine turned from hardwood and shall fit 1-1/4" diameter holes in the pin rail.
3. Provide 10

2.5 STAGE TRAVELER TRACK ASSEMBLIES

A. Provide tracks for the traveler curtains and side masking draperies as indicated on Drawings and schedules. Complete with all necessary accessories (CWANA).

B. Track:

1. Track to be heavy-duty channel type, approximately 3" x 3", 14 gauge steel or extruded aluminum formed to provide parallel double tracks for carrier wheels and totally enclosed except for bottom carrier slot.
2. Traveler tracks for bi-part drapes to be in two sections, with 2'-0" combined center overlap, fitted for manual line operation.
3. Traveler tracks for side masking draperies to be single sections, fitted for manual line operation.
4. Each traveler track section to be a single piece, free of burrs, dents or irregularities. Sections for bi-part track assemblies clamped together by at least 3 lap clamps.
5. Hanger fittings and clamps for attachment spaced at 4'-0" on center maximum.

C. Carriers:

1. Provide one master carrier for each single-section line-operated traveler track.
2. Provide two master carriers for each double-section traveler track.
3. Master carriers to each have 4 paired neoprene wheels with ball bearings.
4. Master carriers to have 2 clamps for attachment of operating line and 2 plated swivels with 6" of usable trim chains for curtain attachment.
5. Single carriers to have 2 neoprene wheels with ball bearing with "hollow center" design to bypass the operating line.
6. Each single carrier to have single plated swivels with 6" of usable trim chain.
7. One single carrier for each 1'-0" of track length.
8. Provide end stacking (rear fold, back pack) devices to stack drapery only at offstage track ends. Provide rubber washers to packing tabs.

D. Traveler Track Pulley Blocks:

1. End pulley blocks heavy-duty type with 8" sheaves turned and grooved for 1/2" operating line. Double vertical sheaves on the live end of the tracks; a single horizontal sheave on the dead end. Housings firmly bolted to the track.
 - a. Flying Traveler Tracks: Provide a single 45 degree slanted sheave on the dead end.
 2. Floor pulley blocks to have 8" sheaves with sealed ball bearings. Sheaves mounted to slide vertically and clamp in a steel frame with full side plates of sufficient height to permit 9" tension and adjustment of operating line. Base drilled for 2 improved stage screws for floor mounting. Supply 2 improved stage screws and plugs.
 3. All blocks to provide for positive retention of operating cords in grooves of sheaves.
- E. Traveler Operating Hand Lines:
1. Each hand line to be a single length, first quality, 1/2" diameter, fiberglass center, braided cotton cord.
 2. Rig for curtain operation from the live end of the track.
 3. Length of hand line to be adjusted for tension with traveler curtains mounted and trimmed.
- F. Products:
1. ADC #283-R
 2. H&H #400
 3. Or equal

2.6 SPEAKER RIGGING

- A. Confirm speaker loading configuration with the structural engineer of record.
- B. Provide all necessary rigging components to safely rig the speaker cluster. The safety factor of the components shall be 10:1. This includes but is not limited to; beam clamps, turnbuckles, wire rope, thimbles, compression sleeves, etc.

2.7 MOTORIZED ZERO-FLEET HOIST BATTENS WITH INTEGRATED STRUCTURAL BACKBONE

- A. Winch Architecture
 1. Zero Fleet:
 - a. Provide a system of compact horizontally or vertically mounted "zero fleet" fixed speed winches to be located and mounted as shown on the drawings. Zero fleet is defined as the angle at which the wire rope leaves a grooved winch drum perpendicular to the groove; this angle must remain 0 degrees at all times.
 - b. Winch system shall utilize motor drives local to each individual winch. Winch cables shall be connectorized for connection to wireways.
 - c. The winches shall be mounted on a chassis bolted to structure as shown on the drawings.
 - 1) All mounting hardware is under this contract.
 - d. Total width of winches shall not to exceed dimensions as shown in the drawings.
 - e. The motor carriage with drum or assembly of diverter sheaves shall move horizontally as the drum rotates to allow the pick-up lines to pass internal diverter sheaves maintaining a zero fleet angle.
 - f. If required due to the hoist orientation, diverter sheaves allow the cable to exit the drum and immediately turn 90 degrees to exit the end of the winch parallel to drum axis.
 2. Hoisting Capacity
 - a. The safe working load (SWL) of the hoist shall be as listed in the Lineset Schedule.
 - b. During the commissioning and Compliance Testing phase, this hoist shall be capable of lifting 25% more than the SWL without substitution of any components. See "System Start up, Owners Instruction and Commissioning" above.
 3. Speed
 - a. The speed of the hoist shall be as listed in the Lineset Schedule.
 4. Lift lines:
 - a. The number of wire ropes that will be attached to the hoist drum shall be as listed in the Lineset Schedule. The drum must be sized to accommodate the full travel, plus three dead (safety) wraps and space for two unused wraps for each lift line. The termination of each wire rope shall be by compression stop sleeve installed as per manufacturer's recommendation to hold the wire rope firmly to the drum.

- b. Note: the total length of each lift line is a function of the travel distance and the distance from the hoist to the attachment point for the batten.
- 5. Travel Distance:
 - a. The travel distance shall be as listed herein or as detailed in the drawings.
- 6. Limits:
 - a. The hoist shall be capable of being stopped at any point between its initial up and initial down limits. The exact stopping point shall be determined by the information provided by an absolute encoder which is part of the hoist design.
 - b. The hoist shall have the following hard struck limit switches:
 - 1) "Ultimate up" hard struck limit
 - 2) "Initial up" hard struck limit
 - 3) "Initial down" hard struck limit
 - 4) "Ultimate down" hard struck limit
 - c. The initial hard limits, both up and down, stop the hoist from traveling but allow the operator to drive off the initial limit. The ultimate hard limits, both up and down, initiate an E-stop in which power is removed from the motor drive after a fast deceleration.
 - d. In all cases, proper over travel must be provided in the hoist design to accommodate a failure of the control system. The hoist must come to a complete stop after striking an "initial up" or "initial down" limit without striking an "ultimate" limit. If the "initial limits" fail to function, the striking of an "ultimate" limit must bring the hoist to a complete stop before striking an immoveable object.
- 7. Telemetry:
 - a. The telemetry, i.e. position, of the moving element connected to the hoist shall be determined by the feedback of, at minimum, a single absolute encoder. This encoder shall be capable of accurately positioning the moving element. This encoder shall be mounted to the electric motor and shall not be belt driven.
- 8. Brake:
 - a. Each hoist shall have a primary motor brake and a secondary brake. Each brake shall be cable of stopping and holding 200% of the hoisting capacity. Each brake shall be spring applied, fail safe, electromagnetically released.
 - 1) Secondary brake shall be on load side of hoist drive-train. Secondary brake shall be mechanically coupled to wire rope drum with as few connections as possible. Secondary brake located at the motor's high RPM/low torque output shaft shall not be accepted
- 9. Load Detection:
 - a. The hoist shall be provided with a load cell device which is capable of determining the load which has been added or removed from the system. This device shall be integrated into the control system and each hoist shall be able to "learn" its load, as a safeguard against unintentionally overloading or under-loading the hoist.
 - b. The control system must initiate a stop if the system load changes by more than $\pm 6\%$. This threshold shall be user adjustable.
 - c. In no case shall the software system allow movement if the SWL is exceeded.
- 10. Cross Groove Detection:
 - a. The hoist shall be provided with a ground bar or limit switches, one per each lift line, which initiate an E-stop if any of the lift lines leave their established rope drum groove either due to slack line or cross groove condition.
- 11. Drum rollers:
 - a. Provide pinch rollers to ensure lift lines are held in their groove at the tangential point at which the lift line exits the drum.
 - b. Rollers shall rotate on sealed ball bearings. Plain bushings shall not be accepted.
 - c. Rollers shall be machined to match the profile of the lift lines. Machined rollers shall include at least one profile to ride in an empty drum groove and at least one groove for exiting lift line.
- 12. Adjustable acceleration and deceleration:
 - a. The acceleration and or deceleration of the hoist shall be user configurable from the control console, and shall be capable of straight line or S shape acceleration/deceleration ramp curves up to the maximum rates listed above.
- 13. Power and Control Wiring

- a. Power and control cables shall be provided with each winch.
 - b. Power cables shall be properly rated SO cable with NEMA locking connectors. Control cables shall have connectors with steel body and position locking.
 - c. Power and control wireways shall be provided with receptacles to mate with connectors on provided power and control cables.
14. The hoist shall be (no other known equals):
- a. The PowerLift series by J.R. Clancy
 - b. Prodigy P1900G Hoist by ETC Rigging
- B. Integrated Structural Backbone and Beam Clamps
1. The Structural Backbone shall be a continuous channel of extruded aluminum engineered so as not to add horizontal forces on the building when used in combination with the slip fit beam clamps.
 - a. The tube shall support the loft blocks mounted within the spacing limits of the system.
 - b. Structural Backbone sections shall be joined into a continuous assembly by a pair of dedicated splicing plates at each Structural Backbone joint.
 - c. The Structural Backbone shall be installed only by means of dedicated beam clamps that allow the Structural Backbone to snap-into place and move horizontally to neutralize additional lateral forces on the structure.
 - d. Beam clamps shall be capable of attaching to horizontal beams, joist flanges or flat steel plates measuring from .25" thick up to 1" thick and from 4.25" wide up to 14" wide.
 - e. Hoist systems that add lateral forces to the building shall not be accepted for this project.
 - f. The Structural Backbone shall permit positioning of loft blocks anywhere along its length.
 2. Loft Blocks:
 - a. Each loft block shall be an assembly of steel side plates, a wire rope idler, sheave support hardware and an assembly to prevent the loft block from sliding horizontally. Each loft block shall be inserted into a slot on the bottom of the Structural Backbone.
 - b. Loft blocks sheaves shall measure 5.25" in diameter and contain a pair of press fit sealed ball bearings.
 - c. Lift lines shall travel in a groove shaped and sized for 3/16" diameter wire rope per the latest edition of the Wire Rope Users' Manual as published by the Wire Rope Technical Board. The loft block sheave shall be concentric about the hub and shall be evenly balanced for ease of rotation.
 - d. An idler shall be incorporated into the top assembly of the loft block to guide and support lift lines as they pass the loft block.
 - e. Hoisting systems requiring the loft blocks to be mounted directly to the facility steel shall not be accepted for this project.
- C. Lift Lines:
1. Oil-free, zinc coated, 3/16" or 1/4", 7x19 aircraft cable. 7,000 lbs. minimum breaking strength for 1/4" or 4,200 lbs minimum breaking strength for 3/16".
 2. Pipe batten connection by:
 - a. Pipe clamp
 - b. Rated hot dip galvanized jaw/jaw (cotter pin type) turnbuckle with 6" of take-up, lock nuts, lock washers and safety wire mouse (after adjustment).
 - c. Wire rope thimble
 - d. Compression sleeve installed as per manufacturer's recommendation.
 - e. Dress cable ends by black heat shrink tubing.
 3. Adjust lengths of lift lines to trim batten parallel to stage floor at low trim height as indicated on the Drawings.
- D. Pipe Battens:
1. Provide segmented battens complete with couplings, connectors and fittings as indicated on the Drawings. Pipe to be of 1 1/2" nominal Schedule 40 black steel pipe as per standard industry practice.
 2. Batten segments and couplings to be secured with 5/16" bolts, lock washers and nuts.
 3. Batten ends to be covered with yellow vinyl caps to protect individuals from contact with cut pipe ends.
 4. Battens to be painted with flat black enamel.

5. Battens to be marked with a 1" wide white stripe on centerline only, full circumference around pipe. Battens to be marked with 1'-0" measured increments from end to end. All markings to be in yellow enamel paint.

2.8 RIGGING CONTROL SYSTEM (RCS)

- A. Provide a control system for the motorized theatrical rigging equipment as indicated on the drawings and as detailed herein.
 1. Controller shall be (provide 1):
 - a. JR Clancy: Scene Control Pendant
 - b. ETC Rigging: QuickTouch 1-channel
 - c. Or approved equal
 2. Additional Control System components:
 - a. Motor control cabinets (MCC)
 - b. Motion Control Racks (MCR)
 - c. Control point and E-Stop
 - d. Control pendant receptacles
 - e. Control for all motors herein

2.9 MOTORIZED ZERO-FLEET HOIST BATTENS

- A. Winch Architecture
 1. Zero Fleet:
 - a. Provide a system of compact horizontally or vertically mounted "zero fleet" fixed speed winches to be located and mounted as shown on the drawings. Zero fleet is defined as the angle at which the wire rope leaves a grooved winch drum perpendicular to the groove; this angle must remain 0 degrees at all times.
 - b. Winch system shall utilize motor drives local to each individual winch. Winch cables shall be connectorized for connection to wireways.
 - c. The winches shall be mounted on a chassis bolted to structure as shown on the drawings.
 - 1) All mounting hardware is under this contract.
 - d. Total width of winches shall not to exceed dimensions as shown in the drawings.
 - e. The motor carriage with drum or assembly of diverter sheaves shall move horizontally as the drum rotates to allow the pick-up lines to pass internal diverter sheaves maintaining a zero fleet angle.
 - f. If required due to the hoist orientation, diverter sheaves allow the cable to exit the drum and immediately turn 90 degrees to exit the end of the winch parallel to drum axis.
 2. Hoisting Capacity
 - a. The safe working load (SWL) of the hoist shall be as listed in the Lineset Schedule.
 - b. During the commissioning and Compliance Testing phase, this hoist shall be capable of lifting 25% more than the SWL without substitution of any components. See "System Start up, Owners Instruction and Commissioning" above.
 3. Speed
 - a. The speed of the hoist shall be as listed in the Lineset Schedule.
 4. Lift lines:
 - a. The number of wire ropes that will be attached to the hoist drum shall be as listed in the Lineset Schedule. The drum must be sized to accommodate the full travel, plus three dead (safety) wraps and space for two unused wraps for each lift line. The termination of each wire rope shall be by compression stop sleeve installed as per manufacturer's recommendation to hold the wire rope firmly to the drum.
 - b. Note: the total length of each lift line is a function of the travel distance and the distance from the hoist to the attachment point for the batten.
 5. Travel Distance:
 - a. The travel distance shall be as listed herein or as detailed in the drawings.
 6. Limits:
 - a. The hoist shall be capable of being stopped at any point between its initial up and initial down limits. The exact stopping point shall be determined by the information provided by an absolute encoder which is part of the hoist design.

- b. The hoist shall have the following hard struck limit switches:
 - 1) "Ultimate up" hard struck limit
 - 2) "Initial up" hard struck limit
 - 3) "Initial down" hard struck limit
 - 4) "Ultimate down" hard struck limit
 - c. The initial hard limits, both up and down, stop the hoist from traveling but allow the operator to drive off the initial limit. The ultimate hard limits, both up and down, initiate an E-stop in which power is removed from the motor drive after a fast deceleration.
 - d. In all cases, proper over travel must be provided in the hoist design to accommodate a failure of the control system. The hoist must come to a complete stop after striking an "initial up" or "initial down" limit without striking an "ultimate" limit. If the "initial limits" fail to function, the striking of an "ultimate" limit must bring the hoist to a complete stop before striking an immovable object.
7. Telemetry:
- a. The telemetry, i.e. position, of the moving element connected to the hoist shall be determined by the feedback of, at minimum, a single absolute encoder. This encoder shall be capable of accurately positioning the moving element. This encoder shall be mounted to the electric motor and shall not be belt driven.
8. Brake:
- a. Each hoist shall have a primary motor brake and a secondary brake. Each brake shall be capable of stopping and holding 200% of the hoisting capacity. Each brake shall be spring applied, fail safe, electromagnetically released.
 - 1) Secondary brake shall be on load side of hoist drive-train. Secondary brake shall be mechanically coupled to wire rope drum with as few connections as possible. Secondary brake located at the motor's high RPM/low torque output shaft shall not be accepted
9. Load Detection:
- a. The hoist shall be provided with a load cell device which is capable of determining the load which has been added or removed from the system. This device shall be integrated into the control system and each hoist shall be able to "learn" its load, as a safeguard against unintentionally overloading or under-loading the hoist.
 - b. The control system must initiate a stop if the system load changes by more than $\pm 6\%$. This threshold shall be user adjustable.
 - c. In no case shall the software system allow movement if the SWL is exceeded.
10. Cross Groove Detection:
- a. The hoist shall be provided with a ground bar or limit switches, one per each lift line, which initiate an E-stop if any of the lift lines leave their established rope drum groove either due to slack line or cross groove condition.
11. Drum rollers:
- a. Provide pinch rollers to ensure lift lines are held in their groove at the tangential point at which the lift line exits the drum.
 - b. Rollers shall rotate on sealed ball bearings. Plain bushings shall not be accepted.
 - c. Rollers shall be machined to match the profile of the lift lines. Machined rollers shall include at least one profile to ride in an empty drum groove and at least one groove for exiting lift line.
12. Adjustable acceleration and deceleration:
- a. The acceleration and or deceleration of the hoist shall be user configurable from the control console, and shall be capable of straight line or S shape acceleration/deceleration ramp curves up to the maximum rates listed above.
13. Power and Control Wiring
- a. Power and control cables shall be provided with each winch.
 - b. Power cables shall be properly rated SO cable with NEMA locking connectors. Control cables shall have connectors with steel body and position locking.
 - c. Power and control wireways shall be provided with receptacles to mate with connectors on provided power and control cables.
14. The hoist shall be (no other known equals):
- a. The PowerLift series by J.R. Clancy
 - b. Prodigy P1900G Hoist by ETC Rigging

B. Lift Lines:

1. Oil-free, zinc coated, 3/16" or 1/4", 7x19 aircraft cable. 7,000 lbs. minimum breaking strength for 1/4" or 4,200 lbs minimum breaking strength for 3/16".
2. Pipe batten connection by:
 - a. Pipe clamp
 - b. Rated hot dip galvanized jaw/jaw (cotter pin type) turnbuckle with 6" of take-up, lock nuts, lock washers and safety wire mouse (after adjustment).
 - c. Wire rope thimble
 - d. Compression sleeve installed as per manufacturer's recommendation.
 - e. Dress cable ends by black heat shrink tubing.
3. Adjust lengths of lift lines to trim batten parallel to stage floor at low trim height as indicated on the Drawings.

C. Pipe Battens

1. Provide segmented battens complete with couplings, connectors and fittings as indicated on the Drawings. Pipe to be of 1 1/2" nominal Schedule 40 black steel pipe as per standard industry practice.
2. Batten segments and couplings to be secured with 5/16" bolts, lock washers and nuts.
3. Batten ends to be covered with yellow vinyl caps to protect individuals from contact with cut pipe ends.
4. Battens to be painted with flat black enamel.
5. Battens to be marked with a 1" wide white stripe on centerline only, full circumference around pipe. Battens to be marked with 1'-0" measured increments from end to end. All markings to be in yellow enamel paint.

D. Loft Blocks:

1. Machined, cast ductile iron or #30 gray iron sheaves, turned and grooved for one 1/4" steel cable. 1/64" groove tolerance. Wire rope to sheave D to d to be 26 times minimum.
2. Sheaves bored and press-fitted with double sealed precision ball bearing assemblies. SKF 6000 Series 2RS or equal.
3. Shafts of 15mm diameter steel locked to side plate, with adjustment nut factory set for proper shaft and bearing adjustment and locked in place.
4. Side plates not less than 10 gauge CRS plate.
5. Base angles shall be 1 1/2" x 1 1/2" x 1/4", with legs turned out.
6. Sides joined by five 5/16" bolts with pipe spacers located where appropriate to retain cables in sheave grooves and fully enclose sheave.
7. Idler sheaves (4" minimum diameter) may be of high strength nylon grooved for system cable. Precision ball bearings. Provide spacers as required to locate sheaves 1/2" on center, sheave to sheave. Each loft block shall have one idler for each cable which passes it.
8. Idler sheave as shown on drawings.
9. Loft blocks attached to roof beams by double 2" X 1 1/4" clips with forge offset or spacer plate for thickness of beam flange. Clips bolted to block by 2 7/16" bolts at each side.

2.10 RIGGING CONTROL SYSTEM (RCS)

- A. Provide a control system for the motorized theatrical rigging equipment as indicated on the drawings and as detailed herein.
1. Controller shall be (provide 1):
 - a. JR Clancy: Scene Control 12
 - b. ETC Rigging: QuickTouch 4-channel
 - c. Or approved equal
 2. Additional Control System components:
 - a. Motor control cabinets (MCC)
 - b. Motion Control Racks (MCR)
 - c. Control point and E-Stop
 - d. Control pendant receptacles
 - e. Control for all motors herein

2.11 TENSION WIRE GRID

A. DESIGN CRITERIA:

1. The following design criteria are intended to establish minimum safety requirements. Where Federal, State and Local legislation address these topics, the more stringent requirement shall take precedence. Factors listed below in no way relieve the contractor from the sole responsibility for furnishing a safe and properly engineered system.
2. Cables, fittings, load bearing components: Minimum safety factor of 8x.
3. Maximum woven cable surface deflection at mid-span: Not greater than L/80 under a 150# load on a 12" x 12" area.
4. Maximum frame compression on any member: 5000#.
5. Design live load on grid: 20# p.s.f. over a panel.

B. TENSION GRID FRAME ASSEMBLY

1. Tension wire grid frames to be welded assemblies of structural steel, sized appropriately for this application. Overall dimensions of the frames as per the Drawings and as verified by field survey of structural support grid.
2. Frame assembly to be drilled, de-burred and chamfered for attachment of woven wire rope grid. Live end (swaged fitting) holes and dead end (compression sleeve) holes to be 9/32" diameter.
3. Frame assembly to be finished with flat black enamel.

C. TENSION GRID WOVEN WIRE ROPE GRID

1. The walking surface of the tension wire grid shall be made of 1/8" wire rope woven at 2" on center in two directions. Connections to channel frame assembly by swaged fittings and compression sleeves as per Drawings and indicated herein.
2. Where members having sloping flange faces, bolted connections shall be provided with appropriate beveled washers to afford square seating of heads and nuts. Alternate method: weld pipe section in place to accommodate a bend in the wire rope.
3. Wire rope lengths shall be continuous lines from the same spool, free of knots, splices or mechanical fasteners along their length unless specifically required in the Contract Documents.
4. Wire rope shall be oil free, preformed 1/8" diameter 7x19 galvanized and blackened cable. Blacken by means of electro-statically applied powder coat. Cable shall be rated at not less than 2,000 pounds. Damaged or deformed cables shall not be used.
5. Blackened wire rope shall be the product of:
 - a. Fehr Brothers (no known equal).

D. TENSION GRID SWAGED FITTINGS

1. Swaged fittings shall be Type 303 selenium bearing, corrosion resistant stainless steel. Stud fittings shall be sized for 1/8" wire rope and be threaded as required to meet the criteria established herein and on the Drawings.
2. Swaged fitting shall be secured in place with 1 washer and 2 nuts.

E. TENSION GRID COMPRESSION SLEEVES

1. Compression sleeves shall be sized appropriately for the cable construction and diameter of the cable with which they are employed.. Sleeves shall be cylindrical for stop sleeves. Sleeves shall be copper. After application, sleeves shall meet or exceed the latest requirements of Military Specification MIL-W-83420.
2. Compression sleeves and tools shall be the product of:
 - a. National Telephone Supply Company, Locoloc, or equal.

F. TEMPORARY COMPRESSION STRUTS

1. If required to prevent deformation during fabrication, provide temporary compression struts. Struts to remain in place until modules are welded down, and tension tabs and perimeter gussets are welded in place.
2. Struts to be completely removed after welding is complete. No remnants or finish variations permitted.

G. TENSION TABS AND PERIMETER GUSSETS

1. Tension tabs and perimeter gussets shall be installed in order to prevent the deformation of the module channel frame.
2. After placement and weld-down of tension grid modules and prior to the removal of the temporary shipping struts, weld 1" x 6" steel strap between adjacent modules, top and bottom. Provide tension tabs at third points on all side. Alternate on either side of centerline across a row to permit future access to wire rope fittings. Center tabs between holes.
3. For the perimeter conditions, after placement and weld-down of tension grid modules and prior to the removal of the temporary shipping struts, weld 4" leg 45 degree triangle steel gusset between module channel and understructure. Provide gussets at third points of module. Locate centered between holes.

H. TENSION GRID SIGNAGE

1. Signage shall be legible both in construction and grammar. A diagram depicting the system layout and maximum load limitations (drawn not less than 1/2" = 1'-0") shall be wall-mounted in a protective transparent faced frame on the wall near the entrance to the grid as to be plainly visible, and as not to interfere with the operation of systems.
2. Provide verbiage in English as listed below:

WARNINGS FOR TENSION GRID:

MAXIMUM LOAD - 4 PERSONS PER MODULE (20 lbs./sq.ft.)
DO NOT BOUNCE ON SURFACE
SECURE LOOSE ITEMS
MAINTAIN CABLE WEAVE AT 2" SQ.

2.12 PIPE GRIDS

- A. Provide pipe grids as shown on the contract drawings. Pipe battens of 1½" nominal diameter I.D. (1.9" outside diameter) Schedule 40 black steel pipe as per standard industry practice.
- B. Provide dead-hung pipe grids as shown on the Drawings.
- C. All hardware to be finished with flat black matte epoxy paint.
- D. Pipe splices to be 18" close fitted internal sleeves secured by 2 bolts perpendicular to floor on each side of joint. ¼" x 20 cap screws through-bolted with nylock nuts. Holes 6" on center, 3" from ends.

- E. Provide rigid supports to overhead structure as shown in drawings and as required to meet specified loading criteria as well as local seismic codes. Confirm final support design with structural engineer.
- F. Provide lateral support to building structure as shown in drawings and as required to meet specified load criteria.
 - 1. Grid wall flange SSRC #WF or equal
- G. Load criteria
 - 1. 30 lbs/lin. ft. uniform load.
 - 2. 100 lb maximum point loads at center of spans.
 - 3. Maximum working load over pipe grids:
 - a. Paint Shop: 3 tons
- H. Pipe grid hangers:
 - 1. WT 3x8 Steel T batten clamp as shown in the drawings
 - 2. Rated hot dip galvanized jaw/ open thread turnbuckle with 6" of take-up, locking hardware and safety wire mouse (after adjustment).
 - 3. Threaded rod sized as appropriate for load / safety factor.
 - 4. Pipe clamp: ADC#2815, or equal
- I. Pipe grid junction connections:
 - 1. Provide J.R. Clancy or SSRC full cross grid connector,
 - 2. Pipe grid junction connections shall be located at a minimum of 50% of all grid junctions.

2.13 DRAPERY TRACK

- A. Walk-Draw Track
 - 1. Furnish and install walk-draw traveler tracks for surround masking draperies as indicated on Drawings and schedules, complete with all necessary accessories (CWANA).
 - 2. Track:
 - a. Track to be heavy-duty extruded aluminum type, approximately 3-1/4" high x 1-5/8" wide I-beam, 7 gauge. Extruded shape shall provide parallel tracks for carrier.
 - b. Tracks to be single pieces, free of burrs, dents or irregularities.
 - c. Provide straight track and radius track sections as per contract drawings.
 - d. Splice sections as required for continuous installation as per contract drawings.
 - e. Finish Black.
 - f. Provide attachment to pipes and walls to properly support track along its entire path.
 - g. Hanger fitting and clamps for attachment spaced at 5'-0" on center maximum or as recommended by manufacturer.
 - 3. Carriers:
 - a. Provide two master carriers per drapery panel. Each with 4 paired neoprene wheels with ball bearings.
 - b. Single carriers to have two neoprene wheels with ball bearings.
 - c. Each single carrier to have single plated swivels with 6" of usable trim chain.
 - d. One single carrier for each 1'-0" of track length.
 - e. Neoprene bumpers and nylon strips attach to carrier to assure quiet operation.
 - f. Finish Black.
 - g. Walk-draw track shall include a paging cord at both ends of curtain attached to master carriers.
 - 4. Acceptable Products:
 - a. ADC Patriarc 500 series
 - b. H&H 500 series
 - c. Or approved equal

2.14 REMOVABLE DEAD HUNG DRAPERY BATTENS

- A. Furnish and install dead hung pipe battens for support of masking drapery and tracks.

2.15 MISCELLANEOUS RIGGING EQUIPMENT AND ACCESSORIES

- A. Provide loose rigging equipment and accessories as indicated in the Appendix.
<<Appendix not provided as part of Design Development Submission>>

2.16 SOURCE QUALITY CONTROL

- A. All equipment and components to be factory tested prior to shipping.

2.17 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine-finish all operating parts to standard trade tolerance, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of the "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction (AISC).

PART 3 EXECUTION

3.1 INSTALLERS

- A. The systems, equipment and services described herein shall be provided by a Theatrical Engineering and Rigging Contractor who will be responsible for all the work of this Section, including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings.
- B. To establish comparative standards of quality, the provision of the equipment and services of this section shall be by one of the following contractors:

Beck Studios, Inc
1001 Tech Drive
Milford, OH 45150
Tel: (513) 831-6650

J.R. Clancy Incorporated
7041 Interstate Island Road
Syracuse, NY 13209-9713
Tel: (800) 836-1885

LVH Entertainment Systems
1801 Highland Avenue,
Unit E
Duarte, CA 91010
Tel: (805) 278-4584

Stagecraft Industries
5051 North Lagoon Avenue
Portland, OR 97217
Tel: (503) 286-1600

Texas Scenic Co.
8053 Potranco Road
San Antonio, TX 78251
Tel: 210-684-0091

- C. Substitution Limitations

1. Any contractor who wishes to be listed and has not been pre-approved must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, and supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
 - a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

3.2 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.3 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Provide site supervision during the installation of electrical work associated with the Theatrical Rigging system elements.
- C. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- D. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- E. Coordinate work with all other trades to avoid causing delays in construction schedule.
- F. All field welding requires prior approval of the Architect and Contractor's Structural Engineer.
- G. Carry out approved field welding in full accordance with the appropriate sections of "Specification for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- H. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Architect's prior approval for cutting and drilling of existing structural work.
- I. Clean structural steel and fabricated steelwork of rust, scale and foreign matter by grinding; prime with 1 coat of primer; finish with 1 coat of first quality machinery enamel free of skips, runs and saps. Touch up all field connections, welds and abraded places with primer and enamel.

3.4 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this Section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Installers must be appropriately skilled and experienced for the type and quality of work.
- C. Arrange for all tests and inspections required by the General Requirements.

3.5 SYSTEM STARTUP AND COMMISSIONING

- A. Commissioning
 - 1. Upon completion of installation work required by the work of this Section, the Contractor shall perform all required tests and inspections, including but not limited to the Compliance Testing Procedures specified herein.
 - 2. Contractor shall supply all equipment required for the commissioning process including access equipment (personnel lifts, ladders and appropriate protective equipment), test instruments and communications equipment.
 - 3. Contractor shall provide staff to assist in the commissioning process.
 - 4. Compliance Testing Procedures (CTP)
 - a. The Compliance Testing Procedures are designed to verify that all system motor drive elements function as specified. The following represents a sample of the types of testing that will be conducted:
 - 1) Validation of E-Stop and limit switches
 - 2) Validation of operational speeds
 - 3) Validation of travel limits
 - 4) Validation of target achievement & repeatability
 - 5) Observe motion during E-Stop Activation
 - 6) Observe motion during instantaneous loss of power (bang stop)
 - b. Contractor shall coordinate the site so as to ensure testing can be done in a well-lit, clean, safe environment, including barricades to ensure unauthorized persons are not able to interfere with the testing. No temporary wiring or transformers will be allowed during the CTP.
 - c. All costs associated with the CTP are the responsibility of the Contractor; this includes items such as equipment necessary to access the hoists to ensure limits and brakes can be tested.

3.6 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent Contract Drawings prior to the demonstration indicated herein.

3.7 CLEANING

- A. Touch up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.8 CLOSEOUT ACTIVITIES

- A. Demonstration
 - 1. Upon completion of Commissioning, the Contractor will notify the Theatre Consultant that the system is complete, conforms to specification and is ready for Demonstration.
 - 2. Installed equipment to be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 - 3. The Theatre Consultant will ask for the CTP to be repeated on randomly selected hoist units during the equipment Demonstration. Failure to reproduce the tests on two of the units will require complete retesting of all units in the presence of the Theatre Consultant.

4. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
5. Costs of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.

B. Training

1. Following the equipment demonstration, inspection and final adjustments, provide instruction to the Owner's staff or representatives on the safe operation, care and maintenance of all items.
 - a. Instruction must match information provided at the time of submittals and shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts, and operating procedure to obtain maximum usage of system.
 - b. Deliver all copies of approved Operations Manual to Owner prior to first instruction session, and review it as part of that session.
2. Motorized Rigging Instruction:
 - a. Provide in-depth instruction to Owner or Owner's designated staff on the detailed operation of motorized hoists, control elements and associated devices. This training shall take place in two separate sessions.
3. Timing for all sessions shall be scheduled by the Owner at their convenience.
4. Instruction must be by qualified expert operators who have actual experience with systems in performance conditions.
5. At the conclusion of the training the Contractor shall conduct a written and hands-on test of the participants that shall demonstrate to the Contractor that the participants have reached a level of understanding that will result in safe use of the equipment.
 - a. Provide Certificates of Training for each participant. Log the names of those who successfully completed the training process. Submit as the first page of the bound material.

3.9 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean components thoroughly prior to the demonstration session.

3.10 MAINTENANCE

A. Maintenance Services

1. One month prior to the end of the first year following the date of final systems acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this section as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
2. Following this inspection and maintenance service, the Contractor shall provide the Owner and Theatre Consultant with a written report itemizing the results of the inspections and the warranty work that was conducted. The Contractor shall also include in this written report recommendations for any corrective actions which the Contractor feels should be taken with respect to the equipment included in this section but are outside the scope of the warranty agreement.
 - a. The report of the one year inspection shall be furnished within fifteen days of the inspection. It shall indicate the findings, recommendations, revised maintenance procedures, etc.

B. System Programming Updates

1. Contractor shall review system operation and control system programming with the Owner's representatives. Any required adjustments and changes to the control system programming requested by the Owner shall be performed and completed during the time of the corrective service site visit. All control system programming changes shall be documented by the Contractor.

C. Maintenance Contract

1. Provide to the Owner an executed yearly maintenance agreement for a total of 5 years. This agreement must include, but not be limited to:
 - a. Visual inspection of each hoist and all associated loft blocks, idlers, mule blocks, wire rope, connections, etc.
 - b. Upgrade, if available, to the latest release of the software compatible with the existing control system.
 - c. Network data distribution inspection.
 - d. Re-training of existing personnel and new training of new personnel. This training is to be at the same level or better than the original training.
 - e. All material, components, accessories and services required to provide the work as specified herein.

3.11 ATTACHMENTS

- A. Refer to Appendix A of this section for quantities and accessories.
- B. <<Appendix not provided as part of Design Development Submission>>

END OF SECTION

SECTION 116135
STAGE EXTENSION – ORCHESTRA PIT LIFT SYSTEM

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes Theatrical Stage Extension - Orchestra Pit Lift systems and equipment within the following spaces and associated support areas:
1. Proscenium Theatre
- B. Section Includes
1. Major Systems and Equipment: furnish and install the following major elements and associated accessories:
 - a. Motorized orchestra pit lift
 - 1) Floor boxes
 - 2) Cable Management
 - 3) Rigid telescoping skirt with safety net
 - b. Stage Lift Controls
 - c. Safety Devices
 - 1) Removable safety railings
 - 2) Astragal safety tape switches
 - 3) Access hatch and removable railing interlocks
 - 4) Door interlocks
 - d. Training
 2. Work Results:
 - a. The equipment installed as part of this Section shall result in a complete and working orchestra pit lift system in each space.
 - b. Provide fully coordinated and engineered equipment, installation, supervision and commissioning for the systems and associated accessories as required for each space.
 - c. Provide supervision of Orchestra Pit Lift System low voltage signal cable pulling, termination and testing by the Division 26 Electrical Contractor.
 - d. Provide coordination of conduit, backboxes and AC power wiring provided by the Division 26 Electrical Contractor.
 - e. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related drawings.
 - f. Consult and coordinate with other affected work and Contractors throughout the course of the work contained herein.
 3. Delegated Design:
 - a. Provide design for the means of fastening, suspension and support of the work of this Section.
 - b. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related Drawings.
- C. Products Supplied But Not Installed Under This Section
1. The following equipment supplied under this Section shall be installed and/or terminated under Division 26:
 - a. Motors
 - b. Motor Control Centers
 - c. Multi-cable for orchestra pit lift aisle light floor boxes
 - d. Lift control system devices including but not limited to control panels, E-stop stations, and control connection stations.
 2. Termination of control system conductors shall be made by Division 26 under the direct onsite supervision of the Contractor.

3. Controls, limit switches, safety interlock system devices (including rocker arm limit switches, astragal tape switches, door interlocks, removable rail interlocks, stage edge skirt proximity sensors, etc.) are installed under this Section. Final terminations to the devices are made under Division 26.

D. Related Requirements-

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
2. Examine Contract Documents for requirements that directly affect or are affected by Work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - 1) Fastener requirements
 - c. Division 04 – Masonry
 - 1) Fastener requirements
 - d. Division 05 – Metals
 - 1) Structural steel supporting the work of this section.
 - e. Division 09 – Finishes
 - 1) Flooring
 - (a) Finished floor and any additional framing on top of lift superstructure required for floor support (see Architectural Documents).
 - 2) Millwork
 - (a) Partial height wall with removable sections at audience side of the lift (see Architectural Documents).
 - f. Division 11 – Equipment
 - 1) Section 116133 – Theatrical Rigging
 - 2) Section 116137 – Adjustable Acoustic Banners
 - 3) Section 116163 – Theatrical Lighting Dimming and Control
 - 4) Section 116183 – Theatrical Audio Video Systems
 - g. Division 12 – Furnishings
 - 1) Section 126100 – Fixed Audience Seating
 - h. Division 26 – Electrical, including but not limited to:
 - 1) Section 265561 – Theatrical Systems Electrical Requirements
 - 2) General requirements for all Electrical work, including installation of system cable trays, terminal cabinets, empty conduit, junction/pull boxes and back boxes for system devices and panels (Division 26).
 - 3) Electrical terminations (AC power and grounding only) to all equipment racks and AC power receptacles (Division 26).
 - 4) Provision and installation of all conduit and back boxes (Division 26).
 - 5) Electrical services and main circuit protection (Division 26).
 - 6) Distribution system equipment (Division 26).
 - 7) Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation.
 - 8) Terminations and testing of system continuity.

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 1. Provide price to Owner for five year maintenance agreement on motor drive elements. Price to include emergency site service (post warranty period), one one-day session of additional operator training per year, and replacement of parts due to failure under normal usage.
- C. Alternates
 1. Provide separate price information for material and labor associated with the following equipment and systems:

- a. <<TBD>>
2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

A. Definitions

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. "Architect": All references to the "Architect", Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Project Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. "Theatre Consultant": Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. "Other Project Consultants": Acoustical Consultant, Electrical Engineer, Structural Engineer or Mechanical Engineer as is applicable to a particular issue.
 - e. "Contractor": Manufacturer/Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other portions of the work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
 - f. "Owner": Authorized personnel representing Wayne State University.
 - g. "Furnish": Purchase and/or fabricate and deliver to project site.
 - h. "Install": Physically install the items in their proper location(s) on the project site.
 - i. "Provide": Furnish and install unless otherwise indicated.

B. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.
6. The following standards apply to the work of this Section. It remains the Contractor's responsibility to confirm and comply with all industry standards that are applicable to the work of this Section.
 - a. ASTM International
 - 1) ASTM A36 for structural steel shapes
 - 2) ASTM A47 for malleable iron casting
 - 3) ASTM A48 for gray iron casting
 - 4) ASTM A1011 for side plates
 - b. American National Standards Institute (ANSI):
 - 1) ANSI B18.2.1&2 for square and hex bolts and nuts
 - 2) ANSI-Z535 - System load and safety signage
 - 3) ANSI E1.42 – 2016 Entertainment Technology – Design, Installation, and Use of Orchestra Pit Lifts
 - c. American Iron and Steel Institute (AISI):

- 1) AISI 1045 for steel shafts
- d. National Fire Protection Association (NFPA)
 - 1) NFPA 70 - National Electrical Code
- e. National Electrical Manufacturers Association (NEMA)
 - 1) NEMA WC 63.1 (2005) Twisted Pair Premise Voice and Data Communications Cables
 - 2) NEMA WC 66 (2001; Errata 2003) Category 6 and Category 7 100 Ohm Shielded and Unshielded Twisted Pairs
- f. Underwriters Laboratories Incorporated (UL)
 - 1) UL/IEC 61508A Functional Safety of Electrical/Electronic/Programmable Electronic Safety-related Systems
 - 2) UL 1666 (2000; Rev thru Jul 2002) Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts
 - 3) UL 467 (2004) Standard for Grounding and Bonding Equipment
 - 4) UL 50 (2003; R 2005) Standard for Enclosures for Electrical Equipment
 - 5) UL 969 (1995; rev Thru Dec 2006) Marking and Labeling Systems

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.
- B. Pre-installation Meeting:
 - 1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.
- C. Sequencing
 - 1. The installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work in this section may be installed, including:
 - a. Principal foundation work (see Architectural Drawings)
 - b. Installation of associated electrical work (see Electrical Drawings)
 - c. Installation of HVAC work in ceilings (see Mechanical Drawings)
 - d. Painting
 - e. Finishing of floors and finishes
 - f. Electromechanical and electronic equipment installation shall proceed after environmental site conditions are met. Refer to paragraph 1.10-B for class requirements.
- D. Scheduling
 - 1. The Contractor shall submit a project schedule (critical path) at the time of contract negotiation, which shall indicate coordinated functions with other trades and project requirements.

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.

- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system. In addition, the Manufacturer shall indicate maximum accepted wire size as it relates to termination points on their equipment.
- H. Verify wire type, count, and routing for all required data wiring between all components to allow for proper conduit sizing and routing by Division 26. Verify and coordinate all line voltage power input required by systems components that shall be provided under Division 26.
- I. Prior to fabrication, it shall be the responsibility of the contractor to provide a complete submittal for approval within 90 days of award of contract.
- J. Product Data
1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- K. Shop Drawings
1. Provide shop drawings on D size minimum (24" x 36") sheets.
 2. Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 3. Provide 1/4" = 1'-0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity, which may affect work in this Section.
 4. Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
 5. Provide requisite schematics, plans and sections indicating assembly and installation of components.
 6. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 7. Indicate all elements with appropriate safety factors and/or safety equipment.
 8. Indicate recommended load limits for each element in the system with loading requirements.
 9. Provide power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components. These shall be provided within 30 days of Contract Award.
 10. Provide a full Bill of Materials to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
- L. Samples
1. Submit sample items including, but not limited to:
 - a. Control switches and panel materials
 - b. Astragal tape switches
 - c. Limit switches
 - d. Rigid Chain
 - e. Lift guide rail and block
 - f. Interlock switches/sensors
 - g. Digital optical encoders
 2. Additional samples must be submitted within 14 days Architect's written request.
- M. Delegated Design Submittals
1. Provide drawings and calculations meeting the review requirements of the authorities having jurisdiction, stamped and wet signed by a Professional Engineer licensed in the project jurisdiction for work of the specific type performed.
 2. Where standard components are used, manufacturer's engineering data shall be provided to supplement engineered calculations.
 3. Engineered drawings shall be provided to the Architect and Theatre Consultant for review of coordination and compliance to this Section.

4. Engineered drawings shall be provided to the Structural Engineer of record for this project. The engineer of record will review the loads imposed on the structure by this equipment and compare those loads to allowable structural loading.
5. Engineered drawings shall be provided to the Authority Having Jurisdiction for this facility. The AHJ will review the drawings for compliance with local codes. In all cases code compliance is the responsibility of the Contractor.

N. Manufacturer's Instructions

1. Installation Instructions:

- a. Supply installation instructions for all items furnished in this section, as reviewed and approved with shop drawings, to Electrical Contractor and General Contractor. Such instructions shall be fully coordinated with trades doing adjoining work and with site conditions. Instructions shall include inter-equipment connection diagrams with terminal designations.

O. Manufacturer's Reports

1. Installation Inspection Reports:

- a. Supply reports confirming that all elements of installation by Division 26 conform to requirements of the Orchestra Pit Lift System as engineered and specified herein. Submit these reports to the Architect at times required by the Schedule of Submittals.
 - b. If conditions exist that are contrary to proper installation of the Orchestra Pit Lift System, directly inform Contractor, Architect, and Theatre Consultant of discrepancies. Failure to inform the Contractor shall constitute acceptance of installation and place responsibility for any revisions or additions necessary to properly install work of this section, with the Manufacturer.
2. Provide periodic video recordings of production of material to demonstrate progress of work. Video schedule shall be indicated in the Contractor's critical path.

P. Source Quality Control Submittals

1. The Contractor shall supply as part of the submittal process the following Source Quality Control documents which must contain, at minimum:
 - a. Serial number of motor(s)
 - b. Serial number of lifting column(s)
 - c. Motor drive serial number
 - d. Batch number of major components
 - e. Name of person conducting the QC test
 - f. Date the test was conducted
 - g. List of mechanical tests conducted
 - h. List of electrical tests conducted

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents:

1. Submit documents in accordance with Division 01 – General Requirements.
2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
3. Within 60 days of the acceptance testing, submit one (1) set of reproducible “as built and approved” drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
4. Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement or maintenance.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.

- e. Deliver all copies of approved Operations Manual to Owner during instruction session, and review it as part of that session.
 - 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 - 6. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
 - C. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
 - D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts:
 - 1. Deliver stock of maintenance material to Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. (2) Spare fuses of each type used in the system
 - b. (6) Indicator lamps of each type used in the system
 - c. (2) Relays of each type used in the system
 - d. Machinery lubricant

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Refer to Division 01 – General Requirements.
- B. Qualifications
 - 1. All equipment and installation to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication, assembly and integration of theatrical lift equipment, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Contractor's business.
 - 2. The Contractor's Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the Contractor. The Project Manager shall be the primary conduit for all information between the supplier of this equipment and the General Contractor. All information given to the Project Manager shall be considered as given to the Contractor.
 - 3. The Contractor shall have been continuously engaged in the fabrication, integration and installation of theatrical lift equipment for no less than ten years.
 - 4. The Contractor shall have, at the time of bid, a current Contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
 - 5. Contractor shall be responsible for proper installation, operation and safety of all component equipment.
 - a. Equipment must be procured as specified. Non-specified items may be procured from any nationally recognized manufacturer.
 - b. Metalworking may be done by others. Responsibility in all respects shall be that of the Contractor.
 - 6. The Contractor shall verify all system design loads.
 - 7. Errors and omission within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility of providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.

B. Packing, Shipping, Handling and Unloading

1. All equipment shall be appropriately and substantially packed for shipment.
2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.

C. Acceptance at Site

1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
2. The Contractor shall be responsible for acceptance of the Theatrical Lift System components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.

D. Storage and Protection

1. Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
2. Replace, at no expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

A. Existing Conditions

1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions and or corrections are to be requested prior to fabrication.

B. Environmental Requirements

1. Equipment is classified according to its susceptibility to construction conditions that may affect its operation. Classes shall be defined by the following paragraphs:
 - a. Class 1:
 - 1) Cable and distribution apparatus, structural elements, electrical back boxes, face plates, terminal boxes, and empty equipment rack frames may be stored in weather protected spaces under "normal" construction site conditions provided that no electronic components are contained within devices, storage boxes are sturdy and well-sealed, and equipment is protected with imperforate inner plastic sheeting.
 - 2) Contractor may install this class of equipment in weather-protected spaces under "normal" construction site conditions provided that equipment is protected from dust and moisture by sturdy imperforate plastic sheeting and completely covered with corrugated cardboard held securely in place by duct tape. Cardboard covers shall not be removed until area is broom cleaned. Under no circumstances shall equipment remain uncovered overnight during installation or while work which causes high dust or moisture levels in area of placement is taking place.
 2. Class 2:
 - 1) Control panels, spare parts, test and other equipment (except as listed under Class 3) not subject to damage by concrete dust or dirt shall be stored and protected per Class 1 devices.
 - 2) Contractor shall not install equipment in this class until area of installation is broom cleaned, "blown" clean with pressurized air, mopped, air conditioned and secure. Contractor may install control panels with electronic components under Class 1 conditions, but electronic components must be removed and not installed until area of installation meets Class 2 conditions.
 3. Class 3:
 - 1) Control consoles, filled equipment racks and other electronic equipment shall not be shipped to site until the rack and control rooms are finished, air conditioned, dust free, broom and mop cleaned, secure, and in all respects complete and ready for occupation.

- 2) This class of equipment shall not be unpacked until the system is complete in all other respects. Under no circumstances may any equipment in this class be removed from the rack and control rooms into or through spaces which are not cleaned, air conditioned, and complete.

C. Field Measurements

1. Field measurements shall be taken prior to preparation of shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and following.
- B. The Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of the installation services provided under this Section for a period of one (1) year following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.
- D. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.
- E. During the Warranty Period, for each product that uses software, furnish manufacturer's software updates to the Owner for installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and installation indicated herein shall be by one of the following manufacturers:

Gala Systems Inc.
3185 First Street
St-Hubert, QC J3Y 8Y6
Canada
Tel: (866) 647-5046

Serapid USA Inc.
34100 Mound Rd
Sterling Heights, MI 48310
Tel: (586) 274-0774

- B. Substitution Limitations

1. Any contractor who wishes to be listed and has not been pre-approved must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.

- c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
- a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

2.2 SYSTEMS DESCRIPTION

- A. The following performance spaces shall contain the following major systems components listed below and as shown on the TE-series drawings:
1. Orchestra Pit Lift
 - a. The orchestra pit lift shall be built as a continuation of the stage floor, with predetermined stops to serve as a stage extension, an audience seating area with removable seats, and an orchestra pit. The finished floor shall be by Flooring Contractor. Coordinate adequate steel framing and subfloor support for the floor detail shown on the Architectural drawings with the Flooring Contractor.
 - b. The finished lift shall be equipped to receive power and control receptacles as indicated on the drawings. Coordinate this work with the Electrical Contractor and/or AV Contractor.
 - c. Cable management shall be provided for any flexible cabling between the machine pit and the stage lift floor.
 - d. The underside of the lift shall have a rigid telescoping skirt with safety net to prevent access to the machine pit from the orchestra pit / trap room.
 2. Controls
 - a. Lift controls shall be located as indicated in the drawings. Controller shall be a handheld pendant on an umbilicus, which shall plug into a receptacle located at the Production Control Panel (PCP).
 3. Safety Devices
 - a. The orchestra pit lift shall be provided with removable, socketed safety railings as shown in the drawings. Coordinate railing fabrication with details in Architectural drawings.
 - b. Shear edge protection and interlocks at doors, railings, and access hatches to be provided as indicated in the drawings.
- B. State of the Art Development
1. The Contractor shall furnish only the manufacturer's latest developed appropriate products. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Architect and make the newer product available to the Owner for acceptance. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the Owner at no additional cost.
 2. Should product recall by the Manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the Owner at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.

3. Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the job site.
4. Equipment defect or intended recall shall not relieve the Contractor from his contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Architect by express carrier. Arrangement for alternate product shall be made at this time.

C. Substitutions

1. All requests for variations from the specified materials and products will be reviewed by the Architect and Theatre Consultant according to the procedures outlined in Division 01.
2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.
3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.
4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested in order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.
5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.3 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
2. All equipment to have pertinent labels.

B. Materials shall conform to the following minimum standard specifications:

1. AISI 1045 for steel shafts
2. ASTM A36 for structural steel shapes
3. ASTM A47 for malleable iron casting
4. ASTM A48 for gray iron casting
5. ASTM A1011 for side plates
6. ANSI B18.2.1&2 for square and hex bolts and nuts

C. Hardware

1. All mounting hardware to be included.
2. All bolts and fasteners must be Grade 5 or better.
3. All bolted attachments to have lock washers or other self-locking fasteners.

D. Electrical

1. All internal wiring shall be factory completed and clearly marked. All field connections shall be by compression connector, terminal strip or other device specified herein. All terminal strip connections shall be clearly labeled as to terminal designation. Insulated wire ferrules are to be used whenever possible for wire termination. Wire nut splices not permitted.
2. All wire sizes and insulation to comply with Underwriters Laboratory and all applicable standards and local codes.
3. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.

E. Design Factors

1. Contributing static loads x 7.0 for structure and all supporting and mechanical components; x 3.0 for drive components.
2. Static deflection of structural spans shall adhere to a criteria of L/720.

3. All drive components shall be designed with a safety factor 3X.
4. Bearings shall be designed with a 2X rating, full speed / 2000 hours.

F. Finishes

1. Machine-finish all operating parts to standard trade tolerance, fits and finishes.

G. Electronics

1. All microprocessor controls shall utilize a non-volatile memory. System configuration, operating parameters, presets, etc. shall be protected against system power failure indefinitely.

2.4 STAGE LIFT

A. Operating Criteria

1. Electro-mechanical Lifting Mechanism (Option 1):
 - a. Spiralift by Gala
2. Electro-mechanical Lifting Mechanism (Option 2):
 - a. Linklift rigid push chain columns by Serapid
3. Travel Speed: as per drawings
4. Sustaining Capacity: as per drawings
5. Lifting Capacity: as per drawings
6. "Point Load" Capacity: 1000 lbs. castored wheel load
7. Vertical Drift: 0 under full load
8. Programmed Stops:
 - a. Stage Level
 - b. Audience Level
 - c. Orchestra Pit Level
 - d. Basement Level
9. Total Travel
 - a. 12'-0"
10. Over-travel
 - a. Proper over-travel is required to ensure a safe stop can be achieved.
 - 1) The lift shall not strike the initial limit if all system components are operating normally.
 - 2) The lift shall not strike the ultimate limit if a deceleration stop was initiated by striking the initial limit.
 - 3) The lift shall not strike any hard surface (building or lift structure) if a deceleration stop was initiated by striking the ultimate limit.
11. Power Supply: 480VAC, 3-Phase, 60Hz (confirm with electrical contractor)

B. Structural Framing

1. The superstructure of the lift shall be provided as indicated in the drawings.
2. All framing and structural support members shall be of steel construction, sandblasted, primed with rust inhibitor, and painted with two coats of black enamel.
3. Static deflection of structural spans shall adhere to a criteria of L/720.
4. Steel tube stringers on superstructure to accept finished stage floor by others. Coordinate with General Contractor.
5. Coordinate lift structure and fascia with General Contractor to ensure that finished edges of lift have no more than 3/16" clearance to adjacent surfaces. See Drawings for details.

C. Drive System

1. General
 - a. The mechanical system shall consist of electro-mechanically driven lifting columns mounted to the machine room floor as indicated in the drawings. There shall be two motors and floor-mounted miter gearboxes. Provide intermediate shaft supports as necessary.
 - b. Provide enclosure to protect and house the lifting elements from entry of foreign materials and prevent the collection of debris in the machinery.
 - c. Vertical drift under full static and live load shall be zero.
2. Rigid Chain Columns
 - a. Provide rigid push chain lifting columns as indicated in the Drawings.

- b. Drive mechanism shall be inherently self-locking regardless of the elevation or load imposed.
 - c. Provide rigid chain storage magazine cover.
 - d. Front of chain attachment with reaction plate bolted to the lift superstructure.
 - e. 90 degree reaction base plate with mounting angles for attachment to the machine room floor.
 - f. The columns shall have flexible dust / debris cover at the top chain input port.
 - g. Linklift Chain gearbox
 - 1) The chain shall be driven by a planetary gear box that is sized to resist the loads with appropriate safety factors as described herein.
 - h. Provide Linklift columns by Serapid, sized as required to meet operating criteria as indicated above and in drawings.
3. Spiralift Columns
- a. Provide Spiralift columns as indicated in the Drawings.
 - b. Top of Spiralift attachment with reaction plate bolted to the lift superstructure.
 - c. Provide pressure plate with compression load sensor at top of Spiralift to ensure constant compressive loading on all columns. Compression load sensors shall disable power to the system before the compression load is completely relieved in order to prevent a catastrophic failure of the column.
 - d. Provide base plate with mounting angles for attachment to the machine room floor.
 - e. Spiralift worm gear:
 - 1) The column shall be driven by a worm gear that is engineered to resist the loads with the appropriate safety factors as described herein.
 - f. Provide Spiralift columns by Gala Systems, sized as required to meet operating criteria as indicated above and in drawings.
4. Drive Mechanism:
- a. Gearboxes
 - 1) Power shall be transmitted to lifting columns via drive shafts and right angle bevel gearboxes via drive shafts.
 - 2) A 90 degree miter gearbox shall be provided at right angle transitions in the drive train.
 - 3) Pedestals and support for gearbox and drive shafts are under the work in this Section.
 - 4) All stepped-down shaft corners and shoulders shall have proper corner radius.
 - 5) The gears shall run in an oil bath.
 - 6) The shaft bearings shall be provided with double-lip oil seals to prevent leakage.
 - 7) The gear box shall be sized to resist the loads with the appropriate safety factors as described herein.
 - 8) Provide spiral-bevel type gearbox by Andantex or pre-approved equal (Hubcity shall not be accepted)
 - b. Shaft Couplings:
 - 1) Flexible couplings, shaft and bearing blocks shall be provided as required.
 - 2) All shaft connections shall be flexible spline/gear type. Chain couplings are not acceptable.
 - 3) Shafts shall be supported by an intermittent pillow block support assembly as required.
 - 4) The shaft couplings shall be sized to resist the loads with the appropriate safety factors as described herein.
 - c. Shaft
 - 1) Connecting shafts shall be sized to limit twist to 0.001 degree per foot at maximum torque over full length of shafting. All shafting, keys and keyways shall be in accordance with ANSI "Code of Design of Transmission Shafting" to safely transmit all applied loads, torques and their combinations, with proper allowance for impact loading and to satisfy critical speed and torsional deflection requirements.
 - d. Pillow Blocks
 - 1) Shafts shall be supported by heavy duty spherical roller bearing pillow blocks, with sealed ball bearings.
 - 2) Pillow blocks bolted to support frame with bolts, nuts and lock washers.
5. Lift Motor:
- a. Size and capacity as described herein.
 - b. Operating speed of the lift shall be consistent whether the lift is fully loaded or unladen.

- c. The motor shall be NEMA class D designed for three-phase operation with soft start and high starting torque characteristics.
- d. Service factor of 1.25 for continuous operation and an AGMA load classification of 1. All motors shall be totally enclosed and fan cooled. Motors shall have ramp start and stop.
- e. Motor shall have flux vector type drive.
- f. Motor brakes shall be an integral part of the motor and shall operate on single-phase AC. Brakes shall be normally closed, direct acting, spring loaded, electrically released, and equipped with a manual release. Brakes must stop and hold 200% of the full load torque on the motor shaft.
- g. Shafts to be keyed and fixed with double set screws and positioned with locking collars.
- h. Exposed shafting and couplings shall be properly supported with bearing blocks to provide quiet operation. Speed shall not exceed 25 rpm.
- i. Motor support to be rectangular tube frame bolted to pit slab as indicated in Drawings.
- j. Verify and coordinate power requirements with Electrical Engineer.
- k. Provide Conedrive, SEW Eurodrive or equal.

D. Guides

- 1. The lift shall be provided with guides to control lateral movement in all directions at all levels.
- 2. Guides shall be Thomson linear motion shaft bearings as shown on the drawings. Elevator "tee" guides are not acceptable. Precision guides shall be hardened steel.
- 3. Lateral movement shall be nil and controlled so as to allow no more than 3/16" gap between the lift and adjacent structure.
- 4. Provide a flexible but positive closure over all guide slots in order to conceal slots from view and prevent physical access from personnel on the lift. Closure shall be neoprene strip split to allow guide arm to travel freely.
- 5. Guide rails to be mounted to support plates with threaded bolt assembly that allows for vertical/horizontal field adjustment.

E. Positioning

- 1. Position feedback will be by absolute encoder.

F. Limit Switches

- 1. Provide lever operated hatchway type limit switches for top and bottom extreme travel and intermediate stops. Mount limit switches at guide chase.
- 2. Secondary or final backup limit control shall be by the lever operated limit switches.

G. Floor boxes

- 1. Provide flush-mounted floor boxes for aisle light power receptacles with covered faceplates. Faceplates to match those for aisle lights at fixed audience seating. Receptacles and faceplates to be provided by Division 26.
- 2. Coordinate floor box type and locations with Electrical Contractor to ensure that lift platform framing does not conflict with receptacle locations.

H. Cable Management

- 1. Provide cable management system and associated flexible cable for the stage lifts. The demarcation will be the junction boxes mounted by the Electrical Contractor on the floor of the machine pit. The Contractor must provide all cable management between the junction boxes on pit slab and on the stage lift.

I. Telescoping Skirt

- 1. Provide a rigid telescoping skirt with safety net as indicated in the drawings.

2.5 CONTROLS

- A. Lift controls shall be by a handheld touchscreen control pendant on a 50'-0" umbilicus with constant contact "UP" and "DOWN" pushbuttons and an "Emergency Stop" mushroom button. The emergency stop shall remove power to the motor drives. Reset shall be possible at the handheld controller.

- B. The lift shall be capable of being stopped at any point between its extreme upper and lower limits by releasing the travel control button.
- C. In no case shall the lift operate past its upper or lower limits.
- D. Locate the lift control receptacles as per the drawings.
 - 1. Provide a finished rack-mount control receptacle panel in the Production Control Panel:
 - a. Labels to be engraved and white filled.
 - b. Prewire the panel at the factory, insofar as possible.
 - c. Terminate field connections on a clearly labeled terminal strip.
 - d. Panel to contain the following controls:
 - 1) One emergency "STOP" latching mushroom-type pushbutton
 - 2) Multi-pin receptacle for handheld controller
- E. The operation of the lifts to be as follows:
 - 1. The operator must plug the control pendant into the receptacle at the Production Control Panel. The appropriate direction pushbutton must then be pushed and held. The lift shall operate as long as the pushbutton is held or until it reaches the next predetermined stop (or upper or lower limit), whichever comes first. To continue operation, the pushbutton must be released and pushed again.
- F. Motor Controls:
 - 1. Provide motor drives by:
 - a. Siemens
 - b. Mitsubishi
 - c. Or approved equal
 - 2. Logic systems to be solid state. Use of relays requires prior approval.
 - 3. Provide lift control/starter cabinet and logic panel attached to wall as indicated in the drawings.
- G. Provide junction/pull boxes as shown on control riser and ensure that conduit penetrations conform to acoustical penetration guidelines under Division 26.

2.6 SAFETY DEVICES

- A. Safety Railings
 - 1. Provide removable, socketed safety railings as indicated in the drawings.
- B. Interlocks
 - 1. Provide an interlock system utilizing proper placement or condition of railings, access doors, tape switches etc., as shown on the drawings. Lift shall be inoperative unless devices are properly activated.
 - a. Design the system logic and provide triggering components (e.g. magnetic door locks, railing interlocks, etc.) under work of this Section.
 - 2. Railing Interlocks
 - a. The decorative orchestra pit railing interlocks shall restrict the lift from traveling below audience elevation unless the rail interlocks are detected. Provide a reliable sensing system with handrail detection devices for installation at the removable rail sections as shown on the drawings. When the integral circuits are activated, the detector shall indicate that the railing is in place and thereby de-activate restricted travel for the lift.
 - 1) The decorative orchestra pit railing is provided by others. Coordinate circuit wiring with railing manufacturer, electrical engineer, and architect.
 - b. The chair storage room railing interlocks shall restrict the lift from traveling above Basement level unless the rail interlocks are detected. Provide a reliable sensing system with handrail detection devices for installation at the removable rail sections as shown on the drawings. When the integral circuits are activated, the detector shall indicate that the railing is in place and thereby de-activate restricted travel for the lift.
 - 1) The chair storage room railing is provided by others. Coordinate circuit wiring with railing manufacturer, electrical engineer, and architect.
 - 3. Door Interlocks
 - a. Orchestra Pit

- 1) Orchestra pit doors shall be locked when lift is not at Orchestra Pit level. A key override switch shall be provided at the entry to the orchestra pit for emergency access.
 - (a) Provide yellow mushroom-type momentary contact pushbutton for escape from the orchestra pit. The pushbutton will override door lock to allow exit from the orchestra pit.
 - b. Trap Room
 - 1) The Trap Room door to the orchestra pit shall be locked when pit lift is not at Basement level. A key override switch shall be provided at the entry to the orchestra pit for emergency access.
 - c. Access Hatch
 - 1) The Machine Pit access hatch shall be locked when lift is in motion.
- C. Shear Edge Protection
1. Provide fail-safe pressure sensitive safety edges as required to protect against shear hazards in both directions of travel. Field verify and identify shear hazards.
 2. All overhanging surfaces and shear edges shall be equipped with a continuous pressure tape switch (astragal) fitted to a yield pad. Upon contact, the lift shall stop and then automatically reverse direction for 6" of travel.
- D. Motor controls will be sized to disengage or shunt at a value no greater than the capacity of the motor.
- E. A visual flashing and audible "beeping" indicator will be activated in the pit area whenever the lift is in motion.
- F. Exposed rotary and transmission components must be guarded to prevent injury.

2.7 SOURCE QUALITY CONTROL

- A. All equipment and components to be factory tested prior to shipping.

2.8 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerance, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction (AISC).

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.2 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Provide site supervision during the installation of electrical work associated with the Theatrical Lift system elements.

- C. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- D. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- E. Coordinate all work with all other trades to avoid causing delays in construction schedule.
- F. All field welding requires prior approval of the Architect and Contractor's Structural Engineer.
- G. Carry out approved field welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- H. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Architect's prior approval for cutting and drilling of existing structural work.
- I. Clean structural steel and fabricated steelwork of rust, scale and foreign matter by grinding; prime with 1 coat of first quality primer; finish with 1 coat of first quality machinery enamel free of skips, runs and saps. Touch up all field connections, welds and abraded places with primer and enamel.

3.3 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this Section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Installers must be appropriately skilled and experienced for the type and quality of work.
- C. Arrange for all tests and inspections required by the General Requirements.
 - 1. If any work is to be specially tested or approved, whether by the General Contractor's instructions or by any laws, ordinance or any public authority, the Contractor shall give the General Contractor and Architect timely notice of its readiness for inspections, and of dates of inspections to be made by appropriate authorities.

3.4 SYSTEM STARTUP AND COMMISSIONING

- A. Commissioning
 - 1. Upon completion of installation work required by the work of this Section, the Contractor shall perform all required tests and inspections, including but not limited to the Compliance Testing Procedures specified herein.
 - 2. Contractor shall supply all equipment required for the commissioning process including access equipment (personnel lifts, ladders and appropriate protective equipment), test instruments and communications equipment.
 - 3. Contractor shall provide staff to assist in the commissioning process.
 - 4. Compliance Testing Procedures (CTP)
 - a. Full load test at sustaining (static) and lifting (dynamic) capacity. Lifts to run under full dynamic load in up and down directions to all predetermined stops in each direction. Demonstrate all emergency stop circuitry under full load.
 - b. Contractor to provide test weight, delivered, manipulated for testing, and removed from site. Provide floor protection during test.
 - c. Provide means to momentarily bypass travel limits for testing/commissioning purposes. Temporary removal of the physical limit/actuator/striker shall not be acceptable.

3.5 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent Contract Drawings prior to the demonstration indicated herein.

3.6 CLEANING

- A. Touch-up minor abrasions and imperfections as required.

- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.7 CLOSEOUT ACTIVITIES

A. Demonstration

1. Upon completion of Commissioning, the Contractor will notify the Theatre Consultant that the system is complete, conforms to specification and is ready for Demonstration.
2. Installed equipment to be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
3. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
4. Costs of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.

B. Training

1. Following the equipment demonstration, inspection and final adjustments, provide an instruction session to the Owner's staff or representatives on the safe operation, care and maintenance of all items.
 - a. Instruction shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts, and operating procedure to obtain maximum usage of system.
 - b. Provide one (1) half-day of staff training on operation of motor drive elements. This shall include basic safety in the use of the system as well as the handling of mechanical elements. Attendance shall be limited to ten (10) personnel.
 - c. Deliver all copies of approved Operations Manual to Owner prior to first instruction session, and review it as part of that session.
2. Timing for all sessions shall be scheduled by the Owner at their convenience.
3. All training shall be by technical staff of the Contractor.

3.8 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

3.9 MAINTENANCE

A. Maintenance Services:

1. One month prior to the end of the first year following the date of final systems acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this section as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
2. Following this inspection and maintenance service, the Contractor shall provide the Owner and Theatre Consultant with a written report itemizing the results of the inspections and the warranty work that was conducted. The Contractor shall also include in this written report recommendations for any corrective actions which the Contractor feels should be taken with respect to the equipment included in this section but are outside the scope of the warranty agreement.

- a. The report of the one year inspection shall be furnished within fifteen days of the inspection. It shall indicate the findings, recommendations, revised maintenance procedures, etc.
- B. System Programming Updates
1. Contractor shall review system operation and control system programming with the Owner's representatives. Any required adjustments and changes to the control system programming requested by the Owner shall be performed and completed during the time of the corrective service site visit. All control system programming changes shall be documented by the Contractor.
- C. Maintenance Contract
1. Provide to the Owner an executed yearly maintenance agreement for a total of 5 years. This agreement must include, but not be limited to:
 - a. Visual inspection of each lift system and all associated hardware.
 - b. Upgrade, if available, to the latest release of the software compatible with the existing control system.
 - c. Network data distribution inspection.
 - d. Re-training of existing personnel and new training of new personnel. This training is to be at the same level or better than the original training.
 - e. All material, components, accessories and services required to provide the work as specified herein.

END OF SECTION

SECTION 116143 THEATRICAL DRAPERY

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes Theatrical Draperies (TD) and equipment within the following spaces and associated support areas:
 - 1. Proscenium Theatre
 - 2. Studio Theatre
 - 3. Valade Jazz Center
- B. Section Includes
 - 1. Major Systems and Equipment: furnish and install the following major elements and associated accessories:
 - a. Main Drape and Valance
 - b. Stage masking draperies: borders, legs and side tabs
 - c. Scrim
 - d. Cycloramas
 - e. Under gallery masking draperies
 - f. Walk-draw acoustic draperies
 - g. Electrics heat resisting borders
 - h. Bottom pipes
 - i. Drapery storage bags/hampers
 - j. Fabric remnants from the manufacture of the theatrical draperies
 - 2. Provide all materials, components and services required to provide the work as specified herein, elsewhere in the project documents, and/or as shown on related drawings.
 - 3. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
- C. Related Requirements
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
 - 2. Examine Contract Documents for requirements that directly affect or are affected by work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - c. Division 04 – Masonry
 - d. Division 05 – Metals
 - e. Division 09 – Finishes
 - f. Division 11 – Equipment
 - 1) Section 116113 – Orchestra Shell Enclosure
 - 2) Section 116133 – Theatrical Rigging
 - 3) Section 116163 – Theatrical Lighting Dimming and Control
 - 4) Section 116183 – Theatrical Audio Video Systems
 - g. Division 21 – Fire Suppression
 - h. Division 22 – Plumbing
 - i. Division 23 – Heating, Ventilating and Air Conditioning

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 - General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 - 1. Provide unit price for <TBD>.

C. Alternates

1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. <<TBD>>
2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. NFPA: National Fire Protection Association

B. Definitions:

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theatre Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location(s) on the project site.
 - i. “Provide”: Furnish and install.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

- B. Pre-installation Meeting:
 - 1. Refer to Division 01 – General Requirements for information regarding pre-installation meeting with the General Contractor.
- C. Sequencing:
 - 1. The installation of the equipment in this section shall begin following the completion of work which may be in conflict with the installation, including:
 - a. Theatrical rigging battens
 - b. Miscellaneous metals, specialty hanging pipes
 - c. Theatrical drapery traveler tracks
 - d. Painting
 - e. Finishing of floors

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible re-submittals without jeopardizing the project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Product Data:
 - 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 - 2. Clearly indicate specific component and applicable options.
- H. Shop Drawings
 - 1. Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 - 2. Provide 1/4" = 1'-0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity, which may affect work in this contract.
 - 3. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 - 4. Provide a full Bill of Materials to be supplied, including quantities, manufacturer, manufacturer's part numbers, etc. Provide an inventory of all draperies to be supplied, indicating fabric type, fullness, edge finish, color and size.
- I. Samples
 - 1. Submit sample items for approval within 14 days of Architect's written request. These items may include, but are not limited to:
 - a. Full bolt-width (54") by 36-inch "quality" samples and color line swatches for all fabrics to be selected "by Architect". These samples will be approved and all colors selected prior to shop drawings submittals.
 - b. Samples of standard hooks, swivels, ties and hardware.
 - c. Samples of drapery tracks and associated hardware.
- J. Certificates
 - 1. Provide manufacturer's certificates stating materials meet fire performance characteristics as specified herein.

1.6 CLOSEOUT SUBMITTALS

- A. Project Record Documents:
 - 1. Submit documents in accordance with Division 01 – General Requirements.
 - 2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
 - 3. Within 60 days of the acceptance testing, submit one (1) set of reproducible “as built” inventories of all draperies. These inventories shall include information as to the method used to flameproof each item.
 - 4. Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 - e. Provide specific recommendations for cleaning drapery fabric, including precautions against materials and methods which could damage drapery fabric.
 - 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 - 6. Certificates of flame resistance as required herein.
 - 7. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- C. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
- D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials:
 - 1. Deliver all fabric remnants from the manufacture of the theatrical draperies to the Owner.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Refer to Division 01 – General Requirements.
- B. Qualifications:
 - 1. Manufacturers
 - a. The Manufacturer shall own and operate their own manufacturing facility for the fabrication of stage curtains and draperies, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Manufacturer’s business.
 - b. The Manufacturer shall have been continuously engaged in the fabrication of theatrical draperies for no less than five years.
 - 2. Installers
 - a. The systems and equipment under this Section shall be provided through a single pre-approved Contractor who is a factory authorized dealer, integrator and servicer of all equipment specified herein and meets the following requirements.
 - b. The Contractor shall have been in the theatrical drapery and installation business continuously for no less than five years and shall have provided complete engineering and installation services on a minimum of five projects of similar scope and complexity in the past five years.

- c. Project Manager: The Contractor's Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the Contractor and Manufacturer of this equipment. The Project Manager shall be the primary conduit for all information between the supplier of this equipment and the General Contractor. All information given to the Project Manager shall be considered as given to the Contractor.
- d. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
- e. Contractor is responsible for proper installation, operation and safety of all component equipment.
- f. Contractor is responsible for the complete design and engineering of all systems described herein. Contractor shall confirm project details and, if necessary, suggest modifications to the criteria established herein in order to maintain the design intent.
- g. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling, and Unloading
 - 1. All equipment shall be appropriately and substantially packed for shipment.
 - 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
 - 3. All drapery shall be boxed in solid plywood crates and shipped on pallets. In no case shall the drapery itself contact any slatted surfaces during shipping.
 - 4. All required weights and bottom pipe to be shipped separately from draperies and installed on the job site.
 - 5. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 - 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 - 2. The Contractor shall be responsible for acceptance of the theatrical draperies and components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protection
 - 1. Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
 - 2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions:
 - 1. Verify all conditions at job site. Promptly report variations and obstructions to the General Contractor. All additions and/or corrections are to be requested prior to fabrication.
- B. Field Measurements:
 - 1. Field measurements shall be taken prior to preparation of shop drawings to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.

2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.
- B. The Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 30 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of installation services provided under this Section for a period of two (2) years following the date of final acceptance. Ordinary wear and defects due to improper usage are excepted.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the Contractor may install drapery as manufactured by the following:

Gerriets International, Inc.
130 Winterwood Avenue
Ewing, NJ 08638
Tel: (609) 771-8111

iWeiss
815 Fairview Avenue, #10
Fairview, NJ 07022
Tel: (888) 325-7192

Pook Diemont & Ohl / Texas Scenic
701 East 132nd Street
Bronx, NY 10454
Tel: (718) 402-2677

Rose Brand
4 Emerson Lane
Secaucus, NJ 07094
Tel: (800) 223-1624

Stage Decoration and Supplies
3519 Associate Drive
Greensboro, NC 27405
Tel: (336) 621-5454

- B. Substitutions
 1. All requests for variations from the specified materials and products will be reviewed by the Architect according to the procedures outlined in Division 01.
 2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.
 3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.

4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.
5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.2 SYSTEMS DESCRIPTION

A. The following performance spaces shall contain the following major system components listed below and as shown on the TD-series drawings:

1. Proscenium Theatre
 - a. Main Drape and Valance
 - 1) Decorative lined velour curtains located at the proscenium
 - b. Stage Masking Draperies
 - 1) Legs: velour curtains hung from system pipe battens
 - 2) Borders: velour curtains hung from system pipe battens
 - 3) Side tabs: velour curtains hung from traveler track at stage sides
 - c. Scrim
 - 1) Seamless black sharkstooth scrim hung from system pipe battens
 - 2) Seamless white sharkstooth scrim hung from system pipe battens
 - d. Cyclorama
 - 1) White leno-cloth cyclorama hung from system pipe batten
 - 2) Translucency: White Rear Projection Screen hung from system pipe batten
 - 3) Bounce: Seamless bleached white muslin cyclorama hung from system pipe batten
 - e. Under Gallery Masking Draperies
 - 1) Velour curtains hung from fixed pipes mounted under galleries
 - f. Walk Draw Acoustic Draperies
 - 1) Velour curtains hung from traveler track mounted to the orchestra pit wall
 - g. Electrics heat resisting borders
 - h. Bottom Pipe
 - i. Heavy-duty canvas storage bags
2. Studio Theatre
 - a. Stage Masking Draperies
 - 1) Legs: velour curtains hung from dead hung pipe battens
 - 2) Borders: velour curtains hung from dead hung pipe battens
 - 3) Side tabs: velour curtains hung from traveler track at stage sides
 - b. Scrim
 - 1) Seamless black sharkstooth scrim hung from system pipe battens
 - 2) Seamless white sharkstooth scrim hung from system pipe battens
 - c. Cyclorama
 - 1) White leno-cloth cyclorama hung from system pipe batten
 - 2) Translucency: White Rear Projection Screen hung from system pipe batten
 - 3) Bounce: Seamless bleached white muslin cyclorama hung from system pipe batten
 - d. Under Gallery Masking Draperies
 - 1) Velour curtains hung from fixed pipes mounted under galleries
 - e. Electrics heat resisting borders
 - f. Bottom Pipe
 - g. Heavy-duty canvas storage bags
3. Valade Jazz Center
 - a. Acoustic Backdrop Draperies
 - 1) Decorative velour curtains located at the upstage wall hung from traveler track mounted from wall brackets

B. Refer to the drapery schedules and project drawings for drapery requirements and quantities.

2.3 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
2. In all cases, fabrics are to be "first quality". In no case shall "seconds" or re-dyed fabric be acceptable.
3. All velour fabric to be free of crush marks, nap irregularities, and any other abnormal markings.
4. All variations from the specified materials and product must be approved by the Architect and Theatre Consultant.

B. Dyeing and Flameproofing:

1. Fabrics shall be vat-dyed with no variation of color or pigment impregnation. There shall be no evidence of streaking or color variation. Verification of fabric quality is the responsibility of the fabricator prior to sewing.
2. Materials shall be either IFR polyester or through-flame retarded to conform to local, state, and national codes. Affidavits from fabric manufacturer, jobber or other agent required to attest flame resistance of the fabrics and methods used shall accompany drapery upon delivery. Duplicate copies shall be sewn to a normally accessible but hidden corner of each piece of drapery goods.
 - a. Provide a 100 square inch cutaway sample of drapery fabric and lining sewn adjacent to flame resistance certification on rear for use in Fire Marshall testing.
3. There shall be no chemical leach-out or crystallization from the flame-retardant process allowed. Flame retarding shall be done at the mill. No flame retarding shall be acceptable after drapery fabrication without prior approval.
4. Flame retarded fabrics shall be certified as tested to NFPA 701.

2.4 EQUIPMENT AND COMPONENTS

A. Main Drape and Valance

1. The face material of the Main Drape and Valance shall meet or exceed the following criteria:
 - a. 100% Inherently Flame Retardant (IFR) polyester velour
 - b. Acceptable products:
 - 1) Rose Brand 25 oz. "Prestige"
 - 2) Dazian 25 oz. "Angelo"
 - 3) or approved equal
 - c. The color shall be selected by the Architect from the manufacturer's standard color choices.
2. Line with black IFR lining fabric. Tack lining to face material by sewing cording between each face material seam and the lining material at 4'-0" on center vertically. Tack lining to face material hems every 4'-0" on center horizontally in a similar fashion.
 - a. Acceptable Products
 - 1) Rose Brand "Avara Lining"
 - 2) Rose Brand "Poly Chintz"
 - 3) Or equal IFR lining fabric
3. Main Drape Construction:
 - a. Two panels for bi-part action, with continuous border as indicated on drawings. Each panel finished with 75% fullness, box pleated and sewn down.
 - b. Sew with nylon thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
 - c. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.
 - d. The center edges of each panel faced back with a full width of fabric plus 1'-0" (minimum) and hand-tacked entire height with continuous catch stitching spaced 4" apart, seizing lining and facing material.
 - e. Offstage edges faced back 1'-0".
 - f. Provide pocket for storage of floor block at the offstage edge of the live end of the Main Drape.
 - g. Provide a paging handle for the upstage panel of each bi-parting curtain set. The paging handle shall be located on the back face of the onstage side of the panel with the point of attachment located 48" above the bottom of the curtain.

- 1) Each handle to be fabricated of a 12" loop of velour face material which is sewn around a core of heavy-duty 2" black polypropylene webbing.
 - 2) Each handle to be stitched to the back of the center edge of the panel and seized in the stitching where the face material is turned back. Sewing for the attachment of the handle shall not be visible on the face of the curtain panel.
- h. Box pleats at top of panels 1'-0" O.C. reinforced with heavyweight 3½" polypropylene webbing. Vertical seams to be located so as to be hidden behind pleats.
 - i. At center of each pleat on main drape, provide 1" cadmium plated rigid eye snap hook attached by nylon webbing strap sewn and riveted through curtain and polypropylene webbing with two rivets. This assembly shall be centered on the webbing. Provide double layer of polypropylene webbing (3½" square) at snap hook locations.
 - j. 6" double-turned bottom hems with 0.75 lb per foot weighted tape in a separate pocket inside hem. Continuous chain of equal weight, sewn in, acceptable. Weight pocket to be 1" short of finished hem for main drape, equal to finished hem for valance. Ends of weight pockets to be secured with ½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - 1) Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - 2) A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
 - k. Size and quantity as indicated in the Drapery Schedules.
4. Valance Construction:
- a. Entire drapery shall be continuous, finished with 75% fullness, box pleated and sewn down.
 - b. Sew with nylon thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
 - c. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.
 - d. Offstage edges faced back 1'-0".
 - e. Box pleats at top of panels 1'-0" O.C. reinforced with heavy weight 3½" polypropylene webbing. Vertical seams to be located so as to be hidden behind pleats.
 - f. At center of each pleat on valance, provide #2 black oxide finish brass grommets, double grommets at both ends. Center grommets on webbing. Provide double layer of webbing (3½" square) at each grommet.
 - g. Mark with centerline designation on heavy-duty muslin with permanent markings, sewn securely to webbing. 2" high letters minimum.
 - h. Provide one 2'-0" black #4 cotton braided tie line at each grommet. Center tie line to be white. Finish ends of tie lines to prevent unraveling.
 - i. 6" double-turned bottom hems with 0.75 lb per foot weighted tape in a separate pocket inside hem. Continuous chain of equal weight, sewn in, acceptable. Weight pocket to be equal to finished hem for valance. Ends of weight pockets to be secured with ½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - 1) Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - 2) A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
 - j. Size and quantity as indicated in the Drapery Schedules.
- B. Stage Masking Draperies
1. The face material of the stage masking draperies shall meet or exceed the following criteria:
 - a. 100% Inherently Flame Retardant (IFR) polyester velour
 - b. Acceptable products:
 - 1) Rose Brand 22 oz. "Encore"
 - 2) Dazian 21 oz. "Da Vinci Velvet Plus"
 - 3) or approved equal
 2. The color of all stage masking draperies shall be black.
 3. Each panel finished without fullness. Space grommets 1'-0" on center unless otherwise indicated in Drapery Schedules.

4. Black-out drapery to be constructed in two panels for use as traveler. Continuous borders of lengths as indicated on drawings. All legs to be provided in pairs. Single panel masking curtains as indicated in the schedules.
5. Sew with nylon thread or cotton thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
6. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.
7. Edges of masking legs and the offstage edge of traveler panels are to be faced back with at least 1'-0" of fabric. Edges of borders and tabs with 2" hems. Hand-tack entire height with continuous catch stitching spaced 4" apart.
8. The onstage edge of traveler panels are to be faced back one full width of fabric plus 1'-0" (minimum).
9. Tops reinforced with 3½" polypropylene webbing with #2 black oxide finish brass grommets, 6" O.C.; double grommets at both ends. Center grommets on webbing. Provide double layer of webbing (3½" square) at each grommet at travelers and legs (not required for borders).
10. Masking borders to be marked with centerline designation on heavy-duty muslin with permanent markings, sewn securely to webbing. 2" high letters minimum.
11. Provide one 2'-0" black #4 cotton braided tie line at each grommet. Center tie line to be white on masking borders and tabs. Finish ends of tie lines to prevent unraveling.
12. Bottoms of all floor-length maskings to have 6" double-turned hems with #8 zinc coated chain in separate pocket inside hem. Weight pocket to be 1" short of finished hem for full height maskings and equal to finished hem for borders. Ends of weight pockets to be secured with 1½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - a. Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - b. A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
13. Bottoms of all floor-length maskings to also have a separate canvas pipe pocket for insertion of ¾" nominal pipe or other battens. Pocket to be finished even internally with face fabric hem. Ends of pocket to be left open without fastening system.
14. Sizes and quantities as indicated in the Drapery Schedules.

C. Under Gallery Masking Draperies

1. The face material of the stage masking draperies shall meet or exceed the following criteria:
 - a. 100% Inherently Flame Retardant (IFR) polyester velour
 - b. Acceptable products:
 - 1) Rose Brand 22 oz. "Encore"
 - 2) Dazian 21 oz. "Da Vinci Velvet Plus"
 - 3) or approved equal
2. The color of all stage masking draperies shall be black.
3. Each panel finished without fullness. Space grommets 1'-0" on center unless otherwise indicated in Drapery Schedules.
4. Black-out drapery to be constructed as single panel masking curtains as indicated in the schedules.
5. Sew with nylon thread or cotton thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
6. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.
7. Edges of masking legs and the offstage edge of traveler panels are to be faced back with at least 1'-0" of fabric. Edges of borders and tabs with 2" hems. Hand-tack entire height with continuous catch stitching spaced 4" apart.
8. The onstage edge of traveler panels are to be faced back one full width of fabric plus 1'-0" (minimum).
9. Tops reinforced with 3½" polypropylene webbing with #2 black oxide finish brass grommets, 6" O.C.; double grommets at both ends. Center grommets on webbing. Provide double layer of webbing (3½" square) at each grommet at travelers and legs (not required for borders).
10. Masking borders to be marked with centerline designation on heavy-duty muslin with permanent markings, sewn securely to webbing. 2" high letters minimum.
11. Provide one 2'-0" black #4 cotton braided tie line at each grommet. Center tie line to be white on masking borders and tabs. Finish ends of tie lines to prevent unraveling.

12. Bottoms of all floor-length maskings to have 6" double-turned hems with #8 zinc coated chain in separate pocket inside hem. Weight pocket to be 1" short of finished hem for full height maskings and equal to finished hem for borders. Ends of weight pockets to be secured with 1½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - a. Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - b. A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
13. Bottoms of all floor-length maskings to also have a separate canvas pipe pocket for insertion of ¾" nominal pipe or other battens. Pocket to be finished even internally with face fabric hem. Ends of pocket to be left open without fastening system.
14. Sizes and quantities as indicated in the Drapery Schedules.

D. Scrim

1. Material: Sharktooth Scrim, color per schedule.
2. Edges to have 3" double-stitched seams.
3. Top reinforced with 3½" polypropylene webbing, color to match face material. #2 brass grommets and black braided cotton tie lines 1'-0" O.C.; double grommets at ends. One white tie line at centerline. Mark center of drape on webbing.
4. Bottom to have 4" triple hem. Ribbon ties at 1'-0" O.C. for 1" O.D. pipe batten triple stitched to top of hem. 1'-0" polypropylene webbing sewn into ends of hems with two grommets 4" apart at corners. Provide slots in the back of the hem for installing pipe weight.
5. Provide grommets at sides, 1'-0" O.C.
6. Sizes, quantities and colors as indicated on drawings.
7. Provide 1" diameter EMT or 1" O.D. pipe for weight at bottom of scrims. Ends to be ground smooth.

E. Cyclorama

1. Material: White leno cyclorama cloth, fabricated without seams.
2. Finish webbing to be white heavyweight polypropylene.
3. Where the specified height of the cyclorama precludes the use of a single piece of leno, one horizontal seam near the top of the cyclorama will be acceptable.
4. Edges to have 3" double-stitched seams.
5. Top reinforced with 3½" polypropylene webbing. #2 brass grommets and white braided cotton tie lines 1'-0" O.C., double grommets at ends. One yellow tie line at centerline. Mark center of drape on webbing.
6. Bottom to have 4" triple hem. White ribbon ties at 1'-0" O.C. for 1" O.D. pipe batten triple stitched to top of hem. 1'-0" polypropylene webbing sewn into ends of hems with two grommets 4" apart at corners. Provide slots in the back of the hem for installing pipe weight.
7. Provide grommets at sides, 1'-0" O.C.
8. Provide 1" O.D. painted pipe for bottom of cyclorama.

F. Translucency

1. Material: Rosco "Twin White" projection screen.
 - a. 7 mil thickness
 - b. 100% PVC
2. Edges to have 3" doubled-back material with heat welded seams.
3. Top reinforced with 3½" synthetic webbing. #2 brass grommets and black braided cotton tie lines 1'-0" O.C.; double grommets at ends. One white tie line at centerline. Mark center of drape on webbing.
4. Bottom to have 4" triple wrapped pipe pocket.
5. Provide grommets at sides, 1'-0" O.C.
6. Seams welded ultrasonically.
7. Sizes and quantities as indicated on drawings.
8. Provide ¾" nominal diameter schedule 40 pipe for weight at bottom of Translucency. Ends to be threaded and provide with couplings.

G. Bounce

1. Material: Seamless Bleached Heavyweight White Muslin.

2. Finish webbing to be white heavyweight polypropylene.
3. Edges to have 3" double-stitched seams.
4. Top reinforced with 3½" polypropylene webbing. #2 brass grommets and black braided cotton tie lines 1'-0" O.C.; double grommets at ends. One white tie line at centerline. Mark center of drape on webbing.
5. Bottom to have 4" triple hem. White ribbon ties at 1'-0" O.C. for 1" O.D. pipe batten triple stitched to top of hem. 1'-0" polypropylene webbing sewn into ends of hems with two grommets 4" apart at corners.
6. Provide grommets at sides, 1'-0" O.C.
7. Provide 1" diameter EMT or 1" O.D. pipe for weight at bottom of bounce. Ends to be ground smooth.

H. Acoustic Walk Draw Draperies

1. The face material shall meet or exceed the following criteria:
 - a. 100% Inherently Flame Retardant (IFR) polyester velour
 - b. Acceptable products:
 - 1) Rose Brand 25 oz. "Prestige"
 - 2) Dazian 25 oz. "Angelo"
 - 3) or approved equal
2. The color of all acoustic walk draw draperies shall be black.
3. Drapery to be constructed in two panels for use as a walk-draw traveler. Single panel walk-draw masking curtains as indicated in the schedules. Each panel finished with 100% fullness, box pleated and sewn down.
4. Sew with nylon thread or cotton thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
5. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.
6. Edges of masking panels are to be faced back with at least 3" hems. Hand-tack entire height with continuous catch stitching spaced 4" apart.
7. Tops reinforced with 3½" polypropylene webbing with #2 black oxide finish brass grommets, 12" O.C.; double grommets at both ends. Center grommets on webbing. Provide double layer of webbing (3½" square) at each grommet.
8. Bottoms to have 6" double-turned hems with #8 zinc coated chain in separate pocket inside hem. Weight pocket to be 1" short of finished hem. Ends of weight pockets to be secured with 1½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - a. Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - b. A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
9. Provide all attachment hardware to mount drapery to curtain track carriers provided under section 116133.
10. Sizes and quantities as indicated in the Drapery Schedules.

I. Acoustic Backdrop Draperies

1. The face material shall meet or exceed the following criteria:
 - a. 100% Inherently Flame Retardant (IFR) polyester velour
 - b. Acceptable products:
 - 1) Rose Brand 25 oz. "Prestige"
 - 2) Dazian 25 oz. "Angelo"
 - 3) or approved equal
2. The color of all mirror masking draperies shall be selected by Architect.
3. Acoustic Backdrop Drape Construction:
 - a. Two panels for bi-part action, with continuous border as indicated on drawings. Each panel finished with 100% fullness, box pleated and sewn down.
 - b. Sew with nylon thread. Color to match face material. Thread shall have no apparent sheen with relationship to the velour.
 - c. All finish webbing to be black heavyweight polypropylene, unless otherwise indicated.

- d. The center edges of each panel faced back with a full width of fabric plus 1'-0" (minimum) and hand-tacked entire height with continuous catch stitching spaced 4" apart, seizing lining and facing material.
 - e. Offstage edges faced back 1'-0".
 - f. Box pleats at top of panels 1'-0" O.C. reinforced with heavyweight 3½" polypropylene webbing. Vertical seams to be located so as to be hidden behind pleats.
 - g. At center of each pleat, provide 1" cadmium plated rigid eye snap hook attached by nylon webbing strap sewn and riveted through curtain and polypropylene webbing with two rivets. This assembly shall be centered on the webbing. Provide double layer of polypropylene webbing (3½" square) at snap hook locations.
 - h. 6" double-turned bottom hems with 0.75 lb per foot weighted tape in a separate pocket inside hem. Continuous chain of equal weight, sewn in, acceptable. Weight pocket to be 1" short of finished hem for main drape, equal to finished hem for valance. Ends of weight pockets to be secured with 1½" wide black hook-and-loop fastener for the full height of the pocket opening.
 - 1) Weights shall be shipped separately from draperies and installed in weight pockets in the field.
 - 2) A pull-line or tape shall be placed within each weight pocket prior to shipping. The pull line shall be provided to facilitate installation of weights in the field.
 - i. Size and quantity as indicated in the Drapery Schedules.
- J. Electric Borders
- 1. Material: Black "Heatstop 1832" as manufactured by W.E. Palmer Company or approved equal.
 - 2. Construction as for masking borders.
- K. Bottom Pipe
- 1. Provide bottom pipe for draperies as indicated herein.
- L. Storage Hampers
- 1. Provide storage hampers in sizes and quantities defined in the Drapery Schedules.
- M. Storage Bags
- 1. Provide heavy-duty canvas drapery storage bags in sizes and quantities defined in the Drapery Schedules.

2.5 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Each drapery to have identification tag sewn to the webbing at the upper offstage corner of the goods. Identification tag should contain the following information:
 - 1. Manufacturer's Name
 - 2. Date of manufacture
 - 3. Finished size of goods
 - 4. Recommended cleaning instructions
- C. Fabric runs to be full height without joints or intermediate seams.
- D. In no case shall a seam between fabric runs fall directly at the finished end of a piece of goods. Provide 1'-0" minimum from end of goods to a seam, either on the front or back face.
- E. Nap of velour sewn down unless otherwise specified.
- F. Ends of chain and pipe pockets to be closed with 1½" wide hook and loop fasteners minimum.
- G. Hang-out and Straightening
 - 1. All draperies, with the exception of cycloramas and scrimms, shall be pre-hung for stretch and final length and trim prior to delivery. This shall be done at the scenic studio or at the job site given clean conditions.

PART 3 EXECUTION

3.1 INSTALLERS

- A. To establish comparative standards of quality, the provision of the equipment and services of this Section shall be by one of the following contractors:

Beck Studios, Inc
1001 Tech Drive
Milford, OH 45150
Tel: (513) 831-6650

J.R. Clancy Incorporated
7041 Interstate Island Road
Syracuse, NY 13209-9713
Tel: (800) 836-1885

LVH Entertainment Systems
1801 Highland Avenue,
Unit E
Duarte, CA 91010
Tel: (805) 278-4584

Stagecraft Industries
5051 North Lagoon Avenue
Portland, OR 97217
Tel: (503) 286-1600

Texas Scenic Co.
8053 Potranco Road
San Antonio, TX 78251
Tel: 210-684-0091

B. Substitution Limitations

1. Any contractor who wishes to be listed, and has not been pre-approved, must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:

- a. Refer to Paragraph 1.8B – Quality Assurance/Qualifications.

3.2 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and shall notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.3 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.

3.4 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Arrange for all tests and inspections required by the General Requirements.

3.5 ADJUSTING

- A. Upon installation and in accordance with the Owner's and the Theatrical Rigging Contractor's schedule, all draperies shall be given an adequate "hang-out" period prior to final acceptance. Steam-out of wrinkles and creases will only be permitted with prior approval.

3.6 CLEANING

- A. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.7 CLOSEOUT ACTIVITIES

- A. Demonstration
 1. Installed equipment to be operated for approval and inspected for quality by the Architect and the Owner.
 2. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 3. Cost of re-inspection and additional testing by the Architect and/or Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.
- B. Training
 1. Following the equipment demonstration, inspection and final adjustments, the Owner's designated staff or representatives shall be instructed in the use, care and maintenance of all items.
 2. Deliver all copies of approved Operations Manual to Owner prior to the instruction session, and review it as part of that session.
 3. Instruction shall be by technical staff of the Contractor.
 4. Instruction to be scheduled in conformance with project construction schedules and the availability of the Architect and the Owner.

3.8 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

END OF SECTION

SECTION 116163 THEATRICAL LIGHTING DIMMING & CONTROL

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes Theatrical Lighting (TL) systems and equipment within the following spaces and associated support areas:
1. Proscenium Theatre
 2. Studio Theatre
 3. Valade Jazz Center
- B. Section Includes
1. Major Systems and Equipment: furnish and supervise installation of the following major elements and associated accessories:
 - a. Theatrical and Architectural dimmer racks
 - b. Theatrical and Architectural DMX controlled panelboards
 - c. Auxiliary equipment/electronics racks
 - d. Lighting systems computers
 - e. Theatrical lighting Ethernet data networks
 - 1) Network racks
 - 2) Network components
 - 3) Network devices
 - 4) Network receptacles
 - f. Theatrical lighting control consoles and peripherals
 - 1) Wireless focus remote systems
 - 2) Theatrical control panels and receptacles
 - 3) Video display monitors
 - g. Architectural lighting control systems
 - 1) House lighting controls
 - 2) House panic systems
 - 3) Architectural lighting emergency bypass devices
 - 4) Architectural control panels and receptacles
 - 5) Portable house light master station and receptacles
 - h. Theatrical lighting wiring devices
 - i. Control Room furniture
 - j. All elements shown on "TL" Series drawings
 2. Work Results:
 - a. Provide all hardware and software required for a complete and working theatrical lighting system as described herein.
 - b. Provide fully coordinated and engineered equipment, installation, supervision and commissioning for the following major systems and associated accessories as required for each space.
 - c. Provide supervision of Theatrical Lighting Systems low voltage signal cable pulling, termination and testing by the Division 26 Electrical Contractor.
 - d. Provide coordination of conduit, backboxes and AC power wiring provided by the Division 26 Electrical Contractor.
 - e. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on related drawings.
 - f. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
- C. Products Supplied But Not Installed Under This Section
1. All equipment shall be installed and terminated under Division 26, except as noted below in paragraph D.1.
- D. Products Installed But Not Supplied Under this Section

1. The work of this section includes supervision of the termination of all control wiring in panels and racks. All control cabling related to this section shall be installed under Division 26.

E. Related Requirements

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
2. Examine Contract Documents for requirements that directly affect or are affected by work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - c. Division 04 – Masonry
 - d. Division 05 – Metals
 - e. Division 09 – Finishes
 - f. Division 11 – Equipment
 - 1) Section 116113 – Orchestra Shell Enclosure
 - 2) Section 116133 – Theatrical Rigging
 - 3) Section 116173 – Theatrical Lighting Fixtures and Accessories
 - 4) Section 116183 – Theatrical Audio Video Systems
 - g. Division 12 – Furnishings
 - 1) Section 126100 – Fixed Audience Seating
 - h. Division 21 – Fire Suppression
 - i. Division 22 – Plumbing
 - j. Division 23 – Heating, Ventilating and Air Conditioning
 - k. Division 26 – Electrical
 - 1) Section 265561 – Theatrical Systems Electrical Requirements
 - 2) General requirements for all Electrical work, including installation of system cable trays, terminal cabinets, empty conduit, junction/pull boxes and back boxes for system devices and panels (Division 26).
 - 3) Electrical terminations (AC power and grounding only) to all equipment racks and AC power receptacles (Division 26).
 - 4) Provision and installation of all conduit and back boxes (Division 26)
 - 5) Electrical services and main circuit protection (Division 26)
 - 6) Distribution system equipment (Division 26)
 - 7) Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation.
 - 8) Terminations and testing of system continuity
 - l. Division 27 – Communications
 - 1) Structured cabling systems
 - 2) At common facility panels, coordinate receptacles for building standard communications systems.

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 - General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 1. Provide Unit Price for items described in paragraph 1.7.A.2.
- C. Alternates
 1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. Valade Jazz Center - Network Control Infrastructure
 2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. DMX or DMX 512: ANSI E1.11 - 2008, USITT DMX512-A
 - b. NFPA: National Fire Protection Association
 - c. NEC: National Electric Code
 - d. UL: Underwriters Laboratories
 - e. IEEE: Institute of Electronic and Electrical Engineers
 - f. IESNA: Illuminating Engineering Society of North America
 - g. ANSI: American National Standards Institute
 - h. AISC: American Institute of Steel Construction
 - i. NEMA: National Electrical Manufacturers Association
 - j. TIA/EIA: Electronic Industries Alliance/Telecommunications Industry Association

B. Definitions

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theater Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theater Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theater Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location (s) on the project site.
 - i. “Provide”: Furnish and install.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.
6. The following standards apply to the work of this Section. It remains the Contractor’s responsibility to confirm and comply with all industry standards that are applicable to the work of this Section.
 - a. Underwriters Laboratories
 - 1) UL 1008
 - b. Institute of Electronic and Electrical Engineers
 - 1) IEEE 802.3af

- 2) IEEE 802.3at
 - 3) IEEE 802.3z
 - c. Illuminating Engineering Society of North America
 - d. American National Standards Institute
- ANSI E1.11 - 2008, USITT DMX512-A
- ANSI E1.17-2010, Architecture for Control Networks
- ANSI E1.20, Remote Device Management over DMX512 Networks
- e. Electronic Industries Alliance/Telecommunications Industry Association
 - 1) ANSI/TIA/EIA 568-A
- Category 5e Standard
- 2) ANSI/TIA/EIA-568-B
 - 3) Category 6 Standard
- f. American Institute of Steel Construction
 - 1) Specifications for the Design, Fabrication and Erection of Structural Steel Buildings
 - g. National Electrical Manufacturers Association

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.
- B. Pre-installation Meeting:
 - 1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.
- C. Sequencing:
 - 1. The installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work under this section may be installed, including:
 - a. Principal foundation work (see Architectural Drawings)
 - b. Installation of associated electrical work (see Electrical Drawings)
 - c. Installation of HVAC work in ceilings (see Mechanical Drawings)
 - d. The installation of the electromechanical systems equipment, panels and devices shall not occur until all painting in the area has been completed.
 - e. Electromechanical and electronic equipment installation shall proceed after environmental site conditions are met. Refer to paragraph 1.10-B for class requirements.

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system. In addition, the Manufacturer shall indicate the maximum accepted wire size as it relates to termination points on their equipment.

- H. Verify wire type, count and routing for all required data wiring between all components to allow for proper conduit sizing and routing by Division 26. Verify and coordinate all line voltage power input required by systems components that shall be provided under Division 26.
- I. Product Data:
 - 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 - 2. Clearly indicate specific component and applicable options.
- J. Shop Drawings
 - 1. Provide shop drawings on D size minimum (24" x 36") sheets.
 - 2. Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 - 3. Provide complete, fully dimensioned, large-scale detailed drawings of all major components.
 - 4. Provide requisite schematics, plans and sections indicating assembly and installation of components.
 - 5. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 - 6. Provide detailed one-line riser diagrams and installation circuit diagrams indicating all control and/or data electrical requirements and point to point connections. These shall be provided within 30 days of Contract Award.
 - 7. Provide a full Bill of Materials to be supplied, including quantities, manufacturers, manufacturer's part numbers, reference to applicable drawings, etc.
- K. Samples
 - 1. Submit sample items including, but not limited to:
 - a. Panel engraving or silk screen
 - b. Distribution device engraved lamacoid label showing attachment method.
 - 2. Additional samples must be submitted within 14 days of Architect's written request.
- L. Source Quality Control Submittals
 - 1. The Contractor shall supply as part of the submittal process the following Source Quality Control documents:
 - a. Serial number of equipment tested
 - b. Serial number of any component device(s)
 - c. Batch number of major components
 - d. Name of person conducting the test
 - e. Date the test was conducted
 - f. List of mechanical tests conducted
 - g. List of electrical tests conducted
- M. Special Procedure Submittals
 - 1. Training
 - a. To ensure proper training of the user group, the Contractor shall supply as part of the submittal process the following training documentation:
 - 1) Training syllabus
 - 2) Training guide (bound hard copy)
 - 3) Training guide (hands on system training)
 - 4) Testing document for confirmation of understanding
 - 5) DVD/ MPG video training file
 - b. These shall be provided two (2) months prior to completion.

1.6 CLOSEOUT SUBMITTALS

- A. Project Record Documents:
 - 1. Submit documents in accordance with Division 01 – General Requirements.

2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
 3. Within 60 days of the acceptance testing, submit one (1) set of reproducible “as built and approved” drawing showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
 4. Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement or maintenance.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 6. Warranties as required herein.
- B. Maintenance Contract
1. Refer to 3.10 – Maintenance.
 2. Submit maintenance contract proposal for Owner and Theatre Consultant review no later one month prior to substantial completion.
- C. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- D. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
- E. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts:
1. Furnish a package of spare parts for all user serviceable portions of the theatrical lighting system equipment:
 - a. Furnish 10% of total quantity of each type of small component or part in system as spare parts (minimum of one). Package may include connectors, bulbs, fuses, knobs, switches, and other miscellaneous parts, in addition to any spare parts specifically listed in individual product specifications.
 - b. Label all spare parts with Manufacturer's part number, designation and description, and location(s) where used.
 - c. Furnish durable, clearly labeled, storage containers for all spare parts, including special static free containers for electronically sensitive parts.
 - d. Furnish five (5) 16GB USB flash drives or other appropriate data storage medium.
 2. Provide unit price for recommended package of parts.
- B. Extra Stock Materials:
1. Deliver stock of maintenance material to Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. Furnish spare dimmer modules (minimum of two, or in quantities as listed in the Appendix) for each type of installed dimmer module in the system.
 - b. Furnish one spare node or complete internal components of each type of installed node in the system.
 - c. Furnish 5% circuit breakers (minimum of one) of each size in the system, including automated circuit breakers.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Refer to Division 01 – General Requirements.
- B. Qualifications:
 - 1. Manufacturers
 - a. The Manufacturer shall own and operate their own manufacturing facility for the fabrication of theatrical lighting dimming and control equipment, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Manufacturer's business.
 - 2. Installers / Integrators
 - a. The systems and equipment under this Section shall be provided through a single pre-approved Contractor who is a factory authorized dealer, integrator and servicer of all of the equipment specified herein and meets the following requirements.
 - b. The Contractor shall maintain a full-time Manufacturer-trained and certified field engineering staff of at least two people available within 4 hours travel of the project location on an emergency basis. Staff shall be employed by the local authorized dealer and trained in electronic lighting control systems and Ethernet systems services.
 - c. The Contractor shall have been continuously engaged in the integration and installation of theatrical lighting equipment for no less than five years and shall have provided complete engineering and installation services on a minimum of five projects of similar scope and complexity in the past five years.
 - d. Project Manager: The Contractor's Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the Contractor and Manufacturer of this equipment. The Project Manager shall be the primary conduit for all information between the supplier of this equipment and the General Contractor. All information given to the Project Manager shall be considered as given to the Contractor.
 - e. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
 - f. Contractor is responsible for proper installation, operation and safety of all component equipment.
 - g. Contractor is responsible for the complete integration and engineering of all systems described herein. Contractor shall confirm project details and, if necessary, suggest modifications to the criteria established herein in order to maintain the design intent.
 - h. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 - 1. All equipment shall be appropriately and substantially packed for shipment.
 - 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theater site allocation. Include packing and shipping lists for each container.
 - 3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 - 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.

2. The Contractor shall be responsible for acceptance of the Theatrical Lighting System components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.

D. Storage and Protection

1. Upon delivery, the materials shall be stored under cover in a clean and dry location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

A. Existing Conditions

1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions and/or corrections are to be requested prior to fabrication.

B. Environmental Requirements

1. Equipment is classified according to its susceptibility to construction conditions that may affect its operation. Classes shall be defined by the following paragraphs:
 - a. Class 1:
 - 1) Cable and distribution apparatus, structural elements, electrical back boxes, face plates, terminal boxes, and empty equipment rack frames may be stored in weather protected spaces under "normal" construction site conditions provided that no electronic components are contained within devices, storage boxes are sturdy and well-sealed, and equipment is protected with imperforate inner plastic sheeting.
 - 2) Contractor may install this class of equipment in weather-protected spaces under "normal" construction site conditions provided that equipment is protected from dust and moisture by sturdy imperforate plastic sheeting and completely covered with corrugated cardboard held securely in place by duct tape. Cardboard covers shall not be removed until area is broom cleaned. Under no circumstances shall equipment remain uncovered overnight during installation or while work which causes high dust or moisture levels in area of placement is taking place.
 - b. Class 2:
 - 1) Control panels, spare parts, test and other equipment (except as listed under Class 3) not subject to damage by concrete dust or dirt shall be stored and protected per Class 1 devices.
 - 2) Contractor shall not install equipment in this class until area of installation is broom cleaned, "blown" clean with pressurized air, mopped, air conditioned and secure. Contractor may install control panels with electronic components under Class 1 conditions, but electronic components must be removed and not installed until area of installation meets Class 2 conditions.
 - c. Class 3:
 - 1) Control consoles, filled equipment racks and other electronic equipment shall not be shipped to site until the rack and control rooms are finished, air conditioned, dust free, broom and mop cleaned, secure, and in all respects complete and ready for occupation.
 - 2) This class of equipment shall not be unpacked until the system is complete in all other respects. Under no circumstances may any equipment in this class be removed from the rack and control rooms into or through spaces which are not cleaned, air conditioned, and complete.

C. Field Measurements

1. Field measurements must be taken prior to preparation of final shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.
- B. The Manufacturer shall warrant materials and workmanship of systems and equipment installed as free of defects. The Manufacturer shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of two (2) years following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of the installation services provided under this Section for a period of two (2) years following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.
- D. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.
- E. During the Warranty Period, for each product that uses software, furnish manufacturer's software updates to the Owner for installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality the systems and equipment described herein shall be furnished by the manufacturers listed herein and in the Appendix.
 - 1. Manufacturers shall provide the Warranty and Maintenance services specified herein as applicable to their products.
 - 2. Manufacturers shall engineer, design, produce shop drawings and fabricate all custom equipment required in this section.

2.2 SYSTEMS DESCRIPTION

- A. The following performance spaces shall contain the following major system components listed below and as shown on the TL-series drawings:
 - 1. Proscenium Theatre
 - a. Theatrical Dimmer Racks and Modules
 - 1) Installed dimmer racks with 500ms rise-time flexible configuration dimmers
 - 2) Paralleled branch circuits to some quantity of dimmers (ref. schedule)
 - 3) Air flow modules in place of dimmer modules for some quantity of dimmer racks (ref. schedule)
 - b. DMX controlled panelboards
 - 1) 120V 20A single pole circuit breakers feeding receptacles for 120V lighting fixtures, including LED source fixtures with on-board dimming.
 - c. Network data system
 - d. Network connection devices
 - e. Theatrical lighting control console
 - f. Architectural lighting control system
 - 1) DMX bypass for LED source house lighting
 - g. Architectural lighting control panels
 - h. Cue Light System
 - i. Dimmed and switched power distribution devices
 - 1) Plugging strips
 - 2) Plugging boxes
 - 2. Studio Theatre
 - a. DMX controlled panelboards
 - 1) 120V 20A single pole circuit breakers feeding receptacles for 120V lighting fixtures, including LED source fixtures with on-board dimming.
 - b. Network data system
 - c. Network connection devices

- d. Theatrical lighting control console
 - e. Architectural lighting control system
 - 1) DMX bypass for LED source house lighting
 - f. Architectural lighting control panels
 - g. Dimmed and switched power distribution devices
 - 1) Plugging strips
 - 2) Plugging boxes
 - h. Control room furniture
- B. The systems shall be professional theatrical lighting systems complete with all necessary accessories to provide control, dimming and switching of incandescent and LED theatrical lighting fixtures via a wired and wireless network of power and data distributed through each space included in the work of this section.
- C. The system in each space shall be complete and operate independently allowing concurrent use without dependence on the equipment or components in other spaces. Each performance space's data network system shall allow for a temporary connection to the main building network for communication with equipment manufacturers' firmware updates.
- D. The control system in each space shall be ACN, RDM and DMX compatible, operating over a TCP/IP network using CAT 5e cabling.
1. Data shall be provided via theatrical lighting consoles, architectural lighting processors and control panels, and wired and wireless remote devices. Data shall be input to the network via direct network connection or via DMX input nodes.
 - a. All input devices shall exist as network devices with distinct IP addresses capable of addressing any endpoint device on the network based on the properties defined by the master console.
 2. Data shall be distributed over the Ethernet network to installed DMX nodes or to network taps for use with portable DMX nodes. Data shall be converted to DMX at the nodes for use by endpoint devices.
 3. The system shall provide POE via endspan network switches compatible with the specified DMX nodes.
- E. State of the Art Development
1. The Contractor shall furnish only the manufacturers' latest developed appropriate products. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Architect and make the newer product available to the Owner for acceptance. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the Owner at no additional cost.
 2. Should product recall by the Manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the Owner at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.
 3. Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the job site.
 4. Equipment defect or intended recall shall not relieve the Contractor from his contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Architect by express carrier. Arrangement for alternate product shall be made at this time.
 5. Under no circumstances shall arrangement for alternate product necessarily require the Owner to accept superseded equipment except on a temporary basis.
- F. Substitutions
1. All requests for variations from the specified materials and products will be reviewed by the Architect according to the procedures outlined in Division 01.
 2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.

3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.
4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested in order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.
5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.3 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable.
2. All mounting hardware shall be included.
 - a. All bolts and fasteners required to mount equipment to mounting hardware must be Grade 5 or better.
3. All equipment and components shall be factory tested prior to shipping.
4. All bolted attachments shall have lock washers or other approved self-locking hardware.
5. All internal wiring shall be factory completed and clearly marked. All field connections shall be by connector, terminal strip or other device specified herein. Any terminal strip connections shall be clearly labeled as to terminal designation.
6. All wire sizes and insulation shall comply with NEC, NFPA and UL standards and all other applicable national and local codes.
7. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.
8. All control wire counts shall include 10% spares.
9. All microprocessor controls shall utilize a non-volatile memory. System configuration, operating parameter, preset, etc. shall be protected against system power failure for a minimum of 48 hours.
10. Systems components shall be modular in nature. Individual dimming modules shall slide in and be easily disconnected from power and removed from the rack without disturbing adjacent components and shall require no special tools for these tasks. Control circuitry shall be contained on plug-in printed circuit cards. Plug-in circuit cards shall be individually removable without disturbing adjacent components.
11. All fixed components including dimmer modules, non-dim modules, circuit breakers, and cabinets shall be labeled sequentially for ease of maintenance.
12. No manufacturer's logo shall appear on control station faceplates or any other device located in public areas.
13. Any supplementary or auxiliary equipment necessary for the operation of the system shall be supplied with overload and short-circuit protection.

2.4 DIMMER RACKS AND MODULES

A. Dimmer Equipment Racks:

1. The entire dimmer rack assembly shall be UL listed. Rack finishes shall be manufacturer's standard baked enamel color.
2. Dimmer racks shall be floor mounted, dead front switch boards complete with all dimmers, control electronics, timers, circuit breakers, and wiring terminations. No external components shall be required.
3. Dimmer slots shall be sequentially numbered and labeled on both sides of the dimmer slots.
4. Each dimmer rack shall be labeled as indicated on the drawings or as listed in dimmer schedules. Engrave and fill or silk-screen labels.

5. Dimmer racks shall be completely wired internally by the Manufacturer. The Electrical Contractor shall provide input feed wiring, load wiring, low voltage wire pulls and individual cabinet disconnects. All terminals shall be clearly and permanently marked and numbered.
6. Dimmer racks shall be constructed of #14 or #16 US gauge cold rolled sheet steel.
7. Provide access panels or knockouts for bottom feed and top load/control wires.
8. All internal components shall be accessible from the front for testing and adjusting while system is operating. No rear access shall be needed for installation or future service.
9. Power distribution shall be by copper buss bars. Aluminum buss bars are not acceptable.
10. Theatrical and Architectural dimmer racks shall be 120/208 volt, 3 phase, 4 wire, size for minimum 600-amp feeds, as indicated on Division 26 contract documents.
11. Theatrical and Architectural dimmer rack load, neutral and ground terminals shall accept up to #2 AWG wire.
12. Individual rack disconnects shall be provided under Division 26. Coordinate fault current requirements with the Architect.
13. All internal wiring shall terminate in pressure wire or clamp type terminals for installation of Electrical Contractor's wiring. No wire nuts or crimps shall be acceptable.
14. All wiring provided by the Electrical Contractor under Division 26 shall be individually labeled at both ends of wire and at all splice locations.
15. Each branch load circuit must have an individual neutral to the dimmer cabinet terminals. Common neutrals shall not be acceptable for any load wire from the load to the dimmer cabinet terminals. Clearly note this requirement on all documentation.
16. Standard advertised product dimensions are to be considered maximum and are not to be increased. Reduced sizes are acceptable with prior approval of Architect.
17. Location of dimmer racks shall be as shown on drawings. Provide quantities of cabinets dictated by dimmer quantity indicated herein.
18. Provide requisite ancillary, current modifying, regulating, and monitoring devices required for operation of a complete fully functioning system.
19. Dimming panels may be cooled by free convection without the use of cooling fans or by fans or blowers with screened air inlet and outlet grilles. Regardless of cooling method, dimming panels shall operate within a maintained ambient room temperature range of no less than 32°F and no more than 95°F degrees.
20. Provide cabinet overheat sensor and pilot light for each cabinet mounted in face of cabinet. Automatic shut off of the dimming system components shall occur should maximum safe operating temperatures of the cabinet be exceeded. Over heat sensor shall be duplicated to provide remote-warning messages located on the theatrical lighting control console.
21. The interior construction of the entire electrical assembly shall be designed for a minimum standard fault current of 50,000 AIC with the capability for increased protection to 100,000 AIC, if required.
22. Noise generated shall not exceed 55dbc per cabinet, as measured with a Type 2 sound level meter at a distance of three feet from the cabinet in installed dimmer location.
23. The racks shall be mounted on vibration isolation mounts or pads consisting of a neoprene core with steel bearing plate, and a neoprene friction surface. Isolation mounts shall be Mason Industries Type "ND" or as specified by the project Acoustician; isolation pads shall be Mason Industries Type "WMSW" or as specified by the project Acoustician.
24. Dimmer bank shall accept USITT standard DMX512-A protocol digital control signal or Category 5e or greater Ethernet control signal in addition to any proprietary protocol control signal supported by the Manufacturer. Ethernet dimmer rack shall provide two (2) data inputs functioning on a Highest Takes Precedence basis.
25. Selection of signal protocol shall be automatic and shall not require use of mechanical transfer relays.
26. Control signal input of each individual dimmer rack shall be fully opto-isolated from control signal input of any other rack, and fully opto-isolated from any control signal output.

B. Dimmer Modules:

1. Dimmers shall meet all dimming performance criteria as listed in this section.
2. Dimmer electronics shall be completely solid state. Silicon controlled rectifiers shall be used to control AC power supplied to the loads.

3. Dimmers shall utilize two silicon-controlled rectifiers in back-to-back electrical configuration and all required gating circuitry on high voltage side of an integral opto-coupled control voltage isolator.
4. Rectifiers shall be mounted on ceramic substrate and encapsulated along with other components in epoxy-filled high-impact plastic case.
5. All dimmer modules shall be able to operate as “non-dims” with selection of this function through dimmer rack and control console software.
 - a. When selected as a “non-dim”, incoming control signal level is interpreted as either full on or full off signal.
 - b. Level of control signal required to initiate turn-on and turn-off shall be user selectable from 0% to 100%.
 - c. Non-dim function shall operate regardless of load type or wattage.
6. Dimmers shall operate properly on 60 Hz, 120 - 140 volts AC input. Dimmer output shall be AC, containing less than 1% DC component. At maximum input signal, the dimmer shall produce a full sine wave. With the input signal at zero, the dimmer output shall be zero voltage at any load with regulation set OFF. Output shall be symmetrical to the zero voltage axis at any control setting prior to any electronic enhancement.
7. Dimmer efficiency shall be at least 97% at any voltage and with any load to maximum capacity.
8. AC voltage control components shall be rated at a minimum of two times the rated capacity of the dimmer and shall sustain a total short circuit for a sufficient length of time to open primary circuit protection.
9. Incandescent dimmers (line and low voltage) shall be capable of hot patching cold tungsten loads up to full rated capacity without malfunction or change in operating characteristics regardless of control setting.
10. Speed of response of system processor modules to control signal changes shall be no more than 25 milliseconds.
11. Dimmer output shall repeat with respect to the control signal input unit value without hysteresis.
12. Dimmers set to equivalent control signals with equal types and amperage of loads shall not vary from one to another by more than one percent (1%) at any place in the control signal range from full-off to full-on. Dimmer response shall not be phase sensitive with respect to control signal. There shall be exact tracking from one dimmer to the next with no variation.
13. There shall be no visible dimming resolution stepping or flickering regardless of length of fade time or control fader settings.
14. Provide protection from overloads, short-circuiting, and transient voltage. Protection devices requiring reset or replacement must be accessible on the face of the dimming module or dimming cabinet.
15. Circuit Breakers:
 - a. Provide input fully magnetic circuit breaker(s) mounted on the face of each dimmer module or cabinet faceplate. Provide one input breaker for each individual dimmer within a module (e.g. one for single module, two for dual modules, etc.).
 - b. Input breakers must be rated for full load of the dimmer and must trip at 125% of rated capacity. Input breakers shall be rated for a minimum fault current of 10,000 AIC (120V) or 14,000 AIC (277V).
 - c. Acceptable manufacturers: Airpax or approved equal
16. Provide dimmers with a ferrous core toroidal filter choke. This filter choke shall suppress lamp filament or transformer hum and vibration, prevent electromagnetic interference in professional quality audio, video, and computer equipment and limit objectionable harmonics. Laminated E.I. or C.I. type chokes are not acceptable.
 - a. Rise Time Full Load (Theatrical Lighting Dimmers): Voltage rise time shall not be less than 500 microseconds measured and installed on site at 90 degree conduction angle from 10% to 90% of output wave form with dimmer operating at maximum load.

C. Dimmer Modules with Bypass

1. Dimmer modules with Bypass shall meet all of the criteria for dimmer modules listed above
2. Modules shall utilize the same chassis form as the dimmer modules
3. Modules shall contain two mechanically held relays
4. Each output in the module shall be configurable to operate as a dimmer or a relay
5. Local override switches shall permit full manual bypass of control signal at each output

6. Breakers shall be fully rated at 20 amps
7. Breakers shall be fully magnetic type

D. Non-Dim Modules

1. Non-dim modules shall utilize the same chassis form as the dimmer modules
2. Modules shall contain two true electrically held relays
3. Breakers shall be fully rated at 20 amps
4. Breakers shall be fully magnetic type

E. Dimmer Control Electronics:

1. Control electronics shall use digital electronic circuitry, be microprocessor based, and be designed specifically for the control of dimming systems. All user operated controls shall be low voltage, use Class II wiring and be electrically isolated from power wiring by means of a UL listed Class II transformer. Appropriate analog to digital conversion shall be acceptable provided circuitry is integral to the control system and not a stand-alone component.
2. System configuration, operating parameters, presets, levels and fade times shall be able to be field modified and shall not require components to be returned to the Manufacturer for such modifications.
3. System configuration, operating parameters, presets, levels and fade times shall be protected against system power failure for a minimum of 10 years. The state of the system status upon restoration of power shall be user selectable.
4. The dimmer control electronics may be capable of being addressed by the IEEE 802.3 Ethernet protocol.
 - a. The dimmer control electronics shall be capable of being addressed by an ACN-compliant transport system for the USITT DMX512-A protocol when any lighting control console utilizing the same protocol is plugged into a DMX In Node.
5. Dimmers shall regulate output voltage to maintain constant output RMS voltage as long as input remains over 120V per phase.
6. Dimmer output RMS voltage versus control input signal shall be consistent with a modified square law curve. The dimmer curve shall be stable and shall not require individual curve adjustment devices. The dimming curve shall be predetermined and shall not vary unless modified through control device software.
 - a. Modified square law curve shall provide a more uniform output response to control level changes than a standard square law curve.
 - b. Other optional curves shall be available for installation through rack and/or control console operations software.
 - c. Field adjustment of dimming curve shall not be required.

F. Provide:

1. ETC Sensor3 Racks and ThruPower 500ms rise AF dimmers

2.5 DMX CONTROLLED PANELBOARDS

A. DMX Relay Panel

1. Panels shall provide over-current circuit protection and remote on and off circuit control utilizing mechanically held relays in a single wall-mounted enclosure.
2. Panels shall support single, double, and triple pole relays, and include control electronics, electronics power supply, and isolated technical ground bar.
3. Panels shall support 300W phase-adaptive dimmer modules at any single pole circuit position.
4. All panels and components shall be ETL or UL Listed.
5. Panels shall be no larger than 20" wide x 6" deep x 70" high.
6. Panels shall be constructed of 16-gauge steel with removable knockout panels to facilitate conduit entry. Front panel shall be easily removable for full access to all connections.
7. Panels shall be convection cooled.
8. Panels shall be fed by 3-Phase 4-wire (3-Phase conductors, 200% Neutral), Isolated Technical Ground and chassis ground 120/208 or 277/480 VAC 60 Hz supply.
9. Panels shall have Main Circuit Breaker protection on input feed.
10. All line, neutral and ground terminals shall accept up to 6 AWG wire.

11. The individual relays shall contain mechanically held contacts with ampacity ratings of 20 amps at up to 277AC, as required.
12. Each relay shall have an integral manual override switch with on/off status indication.
13. The relays shall have the following characteristics:
 - a. Respond to control changes in less than 25 milliseconds
 - b. Rated for a minimum of 100,000 mechanical operations at full resistive load
14. The panel control electronics shall operate on single phase, 120-277V AC 60Hz fed from an included 15 amp circuit breaker. Fault current protection shall be 25,000 AIC @ 120 VAC.
15. The panel shall receive DMX512 control protocol and sACN. Up to two additional control protocols, including 0-10V Dimming, Contact Closure, and DALI, shall be available, as required, via on-board interface or accessory card. Addressing shall be set through a user interface.
16. Panels shall support discrete addressing of each relay.
17. 2,500V of optical isolation shall be provided between the DMX512 inputs and the control electronics as well as between control and power components.
18. A voltage barrier shall be provided to separate line voltage and control voltage sections of the panel.
19. Provide:
 - a. Electronic Theatre Controls Unison Echo Relay Panel Mains Feed in configurations and with accessories as listed in the Appendix.

NETWORK DATA SYSTEM

B. Equipment Racks

1. Equipment Racks shall be 19" standard freestanding or wall-anchored equipment racks, as indicated in the drawings. Enclosure shall provide adequate space for all network components and auxiliary equipment as required.
2. Equipment racks shall be provided with knockouts as required on top, bottom and sides to allow conduit connection as required.
3. In no case shall loose equipment be permanently mounted outside of a protective equipment rack or cabinet.
4. Provide finished, blank panels, complete with rack-mounting holes and hardware as necessary.
5. Label all controls that are contained within this contract as indicated on related drawings or as appropriate. All labels to be engraved and white filled.
6. Network Control Racks (CR)
 - a. Network Control Racks (CR) shall contain network components and auxiliary equipment including but not limited to:
 - 1) Network switches, patch panels, and cable management, as required.
 - 2) Network devices, including network nodes and taps, as required.
 - 3) DMX Combine Merger and Splitter Units, as required
 - 4) Architectural processors, as required
 - 5) Uninterruptible power supplies
 - 6) Additional equipment as indicated on Drawings.
7. Production Control Panel (PCP)
 - a. The Production Control Panel (PCP) shall contain the following elements:
 - 1) Rack Identification panel with rack name and location.
 - 2) Task Light Panel
 - 3) House and Work Lighting Control panel.
 - 4) Additional Theatrical Lighting equipment as indicated on Drawings.
 - 5) Uninterruptible power supply rated to power equipment contained in this rack for 30 minutes.
 - 6) Blank and vent panels as required.
 - 7) Control panels and equipment for other theatrical systems (e.g., Rigging, Stage Lifts, Variable Acoustics, etc.). Equipment to be supplied and installed in the rack under the work of the respective sections.
 - b. Confirm space requirements with other affected contractors in writing prior to fabrication. Coordinate wall backing requirements for mounting with General Contractor.

C. Network Components:

1. Network switches shall have the following characteristics and functions:
 - a. Switches shall contain (24) dual speed auto-sensing ports, supporting both 100BASE-T and 10BASE-T and PoE per IEEE 802.3af or 802.3at as appropriate.
 - b. Switches shall support IEEE 802.3i Type 100BASE-T standard.
 - c. Switches shall be rack-mounted in standard 19" racks.
 - d. Switches shall have front panel LEDs that shall report switch traffic, collisions and expansion status. Per port LEDs shall indicate link and partition status for individual connections.
 - e. Switches shall have UTP ports on its front face for connecting to nodes and taps via standard 19" patch panel.
 - f. Should Ethernet wire runs exceed 300 feet, provide switches with fiber ports equal to the number of fiber runs in the system.
 - g. Acceptable manufacturers:
 - 1) Cisco
 - 2) Approved equal
2. UTP network patch panels
 - a. Provide Category 5e Patch Bay (or bays as required) for termination of Category 5e wire runs.
 - b. Provide Category 5e patch cords as required for connection between the patch bay (or bays), switches and Ethernet Power Supply.
 - c. Patch bays shall be rack-mounted in standard 19" racks.
 - d. Provide rack mounted standard 19" cable management system for each patch panel.
 - e. Patch bays and cable management panels shall be finished in a black anodized finish and shall contain black Category 5e connectors as required.
 - f. Acceptable Manufacturers:
 - 1) Hubbell
3. Fiber Optic network patch panels
 - a. Provide Fiber Optic Patch Bay(s) as required, for termination of fiber optic cable runs.
 - b. Each patch panel shall be populated with (12) LC Duplex MM adapters.
 - c. Patch panels shall include internal cable management.
 - d. Provide 1RU label panel above each patch panel with both the appropriate receptacle designation and location description for each patch jack.
 - e. Legends shall correspond with receptacle panel legends where applicable.
 - f. Patch bays shall be rack-mounted in standard 19" racks.
 - g. Patch bays shall be finished in a black anodized finish.
 - h. Provide:
 - 1) Hubbell Fiber Interconnection Shelf, 1RU (FEUR24LCDOM3)
 - 2) Approved equal

D. Network Cabling:

1. Fiber Optic Cable (as required for all runs greater than 300 feet)
 - a. Contractor to confirm all cable routing distances to determine appropriate use of fiber runs.
 - b. Contractor shall specify 50/125 μ m fiber optic cable as required to support network components.
 - c. The cable must exceed the IEEE802.3z Gigabit Ethernet Fiber specification for 50/125 μ m Fiber.
 - 1) For Gigabit Ethernet 1000sx over 50/125 μ m fiber, a modal bandwidth of 500mHz per km in the 850nm wavelength with 500m minimum distance is required.
 - 2) For Gigabit Ethernet 1000lx over 50/125 μ m fiber, a modal bandwidth of 500mHz per km in the 1300nm wavelength with 500m minimum distance is required.
 - d. The cable must exceed the TIA/EIA 568B Fiber specification.
 - e. Acceptable Manufacturers:
 - 1) Belden F13D006R9
2. UTP Cable
 - a. The copper cabling and connecting hardware must fully comply with the existing TIA/EIA 568B Standard and with the standard installation of Category 5e products.
 - b. The copper cabling should also comply with the TIA/EIA Category 5e standard.
 - c. Acceptable Manufacturers:

- 1) For non-plenum rated applications:
CommScope 55N4 Ultra II Enhanced Category 5 UTP cable
Belden 1583A
- 2) For plenum rated applications;
CommScope 5504M Ultra II Enhanced Category 5 UTP cable (for plenum rated applications).

Belden 1585A

E. Network Services Gateway

1. The Network Services Gateway shall be a microprocessor-based unit for automatic configuration, monitoring and management of an integrated lighting network system. The gateway shall:
 - a. Communicate with lighting network devices over Ethernet using standard Category 5e cabling and Ethernet switches.
 - b. Support multiple protocols, including ACN, DHCP, DNS, and FTP.
 - c. Support real-time logging and notification of system errors.
 - d. Provide storage of system device configurations.
 - e. Allow creation of user-defined reports.
2. Enclosure shall include a backlit graphic LCD display for identification and status reporting.
3. Provide with rack-mounting hardware and power supply.
4. Provide:
 - a. Electronic Theatre Controls Net3 Conductor.

F. Lighting Systems Computer

1. The lighting systems computer serves as both the Theatrical and Architectural lighting network programming device.
2. Provide one laptop PC with 14" diagonal 16:9 format screen, minimum Intel Core i7 processor (Microsoft Windows 7 compatible) with 8GB of RAM and 500 GB solid state hard drive, CD/DVD-RW drive, 3-USB slots, Wireless-N card. The Computer shall have the following:
 - a. Network interface card for direct use over the lighting Ethernet data network.
 - b. Provide fifteen foot cable for plug-in to the network receptacle.
3. Acceptable Manufacturers:
 - a. Lenovo
 - b. Toshiba
 - c. Dell
4. System Software
 - a. Provide one boxed set of the most current Windows based operating system compatible with the proprietary application software and system configuration.
 - b. Provide networking software complete with manuals, technical support resources and CDROM as required allowing on line and off line Owner configuration and operation of all system parameters and dimmer rack configuration settings.
 - c. Provide Architectural lighting system software:
 - 1) ETC Unison Paradigm

G. Wireless Network

1. Provide wireless access points (WAP) to provide continuous and consistent access to the available lighting network using wireless remote lighting control units and laptop computers.
2. Wireless switches shall comply with the latest IEEE 802.3 b/g standards.
3. Coordinate the Ethernet protocols (and frequencies) with other areas of work (AV, Automation, Administration, etc.) to ensure that the lighting system has its own dedicated secured channels and does not broadcast SSID information that would allow the system to be compromised. Setup MAC address filtering if nearby networks require it.
4. Each space shall have a distinct SSID and shall be secured using WPA-2 security.
5. Provide a wireless network map showing WAP locations, discrete address, and coordination with other wireless networks.
6. Provide external antenna connectors for auxiliary antennas.
7. Provide software to allow management and configuration of WAPs.
8. Wireless access points shall be provided with pipe mounting or other appropriate mounting hardware, power supply and 25' Ethernet cable.

9. Manufacturers:
 - a. Cisco Systems
 - b. 3-Com
 - c. Or equal
10. Provide a wireless network for each space listed below:
 - a. Proscenium Theatre
 - b. Studio Theatre
 - c. Valade Jazz Center

2.6 NETWORK GATEWAYS

A. DMX In/Out Nodes – General:

1. DMX In/Out nodes will be located as noted on drawings. Nodes shall be connected via the Ethernet data network on Category 5e wire.
2. DMX In/Out nodes shall be capable of translating Ethernet based protocol into usable signal for output to plug-in peripheral devices employing USITT standard DMX512-A. These nodes shall comply with IEEE 802.3 standards.
3. DMX In/Out nodes shall support Remote Device Management (RDM) protocol.
4. XLR connectors at each node shall be able to be configured to output or allow input for any one frame of DMX512 with normal assignment being sequential. All nodes indicated in the system shall be able to operate simultaneously without data collision or corruption while maintaining recommended minimum and maximum DMX512/RS485 frame length, packet size and refresh rates.
5. DMX distribution over the data network shall be independent of all devices on the system. Regardless of dedicated theatrical lighting devices that may be connected to the various nodes, the DMX distribution system shall be configurable from a PC or other independent control device. The PC or other independent control device shall be provided under this section. Saving and loading of the system configuration to disk shall be supported.

B. Install DMX In/Out Nodes - Type 'EN':

1. Provide nodes with female five-pin XLR connectors within one node box, as shown on the drawings.
 - a. Label each receptacle with appropriate designations. All labels to be engraved with white core fill. Provide white acrylic write on surface as shown.
2. Each node shall be powered via its Ethernet connection using Power Over Ethernet (IEEE 80203.af).
3. Devices shall be mounted at fixed locations and wired as indicated on the drawings.
4. Assembly shall have sheet metal back box and faceplate.
 - a. Provide flush mount or surface back box and properly sized face plate as required for each location shown on drawings
 - b. Face plate shall match edges of back box in surface mount conditions.
5. Provide quantities and configurations as indicated in drawings
 - a. ETC Net3 DMX/RDM Output Gateway

C. 4-Port DMX In/Out Nodes:

1. Devices shall have (4) five-pin XLR receptacles within one node box.
 - a. Provide male XLR receptacles for DMX 'In' ports
 - b. Provide female XLR receptacles for DMX 'Out' ports
 - c. Label each receptacle with appropriate designations. All labels to be engraved with white core fill.
2. Each node shall be powered via its Ethernet connection using Power Over Ethernet (IEEE 802.3.af).
3. Nodes shall be rack mounted in Network racks and wired as indicated on the drawings.
4. Provide quantities and configurations as indicated in drawings and as required for operation of the system as described herein:
 - a. ETC Response 4-Port DMX/RDM Gateway

D. Portable 2-Port DMX In/Out Nodes

1. Device shall have (2) female five-pin XLR connectors within one node box.

- a. Label each receptacle with appropriate designations. All labels to be engraved with white core fill. Provide white acrylic write on surface as shown.
2. Each node shall be powered via its Ethernet connection using Power Over Ethernet (IEEE 802.3af).
3. Devices shall be portable.
4. Connection of Category 5e at nodes shall be via a ruggedized RJ45 connector or what is accepted as industry standard at the time of the installation.
5. Internal components shall be modular in nature and easily replaced as a unit in case of failure.
6. Assembly shall be a sheet metal enclosure and faceplate.
7. Provide 5'-0" Category 5e cable extension for each node.
8. Provide appropriate mounting hardware to mount node onto 1.5" Schedule 40 pipe.
9. Provide:
 - a. ETC Net3 Two-Port DMX/RDM Output Touring Gateway

E. Portable Network Full Function Node

1. Provide one (1) 4-Port DMX In/Out Node and one (1) Remote Video Interface in a portable rack enclosure to provide for connection of Designer remote consoles, remote video monitors, focus remote and other DMX devices as required.
2. 120 Volt power
3. All other network features as described above

2.7 NETWORK CONNECTION DEVICES

A. General

1. Provide all network connection devices as indicated on the drawings and as specified herein, for installation by Division 26.
2. Coordinate size of device, orientation of circuits, and mounting detail to suite site condition.
3. Assembly shall have a sheet metal back box and faceplate, finished flat black.
 - a. Provide flush mount or surface back box and properly sized faceplate as required for each location shown on drawings.
 - b. Faceplate shall match edges of back box in surface mount conditions.
4. See drawings for device locations and control device schedules for device type, mounting type, and receptacle types and quantities.
5. Receptacles:
 - a. 20A Edison (NEMA 5-20 R) duplex panel mounted receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Color to be black except where specifically noted otherwise
 - b. RJ45 panel mounted receptacles
 - 1) RJ45 receptacles must comply with all Category 5e or greater standards.
 - 2) Ruggedized locking connector system
 - 3) Provide:
Neutrik etherCON RJ45 receptacles
 - c. Fiber optic panel mounted receptacles
 - 1) Fiber optic receptacles must be LC-Duplex compatible.
 - 2) Ruggedized locking connector system
 - 3) Provide:
Neutrik opticalCON receptacles
 - d. Multi-Pin receptacles
 - 1) Provide ruggedized multi-pin receptacles to mate with cord-mounted connector on device type HLP, portable houselight controller.
6. Labeling:
 - a. Label each network receptacle with appropriate designations. All network receptacle labels to be engraved with white core fill, unless otherwise noted.
 - b. Provide lamacoid tags for the following information:
 - 1) Maximum length of external Category 5e cable that can be connected without violating the Category 5e standard
 - 2) Circuit designation(s) of each power receptacle. Circuit designations to be verified by Division 26 prior to fabrication.

- c. Lamacoid tags to be engraved on black (with white core) with chamfered edges, and shall be securely mechanically fastened to device.
- 7. Mounting:
 - a. Devices shall be surface, flush or recess mounted at locations and mounting heights as called out on drawings and device schedules.
 - b. Provide all requisite mounting hardware for installation of devices. Coordinate all device mounting requirements with Division 26.
 - c. All holes in mounting brackets to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.
- B. Console Connection panels – Type 'CC':
 - 1. Provide device with one double duplex "clean power" receptacle and control receptacles as shown on the drawings.
 - 2. RJ45 receptacles shall be connected via Category 5e cable to the Ethernet network and shall allow full function nodes or other peripheral portable nodes to be connected to the network.
 - 3. Fiber optic receptacles shall be terminated with 2 fiber cable as specified herein.
 - 4. Portable house light control receptacle shall allow full function of portable house lighting controller including panic and normal functions.
 - 5. Network Taps – Type 'ET':
 - a. Provide device with one duplex "clean" power receptacle and control receptacles as shown on the drawings.
 - b. RJ45 receptacles shall be connected via Category 5e cable to the Ethernet network and shall allow full function nodes or other peripheral portable nodes to be connected to the network.
 - c. Fiber optic receptacles shall be terminated with 2 fiber cable as specified herein.

2.8 THEATRICAL LIGHTING CONTROL CONSOLES

- A. Lighting Control Console
 - 1. Console shall be microprocessor-based system designed specifically for theatrical lighting control application. Consoles shall be engineered for ease and clarity of operation and shall incorporate visual display to assist operator in modes of operation.
 - 2. The console shall be capable of operation in blind (preview/non-live) and shall also be capable of operation in live (stage) mode.
 - 3. Console shall be able to organize data for channels other than those associated with dimmer levels through the use of special grouping or numbering schemes. Simply flagging channels with a new color in the video display shall not be acceptable.
 - 4. Console shall graphically organize information, particularly for automated luminaires, to allow easy identification of the large groups of channel numbers involved with such fixtures. Assignment of pan and tilt functions of automated luminaires shall be supported by either level wheel, track pad or a mouse associated with the console. In addition, the pan and tilt axis of multiple luminaires shall be able to be assigned to a single device, such as a level wheel, track ball or mouse, to allow multiple automated fixtures to track together to a single point on stage.
 - 5. Console shall be capable of pan and tilt operation through external devices with virtual focus software (such as Wysiwyg) or automated tracking devices (such as BlackTrax).
 - 6. The console shall allow cues to be modified while they are running. The console shall support color print outs to mimic color displayed on video screens.
 - 7. Console shall support full bi-directional RDM communication with compatible devices.
 - 8. Console shall have Ethernet, USB, DMX512/RDM, MIDI In/Out, and RS-232 ASCII port interfaces.
 - 9. The Console and central processors (if needed in the system) shall be connected through uninterruptible power supplies as needed to protect console and network operations for at least 30 minutes in the event of power failure.
 - 10. The console shall be provided with all currently advertised features and components indicated in the most recently published product literature plus features described in System Description.
 - 11. The console shall be capable of controlling the lighting network by being plugged directly into any network tap.
 - 12. Provide one Theatrical Lighting Main Control Console for each of the spaces listed below:

- a. Proscenium Theatre
 - 1) Electronic Theatre Controls – Gio – 24K with 2 x 10 fader wing
- b. Studio Theatre
 - 1) Electronic Theatre Controls – Gio@5 – 24K with 2 x 10 fader wing
- c. Valade Jazz Center
 - 1) Electronic Theatre Controls – Ion Xe 20 – 12K

B. Wireless Focus Remote Unit

1. Provide Wireless Remote Focus Unit system with all currently advertised features and components indicated in the most recently published product literature.
2. System shall consist of a handheld personal digital assistant equipped with a wireless access card for operation on an 802.11b wireless Ethernet network. Wireless access card must be compatible with wireless access points (WAP) provided with the theatrical lighting Ethernet network.
3. Remote shall “call up” dimmers and channels from remote locations for lamp or focus checks without an operator at the main console.
4. Remote shall be capable of calling up and running through pre-recorded cues and triggering macros.
5. Remote shall not lose data if its battery becomes depleted.
6. Remote shall operate with the main console.
7. Remote shall be provided with a charging cradle.
8. Provide quantities as listed in the Appendix.

C. Video Monitors

1. Monitors shall be high resolution; 17” color flat-screen multi-touch capable LCD monitors capable of displaying all console video display information. Monitors shall have connectors to mate directly with Remote Video Interface and shall have front mounted controls for contrast, brightness, vertical hold, and horizontal hold.
2. Provide: quantity per Appendix.
 - a. Furnish 1 - 10' and 1 - 25' video extension cable for each monitor.
 - b. Furnish 1 - 10' and 1 - 25' power extension cable for each monitor.
 - c. Protective Cover:
 - 1) Provide one protective cover for each monitor.

2.9 ARCHITECTURAL LIGHTING CONTROL SYSTEM

A. General

1. The Architectural lighting control system shall be a microprocessor-based control system that works in conjunction with the theatrical lighting control console in rooms where consoles are provided and otherwise independently to set and control auditorium house lighting or studio lighting levels. The system shall control LED architectural lighting, DMX relay-controlled work lighting and DMX controlled switching for theatrical circuits as shown on the drawings. The system shall operate through master control panels, preset recall stations and entry panel stations located as shown in the drawings. The system shall also be controlled remotely with a portable master station (specified herein) with plug-in locations as shown in the drawings.
2. When in use, the theatrical console shall override preset levels on a highest takes precedence basis and shall directly control only those dimmed architectural circuits within the same performance space.
3. The dimmed circuits in the performance spaces shall operate independently of the dimmed circuits in the lobbies and public spaces. This system shall not control the lobbies and public spaces.

B. Architectural Lighting Control System

1. The System allows programming and recall of preset lighting states, time clock events, and sequences, and control of fade times between presets.
 - a. Provide support for a minimum of 99 lighting presets
2. The System shall be configured to allow multiple active presets to control architectural lighting, work lights, and theatrical lights simultaneously through the use of multiple room assignments.

3. Provide sufficient quantity of system processors to have the ability to “snapshot” DMX levels from Theatrical lighting console and record in to architectural preset for all DMX assigned values including dimmed circuits, relay circuits, moving lights and theatrical lights in each system.
4. Switching between panels shall not cause flicker or change in lighting levels when setting on panels or House Lighting master station are identical.
5. The system shall be a microprocessor based lighting control system. System operating program shall be stored in electrically erasable programmable read only memory (EEPROM).
6. Data storage facilities shall retain memory for an indefinite period of time. In case of power failure, the control module shall retain preset memory for minimum of 72 hours.
7. Provide control system configuration software operating on a PC platform to allow configuration and preset level setting.
8. Provide:
 - 1) Electronic Theatre Controls Unison Paradigm System

C. House Light Panic System

1. The House Panic Control System instantly brings the architectural lights to full with the push of one button. The system is always enabled at every location, regardless of the state of other control systems. The system must operate independently of emergency power transfer relays or other power failure reliant systems.
2. House Light Panic System shall include a separate power supply and DMX driver so that house lights can be brought on in the event of failure of primary supply and/or electronics.
3. House Light Panic control shall be included in all House Lighting Master Stations, including any portable stations.
4. Operations:
 - a. The NORMAL push button is illuminated at all locations whenever Panic System is not activated.
 - b. Depressing any PANIC push button illuminates the PANIC push button and turns off illumination of the NORMAL push button at all locations, and causes a control signal from a dedicated set of control electronics and a dedicated power supply to be applied to selected house light dimmers. This causes those house light dimmers to output full line voltage to loads. This state remains until any NORMAL push button is depressed. Depressing any NORMAL push button illuminates the NORMAL push button and turns off illumination of the PANIC push button at all locations, and returns the system to the exact state it was in prior to depression of the PANIC push button.

D. Architectural LED Lighting Dimming & Control Interfaces

1. Architectural lighting fixtures with LED sources compatible with low voltage dimming will be controlled via DMX data signals generated by the theatrical lighting control systems.
2. Architectural lighting fixtures with LED sources compatible with mains dimming will be controlled directly by dimmer modules in the theatrical lighting dimming system.
3. Low voltage drivers and theatrical system dimmer modules for all LED sourced architectural lighting fixture types shall be tested for full 0-100% dimming range compatibility at the dimming and control manufacturer’s factory.
4. Control interface devices, including control signal gateways and repeaters, shall be rack-mounted or provided in DIN rail enclosures.
5. Fixture interface devices, including device drivers and external power supplies, required between control signals and the LED fixtures shall be provided under Division 26 work.
6. Provide:
 - a. DMX output nodes, DMX repeaters, and/or DMX-controlled 0-10V output nodes as listed in the Appendix. Review Division 26 Architectural Lighting documents to confirm quantity of outputs required for control of system.

E. Architectural LED Lighting Emergency Bypass Detection

1. Provide a power loss detection device that will monitor normal power feed and generate a contact closure output to trigger emergency lighting bypass operation upon loss of normal power.
2. Each unit shall provide isolated outputs for connection of multiple devices.
3. Unit shall be compatible with single or three phase systems.

4. Unit shall provide automatic sensing of normal power loss.
5. Unit shall include an integrated circuit breaker for over-current protection and simulation of normal power loss.
6. Unit shall provide a normally-closed input for interface with fire alarm systems.
7. Each unit shall provide a full universe (512 channels) of DMX control.
8. The unit shall be UL924 listed.
9. Outputs shall be configurable as normally open or normally closed.
10. Provide:
 - a. Electronic Theatre Controls Emergency Bypass Detection Kit, model EBDK

F. Architectural LED Lighting Emergency Bypass Controller

1. Provide low voltage bypass device that will allow LED sourced fixtures to operate as normal / emergency fittings by sending DMX512 directly to connected fittings. The unit shall override the control signals on associated emergency lighting fittings upon loss of normal power.
2. When in panic mode, the unit can provide a maintained normally open, normally closed, dry contact or +12VDC signal.
3. Each unit shall provide a full universe (512 channels) of DMX control.
4. The unit shall be UL924 listed.
5. Outputs shall be compatible with DMX512 protocol.
6. Provide:
 - a. Electronic Theatre Controls DMX Emergency Bypass Controller, model DEBC

2.10 ARCHITECTURAL LIGHTING CONTROL PANELS

A. General:

1. Control electronics shall use digital electronic circuitry, be microprocessor based and be designed specifically for the control of architectural lighting systems. Location, overall dimensions, and quantity of control devices shall be as shown on drawings.
2. Control device back boxes, where required, shall be standard deep masonry boxes by Square D or equal.
3. Controls shall be low voltage type and use N.E.C. Class II, low-voltage wiring.
 - a. Only Belden control cables shall be acceptable.
4. Faceplates shall attach to the device with no visible mounting screws. No manufacturer's logo or other marking shall appear on faceplates unless otherwise noted.
5. Faceplate finishes shall be manufacturer's standard finish unless otherwise noted by Architect or Architectural Lighting Consultant. Selection of finish, custom or standard color shall be by Architect.
6. Control devices shall be provided with appropriate zone and/or scene descriptions. These descriptions shall be furnished to the Manufacturer prior to fabrication by the Architect or Architectural Lighting Consultant and shall be engraved and filled with color to be selected by Architect. Any silk screened borders, logos, potentiometer graduations, etc. shall use a chemically bonded graphic process which resists removal by scratching, cleaning, or other light abrasive scouring.
7. All slider potentiometers shall have a minimum travel of one (1) inch and shall have a graduated scale marked adjacent to the slider.

B. House Lighting Master Station 'HL'

1. Provide a panel assembly with flush mounted Color Touchscreen Controller capable of the following operations:
 - a. Random playback of House Light presets as described herein.
 - b. Control of relay controlled work lighting circuits as described herein.
 - c. House Light Panic system control as specified herein.
2. The Color Touchscreen Controller shall include the following:
 - a. Back lit user customizable 7" color liquid crystal display with user interface touch screen face-plate.
 - b. The Controller shall have multiple pages as follows to allow control of:
 - 1) Master levels of each recorded preset.
 - 2) Individual dimmed channel and switched work light channel levels/status.
 - 3) Preset, level and fade time recording.

- 4) Preset selection and playback.
 - 5) Recording of Theatrical lighting console output into architectural system presets
 - c. Products:
 - 1) Electronic Theatre Controls Unison Paradigm 7" Touchscreen
 3. Provide front panel containing all controls as required to operate House, House Panic and Work Lighting Systems as specified herein.
 4. Provide EAO Series 31 Switches as specified above for PANIC, NORMAL controls.
 5. Provide flush, surface, or 19" rack mount back box as required for each mounting condition shown on drawings.
 6. Provide anodized aluminum or painted sheet metal cover plate with chamfered edges, color as per Architect.
- C. Portable House Lighting Master Station 'HLP'
1. Provide one Portable House Lighting Master Station with all of the features described above in a rugged portable enclosure.
 2. Case: Provide sturdy case with carrying handles and rubber feet, as indicated on the Theatrical Lighting drawings.
 3. Cables
 - a. Provide 1 – 10', and 1 – 25' male to female combined power and control cable to mate with associated connection panels.
 4. Mating Connectors
 - a. Provide mating female multi-pin receptacle in the CC panels as shown on the drawings.
- D. Architectural entry stations - Type 'EP'
1. Provide push button entry stations in surface or flush mounted box in locations as shown on the drawings. See drawings for push button quantities per device type.
 2. Station shall recall designated preset(s) and may be disabled by the main system control.
 3. Provide black sheet metal back box. Do not exceed 4" in depth without prior approval.
 - a. Provide surface or flush mount back box as required for each mounting condition shown on drawings.
 4. Provide anodized aluminum or painted sheet metal cover plate with chamfered edges, color as per Architect. Cover shall be flush with back box edges in surface mount condition.
 5. LED indicators in switches shall indicate the active preset on the panel.
 6. Stations shall allow multiple presets to be concurrently active.

2.11 THEATRICAL WIRING DEVICES

A. General

1. Provide all theatrical wiring devices as indicated on the drawings and as specified herein, for installation by Division 26.
2. Coordinate size of device, orientation of circuits and mounting detail to suit site condition.
3. Device back boxes and faceplates constructed of sheet metal, finished flat black. Provide requisite mounting holes, conduit knockouts, etc.
4. Receptacles:
 - a. Stage Pin Connectors
 - 1) All 20 amp stage pin receptacles shall be of the same manufacture
 - 2) Flush mounted female receptacles shall have a screw-driven locking spring to ensure firm fit on face panel
 - 3) Provide for 20A stage pin connectors:
Union Connector 20-2P&G series
Rosco 2000 series
Bates Connectors
 - b. 20A Edison (NEMA 5-20R) duplex panel mounted receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Hospital Grade to UL 498 Supplement SD
 - 3) Retention force of grounding pin tested to NFPA 99. Retention force shall not be less than 4 oz.
 - 4) Color: Black except where specifically noted otherwise
 - 5) Provide:

- Leviton 8300-E
- Legrand/Pass & Seymour 8300-BK
- c. 20A Edison (NEMA 5-20R) cord mounted receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Hospital Grade to UL 498 Supplement SD
 - 3) Retention force of grounding pin tested to NFPA 99. Retention force shall not be less than 4 oz.
 - 4) Nylon and/or high impact polycarbonate body with screw-open cable gripping jaws
 - 5) Straight body
 - 6) Color: Black and white, black and clear, or clear and white
 - 7) Provide:
 - Leviton 8319C
 - Legrand/Pass & Seymour PS5369XHG
 - Hubbell 8319C
 - Cooper (Arrow/Hart) 8369
- d. 20A Twist-Lock (NEMA L5-20R) single flush mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: Black
 - 4) Provide:
 - (a) Leviton 2310
 - (b) Legrand/Pass & Seymour L520R
 - (c) Hubbell 2310
 - (d) Cooper CWL520R
- e. 20A Twist-Lock (NEMA L5-20R) single flush flange mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: White
 - 4) Provide:
 - (a) Leviton 2316
 - (b) Hubbell 2316
 - (c) Cooper CWL520FO
- f. 20A 208V Twist-Lock (NEMA L6-20R) single flush mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: Black
 - 4) Provide:
 - (a) Leviton 2320
 - (b) Legrand/Pass & Seymour L620R
 - (c) Hubbell 2320
 - (d) Cooper AHL620R
- g. 20A 208V Twist-Lock (NEMA L6-20R) single flush flange mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: White
 - 4) Provide:
 - (a) Leviton 2326
 - (b) Hubbell 2326
 - (c) Cooper AHL620FO
- h. 20A 3-phase, 4 Wire plus Ground Twist-Lock (NEMA L21-20R) single flush mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: Black
 - 4) Provide:
 - (a) Leviton 2510
 - (b) Legrand/Pass & Seymour L2120R
 - (c) Hubbell 2510

- (d) Cooper CWL2120R
 - i. 20A 3-phase, 4 Wire plus Ground Twist-Lock (NEMA L21-20R) single flush flange mount receptacles
 - 1) All receptacles shall be of the same manufacture
 - 2) Nylon body
 - 3) Color: White
 - 4) Provide:
 - (a) Leviton 2516
 - (b) Hubbell 2516
 - j. Multi-Pin Locking Connectors
 - 1) All multi-pin receptacles shall be of the same manufacture, including panel mount female and cord mount male and female connectors
 - 2) Provide cord mounted connectors with appropriate strain relief:
 - (a) Single cables with double basket weave strain relief
 - (b) Multiple individual cords with clamping cable glands
 - 3) Multi-pin receptacles and plugs shall be 19-pin connectors wired for 6 circuits with dedicated line and neutral connections and 7 ground wires.
 - 4) Provide:
 - (a) Veam VSC
 - (b) Approved equal
 - 5. Provide all wiring devices with either internal terminal strips or exterior terminal boxes for interconnection to the dimming and switched power system. All wiring devices may be internally wired at the factory prior to shipping.
 - a. Size all terminals as required based on wire sizes indicated on the Electrical Documents.
 - b. Terminal strips shall be grounded to the device enclosure.
 - 6. Terminal Boxes:
 - a. Provide terminal boxes factory assembled with numbered terminal blocks for field connection by others, as indicated in the drawings and schedules.
 - b. All terminal boxes regardless of quantity of circuits shall be the same size.
 - c. Provide six spare terminals in each terminal box in addition to the spare circuits indicated in the schedules. Provide 4 ground lugs per box. Size all lugs and terminals as required based on wire sizes indicated on the Electrical Documents.
 - d. Sheet metal construction, finish flat black. Reinforce base of terminal boxes as required to take load from multi-cable.
 - e. Back box to be clearly labeled with circuit numbers.
 - 7. Labeling:
 - a. Label each receptacle with appropriate circuit designation indicated on distribution schedule and drawings. All labels to be engraved on black (with white core) lamacoid tags with chamfered edges. Tags to be securely mechanically fastened to wiring device.
 - 8. Mounting:
 - a. Devices shall be surface, flush or recess mounted at locations and mounting heights as called out on drawings.
 - b. Provide all requisite mounting hardware for installation of theatrical wiring devices. Coordinate all device mounting requirements with Division 26.
 - c. All holes in mounting brackets to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.
 - 9. The Manufacturer is responsible for providing all wiring devices to meet all requirements as stated by the National Electrical Code and local code in reference to separation, isolation, and clearances for all voltages specified, as well as terminal sizes for all cable sizes, cable entry sizes, and exit routes and standoff.
- B. Plug Boxes with Flush Receptacles - Type 'PBR'**
- 1. Provide plug boxes with flush mounted receptacles as shown on the drawings. See drawings for device locations and distribution schedule for device type, mounting type and circuit quantity.
 - 2. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
- C. Plug Boxes with Pigtails - Type 'PBP'**

1. Provide plug boxes with pigtail mounted receptacles as shown on the drawings. See drawings for device locations and distribution schedule for device type, mounting type and circuit quantity.
 2. Pigtail length shall be as indicated on drawings.
 3. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
- D. Plugging Strip with Flush Receptacles – Type ‘PSR’
1. Provide plugging strips of standard plug batten construction with flush mounted receptacles as shown on the drawings. See drawings for device locations and distribution schedule for device type, mounting type and circuit quantity.
 2. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
- E. Plugging Strip with Pigtails - Type ‘PSP’
1. Provide plugging strips of standard plug batten construction with pigtail mounted receptacles as shown on the drawings. See drawings for device locations and distribution schedule for device type, mounting type and circuit quantity.
 2. Pigtail length shall be as indicated on drawings.
 3. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
 4. Provide with integral control device panels where indicated on drawings.
 5. Provide brackets and hardware for mounting boxes. All holes in mounting bracket to have 1” minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.
- F. Multi-cable Box with Flush Receptacles – Type ‘MBR’
1. Provide multi-cable boxes with flush mounted receptacles as shown on the drawings. See drawings for device locations and distribution schedule for device type, mounting type and circuit quantity.
 2. Provide metal dust caps on cable lanyard captive to back box for each multi-pin receptacle.
 3. Provide boxes with forged shouldered eye bolts mounted to reinforced edges of back box for multi-cable strain relief.
 4. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
- G. Multi-cable Box with Pigtails - Type ‘MBP’
1. Provide multi-cable boxes with pigtail mounted receptacles as shown on the drawings. See drawings for locations of devices and distribution device schedule for device type, mounting type and circuit quantity.
 2. Provide metal dust caps on cable lanyard captive to back box for each multi-pin receptacle
 3. Provide boxes with forged shouldered eye-bolts mounted to reinforced edges of back box for multi-cable strain relief.
 4. Pigtail length shall be as indicated on drawings.
 5. Provide multi-cables built from 75°C Extra-Hard Usage Cords, which consist of specified number of circuits rated 20 amps at 125 volts in accordance with Article 520 of National Electric Code.
 6. Strain Relief:
 - a. Provide Hubbell Kellems Deluxe Cord type grips correctly sized to restrain permanently attached multi-conductor cables to all multi-cable junction boxes and drop boxes.
 - b. Provide Hubbell Kellems Heavy Duty, Single Eye, Closed Mesh Strain relief on each multi-cable extension.
 7. Label each receptacle with appropriate switched circuit designation and DMX address or dimmer designation indicated on distribution schedule and drawings.
- H. Flexible Cable Terminal Box - Type ‘TB’
1. Provide junction boxes between conduit and flexible multi-cable feeding batten-mounted connector strips. See drawings for device locations and circuit quantities.
 2. All wiring connections shall be internal to the device.
 3. Provide feed through wiring terminals with individual circuit labels.

4. Provide with low voltage distribution system compatible with DMX and/or Ethernet protocols, as indicated on drawings.
5. Provide appropriate strain relief at all flexible cable entries.

2.12 CONTROL ROOM FURNITURE

- A. Adjustable Height Desk
 1. Provide control room desks for lighting and stage management control positions
 2. Height adjustable from 28" to 47"
 3. Electric lift for height adjustment
 4. Castered base with locking casters
 5. 150lb. lift capacity
 6. Metal understructure with black work surface
 7. Integral cable tray
 8. 29" minimum work surface depth
 9. Widths and quantities as listed in the Appendix
 10. Provide:
 - a. Ergotron Elevate Single Surface
 - b. Or approved equal

2.13 SOURCE QUALITY CONTROL

- A. All equipment and components shall be factory tested prior to shipping.
- B. Assemble in factory any and all system assemblies and subassemblies at Architect or Theatre Consultant's request, for testing in presence of Architect or Theatre Consultant, prior to shipment. Notify Architect at least 3 weeks prior to date when equipment is complete and ready for testing. Make equipment available to Architect or Theatre Consultant in Manufacturer's factory for period of at least 2 weeks for testing prior to shipment.
- C. During the test provide test equipment for all testing required and any other testing requested by the Architect or Theatre Consultant.
 1. Test Equipment shall consist of any item that is proprietary to the testing of Manufacturer's equipment. Meters and oscilloscope need not be supplied.
- D. Control Testing:
 1. Theatre Lighting Control Console and Network system shall be assembled in factory and tested for control console update time, video refresh rate, remote video picture quality, and any other function requested by Architect.
 2. Architect shall be sole judge of extent of testing necessary and sole judge of acceptability of any system tested.
- E. Verification of Performance:
 1. Provide Architect with all test results for verification of system performance.
- F. For equipment that requires in house testing, do not ship any piece of equipment without either written verification of factory testing or written waiver of factory testing from Architect for that particular piece of equipment.

2.14 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerance, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- D. Fabrication, assembly and wiring shall be neat and workmanlike throughout.

- E. Control desks, racks and cabinets shall be welded assemblies of sheet steel or aluminum or of bar size angles, channels and tees or aluminum extrusions forming rigid enclosures to support internal components.
- F. All face panels shall be fully supported on all edges, either internally or by rolling interior edges of panels.
- G. Wood furniture/cabinet work for control desks acceptable with prior approval.
- H. Operating elements shall be mechanically safe and electrically "dead".
- I. All steel parts and panels shall be cleaned and primed with rust inhibiting primer. Exterior finishes shall be epoxy resin or baked enamel in matte black or in anodized black aluminum where approved.
- J. Control element working face panels shall be heavy aluminum or bakelite. Legends and control and protective device designations shall be engraved in panels, or in permanently attached plates, and located for ready identification.
- K. Operating instructions shall be similarly engraved and appropriately located on designated equipment.
- L. All panel engraving shall be in Helvetica Regular, height as indicated herein. Engraving shall be ¼" or 3/16" as shown in drawings. In no case shall the engraving be less than 3/16" high without Architect's approval.
- M. All internal wiring shall be factory completed and clearly marked.
- N. Field connections shall be made by connector devices and cables as specified in preceding sections.
- O. Dimmer modules, dimmer controllers and other plug-in components may have spade lug and/or receptacle devices for connection.
- P. Control relays wherever possible shall be the glass or polycarbonate enclosed plug-in type. Relays shall be acoustically damped.
- Q. Uniform components shall be used throughout the system. All dimmer, fader and preset controllers shall be physically similar; they may vary in voltage according to the Theatrical Lighting Manufacturer circuit requirements.
- R. All wire sizes and insulation to comply with UL standards and local codes and meet or exceed electronics industry standards.
- S. All wiring to be harnessed and bound. No loose or randomly routed wires permitted.
- T. All printed circuit cards to be suitably racked with numbered and indexed guides. Legends to be provided on panel door.
- U. Key all components in this section with locks or key switches alike. Provide six keys minimum.
- V. Each receptacle within a wiring device must have a home run to the dimmer rack or DMX controlled panelboard of its hot and neutral. Circuits with more than one receptacle must be paralleled at the dimmer rack. The method of termination must not void UL listing. Circuits with more than one receptacle within a single wiring device may be paralleled within the device and require only one home run of the hot and neutral to the dimmer rack or DMX controlled panelboard.
- W. Minimize feeder inductance by twisting the hot and neutral conductors in long connector strips. Neutral conductor must be at least the same size or greater than the hot conductor.

PART 3 EXECUTION

3.1 INSTALLERS / INTEGRATORS

- A. To establish comparative standards of quality, the provision of equipment and services of this section shall be by one of the following authorized dealers:

Beck Studios, Inc
1001 Tech Drive
Milford, OH 45150
Tel: (513) 831-6650

Fantasee Lighting
14857 Martinsville Road
Belleville, MI 48111
Tel: (734) 699-7200

LVH Entertainment Systems
1801 Highland Avenue,
Unit E
Duarte, CA 91010
Tel: (805) 278-4584

Texas Scenic Co.
8053 Potranco Road
San Antonio, TX 78251
Tel: 210-684-0091

B. Substitution Limitations

1. Any contractor who wishes to be listed and has not been pre-approved must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, and supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
 - a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

3.2 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.3 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Provide site supervision during the installation of electrical work associated with the Theatrical and Architectural Lighting system elements.
- C. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- D. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- E. Coordinate work with all other trades to avoid causing delays in construction schedule.
- F. All field welding requires prior approval of the Architect and Contractor's Structural Engineer.
- G. Carry out approved field welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- H. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Architect's prior approval for cutting and drilling of existing structural work.
- I. Clean structural steel and fabricated steelwork of rust, scale and foreign matter by grinding; prime with 1 coat of chromated primer; finish with 1 coat of first quality machinery enamel free of skips, runs and saps. Touch up all field connections, welds and abraded places with primer and enamel.

3.4 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Installers must be appropriately skilled and experienced for the type and quality of work.
- C. Arrange for all tests and inspections required by the General Requirements.

3.5 SYSTEM STARTUP AND COMMISSIONING

- A. Commissioning
 - 1. Upon completion of installation work required by the work of this Section, the Contractor shall perform all required tests and inspections, including but not limited to the Compliance Testing Procedures specified herein.
 - 2. Contractor shall supply all equipment required for the commissioning process including access equipment (personnel lifts, ladders and appropriate protective equipment), test instruments and communications equipment.
 - 3. Contractor shall provide staff to assist in the commissioning process.
 - 4. Compliance Testing Procedures (CTP)
 - a. Test all dimmed/switched receptacle circuits:
 - 1) Polarity
 - 2) Circuit identification
 - 3) Assignment to designated device
 - b. Test all control receptacles for data integrity
 - 1) DMX
 - 2) Ethernet
 - c. Test all theatrical control devices for function
 - 1) DMX Nodes
 - 2) Remotes
 - 3) Consoles
 - 4) Architectural Panels
 - d. Test all cables provided as part of this section

3.6 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent Contract Drawings prior to the demonstration indicated herein.

3.7 CLEANING

- A. Touch up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.8 CLOSEOUT ACTIVITIES

- A. Demonstration
 1. Upon completion of Commissioning, the Contractor will notify the Architect and Theatre Consultant that system is complete, conforms to specification and is ready for Demonstration.
 2. Installed equipment is to be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 3. The Theatre Consultant will perform the tests listed in the Compliance Testing Procedures to verify compliance with specifications.
 4. Contractor shall supply all equipment required for the Demonstration, including access equipment (personnel lifts, ladders and appropriate protective equipment), test instruments and communications equipment.
 5. Contractor shall provide staff to assist in the Demonstration, as necessary.
 6. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 7. Costs of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.
- B. Training
 1. Following the equipment demonstration, inspection and final adjustments, provide an instruction session to the Owner's staff or representatives on the safe operation, care and maintenance of the system.
 - a. Provide instruction of not less than eight hours total, in 2 separate sessions.
 - b. Instruction shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts, and operating procedure to obtain maximum usage of system.
 - c. Deliver all copies of approved Operations Manual to Owner prior to first instruction session, and review it as part of that session.
 - d. The first session shall take place in the presence of the Architect or Theatre Consultant and shall occur directly after finish of Completion Checkout. If Owner, Architect judge that any work inspected fails to conform to the specification or is not substantially complete at time of Completion Checkout, postpone instruction session until Owner and Architect judge the entire Lighting System to conform with specification.
 - e. The second session shall occur at a time arranged by the Owner no sooner than 1 day and no later than 1 month after first session.
 2. Console Operator Instruction:
 - a. Provide instruction to Owner or Owner's selected key Lighting Control Console Operators on the detailed operation of Console. This training shall take place in two separate sessions. Each session shall be no less than four hours and shall take place on site.
 3. Timing for all sessions shall be scheduled by the Owner at their convenience.
 4. Instruction must be by qualified expert operators who have actual experience with systems in performance conditions.

3.9 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean components thoroughly prior to the demonstration session.

3.10 MAINTENANCE

- A. Maintenance Service
 - 1. One month prior to the end of the first year following the date of final systems acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this section which is found to require warranty work prior to the end of the warranty period. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Manufacturer. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
 - 2. Following this inspection and maintenance service, the Contractor shall provide the Owner and Theatre Consultant with a written report itemizing the results of the inspections and the warranty work that was conducted. The Contractor shall also include in this written report recommendations for any corrective actions which the Contractor feels should be taken with respect to the equipment included in this section, but are outside the scope of the warranty agreement.
- B. System Programming Updates
 - 1. Contractor shall review system operation and control system programming with the Owner's representatives. Any required adjustments and changes to the control system programming requested by the Owner shall be performed and completed during the time of the corrective service site visit. All control system programming changes shall be documented by the Contractor.

3.11 ATTACHMENTS

- A. Refer to Appendix A of this section for quantities and accessories.

<<APPENDIX NOT ISSUED AS A PART OF DESIGN DEVELOPMENT SUBMISSION>>

END OF SECTION

**SECTION 116173
THEATRICAL LIGHTING FIXTURES AND ACCESSORIES**

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Furnish the following major elements and associated accessories:
 - a. Theatrical lighting fixtures and accessories
 - 1) LED Source Fixtures
 - 2) Incandescent Source Fixtures
 - 3) Automated Fixtures
 - 4) Followspots
 - 5) Accessories
 - 6) Portable Stage Cable
 - 7) Lamps
 - 8) Hardware
 - 9) Color frames, clamps and safety cables
2. Provide all materials, components and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on related drawings.
3. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.

B. Products Supplied But Not Installed Under This Section

1. Lighting fixtures and accessories will be delivered to the site, unpacked and assembled for installation by the Owner.

C. Related Requirements

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
2. Examine Contract Documents for requirements that directly affect or are affected by work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 11 – Equipment
 - 1) Section 116133 – Theatrical Rigging
 - 2) Section 116163 – Theatrical Lighting Dimming and Control
 - c. Division 26 – Electrical

1.2 PRICE AND PAYMENT PROCEDURES

A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.

B. Unit prices

1. Provide a unit price for each line item identified in the Appendix to this specification.
 - a. The Owner may adjust quantities before award of bid based on unit pricing.

C. Alternates

1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. <<TBD>>
2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. DMX or DMX 512: ANSI E1.11 - 2008, USITT DMX512-A
 - b. NFPA: National Fire Protection Association
 - c. NEC: National Electric Code
 - d. UL: Underwriters Laboratories
 - e. IEEE: Institute of Electronic and Electrical Engineers
 - f. IESNA: Illuminating Engineering Society of North America
 - g. ANSI: American National Standards Institute
 - h. AISC: American Institute of Steel Construction
 - i. NEMA: National Electrical Manufacturers Association
 - j. TIA/EIA: Electronic Industries Alliance/Telecommunications Industry Association

B. Definitions:

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theatre Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location(s) on the project site.
 - i. “Provide”: Furnish and install.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

B. Sequencing:

1. The delivery and installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work under this section may be installed.
2. The unpacking and installation of Theatrical Lighting Fixtures and Accessories shall not occur until the site is continuously secure, free of dust and debris, and climate controlled.

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- F. Provide insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Product Data:
1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- H. Shop Drawings:
1. Provide shop drawings on D size minimum (24" x 36") sheets.
 2. Provide complete, fully dimensioned, large-scale shop drawings of all non-standard components. Include item-identifying number.
 3. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 4. Provide a full Bill of Materials to be supplied, including quantities, manufacturer, manufacturer's part number, manufacturer's catalog number, etc. Clearly indicate the type and quantity of lamps being supplied for each fixture.
 5. All custom elements shall be engineered. Provide approved drawings stamped by a Professional Engineer licensed in the project jurisdiction. The engineer shall verify that the equipment supplied under this section meets or exceeds the design criteria of this specification.
- I. Samples
1. Submit samples items for approval within 14 days of Architect's written request. These items may include, but are not limited to:
 - a. Individual fixtures
 - b. Mounting hardware
 - c. Connectors

1.6 CLOSEOUT SUBMITTALS

- A. Project Record Documents:
1. Submit documents in accordance with Division 01 – General Requirements.
 2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
 3. Within 60 days of the acceptance testing, submit one (1) set of reproducible inventories of all equipment provided.

4. Submit operation and maintenance manuals with the final inventories. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts, which may need periodic replacement.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 6. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- C. The record documents shall be reviewed by the Architect and all modifications to the documents stemming from this review shall be made as required.
- D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts:
1. Furnish a package of spare parts for user-serviceable portions of the equipment.
 2. Label all spare parts with manufacturer's part number, designation and description, and location(s) where used.
 3. Furnish durable, clearly labeled storage containers for spare parts, including special static free containers for electronically sensitive parts.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
1. Refer to Division 01 – General Requirements.
- B. Qualifications:
1. All equipment within this specification is to be the responsibility of a single Contractor. Provision of such equipment shall comprise no less than 90% of the Contractor's business.
 2. The Contractor shall be a factory-authorized distributor and servicer for all of the specified equipment.
 3. Contractor shall maintain a full-time Manufacturer-trained and certified field technician available on an emergency basis within 2 hours travel of the project location.
 4. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
- C. Contractor is responsible for proper installation, operation and safety of all component equipment.
- D. Contractor is responsible for the complete design and engineering of all systems described herein. Contractor shall confirm project details and, if necessary, suggest modifications to the criteria established herein in order to maintain the design intent.
- E. Errors and omissions within the Contract Documents shall not relieve the Contractor of the responsibility for providing properly functioning theatrical lighting fixtures and accessories as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading

1. All equipment shall be appropriately and substantially packed for shipment.
2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.

C. Acceptance at Site

1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
2. The Contractor shall be responsible for acceptance of the equipment and components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.

D. Storage and Protections

1. Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

A. Existing Conditions

1. Verify conditions at job site. Promptly report variations and obstructions to the Architect. All additions and/or corrections are to be requested prior to installation.

B. Environmental Requirements

1. Coordinate all environmental requirements for all materials provided and installed under this contract.

1.11 WARRANTY

A. Comply with the warranty requirements of Division 01 and the following.

B. Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.

C. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.

D. During the Warranty Period, for each product that uses software, furnish manufacturer's software updates to the Owner for installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. The following listed manufacturers are indicative of the quality and features for the equipment specified herein:

1. LED Source Fixtures
 - a. Electronic Theatre Controls
 - b. Altman Stage Lighting
2. Incandescent Source Fixtures
 - a. Electronic Theatre Controls
 - b. Altman Stage Lighting

3. Automated Fixtures
 - a. Martin
 - b. High End Systems
 - c. Vari-Lite
4. Followspots
 - a. Lycian Stage Lighting
 - b. Robert Juliat
5. Accessories
 - a. City Theatrical
 - b. Fehr Brothers
 - c. The Light Source
 - d. Electronic Theatre Controls
6. Lamps
 - a. General Electric
 - b. Osram
 - c. Sylvania
 - d. Ushio
 - e. LEDs per fixture manufacturer standard
7. Portable Stage Cable
 - a. Lex Products
 - b. A.C.T. Lighting
 - c. C.B.I. Professional Wiring Systems
8. Hardware
 - a. City Theatrical

B. State of the Art Development

1. The Contractor shall furnish only the manufacturers' latest developed appropriate products. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Architect and make the newer product available to the Owner for acceptance. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the Owner at no additional cost.
2. Should product recall by the Manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the Owner at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.
3. Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the job site.
4. Equipment defect or intended recall shall not relieve the Contractor from his contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Architect by express carrier. Arrangement for alternate product shall be made at this time.
5. Under no circumstances shall arrangement for alternate product necessarily require the Owner to accept superseded equipment except on a temporary basis.

C. Substitutions

1. All requests for variations from the specified materials and products will be reviewed by the Architect according to the procedures outlined in Division 01.
2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.
3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.

4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested in order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.
5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.2 MATERIALS

- A. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable.
- B. All mounting hardware shall be included.
 1. All bolts and fasteners required to mount equipment to mounting hardware shall be Grade 5 or better.
- C. Housings shall be sheet steel, cast aluminum or a combination of both, in thicknesses and gauges conforming to prevailing industry standards.
- D. Fixtures shall be adequately ventilated for the largest lamp that the instrument is designed to accommodate. Vents shall be baffled to prevent emission of direct light from filament and reflector and to reduce to a minimum the stray light and secondary reflections.
- E. Unless otherwise specified, reflectors shall be molded borosilicate reflector with multiple dichroic layers.
- F. The exterior finish of all instruments shall be black high temperature epoxy paint. The interior finish in all instruments shall be flat black except for sockets and reflectors.
- G. All lenses shall be heat-resistant, of size, type and spread specified.
- H. All profile spotlights shall be provided with a positively locking means for adjusting the source to lens relationship to provide proper centering of the optical train.
- I. All fixtures shall be supplied with lamps as specified, shipped to the job site (in their original packing) in clearly marked cartons, indicating lamp type, size and the space for which they are intended.

2.3 LED PROFILE SPOTLIGHTS, COLOR MIXING

- A. 19 Degree Profile LED source color mixing spotlight shall have the following characteristics:
 1. Profile spotlight lighting fixture utilizing minimum of 60 LED array providing 7 colors
 2. Beam angle of 18 degrees
 3. Field angle of 19 degrees
 4. Optics shall utilize enhanced definition lens tube
 5. LED "lamp life" of 20,000 hours
 6. Fixture form factor similar in size and shape to incandescent profile spotlights
 7. Neutrik powerCON in and through receptacles
 8. Power cable terminated with parallel blade U-ground Edison connector
 9. Input voltage of 100 to 240VAC at 50/60HZ
 10. 15-bit dimming engine
 11. Fixture parameters controlled via DMX512
 12. 15 control addresses
 13. DMX512 in and through connectors
 14. Die cast aluminum fixture construction
 15. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat

16. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 17. Slot for pattern holder or mechanical iris unit
 18. C-Clamp for attachment of fixture to pipes of up to 3"
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification
 22. Provide in quantities defined in the appendix to this specification
 23. Provide Electronic Theatre Controls, Source Four LED Series 2 Lustr 19 Degree or approved equal
- B. 26 Degree Profile LED source color mixing spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing minimum of 60 LED array providing 7 colors
 2. Beam angle of 25 degrees
 3. Field angle of 27 degrees
 4. Optics shall utilize enhanced definition lens tube
 5. LED "lamp life" of 20,000 hours
 6. Fixture form factor similar in size and shape to incandescent profile spotlights
 7. Neutrik powerCON in and through receptacles
 8. Power cable terminated with parallel blade U-ground Edison connector
 9. Input voltage of 100 to 240VAC at 50/60HZ
 10. 15-bit dimming engine
 11. Fixture parameters controlled via DMX512
 12. 15 control addresses
 13. DMX512 in and through connectors
 14. Die cast aluminum fixture construction
 15. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 16. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 17. Slot for pattern holder or mechanical iris unit
 18. C-Clamp for attachment of fixture to pipes of up to 3"
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification
 22. Provide in quantities defined in the appendix to this specification
 23. Provide Electronic Theatre Controls, Source Four LED Series 2 Lustr 26 Degree or approved equal
- C. 36 Degree Profile LED source color mixing spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing minimum of 60 LED array providing 7 colors
 2. Beam angle of 33 degrees
 3. Field angle of 35 degrees
 4. Optics shall utilize enhanced definition lens tube
 5. LED "lamp life" of 20,000 hours
 6. Fixture form factor similar in size and shape to incandescent profile spotlights
 7. Neutrik powerCON in and through receptacles
 8. Power cable terminated with parallel blade U-ground Edison connector
 9. Input voltage of 100 to 240VAC at 50/60HZ
 10. 15-bit dimming engine
 11. Fixture parameters controlled via DMX512
 12. 15 control addresses
 13. DMX512 in and through connectors
 14. Die cast aluminum fixture construction
 15. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 16. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture

17. Slot for pattern holder or mechanical iris unit
 18. C-Clamp for attachment of fixture to pipes of up to 3"
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification
 22. Provide in quantities defined in the appendix to this specification
 23. Provide Electronic Theatre Controls, Source Four LED Series 2 Lustr 36 Degree or approved equal
- D. 50 Degree Profile LED source color mixing spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing minimum of 60 LED array providing 7 colors
 2. Beam angle of 48 degrees
 3. Field angle of 50 degrees
 4. Optics shall utilize enhanced definition lens tube
 5. LED "lamp life" of 20,000 hours
 6. Fixture form factor similar in size and shape to incandescent profile spotlights
 7. Neutrik powerCON in and through receptacles
 8. Power cable terminated with parallel blade U-ground Edison connector
 9. Input voltage of 100 to 240VAC at 50/60HZ
 10. 15-bit dimming engine
 11. Fixture parameters controlled via DMX512
 12. 15 control addresses
 13. DMX512 in and through connectors
 14. Die cast aluminum fixture construction
 15. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 16. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 17. Slot for pattern holder or mechanical iris unit
 18. C-Clamp for attachment of fixture to pipes of up to 3"
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification
 22. Provide in quantities defined in the appendix to this specification
 23. Provide Electronic Theatre Controls, Source Four LED Series 2 Lustr 50 Degree or approved equal
- E. 70 Degree Profile LED source color mixing spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing minimum of 60 LED array providing 7 colors
 2. Beam angle of 65 degrees
 3. Field angle of 70 degrees
 4. LED "lamp life" of 20,000 hours
 5. Fixture form factor similar in size and shape to incandescent profile spotlights
 6. Neutrik powerCON in and through receptacles
 7. Power cable terminated with parallel blade U-ground Edison connector
 8. Input voltage of 100 to 240VAC at 50/60HZ
 9. 15-bit dimming engine
 10. Fixture parameters controlled via DMX512
 11. 15 control addresses
 12. DMX512 in and through connectors
 13. Die cast aluminum fixture construction
 14. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 15. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 16. Slot for pattern holder or mechanical iris unit
 17. C-Clamp for attachment of fixture to pipes of up to 3"
 18. UL or ETL approved

19. Integral low noise fan controlled by on-board thermostat
20. Provide accessories as defined in the appendix to this specification
21. Provide in quantities defined in the appendix to this specification
22. Provide Electronic Theatre Controls, Source Four LED Series 2 Lustr 70 Degree or approved equal

2.4 LED WASH FIXTURES, COLOR MIXING

- A. LED source color mixing wash fixture shall have the following characteristics:
1. Wash lighting fixture utilizing minimum of 60 LED array providing 6 colors plus white
 2. Beam angle of 8 degrees
 3. Field angle of 17 degrees
 4. LED "lamp life" of 50,000 hours
 5. Neutrik powerCON in and through receptacles
 6. Power cable terminated with parallel blade U-ground Edison connector
 7. Input voltage of 120 to 240VAC at 50/60HZ
 8. Power consumption of 161W at full intensity
 9. 15-bit dimming engine
 10. Fixture parameters controlled via DMX512
 11. 15 control addresses
 12. DMX512 in and through connectors
 13. Die cast aluminum fixture construction
 14. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 15. C-Clamp for attachment of fixture to pipes of up to 3"
 16. UL or ETL approved
 17. Integral low noise fan controlled by on-board thermostat
 18. Provide secondary lenses as defined in the appendix to this specification
 19. Provide accessories as defined in the appendix to this specification
 20. Provide in quantities defined in the appendix to this specification
 21. Provide Electronic Theatre Controls, Desire D60 Lustr+ or approved equal

2.5 LED CYCLORAMA WASH FIXTURES, COLOR MIXING

- A. LED Cyclorama Fixture
1. Wash lighting fixture designed for lighting vertical surfaces utilizing RGBW LED arrays
 2. Reflector design with specular finish for even coverage of vertical surfaces
 3. Neutrik powerCON in and through receptacles
 4. Power cable terminated with parallel blade U-ground Edison connector
 5. Input voltage of 120 to 240VAC at 50/60HZ
 6. Power consumption of 100W at full intensity
 7. Integral dimming engine
 8. Fixture parameters controlled via DMX512 or RDM
 9. 4 control addresses
 10. DMX512 in and through connectors
 11. Lightweight aluminum fixture construction in black finish
 12. C-Clamp for attachment of fixture to pipes of up to 3" for hanging
 13. Floor Trunnions for groundrow use
 14. Convection cooled
 15. UL or ETL approved
 16. Provide accessories as defined in the appendix to this specification
 17. Provide in quantities defined in the appendix to this specification
 18. Provide Altman Stage Lighting, Spectra Cyc 100 or approved equal.
- B. LED Striplight
1. Wash lighting fixture designed for lighting vertical surfaces utilizing RGBA LED arrays
 2. 6-foot fixture length
 3. Neutrik powerCON in and through receptacles
 4. Power cable terminated with parallel blade U-ground Edison connector

5. Input voltage of 120 to 240VAC at 50/60HZ
6. Power consumption of 660W at full intensity
7. Integral dimming engine
8. Fixture parameters controlled via DMX512 or RDM
9. 4 control addresses
10. DMX512 in and through connectors
11. Lightweight aluminum fixture construction in black finish
12. C-Clamp for attachment of fixture to pipes of up to 3" for hanging
13. Floor Trunnions for groundrow use
14. Integral low noise fan controlled by on-board thermostat
15. UL or ETL approved
16. Provide accessories as defined in the appendix to this specification
17. Provide in quantities defined in the appendix to this specification
18. Provide Chroma-Q Color Force 72 or approved equal.

2.6 LED SOURCE BROAD FIXTURE

- A. LED Broad Worklight, 90W shall have the following characteristics:
 1. Worklight fixture designed to create a radially symmetrical pattern of light
 2. 90W LED array
 3. Output of 5000 lumens, minimum
 4. Color temperature of 3500K, CRI of 90+
 5. LED "lamp life" of 40,000 hours
 6. Dimmable via mains voltage dimming
 7. The fixture housing shall be made of 18 gauge steel with a black baked enamel finish
 8. The lens shall be a diffused borosilicate safety lens mounted in a steel frame
 9. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 10. C-Clamp for attachment of fixture to pipes of up to 3"
 11. Convection cooled for silent operation
 12. UL approved
 13. Provide accessories as defined in the appendix to this specification
 14. Provide in quantities defined in the appendix to this specification
 15. Provide Osram Kreios FLx 90W or approved equal

2.7 PROFILE LED WHITE SOURCE SPOTLIGHT RETROFIT

- A. Profile LED White Source Retrofit shall have the following characteristics:
 1. Profile spotlight lighting fixture utilizing ellipsoidal reflector design
 2. Burner assembly using an LED source providing a 3000K color temperature 90+ CRI white light
 3. Beam angle of 17 degrees
 4. Field angle of 25 degrees
 5. LED "lamp life" of 30,000 hours
 6. Power cable terminated with parallel blade U-ground Edison connector
 7. Input voltage of 114 to 125VAC at 60HZ
 8. Power consumption of 155W at full intensity
 9. Dimmable via DMX or a line-dimmed source
 10. DMX512 in and through via RJ45 connectors
 11. Die cast aluminum fixture construction
 12. Dichroic reflector
 13. Ability to adjust lens system to provide a flat or peaked light output
 14. Light output shall have no discernible chromatic aberration
 15. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 16. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 17. Slot for pattern holder or mechanical iris unit
 18. C-Clamp for attachment of fixture to pipes of up to 3"
 19. UL or ETL approved

20. Integral low noise fan controlled by on-board thermostat
21. Provide accessories as defined in the appendix to this specification
22. Provide in quantities defined in the appendix to this specification
23. Provide Electronic Theatre Controls, Source 4WRD (Gallery Version)

2.8 PROFILE LED COLOR MIXING SPOTLIGHT RETROFIT

1. Profile spotlight lighting fixture retrofit utilizing minimum of 60 LED array providing 7 colors
2. LED "lamp life" of 20,000 hours
3. Fixture form factor similar in size and shape to incandescent profile spotlights
4. Neutrik powerCON in and through receptacles
5. Power cable terminated with parallel blade U-ground Edison connector
6. Input voltage of 100 to 240VAC at 50/60HZ
7. 15-bit dimming engine
8. Fixture parameters controlled via DMX512
9. 15 control addresses
10. DMX512 in and through connectors
11. Die cast aluminum fixture construction
12. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
13. Slot for pattern holder or mechanical iris unit
14. C-Clamp for attachment of fixture to pipes of up to 3"
15. UL or ETL approved
16. Integral low noise fan controlled by on-board thermostat
17. Provide accessories as defined in the appendix to this specification
18. Provide in quantities defined in the appendix to this specification
19. Provide Electronic Theatre Controls, Source Four LED Series 2 Light Engine only or approved equal

2.9 INCANDESCENT SOURCE PROFILE SPOTLIGHTS

- A. 19 Degree Profile Spotlight shall have the following characteristics:
 1. Profile spotlight lighting fixture utilizing ellipsoidal reflector design
 2. 575W HPL long life lamp
 3. Beam angle of 15 degrees
 4. Field angle of 18 degrees
 5. Lamp aligned axially within fixture's reflector
 6. Die cast aluminum fixture construction
 7. Dichroic reflector
 8. Ability to adjust lens system to provide a flat or peaked light output
 9. Light output shall have no discernible chromatic aberration
 10. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 11. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 12. Slot for pattern holder or mechanical iris unit
 13. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 14. C-Clamp for attachment of fixture to pipes of up to 3"
 15. UL approved
 16. Provide accessories as defined in the appendix to this specification
 17. Provide in quantities defined in the appendix to this specification
 18. Provide Electronic Theatre Controls, Source Four 19 Degree or approved equal
- B. 26 Degree Profile Spotlight shall have the following characteristics:
 1. Profile spotlight lighting fixture utilizing ellipsoidal reflector design
 2. 575W HPL long life lamp
 3. Beam angle of 17 degrees
 4. Field angle of 25 degrees
 5. Lamp aligned axially within fixture's reflector

6. Die cast aluminum fixture construction
 7. Dichroic reflector
 8. Ability to adjust lens system to provide a flat or peaked light output
 9. Light output shall have no discernible chromatic aberration
 10. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 11. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 12. Slot for pattern holder or mechanical iris unit
 13. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 14. C-Clamp for attachment of fixture to pipes of up to 3"
 15. UL approved
 16. Provide accessories as defined in the appendix to this specification
 17. Provide in quantities defined in the appendix to this specification
 18. Provide Electronic Theatre Controls, Source Four 26 Degree or approved equal
- C. 36 Degree Profile Spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing ellipsoidal reflector design
 2. 575W HPL long life lamp
 3. Beam angle of 25 degrees
 4. Field angle of 35 degrees
 5. Lamp aligned axially within fixture's reflector
 6. Die cast aluminum fixture construction
 7. Dichroic reflector
 8. Ability to adjust lens system to provide a flat or peaked light output
 9. Light output shall have no discernible chromatic aberration
 10. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 11. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 12. Slot for pattern holder or mechanical iris unit
 13. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 14. C-Clamp for attachment of fixture to pipes of up to 3"
 15. UL approved
 16. Provide accessories as defined in the appendix to this specification
 17. Provide in quantities defined in the appendix to this specification
 18. Provide Electronic Theatre Controls, Source Four 36 Degree or approved equal
- D. 50 Degree Profile Spotlight shall have the following characteristics:
1. Profile spotlight lighting fixture utilizing ellipsoidal reflector design
 2. 575W HPL long life lamp
 3. Beam angle of 33 degrees
 4. Field angle of 51 degrees
 5. Lamp aligned axially within fixture's reflector
 6. Die cast aluminum fixture construction
 7. Dichroic reflector
 8. Ability to adjust lens system to provide a flat or peaked light output
 9. Light output shall have no discernible chromatic aberration
 10. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 11. 4 independent framing shutters with 25 degree minimum rotation of shutter assembly with the fixture
 12. Slot for pattern holder or mechanical iris unit
 13. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 14. C-Clamp for attachment of fixture to pipes of up to 3"
 15. UL approved
 16. Provide accessories as defined in the appendix to this specification
 17. Provide in quantities defined in the appendix to this specification

18. Provide Electronic Theatre Controls, Source Four 50 Degree or approved equal

2.10 INCANDESCENT SOURCE FIXED BEAM FIXTURES

- A. Parabolic Aluminized Reflector fixture, 575W with aluminum reflector shall have the following characteristics:
1. Fixed beam lighting fixture utilizing modified parabolic reflector design
 2. 575W HPL long life lamp
 3. Reflector shall be faceted and finished with polished aluminum
 4. Beam and field angles shall be variable with the use of interchangeable lenses
 5. Lenses shall be available in four beam spreads:
 - a. VNSP – 9 degree beam angle
 - b. NSP – 10 degree beam angle
 - c. MFL – 12/18 degree beam angle
 - d. WFL – 17/27 degree beam angle
 6. Lenses shall be changeable without the use of tools
 7. Die cast aluminum fixture construction
 8. All adjustments shall have reliable locking knobs that do not require the use of tools and do not transmit heat
 9. 36" power cable terminated with a male two pin and ground 20A stage pin connector
 10. C-Clamp for attachment of fixture to pipes of up to 3"
 11. UL approved
 12. Provide lenses as defined in the appendix to this specification
 13. Provide accessories as defined in the appendix to this specification
 14. Provide in quantities defined in the appendix to this specification
 15. Provide Electronic Theatre Controls, Source Four PAR EA or approved equal.

2.11 INCANDESCENT SOURCE BROAD FIXTURE

- A. Broad Worklight, 500W shall have the following characteristics:
1. Worklight fixture designed to create a radially symmetrical pattern of light
 2. 500W EHD lamp
 3. Reflector shall have a patterned specular finish
 4. The fixture housing shall be made of 18 gauge steel with a black baked enamel finish
 5. The lens shall be a clear borosilicate safety lens mounted in a steel frame
 6. The lens frame shall be mounted in a hinged front lamp access door with locking latch
 7. 36" power cable terminated with a male L5-20 twist-lock connector
 8. C-Clamp for attachment of fixture to pipes of up to 3"
 9. UL approved
 10. Provide accessories as defined in the appendix to this specification
 11. Provide in quantities defined in the appendix to this specification
 12. Provide Lighting & Electronics, Inc. Worklite Q or approved equal.

2.12 AUTOMATED FIXTURES

- A. LED Source Automated Framing Spotlight shall have the following characteristics:
1. Moving head spot lighting fixture designed utilizing a 3000K LED source
 2. 468W LED engine
 3. Internal dimmer / shutter control
 4. Minimum pan of 540 degrees
 5. Minimum tilt of 268 degrees
 6. Controllable field angle varying from 12 to 48 degrees
 7. Integral CMY color mixing system
 8. Five position rotating pattern wheel
 9. Strobe effect
 10. Neutrik powerCON TRUE1 receptacle
 11. Power cable terminated with parallel blade U-ground Edison connector
 12. Input voltage of 120 to 240VAC at 50/60Hz
 13. Operable in any orientation

14. Fixture parameters controlled via DMX512
 15. 38 control addresses
 16. DMX512 In and Through connectors
 17. 4 independent framing shutters with +/- 30° individual adjustment and +/-55° rotation of shutter assembly within the fixture
 18. Half-coupler clamp for attachment of fixture to pipes
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification
 22. Provide in quantities defined in the appendix to this specification
 23. Provide Martin MAC Encore Performance WRM or approved equal.
- B. LED Source Automated Wash Light shall have the following characteristics:
1. Moving head wash lighting fixture designed utilizing a 3000K LED source
 2. 750W LED engine
 3. Electronic dimming with a minimum of 4 dimming curve options
 4. Minimum pan of 540 degrees
 5. Minimum tilt of 270 degrees
 6. Controllable field angle varying from 11 to 53 degrees
 7. RGBW color mixing system
 8. Shutter effect
 9. Neutrik powerCON receptacle
 10. Power cable terminated with parallel blade U-ground Edison connector
 11. Input voltage of 120 to 240VAC at 50/60Hz
 12. Operable in any orientation
 13. Fixture parameters controlled via DMX512
 14. 33 control addresses
 15. DMX512 In and Through connectors
 16. Half-coupler clamp for attachment of fixture to pipes
 17. UL or ETL approved
 18. Integral low noise fan controlled by on-board thermostat
 19. Provide accessories as defined in the appendix to this specification
 20. Provide in quantities defined in the appendix to this specification
 21. Provide Martin MAC Quantum Wash or approved equal.
- C. Discharge Source Automated Framing Spotlight shall have the following characteristics:
1. Moving head spot lighting fixture designed utilizing an arc-discharge source
 2. 1000W short-arc discharge lamp
 3. Internal mechanical dimmer / shutter
 4. Minimum pan of 540 degrees
 5. Minimum tilt of 268 degrees
 6. Controllable field angle varying from 10 to 44 degrees
 7. Integral CMY color mixing system
 8. Five position rotating pattern wheel
 9. Strobe effect
 10. Neutrik powerCON receptacle
 11. Power cable terminated with twist-lock L6-20 connector
 12. Input voltage of 120 to 240VAC at 50/60Hz
 13. Operable in any orientation
 14. Fixture parameters controlled via DMX512
 15. 32/40 control addresses
 16. DMX512 In and Through connectors
 17. 4 independent framing shutters with +/- 30 degree individual adjustment and +/- 55 degree rotation of shutter assembly within the fixture
 18. Half-coupler clamp for attachment of fixture to pipes
 19. UL or ETL approved
 20. Integral low noise fan controlled by on-board thermostat
 21. Provide accessories as defined in the appendix to this specification

22. Provide in quantities defined in the appendix to this specification
23. Provide Martin MAC Viper Performance or approved equal.

2.13 FOLLOWSPOTS

- A. Metal Arc Source Followspot Medium Throw shall have the following characteristics:
 1. Followspot shall be designed specifically for manually following performers
 2. 1200W HMI lamp source
 3. Manual optical train with beam angle variable from 7 to 14.5 degrees
 4. Fully closing iris
 5. Seven-way self-cancelling color changer
 6. Integral low noise fan controlled by on-board thermostat
 7. Balanced pan and tilt operation
 8. One-handed operation for dim, pan and tilt control
 9. UL or ETL approved
 10. Twelve foot power cable terminated with parallel blade U-ground Edison connector
 11. Floor mount stand designed for use with this followspot
 12. Truss hanging hardware designed for use with this followspot
 13. Provide accessories as defined in the appendix to this specification
 14. Provide in quantities defined in the appendix to this specification
 15. Provide Robert Juliat Super Corrigan, or approved equal
- B. Metal Arc Source Followspot Long Throw shall have the following characteristics:
 1. Followspot shall be designed specifically for manually following performers
 2. 2500W HMI lamp source
 3. Manual optical train with beam angle variable from 3 to 8 degrees
 4. Quartz condenser lens
 5. Internal mechanical dimmer
 6. Fully closing iris
 7. Independent control of beam size and focus
 8. Six-way self-cancelling color changer with individually removable color frames
 9. Integral low noise fan
 10. Balanced pan and tilt operation
 11. One-handed operation for dim, pan and tilt control
 12. External power supply with hot restrike
 13. Input voltage of 208VAC at 60Hz
 14. UL or ETL approved
 15. Power cable terminated with twist-lock L6-20 connector
 16. Floor mount stand designed for use with this followspot
 17. Truss hanging hardware designed for use with this followspot
 18. Provide accessories as defined in the appendix to this specification
 19. Provide in quantities defined in the appendix to this specification
 20. Provide Robert Juliat Cyrano, or approved equal

2.14 ACCESSORIES

- A. Provide accessories as described in the attached Appendix.
- B. Each fixture to be supplied with:
 1. Color frames of appropriate size
 2. Power input cable
 3. Five foot data cable for all LED fixtures
 4. Clamp
 5. Safety cable

2.15 STAGE CABLE

- A. General

1. All stage extension cables shall be furnished with two 3" clear shrink wrap pieces, unshrunk, installed on cables for user labeling.
 2. One shrink wrap piece shall be shrunk over a band of color at either end of the cable that shall identify the length of the cable. Alternate: shrink wrap shall be integral color as indicated.
 3. Confirm color codes with Owner prior to fabrication.
- B. Jumper Cables
1. All shall be Extra Hard usage cable utilizing NEMA or Neutrik PowerCON plugs as shown in the Appendix. Provide two affixed black sash cord ties.
 2. Provide with 20A connectors and 12/3 SOW-A cable.
 3. Provide quantities as shown in Appendix.
- C. Two-fer Cables
1. All shall be 36" long, #12 AWG individual stranded cables in fiberglass sheaths or a 12/3 SO cord in a molded assembly with appropriate strain relief as approved.
 2. Provide with connectors as shown in Appendix.
 3. Provide quantities as shown in Appendix.
- D. Multi-cable Extensions
1. Provide multi-cable extensions built from 75°C Extra Hard Usage cords, which consist of specified number of circuits rated 20 Amp at 125 Volts in accordance with Article 520 of the National Electrical Code
 2. Multi-cable ends shall terminate in cylindrical male and female multi-pin connectors appropriately sized to mate with wiring devices as specified above.
 3. Strain Relief:
 - a. Provide Hubbell Kellems Heavy Duty, Single Eye, Closed Mesh strain relief on each multi-cable extension
 4. Provide quantities as shown in Appendix.
- E. Multi-cable "Fan-Out" Cables
1. Provide multi-pin to 20A connector "fan-out" cables of six 12/3 S or SO neoprene covered cables
 2. Heavy-duty, locking multi-pin connector with clamping cable glands strain relief to mate with, and be of the same manufacture as, the multi-cable plug boxes
 3. 20A connectors to be as listed in the Appendix
 4. Male multi-pin to 20A female connector fan-outs:
 - a. The cables shall be bundled to "fan-out" on 18" centers
 - b. The first connector drop shall be 2'-0" from the multi-pin connector
 - c. Connector drops shall be 18" long
 5. Each 20A circuit shall have a discrete ground wire terminating in the multi-pin connector. The grounds may be common within the multi-pin connector.
 6. Label connector drops with appropriate alphabetic circuit designations ("A" through "F") keeping circuiting sequence identical through all multi-cables. All labels shall be affixed to the connector drops with shrink wrap tube. The "A" connector drop shall be closest to the multi-pin connector.
 7. In addition to the alphabetic designations indicated above, securely attach blank white Plexiglas labels to 20A connectors. This surface shall allow the user to mark the circuit designation on the receptacle with china marker.
 8. Provide quantities as shown in Appendix.
- F. DMX Extension Cables
1. Provide DMX extension cables of ACT Tour-Plex Data-Sure or equal
 2. 5-pin XLR connectors to mate with DMX nodes.
 3. Provide quantities as shown in Appendix.
- G. DMX Terminators
1. Provide In-Line DMX Terminator with status LED for end of line termination
 2. Provide quantities as shown in Appendix.
- H. Ethernet Extension Cables

1. Provide Ethernet Extension Cables of ACT Tour-Plex Tour-Net Cat5e or equal
2. RJ45 connectors to mate with Ethernet Taps.
3. Provide quantities as shown in Appendix.

2.16 SOURCE QUALITY CONTROL

- A. All equipment and components shall be factory tested prior to shipping.

2.17 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect and General Contractor's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerance, fits and finishes.

PART 3 EXECUTION

3.1 CONTRACTORS

- A. The equipment described herein shall be provided by a single Theatrical Lighting Fixtures and Accessories Contractor who will be responsible for furnishing all services described herein, including but not limited to coordination and supervision of the engineering, submittals and provision for all equipment specified herein.
- B. Contractor shall provide the Warranty and Maintenance services specified herein.
- C. To establish comparative standards of quality, the provision of the equipment and services of this Section shall be by one of the following authorized dealers:

Beck Studios, Inc
1001 Tech Drive
Milford, OH 45150
Tel: (513) 831-6650

Fantasee Lighting
14857 Martinsville Road
Belleville, MI 48111
Tel: (734) 699-7200

LVH Entertainment Systems
1801 Highland Avenue,
Unit E
Duarte, CA 91010
Tel: (805) 278-4584

Texas Scenic Co.
8053 Potranco Road
San Antonio, TX 78251
Tel: 210-684-0091

- D. Substitution Limitations
 1. Any contractor who wishes to be listed and has not been pre-approved must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.

- c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
- a. Refer to Paragraph 1.8B – Quality Assurance/Qualifications.

3.2 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.3 INSTALLATION

- A. Provide site labor to unpack fixtures, install lamps, attach hanging clamps, and move equipment to storage area at General Contractor's direction.

3.4 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings, submittals and pertinent project drawings prior to the demonstration indicated herein.

3.5 CLEANING

- A. Touch-up minor abrasions and imperfections created during installation to match original finish as required.
- B. Remove paint spatters, other spots, dirt and debris.
- C. Remove from the premises all debris caused by this work. All unnecessary equipment and materials, including packing materials, shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.6 CLOSEOUT ACTIVITIES

- A. Demonstration
 - 1. Installed equipment to be operated for approval and inspected for quality by the Architect and the Owner.
 - 2. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 - 3. Cost of re-inspection and additional testing by the Architect, Owner or Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.

B. Training

1. Following the equipment demonstration, inspection and final adjustments, the Owner's designated staff or representatives shall be instructed in the use, care and maintenance of all items.
2. Instruction must be by qualified expert operators who have actual experience with equipment in performance conditions.
3. Instruction to be scheduled in conformance with project construction schedules and the availability of the Owner.

3.7 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

3.8 ATTACHMENTS

- A. Refer to Appendix A of this section for quantities and accessories.

END OF SECTION

SECTION 122413 ROLLER WINDOW SHADES

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Manual roller shades (WT-__) & (WT-__).
 - 2. Manual double roller shades (WT-__)
 - 3. Motorized Roller Shades (WT-__)
 - 4. Motorized double roller shades (WT-__).

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.
 - 1. Motorized Shade Operators: Include operating instructions.
- B. Shop Drawings: Show location and extent of roller shades. Include elevations, sections, details, fabric width and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
 - 1. Motorized Shade Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
 - 2. Wiring Diagrams: Power, system, and control wiring.
- C. Samples for Initial Selection: For each colored component of each type of shade indicated.
 - 1. Include similar Samples of accessories involving color selection.
- D. Shade Material Samples for Verification: Not less than 3 inches square, with specified treatments applied. Mark face of material.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of roller shade, signed by product manufacturer.
- B. Qualification Data: For Installer.
- C. Product Test Reports: For each type of roller shade.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roller shades to include in maintenance manuals. Include the following:
 - 1. Methods for maintaining roller shades and finishes.
 - 2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
 - 3. Operating hardware.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Source Limitations: Obtain roller shades through one source from a single manufacturer.
- C. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Flame-Resistance Ratings: Passes NFPA 701.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Product Standard: Provide roller shades complying with WCMA A 100.1.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide either the specified products or comparable products by one of the following manufacturers:
 1. MechoShade Systems, Inc.,
 2. Draper Inc.,
 3. Hunter Douglas, Inc.,
 4. Lutron Electronics Co., Inc.,
 5. Nysan Solar Control Inc.
 6. Silent Gliss USA, Inc.

2.2 MANUALLY-OPERATED ROLLER SHADES

- A. (WT-1) Manually-Operated Roller Shade: Manual roller shades, with fascia, continuous stainless-steel bead-chain operator and related heavy duty mounting systems and accessories.
 1. Basis of Design:
 - a. FlexShade by Draper, Inc..
 - b. Mecho/5 by MechoShade Systems, Inc.
 2. Visually Transparent Shade Fabric: Refer to Material Identification List.

2.3 MOTOR-OPERATED ROLLER SHADES

- A. (WT-2) Motor-Operated Visually-Transparent Shade: Motor-operated roller shades and related heavy duty mounting systems and accessories.
 1. Basis of Design:
 - a. Motorized FlexShade by Draper, Inc..
 - b. ElectroShade by MechoShade Systems, Inc.
 2. Visually-Transparent, PVC-Free Single-Fabric Shade: PVC-free cloth fabricated from TPO yarn; Cradle to Cradle certified; with straight bottom hem.
 - a. Basis of Design: Draper GreenScreen Revive.
 - 1) Openness Factor: 1 percent.
 - b. Open Basket Weave: EcoVeil 1350 Series by MechoShade Systems, Inc..
 - 1) Openness Factor: 5 percent.

2.4 MOTOR-OPERATED DOUBLE ROLLER SHADES

- A. (WT-3) Motor-Operated Double-Roller Shade: Motor-operated, double roller shades, with [fascia,] and related heavy duty mounting systems and accessories.
 - 1. Product and Manufacturer:
 - a. ___ by Draper, Inc..
 - b. ElectroShade DoubleShades by MechoShade Systems, Inc..
 - 2. Visually-Transparent, PVC-Free Single-Fabric Shade, Interior Face:: PVC-free cloth fabricated from TPO yarn; Cradle to Cradle certified; with straight bottom hem.
 - a. Basis of Design: Draper GreenScreen Revive.
 - 1) Openness Factor: 1 percent.
 - b. Open Basket Weave: EcoVeil 1350 Series by MechoShade Systems, Inc..
 - 1) Openness Factor: 5 percent.
 - 3. Blackout Shade, Exterior Face: Opaque shade, 0 percent openness factor; straight bottom hem.
 - a. Blackout Single-Fabric Shade with Opaque Acrylic Backing: ThermoVeil Equinox 0100 Series by MechoShade Systems, Inc..
 - 1) Material: 53 percent fiberglass, 45 percent acrylic, 2 percent polyester finish (PVC-free).

2.5 MANUALLY-OPERATED DOUBLE ROLLER SHADES

- A. (WT-4) Manually-Operated Double-Roller Shade: Manually-operated, double roller shades, with housing as indicated on Drawings, continuous jamb channels, and related heavy duty mounting systems and accessories.
 - 1. Basis of Design: DoubleShades by MechoShade Systems, Inc..
 - 2. Visually-Transparent Shade Fabric: Refer to Material Identification List.
 - 3. Blackout Shade Fabric: Refer to Material Identification List.

2.6 SYSTEM COMPONENTS

- A. Provide complete system with side angles, bottom bar, headbox, sponge liner, roller tube, controls, wiring, switches, fascia panel, and necessary accessories and fasteners.
- B. Rollers: Electro-galvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with manufacturer's standard method for attaching shade material. Provide capacity for one roller shade band per roller, unless otherwise indicated.
- C. Mounting Brackets: Galvanized or zinc-plated steel, painted to match fascia (where applicable).
- D. Fascia: L-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; continuous panel concealing front and bottom of shade roller, brackets, and operating hardware and operators; length as indicated on Drawings; removable design for access.
 - 1. Top/Back Cover: L-shaped; material and finish to match fascia; combining with fascia and end caps to form a six-sided headbox enclosure sized to fit shade roller and operating hardware inside.
 - 2. Pocket-Style Headbox: U-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; with a bottom cover consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing shade roller, brackets, and operating hardware and operators within.
- E. Pocket with Ceiling Slot Opening: Six-sided box units for recessed installation; fabricated from formed-steel sheet, extruded aluminum, or wood; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing rollers, brackets, and operating hardware and operators within.
- F. Bottom Bar: Steel or extruded aluminum, with metal capped ends. Provide concealed, by pocket of shade material, internal-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.

- G. Mounting: As indicated on Drawings, mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.
- H. Manual Shade Operating Mechanisms: Manual-operated, with continuous-loop bead-chain, clutch, and cord tensioner and bracket lift operator; in compliance with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.
 - 1. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
 - a. Operating Function: Stop and hold shade at any position in ascending or descending travel.

2.7 ROLLER SHADE FABRICATION

- A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.
- B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials, with permanently lubricated moving parts.
- C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings.
- D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting roller, and operating hardware and for hardware position and shade mounting method indicated.
- E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.
- F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

2.8 MOTORIZED ROLLER SHADE OPERATORS

- A. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.
- B. Comply with NFPA 70.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- D. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
 - 1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
 - 2. Motor Characteristics: Single phase, [24] [110] [220] V, 60 Hz.
 - 3. Motor Mounting: Within manufacturer's standard roller enclosure.
- E. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for [surface] [recessed or flush] mounting. Provide the following devices for remote-control activation of shades:
 - 1. Individual/Group Control Stations: [Maintained] [Momentary]-contact, three-position, rocker-style, wall switch-operated control station with open, close, and center off functions for individual and group control.
- F. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.

- G. Operating Function: Stop and hold shade at any position.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so shade band is not closer than 2 inches to interior face of glass.

3.3 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage factory-authorized service representative to train Owner maintenance personnel to adjust, operate, and maintain system.

END OF SECTION

SECTION 123551 MUSIC EDUCATION STORAGE CASEWORK

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Music instrument storage lockers (MESC-1).
 - 2. High-density sheet music storage (MESC-3).
 - 3. High-density sheet music storage (MESC-4).
- B. Related Sections:
 - 1. Section 061000 - Rough Carpentry: Blocking in frame walls required to anchor casework.
 - 2. Section 064000 - Architectural Woodwork: (PLAM).

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's data sheets, installation instructions, and maintenance recommendations.
- B. Product Test Reports: Indicating compliance of products with requirements, from a qualified independent testing agency.
- C. Shop Drawings: Prepared by manufacturer. Include elevations showing casework components, details of each condition of installation, and types and locations of hardware and fasteners. Show fabrication and installation details. Include plans, elevations, sections, details, and attachments to other Work.

1.3 INFORMATIONAL SUBMITTALS

- A. Samples: For each color and finish for each exposed casework component.
- B. Operation and Maintenance Data.
- C. Warranty: Submit sample meeting warranty requirements of this Section.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Approved manufacturer listed in this section, with minimum 5 years' experience manufacture of similar products in use in similar environments. Obtain music education storage casework through one source from a single approved manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle music education storage casework in accordance with manufacturer's recommendations. Ship to jobsite only after roughing-in, painting work, and other related finish work has been completed and installation areas are ready to accept casework and recommended temperature and humidity levels will be maintained during the remainder of construction.

1.6 COORDINATION

- A. Coordinate installation of blocking and supports in frame wall assemblies under work of other sections where required for anchoring of music education storage casework.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's written warranty indicating manufacturer's intent to repair or replace components of music education storage casework that fail in materials or workmanship within 10 years from date of Substantial Completion. Failures are defined to include, but are not limited to, the following:

1. Fracturing or breaking of casework components including doors, panels, shelves, or hardware resulting from normal wear and tear and normal use other than vandalism.
2. Delamination or other failures of glue bond of components.
3. Warping of casework components not resulting from leaks, flooding, or other uncontrolled moisture or humidity.
4. Failure of operating hardware.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Storage Casework Component Load Capacities: Unless otherwise indicated, comply with the following:
 1. Storage Casework Wire-Grille Door Hinge: Each weld capable of resisting 400 lbf pull test without visible damage or permanent deformation.
 2. Storage Casework Full Grille Door Hinge: Full length door capable of supporting 315 lbs. Through open and close cycle without permanent damage.
 3. Sheet Music Storage Casework: Units shall support 35 lb/lin. ft. uniform shelf loading with maximum 1/16 inch deflection.

2.2 PLASTIC LAMINATE MATERIALS

- A. PLAM Door Panels and Exposed Surfaces: Flush overlay 3/4 inch thick HDPL .
 1. (PLAM-2) Basis of Design: Refer to Material Identification List and Section 064000 - Architectural Woodwork.
- B. Particleboard: ANSI A208.1, minimum 43 lb/cu. ft. density.
- C. Particleboard Thermoset Panels: Particleboard finished with thermally-fused polyester surfacing on both sides meeting performance properties of NEMA LD 3 for VGS grade, edge-banded to match PLAM faces.
- D. Plywood Thermoset Panels: Plywood finished with thermally-fused polyester surfacing on both sides meeting performance requirements of NEMA LD 3 for VGS grade, edge-banded to match PLAM faces.
- E. Polyethylene Shelves: High-density, one-piece, blow-molded or polyethylene, with radiused front edge, for abuse-resistant shelves.

2.3 INSTRUMENT STORAGE

- A. (MESC-1) Music Instrument Storage Lockers: Modular instrument storage casework with integral bases, adjustable levelers, and through-bolted fastening, enabling owner reconfiguration of unit layout.
 1. Basis of Design: Wenger Corporation, Owatonna, MN; 800-493-6437; www.wengercorp.com.
- B. Components and Materials:
 1. Plastic Laminate: (PLAM-2), unless noted otherwise.
 2. Side Panels and Divider Panels: Particleboard thermoset panel, 3/4 inch thick. Side panels machined to accept unit-to-unit through-bolting.
 3. Panel Doors: Particleboard thermoset panel, 3/4 inch thick, inset-type.
 4. Open Casework: Provide casework without doors.
 - a. Provide for casework indicated.
 5. Panel Edge Banding: Matching PLAM faces, 3 mm thick, heat-bonded, with beveled and profiled edges and corners.
 6. Shelving: Sized with adequate gap between shelving and casework side panels to allow air movement inside casework.
 7. Unexposed Surfaces: Particleboard thermoset panel, 3/4 inch thick. Side panels machined to accept unit-to-unit through-bolting.
 8. Hardware: Provide both of the following:
 - a. Cam Padlock Hasp: Surface-mounted, steel; finished to match other hardware.

- b. Built-in Combination Locks: Key-controlled, three-number dialing combination locks.
- C. Shelving: Sized with adequate gap between shelving and casework side panels to allow air movement inside casework.
 1. Up to 27 inches wide: Removable molded polyethylene shelf, with impact-resistant, radiused front edge, mounted to cabinet wall with self-locking clip.
 2. Over 27 inches wide: For large instrument casework: Removable formed polyethylene shelf, ribbed, with high-impact-resistant, radiused front edge, supported by steel tube frame.
 3. Corner cabinet revolving shelving: 0.053 inch min. thickness steel sheet bolted to revolving steel center post, with radiused hardboard deflector panel.

2.4 SHEET MUSIC STORAGE

- A. (MESC-3): Music Library High-Density Storage: Sheet music storage casework in wheeled retractable units providing high-density storage, adjustable to fit most sizes of published sheet music, enabling owner reconfiguration of unit layout.
 1. Basis of Design: Wenger Corporation, Owatonna, MN; 800-493-6437; www.wengercorp.com.
- B. Unit Configurations:
 1. Unit Type: 7-shelf units, 92"H with 4 adjustable shelves and 3 fixed
 2. Standard Compartment: 10.5"H x 13"D. Each unit is 44"D and 16"W in the closed position.
 3. Oversized Compartment: 10.5"H x 16"D. Each unit is 44"D and 19"W in the closed position.
- C. Components and Materials:
 1. End Panels: Particleboard thermoset panel, 3/4 inch thick.
 2. Shelving: Plywood thermoset panel, 3/4 inch thick. 7-shelf unit with 4 adjustable and 3 fixed shelves, with metal book supports.
 3. Exposed End Cover Panels: Particleboard thermoset panel, 3/4 inch thick.
 4. Casters: 4 rigid 8 inch diameter casters.
 5. Guide Frame: 1 by 1 inch by 16 gauge/0.053 inch steel tubes, factory finished, with limiting cable, bumpers, and hat channel wall anchor.
 6. Casework Panel Color: As selected by Architect from manufacturer's standard colors.

2.5 HIGH-DENSITY OPERABLE STORAGE

- A. (MESC-4) High-Density Music Library Storage: Provide manufacturer's standard mobile storage shelving systems and components. Where components are not otherwise indicated, provide manufacturer's standard components as required for a complete system.
- B. Inserts: Furnish required concrete inserts and similar anchorage devices for installing track system, and furnish other components of work where installation of devices is specified in another Section.
- C. Tracks: Steel rails with tops machined to mate with guide wheels and with ends designed to provide smooth, secure continuity between sections without field welding. Provide mounting brackets, anchorage devices, adjustable leveling devices, and stops at terminations of rails to prevent carriages from running off track ends.
 1. Mounting: [**Surface mounted**] [**Recessed**].
- D. Carriages: Rigid frames consisting of C-shaped cold-formed steel beams and cross beams, designed to allow secure anchorage of shelving units.
 1. Wheels: Manufacturer's standard number of bearing-mounted, steel wheels, precision ground to mate with tracks.
 2. Bumpers: Provide two rubber bumpers with minimum depth of 1/2 inch each side.
- E. Carriage End Panels: Full depth and height of shelving units. Provide at [**the operating end**] [**both ends**] of each range.
 1. Material: High-pressure decorative laminate.
- F. Mechanical Assistance:
 1. Drive Systems: Geared transmission and chain systems with tensioning device to provide mechanical assistance and uniform movement along entire length of each carriage. Permanently shielded and lubricated.

2. Drive Shaft: Continuous tubular or solid steel shaft, capable of transmitting torque from drive system without distortion.
 3. Locking Pins: Located on range end panels to allow locking of individual range carriage when depressed.
- G. Steel-Case Shelving: Shelving consisting of full end, top, and back panels, with end panels made to receive adjustable shelves in slots or to receive clips to support adjustable shelves. Configure units for mounting on mobile carriages.
- H. Steel Four-Post Shelving: Shelving consisting of four angle-iron uprights per section, with adjustable shelves resting on shelf supports hung on uprights. Configure units for mounting on mobile carriages.

2.6 ACCESSORIES

- A. Filler Panels and Closure Kits: 3/4 inch thick particleboard thermoset panels matching cabinet side panels. Provide the following, cut to fit field conditions, where indicated:
1. Wall filler between cabinet side and wall.
 2. Top filler between cabinet top and wall.
 3. Top of cabinet closure panel between cabinet and finished ceiling or soffits.
 4. Finished back panel for exposed cabinet backs.

2.7 HARDWARE

- A. Butt Hinges: 2-3/4 inch, 5-knuckle steel hinges made from 0.090 inch thick metal, ANSI/BHMA A156.9, Grade 1, with powder-coated finish, through-bolted to door and side panels. Provide 2 hinges on compartment doors, and 4 hinges on full-height doors.
- B. Slide Latch: 0.105 inch min. thickness steel, with padlock eye, powder-coat finish, through-bolted to panel door and side panel. Latches securely without padlock. Provide with clear plastic label holder with numbering system.
- C. Panel Connectors: 1/4–20 by 1.77 inch panel connectors, with steel thread inserts, powder coated to match panels.
- D. Cabinet Levelers: Leveling glides with 3/8 inch diameter threaded steel rod in steel corner brackets, minimum two each per cabinet side, accessible from within unit, and concealed in completed installation.
- E. Fasteners: Manufacturer-recommended fasteners as required for casework substrate and project performance requirements, consisting of one or more of the following:
1. Sheet Metal Screws: SAE J78, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.
 2. Wood Screws: ASME B18.6.1.
 3. Expansion Anchors in Concrete and Concrete Masonry Units: Carbon-steel, zinc plated.

2.8 FINISHES

- A. Steel Sheet, Steel Wire, and Exposed Fasteners: Urethane-based electrostatic powder coating, color as indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine casework installation areas for compliance with requirements for installation tolerances, location of blocking and other anchoring reinforcements, and other existing conditions affecting installation and performance of casework. Proceed with casework installation upon correction of unsatisfactory conditions.

3.2 CASEWORK INSTALLATION

- A. Install plumb, level, and true; using integral levelers. Install in accordance with manufacturer's recommendations and approved submittals.
- B. Install hardware uniformly and precisely. Set hinges snug and flat. Adjust and align hardware so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.
- C. Adjust casework and hardware so doors and drawers operate smoothly without warp or bind and close with uniform reveals.

3.3 HIGH-DENSITY STORAGE INSTALLATION

- A. Level and plumb tracks to a tolerance of 0.09 inch in 120 inches with no more than 0.06-inch variation between adjacent rails. Use permanent shims or non-shrink grout as indicated by manufacturer.
- B. Surface-Mounted Track Systems: Install underlayment, ramps, and finish flooring according to manufacturer's written instructions and flush with track surfaces. Do not extend ramps beyond ends of carriages.
- C. Carriage Installation: Mount mobile carriages on track system and adjust for smooth operation. Provide non-moving carriages securely fixed to rails where indicated.

3.4 INSTALLED WORK

- A. Repair or replace defective work as directed by Architect upon inspection.
- B. Clean casework surfaces. Touch up, refinish, or replace damaged components in a manner acceptable to Architect.
- C. Turn over operation and maintenance instructions to Owner.
- D. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain mobile storage shelving.

END OF SECTION

SECTION 124800 ENTRANCE FLOOR MATS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Vestibule carpet tile (FL MAT-1).
- B. Related Sections:
 - 1. Section 033000 - Cast-in-Place Concrete: Coordinate size and location of recesses in concrete with installation of finish floors to receive floor mats.

1.2 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Samples: For each type of product indicated, full tile size.
- C. Maintenance Data: For floor mats to include in maintenance manuals.

1.3 PROJECT CONDITIONS

- A. Comply with CRI 104, Section 6: "Site Conditions."
- B. Space Enclosures and Environmental Limitations: Do not install carpet until space is enclosed and weatherproof, wet-work in space is completed and nominally dry, work above ceilings is complete, and ambient temperature and humidity conditions are and will be continuously maintained at values near those indicated for final occupancy.
- C. Subfloor Moisture Conditions: Moisture emission rate of not more than 3 lb/1000 sq. ft/24 hours when tested by calcium chloride moisture test in compliance with CRI 104, 6.2.1, with subfloor temperature not less than 55 degrees F.
- D. Subfloor Alkalinity Conditions: pH range of 5 to 9 when subfloor is wetted with potable water and pHdrion paper is applied.

1.4 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Entrance Tiles: Full-size units equal to 2 percent of amount installed for each size, color, and pattern indicated, but no fewer than 10 units.

PART 2 PRODUCTS

2.1 REGULATORY REQUIREMENTS

- A. Accessibility Requirements: Provide installed floor mats that comply with Section 4.5 in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)" and Sections 302 and 303 in CC A117.1.

2.2 ENTRANCE MATS

- A. (FL MAT-1) Carpet-Type Tiles: Polyester carpet bonded to 1/8- to 1/4-inch- thick, flexible vinyl backing to form mats 3/8 or 7/16 inch thick with nonraveling edges.
 - 1. Basis of Design: As indicated on Material Identification List.

2.3 INSTALLATION ACCESSORIES

- A. Trowel-Applied Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.
- B. Concrete-Slab Primer: Non-staining type as recommended by carpet manufacturer.
- C. Adhesive: Water-resistant, mildew-resistant, nonstaining type recommended and approved by flooring manufacturer to suit products and subfloor conditions indicated and to comply with flammability requirements for installed carpet as recommended by carpet manufacturer.
 - 1. Adhesive and Sealant VOC Limits: According to South Coast Air Quality Management District Rule 1168 and GS-36 for aerosols. VOC Limits: As tested using U.S. EPA Reference Test Method 24 and as defined by South Coast Air Quality Management District Rules: SCAQMD Rule 1168, Adhesive and Sealant Applications.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Preparation: Comply with CRI's "CRI Carpet Installation Standard" and with carpet manufacturer's written installation instructions for preparing substrates.
- B. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet manufacturers.
 - 1. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch, unless more stringent requirements are required by manufacturer's written instructions.
- C. Installation: Comply with CRI's "CRI Carpet Installation Standard" and written installation instructions by carpet and adhesive manufacturers.
 - 1. Installation Method: Glue-down method as recommended in writing by carpet manufacturer
 - 2. Maintain dye-lot integrity. Do not mix dye lots in same area.
- D. Cleaning: Perform the following operations immediately after installing carpet:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
 - 2. Remove yarns that protrude from carpet surface.
 - 3. Vacuum carpet using commercial machine with face-beater element.
- E. Protection: Protect installed carpet to comply with CRI's "CRI Carpet Installation Standard."

END OF SECTION

SECTION 126100 FIXED AUDITORIUM SEATING

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes the fixed auditorium seating system within the following spaces:
 - 1. Proscenium Theatre
 - 2. Valade Jazz Center
- B. Section Includes
 - 1. Furnish and install all elements of the fixed auditorium seating system and associated accessories.
 - 2. Work Results:
 - a. Provide a complete, working and code compliant fixed auditorium seating system.
 - b. Provide fully coordinated and engineered equipment, installation, supervision and commissioning for the major systems and associated accessories as required for each space.
 - c. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on related drawings.
 - d. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
- C. Products Supplied But Not Installed Under This Section:
 - 1. Extra materials as listed in Paragraph 1.7A, Extra Materials.
- D. Related Requirements:
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
 - 2. Examine Contract Documents for requirements that directly affect or are affected by Work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - b. Division 03 – Concrete
 - 1) Fastener requirements
 - 2) Floor box location and blockouts
 - 3) Mechanical diffusers
 - c. Division 04 – Masonry
 - 1) Fastener requirements
 - d. Division 05 – Metals
 - 1) Structural steel supporting the work of this section
 - e. Division 09 – Finishes
 - 1) Adjacent walls and floors
 - 2) Metal fabrication
 - f. Division 23 – Mechanical
 - g. Division 26 – Electrical
 - 1) Section 265561 – Theatrical Systems Electrical Requirements
 - 2) Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation
 - 3) Terminations and testing of system continuity

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 - General Requirements for information regarding price and payment procedures.

1.3 REFERENCES

A. Abbreviations:

1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. UL: Underwriters Laboratories

B. Definitions

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. "Architect": All references to the "Architect", Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. "Theatre Consultant": Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. "Other Project Consultants": Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. "Contractor": Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
 - f. "Owner": Authorized personnel representing Wayne State University.
 - g. "Furnish": Purchase and/or fabricate and deliver to project site.
 - h. "Install": Physically install the items in their proper location(s) on the project site.
 - i. "Provide": Furnish and install complete.

C. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.
6. The following standards apply to the work of this Section. It remains the Contractor's responsibility to confirm and comply with all industry standards that are applicable to the work of this Section.
 - a. International Building Code 2012
 - b. Americans with Disabilities Standard for Accessible Design
 - c. Local Authority Building Regulations
 - d. Local Authority Licensing Regulations

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

B. Pre-Installation Meeting:

1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.
- C. Sequencing:
1. The delivery and installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work under this section may be installed, including:
 - a. Principal foundation work (see Architectural Drawings)
 - b. Installation of associated electrical work (see Electrical Drawings)
 - c. Drywall, mudding, sanding or painting of ceilings and walls
 - d. Sanding or application of finishes to floors

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Drawing markups will be provided on PDF files provided by the Contractor or on paper drawings which shall be scanned and returned electronically.
- F. Provide full insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system. In addition, the Manufacturer shall indicate maximum accepted wire size as it relates to termination points on their equipment.
- H. Product Data:
 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- I. Shop Drawings:
 1. Provide shop drawings on D size minimum (24" x 36") sheets.
 2. Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 3. Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
 4. Provide a minimum of one sheet for each seating level.
 5. Provide 1/4" scale layout plan(s) clearly indicating seat widths, dimensions for coordination for seat mounting, aisle widths and row-to-row clearances.
 6. Provide 1/2" scale details showing relationship of seat rows, indicating seat back to back spacing and clear aisle accessway.
 7. Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components. Include plan or schedules with quantities of each seat size, removable seats, transfer arm seating, end panel lights, and all other accessories.
 8. Provide plan of electrical junction box locations and details.
 9. Provide plan of row letter and seat number layout.
 10. Provide requisite schematics, plans and sections indicating assembly and installation of components.

11. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
12. Provide power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components. These shall be provided within 30 days of Contract Award.
13. Provide detailed drawings of trolley for transport and storage of 'removable' seating.
14. Provide a full Bill of Materials to be supplied, including quantities, manufacturer, manufacturer's part number, reference to applicable drawings, etc.
15. Per the requirements of the approved schedule, provide a provisional set of shop drawings with all required information included. A revised set of drawings shall be provided after site verification measurements can be taken. The second set shall show any modifications to the layout due to unexpected site conditions.
16. Shop drawings shall provide sufficient detail to show fabrication, installation, anchorage and interface of the work of this Section with the work of adjacent trades.
17. Responsibility to prevent or remedy conflicts with any floor element shall rest solely on the Contractor.
18. Responsibility for providing a seating layout that meets prevailing code requirements, as demonstrated in the Contract Documents, rests with the Contractor.

J. Samples:

1. Submit samples for approval as per the approved project schedule.
2. Submit samples of each of the following elements in each color, finish, pattern and texture specified per the terms of the Works Contract. If qualities of an element have not been specifically indicated herein, submit manufacturer's color charts or samples of actual materials indicating the full range of standard colors, finishes, patterns and textures available. The samples shall include, but are not limited to:
 - a. Provide two 30" square "quality" samples of each seating fabric.
 - b. Manufacturer's color charts or actual samples of electrostatically applied powder finishes to be used on exposed parts.
 - c. Manufacturer's color charts or actual samples of plastics to be used on seat backs or bottoms.
 - d. Wood and plywood materials with finish samples for color selection.
 - e. Seat and back cushion.
 - f. Seat pan assembly with padding and upholstery.
3. Additional samples must be submitted within 14 days of Architect's written request.

K. Certificates

1. Provide manufacturer's certificate stating materials meet fire performance characteristics specified herein.
2. Provide test certificates for specified performance testing.

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents:

1. Submit documents in accordance with Division 01 - General Requirements.
2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
3. Within 60 days of the acceptance testing, submit one (1) set of reproducible "as built and approved" drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
4. Submit operation and maintenance manuals with the "as built and approved" drawings. These manuals shall include all comments and adjustments made during the acceptance and review processes. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for all component parts
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces

- e. Provide specific recommendations for cleaning upholstery, including precautions against materials and methods which could damage upholstery fabric.
 - 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 - 6. Certificates of flame resistance as required herein.
 - 7. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
 - C. The record documents shall be reviewed by the Architect and Theatre Consultant, and all modifications to the documents stemming from this review shall be made as required.
 - D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials:
 - 1. Deliver stock of maintenance material to Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. Seat and back covers in a quantity equal to five percent (5%) of each type of chair and each color provided, with covers prorated to sizes of chairs used.
 - b. Provide LED end panel light assemblies in a quantity equal to five percent (5%) of end panel lights installed.
 - c. Provide mounting hardware for all mounting conditions equal to five percent (5%) of chairs installed.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Refer to Division 01 – General Requirements.
- B. Qualifications:
 - 1. All equipment and installation to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication of theatrical seating equipment, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Contractor's business.
 - 2. The Contractor shall have been continuously engaged in the fabrication and installation of equipment of the type indicated herein for no less than five years.
 - 3. The Contractor shall have under their control all parts composing the complete chair including castings, steel, plywood, fabric, and accessories, as well as mounting and installation components. Contractor shall do all fabrication and coordinate installation, and shall maintain thorough test and inspection procedures to assure uniform high quality of all raw materials used as well as the finished product.
 - 4. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
- C. Contractor is responsible for proper installation, operation and safety of all component equipment.
- D. Contractor is responsible for the complete design and engineering of all systems described herein. Contractor shall confirm project details and, if necessary, suggest modifications to the criteria established herein in order to maintain the design intent.
- E. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.
- F. Mock-Ups:

1. Following approval of shop drawings and samples indicated above, and prior to fabrication, a mock-up shall be provided for quality review, verification and testing by the Architect, Theatre Consultant and Owner.
2. The mock-up for quality review shall meet the following criteria:
 - a. Provide a minimum of two (2) chairs including selected fabric, finishes, etc.
 - b. One of the chairs of the mock-up will include an ADA transfer arm as specified herein; the other shall have a fixed decorative end standard with integral end panel light as specified herein.
 - c. The mock-up should include the actual widths of chairs to be provided.
3. Fabrication will not proceed until written approval of all mock-ups has been received from the Architect.
4. It shall be the Contractor's obligation to provide shipping of the mock-up to the Architect's office and, following installation, to the job site. Following approval of the finished installation, the mock-up shall be turned over to the Owner.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 1. All equipment shall be appropriately and substantially packed for shipment.
 - a. Packaging should include humidity resistant wrapping with desiccant as appropriate to protect contents. Contractor shall ensure that seating and related materials are delivered to the job site in their original and undamaged cartons bearing the manufacturer's name, product name and stock numbers.
 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
 3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 2. The Contractor shall be responsible for acceptance of the fixed audience seating system components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protection
 1. Upon delivery, the materials shall be stored in their original cartons under protective cover in a dry and clean location, off the ground. Materials shall be stacked or positioned as directed by the Contractor. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
 2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions:
 1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions or corrections are to be requested through the General Contractor prior to fabrication.
- B. Environmental Requirements:
 1. Coordinate all environmental requirements for all materials provided and installed under this contract.
- C. Field Measurements:

1. Field measurements must be taken prior to preparation of final shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.
- B. The Contractor shall warrant materials and workmanship of systems and equipment as free of defects. The Contractor shall guarantee in writing the repair or replacement within 30 days of any item found defective during a period of one (1) year following date of final acceptance. Ordinary wear and damage due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of installation services provided under this section for a period of five (5) years following the date of final acceptance. Ordinary wear and damage to improper usage are excepted.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and services of this section shall be by one of the following manufacturers:

Ducharme Seating
9275 rue le Royer
Saint-Léonard, Québec
Canada H1P 3H7
Tel: (514) 438-2772

Figueras Seating Americas
1860 Polk Street
Hollywood, FL 33020
Tel: (786) 331-9433

Irwin Seating Company
3251 Fruit Ridge NW
Grand Rapids, MI 49544
Tel: (616) 574-7400

Series Seating
20900 NE 30th Avenue
Suite 901
Miami, FL 33180
Tel: (305) 932 4626

- B. Substitution Limitations

1. Any contractor who wishes to be listed, and has not been pre-approved, must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.

- c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
- a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

2.2 SYSTEMS DESCRIPTION

- A. Refer to 'TS' Series Contract Drawings for seating layout plans and to architectural and structural drawings for floor and riser plans.
- B. The seating layout drawings indicate acceptable seat widths and quantities at each width. Proposed manufacturer's alterations from this layout shall be explained in the shop drawings.
- C. Layout Requirements:
 - 1. Seating layout shall conform to critical aisle dimensions as indicated on the Drawings. These dimensions are based on project code requirements.
 - 2. Actual makeup of rows and requisite seat widths shall be the responsibility of the Contractor and shall be based on the Contractor's own field measurements and Theatre Consultant's review of final shop drawings.
 - 3. The chairs must stagger from row to row on the centerline of the theatre to maximize vertical sightlines. End of rows shall align as indicated on the Drawings.
 - 4. In rows which contain varying width chairs, the following criteria shall generally be followed:
 - a. A narrow seat is to be mounted adjacent to an aisle.
 - b. A wide seat is to be mounted adjacent to side-walls or railing.
 - c. The remaining varying width seats shall be distributed throughout the row so that the narrow seats are not mounted adjacent to one another and the overall quantity is at the absolute minimum.

2.3 DESIGN CRITERIA

- A. All auditorium seating must be designed, manufactured and installed to:
 - 1. Perform satisfactorily in their intended situation and under their expected conditions in use.
 - 2. Have sufficient strength to meet their intended conditions of use.
 - 3. Be free from any dimensional inaccuracy or distortion likely to affect its installation or operation.
 - 4. Ensure that they do not contain any material which by direct contact or otherwise can be detrimental to the health and safety of the user.
- B. Overall front to back envelope with seat in upright position shall not exceed 21" without notifying Architect in writing.
- C. The audience seating shall be fabricated using molded foam cushions for maximum comfort, using materials which are carefully selected to be free of defects, objectionable projections, or irregularities. Smoothly round corners, edges and exposed fasteners to present least possible snagging and pinching hazards.
- D. Basis of design:

1. The basis of design for the fixed and removable auditorium seat shall be the following with special components as indicated herein or an approved equal:
 - a. Proscenium Theatre
 - 1) Basis of design appearance:
 - (a) TBD
 - (b) TBD
 - 2) Wood back panel with hardwood edges, White Oak veneer
 - 3) Upholstered seat with wood bottom, White Oak veneer
 - 4) Wood aisle end panel, White Oak veneer
 - 5) Solid wood arm rests, stain TBD by Architect
 - 6) Concealed low voltage LED end panel lights
 - 7) Fabric: Level 'XX' fabric, pattern and color TBD by Architect.
 - b. Valade Jazz Center
 - 1) Basis of design appearance:
 - (a) TBD
 - (b) TBD
 - 2) Wood back panel with hardwood edges, White Oak veneer
 - 3) Upholstered seat with wood bottom, White Oak veneer
 - 4) Wood aisle end panel, White Oak veneer
 - 5) Solid wood arm rests, stain TBD by Architect
 - 6) Concealed low voltage LED end panel lights
 - 7) Fabric: Level 'XX' fabric, pattern and color TBD by Architect.

E. Capacities:

1. Seats:
 - a. Seats shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed minimum of 600 lbs. static load located 3" back from the front of the seat without deflection.
 - b. Seats shall be tested and professionally certified through an independent testing laboratory to withstand 300,000 operating cycles without added lubrication, spring fatigue or measurable bearing wear.
 - c. Seats shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 100,000 impacts of a 40 lb. sandbag dropped equally from heights of 6", 8", 10" and 12".
 - d. All up-stops and down-stops shall be completely concealed.
2. Backs:
 - a. Backs shall withstand an evenly distributed front or rear load of 450 lbs.
 - b. Backs shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 40,000 alternating swinging impact cycles by each of 2 opposing 40 lb. sandbags. Sandbags shall be moved horizontally and equally through various distances of 6", 8", 10" and 12" at 35 cpm.
3. Arm rests:
 - a. Armrests shall be tested and professionally certified through an independent testing laboratory to accept a 250 lb. sandbag placed at the front of the armrest with no deflection.
 - b. The same test shall be performed on the rear of the armrest.

F. Acoustic Performance

1. Seat bottoms shall not create high-frequency noise that may disrupt performances when allowed to spring to their upright position from their down position. The sound level of the seats in motion shall not exceed 30 dB(A) when measured 3 feet from the seat bottom using a precision sound level meter on the fast response setting.

G. Fire Performance Characteristics

1. Flame Retardant performance: Upholstery components and the assembly thereof shall be in conformance with flammability standards as set forth in California Technical Bulletin #117.
2. Padding: Provide new (prime manufacture) polyurethane foam with an average burn length not exceeding 8" and average flame time after removal of flame source not exceeding 15 seconds, with drippings from test specimen not continuing to flame for more than 5 seconds after falling, when tested vertically in compliance with Federal Test Method Standard 191, Method 5903.2.

3. Fabric to comply with 16 CFR Part 1610 Class 1.

2.4 MATERIALS

A. General

1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
2. All equipment to have pertinent testing labels.
3. All variations from the specified materials and product must be approved by the Architect.

B. Materials shall conform to the following minimum standard specifications:

1. Gray Iron Castings: American Society of Testing Materials A48, Class 25.
2. Steel Plates, Shapes, and Bars: American Society of Testing Materials A36.
3. Steel Sheets for Baked Enamel Finish: American Society of Testing Materials A591, commercial and drawing quality; Class C, galvanized-bonderized; 20 gauge minimum unless otherwise indicated.
4. Expansion Bolts: FS FF-B-588; Type, Class, and Style as recommended by the chair manufacturer.
5. Concealed Plywood: PS 1/ANSI A199.

C. Finishes

1. Finish for all exposed metal parts shall be selected by the Architect and shall match.
2. Finish for all exposed plastic parts shall be selected by the Architect and shall match.
3. Exposed Wood (including plywood): Manufacturer's standard hardwood, free of visible defects. Color shall be stain per the Architect. Species shall be as specified. Seal with lacquer.
4. Fabric:
 - a. Upholstery fabric to be selected by the Architect from one of the manufacturer's standard seating fabrics.
 - b. Fabric color shall selected by the Architect from one of the manufacturer's standard colors offered within the specified grade.
 - c. Flame Retardant: Meets Class "A" flamespread rating in accordance with American Society of Testing Materials-E84, NFPA #255, UBC #42-1, and Underwriters Laboratory #723.
 - d. Light Fast: Exceeds 48 hour NAFM requirement. Test method A.A.T.C.C.-16A.
 - e. The fabric shall be strengthened with an acrylic or similar backing.
5. Cushions: Seat and back cushions made of open cell polyurethane foam.
6. Fasteners: All fasteners shall be concealed. No exposed fasteners permitted.

2.5 UPHOLSTERED SEATS

- A. The seat shall have seat pans constructed of steel and upholstered molded foam cushion.
- B. The seat should be well shaped to provide maximum comfort.
- C. Equip chairs with noiseless gravity uplift devices, so that unoccupied seats quietly rise to uniform full vertical fold.
- D. Provide for seat rotation on bushings which do not require lubrication and have a positive internal return stop of rubber or neoprene.
- E. The seats shall be free of exposed screws and bolts on the bottom, front and sides.

2.6 UPHOLSTERED BACKS

- A. The seat back will be upholstered on the front with a wood panel on the rear.
- B. The seat back will be ergonomically designed back with lumbar support.
- C. Inner structure will be a rigid triple curved, molded, compressed fire retardant chipboard.
- D. Foam padding will be cold molded CMHR polyurethane foam.
- E. The backs shall be free of screws and bolts on the bottom, front and sides.
- F. The back of the rear panel shall not be upholstered nor covered with fabric of any kind.

1. Wood type and stain will be chosen by the Architect from the manufacturer's standard products.

2.7 AISLE AND INTERMEDIATE CHAIR STANDARDS

- A. Standards shall be fabricated from tubular steel.
 1. Tubular Steel Standards: Fabricate chair standards of heavy gauge rectangular steel tubing securely welded to steel mounting plate, with seat, back and armrest connections welded to tubing.
 - a. All weldments shall be gas shielded, arc welded.
 2. Fabricate seating units for attachment to floor conditions, both sloped and level, as indicated, using standards which have been manufactured to allow maximum cleaning space below point of attachment while maintaining seat height at proper elevation to floor.
 3. Provide bolt caps at each floor standard foot which cover mounting stud and nut. Color to match selected metal finish for aisle standard.

2.8 AISLE END PANEL

- A. The aisle end panel shall be a decorative panel as described above.

2.9 TRANSFER ARMS

- A. Provide aisle standards equipped with swing-away end panel assemblies in locations shown on drawings and as required by building codes and the ADA.
- B. The aisle end panel assembly shall swing away to allow the individual access to the seat. Aisle standards shall use positive latching hardware to secure swinging panel in place.
- C. The accessible aisle end panels shall match others that are not accessible.
- D. The accessible aisle end panels shall be designated with code complying graphics. All graphic elements shall be set flush in chair surfaces and shall be permanently affixed to the chair with dry adhesive.

2.10 ARMREST

- A. Provide armrest at each aisle and between chairs, designed for concealed mounting to standards.
- B. Armrests shall be of solid wood construction with exposed edges well rounded.
- C. Armrests at aisle end standards accepting concealed light elements shall be wider than intermediate armrests and shall be routed or coped to accept concealed light assembly.
- D. Attachment shall be with 2 keyhole slots plus 1 security screw, or countersunk fasteners on underside.

2.11 END PANEL LIGHTS

- A. Provide integral end panel lights in locations as shown on the drawings.
- B. End panel light shall be a low voltage LED luminaire that is recessed within the aisle end standard armrest.
- C. End panel LED strip light fixture:
 1. Visual Lighting Technologies – Catalog #ELL-1QL-1720-30-AL-OP2, WE1-0-6"-UL, 130 lumens, .9w, 83CRI, remote dimming driver AC-PWR-PB-DMX1 (Type L103 specification section 26 52 01)
- D. The end panel light on fixed chairs shall be pre-wired with No. 14 AWG wire with THHN type insulation, extending 24 inches beyond the end standard mounting foot. Provide a flex-steel conduit whip and fittings pre-attached to the interior of the end standard.
 1. Mounting of whip shall be tight to leg support/foot of aisle end standard, so as to be as unobtrusive as possible.
 2. Bright finishes of flex steel conduit shall be painted over with base color matching end standards to reduce visibility.

- E. The end panel light on removable chairs shall be pre-wired with black S or SO neoprene covered cable with L1-15 locking plug, extending 24 inches beyond the chair mounting foot. Provide fittings pre-attached to standard.
 - 1. Plug shall mate with floor box receptacle provided by Division 26.
- F. Provide low voltage DMX compatible transformers as required for installation under Division 26. Transformers shall be provided in quantities to allow for zoning of the aisle lights as shown on the drawings. Transformers shall be housed in a steel safety enclosure complete with primary and secondary fuses, terminal blocks and safety disconnect.
 - 1. End panel lighting and all associated power and transformers shall be inaudible under all operating conditions.
 - 2. Provide all necessary hardware for vibration isolation mounting. Mounting shall prevent vibration from being transmitted into the concrete slab. Assembly shall include:
 - a. Unistrut, bolts, washers and nuts
 - b. Mason Industries HLW multiple layer neoprene impregnated duck washers or equal.
- G. Provide one LED DMX compatible dimming driver per transformer / zone allowing smooth full to zero percent dimming for all aisle end panel lights. Drivers installed under Division 26.

2.12 NUMBER AND LETTER PLATES

- A. Provide seat number plates for seat location identification system corresponding to approved shop drawings.
 - 1. Plate type and finish to be manufacturer standard and shall be selected by the Architect.
 - 2. Font, color and text size information to be provided by the Architect.
- B. Provide row letter plates mounted to aisle end standards for seat location identification system corresponding to approved shop drawings.
 - 1. Plate type and finish to manufacturer standard and shall be selected by the Architect.
 - 2. Font, color and text size information to be provided by the Architect.
- C. Text fill shall be deep in color and consistent. Characters shall be centered on the plate.
- D. Fixing shall be by two-part epoxy adhesive.
- E. Number, letter plates located on wood finishes will be located in a recess resulting in an even flush surface across the wood finish and plate. Recesses will be identical in location, size and quality of workmanship.

2.13 DONOR PLATES

- A. Donor plates shall be 7/8" wide x 3" long, brushed bronze or aluminum.
- B. Fixing shall be by two-part epoxy adhesive.
- C. Donor plates shall be accommodated for all chairs and shall be located in a recess for flush mounting in all armrests near the rear of the armrest.
- D. Donor plates located on wood finishes will be located in a recess resulting in an even flush surface across the wood finish and plate. Recesses will be identical in location, size and quality of workmanship.

2.14 MOVABLE CHAIR BASES

- A. Designated chairs on the drawings shall be provided with low-profile steel platforms fitted with specially designed locking devices to provide for easy removal and re-attachment of the chair to accommodate conversion of the space for equipment access.
- B. Release/transport tool shall be provided to the Owner with each chair/platform.

2.15 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices, and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerances, fits and finishes.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which auditorium seating is to be installed, including condition of substrate to which seating standards are to be attached, and must notify the Architect in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.
- B. Surface Preparation: Prepare all surfaces as to manufacturer's recommendations. Comply with all industry standards regarding surface materials.

3.2 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- C. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- D. Install seats in locations indicated on approved shop drawings, with required clearances, elevations, and sightlines.
- E. Install standards in locations necessitated by seating layout with each standard attached to the substrate by no less than two (2) anchoring devices of recommended size.
- F. Install seats by mounting components to standards or brackets mounted on standards using industry approved hardware and fasteners.
- G. Seats in back rows with a wall behind them or seats with a balustrade behind them should be set forward by 4". Maintain aisle width.
- H. Contractor shall ensure that mounting bolts and assembly hardware are cut and capped and/or otherwise finished to achieve both a finished appearance to the installation and eliminate protrusions and sharp edges which could cut and tear.

3.3 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Installers must be appropriately skilled and experienced for the type and quality of work.
- C. Arrange for all tests and inspections required by the General Requirements.

3.4 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent project drawings prior to the demonstration indicated herein.
- B. Verify that moving components operate smoothly and quietly.

- C. Adjust seat uplift mechanisms to ensure that seats in each row are aligned when in upright position.
- D. Replace any upholstery damaged during installation.

3.5 CLEANING

- A. Touch-up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.6 CLOSEOUT ACTIVITIES

- A. Demonstration
 1. Upon completion of the installation work required by the work of this Section, the Contractor will notify the Architect that the work is complete, conforms to specification and is ready for Demonstration.
 2. Installed equipment shall be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 3. Installed seating shall be compared with the approved mock-up. They shall be identical in all respects.
 4. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 5. Cost of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor respective to the area of work concerned. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/ testing session.
- B. Training
 1. Following the equipment demonstration, inspection and final adjustments, the Owner's designated staff or representatives shall be instructed in the use, care and maintenance of all items.
 2. Schedule the instruction in conformance with project construction schedule and the availability of the Owner.

3.7 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

END OF SECTION

SECTION 126100 FIXED AUDIENCE SEATING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Standard-mounted, fully-upholstered chairs with hardwood-veneer shells and end panels, and upholstered inserts.

1.2 COORDINATION

- A. Coordinate layout and installation of electrical wiring and devices with seating layout to ensure that floor junction boxes for electrical devices are accurately located to allow connection without exposed conduit.
- B. Coordinate layout and installation of diffuser pedestals with HVAC work and with properties of diffuser pedestals to ensure alignment, proper air diffusion, and correct seat locations.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of components, and finishes for fixed audience seating.
1. Include electrical characteristics of electrical components, devices, and accessories.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Seating Layout: Show seating layout, aisle widths, row-lettering and chair-numbering scheme, chair widths, and chair spacing in each row.
 2. Accessories: Show accessories, including locations of left- and right-hand tablet arms, electrical devices, accessibility provisions, and attachments to other work.
 3. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Baked-on Coating Finishes: Manufacturer's standard-size unit, not less than 3 inches square.
 2. Wood and Plywood Materials and Finishes: Manufacturer's standard-size unit, not less than 3 inches square.
 3. Upholstery Fabric: Full width by 36-inch-long section of fabric from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.
 4. Row-Letter and Chair-Number Plates: Full-size units with letters and numbers marked.
 5. Aisle Lighting: Full-size unit.
 6. Exposed Fasteners: Full-size units of each type.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of fixed audience seating.
- B. Material Certificates: For each type of flame-retardant treatment of fabric.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fixed audience seating to include in operation and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS (ATTIC STOCK)

- A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Chair Seats: 2 percent of quantity installed.
 2. Seat Covers: 3 percent of quantity installed.

3. Chair Backs: 2 percent of quantity installed.
4. Back Covers: 2 percent of quantity installed.
5. Armrests: 2 percent of quantity installed.
6. Aisle Armrests: 2 percent of quantity installed.
7. Tablet Arms: 5 percent of quantity installed.
8. Chair Seat Hinges: 5 percent of quantity installed.
9. Fabric: 2 percent of quantity installed, and additional 36 yards for use with loose seats (provided by others).

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of seating required, including accessories and mounting components, from single source from single manufacturer.
 1. Upholstery Fabric: Obtain fabric of a single dye lot for each color and pattern of fabric required.
- B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 1. Build mockups for the following types of fixed audience seating including fabric, finishes, and accessories:
 - a. Double-seat mock-up with (1) aisle light.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- C. Preinstallation Conference: Conduct conference at Project site.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install seating until spaces are enclosed and weather-tight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary or permanent HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of seating layout and construction contiguous with seating by field measurements before fabrication.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fixed audience seating that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including standards, beams, and pedestals.
 - b. Faulty operation of self-rising seat mechanism.
 - c. Faulty operation of electrical components.
 - d. Faulty operation of tablet arm or structural failure of tablet arm.
 - e. Wear and deterioration of fabric and stitching beyond normal use.
 - f. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 2. Warranty Periods: As follows, from date of Substantial Completion.
 - a. Structural: Ten (10) years.
 - b. Seat Lift Operating Mechanism: Lifetime.
 - c. Electrical Components: One (1) year.
 - d. Plastic, Wood, and Paint Components: Five (5) years.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics of Upholstered Chairs:

1. Fabric: Class 1 according to DOC CS 191-1953 or 16 CFR 1610, tested according to California Technical Bulletin 117.
 2. Padding: Comply with California Technical Bulletin 117.
 3. Full-Scale Fire Test: Comply with California Technical Bulletin 133.
- B. Strength and Durability Performance: Chairs and components shall pass testing according to BIFMA X5.4.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 AUDIENCE FIXED SEATING

- A. Audience Fixed Seating: Interior assembly-space seating in permanent arrangement, as shown on Drawings.
1. Fabric Upholstered Chairs:
 - a. Rear Panel: Hardwood-veneer plywood, concealed fasteners.
 - b. Self-Rising Seat Mechanism.
 2. Chair Mounting Standards: Floor-mounted standards, type as indicated by model selection.
 3. End Panels: Hardwood-veneer plywood.
 4. Armrests: Hardwood, concealed mounting.
 5. Aisle Lighting Fixtures: Manufacturer's standard LED fixtures.
 6. Row-Letter and Chair-Number and Donor Plates: As selected by Architect from Manufacturer's standard types, with black embossed characters, mechanically-fastened.
 7. Accessible Seating: Provide removable chairs where wheelchair spaces are indicated.
- B. Products and Manufacturers:
1. IDEA Model WB-CS; by Series Seating.
 2. VIA Model WB-CS; by Series Seating.
 3. Century PAC, Model No. 6b.12seq.17bf.4; by Irwin Seating.
 4. Series 200; by Wenger Corporation.
 5. Hussey Quattro Chair System, Designer Model No. S5AS3H3APAFOW; by Hussey Seating Company.
 6. Concerto by KI.
 7. Aria by KI.

2.3 FIXED AUDIENCE SEATING

- A. Source Limitations: Obtain each type of seating required, including accessories and mounting components, from single source from single manufacturer.
1. Upholstery Fabric: Obtain fabric of a single dye lot for each color and pattern of fabric required.
- B. *Floor-Mounted, Two-Part, Fabric-Upholstered Chairs with Wood Seats, Back Panels, Armrests, and End Panels:*
1. *Basis-of-Design: Madison 2013-BW Reveal by Series Seating.*
 2. *Other Product: Symphony by Ducharme Seating International Inc..*
 - a. *Seat: Fully upholstered with wood panel.*
 - b. *Back: Upholstered with wood veneer panel.*
 - c. *Armrest: flat top with rounded edges. Arm to extend to front side of seat back.*
 3. *Other Product: Customized Allegro PAC Chair by Irwin Seating Company.*
 - a. *Seat: 12s Ergo Seat.*
 - b. *Model Number: 27hbsp.12se.14ex-bf.4 .*
- C. Accessible Seating: Where shown on theatrical seating plans, provide ADA transfer arms, arranged to swing rearward, creating sideways access to the chair. Aisle standards so equipped shall be provided with a label displaying an easily recognizable "handicapped" symbol.

2.4 MATERIALS AND COMPONENTS

- A. Hardwood Lumber and Veneer Faces:
1. Wood Species: Manufacturer's standard.

2. Wood Grain, Stain and Finish: Matching Architect's sample for WD-1, in accordance with Section 064000 - Architectural Woodwork.
 - a. Exposed wood shall be sanded smooth and stained to color selected with low-VOC water-based stain and top coat to provide with a high quality finish.
 3. Exposed Plywood: HPVA HP-1, Face Grade A, hardwood veneer core with color-matched hardwood-veneer faces, made with adhesive containing no urea formaldehyde.
- B. Upholstery Fabric:
1. Basis of Design: FABRIC-3, as indicated on Material Identification List.
 2. Provide extra material in accordance with Part 1 of this specification.
 3. Fire-Test-Response Characteristics: Class 1 according to DOC CS 191 and 16 CFR 1610.61, tested according to California Technical Bulletin 117.
 - a. ASTM E 84: Pass.
 - b. NFPA 255: Pass.
 - c. NFPA 701: Pass.
- C. Upholstery Padding: Flexible, cellular, cold-molded foam, in compliance with California Technical Bulletin 117.
- D. Metal Components:
1. Electrostatic epoxy-polyester oven baked powder coating.
 2. Thickness: 3mm.
 3. Color: Black, semi-luster.
 4. Grid adherence: 100%.
- E. Backs: Fixed height, pitched, upholstered backs.
1. Rear Panel: Manufacturer's 'Designer' panel
 - a. The rear of the back shall be 9/16", 7-ply, high-frequency glued, engineered hardwood with a wood veneer face surface and veneer edges. The back panel to be attached to inner panel by no less than 4 concealed fasteners to inner panel.
 2. Top Corners: 1/8-inch radius.
 3. Edge Reveal: 1-1/2-inch
 4. Back Height: Standard-style backs, 35 inches high.
 5. Back Pitch: Fixed, at varying angles. See Drawings for layout of units with varying back pitch.
 6. Padding Thickness: 2 inches.
 7. Assembly: Back to connect to steel frame structure by means of concealed fasteners.
- F. Seats: Self-rising upholstered seats.
1. Seat Foundation: 7/8" diameter 11-gauge tubular steel frame and 1" x 1/2" solid steel counter-weight plates with flexible support webbing.
 2. Seats shall be fully encapsulated in cold-cured sculptured molded foam.
 - a. Foam cushioning shall be minimum 3.4 lbs per square inch.
 - b. Overall Seat Thickness: nominal 4 3/4"
 3. Chair Seat Hinges: Self-lubricating, compensating type with noiseless self-rising seat mechanism passing ASTM F 851 and with positive internal stops cushioned with rubber or neoprene.
 4. Self-Rising Seat Mechanism: Counter-balanced gravity-lift
 5. Chair-Number Plates: Manufacturer's standard aluminum with black embossed characters.
 - a. Attachment: Manufacturer's standard method.
 - b. Provide ADA signage.
- G. Standards for Floor-Mounted Chairs: One-piece heavy-tube or reinforced steel sheet with welded mounting plate and welded connections for seat pivots, backs, armrests, and end panels. Standards to have wood veneer finish to match end panels.
1. Steel: ASTM A 36 plates, shapes, and bars; ASTM A 513 mechanical tubing; ASTM A 1008 cold-rolled sheet; and ASTM A 1011 hot-rolled sheet and strip.
 2. Metal Finish: Finish exposed metal parts with manufacturer's standard minimum 2-mil- thick, baked-on powder coating.
 - a. Color: As selected by Architect from manufacturer's full range.
 3. Wood Veneer Finish: As specified above.

- H. Armrests: Flat hardwood with 1/8" radiused edges, concealed mounting. Integral to end panel and matching intermediate standards.
- I. Tablet Arms: Manufacturer's standard-size foldaway tablet arm with plastic-laminate writing surface over medium-density fiberboard or plywood core and with rounded, matching PVC edges.
 - 1. Provide at all seats in Recital.
 - 2. Mounting: Right-hand mounted unless otherwise indicated.
 - 3. Fold-Away Mechanism: Cast-iron or steel hinge and swivel mechanism that give positive support in open position and semiautomatic return to stored position below arm block and parallel to chair.
- J. End Panels: Hardwood-veneer plywood with MDF core rectangular panel to floor, 2-inches thick, with square corners.
 - 1. MDF Core: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde
 - 2. Row-Letter Plates: Manufacturer's standard aluminum with black embossed characters.
 - a. Attachment: Manufacturer's standard method.
 - b. Provide ADA signage.
- K. Aisle Lighting Fixtures: Manufacturer's standard concealed LED aisle lighting at every chair on an aisle.
 - 1. LED's: Color temperature of 2700K.
 - 2. Power: 12 V.
 - 3. For low-voltage lighting, provide manufacturer's voltage-reduction device housed in safety enclosure equipped with fuses, terminal blocks, and safety disconnect.
 - 4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 5. Refer to electrical drawings for additional information.

2.5 FABRICATION

- A. Floor Attachments: Fabricate to conform to floor slope, if any, so that standards and pedestals are plumb and chairs are maintained at same angular relationship to vertical throughout Project, unless noted otherwise.
- B. Upholstery: Fabricate fabric-covered cushions with molded padding beneath fabric and with fabric covering free of welts, creases, stretch lines, and wrinkles. For each upholstered component, install pile and pattern run in a consistent direction.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine floors, risers, and other adjacent work and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Examine locations of HVAC supply ducts.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install seating in locations indicated and fastened securely to substrates according to manufacturer's written installation instructions.
 - 1. Use installation methods and fasteners that produce fixed audience seating assemblies with individual chairs capable of supporting an evenly distributed 600-lb static load without failure or other conditions that might impair the chair's usefulness.
 - 2. Install standards and pedestals plumb.
- B. Install seating with chair end standards aligned from first to last row and with backs and seats varied in width and/or spacing to optimize sightlines.

- C. Install riser-mounted attachments to maintain uniform chair heights above floor.
- D. Install chairs in curved rows at a smooth radius.
- E. Install seating so moving components operate smoothly and quietly.
- F. Install wiring conductors and cables concealed in components of seating and accessible for servicing.

3.3 INSTALLED WORK

- A. Adjusting:
 - 1. Adjust chair backs so that they are at proper angles and aligned with each other in uniform rows.
 - 2. Adjust hardware and moving parts to function smoothly so they operate easily. Lubricate bearings and sliding parts as recommended in writing by manufacturer.
 - 3. Adjust self-rising seat mechanisms so seats in each row are aligned when in upright position.
- B. Repair and Replacement:
 - 1. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.
 - 2. Replace damaged and malfunctioning components that cannot be acceptably repaired.
 - 3. Replace upholstery fabric damaged during installation or work of other trades.

END OF SECTION

SECTION 126600 RETRACTABLE BLEACHER SYSTEM AND SEATING

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes Retractable Bleacher System and Seating within the following spaces:
 - 1. Studio Theatre
- B. Section Includes:
 - 1. Major Systems and Equipment: furnish and install the following major elements and associated accessories:
 - a. Telescoping seating system
 - 1) Floor mounted fold down seating
 - 2) Movable floor mounted seating
 - 3) Guard rails
 - 4) Side closure panels
 - 5) Intermediate steps
 - 6) Aisle lighting
 - b. Fabric storage cover
 - 2. Work Results:
 - a. The equipment installed as a part of this Section shall result in a complete and working and code compliant retractable seating system.
 - b. Provide fully coordinated and engineered equipment, installation, supervision and commissioning for the major systems and associated accessories as required for each space.
 - c. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related drawings.
 - d. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
- C. Products Supplied But Not Installed Under This Section:
 - 1. Extra materials as listed in Paragraph 1.7A, Extra Materials.
- D. Related Requirements
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
 - 2. Examine Contract Documents for requirements that directly affect or are affected by Work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - 1) 012300 - Alternates
 - b. Division 03 – Concrete
 - c. Division 04 – Masonry
 - d. Division 05 – Metals
 - e. Division 09 – Finishes
 - f. Division 11 – Equipment
 - 1) Section 116123 – Theatrical Platforming
 - 2) Section 116143 – Theatrical Draperies
 - 3) Section 116163 – Theatrical Lighting Systems Dimming and Control
 - g. Division 12 – Furnishings
 - 1) Section 127100 – Portable Seating
 - h. Division 26 – Electrical
 - 1) Section 265561 – Theatrical Systems Electrical Requirements

- 2) Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation
- 3) Terminations and testing of system continuity

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.
- B. Alternates
 1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. <<TBD>>
 2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

- A. Abbreviations:
 1. The following abbreviations and acronyms are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. UL: Underwriters Laboratories
- B. Definitions:
 1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theatre Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation for the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location(s) on the project site.
 - i. “Provide”: Furnish and install complete.
- C. Reference Standards:
 1. Refer to Division 01 for general project references and standards.
 2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
 3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.

4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.
6. The following standards apply to the work of this Section. It remains the Contractor's responsibility to confirm and comply with all industry standards that are applicable to the work of this Section.
 - a. International Building Code 2012
 - b. Americans with Disabilities Standard for Accessible Design
 - c. Local Authority Building Regulations
 - d. Local Authority Licensing Regulations

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.
- B. Pre-Installation Meeting:
 1. Refer to Division 01 - General Requirements for information regarding pre-installation meeting with the General Contractor.
- C. Sequencing
 1. The delivery and installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work under this section may be installed, including:
 - a. Installation of associated electrical work (see Electrical Drawings)
 - b. Completion of application of all interior wall and floor finishes.

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.
- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Drawing markups will be provided on PDF files provided by the Contractor or on paper drawings which shall be scanned and returned electronically.
- F. Provide full insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Review all pertinent project Contract Documents. Following this review, provide to the Architect and General Contractor any additional information required to make a fully functioning system. In addition, the Manufacturer shall indicate maximum accepted wire size as it relates to termination points on their equipment.
- H. Prior to fabrication, it shall be the responsibility of the contractor to provide a complete submittal for approval within 90 days of award of contract.
- I. Product Data
 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 2. Clearly indicate specific component and applicable options.
- J. Shop Drawings

1. Provide shop drawings on D size minimum (24" x 36") sheets.
2. Include a cover sheet with a drawing index including sheet number and title for each sheet in the set.
3. Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
4. Provide ¼" = 1'-0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity which may affect work of this Section.
5. Provide ½" scale details showing relationship of seat rows, indicating seat back to back spacing and clear aisle accessway.
6. Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
7. Provide plan of row letter and seat number layout.
8. Provide requisite schematics, plans and sections indicating assembly and installation of components.
9. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
10. Indicate all elements with appropriate safety factors and/or safety equipment.
11. Indicate recommended load limits for each element in the system with loading requirements.
12. Indicate Safe Working Load for each element in the system with loading requirements.
13. All elements shall be engineered, approved and drawings stamped by a Professional Engineer licensed in the project jurisdiction. The engineer shall verify that the equipment supplied under this section meets or exceeds the design criteria of this specification.
14. Provide power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components. These shall be provided within 30 days of Contract Award.
15. Provide a full Bill of Materials to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.

K. Samples:

1. Submit samples for approval as per the approved project schedule.
2. Submit samples of each of the following elements in each color, finish, pattern and texture indicated within 30 calendar days of contract award. If qualities of an element have not been specifically indicated herein, submit manufacturer's color charts or samples of actual materials indicating the full range of standard colors, finishes, patterns and textures available. The samples shall include, but are not limited to:
 - a. 30-inch square "quality" sample of platform carpeting.
 - b. 30-inch square "quality" sample of seat fabrics.
 - c. Manufacturer's color charts or actual samples of electrostatically applied powder finishes to be used on exposed parts.
 - d. Wood stain and other color choice samples as listed herein.
3. Additional samples must be submitted within 14 days of Architect's written request.

L. Certificates

1. Provide manufacturer's certificate stating materials meet fire performance characteristics specified herein.
2. Provide test certificates for specified performance testing.

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents:

1. Submit documents in accordance with Division 01 - General Requirements.
2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
3. Within 60 days of the acceptance testing, submit one (1) set of reproducible "as built and approved" drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.

4. Submit operation and maintenance manuals with the “as built and approved” drawings. These manuals shall include all comments and adjustments made during the acceptance and review processes. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for all component parts
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces
 - e. Provide specific recommendations for cleaning upholstery, including precautions against materials and methods which could damage upholstery fabric.
 5. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 6. Certificates of flame resistance as required herein.
 7. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- C. The record documents shall be reviewed by the Architect and Theatre Consultant, and all modifications to the documents stemming from this review shall be made as required.
- D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials:
1. Deliver stock of maintenance material to Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. Complete seat back and bottom in a quantity equal to five percent (5%) of each type of chair provided, with material prorated to sizes of chairs used.
 - b. Seat and back fabric or fabric covers in a quantity equal to five percent (5%) of each type of chair provided, with covers prorated to sizes of chairs used.
 - c. Spare aisle lighting assemblies for 25% of aisle lights installed.
 - d. Touch-up paint for all exposed metal surfaces.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
1. Refer to Division 01 – General Requirements.
- B. Qualifications
1. All equipment and installation to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication, assembly and integration of telescopic seating systems for the theatre, and be regularly engaged in the fabrication of such equipment. Fabrication of such equipment shall comprise no less than 90% of the Contractor's business.
 2. The Contractor's Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the Contractor. The Project Manager shall be the primary conduit for all information between the supplier of this equipment and the General Contractor. All information given to the Project Manager shall be considered as given to the Contractor.
 3. The Contractor shall have been continuously engaged in the fabrication, integration and installation of theatrical telescopic seating systems for no less than five years.
 4. The Contractor shall have under their control all parts composing the complete chair including castings, steel, plywood, fabric, and accessories, as well as mounting and installation components. Contractor shall do all fabrication and coordinate installation, shall maintain thorough test and inspection procedures to assure uniform high quality of all raw materials used as well as the finished product.

5. The Contractor shall have, at the time of bid, a current Contractor's License and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of work of this contract.
6. Contractor is responsible for proper installation, operation and safety of all component equipment.
 - a. Equipment must be procured as specified. Non-specified items may be procured from any nationally recognized manufacturer.
 - b. Metalworking may be done by others. Responsibility in all respects shall be that of the Contractor.
7. The Contractor shall verify all system design loads.
8. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

C. Mock-Ups:

1. Following approval of shop drawings and samples indicated above, and prior to fabrication, a mock-up shall be provided for quality review, verification and testing by the Architect, Theatre Consultant and Owner.
2. The mock-up for quality review shall meet the following criteria:
 - a. Provide one seating tier assembly showing all specified components, including end closures and fascias. Unit shall be mounted to a carpeted deck as specified herein, with specified nosings, fascias, steps, aisle lights and railings.
 - b. The mock-up shall be of 2 chairs including selected fabric, finishes, etc. The mock-up should include the extreme widths of chairs to be provided. Both chairs in the mock-up shall include fully functional locking mechanism.
3. Fabrication will not proceed until written approval of all mock-ups has been received from the Architect.
4. It shall be the Contractor's obligation to provide shipping of the mock-up to the Architect's office and, following installation, to the job site. Following approval of the finished installation, the mock-up shall be turned over to the Owner.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 1. All equipment shall be appropriately and substantially packed for shipment.
 - a. Packaging should include humidity resistant wrapping with desiccant as appropriate to protect contents.
 2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
 3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 2. The Contractor shall be responsible for acceptance of the system components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protection
 1. Upon delivery, the materials shall be stored in their original cartons under protective cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.

2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions
 1. Verify all conditions at job site. Promptly report variations and obstructions to the Architect. All additions and/or corrections are to be requested prior to fabrication.
- B. Environmental Requirements
 1. Coordinate all environmental requirements for all materials provided and installed under this contract.
- C. Field Measurements
 1. Field measurements must be taken prior to preparation of final shop drawings and prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
 2. Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.11 WARRANTY

- A. Comply with the warranty requirements of Division 01 and the following.
- B. The Contractor shall warrant materials and workmanship of systems and equipment as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of one (1) year following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.
- C. The Contractor shall warrant the workmanship of the installation services provided under this Section for a period of one (1) year following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and services of this section shall be by one of the following manufacturers:

Jezet Seating Ltd.
Siberiëstraat 10
3900 Overpelt
Belgium

Jezet Seating - US Contact
802 Berwick Crescent
Town of Mount Royal, QC H3R 2K9
Canada
Tel: +1-514-518-8701

- B. Substitution Limitations

1. Any contractor who wishes to be listed, and has not been pre-approved, must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
 - a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

2.2 SYSTEMS DESCRIPTION

- A. The following performance spaces shall contain the following major system components listed below and as shown on the TS-series drawings:
1. Studio Theatre
 - a. A single retractable seating unit with fold-down chairs shall be provided, as shown on the drawings.
 - b. Movable seats in groups of 2 or 3 with self-rising seat pans shall be provided for use on the top row of the seating unit, as shown on the drawings.
 - c. Unit shall store under architectural room elements as shown on drawings.
 - d. The stored depth of the complete riser unit, with seats, shall not exceed 60" under any circumstances.

- e. Provide wood fascia panels permanently mounted to the front of the seating risers to provide a finished architectural face when the unit is stored.
- B. The seating layout drawings indicate acceptable seat widths and quantities at each width. Proposed manufacturer's alterations from this layout shall be explained in the shop drawings.
- C. Layout Requirements:
1. Seating layout shall conform to critical aisle dimensions as indicated on the Drawings. These dimensions are based on project code requirements.
 2. Actual makeup of rows and requisite seat widths shall be the responsibility of the Contractor and shall be based on the Contractor's own field measurements and Theatre Consultant's review of final shop drawings.
 3. The chairs must stagger from row to row on the centerline of the seating unit to maximize vertical sightlines. End of rows shall align as indicated on the Drawings.
 4. In rows that contain varying width chairs, the following criteria shall generally be followed:
 - a. A narrow seat is to be mounted adjacent to an aisle.
 - b. A wide seat is to be mounted adjacent to side-walls or railing.
 - c. The remaining varying width seats shall be distributed throughout the row so that the narrow seats are not mounted adjacent to one another and the overall quantity is at the absolute minimum.

2.3 DESIGN CRITERIA

- A. Retractable Bleacher System:
1. Each individual assembly shall be designed to support and resist, in addition to its own weight, the following forces:
 - a. Seats and decking shall be designed to resist a live load of 120 lbs. per linear foot.
 - b. 100 lbs. per square foot of live load.
 - c. Side sway load of 24 lbs. per linear foot of row.
 - d. Front to rear sway load of 10 lbs. per linear foot of row.
 2. Railings shall be designed to withstand the following horizontal forces applied separately:
 - a. 50 lbs. per foot acting outward at top rail.
 - b. 25 lbs. per foot acting outward at mid-rail.
 3. American Institute of Steel Construction (AISC), and Aluminum Association (AA) design criteria shall be the basis for all calculation of member sizes and connections.
 4. Wood members shall be designed in accordance with National Forest Products Association's National Design Specification for Wood Construction.
 5. All drive components shall be designed with a safety factor of 3x.
- B. Seating:
1. Seats:
 - a. Seats shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed minimum of 600 lbs. static load located 3" back from the front of the seat without deflection.
 - b. Seats shall be tested and professionally certified through an independent testing laboratory to withstand 300,000 operating cycles without added lubrication, spring fatigue or measurable bearing wear.
 - c. Seats shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 100,000 impacts of a 40 lb. sandbag dropped equally from heights of 6", 8", 10" and 12".
 - d. All up-stops and down-stops shall be completely concealed.
 2. Backs:
 - a. Backs shall withstand an evenly distributed front or rear load of 450 lbs.
 - b. Backs shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 40,000 alternating swinging impact cycles by each of 2 opposing 40 lb. sandbags. Sandbags shall be moved horizontally and equally through various distances of 6", 8", 10" and 12" at 35 cpm.
 3. Arm rests:

- a. Armrests shall be tested and professionally certified through an independent testing laboratory to accept a 250 lb. sandbag placed at the front of the armrest with no deflection.
 - b. The same test shall be performed on the rear of the armrest.
- C. Fire Performance Characteristics:
- 1. Flame Retardant performance: Upholstery components and the assembly thereof shall be in conformance with flammability standards as set forth in California Technical Bulletin #117.
 - 2. Padding: Provide new (prime manufacture) polyurethane foam with an average burn length not exceeding 8" and average flame time after removal of flame source not exceeding 15 seconds, with drippings from test specimen not continuing to flame for more than 5 seconds after falling, when tested vertically in compliance with Federal Test Method Standard 191, Method 5903.2.
 - 3. Fabric to comply with 16 CFR Part 1610 Class I.

2.4 MATERIALS

A. General

- 1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
- 2. All equipment to have pertinent labels.

B. Materials shall conform to the following minimum standard specifications:

- 1. Gray Iron Castings: ASTM A48, Class 25.
- 2. Steel Plates, Shapes, and Bars: ASTM A36.
- 3. Steel Sheets for Baked Enamel Finish: ASTM A591, commercial and drawing quality; Class C, galvanized-bonderized; 20 gauge minimum unless otherwise indicated.
- 4. Expansion Bolts: FS FF-B-588; Type, Class, and Style as recommended by the chair manufacturer.
- 5. Concealed Plywood: PS 1/ANSI A199.

C. Electrical

- 1. All internal wiring shall be factory completed and clearly marked. All field connections shall be by compression connector, terminal strip or other device specified herein. All terminal strip connections shall be clearly labeled as to terminal designation. Insulated wire ferrules are to be used whenever possible for wire termination. Wire nut splices not permitted.
- 2. All wire sizes and insulation to comply with Underwriters Laboratory and all applicable standards and local codes.
- 3. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.

D. Finishes

- 1. Finish for all exposed metal parts shall be selected from the manufacturer's standard color line to be chosen by the Architect.
- 2. Finish for all exposed plastic parts shall be selected from the manufacturer's standard color line to be chosen by the Architect.
- 3. Exposed wood (including plywood): Manufacturer's standard hardwood, free of visible defects. Color shall be stain per Architect. Species shall be as specified. Seal with lacquer.
- 4. Fabric:
 - a. Upholstery fabric to be selected from the manufacturer's standard line to be chosen by the Architect.
 - b. Fabric color to be selected from the manufacturer's standard color line to be chosen by the Architect.
 - c. Flame Retardant: Meets Class "A" flamespread rating in accordance with American Society of Testing Materials-E84, NFPA #255, UBC #42-1, and Underwriters Laboratory #723.
 - d. Light Fast: Exceeds 48 hour NAFM requirement. Test method A.A.T.C.C.-16A
- 5. Carpet shall be selected from the manufacturer's standard color line to be chosen by the Architect.
- 6. Cushions: Seat and back cushions made of open cell polyurethane foam.

2.5 RETRACTABLE BLEACHER SYSTEM

A. General

1. Retractable bleacher system shall be multiple tiered seating rows comprised of folding seat and deck components, risers, railings and supportive understructure.
2. Seating platforms shall operate on the telescopic principle, stacking vertically in minimum depth floor area when not in use.
3. Telescopic riser system shall be designed to allow the use of any quantity of leading rows separately without the full extension of the system.
 - a. Structural integrity of the system shall not be compromised when partially deployed.
 - b. Seats shall fully deploy with full range seat/back raise and lower without requiring any portion of an unused row to be deployed.
4. Chair systems: Fixed chairs shall be individually mounted on a folding stanchion on the telescoping riser platforms; multiple chairs supported on a single beam shall not be acceptable.
5. When seat backs are folded down in their storage mode, the uppermost portion of the seat back shall store within the height constraints of the treads.
6. Guard rails shall be permanently attached to riser unit and shall fold down for storage. Railings and their interface with decking shall be vertical and plumb with one another in each successive platform level.
7. Telescopic step units shall incorporate nose mounted integrated low voltage aisle lights at each platform level. System shall include individual switch contacts to allow illumination of aisle lights in deployed rows only.

B. Telescopic Platform Risers

1. The structure shall be made of welded rectangular steel tubes.
2. Transversal stiffness shall be ensured by (2) 1½" x 1¼" x ⅛" (40mm x 30mm x 3mm) steel tubes on both sides of each platform and an additional 1½" x 1¼" x ⅛" (40mm x 20mm x 3mm) tube. Each tube shall be minimum 18" (500mm) in length.
3. All welds shall be made at the factory by welders that are certified on the equipment and process used.
4. Moving rows shall be guided by horizontal roller bearings, fixed underneath the platform.
5. Decking and deck supports form rigid closed deck structure providing positive containment. Deck structure shall be fabricated leaving no opening such that any major human extremity or other items could pass either accidentally or deliberately.
6. Decking: Shall be fabricated from 11/16" nominal plywood with exterior glue, 5 ply, all plies Group 1 plugged crossband under face, produced in conformance with PS-1-74 of the National Bureau of Standards. Decking shall be through bolted to deck stiffeners, doublers, and frame cantilevers for structural integrity, including transmittance of sway forces to the understructure. Cover decking with carpet.
7. Fasteners: All structural connections that are not welded shall be made with S.A.E. stress rated bolts and self-locking nuts.
8. Steel structure shall be coated with an anti-corrosive polyester powder coating.
9. The nose of the platforms shall be equipped with a 1" x 1" x 1/16" (26mm x 26mm x 2mm) slip resistant anodized aluminum edging. Color to match carpet.

C. Automatic Platform Securing System

1. The platforms shall automatically lock upon opening and unlock upon closing.
2. At the rear of each platform, a spring operated 13/16" diameter steel shaft shall automatically interlock into a receptacle in the platform above it.
3. Upon retraction, each platform shall automatically cause the shaft to disengage.

D. Guiding System and Supports

1. The supports of each platform shall be composed of 100mm x 40mm x 4mm vertical columns/tubes welded to the lower guide section.
2. The support tubes shall be bolted to an adjustable upper shaft to allow the platforms to be adjusted during installation.
3. Between the vertical columns and the platforms, sway braces of 40mm x 40mm x 2mm steel tube shall be bolted to ensure lateral stability.
4. All parts shall be finished with an anti-corrosive polyester powder coating.

5. The lower guide sections shall have (4) 140mm x 44mm (5-1/2" x 1-3/4") polyurethane wheels, equipped with roller bearings.

E. Aisle Steps

1. Aisle steps shall be made by fitting intermediate steps on the platforms. Step height shall be one half the rise from one platform to the next.
2. Tread depths shall be uniform throughout the run of the aisle stair and shall comply with all applicable national, state and local codes.
3. Steps shall have a locking mechanism to securely attach them to the platforms without tools.
4. The same carpet that covers the platforms shall cover the steps and shall be bound at all edges using an anodized extrusion or angle, with non-slip surface and recessed fasteners.
5. All step edges shall have a 1" x 1" x 1/16" (26mm x 26mm x 2mm) anodized aluminum anti-slip edging with integrated LED step light.

F. Guard Rails

1. All guard rails shall comply with all applicable national, state and local codes with respect to dimension, graspable rail diameter, height, etc.
2. Provide graspable handrail at each aisle.
3. Side guard rails shall be permanently affixed to the platforms with a hinged base allowing them to "self store", folding inward over the seating.
4. Storage of the railings shall not impede the telescopic action and storage of the entire seating system.
5. Guard rails shall be positively latching, using a system similar to the latching/release devices used to secure the chair stanchions.
6. Color as listed below, per Architect. Sample to be approved by Architect before fabrication:
 - a. Studio Theatre: Per Architect

G. Side Closure

1. The open end of the structure facing the egress path in and out of the performance space shall be provided with a removable velour fabric closure system.
 - a. Velour shall be inherently flameproof and shall be a polyester-based woven product.
 - b. Mounting of the velour side closure shall rely on a Velcro fastening system with contact points at the platform structure and matching adhesion points sewn tight to the fabric hem.
 - c. All edges of the side closure shall be hemmed with a 4" minimum hem with interfacing to provide additional support and wear resistance.
2. Color as listed below, per Architect. Sample to be approved by Architect before fabrication:
 - a. Studio Theatre: Black

H. Wall Fastening System

1. Telescopic seating system shall be fastened to the rear wall by a folding or sliding steel channel and metal clamp lag bolted to the wall by 2 lag bolts and an adjustable clamp attached to the supports of the last platform of the retractable seating system.
 - a. Studio Theatre: Clamp system may be installed at floor or at top level of storage area.
2. Unit shall be designed to allow the full platform to move out from the wall.
3. Clamps will be attached with a pin to allow the retractable seating system to begin the deployment of the leading rows and move away from the wall the fixed distance shown in the drawings to deploy the last row.
4. Coordinate all required rear wall backing with the General Contractor.

I. Cable Management System

1. Motor drive control/power and aisle light power for telescopic seating system shall managed by a cable festoon system utilizing a C-track and 3" cable trolley.
 - a. 14 gauge steel C-track
 - b. Steel trolleys with 4 shielded ball bearing wheels
2. Mount to underside of gallery/storage area.
 - a. Verify construction and tolerances in the field
 - b. Maintain clear head height, where required, as indicated on the drawings
3. Unit shall be designed to allow the full platform to move out from the wall.

J. Electric Motors

1. Retractable seating system shall be driven by a friction drive mechanism fixed to the underside of the first platform.
2. 4 rubber roller chains will be driven by 3-phase a-synchronous reduction motors.
3. Motor power shall be provided via 3-phase receptacles located in the rear wall of the platform storage alcove.
4. Coordinate all electrical requirements with the Electrical Contractor.
5. Control of the retractable seating system shall be via a low voltage control pendant.
6. A pendant receptacle shall be concealed in the front of the first platform.
7. The pendant control shall enable both deployment and storage of the platform system, as well as left/right motor control adjustment to provide operator control over alignment should the system require it.
8. Entire motor unit shall be UL listed.
9. Provide a 25'-0" cable with the control pendant.

K. Aisle Lights

1. Provide UL approved low voltage warm white LED aisle lighting fixtures for installation centered in face of intermediate aisle risers.
2. Provide nose mounted low voltage fixture. Provide required transformers to be mounted within the telescopic platform system.
 - a. Aisle lighting shall comply with all local codes with respect to egress path lighting of 0.2 footcandles, continuous along the entire egress path, or as required for public assembly seating at the time of contract.
3. Step lights shall be provided on intermediate steps and telescoping steps
 - a. Intermediate steps shall have a coiled cord and plug that mates to a receptacle on seating riser face arranged so that installed step covers the cord, plug and receptacle. Cord shall have length sufficient to install and remove step and plug.
4. Aisle light dimming shall be controlled by the theatrical lighting system via DMX-512
5. Provide contact switches at each telescopic riser row arranged to switch on aisle lights for deployed rows only.

2.6 SEATING

A. Upholstered Chairs

1. The basis of design for the upholstered chair shall be the following with special components as indicated herein or an approved equal:
 - a. Studio Theatre
 - 1) Basis of design appearance:
 - (a) Jezet model TBD (Livio equivalent)
 - 2) Upholstered back with wood back panel, Finish TBD
 - 3) Upholstered seat with wood bottom, Dark Finish TBD
 - 4) Solid wood arm rests on steel supports, Finish TBD
 - 5) Exposed metal finish to be selected by Architect
 - 6) Fabric: per Architect
 - (a) Color TBD
 2. General:
 - a. The chair seating system shall be a self-storing system allowing individual chairs to fold down or be raised into a locking position on individual T-shaped tubular steel supports. A foot pedal shall be provided at each single tube stanchion to lock/unlock the chair assembly position.
 - 1) An inclined central tube of 40mm x 40mm x 3mm steel shall be welded to a 40mm x 40mm x 3mm horizontal tube.
 - 2) Two seat holders shall be welded to the horizontal tube.
 - 3) The back shall be mounted to the support by two ribbed pins.
 - 4) The supports shall be bolted to a foot which will contain the folding and locking mechanism.
 - 5) The foot shall be bolted to the platform with 4 bolts, nuts and washers.
 - b. All component parts of chair modules (except stanchions) shall be interchangeable for telescopic platform chairs.

- c. Seats and backs shall have internally supported peripheral heavy gauge steel frames. The frames shall support, resist and transmit design loads to the rectangular steel chair stringer without excessive deflection of noise.
3. Seat Bottom:
 - a. The seat bottom shall be fabricated using molded foam cushions for maximum comfort, using materials which are carefully selected to be free of defects, objectionable projections, or irregularities.
 - b. Smoothly round corners, edges, and exposed fasteners, to present least possible snagging and pinching hazards.
 - c. Seats shall be automatic lift with for ease of row passage and janitorial access. Chairs shall have 100% seat bottom and arm fold.
 - d. Provide heavy-duty steel hinges of compensating type, each equipped with noiseless adjustable seat lifting device; provide for seat rotation on bushings which do not require lubrication, and have a positive internal return stop of rubber or neoprene.
 - e. The seat upholstery shall be without wetting.
 - f. The underside of the seats shall be exposed finished plywood with no exposed hardware or fully upholstered with same fabric as other components as required for each space.
 4. Backs:
 - a. Fabricate back as padded, upholstered component with ergonomically shaped plywood back panel.
 - b. Provide hardwood veneer ply rear panel.
 - c. The upholstery panel shall be comprised of a medium density virgin urethane foam, not less than 1" thick, on a precision die tempered hardboard backer fitted with concealed nylon fasteners. The fabric cover shall be tensioned over and neatly enclose both foam and backer.
 - d. The back upholstery unit shall be removable for service without the necessity of chair back disassembly.
 5. Chair Standards:
 - a. The chair standards shall be fabricated of continuously welded closed seam steel tube.
 - b. The standards will be engaged in pivotal, riser support brackets. Each chair module will be supported between two standards on a central stanchion. The pivotal brackets shall automatically lock the chair in the upright use position and the seat deploy shall actuate arm rests.
 - c. Manual operation (with pneumatic assisted stanchions) system to raise groups of chairs (up to a maximum of 4 chairs at one time). Unlocking shall be done from a foot lever at the central stanchion.
 6. Arm Rests:
 - a. Provide arm rest at each aisle and between chairs, designed for concealed mounting to standards.
 - b. Arm rests shall be solid hardwood on metal construction or fully upholstered hardwood as required by each space. Sample to be approved by Architect before fabrication.
 - c. The finish color of the arm rests shall be chosen by the Architect from the manufacturer's standard color line of stains and sealers.
- B. Number and Letter Plates:**
1. Provide seat number plates for seat location identification system corresponding to approved shop drawings.
 - a. Plate type and finish to be manufacturer standard and shall be selected by the Architect.
 - b. Font, color and text size information to be provided by the Architect.
 2. Provide row letter plates for seat location identification system corresponding to approved shop drawings.
 - a. Plate type and finish to be manufacturer standard and shall be selected by the Architect.
 - b. Font, color and text size information to be provide by the Architect.
 3. Text fill shall be deep in color and consistent. Characters shall be centered on the plate.
 4. Seat number plates to be recess mounted in the center of the front edge of the seat pan and fastened with rivets.
 5. Fixing shall be by two-part epoxy adhesive.
 - a. If mounting fasteners are approved, they shall match finish of number/letter plates.

- C. Number, letter plates located on wood finishes will be located in a recess resulting in an even flush surface across the wood finish and plate. Recesses will be identical in location, size and quality of workmanship.

2.7 MOVABLE SEATS

3.0 DONOR PLATES

- A. Donor plates shall be 7/8" wide x 3" long, brushed bronze or aluminum.
- B. Fixing shall be by two-part epoxy adhesive.
- C. Donor plates shall be accommodated for all chairs and shall be located in a recess for flush mounting in all armrests near the rear of the armrest.
- D. Donor plates located on wood finishes will be located in a recess resulting in an even flush surface across the wood finish and plate. Recesses will be identical in location, size and quality of workmanship.

2.8 SOURCE QUALITY CONTROL

- A. All equipment and components to be factory tested prior to shipping.

2.9 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine-finish all operating parts to standard trade tolerance, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of the "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction (AISC).

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the Architect in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.2 INSTALLATION

- A. Install all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- C. Position all items accurately as indicated on drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- D. Install chairs in locations indicated on approved shop drawings, with required clearances, elevations, and sightlines.
- E. Install standards in locations necessitated by seating layout with each standard attached to the substrate by no less than two (2) anchoring devices of recommended size.
- F. Install chairs by mounting components to standards or brackets mounted on standards using industry approved hardware and fasteners.

3.3 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Installers must be appropriately skilled and experienced for the type and quality of work.
- C. Arrange for all tests and inspections required by the General Requirements.

3.4 SYSTEM STARTUP AND COMMISSIONING

- A. Commissioning
 - 1. Upon completion of installation work required by the work of this Section, the Contractor shall perform all required tests and inspections, including but not limited to the Compliance Testing Procedures specified herein.
 - 2. Contractor shall supply all equipment required for the commissioning process including access equipment (personnel lifts, ladders and appropriate protective equipment), test instruments and communications equipment.
 - 3. Contractor shall provide staff to assist in the commissioning process.
 - 4. Compliance Testing Procedures (CTP)
 - a. Retractable Seating System
 - 1) Deploy seating system
 - (a) Conduct visual inspection of all mechanical, electrical and, as required, hydraulic/pneumatic connections
 - (b) Raise and lower all seats on fully deployed system
 - 2) Retract seating system
 - 3) Deploy each row individually and successively, row by row
 - (a) Raise all seats in last deployed row to check that seats fully deploy and that seat bottom/back raise lower function is not limited by stored rows behind it
 - (b) Repeat for each additional deployed row
 - 4) Review aisle light function

3.5 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent project drawings prior to the demonstration indicated herein.
- B. Verify that moving components operate smoothly and quietly.
- C. Adjust seat uplift mechanisms to ensure that seats in each row are aligned when in upright position.
- D. Replace any upholstery damaged during installation.

3.6 CLEANING

- A. Touch-up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the Owner.

3.7 CLOSEOUT ACTIVITIES

- A. Demonstration
 - 1. Upon completion of Commissioning, the Contractor will notify the Theatre Consultant that the system is complete, conforms to specification and is ready for Demonstration.
 - 2. Installed equipment to be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 - 3. Installed seating shall be compared with the approved mock-up. They shall be identical in all respects.
 - 4. The Theatre Consultant will perform the tests listed in the Compliance Testing Procedures to verify compliance with specifications.

5. Contractor shall provide staff to assist in the Demonstration, as necessary.
6. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
7. Costs of re-inspection and additional testing by the Architect and Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.

B. Training

1. Following the equipment demonstration, inspection and final adjustments, provide an instruction session to the Owner's staff or representatives on the safe operation, care and maintenance of the system.
 - a. Provide instruction of not less than six hours total, in 2 separate sessions.
 - b. Instruction shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts and operating procedure to obtain maximum usage of system.
 - c. Deliver all copies of approved Operations Manual to Owner prior to first instruction session, and review it as part of that session.
 - d. The first session shall take place in the presence of the Architect or Theatre Consultant and shall occur directly after finish of Completion Checkout. If Owner, Architect judge that any work inspected fails to conform to the specification or is not substantially complete at time of Completion Checkout, postpone instruction session until Owner and Architect judge the entire Seating System to conform with specification.
 - e. The second session shall occur at a time arranged by the Owner no sooner than 1 day and no later than 1 month after first session.
2. Timing for all sessions shall be scheduled by the Owner at their convenience.

3.8 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

3.9 MAINTENANCE

A. Maintenance Services

1. One month prior to the end of the first year following the date of final systems acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this section which is found to require warranty work prior to the end of the warranty period. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Manufacturer. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
2. Following this inspection and maintenance service, the Contractor shall provide the Owner and Theatre Consultant with a written report itemizing the results of the inspections and the warranty work that was conducted. The Contractor shall also include in this written report recommendations for any corrective actions which the Contractor feels should be taken with respect to the equipment included in this section, but are outside the scope of the warranty agreement.

END OF SECTION

SECTION 127100 PORTABLE AUDIENCE SEATING

PART 1 GENERAL

1.1 SUMMARY

- A. The work in this section includes portable audience seating within the following spaces:
 - 1. Proscenium Theatre
 - 2. Studio Theatre
 - 3. Valade Jazz Center
- B. Section Includes
 - 1. Furnish the following major elements and associated accessories:
 - a. Portable folding audience seating and accessories
 - b. Transport carts
 - 2. Provide all materials, components and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related drawings.
 - 3. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
- C. Products Supplied But Not Installed Under This Section:
 - 1. Portable audience seating and accessories will be delivered to site, unpacked and assembled for installation by the Owner.
 - 2. Extra materials as listed in Paragraph 1.7A, Extra Materials.
- D. Related Requirements:
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications apply to this Section.
 - 2. Examine Contract Documents for requirements that directly affect or are affected by work of this Section. A list of those Documents and Sections includes, but is not limited to the following:
 - a. Division 01 – General Requirements
 - 1) Section 012300 – Alternates
 - b. Division 11 – Equipment
 - 1) Section 116123 – Platforming
 - c. Division 12 – Furnishings
 - 1) Section 126600 – Retractable Bleacher System and Seating

1.2 PRICE AND PAYMENT PROCEDURES

- A. Refer to Division 01 – General Requirements for information regarding price and payment procedures.
- B. Unit Prices
 - 1. Provide unit pricing for each type of portable audience chair.
- C. Alternates
 - 1. Provide separate price information for material and labor associated with the following equipment and systems:
 - a. <<TBD>>
 - 2. Provide separate price information to deduct the material and labor associated with the following equipment and systems from the price of the full and complete systems as otherwise specified in this document:
 - a. <<TBD>>

1.3 REFERENCES

- A. Definitions

1. The following definitions are relevant to this Section and are in addition to those defined in Division 01 – General Requirements:
 - a. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
 - b. “Architect”: All references to the “Architect”, Hamilton Anderson Associates, will refer to the process by which the indicated action or decision regarding the work in this section will be administered. All such actions shall be initiated with or by the Architect, who will disseminate all pertinent information and documents to, as well as coordinate all efforts and site visits with, the Theatre Consultant and all other project consultants who may have design responsibility relating to the work in this section.
 - c. “Theatre Consultant”: Auerbach + Associates, Inc. (d.b.a. Auerbach Pollock Friedlander). The Theatre Consultant will be party to all actions and decisions regarding the work in this section.
 - d. “Other Project Consultants”: Acoustical Consultant, Electrical Engineer, Structural Engineer, or Mechanical Engineer as is applicable to a particular issue.
 - e. “Contractor”: Manufacturer / Installer responsible for the fabrication and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word “Contractor” (i.e. General, Electrical, etc.).
 - f. “Owner”: Authorized personnel representing Wayne State University.
 - g. “Furnish”: Purchase and/or fabricate and deliver to project site.
 - h. “Install”: Physically install the items in their proper location (s) on the project site.
 - i. “Provide”: Furnish and install.

B. Reference Standards:

1. Reference Division 01 for general project references and standards.
2. References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
3. If an applicable code or standard permits work of lesser quality or extent than this specification, then this specification and the related drawings will govern.
4. Comply with national, state and local codes.
5. Comply with national, state and local labor regulations and requirements.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. The Contractor is required through drawings, memos and meetings to properly coordinate the work with the other sections as necessary to complete the work of this section.

B. Sequencing:

1. The delivery and installation of the equipment in this section shall be coordinated with other work which may be in conflict with or which must be completed before the work under this section may be installed, including:
 - a. Division 11 – Equipment
 - 1) Section 116123 – Theatrical Platforming
 - 2) Section 116135 – Stage Extension Orchestra Pit Lift System
 - b. Division 12 – Furnishings
 - 1) Section 126600 – Retractable Bleacher System and Seating

1.5 ACTION SUBMITTALS

- A. All submittals shall be submitted in accordance with Division 01.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.

- C. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.
- D. All submittals shall leave space available for review stamps and comments.
- E. The Architect and Theatre Consultant shall only mark one set of drawings per submittal with comments. Drawing markups will be provided on PDF files provided by the Contractor or on paper drawings which shall be scanned and returned electronically.
- F. Provide full insurance against loss or damage during shipment. Furnish certifications of such coverage to the General Contractor not less than 60 calendar days prior to the shipment of any equipment.
- G. Product Data:
 - 1. Where standard manufacturer parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions. The data shall include all information which indicates compliance with the specifications herein.
 - 2. Clearly indicate specific component and applicable options.
- H. Shop Drawings:
 - 1. Provide shop drawings on D size minimum (24" x 36") sheets.
 - 2. Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 - 3. Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
 - 4. Provide complete, fully dimensioned, large scale detailed shop drawings of all major components. Include plan or schedules with quantities of each seat size and all other accessories.
 - 5. Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
 - 6. Provide a full Bill of Materials to be supplied, including quantities, manufacturer, manufacturer's part number, reference to applicable drawings, etc.
- I. Samples:
 - 1. Submit sample items including, but not limited to:
 - a. Two (2) complete sample seats of each type of seat under this section.
 - 2. Additional samples must be submitted within 14 days of Architect's written request.
- J. Certificates:
 - 1. Provide manufacturer's certificate stating materials meet fire performance characteristics as specified herein.

1.6 CLOSEOUT SUBMITTALS:

- A. Project Record Documents:
 - 1. Submit documents in accordance with Division 01 – General Requirements.
 - 2. At the time of acceptance testing, submit three (3) copies of parts lists and maintenance instruction sheets.
 - 3. Submit operation and maintenance manuals with the final inventories. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Recommendations for cleaning, maintaining and touch-up of all finished surfaces
 - c. Provide specific recommendations for cleaning upholstery, including precautions against materials and methods which could damage upholstery fabric.
 - 4. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
 - 5. Certificates of flame resistance as required herein.

6. Warranties as required herein.
- B. Submit verification that all punch list items have been rectified. Such written verification will be required for project closeout and initiation of the warranty period.
- C. The record documents shall be reviewed by the Architect and Theatre Consultant, and all modifications to the documents stemming from this review shall be made as required.
- D. Above submissions are required as a condition for final approval of the work.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Stock Materials
 1. Deliver stock of maintenance material to the Owner. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels:
 - a. Seat and back fabric or fabric covers in a quantity equal to five percent (5%) of each type of chair and each color provided, with covers prorated to sizes of chairs used.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 1. Refer to Division 01 – General Requirements.
- B. Qualifications:
 1. All equipment within this specification to be the responsibility of a single Contractor, who shall own and operate their own manufacturing facility for the fabrication of theatrical seating equipment, and be regularly engaged in the fabrication of such equipment.
 2. The Contractor shall have been continuously engaged in the fabrication and installation of equipment of the type indicated herein for no less than five years.
 3. The Contractor shall have under their control all parts composing the complete chair including castings, steel, plywood, fabric, and accessories, as well as mounting and installation components. Contractor shall do all fabrication and coordinate installation, shall maintain thorough test and inspection procedures to assure uniform high quality of all raw materials used as well as the finished product.
 4. The Contractor shall have, at the time of bid, a current contractor's license and shall know, understand, and have the required documentation to work in the State of Michigan. This license shall be maintained throughout the course of the work of this contract.
- C. Contractor is responsible for proper installation, operation and safety of all component equipment.
- D. Contractor is responsible for the complete design and engineering of all systems described herein. Contractor shall confirm project details and, if necessary, suggest modifications to the criteria established herein in order to maintain the design intent.
- E. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the system as described herein.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 01.
- B. Packing, Shipping, Handling and Unloading
 1. All equipment shall be appropriately and substantially packed for shipment.
 - a. Packing should include humidity resistant wrapping with desiccant as appropriate to protect contents. Contractor shall ensure that seating and related materials are delivered to job site in their original and undamaged cartons bearing the manufacturer's name, product name and stock numbers.

2. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theatre site allocation. Include packing and shipping lists for each container.
3. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.

C. Acceptance at Site

1. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
2. The Contractor shall be responsible for acceptance of portable audience seating components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.

D. Storage and Protection

1. Upon delivery, the materials shall be stored in their original cartons under protective cover in a dry and clean location, off the ground. Materials shall be stacked or positioned as directed by the Contractor. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
2. Replace, at no additional expense to the Owner, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

A. Existing Conditions:

1. Verify all conditions at job site. Promptly report variations or obstructions to the Architect. All additions or corrections are to be requested through the General Contractor prior to fabrication.

B. Environmental Requirements:

1. Coordinate all environmental requirements for all materials provided and installed under this contract.

1.11 WARRANTY

A. Comply with the warranty requirements of Division 01 and the following.

- B. The Contractor shall warrant materials and workmanship of systems and equipment as free of defects. The Contractor shall guarantee in writing the repair or replacement within 30 days of any item found defective during a period of five (5) years following the date of final acceptance. Ordinary wear and damage due to improper usage are excepted.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and services of this section shall be by one of the following manufacturers:

Wenger Corporation
555 Park Drive, P.O. Box 448
Owatonna, MN 55060
Tel: (800) 493-6437

Ducharme Seating
9275 Royer Street, Leonard
Quebec, Canada H1P 3H7
Tel: (514) 328-2772

- B. Substitution Limitations

1. Any contractor who wishes to be listed, and has not been pre-approved, must submit qualification information to the Architect. Proposal shall include all of the information listed below:
 - a. Statements of financial responsibility for the past five fiscal years showing assets and liabilities.
 - b. List of principal officers and design and service engineers in an organizational structure flow chart.
 - c. List of not less than 5 projects of similar size and scope completed within the five years on which contractor has provided full services: product engineering, shop drawings, manufacture, installation and commissioning. In each instance, indicate specifics of scope of fabrication and installation. Include a contact list: name, address and phone numbers of person(s) directly responsible for operation and maintenance of equipment in each facility.
 - d. List of current projects and approximate contract value and completion dates. Include list of names, phone numbers and addresses of owner, owner's representatives and architect.
 - e. For each above described project, list of names of persons who supervised preparation of shop drawings, manufacture of components, and installation of equipment.
 - f. List of names of persons who would do project management, product engineering, supervision of shop drawing, supervision of installation should this contract be awarded.
 - g. Contract Bond Company information indicating that Contractor has bonding capacity for full duration of project. Include list of other bonded projects coinciding with this project.
 - h. Evidence of ability to undertake custom product engineering to meet specific requirements of project specifications. Provide sample project engineering drawings for custom products and contact information for facility operators where those products have been installed.
2. Standards of Acceptance:
 - a. Refer to Paragraph 1.8B - Quality Assurance/Qualifications.

2.2 SYSTEMS DESCRIPTION

- A. Refer to the "TS" series Contract Drawings for seating layout plans and quantities of each type of seat for the following performance spaces. Provide seats noted as "Loose Seats" only.
 1. Proscenium Theatre:
 - a. Portable folding audience seats:
 - 1) Interlocking, folding loose audience chairs with eye tabs at the foot for temporary attachment to the floor
 - 2) Seat bottoms self-rise to a vertical safety position
 - 3) Hanging style storage carts for the total number of seats
 2. Studio Theatre:
 - a. Portable folding audience seats:
 - 1) Interlocking, folding loose audience chairs with eye tabs at the foot for temporary attachment to the floor
 - 2) Seat bottoms self-rise to a vertical safety position
 - 3) Hanging style storage carts for the total number of seats
 3. Valade Jazz Center:
 - a. Portable folding audience seats:
 - 1) Interlocking, folding loose audience chairs with eye tabs at the foot for temporary attachment to the floor
 - 2) Seat bottoms self-rise to a vertical safety position
 - 3) Hanging style storage carts for the total number of seats
- B. Substitutions
 1. All requests for variations from the specified materials and products will be reviewed by the Architect according to the procedures outlined in Division 01.
 2. All requests for substitutions must be submitted in a timely manner, so as not to adversely impact the project schedule.
 3. Substitutions will only be accepted if, in the opinion of the Architect, the product is an equal to the specified product. No substitutions may be made without written acceptance from the Architect. All substitutions made prior to this acceptance are at the sole risk of the Contractor.

4. A substitution must be a product of equal design, construction and performance. The Contractor must submit all pertinent information required to substantiate that the product is equal. The Contractor must submit all additional information, including test data, which may be requested in order for the Architect to fully evaluate the substitution. The burden of proof is solely on the Contractor.
5. All additional expenses of any kind with respect to substitution(s) shall be borne by the Contractor. This shall include, but not be limited to, all fees and expenses incurred by the Architect and other related Consultants for evaluation of the substitution and subsequent integration into the project should the substitution be taken and/or additional costs of other contractors related to the substitution(s).

2.3 DESIGN CRITERIA

- A. Overall front to back envelop with seat in upright position shall not exceed 21" without notifying Architect in writing.
- B. The audience seating shall be fabricated using molded foam cushions for maximum comfort, using materials which are carefully selected to be free of defects, objectionable projections, or irregularities. Smoothly round corners, edges and exposed fasteners to present least possible snagging and pinching hazards.
- C. Capacities:
 1. Seats:
 - a. Seats shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed minimum of 600 lbs. static load located 3" back from the front of the seat without deflection.
 - b. Seats shall be tested and professionally certified through an independent testing laboratory to withstand 300,000 operating cycles without added lubrication, spring fatigue or measurable bearing wear.
 - c. Seats shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 100,000 impacts of a 40 lb. sandbag dropped equally from heights of 6", 8", 10" and 12".
 - d. All up-stops and down-stops shall be completely concealed.
 2. Backs:
 - a. Backs shall withstand an evenly distributed front or rear load of 450 lbs.
 - b. Backs shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 40,000 alternating swinging impact cycles by each of 2 opposing 40 lb. sandbags. Sandbags shall be moved horizontally and equally through various distances of 6", 8", 10" and 12" at 35 cpm.
 3. Arm rests:
 - a. Armrests shall be tested and professionally certified through an independent testing laboratory to accept a 250 lb. sandbag placed at the front of the armrest with no deflection.
 - b. The same test shall be performed on the rear of the armrest.
- D. Fire Performance Characteristics
 1. Flame Retardant performance: Upholstery components and the assembly thereof shall be in conformance with flammability standards as set forth in California Technical Bulletin #117.
 2. Padding: Provide new (prime manufacture) polyurethane foam with an average burn length not exceeding 8" and average flame time after removal of flame source not exceeding 15 seconds, with drippings from test specimen not continuing to flame for more than 5 seconds after falling, when tested vertically in compliance with Federal Test Method Standard 191, Method 5903.2.
 3. Fabric to comply with 16 CFR Part 1610 Class 1.

2.4 MATERIALS

- A. General
 1. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
 2. All equipment to have pertinent testing labels.
 3. All variations from the specified materials and product must be approved by the Architect.

- B. Materials shall conform to the following minimum standard specifications:
1. Gray Iron Castings: American Society of Testing Materials A48, Class 25.
 2. Steel Plates, Shapes, and Bars: American Society of Testing Materials A36.
 3. Steel Sheets for Baked Enamel Finish: American Society of Testing Materials A591, commercial and drawing quality; Class C, galvanized-bonderized; 20 gauge minimum unless otherwise indicated.
 4. Expansion Bolts: FS FF-B-588; Type, Class, and Style as recommended by the chair manufacturer.
 5. Concealed Plywood: PS 1/ANSI A199.
- C. Finishes
1. Finish for all exposed metal parts shall be selected by the Architect and shall match.
 2. Finish for all exposed plastic parts shall be selected by the Architect and shall match.
 3. Exposed Wood (including plywood): Manufacturer's standard hardwood, free of visible defects. Color shall be stain per the Architect. Species shall be as specified. Seal with lacquer.
 4. Fabric:
 - a. Upholstery fabric to be selected by the Architect from one of the manufacturer's standard seating fabrics.
 - b. Fabric color shall selected by the Architect from the manufacturer's standard color line.
 - c. Flame Retardant: Meets Class "A" flamespread rating in accordance with American Society of Testing Materials-E84, NFPA #255, UBC #42-1, and Underwriters Laboratory #723.
 - d. Light Fast: Exceeds 48 hour NAFM requirement. Test method A.A.T.C.C.-16A.
 - e. The fabric shall be strengthened with an acrylic or similar backing.
- D. Cushions: Seat and back cushions made of open cell polyurethane foam.
- E. Fasteners: All fasteners shall be concealed. No exposed fasteners permitted.

2.5 PORTABLE FOLDING AUDIENCE SEATING

- A. Provide portable folding audience chairs with the following characteristics:
1. Chair shall be freestanding, folding audience seating with built-in interlocking device.
 2. Chair frame shall be constructed with 16 gauge continuous electric welded 1" x 2" rectangular steel tube.
 3. The frame shall be finished with black powder coat or black epoxy paint.
 4. The arm rest shall be constructed of hardwood with lacquer finish with rounded edges.
 - a. Wood species and finish color to be selected by the Architect.
 5. The seat and back shall be upholstered with a durable 100% polypropylene fabric.
 - a. Fabric and color to be selected by the Architect.
 6. Seat cushion shall be 2-1/2" thick, high-resiliency polyurethane foam with a 5-ply 3/8" contoured hardwood plywood substrate.
 7. Back cushion shall be 1-1/2" thick, high-resiliency polyurethane foam with a 5-ply 3/8" contoured hardwood plywood substrate. Back cushion shall be shaped to provide lumbar support for comfort.
 8. Chair bottom shall be spring-loaded and shall return to a full upright position when not occupied.
 9. Overall chair height shall be 32" with a seat height of 17-1/2".
 10. Chair depth, when seat is in the upright position, shall be 20".
 11. The chairs shall fold for storage on transport carts.
 12. Provide chairs in quantities and widths as shown on the drawings.
 13. Provide:
 - a. Wenger – Standard Portable Audience Chair
 - b. or approved equal

2.6 ROLLING STORAGE / TRANSPORT CARTS

- A. Provide transport carts for portable folding audience seating with the following characteristics:
1. Cart shall store and transport 24 loose chairs.
 2. Cart shall be of steel construction with easy-roll casters.

3. Overall dimensions shall be 70" high x 82" wide x 38" deep.
4. Provide vinyl coated polyester dust cover for cart laden with chairs.

2.7 FABRICATION

- A. Fabricate all work in this section in accordance with the Architect's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices, and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerances, fits and finishes.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which the equipment is to be installed and must notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Work will not proceed until unsatisfactory conditions have been corrected in a manner acceptable to the Contractor.

3.2 INSTALLATION

- A. Provide site labor to unpack all equipment provided under this Section.
- B. Position all items accurately as indicated on drawings.

3.3 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent project drawings prior to the demonstration indicated herein.
- B. Verify that moving components operate smoothly and quietly.
- C. Adjust seat uplift mechanisms to ensure that seats in each row are aligned when in upright position.
- D. Replace any upholstery damaged during installation.

3.4 CLEANING

- A. Touch-up minor abrasions and imperfections as required.
- B. Remove from the premises all debris caused by this work. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the jobsite and disposed of legally at no additional cost to the Owner.

3.5 CLOSEOUT ACTIVITIES

- A. Demonstration
 1. Installed equipment shall be operated for approval and inspected for quality by the Theatre Consultant, the Architect and the Owner.
 2. Adjustments or modifications shall be made as directed by the Architect and the Theatre Consultant.
 3. Cost of re-inspection and additional testing by the Architect, Owner or Theatre Consultant, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor. This work will be conducted on a time and materials basis, including the Architect's and Theatre Consultant's standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session.
- B. Training
 1. Following the equipment demonstration, inspection and final adjustments, provide an instruction session to the Owner's staff or representatives on the use, care and maintenance of all items.

2. Deliver all copies of approved Operations Manual to Owner prior to the instruction session, and review it as part of that session.
3. Instruction shall be by technical staff of the Contractor.
4. Schedule instruction in conformance with project construction schedules and the availability of the Owner.

3.6 PROTECTION

- A. Provide full protection from damage, construction dirt and debris for all equipment from the point of installation to testing and commissioning.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

END OF SECTION

SECTION 134898 SOUND & VIBRATION CONTROL

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Manufactured components for sound and vibration isolation.
 - 1. Slab underlayment.
 - 2. Slab perimeter isolation.
 - 3. Ceiling hangers.
 - 4. Compact ceiling hangers.
 - 5. Partition sway braces.
- B. Related Sections:
 - 1. Section 018122 - Facility Acoustic Performance Requirements:
 - 2. Sections 031100, 031500, 032000 and Section 033000: Isolated concrete slabs.
 - 3. Sections 054000, 092216 and 092900: Isolated gypsum board assemblies.

1.2 ACTION SUBMITTALS

- A. Product Data: For each product.
- B. Shop Drawings: Prepared by component manufacturer, include layout, section, and transition details, load conditions, isolator natural frequency and load deflection curves, and construction sequence.
- C. Isolator Selection:
 - 1. Bearing surface area and spacing of each isolator shall be determined by Manufacturer based on final evaluation of concentrated and uniformly imposed loads.
 - 2. At load, isolator shall maintain uniform deflection of the floating floor.
- D. Product Schedule:
 - 1. Component manufacturer and type.
 - 2. Deflection of each isolation element.
 - 3. Spring constant of each isolation element.
 - 4. Estimated imposed load on each isolation element .
 - 5. Spring o.d., free operating, and solid heights.
- E. Isolated Floating Floor:
 - 1. Dead, live and concentrated loads.
 - 2. Isolator sizes, deflections, frequencies and locations.
 - 3. Any drains or other penetrations.
 - 4. Size, type, elevation and spacing of concrete reinforcement.
 - 5. Caulking details.
 - 6. Floating floor construction procedure.
- F. Spring-Isolated Ceiling Assemblies:
 - 1. Indicate layout and location of each isolation hanger, location and direction of cold-rolled carrying channel.
 - 2. Include details of edge conditions where isolated ceiling construction meets or adjoins other construction.
 - 3. loads for all ceiling supported systems for incorporation in calculations of spring sizing
- G. Isolated Partitions:
 - 1. Load and deflection curves of all sway braces in both planes. Load and deflection curves of wall isolation pads. Detail drawings of angle braces.
 - 2. Sway Brace Layout: Engineered by contractor in conjunction with steel stud framing.

1.3 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service acoustical performance. Qualified firm will provide authorized technical representatives to observe and inspect installation of products, equipment and assemblies.
- B. Installers Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, being familiar with special acoustical requirements indicated, and whose work has resulted in construction with a record of successful acoustical performance.
- C. Preconstruction Conference: Prior to start of Work, conduct a conference to ensure understanding of Construction Documents and special acoustical requirements of acoustically-critical spaces and construction.

PART 2 PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

- A. Products and Manufacturers: Subject to compliance with specified requirements, provide Basis of Design or equivalent product as approved by Architect, by one of the following Manufacturers:
 - 1. ECOPE International.
 - 2. General Rubber Corporation.
 - 3. Impacta-Regupol
 - 4. Kinetics Noise Control, Inc..
 - 5. Mason Industries.
 - 6. Pliteq.
 - 7. RPG, Inc..
 - 8. The VMC Group.

2.2 ISOLATED SLABS

- A. (SVC-3) Continuous Concrete Slab Isolation Underlayment: Single-ply, non-laminated, re-bonded recycled rubber underlayment with dimpled profile.
 - 1. Basis of Design: QTrbm by ECOPE International.
 - a. Overall Thickness: 1-inch.
 - 2. Basis of Design: Pliteq FF25
- B. (SVC-5) Continuous Polystyrene Perimeter Isolation:
 - 1. Flat Re-bonded recycled rubber perimeter isolation strip, 1/2-inch thick.
 - a. Type PIS Perimeter Rubber Isolation Strip by Pliteq.
 - 2. Closed cell polyethylene. Thickness: 1-inch.
 - a. GenieMat Polyethylene Foam Perimeter Isolation Strip by Pliteq.
- C. Caulking Compound: Non-hardening, drying or bleeding. Troweling or pouring grade.
 - 1. Basis of Design: Type CC-75 by Mason Industries, Inc..
- D. Angle Brackets: 1-1/2" x 2" angle iron sections with provision for bolting to the structure and a minimum thickness of 3/8" sponge cemented to the vertical leg.
 - 1. Basis of Design: Type AB-716 by Mason Industries.
- E. Isolators: Bell shaped castings with integral lugs to locate reinforcing, shrouding 2"(50mm) thick LDS isolators molded to the following AASHO bridge bearing specifications. All housings shall have 3/4"(20mm) minimum diameter jackscrews. Deflections shall not exceed 0.3"(75mm) nor the frequency 10Hz.
 - 1. Basis of Design: Type FSN by Mason Industries, Inc..

2.3 ISOLATED CEILINGS

- A. Spring Hangers:

1. Fail safe.
 2. AASHTO Quality and Dynamic Stiffness
- B. (SVC-11) Ceiling Hangers: Combination Neoprene and Spring Hanger, consisting of a steel frame containing a neoprene isolation element at the top and a coil steel spring seated in a neoprene cup on the bottom.
1. rubber bushing extending through the box to prevent metal to metal contact between the steel suspension rod and the frame..
 2. allow a 30° swing from side to side before rod contact.
 3. Springs shall be factory precompressed to 70% of the assigned deflection.
 4. Basis of Design: Type Mason Industries **30NCC** for channel, **W30N** for wire, or **W30NCC** for wire and channel.
 5. Hangers shall be selected for a minimum of 0.75" (19mm) spring deflection and factory precompressed 70% of the total deflection determined by the assigned load per hanger.
- C. (SVC-12) Ceiling Hanger, Compact: Low-profile, Combination Neoprene and Spring Hanger, compact spring and neoprene pad isolator hangers.
1. Basis of Design:
 - a. Type 30CSCH by Mason Industries.
 - b. Type KSCH Super-Compact Ceiling Hanger by Kinetics Noise Control

2.4 ISOLATED PARTITIONS

- A. (SVC-21) Continuous Isolation Strip and Bushings for Partition Headers and Sills: 30 or 40 durometer continuous strip, 1/2-inch thick and 6-inches wide; with resilient stabilizing bushing, steel washer and anchors.
1. Basis of Design: NPS-40 by Mason Industries.
- B. (SVC-22) Sway Brace: Standard neoprene sway brace, 60 durometer neoprene.
1. Basis of Design: Type DNSB Sway Brace by Mason Industries.

2.5 RESILIENT PADS

- A. (SVC-31) Neoprene Waffle Pads: Natural rubber resilient pads.
1. Durometer: 40
 2. Thickness: 3/4-inch.
 3. Basis of Design: Super W Pads by Mason Industries

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which Work is to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.
- B. Ensure concrete floors are dry and meet moisture conditions required by flooring and adhesive manufacturer's (3 pounds per 1000 square feet based on ASTM F1869, calcium chloride test) and exhibit negative alkalinity, carbonization or dusting. Also ensure substrate meets requirements of adhesive and flooring manufacturer's requirements. Remove curing agents and other surface residue that may negatively affect adhesion or flooring installation and performance.

3.2 INSTALLATION

- A. All building components supported by the isolation hangers shall be free from rigid contact with any part of the non-isolated building structure to prevent unwanted sound flanking.

3.3 ISOLATED CONCRETE FLOOR

- A. Division 03

- B. The installation of all sound isolation materials specified herein, including those installed under other sections of the specifications shall be in accordance with procedure submitted by the isolation material manufacturer and approved by the Architect, Structural Engineer, and Acoustical Consultant.
- C. Clean and prepare substrate in accordance with underlayment manufacturer's instructions.
- D. Lay mat seam to seam covering the area
- E. Tape joints between rolls of the base mat and joints between base mat and perimeter isolation board to avoid leakage during concrete pour.
- F. Perimeter Isolation:
 - 1. Install perimeter isolation strip from the top of the underlayment to a minimum of 1" above the scheduled thickness of the isolated concrete slab.
 - 2. Ensure a maximum gap between the perimeter isolation board and underlayment of 1/8"
 - 3. After concrete has cured, cut back excess perimeter isolation board and caulk perimeter.
- G. Inspection: Notification shall be given by the Contractor to the Architect at the following stage. Architect approval shall be obtained prior to proceeding to the next stage of construction.
 - 1. Upon completion of all areas prior to the placement of isolation material.
 - 2. Upon completion of placement of isolation materials prior to installation of isolated concrete slab.
 - 3. Upon completion of installation of concrete pouring form and isolated, prior to start of concrete pour.
 - 4. Upon completion of concrete isolated slab.

3.4 SPRING-ISOLATED CEILING ASSEMBLIES

- A. Prior to start of the installation of the isolated ceiling, adhesively apply a continuous strip of neoprene surface of perimeter partition; allow for deflection of isolators.
- B. Lay on top of the gypsum board mineral wool in thickness as shown on the drawings.
- C. After installation of isolated ceiling, cut exposed neoprene and caulk perimeter and all penetrations.

3.5 ISOLATED PARTITIONS

- A. Bolt the sway braces to the structural wall as shown on approved Shop Drawings and use the leveling nuts to plumb the channels and set them in their vertical position.
- B. Caulk all joints.

END OF SECTION

SECTION 142400 HYDRAULIC ELEVATORS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes: Service and passenger hydraulic elevator (ELEV-1).
- B. Related Sections:
 - 1. Section 033000 - Cast-in-Place Concrete: Machine Room floor.
 - 2. Mechanical: Pit drainage.
 - 3. Electrical: Electrical power to machine room including main switch and breaker.

1.2 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures; hoistway entrances; and operation, control, and signal systems.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing; machine room layout; coordination with building structure; relationships with other construction; and locations of equipment.
 - 2. Include large-scale layout of car-control station.
 - 3. Indicate maximum dynamic and static loads imposed on building structure at points of support as well as maximum and average power demands.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Manufacturer Certificates: Signed by elevator manufacturer, certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service as shown and specified, are adequate for elevator system being provided.
- C. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
- C. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard five-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Elevator manufacturer or an authorized representative who is trained and approved by manufacturer.

1.6 PERMIT, TEST AND INSPECTION

- A. Obtain and pay for permit, license, and inspection fee necessary to complete installation.
- B. Perform test required by Governing Authority in accordance with procedure described in ASME A17.2 Guide for Inspection of Elevators, Escalators, and Moving Walks in the presence of Authorized Representative.

- C. Supply personnel and equipment for test and final review by Consultant, as required in Part 3.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.8 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Furnish well casing and coordinate delivery with related excavation work.
- C. Coordinate locations and dimensions of other work specified in other Sections that relates to hydraulic elevators, including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Accessibility Requirements: Comply with Section 407 in the United States Access Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Airborne Noise: Measured noise level of elevator equipment and its operation shall not exceed 60 dBA inside car under any condition including door operation and car ventilation exhaust blower on its highest speed. Limit noise level in the machine room relating to elevator equipment and its operation to no more than 80 dBA. All dBA readings to be taken 3'-0" off the floor and 3'-0" from the equipment using the "A" weighted scale.
- D. Vibration Control: All elevator equipment provided under this contract, including power unit, controller, oil supply lines, and their support shall be mechanically isolated from the building structure and electrically isolated from the building power supply and to each other to minimize the possibility of objectionable noise and vibrations being transmitted to occupied areas of the building.

2.2 MANUFACTURERS

- A. Source Limitations: Obtain elevators from single manufacturer. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.
- B. Manufacturers:
 - 1. MEI - Total Elevator Solutions.
 - 2. Kone Elevator Company.
 - 3. Otis Elevator Company.
 - 4. Schindler Elevator Company.
 - 5. ThyssenKrupp Elevator.

2.3 SERVICE AND PASSENGER ELEVATOR

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturers' standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. (ELEV-1) Single-Phase Hydraulic Service Elevator:
 - 1. Basis of Design: Endura A5000 by ThyssenKrupp.
 - 2. Net Capacity: 5000 lbs.
 - 3. Speed: 150 fpm.

4. Openings: , front.
 5. Stops:
 6. Travel: feet
 7. Entrance Openings Size: ___'-___" by 7'-0".
 8. Platform Size: ___'-___"
 9. Pit Depth: ___ inches
- C. Elevator Operation:
1. Simple collective single car automatic operation.
 2. Independent operation with key lock to remove car from normal hall button calls.
 3. Home landing shall be main floor.
- D. Fire Emergency Service:
1. Elevator operation shall comply with requirements of local code.
 2. Fire key shall be kept in suitable emergency box mounted adjacent to elevator.
 3. If smoke or heat sensing devices are wired to elevator system to initiate foregoing operation, install three position key switch, third position to override automatic initiation by sensing device.
- E. Additional Features:
1. Anti-Stall Feature
 2. Braille and Audible Signals
 3. Door Open and Close Stall Protection
 4. Emergency Lighting
 5. Firefighter 's Service, sensors by others
 6. Independent Service Feature
 7. Infrared Light Curtain Door Protection
 8. Low Oil Return
 9. Overload Sensors
 10. Phase Protection
 11. Start Type: Across the Line
 12. Locking Service Panel in Car Operating Panel
 13. Remote Monitoring Capable
 14. Telephone (ADA compliant)

2.4 CAR ENCLOSURES

- A. Car Enclosures, General: Provide enameled-steel car enclosures to receive removable wall panels, with car roof, access doors, power door operators, and ventilation.
- B. Inside Clear Dimensions (Nominal):
1. Inside Width: 6'-0" from side wall to side wall.
 2. Inside Depth: 9'-0" from back wall to front wall (return panels).
 3. Inside Height: 8'-6" to underside of ceiling.
- C. Front Walls (Return Panels) with Integral Car Door Frames: Satin stainless steel, No. 4 finish.
- D. Car Fixtures: Satin stainless steel, No. 4 finish.
- E. Side and Rear Wall Panels: Satin stainless steel, No. 4 finish.
- F. Wall Panel Reveals: Satin stainless steel, No. 4 finish.
- G. Door Faces (Interior): Satin stainless steel, No. 4 finish.
- H. Door Sills: Aluminum, mill finish.
- I. Ceiling and Light Fixtures: Satin stainless steel panels, No. 4 finish, with recessed lighting fixtures.
- J. Handrails: Satin stainless steel, No. 4 finish, 1/2 by 2 inches rectangular, at sides and rear of car.
- K. Floor: Prepared to receive resilient floor tile (RSF). Coordinate with Section 096500.
1. Rubber Sheet Flooring: Norament Arago, 5178 Calm.
- L. Additional Requirements:

1. Provide inspection certificate in each car, mounted under acrylic cover with frame made from satin stainless steel, No. 4 finish.
2. Provide hooks for protective pads in elevator and one complete set(s) of full-height protective pads.

2.5 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies, General: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall construction.
- B. Dimensions of Hoistway Opening:
 1. Width:
 2. Height:
- C. Frames: Satin stainless steel, No. 4 finish.
- D. Hoistway Door Type: Two-speed, side-opening.
- E. Hoistway Doors: Satin stainless steel, No. 4 finish.
- F. Sills: Aluminum, mill finish.
- G. Hall Fixtures: Satin stainless steel, No. 4 finish.

2.6 OPERATING EQUIPMENT

- A. Motors, pumps, controllers, hydraulic fluid reservoir, cylinder, casing, plunger, piping, guide rails, buffers, buttons, wiring, indicators, and hardware and fittings to provide fully operational elevator.
- B. Back-up power source: Provide with standby power source unless elevator is shown to be connected to emergency power generator.
- C. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.
 1. Card-Reader Operation: System uses card readers at car-control stations to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space as indicated for card reader in car.
 - a. Provide at Lower Level.
 - b. Security Access Equipment: Refer to Division 28.
 - c. Coordinate with Section 087100 - Door Hardware and Division 26.

2.7 EQUIPMENT AND COMPONENTS FOR VIBRATION CONTROL

- A. Hydraulic Pumps and Oil Storage Tanks: Mount on Type M-1 multi-layer bridge-bearing neoprene pads or Type M-2 neoprene base mount isolators. Size isolators for not less than 0.3 inch static deflection.
- B. Hydraulic Lines:
 1. Isolate entire length of hydraulic lines from the building structure using Type M-2 bridge-bearing neoprene mounts or Type H-2 hangers. Size isolators for not less than 0.3 inch static deflection.
 - a. Type M-1 Mounts - Neoprene Pads
 - 1) 3/4"-inch minimum thickness, waffled or ribbed neoprene.
 - 2) Where multiple layers are required to provide the specified deflections, interleave pads with 16 gauge steel shim plates. Size pads for deflection equal to 10 to 15 percent of unloaded height and provide pads of sufficient thickness to achieve the specified deflection. Provide load-distributing top plates if required for uniform loading.
 - 3) Acceptable products for individual pads include:
 - (a) Mason W, SW, and Super W
 - (b) Kinetics NP
 - (c) The VMC Group NRC Pads

- 4) Acceptable products for neoprene/steel composite pads include:
 - (a) Mason WSW
 - (b) Vibration Mountings and Controls Group NRC Flex Plates
 - (c) RPG Custom Elastomeric/Steel Composite Pads
 - b. Type M-2 Mounts - Neoprene-in-Shear Mounts
 - 1) Provide double-deflection in-shear isolators with steel bottom plates with pre-drilled bolt holes for attachment to floor or base, a threaded steel insert at the top of the isolator for attaching the equipment, and friction surfaces at both top and bottom. Coat all metal surfaces with neoprene.
 - 2) Design isolators for 0.25 to 0.35 inches of deflection. Acceptable products include
 - 3) Acceptable products include:
 - (a) Mason ND
 - (b) Kinetics RD
 - (c) The VMC Group RDC2
 - c. Type H-2 Hangers - Neoprene-in-Shear Hangers
 - 1) Provide neoprene-in-shear element mounted in a rigid steel hanger box. Mold neoprene element with a rod isolation bushing that prevents rigid contact between hanger rod and housing from vertical through an angular deflection of not less than 30 degrees in any direction.
 - 2) For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
 - 3) Acceptable products include:
 - (a) Mason HD and WHD
 - (b) Kinetics RH
 - (c) The VMC Group HR
 2. Connect hydraulic lines using braided stainless steel hose installed parallel to the equipment drive shafts. Provide hose length not less than 20 times its diameter. Provide carbon steel flanges for pipes greater than 3 inches diameter. Male nipples are acceptable for pipe diameters smaller than 3 inches.
 - a. Flexible Braided Stainless Steel Hose:
 - b. Acceptable products include:
 - 1) Mason FFL and MN
 - 2) Kinetics Kinflex BFMC
 - 3) The VMC Group Group SS
- C. Conduit:
1. Provide flexible connectors for conduit 2 inches in diameter and larger:
 - a. Acceptable products include:
 - 1) Crouse Hinds type XD Expansion/Deflection Coupling
 - 2) OZ/Gedney type DX
 - 3) Anaconda Sealtite
 2. Flexible steel Conduit for conduit less than 2 inches in diameter.
 - a. Flexible conduit will be at least 18 inches long in a slack "U" shaped loop.
 - b. Provide U.L listed flexible zinc-coated steel conduit. Provide liquid tight coating and fittings where required under Division 26.
 - c. Acceptable Products include:
 - 1) American Flexible Conduit Company Type AC-90
 - 2) International Flexible Hose Company Type RWS
 - 3) Liquid Tight Flexible Steel Conduit:
 - 4) Anaconda Sealtite Type UA
 - 5) Electri-Flex Type LT Liguatight

2.8 MATERIALS

- A. Rolled Steel Sections, Shapes, Rods: ANSI A17.1.
- B. Sheet Steel: ASTM A446, G90 Coating designation, stretcher levelled commercial grade.
- C. Stainless Steel: ASTM A167 Type 302/304, No. 4 finish. Run grain of belting in direction of longest dimension.

- D. Aluminum: ASTM B221 extruded alloy; ASTM B209 sheet alloy 6063; enameling (anodizing) quality.
- E. Plywood: PS 1, Western Softwood; (Douglas Fir) good one side, fire retardant treated per following requirements.
 - 1. Each piece to bear:
 - a. UL FR-S rating (flame spread and smoke developed less than 25),
 - b. Complying with extended 30-minute tunnel test, ASTM E84 or UL 723
 - c. Meet interior Type A requirements in AWPA Standard C-27 for plywood.
 - d. And shall be registered for use as a wood preservative by the U.S. Environmental Protection Agency.
 - 2. Treatment to provide protection against:
 - a. Termites.
 - b. Fungal decay.
 - 3. Treatment to be free of:
 - a. Halogens.
 - b. Sulfates.
 - c. Ammonium phosphate.
 - d. Formaldehyde.
 - 4. After treatment: Material shall be dried to an average moisture content of 15 percent or less for plywood and 19 percent or less for other lumber.
 - 5. Coat surfaces cut after treatment with heavy brush coat of same fire-retardant chemical

2.9 FINISHING

- A. Non-exposed to View Surfaces:
 - 1. Structural and Non-exposed Ferrous Metal Surfaces: Free surfaces of rust, oil or grease, clean with solvent, prime with 2 coats structural steel grade primer.
 - 2. Field Welds: Chip and clean away oxidation, flux or residue, wire brush clean, apply 2 coats of primer.
 - 3. Wood: One coat primer and 2 coats semi-gloss low VOC enamel.
- B. Exposed to View Surfaces (in car, machine room and hoistway entrances).
 - 1. Stainless Steel: Type 302/304 No. 4 finish.
 - 2. Baked Enamel: Clean, degrease zinc coated metal surface, one coat of zinc oxide primer sprayed and baked, 2 coats of semi-gloss enamel sprayed and baked, color as selected from manufacturer's standard range.
- C. Primer: Shop coat, (zinc dust/zinc oxide) alkyd.
- D. Galvanizing: ASTM A526, G90 coating designation.
- E. Enamel: Shop applied baked enamel of colors selected by Architect.
- F. Corrosion Protection: Corrosive resistant paint and covering wrap as recommended by elevator manufacturer for specific soil conditions at site.
- G. Machine Room: At the completion of the elevator installation, paint machine room and pit floors with Rust-Oleum water-based epoxy paint. Color to be grey. Refer to Section 099000 - Painting.

2.10 FABRICATION

- A. Machine: A.C. type specifically designed for elevator service having motor, pump, tank valves and muffler mounted and aligned on steel bedplate.
- B. Cylinder/Plunger: Machined polished steel tube having internal couplings where jointed, welded stop on bottom, sliding in high strength steel pipe cylinder having closed bottom and stuffing box with packing gland at top and necessary piping connections.
- C. Car: Sheet steel enclosure with structural steel frame and bracing, 3/4 inch fire retardant treated plywood floor and wall cladding fastened with hidden mechanical fasteners. Power operated hollow steel doors with track, rollers and frame.

PART 3 EXECUTION

3.1 PREPARATION

- A. Examine work of other trades on which work of this Section depends. Report defects to Architect in writing which may affect Work of this trade or equipment operation.
- B. Ensure that shafts and openings for moving equipment are plumb, level and in line and that pit is to proper depth, waterproofed and drained with necessary access doors, cylinder opening, ladder, guard.
- C. Ensure that machine room is properly illuminated, heated and ventilated and equipment foundations correctly located complete with floor and access door.
- D. Before fabrication, take necessary job site measurements and verify where work is governed by other trades. Check measurements of space for equipment and means of access for installation and operation. Obtain dimensions from site for preparation of shop drawings.
- E. Ensure following preparatory work, provided under other Sections has been properly completed to receive elevator work:
 - 1. Supply of electric feeder wires to terminals of elevator control panel, including fused main line switch or circuit breaker. Provision of hoistway outlets for car light, and for light in pit and outlets in machine room for light. Furnishing of electric power for testing and adjusting elevator equipment.
 - 2. Provision of hoistway outlet for telephone.
 - 3. Supply of power for emergency cab lighting and ventilation from power panel specified in Division 26 Electrical fed by building emergency circuits.
 - 4. Machine room enclosed and protected from moisture, with lockable door.
- F. Supply in ample time for installation, inserts, anchors, pipe sleeves, bearing plates, brackets, supports and bracing including setting templates and diagrams for placement.

3.2 INSTALLATION

- A. Perform work with competent mechanics skilled in this work and under direct control and supervision of elevator manufacturer's experienced foreman.
- B. Set hoistway entrances in alignment with car openings and true with plumb sill lines.
- C. Install machinery, guides, controls, car and equipment and accessories in accordance with manufacturer's instructions, applicable codes, and standards to provide quiet, smoothly operating installation, free from sidesway, oscillation, or vibration.
- D. Excavate for plunger and cylinder, set in place plumb and accurate and enclose with 3000 psi concrete.
- E. Mount machine immediately adjacent to hoistway on concrete foundation provided under Section 033000 - Cast-in-Place Concrete. Isolate and dampen machine vibration with properly sized sound reducing anti-vibration pads.
- F. Install and hookup piping between machine and cylinder.
- G. Erect hoistway sills, headers and frames prior to erection of rough walls and doors; erect fascias and toe guards after rough walls finished.
- H. Grout sills and hoistway entrance doors.
- I. Provide stainless steel license holders in each elevator car to suit certificate issued. Design holder with nonvisible tamperproof fastenings.
- J. Provide wall hooks and protective mats for walls of one elevator car as selected.
- K. Locate hall buttons and indicators as detailed on drawings,

3.3 INSTALLED WORK

- A. Adjust and Balance: Make necessary adjustments of equipment to ensure elevator operates smoothly and accurately.
 - 1. Make final check of each elevator operation, with Owner's personnel present and just prior to date of substantial completion. Determine that control systems and operating devices are functioning properly.
- B. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
 - 1. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.
- C. Inspection:
 - 1. Obtain and pay for inspections and permits and make such tests as are required by regulations of authorities. Make tests in presence of Architect.
 - 2. Final inspection shall be after elevator installation, hoisting enclosure and machine room are complete.
 - 3. Inspect installation in accordance with ANSI A17.2.
 - 4. Deliver test certificates and permits to Architect.
- D. Protection: Locate and protect moveable equipment and controls in such way that they can only be operated by authorized persons.
- E. Temporary Use: Comply with the following requirements for elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 - 2. Provide strippable protective film on entrance and car doors and frames.
 - 3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
 - 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - 5. Do not load elevators beyond their rated weight capacity.
- F. Cleaning: Prior to final acceptance remove protection from finished or ornamental surfaces and clean and polish surfaces with due regard to type of material.
- G. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of elevator Installer.
 - 1. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation.
 - 2. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 3. Perform maintenance during normal working hours.
- H. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate, adjust, and maintain elevator(s).
- I. Instruction: Instruct Owner's personnel in proper use, operation and daily maintenance of elevators. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train Owner's personnel in normal procedures to be followed in checking for sources of operational failures or malfunctions. Confer with Owner on requirements for complete elevator maintenance program.

END OF SECTION

SECTION 144200 WHEELCHAIR LIFTS

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Vertical wheelchair lift (ELEV-3).
 - 2. Motor, controls and wiring.
- B. Related Sections:
 - 1. Section 142400 - Hydraulic Elevator.
 - 2. Division 26: Electrical service to lift equipment.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components, and finishes for lifts.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, safety features, controls, finishes, and accessories.
- B. Shop Drawings: For each lift.
 - 1. Include plans, elevations, sections, details, attachments to other work, and required clearances.
 - 2. Indicate dimensions, weights, loads, and points of load to building structure.
 - 3. Include details of equipment assemblies, method of field assembly, components, and location and size of each field connection.
 - 4. Include diagrams for power, signal, and control wiring.
- C. Samples: Submit samples of side panels for color and appearance acceptance.

1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer, vendor and Installer.
- B. Product Certificates: For each type of lift. Include statement that runway, ramp or pit, dimensions as shown on Drawings, and electrical service as shown and specified are adequate for lift being provided.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of lift.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted use of lifts.
- C. Continuing Maintenance Proposal Submittal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard five year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.5 PROJECT CONDITIONS

- A. Examine supporting structure and conditions under which lift is to be installed, and notify Contractor in writing of conditions detrimental to proper and timely completion of work.
- B. Coordinate work directly with other subcontractors as necessary to insure proper fitting, joining to or clearance of their work. Furnish or exchange shop drawings and resolve required dimensions and details.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 PRODUCTS

2.1 PRODUCT REQUIREMENTS

- A. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines.
- B. Regulatory Requirements: Comply with ASME A18.1, "Safety Standard for Platform Lifts and Stairway Chairlifts."

2.2 MANUFACTURERS

- A. Manufacturers:
 1. Ascension; a Division of AGM Container Controls, Inc..
 2. Cambridge Elevating, Inc..
 3. Garaventa Lift.
 4. Harmar.
 5. Inclinator Company of America, Inc..
 6. Lift-U; a Division of Hogan Mfg, Inc..
 7. Liftavator, Inc..
 8. Nation Wide Lifts.
 9. Savaria.
 10. Symmetry Elevating Solutions
 11. T.L. Shield & Associates, Inc..
 12. Vertechs.
 13. Bramalea Elevator, LTD..

2.3 PERFORMANCE VERTICAL LIFT

- A. (ELEV-3) Vertical Platform Lift and Enclosure:
 1. Basis of Design: Model VPC-EL by Symmetry Elevating Solutions.
 - a. Approved Supplier and Installer: Arrow Lift; Blaine, Minnesota.
 2. Number of Stops: Two.
 3. Platform Size: 36 by 54 inches.
 4. Rated Speed: 10 fpm.
 5. Electric Power Supply: 1 HP; 115-V ac, single phase, 60 Hz.
 6. Emergency Operation: Provide manual operation and battery power system to raise or lower unit to a landing in case of malfunction or power loss.
 7. Self-Supporting Unit: Support vertical loads of unit only at base, with lateral support only at landing levels.
 8. Runway Enclosure: Manufacturer's standard enclosure assembly.
 - a. Runway Enclosure: Rectangular steel-tube frame with flush steel-sheet panels.
 - b. Runway-Enclosure Doors: Rectangular steel-tube frame with flush steel-sheet panels.
 9. Platform: Steel sheet or galvanized-steel sheet with manufacturer's standard black rubber flooring.
 10. Platform Enclosure and Door: Rectangular steel-tube frame with flush steel-sheet panels.
 11. Ramp: Fixed ramp matching platform to provide transition from floor to lift platform at bottom landing.
 12. Accessories: Provide units with the following accessories:
- B. Lift Mechanism: Electric mechanism, no hydraulics permitted. Carry lifting forces on 4 steel screw columns connected to platform for maximum stability.
 1. Power Requirements: Install dedicated breaker protected service 115 VAC, 3-wire, 15 amp, single-phase service supplied from building power source. Dedicated breaker protected service supplied by Owner or Owner's Representatives.

2. Limit Switches: Equip lift with redundant upper and lower limit switches. Provide mechanical stops to limit travel in both directions.
- C. Operation: Low voltage (24 VDC) operated with constant pressure control switches, designed to be easily operated by a person with limited dexterity according to ADA requirements.
1. Controls: Equip lift with controls at the top, bottom landing and platform. Provide a security key switch to control unauthorized use.
 2. Emergency Stop Button: Provide an illuminated emergency stop button on platform control panel.
 3. Emergency Alarm System: Audible alarm that is automatically activated when the emergency stop button is depressed.
 4. Limit Switches: Equip lift with redundant upper and lower limit switches.
 5. Battery: Provide backup battery
 6. Manual Lowering Device: Provide device to manually lower or raise the platform.

2.4 FABRICATION

- A. Fabrication, General: Construct lift of steel or aluminum structural frame with welded or bolted connections.
- B. Verify dimensions on site prior to shop fabrication.
- C. Fit and shop assemble in largest practical sections for delivery to site and installation.
- D. Supply components required for proper anchorage of lift.
- E. All welded parts by a certified welder in accord with AWS/D1.1
- F. Provide platform with 4 corner support for maximum stability.
- G. Factory Finish: Corrosion resistant coating, custom color as selected by Architect.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, critical dimensions, and other conditions affecting performance of the Work.
- B. Minimum Headroom Clearance: Verify that installed lift will have a minimum headroom of 80 inches above any point on platform floor at any point of travel.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Installation, General: Comply with ASME A18.1 and manufacturer's written instructions for installation of lifts unless otherwise indicated.
- B. Wiring Method: Conceal conductors and cables within housings of units or building construction. Do not install conduit exposed to view in finished spaces. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
- C. Coordinate runway doors with platform travel and positioning, for accurate alignment and minimum clearance between platforms, runway doors, sills, and door frames.
- D. Position sills accurately and fill space under sills solidly with nonshrink, nonmetallic grout.
- E. Coordinate platform doors with platform travel and positioning.
- F. Adjust stops for accurate stopping and leveling at each landing, within required tolerances.
 1. Leveling Tolerance: 1/4 inch up or down, regardless of load and direction of travel.

- G. Adjust retractable ramps to meet maximum allowable slope and change-in-elevation requirements, and to lie fully against landing surfaces.
- H. Lubricate operating parts of lift, including drive mechanism, guide rails, hinges, safety devices, and hardware.
- I. Test safety devices and verify smoothness of required protective enclosures and other surfaces.

3.3 FIELD QUALITY CONTROL

- A. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times tests are to be performed on lifts.
- B. Acceptance Testing: On completion of lift installation and before permitting use of lifts, perform acceptance tests as required and recommended by ASME A18.1 and authorities having jurisdiction.
- C. Operating Test: In addition to acceptance testing, load lifts to rated capacity and operate continuously for 30 minutes between lowest and highest landings served. Readjust stops, signal equipment, and other devices for accurate stopping and operation of system.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lifts. Include a review of emergency systems and emergency procedures to be followed at time of operational failure and other building emergencies.
- B. Check operation of lifts with Owner's personnel present and before date of Substantial Completion. Determine that operating systems and devices are functioning properly.
- C. Check operation of lifts with Owner's personnel present not more than one month before end of warranty period. Determine that operating systems and devices are functioning properly.

3.5 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 month full maintenance by skilled employees of lift Installer.
 - 1. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper lift operation at rated speed and capacity.
 - 2. Provide parts and supplies same as those used in manufacture and installation of original equipment.

TABLE OF CONTENTS

Volume 1

DIVISION 00 PROCUREMENT AND CONTRACTING REQUIREMENTS

000110 Table of Contents

DIVISION 01 GENERAL REQUIREMENTS

014339 Mockups
017900 Demonstration and Training
018198 Facility Acoustic Performance Requirements

DIVISION 03 CONCRETE

033000 Cast-In-Place Concrete
033544 Polished Concrete Finish
034500 Architectural Precast Concrete

DIVISION 04 MASONRY

042000 Unit Masonry
042200 Concrete Unit Masonry

DIVISION 05 METALS

051200 Structural Steel Framing
052100 Steel Joist Framing
053100 Steel Decking
054000 Cold-Formed Metal Framing
054300 Metal Support Assemblies
055000 Metal Fabrications
055005 Miscellaneous Metal Fabrications
055100 Metal Stairs
055200 Metal Railings
057000 Ornamental Metal
057200 Ornamental Railings

DIVISION 06 WOOD, PLASTICS, AND COMPOSITES

061000 Rough Carpentry
064000 Architectural Woodwork

DIVISION 07 THERMAL AND MOISTURE PROTECTION

071413 Hot Fluid-Applied Rubberized Asphalt Waterproofing
071700 Bentonite Waterproofing
072100 Thermal Insulation
072700 Air & Moisture Barrier
074200 Metal Panels
075400 Thermoplastic Polyolefin (TPO) Roofing
076200 Sheet Metal & Flashing
077233 Roof Hatches
077236 Smoke Vents
078100 Applied Fireproofing
078400 Penetration Firestopping
078443 Joint Firestopping
079100 Preformed Joint Seals
079200 Joint Sealants
079513 Expansion Joint Cover Assemblies

DIVISION 08 OPENINGS

081113	Hollow Metal Doors & Frames
081400	Wood Doors
083100	Access Doors & Panels
083323	Overhead Coiling Doors
083473	Sound Control Door Assemblies
083474	Sliding Sound Control Door Assemblies
084400	Aluminum Curtain Walls, Storefronts & Entrances
084520	Translucent Fiberglass Panel Assemblies
085673	Sound Control Window Units
087100	Door Hardware
087900	Door Operator Switch Bollards
088000	Glazing
089100	Louvers

DIVISION 09 FINISHES

092200	Non-Structural Metal Framing
092900	Gypsum Board
093000	Tiling
095100	Acoustical Ceilings
096001	Flooring Transition Strips
096400	Wood Flooring
096500	Resilient Flooring
096723	Resinous Flooring
096800	Carpeting
097200	Wall Coverings
097700	Fiberglass Reinforced Panels
098000	Acoustic Treatments
099000	Painting
099600	High-Performance Coatings

DIVISION 10 SPECIALTIES

101100	Visual Display Boards
102100	Toilet Compartments
102600	Wall & Door Protection
102813	Toilet Accessories
104400	Fire Protection Specialties
105113	Metal Lockers

DIVISION 11 EQUIPMENT

112326	Commercial Washer and Extractor
115700	Vocational Shop Equipment
116123	Theatrical Platforms
116133	Theatrical Rigging
116135	Orchestra Pit Lift System
116143	Theatrical Drapery
116163	Theatrical Lighting Dimming & Control
116173	Theatrical Lighting Fixtures

DIVISION 12 FURNISHINGS

122413	Roller Window Shades
123551	Music Education Storage Casework
124800	Entrance Floor Mats
126100	Fixed Audience Seating
126600	Retractable Bleacher and Seating System
127100	Portable Audience Seating

DIVISION 13 SPECIAL CONSTRUCTION

134833 Sound & Vibration Control

DIVISION 14 CONVEYING EQUIPMENT

142400 Hydraulic Elevators

144200 Wheelchair Lifts

Volume 2

DIVISION 21 FIRE SUPPRESSION

210500 Common Work Results for Fire Suppression
210502 Basic Fire Protection Requirements
210517 Sleeves and Sleeve Seals for Fire-Suppression Piping
210518 Escutcheons for Fire-Suppression Piping
210523 General-Duty Valves for Fire-Suppression Piping
210529 Hangers and Supports for Fire Suppression Piping and Equipment
210553 Identification for Fire Suppression Piping and Equipment
211119 Fire Department Connections
211200 Fire Suppression Standpipes
211313 Wet-Pipe Sprinkler Systems
213113 Electric-Drive, Centrifugal Fire Pumps
213400 Pressure-Maintenance Pumps
213900 Controllers For Fire-Pump Drivers

DIVISION 22 PLUMBING

220500 Common Work Results for Plumbing
220502 Basic Plumbing Requirements
220513 Common Motor Requirements for Plumbing Equipment
220517 Sleeves and Sleeve Seals for Plumbing Piping
220518 Escutcheons for Plumbing Piping
220519 Meters and Gages for Plumbing Piping
220523.12 Ball Valves for Plumbing Piping
220523.13 Butterfly Valves for Plumbing Piping
220523.14 Check Valves for Plumbing Piping
220529 Hangers and Supports for Plumbing Piping and Equipment
220548 Noise and Vibration Control for Plumbing Systems
220549 Noise Control Accessories for Plumbing Systems
220553 Identification for Plumbing Piping and Equipment
220719 Plumbing Piping Insulation
221116 Domestic Water Piping
221123 Domestic Water Pumps
221316 Sanitary Waste and Vent Piping
221319 Sanitary Waste Piping Specialties
221413 Facility Storm Drainage Piping
221423 Storm Drainage Piping Specialties
221429 Sump Pumps
221513 General Service Compressed-Air Piping
221519 General-Service Packaged Air Compressors and Receivers
223400 Fuel-Fired, Domestic-Water Heaters
224000 Plumbing Fixtures
224500 Emergency Plumbing Fixtures
224716 Pressure Water Coolers

DIVISION 23 HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

230500	Common Work Results For HVAC
230502	Basic HVAC Requirements
230513	Common Motor Requirements For HVAC Equipment
230514	Variable-Frequency Motor Controllers
230516	Expansion Fittings and Loops for HVAC Piping
230517	Sleeves and Sleeve Seals for HVAC Piping
220518	Escutcheons for HVAC Piping
230519	Meters and Gages for HVAC Piping
230523	General Duty Valves For HVAC Piping
230529	Hangers and Supports for HVAC Piping and Equipment
230548	Noise and Vibration Control for HVAC Systems
230553	Identification for HVAC Piping and Equipment
230593	Testing, Adjusting, and Balancing for HVAC
230700	HVAC Insulation - ASHRAE
230900	Instrumentation and Controls For HVAC
231123	Facility Natural-Gas Piping
232113	Hydronic Piping
232116	Hydronic Piping Specialties
232123	Hydronic Pumps
232300	Refrigerant Piping
232500	HVAC Water Treatment
233113	Metal Ducts
233119	HVAC Casings and Acoustical Housings
233300	Air Duct Accessories
233305	Noise Control Accessories for Ductwork
233416	Centrifugal HVAC Fans
233423	HVAC Power Ventilators
233600	Air Terminal Units
233713	Diffusers, Registers, and Grilles
234100	Particulate Air Filtration
235216	Condensing Boilers
236423	Screw Water Chillers
237316	Air-Handling Units
238123	Computer-Room-Air-Conditioning Units
238126	Split-System Air-Conditioning Units
238216	Air Coils
238236	Finned-Tube Radiation Heaters
238239.13	Cabinet Unit Heaters
238239.16	Propeller Unit Heaters
239000	Dust Collectors

DIVISION 26 ELECTRICAL

- 260500 Common Work Results for Electrical
- 260519 Low-Voltage Electrical Power Conductors and Cables
- 260523 Control-Voltage Electrical Power Cables
- 260526 Grounding and Bonding for Electrical Systems
- 260529 Hangers and Supports for Electrical Systems
- 260533 Raceways and Boxes for Electrical Systems
- 260543 Underground Ducts and Raceways for Electrical Systems
- 260553 Identification for Electrical Systems
- 260572 Short-Circuit Studies
- 260573 Coordination Studies
- 260574 Arc-Flash Hazard Analysis
- 260913 Electrical Power Monitoring and Control
- 260923 Lighting Control Devices
- 260936 Modular Dimming Controls
- 260943.03 Distributed Digital Lighting Controls
- 261116.12 Secondary Unit Substations with Switchboard Secondary
- 262213 Low-Voltage Distribution Transformers
- 262413 Switchboards
- 262416 Panelboards
- 262726 Wiring Devices
- 262816 Enclosed Switches and Circuit Breakers
- 263213.16 Gaseous Emergency Engine Generators
- 263214 Generator Connection Cabinet
- 263600 Transfer Switches
- 265119 LED Interior Lighting
- 265201 Interior Luminaires
- 265561 Theatrical System Electrical Requirements
- 265601 Exterior Luminaires

DIVISION 27 COMMUNICATIONS

- 270513 Communications Services
- 270536 Cable Trays for Communications Systems
- 270536.13 Non-Continuous Cable Supports for Communications Systems
- 271000 Structured Cabling
- 274100 Performance AV Systems

DIVISION 28 ELECTRONIC SAFETY AND SECURITY

- 280528 Pathways for Electronic Safety and Security
- 283111 Digital, Addressable Fire-Alarm System

DIVISION 31 EARTHWORK

- 311000 Site Clearing
- 311012 Fine Grading
- 311018 Soil Erosion Control
- 312000 Earth Moving

DIVISION 32 EXTERIOR IMPROVEMENTS

- 321216 Hot Mix Asphalt Concrete Paving
- 321313 Cement Concrete Pavements, Curbs & Gutters
- 321316 Decorative Concrete Paving
- 321373 Concrete Paving Joint Sealants
- 323119 Decorative Metal Fences & Gates
- 323300 Site Furnishings
- 328400 Planting Irrigation
- 329113 Soil Preparation
- 329200 Turf & Grasses
- 329300 Plants
- 329600 Transplanting

DIVISION 33 UTILITIES

- 331100 Water Main
- 333100 Facility Sanitary Sewers
- 334100 Storm Sewers, Underdrains & Drainage Structures

END OF SECTION

SECTION 210500 COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Design Development
 - 1. Documents: Design development specifications may include plumbing and HVAC equipment not required for this project. Equipment and capacities are identified on the drawings. Refer to the specifications for equipment characteristics, components, accessories, and installation requirements. These documents are not for construction.
- B. GMP pricing documents: This is a preliminary copy of the contract documents. The documents (drawings and project manual) are incomplete and issued to present the design intent. Equipment, material, and labor required to provide complete operating systems shall be included in the GMP.
- C. This Section includes the following:
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Grout.
 - 3. Fire-suppression equipment and piping demolition.
 - 4. Equipment installation requirements common to equipment sections.
 - 5. Painting and finishing.
 - 6. Concrete bases.
 - 7. Supports and anchorages.

1.3 DEFINITIONS

- A. GMP: Guaranteed Maximum Price
- B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, and spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- E. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- F. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- G. The following are industry abbreviations for rubber materials:
 - 1. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 2. NBR: Acrylonitrile-butadiene rubber.

1.4 BASIS-OF-DESIGN

- A. Equipment manufacturers listed on the equipment schedules are the basis-of-design. Manufacturers listed in the specification other than the basis-of design manufacture are acceptable substitutions. Equipment schedules are on the drawings. Refer to specifications for unscheduled equipment.

1.5 INFORMATIONAL SUBMITTALS

- A. Equipment startup reports.
 - 1. Reports will indicate equipment was started and tested according to the manufacturer's recommendations and is operating as specified. Included test data.
- B. Coordination Drawings: Submit one copy for the engineer's use. Division 21 coordination drawings will not be returned.
 - 1. Detail major elements, components, and systems of fire protection equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Indicate if sequence and coordination of installations are important to efficient flow of the Work. Include the following:
 - a. Planned piping layout, including valve and specialty locations and valve-stem movement.
 - b. Planned piping hanger layout including building attachments and building structural coordination.
 - c. Clearances for installing and maintaining insulation.
 - d. Clearances for servicing and maintaining equipment, accessories, and specialties, including space for disassembly required for periodic maintenance.
 - e. Equipment and accessory service connections and support details
 - f. Exterior wall and foundation penetrations.
 - g. Fire- and smoke-rated wall and floor penetration.
 - h. Sizes and locations of required concrete equipment curbs and bases.
 - i. Scheduling, sequencing, movement, and positioning of large equipment into building during construction.
 - j. Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.
 - k. Access door and panel locations.
 - l. Reflected ceiling plans to coordinate and integrate installation of air outlets and inlets, light fixtures, communication system components, sprinklers, and other ceiling-mounted items.

1.6 QUALITY ASSURANCE

- A. Comply with ASHRAE Guideline 4 – 2008 Preparation of operating and maintenance documentation for building systems.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- D. All grooved couplings, and fittings, valves and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components.
 - 1. All castings used for coupling housings, fittings, valve bodies, etc., shall be date stamped for quality assurance and traceability.
- E. Electrical Characteristics for Fire-Suppression Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
- F. Multiple Units: When two or more units of materials or equipment of the same type or class are required, these units shall be products of one manufacturer.
- G. Nameplates: Nameplate bearing manufacturer's name or identifiable trademark shall be securely affixed in a conspicuous place on equipment, or name or trademark cast integrally with equipment, stamped or otherwise permanently marked on each item of equipment.

1.7 GUIDELINES, CODES AND STANDARDS

- A. Refer to the most recently published edition for references to guidelines, and standards unless a specific edition is listed.
- B. Installation and materials shall comply with applicable national, state, and local codes and ordinances.
- C. In addition to other applicable codes, comply with the Michigan Fire Prevention Code, Act 207; the Michigan State Construction Code, Act 230 as well as all fire safety rules adopted by the State of Michigan Fire Safety Board.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- B. Store any plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for fire-suppression installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for fire-suppression items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 21 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.
- C. Standard Mechanical Couplings: Manufactured in two segments of cast ductile iron, conforming to ASTM A-536, Grade 65-45-12. Gaskets shall be pressure-responsive synthetic rubber, grade to suit the intended service, conforming to ASTM D-2000. Mechanical Coupling bolts shall be zinc plated (ASTM B-633) heat treated carbon steel track head conforming to ASTM A-449 and ASTM A-183. Couplings shall comply with ASTM F1476 – Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications.
 - 1. Rigid Type: Coupling housings with offsetting, angle-pattern bolt pads shall be used to provide system rigidity and support and hanging in accordance with NFPA-13. Couplings shall be fully installed at visual pad-to-pad offset contact. Couplings that require exact gapping of bolt pads at specific torque ratings are not permitted. Installation-ready, for direct stab installation without field disassembly.
 - 2. Flexible Type: Use in locations where vibration attenuation and stress relief are required.

2.3 JOINING MATERIALS

- A. Refer to individual Division 21 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Grooved Joint Lubricants: Lubricate gaskets in accordance with the manufacturer's published installation instructions, using lubricant compatible with the gasket elastomer and fluid media.
- E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
- G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4 CONCRETE BASES

- A. Refer to Division 03 Section "Cast-in-Place Concrete" or Miscellaneous Cast-in-Place Concrete."

2.5 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.1 PREPARATION

- A. Obtain current fire-hydrant flow test results from the local authority having jurisdiction. Use results for system design calculations required in "Quality Assurance" Article.

3.2 FIRE-SUPPRESSION DEMOLITION

- A. Refer to other sections and drawings for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove fire-suppression systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 SERVICE-ENTRANCE PIPING

- A. Connect fire sprinkler and standpipe piping to water-service piping for service entrance to building. Comply with requirements for exterior piping.
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping.

3.4 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 21 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Verify final equipment locations for roughing-in.
- M. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.5 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 21 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

- F. Grooved Joints: Grooved joints shall be installed in accordance with the manufacturer's latest published installation instructions. Grooved ends shall be clean and free from indentations, projections, and roll marks. Gaskets shall be molded and produced by the coupling manufacturer, and shall be verified as suitable for the intended service. A factory-trained field representative (direct employee) of the mechanical joint manufacture shall provide on-site training for contractor's field personnel in the proper use of grooving tools and installation of grooved piping products. The factory-trained representative shall periodically review the product installation and ensure best practices are being followed. Contractor shall remove and replace any improperly installed products. A distributor's representative is not considered qualified to conduct the training.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- H. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
 - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.6 PAINTING

- A. Painting of fire-suppression systems, equipment, and components as specified in other sections.
- B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.7 CONCRETE BASES

- A. Concrete Bases and Curbs:
 - 1. Provide scaled layouts of bases and curbs with sizes and locations dimensioned to concrete walls and columns.
 - 2. Determine base and curb sizes and locations based on "Accepted" equipment shop drawings. Base and curb sizes shall not be scaled from the Drawings.
 - 3. Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to vibration requirements at Project.
- B. Construction Details: Refer to Architectural Details for base and curb construction types. If not indicated, construct as follows:
 - 1. Provide concrete bases sized 4 inches larger in both directions than the supported equipment.
 - 2. Provide 4-inch high curbs and bases with finished edges, unless otherwise indicated.
 - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 - 4. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - 5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 6. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 7. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 - 8. Use 3000-psi, 28-day compressive-strength concrete and reinforcement.
 - 9. Chamfer all outside corners of concrete bases and curbs.
- C. Concrete Base Painting: Provide 3" wide safety stripe at outside edge of all concrete bases and curbs. Start paint at bottom edge of chamfer. Color shall be selected by architect.

3.8 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.
- B. Field Welding: Comply with AWS D1.1.

3.9 GROUTING

- A. Mix and install grout for fire-suppression equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

3.10 SEALANTS

- A. Comply with appropriate joint-sealant materials and applications specified in other sections.

3.11 CYBERSECURITY RISK MITIGATION STRATEGY

- A. Coordinate with Owner's IT Department to restrict external network access to Internet connected system through virtual private network (VPN) connections only.
- B. Security Event Log: Coordinate with the Owner to configure security event logging. Access to security logs shall be limited to users with proper authentication. Security logs shall be time stamped with Time and Date metadata for auditing and back-up.
- C. Disable any protocols for remote connectivity, unless constantly required for day-to-day operations.
- D. All external transport data shall be routed through encrypted channels with 2048-bit secure sockets layer (SSL).
- E. Coordinate with Owner's IT Department to implement a Web server-based human machine interface (HMI) that relies on IT technologies to secure access and restrict ports that can be opened on the firewall. Coordinate with Owner's IT Department to restrict access to known IP addresses only.
- F. Where building system networks are not physically separate from IT business networks, coordinate with Owner's IT Department to segregate networked and Internet connected systems from the IT business network using virtual local area network (VLAN) IT technologies to restrict internal attacks/breakdowns.
- G. Set unique, cryptographically strong passwords for administrator and user accounts. Default passwords must be changed before systems are connected to the Owner's network.
- H. Collect only the data that is necessary for analytics and optimization.

END OF SECTION

SECTION 210502 - BASIC FIRE PROTECTION REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Where contradictions occur between this Section and Division 01, the most stringent of the two shall apply. Architect shall decide which is most stringent.
- B. These Basic Requirements apply to the entire Division 21 work.
- C. All referenced and related provisions of Divisions 22, 23, 26, 27 and 28 shall also apply to the work of this section as if fully repeated herein.

1.2 SUMMARY

- A. The definitions of Division 01 and the General Conditions of the Specification also apply to the Division 21 contract.
- B. "Contract Documents" constitute the drawings, specifications, general conditions, project manuals, etc., prepared by engineer (or other design professional in association with Engineer) for contractor's bid or contractor's negotiations with the Owner. The Division 21 drawings and specifications prepared by the Engineer are not Construction Documents.
- C. "Construction Documents", "construction drawings", and similar terms for Division 21 work refer to installation diagrams, shop drawings and coordination drawings prepared by the contractor using the design intent indicated on the Engineer's contract documents. These specifications detail the contractor's responsibility for "Engineering by Contractor" and for preparation of construction documents.
- D. "Install" means to "set in place, connect and place in full operational order".
 - 1. "Provide" means to "furnish and install".
- E. "Equal" or "Equivalent" means "meets the specifications of the referenced product or item in all significant aspects". Significant aspects shall be as determined by the Owner's Representative.
- F. "Work by other(s) divisions", "re: Division", and similar expressions means work to be performed under the contract documents, but not necessarily under the division or section of the work on which the note appears. It is the contractors' sole responsibility to coordinate the work of the contract between his/her suppliers, subcontractors and employees. If clarification is required, consult Owner's Representative before submitting bid.
- G. By inference, any reference to a "contractor" or "sub-contractor" means the entity, which has contracted with the Owner for the work of the Contract Documents.
- H. "Engineer" means the design professional firm, which has preferred these contract documents. All questions, submittals, etc. of this division shall be routed to the Engineer (through proper contractual channels).

1.3 COORDINATION WITHIN DIVISION 21

- A. Contract Documents:
 - 1. General: The Contract Documents are diagrammatic showing certain physical relationships, which must be established within Division 21 work and its interface with other work. Such establishment is the exclusive responsibility of the Contractor. Drawings shall not be scaled for the purpose of establishing dimensions, clearances or material quantities.
 - 2. Supplemental Instructions: The exact location for some items in this Specification may not be shown on the Drawings. The location of such items may be established by the Owner's Representative during the progress of the work.
 - 3. Discrepancies:
 - a. Examine Drawings and Specifications of all Divisions of the work.

- b. Report any discrepancies to the Owner's Representative and obtain written instructions before proceeding.
 - c. Should there be a conflict within or between the Specifications or Drawings, the most stringent or higher quality requirements shall apply.
 - d. Items called for either in the Specifications or on the Drawings shall be required as if called for in both.
4. Constructability:
- a. Examine Drawings and Specifications of all Divisions of the work.
 - b. Report any issues to the Owner's Representative which may prevent installation of Division 21 work in accordance with the Contract Documents and the original construction contract.
- B. Contractor shall be responsible for providing proper documentation of equipment product data and shop drawings to all entities providing service.
- C. Coordination Drawings: Prepare coordination drawings in accordance with Division 01, Section "Submittals" to scale of 1/4" = 1'-0" or larger, detailing major elements, components, and systems of mechanical equipment (i.e. equipment rooms, and exterior equipment areas) and materials in relationship with other system, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are important to the efficient flow of the work, including (but not necessarily limited to) the following:
- 1. Indicate all major piping (HVAC, Plumbing and Fire Suppression), electrical equipment and conduits, structural, and architectural elements in these areas as well.
 - 2. Sizes and locations of required concrete pads, piers, curbs, and bases.
 - 3. Provide all necessary sections and elements for clarification.
 - 4. Indicate all seismic restraint and support systems to be used for all mechanical equipment throughout the project.
 - 5. Ductwork and piping transitions from rooftop units to shafts or horizontal ducts.
 - 6. Failure to produce or submit coordination drawings does not dismiss the Contractor's responsibility for translating the design intent of the Contract Documents into Construction Drawings.
- D. Deferred Approval Items: Division 01.
- E. Utility Connections:
- 1. Coordinate the connection of fire protection system with utilities and services.
 - 2. Comply with regulations of utility suppliers.
 - 3. The contract documents indicate the available information on existing utilities and services, and on new services (if any) to be provided to the project by utility companies and agencies.
 - a. Notify the Owner's Representative immediately if discrepancies are found.
 - 4. Coordinate mechanical utility interruptions one week in advance in writing with the Owner's Representative and the Utility Company.
 - a. Plan work so that duration of the interruption is kept to a minimum.

1.4 COORDINATION WITH OTHER DIVISIONS

- A. General:
- 1. Coordinate the Division 21 work with the progress of the work of the other trades.
 - 2. Complete the entire installation as soon as the condition of the building will permit.
 - 3. Contractor is responsible for coordination of his/her work with Owner's facility staff engaged in building automation, commissioning of systems, fire alarm system, etc.
- B. Chases, Inserts and Openings:
- 1. Provide measurements, drawings, and layouts so that opening, inserts and chases in new construction can be built and coordinated as construction progresses.
 - 2. Check sizes and locations of openings provided.
 - 3. Any cutting and patching made necessary by failure to provide measurements, drawings, and layouts at the proper time shall be done at no additional cost to the Owner.

- C. Support Dimensions: Provide dimensions and drawings so that concrete bases and other equipment supports to be provided under other Sections of the Specifications can be built at the proper time.
- D. Deferred Approved Items: Division 01.

1.5 ENGINEERING BY CONTRACTOR

- A. The construction of this building requires the Contractor to design several systems or subsystems. All such designs shall be the complete responsibility of the Contractor.
- B. Systems or subsystems which require responsibility by the Contractor and submitted to the Engineer for review include, but are not limited to:
 - 1. Equipment and piping supports, not detailed in the drawings.
 - 2. Pipe hangers and anchors not specified in these documents, or catalogued by the manufacturer.
 - 3. Vibration Isolation/Seismic Restraint.
 - 4. Thermal pipe stress analysis.

1.6 REGULATORY REQUIREMENTS

- A. General:
 - 1. Regulatory Compliance: Work performed under this Division shall comply with the latest currently adopted editions of Codes and Regulations including, but not limited to those listed below.
 - 2. Minimum Requirements: The requirements of the Drawings and Specifications are the minimum that will be allowed, unless such requirements are exceeded by applicable codes or Regulations, in which case the Code or Regulation requirement shall govern.
 - 3. Code Changes: Should a code change occur between time of proposal and date of permit issue, and the Contractor has unnecessarily delayed the acquisition of permits, the contractor shall hold the Owner free from additional expense resulting from such Code change.
- B. Codes: Comply With the Currently Adopted (At Time of Contract Award) Codes
- C. Comply With the Latest Editions of Applicable Regulations and Standards, Including:
 - 1. Uniform Plumbing Code
 - 2. National Fire Protection Associations (NFPA).
 - 3. Underwriter's Laboratories, Inc. (UL).
 - 4. American National Standards Institute (ANSI).
 - 5. American Society of Testing Materials (ASTM).
 - 6. American Society of Mechanical Engineers (ASME).
 - 7. American Welding Society Code (AWSC).
 - 8. American Water Works Association (AWWA).
 - 9. Compressed Gas Association (CGA).
 - 10. Cast Iron Soil Pipe Institute (CISPI).
 - 11. Manufacturers Standardization Society (MSS).
 - 12. National Bureau of Standards (NBS).
 - 13. Plumbing and Drainage Institute (PDI).
 - 14. Sheet Metal and Air Conditioning Contractors National Association (SMACNA).
 - 15. Factory Mutual Standards
- D. Requirements of Local Utility Companies: Comply with rules and regulations of local utility companies. Include in bid the cost of all valves, valve boxes, meter boxes, meters and such accessory equipment, which will be required for the project.
- E. Additional Regulations: Follow additional regulations which appear in individual Sections of these Specifications.
- F. Contradictions: Where codes are contradictory, follow the most stringent, unless otherwise indicated in Plans or Specifications. The Owner's Representative shall determine which is most stringent.

- G. Contract Documents Not in Compliance:
 - 1. Where it is not noted that the Drawings and Specifications do not comply with the minimum requirements of the codes, either notify the Owner's Representative in writing during the Bidding Period of the revisions required to meet Code Requirements. After entering into contract, Contractor will be held to complete all work necessary to meet Code Requirements without additional expense to the Owner.
 - 2. Follow Drawings and Specifications where they are superior to Code Requirements.
- H. Permits:
 - 1. Contractor shall pay for and obtain all permits required by authorities and agencies having jurisdiction for the work in this Division.
 - 2. Post permits as required.
- I. Inspections and Tests:
 - 1. Arrange for all required inspections and tests.
 - 2. Pay all charges.
 - 3. Notify the Owner's Representative in writing 72 hours before tests.
 - 4. Submit one copy for Owners record of permits. Licenses, inspection reports and test reports.

1.7 EQUIVALENTS AND SUBSTITUTIONS

- A. The applicable paragraphs for General Requirements, Division 01 apply herein.
- B. Basis for Design: The manufacturer's name and product listed on the drawings, or listed first of several names in these Specifications, is used as a basis for design to establish space requirements, a standard of quality and performance.
- C. Equivalents: Products of one or more other manufacturer's names listed in these Specifications following the words "or equivalent by" may be selected, subject to paragraph below titled "Contractor's Responsibility for Equivalent and Substitutions."
- D. Other Options:
 - 1. For products specified by naming only one manufacturer, refer to paragraph below under "Substitutions".
 - 2. For products specified only by performance characteristics or reference standards, select any manufacturer meeting the requirements.
- E. Substitutions: Requests for acceptance of a product of manufacturer's name not listed in these specifications will be considered if any one of the following conditions is met:
 - 1. The named product is not available because of strikes or discontinuance of manufacture, and the proposed product is equivalent to the named product.
 - 2. The proposed product is superior to the named product, in the opinion of the Owner's representative.
 - 3. The proposed product is equivalent to the named product and its use will be to the advantage of the Owner, by the Owner receiving an equitable credit or cost savings. The Owner's Representative reserves the right to reject any substitution.
 - 4. Submit proposed substitutions with bid along with alternate price, complete descriptive data and a comparison of the substitute manufacturer's product with specified product. Request for acceptance of a product of manufacturer's name not listed in these specifications, is subject to the paragraph titled "Contractor's Responsibility Equivalents and Substitutions".
- F. Contractor's Responsibility for Equivalents and Substitutions:
 - 1. Items submitted as a substitution to the basis of design or listed general equivalents shall be identified as such and shall include a written request for substitution indicating the following:
 - a. Contract price adjustment.
 - b. Contract time adjustment.
 - c. Item by item breakdown of differences between basis of design and substituted item.
 - d. Operation, maintenance and energy cost difference.

2. Products of manufacturer must match the features, construction, performance and size of those selected for design. Standard catalogued may require certain modifications to meet specified requirements.
3. The responsibility for providing that specified requirements have been met remains with the manufacturer and contractor. Should the substituted item fail to perform in accordance with the Specifications, replace same with the originally specified item without extra cost to the contract.
4. When requesting review of an equivalent or substituted product, submit a comparison chart listing features, construction, performance and sizes of named product versus equivalent or substituted product.
5. Submittals for review of an equivalent or substituted product will be reviewed for acceptability when all the above requirements have been met. Contractor shall be responsible for all costs incurred by the Architect and Engineer for review of equivalency beyond initial review.
6. Coordinate the installation of the product with all trades.
7. Contractor shall be responsible for changes in electric wiring, materials and for all other additional costs of construction by all trades involved to accommodate the product to perform same as product used on the "Basis of Design".
8. Coordination of General Equivalents and Substitutions: Where Contract Documents permit selection from general equivalents, or where substitutions are authorized, coordinate clearance and other interface requirements with mechanical and other work.
9. Provide necessary additional items so that selected or substituted item operates equivalent to the Basis of Design and properly fits in the available space allocated for the Basis of Design.
10. Contractor is responsible for assuring that piping, conduit, duct, flue and other service locations for general equivalents or substitutions do not cause access, service or operational difficulties any greater than would be encountered with the Basis of Design.
11. Failure to comply with these requirements will result in immediate rejection of the request for substitution.

1.8 GENERAL SUBMITTAL REQUIREMENTS

- A. Refer to Division 01.
- B. Coordination and Sequencing:
 1. Coordinate submittals 3 weeks (minimum) prior to expected order date so that work will not be delayed by submittals.
 2. Do not submit product data, or allow its use on the project until compliance, with requirement of Contract Documents has been confirmed by Contractor.
 3. Submittal is for information and record, unless otherwise indicated, and is not a change order request.
 4. Submitting contractor is responsible for routing reviewed submittals to all parties affected including but not limited to electrical, building automation and temperature control, and test and balance subcontractors.
 5. Make submittals for group of similar products or materials such as valves, fixtures, pumps, insulation, etc., or area of work complete and at one time, not in piecemeal fashion.
 6. Identify submittals with Architect's project name and number, with item designation as indicated on drawings, and referenced to applicable paragraphs of the specifications. Submit in brochure form.
 7. Submittals of products needed at start of Project for its installation, or those requiring a long lead time for assembly or manufacturing, should be submitted before the others.
- C. Preparations of Submittals:
 1. Refer to Division 01 requirements.
 2. Provide permanent marking on each submittal to identify project, date, Contractor, Subcontractor, Supplier, submittal name and similar information to distinguish it from other submittals.
 3. Indicate any portions of work, which deviate from the Contract Documents.
 - a. Explain the reasons for the deviations.
 - b. Show how such deviations coordinate with interfacing portions of other work.
 4. Show Contractor's executed review and approval marking.
 5. Provide space for the Owner's Representative "Action" marking.

6. Submittals, which are received from sources other than through Contractor's office, will be returned "Without Action".
 7. Submittals shall be presented in a neat and legible fashion and shall be returned "Without Action" if presented in any other fashion.
- D. Response to Submittals: Where standard product data has been submitted, it is recognized:
1. That the Submitter has determined that the products fulfill the specified requirements.
 2. That the submittal is for the Owner's Representative information only, but will be returned with appropriate action where observed to be not in compliance with the requirements.
- E. If more than two submittals (either for shop drawings, as-builts drawings, or test and balance reports) are made by the contractor due to the incompleteness, non-compliance, errors, omissions, etc. the Owner reserves the right to charge the contractor for subsequent reviews by their consultants. Such extra fees shall be deducted from payments by the Owner to the Contractor.

1.9 SPECIFIC CATEGORY SUBMITTAL REQUIREMENTS

- A. Manufacturer's Data:
1. Where pre-printed data covers more than one distinct product, size, type, material, trim, accessory group or other variation, mark submitted copy with black ink to indicate which of the variations is to be provided.
 2. Delete or mark-put significant portions of pre-printed data, which are not applicable.
 3. Where operating ranges are shown, mark data to show portion of range required for project application.
 4. For Each Product, Include the Following:
 - a. Sizes.
 - b. Weights.
 - c. Speeds.
 - d. Capacities.
 - e. Piping and electrical connection sizes and locations.
 - f. Statements of compliance with the required standards and regulations.
 - g. Performance data.
 - g. Manufacturer's specifications and installation instructions.
- B. Shop Drawings:
1. Prepare fire protection shop drawings, except diagrams, to accurate scale.
 - a. Show clearance dimensions at critical locations.
 - b. Show dimensions of spaces required for operation and maintenance.
 - c. Show interfaces with other, work, including structural support.
- C. Test Reports:
1. Submit test reports, which have been signed and dated by the firm performing the test.
 2. Prepare test reports in the manner specified in the standard or regulation governing the test procedure (if any) as indicated.
- D. Required Equipment and Shop Drawing Submittals:
1. Provide a submittal schedule with bid.
 2. Provide equipment submittals for each item of equipment specified or scheduled in the Contract Documents.
 3. Submittal schedule shall show each item of equipment, applicable section of the Specifications where it is described, applicable drawing number and schedule name where it is scheduled, date of Contractor's proposed submittal to the Owner's Representative, required date to receive submittal from the Owner's Representative and schedule order date.
 4. Provide a Mechanical Shop Drawing Schedule for submission to the Owner's Representative with the Submittal Schedule.

1.10 COMPATIBILITY

- A. General: Provide products, which are compatible with other products of the mechanical work, and with other work, requiring interface with the mechanical work.

- B. Power Characteristics: Where power characteristics are not stated in Division 21 Sections, refer to the Sections of Division 26 and the Electrical Drawings for the power characteristics of each power driven item of mechanical equipment. Coordinate available power with Electrical Contractor before ordering equipment. Mechanical Contractor shall be responsible for ordering equipment to meet the available power characteristics. If there is a conflict between Division 21 documents and Division 26 documents, provide a written notification to the Owner's Representative for direction. Do not order equipment prior to determining the proper electrical service. No contract cost adjustment will be allowed for equipment ordered in conflict with the available power characteristics.

1.11 RECORD DRAWINGS

A. Drawings:

1. Record of Project Progress: Purchase from the Architect a complete set of reproducible contract drawings and maintain drawings available at the job site for inspection. Keep an accurate, legible and continuously updated record of installed locations and all project revisions other than revised drawings issued by the Architect, including source and date of authorization. Utilize only contract drawing symbols for recording the work. Drawing notations to be sufficiently clear in the representation of the work, for utilization by a CADD operator (drafts person) who is not necessarily familiar with the installed work.
2. Record of Installation: At the conclusion of the work, deliver one (1) set of blue prints of the progress drawings to the Owner's Representative for review. Following the review, Contractor shall have incorporated by a competent CADD operator all of the installed data represented on the project progress drawings.
3. Include in Record Drawings the Following:
 - a. Revisions, including sketches, bulletins, change orders, written addenda and directives, clarifications and responses generated by requests for information (RFIs), regardless of source of the revision.
 - b. Location and configuration of equipment with related housekeeping pads.
 - c. Location of fixtures, drains and appurtenances.
 - d. Physical routing of piping, underground, exposed, and above ceiling with locations of valves and accessories plainly marked and identified.
 - e. Location of piping below building and on exterior, valves, manholes, appurtenances and stub outs dimensioned from buildings and permanent structures, both horizontally and vertically.
 - f. Location of wall and ceiling access panels.

- B. Acceptance: As a condition for acceptance of the work, deliver two (2) sets of Auto CAD Latest Version CDs and one set of signed and dated reproducible drawings to the Owner's Representative and obtain a receipt.

1.12 OPERATING AND MAINTENANCE DATA

A. Refer to Division 01 requirements.

B. Submission:

1. Submit three typed and bound copies of Operating and Maintenance (O&M) Manuals prior to scheduling systems demonstrations for the Owner's Representative, as specified in Division 01.
2. Bind each Maintenance Manual in one or more vinyl covered, 3-ring binders, with pockets for folded drawings.
 - a. Mark the spine of each binder with system identification and volume number.

C. Required Contents:

1. Manuals shall have index with tab dividers for each major equipment section to facilitate locating information on a specific piece of equipment.
2. Identify data within each section with drawing code numbers as they appear on Drawings and Specifications. Include as a minimum the following data:

- a. Alphabetical list of system components, with the name, address and 24 hour telephone number of the company responsible for servicing each item during the first year of operation. Include point of contact for company.
- b. Operating instructions for complete system including:
 - 1) Emergency procedures for fire and failure of major equipment.
 - 2) Major start, operation and shut down procedures.
- c. Maintenance Instructions for Each Piece of Equipment Including:
 - 1) Equipment lists.
 - 2) Proper lubricants and lubricating instructions for each piece of equipment.
 - 3) Necessary cleaning, replacement and/or adjustment schedule.
 - 4) Product data.
 - 5) Installation instructions.
 - 6) Parts list.
- d. Marked or changed prints locating concealed parts and variations from the original system design (as-built drawings).
- e. Valve schedule and associated piping schematics. See Section 220553, IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT.
- f. Copies of any extended equipment warranties which are greater than one year.

1.13 WARRANTIES

- A. The warranty period is two years after Date of Acceptance:
 1. During this period, provide labor and materials as required to repair or replace defects in the mechanical system at no additional cost to the Owner. Provide certificate with O&M Manual submittal, which guarantees same-day service response to Owners call for all such warranty service.
 2. Provide certificate for such items of equipment, which have warranties in excess of one year. Insert copies in O&M Manuals.
 3. Provide extended manufacturers warranties to cover two years from date of acceptance if standard warranty starts any time prior to that date.
 4. At time of bid, submit additional costs or extended warranties for principal equipment (e.g. point of use water heaters, pumps, air compressor, etc.).
- B. Provide longer warranties where specified in individual specification sections.
- C. Refer to Division 01 for additional requirements.

1.14 SPARE PARTS, SPECIAL TOOLS

- A. Deliver spare parts to the Owner's Representative and obtain receipts at the time operating instructions are given to the Owner's personnel.
- B. Include the Following:
 1. V-Belts: One complete set of each size.
 2. Fuses: each type used for all equipment utilizing fuses. Quantity 10%, but not less than two.
 3. Pilot Light Lamps: Each type used on the project. Quantity of 10%, but not less than two.
 4. Special Tools: Furnish special tools required for assembly, adjustment, setting or maintenance of equipment if such tool is not readily available on the commercial tool market.
 5. Maintenance Paint: Furnish one can of touch-up paint for each different factory finish, which is to be the final finished surface of the product.
 6. Alternate Parts: Under the individual mechanical sections, there are listed spare parts to be furnished under a bid alternate. Should the alternate be accepted, such spare parts shall be similarly delivered to the Owner.

1.15 SYSTEM ACCEPTANCE

- A. Acceptance shall be contingent upon completion of final review and correction of all deficiencies. Satisfactory completion of the operational tests, which shall demonstrate compliance with all performance criteria, and the requirements of the Contract Documents.
- B. Request a Final Review Prior to System Acceptance After Completion of the Following:

1. Installation of all systems required by Contract Documents.
2. Submission and acceptance of service manuals.
3. Identification.
4. Cleaning.
5. Satisfactory operation of all systems for a period of one week.

1.16 MANDATORY GOVERNING PROVISION

- A. Omissions of words or phrases, such as “the Contractor shall”, in conformity with”, “shall be”, “as noted on the Drawings”, “according to the Drawings”, “an”, “the”, and “all” are intentional.
- B. Omitted words or phrases shall be supplied by inference.

1.17 OWNER FURNISHED EQUIPMENT

- A. All equipment called out in the Specifications or shown on the Drawings as “Owner Furnished Equipment” shall be installed and connected under this contract. Provide rough-ins for all future connections indicated, unless otherwise specifically indicated on Drawings.

1.18 TEMPORARY FACILITIES

- A. Light, heat, power, etc.
 1. Contractor shall be responsible for providing temporary electricity, heat and other facilities as specified in Division 01.
 2. Contractor shall be responsible for maintaining the equipment in an as-new condition. Equipment will not be turned over to the Owner until it is brought up to as-new condition.

1.19 SAFETY PROVISIONS

- A. Equipment Nameplates: provide power-oriented fire protection equipment with a permanent nameplate attached by the manufacturer, indicating:
 1. The manufacturer.
 2. Product name.
 3. Model number.
 4. Serial number.
 5. Speed.
 6. Capacity.
 7. Power characteristics.
 8. Labels of testing, or inspecting agencies.
 9. Other similar data.
- B. Where manufacturer affixed nameplate is not available, Contractor shall fabricate and attach nameplate.
- C. Guards:
 1. Unless equivalent guards are provided integral with the equipment, enclose each belt drive (including sheaves) on both sides in a galvanized, one inch, mesh screen of No. 18 gauge steel wire or expanded metal, fastened to an approved, structural steel frame, securely fastened to the equipment or floor.
 2. Provide tachometer holes at shaft centers. Unless equivalent guards are provided integral with the equipment, install a solid guard of No. 20 gauge galvanized steel over the coupling of each item of direct-driven equipment.
 3. Sides are not required on these guards except to ensure rigidity.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION GENERAL REQUIREMENTS

- A. Furnish, apply, install, connect, erect, clean, and condition manufactured materials and equipment as recommended in manufacturer's printed directions (maintained on job site during installation).
- B. Provide all attachment devices and materials necessary to secure materials together or to other materials.
- C. Make allowance for ample and normal expansion and contraction for all building components and piping systems that are subject to such.
- D. Install materials only when conditions of temperature, moisture, humidity and conditions of adjacent building components are conducive to achieving the best installation results.
- E. Erect, install and secure components in a structurally sound and appropriate manner.
- F. Where necessary, temporarily brace, shore, or otherwise support members until final connections are installed.
- G. Leave all temporary bracing, shoring, or other structural supports in place as long as practical for safety and to maintain proper alignment.
- H. Handle materials in a manner to prevent scratching, abrading, distortion, chipping, breaking, or other disfigurement.
- I. Conduct work in a manner to avoid injury or damage to previously placed work.
- J. Any work so impaired or damaged shall be replaced at no expense to Owner.
- K. Fabricate and install materials true to line, plumb and level.
- L. Leave finished surfaces smooth and flat, free from wrinkles, wraps, scratches, dents and other imperfections.
- M. Furnish materials in longest practical lengths and largest practical sizes to avoid all unnecessary jointing.
- N. Make all joints secure, tightly fitted, and as inconspicuous as possible by the best, accepted practice in joinery and fabrication.
- O. Consult the Owner's Representative for mounting height or position of any unit not specifically indicated or located on Drawings or specified in Specifications.
- P. Job mixed multi-component materials used in the work shall be mixed in such regulated and properly sized batches that material can be used before it begins to "set".
- Q. Mixing of a partially "set" batch with another batch of fresh materials will not be accepted and entire batch shall be discarded and removed from site.
- R. Clean all mixing tools and appliances that can be contaminated prior to mixing of fresh materials.
- S. In addition to the above, refer to each Section of the Specifications for additional installation requirements for the proper completion of all work.

3.2 COORDINATION OF FIRE PROTECTION INSTALLATION

- A. Inspection and Preparation:
 - 1. Examine the work interfacing with fire protection work, and the conditions under which the work will be performed, and notify the Owner's Representative of conditions detrimental to the proper completion of the work at original contract price.
 - 2. Do not proceed with the work until unsatisfactory conditions have been corrected.
- B. Layout:

1. Layout the fire protection work in conformity with the Contract Drawings, Coordination Drawings and other Shop Drawings, product data and similar requirements so that the entire fire protection system will perform as an integrated system, properly interfaced with other work recognizing that portions of the work are shown only in diagrammatic form.
 2. Where coordination requirements conflict with individual system requirements, comply with the Owner's Representative decision on resolution of the conflict.
 3. Take necessary field measurements to determine space and connection requirements.
 4. Provide sizes and shapes of equipment so the final installation conforms to the intent of the Contract Documents.
 5. Provide necessary fittings to create offsets as required to coordinate with building structure and other trades, even if fittings are not shown on the Contract Drawings.
- C. Integrate fire protection work in ceiling spaces with the ceiling suspension system, light fixtures and other work, so that required performance of each will be achieved.

3.3 PRODUCT INSTALLATION

- A. Manufacturer's instructions:
1. Except where more stringent requirements are indicated, comply with the product manufacturer's instructions and recommendations.
 2. Consult with manufacturer's technical representatives, who are recognized as technical experts, for specific instructions on special projects conditions.
 3. If conflict exists, notify the Owner's in writing and obtain his instruction before proceeding with the work in question.
- B. Movement of Equipment:
1. Wherever possible, arrange for the movement and positioning of equipment so that enclosing partitions, walls and roofs will not be delayed or need to be removed.
 2. Otherwise, advise Contractor of opening requirements to be maintained for the subsequent entry of equipment.
- C. Heavy Equipment:
1. Coordinate the movement of heavy items with shoring and bracing so that the building structure will not be overloaded during the movement and installation.
 2. Where fire protection products to be installed on the existing roof are too heavy to be hand-carried, do not transport across the existing roof deck. Position by crane or other device so as to avoid overloading or otherwise damaging the roof deck.
- D. Clearances:
1. Install Piping:
 - a. Straight and true.
 - b. Aligned with other work.
 - c. Close to walls and overhead structure (allowing for insulation).
 - d. Concealed, where possible, in occupied spaces.
 - e. Out-of-the-way with maximum passageway and headroom remaining in each space.
 2. Do not obstruct windows, doors and other openings.
 3. Coordinate location of piping systems required to slope for drainage (over other service lines and ductwork).
- E. Access:
1. Provide For Removal, Without Damage To Other Parts, Of:
 - a. Seals.
 - b. Shafts.
 - c. Gaskets.
 - d. Drives.
 - e. Filters.
 - f. Strainers.
 - g. Bearings.
 - h. Control components.

- i. Other parts requiring periodic replacement or maintenance.
2. Connect equipment for ease of disconnecting with minimum of interference with other work.
3. Provide unions where required.
4. Locate operating and control equipment and devices for easy access.
5. Provide access panels where equipment or devices are concealed by non-accessible finishes and similar work.
6. Ensure grease fittings for equipment are readily visible and accessible. Extend fittings when necessary.

3.4 PROTECTION OF WORK

- A. Provide protection against dust migration, rain, wind, storms, frost, or heat, so as to maintain all work, materials, apparatus and fixtures free from injury or damage.
- B. At end of each day's work, cover all new work likely to be damaged.
- C. Do not interrupt the integrity of the building security overnight.
- D. Refer to Division 01 for additional requirements.
- E. All pipe ends, valves and equipment left unconnected shall be capped, plugged or otherwise properly protected to prevent damage and the intrusion of foreign matter.
- F. Any equipment or piping systems found to have been damaged or contaminated above "MILL" or "SHOP" conditions shall be replaced or cleaned to the Owner's Representative satisfaction.
- G. Provide initial water seal fill for all waste P-traps or similar traps.

3.5 PROTECTION OF POTABLE WATER SYSTEMS

- A. All temporary water connections shall be made with an approved back flow preventer.
- B. All hose bibs shall have as a minimum, a vacuum breaker, to prevent back flow.
- C. Direct connections to hydronic systems shall only be made through a reduced pressure back flow preventer.

3.6 OBJECTIONABLE NOISE AND VIBRATION

- A. Mechanical equipment and piping system shall operate without objectionable noise and vibration, as determined by the judgment of the Owner's Representative.
- B. If objectionable noise and vibration should be produced, make necessary changes or additions required to produce satisfactory result without additional cost to the Owner.

3.7 CLOSING-IN OF UN-INSPECTED WORK

- A. Do not allow or cause any work to be covered up or enclosed until inspected, tested and approved.
- B. Should any work be enclosed or covered up before such inspection and test, Contractor shall, at his/her own expense, uncover work and after it has been inspected, tested and approved, make repairs with such materials as necessary to restore his/her work and that of other Divisions to original and proper condition.

3.8 CLEANING

- A. After installation is complete, clean all systems as indicated below.
- B. Piping and Equipment To Be Insulated: Clean exterior thoroughly to remove rust, plaster, cement and dirt before insulation is applied.
- C. Piping and Equipment Remain Un-insulated: Clean exterior thoroughly to remove rust, plaster, cement, dirt and other foreign substances.

- D. Piping and Equipment To Be Painted: Clean exterior to be exposed in completed structure. Remove rust, plaster, cement and dirt by wire brushing. Remove grease, oil and other foreign materials by wiping with clean rags and suitable solvents.
- E. During Progress of Work: Carefully clean up the premises and keep all portions of the building free of debris.
- F. Chrome Or Nickel Plated Work: Thoroughly polish.

3.9 DAMAGE RESPONSIBILITY

- A. Contractor shall be responsible for damage to the grounds, buildings or equipment and the loss of refrigerants, fuels or gases, caused by leaks or breaks in pipes for equipment furnished or installed under this Division.

3.10 PRELIMINARY OPERATION

- A. The Owner's Representative reserves the right to operate portions of the mechanical system on a preliminary basis without voiding the guarantee or relieving the Contractor of his/her responsibilities.

3.11 OPERATIONAL TESTS

- A. Before operational tests are performed, demonstrate to the Owner's Representative that systems and components are complete and fully charged with operating fluid and lubricants. Systems shall be operable and capable of maintaining continuous uninterrupted operation during the operating and demonstration period.
- B. After systems have been completely installed, connections made, and tests completed, operate the systems continuously for a period of five working days during the hours of a normal working day.
- C. Rotating equipment shall be in dynamic balance and alignment.
- D. Tests required in various sections herein shall be completed.
- E. Notify the Owner's Representative, in writing, two weeks in advance of this operational period.
- F. This operational test may be concurrent with instruction of the Owner's operating personnel.

3.12 COMPLIANCE TESTS

- A. Conduct tests for individual components, such as chiller, boiler, cooling tower, air handling unit, etc. of all portions of the installation as may be required by the various Sections of this Division to comply with the Contract Documents. Tests shall be made in the presence of the Owner's Representative. Costs of tests shall be borne by the Contractor. Contractor shall provide all instruments, equipment, labor and materials to complete the tests. These tests may be required at any time between the installation of the work and the end of the warranty period. Should these tests expose any defective materials, poor workmanship or variance with requirements of Contract Documents, Contractor shall make any changes necessary and remedy any defects at no cost to the Owner.

END OF SECTION

SECTION 210517 SLEEVES AND SLEEVE SEALS FOR FIRE-SUPPRESSION PIPING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Sleeve-seal systems.
 - 3. Sleeve-seal fittings.
 - 4. Grout.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral water stop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.2 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. Metraflex Company (The).
 - 4. Pipeline Seal and Insulator, Inc.
 - 5. Proco Products, Inc.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - 1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - 2. Pressure Plates: Stainless steel.
 - 3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Holdrite.
- B. Description: Manufactured plastic, sleeve-type, water stop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber water stop collar with center opening to match piping OD.

2.4 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Non-shrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes in walls.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas, pipe chases, or other wet areas 2 inches above finished floor level.
 - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire stop materials. Comply with requirements for fire stopping specified in "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position water stop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.4 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 4. Concrete Slabs above Grade:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
 5. Interior Partitions:
 - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.

END OF SECTION

SECTION 210518 ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and setscrew fastener One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- B. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- C. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed hinge and setscrew.
- D. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed hinge and setscrew.
- E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for exposed piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - c. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - d. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.
 - e. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.
 - 2. Escutcheons for Existing Piping in Renovated Areas:

- a. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
 - b. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
- 1. New Piping: One-piece, floor-plate type.
 - 2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

- A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION

SECTION 210523
GENERAL-DUTY VALVES FOR FIRE-SUPPRESSION PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Two-piece ball valves with indicators.
 - 2. Iron butterfly valves with indicators.
 - 3. Check valves.
 - 4. Bronze OS&Y gate valves.
 - 5. Iron OS&Y gate valves.
 - 6. NRS gate valves.
 - 7. Indicator posts.
 - 8. Trim and drain valves.

1.3 DEFINITIONS

- A. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- B. NRS: Nonrising stem.
- C. OS&Y: Outside screw and yoke.
- D. SBR: Styrene-butadiene rubber.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooved ends, and weld ends.
 - 3. Set valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.
- D. Protect flanges and specialties from moisture and dirt.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. UL Listed: Valves shall be listed in UL's "Online Certifications Directory" under the headings listed below and shall bear UL mark:
 - 1. Main Level: HAMV - Fire Main Equipment.
 - a. Level 1: HCBZ - Indicator Posts, Gate Valve.

- b. Level 1: HLOT - Valves.
 - 1) Level 3: HLUG - Ball Valves, System Control.
 - 2) Level 3: HLXS - Butterfly Valves.
 - 3) Level 3: HMER - Check Valves.
 - 4) Level 3: HMRZ - Gate Valves.
 - 2. Main Level: VDGT - Sprinkler System & Water Spray System Devices.
 - a. Level 1: VQGU - Valves, Trim and Drain.
- B. FM Global Approved: Valves shall be listed in its "Approval Guide," under the headings listed below:
 - 1. Automated Sprinkler Systems:
 - a. Indicator posts.
 - b. Valves.
 - 1) Gate valves.
 - 2) Check valves.
 - (a) Single check valves.
 - 3) Miscellaneous valves.
- C. Source Limitations for Valves: Obtain valves for each valve type from single manufacturer.
- D. ASME Compliance:
 - 1. ASME B16.1 for flanges on iron valves.
 - 2. ASME B1.20.1 for threads for threaded-end valves.
 - 3. ASME B31.9 for building services piping valves.
- E. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- F. NFPA Compliance: Comply with NFPA 24 for valves.
- G. Valve Pressure Ratings: Not less than the minimum pressure rating indicated or higher as required by system pressures.
- H. Valve Sizes: Same as upstream piping unless otherwise indicated.
- I. Valve Actuator Types:
 - 1. Worm-gear actuator with handwheel for quarter-turn valves, except for trim and drain valves.
 - 2. Handwheel: For other than quarter-turn trim and drain valves.
 - 3. Handlever: For quarter-turn trim and drain valves NPS 2 and smaller.

2.2 TWO-PIECE BALL VALVES WITH INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. NIBCO, Inc. (www.nibco.com)
 - 2. Victaulic Company (www.victaulic.com)
- B. Description:
 - 1. UL 1091, except with ball instead of disc and FM Global standard for indicating valves (butterfly or ball type), Class Number 1112.
 - 2. Minimum Pressure Rating: 175 psig.
 - 3. Body Design: Two piece.
 - 4. Body Material: Forged brass or bronze.
 - 5. Port Size: Full or standard.
 - 6. Seats: PTFE.
 - 7. Stem: Bronze or stainless steel.
 - 8. Ball: Chrome-plated brass.
 - 9. Actuator: Weatherproof actuator housing with worm gear or traveling nut.
 - 10. Supervisory Switch: Internal or external.
 - 11. End Connections for Valves NPS 1 through NPS 2: Threaded ends.
 - 12. End Connections for Valves NPS 2-1/2: Grooved ends.

2.3 IRON BUTTERFLY VALVES WITH INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Globe Fire Sprinkler Corporation (www.globesprinkler.com)
 2. Kennedy Valve Company; a division of McWane, Inc. (www.kennedyvalve.com)
 3. Nibco Inc. (www.nibco.com)
 4. Tyco Fire & Building Products (www.tyco-fire.com)
 5. Victaulic Company (www.victaulic.com)
 6. Zurn Industries, LLC (www.zurn.com)
- B. Description:
1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly or ball type), Class Number 112.
 2. Minimum Pressure Rating: 300 psig.
 3. Body Material: Cast or ductile iron.
 4. Seat Material: Pressure responsive EPDM.
 5. Stem: Stainless steel.
 - a. Stem shall be offset from the disc centerline to allow complete 360 degree circumferential seating.
 6. Disc: Ductile iron.
 7. Actuator: Weatherproof actuator housing with worm gear or traveling nut.
 8. Supervisory Switch: Internal or external.

2.4 CHECK VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Anvil International (www.anvilintl.com)
 2. Fire Protection Products, Inc. (www.fppi.com)
 3. Globe Fire Sprinkler Corporation (www.globesprinkler.com)
 4. Kennedy Valve Company; a division of McWane, Inc. (www.kennedyvalve.com)
 5. Matco-Norca (www.matco-norca.com)
 6. Mueller Co. (www.muellercompany.com)
 7. Reliable Automatic Sprinkler Company (www.reliablesprinkler.com)
 8. Shurjoint Piping Products (www.shurjoint.com)
 9. Tyco Fire & Building Products (www.tyco-fire.com)
 10. United Brass Works, Inc. (www.ubw.com)
 11. Venus Fire Protection, Ltd. (www.venus-fire.com)
 12. Victaulic Company (www.victaulic.com)
 13. Viking Corporation (www.vikingcorp.com)
 14. Watts; a Watts Water Technologies Company (www.wattswater.com)
 15. Wilson & Cousins Inc. (www.wilsonandcousins.com)
 16. Zurn Industries, LLC (www.zurn.com)
- B. Description:
1. Standard: UL 312 and FM Global standard for swing check valves, Class Number 1210.
 2. Minimum Pressure Rating: 250 psig.
 3. Type: Spring assisted single swing check.
 4. Suitable for horizontal or vertical installation.
 5. Body Material: Cast iron, ductile iron, or bronze.
 6. Clapper: Bronze, ductile iron, or stainless steel with elastomeric seal.
 7. Clapper Seat: Brass, bronze, or stainless steel.
 8. Hinge Shaft: Bronze or stainless steel.
 9. Hinge Spring: Stainless steel.
 10. End Connections: Flanged, grooved, or threaded.

2.5 BRONZE OS&Y GATE VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Milwaukee Valve Company (www.milwaukeevalve.com)

2. NIBCO, Inc. (www.nibco.com)
3. United Brass Works, Inc. (www.ubw.com)
4. Zurn Industries, LLC (www.zurn.com)

B. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Bronze or brass.
4. Wedge: One-piece bronze or brass.
5. Wedge Seat: Bronze.
6. Stem: Bronze or brass.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.
9. End Connections: Threaded.

2.6 IRON OS&Y GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. NIBCO, Inc. (www.nibco.com)
2. Victaulic Company (www.victaulic.com)
3. Watts; a Watts Water Technologies Company (www.wattswater.com)
4. Zurn Industries, LLC (www.zurn.com)

B. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Cast or ductile iron.
4. Wedge: Cast or ductile iron, or bronze.
5. Wedge Seat: Cast or ductile iron, or bronze.
6. Stem: Brass or bronze.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.

2.7 NRS GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. NIBCO, Inc. (www.nibco.com)
2. Victaulic Company (www.victaulic.com)
3. Zurn Industries, LLC (www.zurn.com)

B. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Cast or ductile iron.
4. Wedge: Cast or ductile iron.
5. Wedge Seat: Cast or ductile iron, or bronze.
6. Stem: Brass or bronze.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.

2.8 INDICATOR POSTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Cast Iron Pipe Company (www.american-usa.com)
2. Clow Valve Company; a subsidiary of McWane, Inc. (www.clowvalve.com)
3. Kennedy Valve Company; a division of McWane, Inc. (www.kennedyvalve.com)

4. Mueller Co. (www.muellercompany.com)
5. NIBCO, Inc. (www.nibco.com)
6. Victaulic Company (www.victaulic.com)

B. Description:

1. Standard: UL 789 and FM Global standard for indicator posts.
2. Type: Wall.
3. Base Barrel Material: Cast or ductile iron.
4. Cap: Cast or ductile iron.
5. Operation: Wrench.

2.9 TRIM AND DRAIN VALVES

A. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO, Inc. (www.nibco.com)
 - b. Victaulic Company (www.victaulic.com)
 - c. Watts; a Watts Water Technologies Company (www.wattswater.com)
 - d. Zurn Industries, LLC (www.zurn.com)
2. Description:
 - a. Pressure Rating: 175 psig.
 - b. Body Design: Two piece.
 - c. Body Material: Forged brass or bronze.
 - d. Port size: Full or standard.
 - e. Seats: PTFE.
 - f. Stem: Bronze or stainless steel.
 - g. Ball: Chrome-plated brass.
 - h. Actuator: Handlever.
 - i. End Connections for Valves NPS 1 through NPS 2-1/2: Threaded ends.
 - j. End Connections for Valves NPS 1-1/4 and NPS 2-1/2: Grooved ends.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc. (www.fppi.com)
 - b. NIBCO, Inc. (www.nibco.com)
 - c. United Brass Works, Inc. (www.ubw.com)
2. Description:
 - a. Pressure Rating: 175 psig.
 - b. Body Material: Brass or bronze.
 - c. Ends: Threaded.
 - d. Stem: Bronze.
 - e. Disc: Bronze.
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron, bronze, or aluminum.

C. Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO, Inc. (www.nibco.com)
 - b. United Brass Works, Inc. (www.ubw.com)
2. Description:
 - a. Pressure Rating: 175 psig.
 - b. Body Material: Bronze with integral seat and screw-in bonnet.
 - c. Ends: Threaded.
 - d. Stem: Bronze.
 - e. Disc Holder and Nut: Bronze.

- f. Disc Seat: Nitrile.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron, bronze, or aluminum.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine grooved ends for form and cleanliness. Grooved ends shall be clean and free from indentations or projections in the area from valve or fitting end to (and including) the groove.
- E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- F. Do not attempt to repair defective valves; replace with new valves.

3.2 GENERAL REQUIREMENTS FOR VALVE INSTALLATION

- A. Comply with requirements in the following Sections for specific valve installation requirements and applications:
 - 1. Division 21 "Fire-Suppression Standpipes" for application of valves in fire-suppression standpipes.
 - 2. Division 21 "Wet-Pipe Sprinkler Systems" for application of valves in wet-pipe, fire-suppression sprinkler systems.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Install valves having threaded connections with unions at each piece of equipment arranged to allow easy access, service, maintenance, and equipment removal without system shutdown. Provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above the pipe center.
- F. Install valves in position to allow full stem movement.
- G. Install valve tags. Comply with requirements in Division 21 "Identification for Fire-Suppression Piping and Equipment" for valve tags and schedules and signs on surfaces concealing valves; and the NFPA standard applying to the piping system in which valves are installed. Install permanent identification signs indicating the portion of system controlled by each valve.
- H. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections.
- I. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

END OF SECTION

SECTION 210529 HANGERS AND SUPPORTS FOR FIRE SUPPRESSION PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following hangers and supports for fire suppression systems piping and equipment:
 - 1. Steel pipe hangers and supports.
 - 2. Trapeze pipe hangers.
 - 3. Metal framing systems.
 - 4. Fastener systems.
 - 5. Equipment supports.

1.3 DEFINITIONS

- A. MSS: Manufacturers Standardization Society for the Valve and Fittings Industry Incorporated
- B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.4 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 SUBMITTALS

- A. Product Data: For the following:
 - 1. Steel pipe hangers and supports.
 - 2. Powder-actuated fastener systems.
 - 3. Pipe positioning systems.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
 - 1. Trapeze pipe hangers. Include Product Data for components.
 - 2. Metal framing systems. Include Product Data for components.
 - 3. Pipe stands. Include Product Data for components.
 - 4. Equipment supports.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code--Steel."
 - 2. AWS D1.2, "Structural Welding Code--Aluminum."
 - 3. AWS D1.4, "Structural Welding Code--Reinforcing Steel."
 - 4. ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 STEEL PIPE HANGERS AND SUPPORTS

- A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.
- B. Manufacturers:
 - 1. AAA Technology & Specialties Company, Incorporated (www.aaatech.com)
 - 2. Anvil International (www.anvilintl.com)
 - 3. Bergen-Power Pipe Supports (www.pipesupports.com)
 - 4. B-Line Systems, Incorporated; a division of Cooper Industries (www.cooperindustries.com)
 - 5. Carpenter & Paterson, Incorporated; a division of Cooper Industries (www.carpenterandpaterson.com)
 - 6. Empire Industries, Incorporated (www.empireindustries.com)
 - 7. ERICO/Michigan Hanger Company (www.erico.com)
 - 8. Globe Pipe Hanger Products, Incorporated (www.globepipehanger.com)
 - 9. National Pipe Hanger Corporation (www.nationalpipehanger.com)
 - 10. PHD Manufacturing, Incorporated (www.phd-mfg.com)
 - 11. PHS Industries, Incorporated
 - 12. Piping Technology & Products, Incorporated (www.pipingtech.com)
 - 13. Tolco Incorporated; a division of Cooper Industries (www.cooperindustries.com)
- C. Galvanized, Metallic Coatings: Pre-galvanized or hot dipped.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.3 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.4 METAL FRAMING SYSTEMS

- A. Description: MFMA-4, shop- or field-fabricated pipe-support assembly made of steel channels and other components.
- B. Manufacturers:
 - 1. B-Line Systems, Incorporated; a division of Cooper Industries (www.cooperindustries.com)
 - 2. ERICO/Michigan Hanger Company (www.erico.com)
 - 3. Power-Strut Division; Tyco International, Ltd. (www.powerstrut.com)
 - 4. Thomas & Betts Corporation (www.tnb.com)
 - 5. Tolco Incorporated; a division of Cooper Industries (www.cooperindustries.com)
 - 6. Unistrut Corporation; a part of Atkore International (www.unistrut.us)
- C. Coatings: Manufacturer's standard finish unless bare metal surfaces are indicated.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened Portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers:
 - a. Hilti, Incorporated (www.us.hilti.com)
 - b. ITW Ramset/Red Head (www.ramset.com)
 - c. MKT Fastening, LLC (www.mktfastening.com)
 - d. Powers Fasteners (www.powers.com)
- B. Mechanical-Expansion Anchors: Insert-wedge-type stainless steel, for use in hardened Portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 1. Manufacturers:
 - a. B-Line Systems, Incorporated; a division of Cooper Industries (www.cooperindustries.com)
 - b. Empire Industries, Incorporated (www.empireindustries.com)
 - c. Hilti, Incorporated (www.us.hilti.com)
 - d. ITW Ramset/Red Head (www.ramset.com)
 - e. MKT Fastening, LLC (www.mktfastening.com)
 - f. Powers Fasteners (www.powers.com)

2.6 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and nonmetallic grout; suitable for interior and exterior applications.
 1. Properties: Non-staining, noncorrosive, and nongaseous.
 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.1 HANGER AND SUPPORT APPLICATIONS

- A. Shared hangers and supports with other systems that have vibration control devices is prohibited.
- B. Attachments to metal roof decks will not be permitted.
- C. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.
- D. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.
- E. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated; install the following types:
 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 30.
 2. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 8.
 3. Extension Hinged or 2-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated stationary pipes, NPS 3/8 to NPS 3.
 4. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30.
 5. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange and with U-bolt to retain pipe.
- G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.

- H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- I. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction to attach to top flange of structural shape.
 3. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.
 4. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
- J. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.
- K. Comply with MFMA-102 for metal framing system selections and applications that are not specified in piping system Sections.
- L. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.
- B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- D. Fastener System Installation:
 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs greater than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 2. Install mechanical fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured.
 3. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- E. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.
- F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

- G. Install lateral bracing with pipe hangers and supports to prevent swaying.
- H. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- I. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- J. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

3.3 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make smooth bearing surface.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.6 PAINTING

- A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.

- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.7 CLEANING

- A. Clean exposed hangers and supports located finished spaces.

END OF SECTION

SECTION 210553

IDENTIFICATION FOR FIRE SUPPRESSION PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Valve tags.
 - 5. Warning tags.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

PART 2 PRODUCTS

2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:
 - 1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
 - 2. Letter Color: White
 - 3. Background Color: Red
 - 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 - 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 - 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 - 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: White.
- C. Background Color: Red.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semi rigid plastic formed to [partially cover] [cover full] circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high.

2.4 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
 - 1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Fasteners: Brass wire-link or beaded chain; or S-hook.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
 - 1. Valve-tag schedule shall be included in operation and maintenance data.

2.5 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: Approximately 4 by 7 inches.
2. Fasteners: Brass grommet and wire.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Red background with white lettering.

PART 3 EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of fire suppression equipment.
- B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

- A. Where piping is exposed to view from public below, locate labels on top of piping just outside of public view.
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 1. Near each valve and control device.
 2. Near each branch connection.
 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 5. Near major equipment items and other points of origination and termination.
 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- C. Pipe Label Color Schedule:
 1. Fire Suppression Piping:
 - a. Background Color: Red.
 - b. Letter Color: White.

3.4 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
 1. Valve-Tag Size and Shape:
 - a. Sprinkler Water: 1-1/2 inches round.
 - b. Compressed Air: 1-1/2 inches round.
 2. Valve-Tag Color: Red
 3. Letter Color: White.

3.5 WARNING-TAG INSTALLATION

- A. Attach warning tags to, equipment and other items where required.

END OF SECTION

SECTION 211119 FIRE-DEPARTMENT CONNECTIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Exposed-type fire-department connections.
 - 2. Flush-type fire-department connections.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each fire-department connection.

PART 2 PRODUCTS

2.1 EXPOSED-TYPE FIRE-DEPARTMENT CONNECTION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Fire Hose & Cabinet (www.americanfirehose.com)
 - 2. Elkhart Brass Mfg. Co., Inc. (www.elkhartbrass.com)
 - 3. Fire Protection Products, Inc. (www.fppi.com)
 - 4. Fire-End & Croker Corporation (www.croker.com)
 - 5. GMR International Equipment Corporation (www.gmr-fire.com)
 - 6. Guardian Fire Equipment, Inc. (www.guardianfire.com)
 - 7. Venus Fire Protection Ltd. (www.venus-fire.com)
 - 8. Wilson & Cousins Inc. (www.wilsonandcousins.com)
- B. Standard: UL 405.
- C. Type: Exposed, projecting, for wall mounting.
- D. Pressure Rating: 175 psig minimum.
- E. Body Material: Corrosion-resistant metal.
- F. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
- G. Caps: Brass, lugged type, with gasket and chain.
- H. Escutcheon Plate: Round, brass, wall type.
- I. Outlet: Back, with pipe threads.
- J. Number of Inlets: Three.
- K. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
- L. Finish: Rough brass or bronze.
- M. Outlet Size: NPS 4.

2.2 FLUSH-TYPE FIRE-DEPARTMENT CONNECTION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Fire Hose & Cabinet (www.americanfirehose.com)
 - 2. Elkhart Brass Mfg. Co., Inc. (www.elkhartbrass.com)
 - 3. GMR International Equipment Corporation (www.gmr-fire.com)
 - 4. Guardian Fire Equipment, Inc. (www.guardianfire.com)
 - 5. Potter Roemer LLC (www.potterroemer.com)
 - 6. Venus Fire Protection Ltd. (www.venus-fire.com)
- B. Standard: UL 405.
- C. Type: Flush, for wall mounting.
- D. Pressure Rating: 175 psig minimum.
- E. Body Material: Corrosion-resistant metal.
- F. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
- G. Caps: Brass, lugged type, with gasket and chain.
- H. Escutcheon Plate: Rectangular, brass, wall type.
- I. Outlet: With pipe threads.
- J. Body Style: Horizontal.
- K. Number of Inlets: Three.
- L. Outlet Location: Back or Top.
- M. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
- N. Finish: Rough brass or bronze.
- O. Outlet Size: NPS 4.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of fire-department connections.
- B. Examine roughing-in for fire-suppression standpipe system to verify actual locations of piping connections before fire-department connection installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wall-type fire-department connections.
- B. Install two protective pipe bollards on sides of each fire-department connection.
- C. Install automatic (ball-drip) drain valve at each check valve for fire-department connection.

END OF SECTION

SECTION 211200 FIRE-SUPPRESSION STANDPIPES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Pipes, fittings, and specialties.
 - 2. Fire-protection specialty valves.
 - 3. Hose connections.
 - 4. Alarm devices.
 - 5. Manual control stations.
 - 6. Control panels.
 - 7. Pressure gages.
- B. Related Sections:
 - 1. Division 21 Section "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
 - 2. Division 21 Section "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
 - 3. Division 28 Section "Digital, Addressable Fire-Alarm System" for alarm devices not specified in this Section.

1.3 DEFINITIONS

- A. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure 175 psig maximum.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For fire-suppression standpipes.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Approved Standpipe Drawings: Working plans, prepared according to NFPA 14, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
- B. Fire-hydrant flow test report.
- C. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 14. Include "Contractor's Material and Test Certificate for Aboveground Piping" and "Contractor's Material and Test Certificate for Underground Piping."
- D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Installer's responsibilities include designing, fabricating, and installing fire-suppression standpipes and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
- B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NFPA 14, "Installation of Standpipe and Hose Systems."

1.8 PROJECT CONDITIONS

- A. Interruption of Existing Fire-Suppression Standpipe Service: Do not interrupt fire-suppression standpipe service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire-suppression standpipe service according to requirements indicated:
 - 1. Notify Architect and Owner no fewer than two days in advance of proposed interruption of fire-suppression standpipe service.
 - 2. Do not proceed with interruption of fire-suppression standpipe service without Owner's written permission.

PART 2 PRODUCTS

2.1 SYSTEM DESCRIPTIONS

- A. Automatic Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- B. Automatic Wet-Type, Class II Standpipe System: Includes NPS 1-1/2 hose stations. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- C. Automatic Wet-Type, Class III Standpipe System: Includes NPS 1-1/2 hose stations and NPS 2-1/2 hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.

2.2 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure, Fire-Suppression Standpipe System Component: Listed for 175-psig minimum working pressure.
- B. Delegated Design: Design fire-suppression standpipes, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Fire-suppression standpipe design shall be approved by authorities having jurisdiction.
 - 1. Minimum residual pressure at each hose-connection outlet is as follows:
 - a. NPS 1-1/2 Hose Connections: 65 psig
 - b. NPS 2-1/2 Hose Connections: 100 psig.

2.3 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.4 BLACK STEEL PIPE AND ASSOCIATED FITTINGS

- A. Schedule 40: ASTM A 53/A 53M, Type E, Grade B; with factory- or field-formed ends to accommodate joining method.
- B. Schedule 40: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.
- C. Schedule 40: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.
- D. Schedule 30: ASTM A 53/A 53M, Type E, Grade B; with factory- or field-formed ends to accommodate joining method.
- E. Schedule 30: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.
- F. Schedule 30: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.
- G. Thinwall: ASTM A 53/A 53M, Type E; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
- H. Thinwall: ASTM A 135/A 135M, Grade A; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
- I. Thinwall: ASTM A 795/A 795M, Type E, Grade A; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
- J. Schedule 10: ASTM A 135/A 135M or ASTM A 795/A 795M, Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.
- K. Lightwall: ASTM A 135/A 135M, [Grade A] <Insert grade>; ASTM A 795/A 795M, [Type E] <Insert type>, [Grade A] <Insert grade>, with wall thickness less than Schedule 10 and greater than Schedule 5.
- L. Uncoated, Steel Couplings: ASTM A 865/A 865M, threaded.
- M. Uncoated, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- N. Malleable- or Ductile-Iron Unions: UL 860.
- O. Cast-Iron Flanges: ASME B16.1, Class 125.
- P. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- Q. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- R. Grooved-Joint, Steel-Pipe Appurtenances:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International (www.anvilintl.com)
 - b. Shurjoint Piping Products (www.shurjoint.com)
 - c. Smith-Cooper International (www.smithcooper.com)
 - d. Tyco Fire & Building Products LP (tyco-fire.com)
 - e. Victaulic Company (www.victaulic.com)
 - 2. Pressure Rating: [175 psig] [250 psig] [300 psig] minimum.
 - 3. [Galvanized] [and] [Uncoated], Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.

4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.5 GALVANIZED-STEEL PIPE AND ASSOCIATED FITTINGS

- A. Schedule 40: ASTM A 53/A 53M, Type E, Grade B; with factory- or field-formed ends to accommodate joining method.
- B. Schedule 40: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.
- C. Schedule 40: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.
- D. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106/A 106M, Standard Weight, seamless steel pipe with threaded ends.
- E. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- F. Malleable-Iron Unions:
 1. ASME B16.39, Class 150.
 2. Hexagonal-stock body.
 3. Ball-and-socket, metal-to-metal, bronze seating surface.
 4. Threaded ends.
- G. Flanges: ASME B16.1, Class 125, cast iron.
- H. Appurtenances for Grooved-End, Galvanized-Steel Pipe:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International (www.anvilintl.com)
 - b. Grinnell Mechanical Products (www.grinnell.com)
 - c. Shurjoint Piping Products (www.shurjoint.com)
 - d. Victaulic Company (www.victaulic.com)
 2. Fittings for Grooved-End, Galvanized-Steel Pipe: Galvanized, ASTM A 47/A 47M, malleable-iron casting; ASTM A 106/A 106M, steel pipe; or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
 3. Fittings for Grooved-End, Galvanized-Steel Pipe:
 - a. AWWA C606 for steel-pipe dimensions.
 - b. Ferrous housing sections.
 - c. EPDM-rubber gaskets suitable for hot and cold water.
 - d. Bolts and nuts.
 - e. Minimum Pressure Rating:
 - 1) NPS 8 and Smaller: **[600 psig]** <Insert value>.
 - 2) NPS 10 and NPS 12: **[400 psig]** <Insert value>.
 - 3) NPS 14 to NPS 24: **[250 psig]** <Insert value>.

2.6 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: **[AWWA C110, rubber, flat face, 1/8 inch thick]** [or] **[ASME B16.21, nonmetallic and asbestos free]**.
 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.7 SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:
 - a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
 - b. High-Pressure Piping Specialty Valves: **[250 psig minimum] [300 psig]**.
3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Alarm Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Globe Fire Sprinkler Corporation. (globe-sprinkler.com)
 - b. Reliable Automatic Sprinkler Company, Incorporated (www.reliablesprinkler.com)
 - c. Tyco Fire & Building Products LP. (tyco-fire.com)
 - d. Venus Fire Protection Ltd. (www.venus-fire.com)
 - e. Victaulic Company. (www.victaulic.com)
 - f. Viking Corporation. (www.vikingcorp.com)
2. Standard: UL 193.
3. Design: For horizontal or vertical installation.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding chamber, and fill-line attachment with strainer.
5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

C. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
 - b. Reliable Automatic Sprinkler Company, Incorporated (www.reliablesprinkler.com)
 - c. Tyco Fire & Building Products LP. (tyco-fire.com)
2. Standard: UL 1726.
3. Pressure Rating: 175 psig minimum.
4. Type: Automatic draining, ball check.
5. Size: NPS 3/4.
6. End Connections: Threaded.

2.8 HOSE CONNECTIONS

A. Adjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Brass Mfg. Company, Incorporated (www.elkhartbrass.com)
 - b. Fire Protection Products, Incorporated (www.fppi.com)
 - c. Guardian Fire Equipment, Incorporated (www.guardianfire.com)
 - d. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
 - e. Tyco Fire & Building Products LP (tyco-fire.com)
 - f. Zurn Industries, LLC (www.zurn.com)
2. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.

8. Pattern: **[Angle] [or] [gate]**.
9. Pressure-Control Device Type: Pressure **[reducing] [restricting]**.
10. Design Outlet Pressure Setting: **<Insert psig>**.
11. Finish: **[Polished chrome-plated] [Rough brass or bronze] [Rough chrome-plated]**.

B. Nonadjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Brass Mfg. Company, Incorporated (www.elkhartbrass.com)
 - b. Fire Protection Products, Incorporated (www.fppi.com)
 - c. Guardian Fire Equipment, Incorporated (www.guardianfire.com)
 - d. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
 - e. Tyco Fire & Building Products LP (tyco-fire.com)
 - f. Zurn Industries, LLC (www.zurn.com)
2. Standard: UL 668 hose valve for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
8. Pattern: **[Angle] [or] [gate]**.
9. Finish: **[Polished chrome-plated] [Rough brass or bronze] [Rough chrome-plated]**.

2.9 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Globe Fire Sprinkler Corporation. (globe-sprinkler.com)
 - b. Tyco Fire & Building Products LP. (tyco-fire.com)
 - c. Victaulic Company. (www.victaulic.com)
 - d. Viking Corporation. (www.vikiingcorp.com)
 - e. **<Insert manufacturer's name>**.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: 10-inch diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: NPS 3/4.
8. Outlet: NPS 1 drain connection.

C. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Incorporated; a Honeywell International Company. (www.firelite.com)
 - b. Notifier; a Honeywell International Company. (www.notifier.com)
 - c. Potter Electric Signal Company. (www.pottersignal.com)
2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: 6-inch minimum.
5. Size: **[6-inch minimum] [8-inch minimum] [10-inch]** diameter.
6. Finish: Red-enamel factory finish, suitable for outdoor use.

D. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ADT Security Services, Incorporated (www.adt.com)
 - b. McDonnell & Miller; ITT Industries. (bellgossett.com)
 - c. Potter Electric Signal Company. (www.pottersignal.com)
 - d. System Sensor; a Honeywell company. (www.systemsensor.com)
 - e. Viking Corporation. (www.vikingcorp.com)
 - f. Watts (www.watts.com)
2. Standard: UL 346.
 3. Water-Flow Detector: Electrically supervised.
 4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
 5. Type: Paddle operated.
 6. Pressure Rating: 250 psig.
 7. Design Installation: Horizontal or vertical.
- E. Pressure Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company. (www.pottersignal.com)
 - b. System Sensor; a Honeywell company. (www.systemsensor.com)
 - c. Tyco Fire & Building Products LP. (tyco-fire.com)
 - d. United Electric Controls Company (www.ueonline.com)
 - e. Viking Corporation. (www.vikingcorp.com)
 2. Standard: UL 346.
 3. Type: Electrically supervised water-flow switch with retard feature.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design Operation: Rising pressure signals water flow.
- F. Valve Supervisory Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Incorporated; a Honeywell company. (www.firelite.com)
 - b. Kennedy Valve; a division of McWane, Incorporated (www.kennedyvalve.com)
 - c. Potter Electric Signal Company. (www.pottersignal.com)
 - d. System Sensor; a Honeywell company. (www.systemsensor.com)
 2. Standard: UL 346.
 3. Type: Electrically supervised.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design: Signals that controlled valve is in other than fully open position.
- G. Indicator-Post Supervisory Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company. (www.pottersignal.com)
 - b. System Sensor; a Honeywell company. (www.systemsensor.com)
 - c. <Insert manufacturer's name>.
 2. Standard: UL 346.
 3. Type: Electrically supervised.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.10 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM approved, hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.11 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
 - 1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
 - 2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
 - 3. Manual Control Stations: Hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.12 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AMETEK; U.S. Gauge Division. (www.ametek.com)
 - 2. Ashcroft Incorporated (www.ashcroft.com)
 - 3. Brecco Corporation. (www.breccocorp.com)
 - 4. WIKA Instrument Corporation. (www.wika.us)
- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch diameter.
- D. Pressure Gage Range: 0 to 250 psig minimum.
- E. Pressure Gage Range: **[0 to 250 psig minimum] [0 to 300 psig]**.
- F. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
- G. Air System Piping Gage: Include **[retard feature and]** "AIR" or "AIR/WATER" label on dial face.

PART 3 EXECUTION

3.1 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.

3.2 SERVICE-ENTRANCE PIPING

- A. Connect fire-suppression standpipe piping to water-service piping at service entrance into building. Comply with requirements for exterior piping in Section 211100 "Facility Fire-Suppression Water-Service Piping."
- B. Install shutoff valve,[backflow preventer,] pressure gage, drain, and other accessories at connection to fire-suppression water-service piping.[Comply with requirements for backflow preventers in Section 211100 "Facility Fire-Suppression Water-Service Piping."]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.3 EXAMINATION

- A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.

- B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 WATER-SUPPLY CONNECTIONS

- A. Connect fire-suppression standpipe piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."
- B. Install shutoff valve,[backflow preventer,] pressure gage, drain, and other accessories at connection to water-distribution piping.[Comply with requirements for backflow preventers in Section 221119 "Domestic Water Piping Specialties."]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

3.5 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
- B. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.
- C. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
- D. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install drain valves on standpipes. Extend drain piping to outside of building.
- F. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.
- G. Install alarm devices in piping systems.
- H. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.
- I. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- J. Drain dry-type standpipe system piping.
