B. Schedule 40: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.
C. Schedule 40: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.
D. Schedule 30: ASTM A 53/A 53M, Type E, Grade B; with factory- or field-formed ends to accommodate joining method.
E. Schedule 30: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.
F. Schedule 30: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.
G. Thinwall: ASTM A 53/A 53M, Type E; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
H. Thinwall: ASTM A 135/A 135M, Grade A; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
I. Thinwall: ASTM A 795/A 795M, Type E, Grade A; with wall thickness less than Schedule 30 and equal to or greater than Schedule 10; and with factory- or field-formed ends to accommodate joining method.
J. Schedule 10: ASTM A 135/A 135M or ASTM A 795/A 795M, Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.
K. Lightwall: ASTM A 135/A 135M, [Grade A] <Insert grade>; ASTM A 795/A 795M, [Type E] <Insert type>, [Grade A] <Insert grade>, with wall thickness less than Schedule 10 and greater than Schedule 5.
L. Uncoated, Steel Couplings: ASTM A 865/A 865M, threaded.
N. Malleable- or Ductile-Iron Unions: UL 860.

P. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.

R. Grooved-Joint, Steel-Pipe Appurtenances:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Anvil International (www.anvilintl.com)
      b. Shurjoint Piping Products (www.shurjoint.com)
      c. Smith-Cooper International (www.smithcooper.com)
      d. Tyco Fire & Building Products LP (tyco-fire.com)
      e. Victaulic Company (www.victaulic.com)
   2. Pressure Rating: [175 psig] [250 psig] [300 psig] minimum.
   3. [Galvanized] [and] [Uncoated], Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
   4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.5 GALVANIZED-STEEL PIPE AND ASSOCIATED FITTINGS

A. Schedule 40: ASTM A 53/A 53M, Type E, Grade B; with factory- or field-formed ends to accommodate joining method.

B. Schedule 40: ASTM A 135/A 135M, Grade A; with factory- or field-formed ends to accommodate joining method.

C. Schedule 40: ASTM A 795/A 795M, Type E, Grade A; with factory- or field-formed ends to accommodate joining method.

E. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.

F. Malleable-Iron Unions:
   1. ASME B16.39, Class 150.
   2. Hexagonal-stock body.
   4. Threaded ends.

G. Flanges: ASME B16.1, Class 125, cast iron.

H. Appurtenances for Grooved-End, Galvanized-Steel Pipe:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Anvil International (www.anvilintl.com)
      b. Grinnell Mechanical Products (www.grinnell.com)
      c. Shurjoint Piping Products (www.shurjoint.com)
      d. Victaulic Company (www.victaulic.com)
   2. Fittings for Grooved-End, Galvanized-Steel Pipe: Galvanized, ASTM A 47/A 47M, malleable-iron casting; ASTM A 106/A 106M, steel pipe; or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
   3. Fittings for Grooved-End, Galvanized-Steel Pipe:
a. AWWA C606 for steel-pipe dimensions.
b. Ferrous housing sections.
c. EPDM-rubber gaskets suitable for hot and cold water.
d. Bolts and nuts.
e. Minimum Pressure Rating:
   1) NPS 8 and Smaller: [600 psig] <Insert value>.
   2) NPS 10 and NPS 12: [400 psig] <Insert value>.
   3) NPS 14 to NPS 24: [250 psig] <Insert value>.

2.6 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: [AWWA C110, rubber, flat face, 1/8 inch thick] [or]
   [ASME B16.21, nonmetallic and asbestos free].
   1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.7 SPECIALTY VALVES

A. General Requirements:
      FM Global, listing.
   2. Pressure Rating:
      a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
      b. High-Pressure Piping Specialty Valves: [250 psig minimum] [300 psig].
   3. Body Material: Cast or ductile iron.
   4. Size: Same as connected piping.
   5. End Connections: Flanged or grooved.
B. Alarm Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the
      following:
      a. Globe Fire Sprinkler Corporation. (globe-sprinkler.com)
      b. Reliable Automatic Sprinkler Company, Incorporated (www.reliablesprinkler.com)
      c. Tyco Fire & Building Products LP. (tyco-fire.com)
      d. Venus Fire Protection Ltd. (www.venus-fire.com)
      e. Victaulic Company. (www.victaulic.com)
      f. Viking Corporation. (www.vikingcorp.com)
   3. Design: For horizontal or vertical installation.
   4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, retarding
      chamber, and fill-line attachment with strainer.
   5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
   6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.
C. Automatic (Ball Drip) Drain Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the
      following:
a. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
b. Reliable Automatic Sprinkler Company, Incorporated (www.reliablesprinkler.com)
c. Tyco Fire & Building Products LP. (tyco-fire.com)

4. Type: Automatic draining, ball check.

2.8 HOSE CONNECTIONS

A. Adjustable-Valve Hose Connections:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Fire Protection Products, Incorporated (www.fppi.com)
   c. Guardian Fire Equipment, Incorporated (www.guardianfire.com)
   d. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
   e. Tyco Fire & Building Products LP (tyco-fire.com)
   f. Zurn Industries, LLC (www.zurn.com)
2. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
8. Pattern: [Angle] [or] [gate].
9. Pressure-Control Device Type: Pressure [reducing] [restricting].
10. Design Outlet Pressure Setting: \<\text{Insert psig}\>.
11. Finish: [Polished chrome-plated] [Rough brass or bronze] [Rough chrome-plated].

B. Nonadjustable-Valve Hose Connections:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Fire Protection Products, Incorporated (www.fppi.com)
   c. Guardian Fire Equipment, Incorporated (www.guardianfire.com)
   d. Kidde Fire Fighting; A UTC Business Unit (www.kidde-fire.com)
   e. Tyco Fire & Building Products LP (tyco-fire.com)
   f. Zurn Industries, LLC (www.zurn.com)
2. Standard: UL 668 hose valve for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
8. Pattern: [Angle] [or] [gate].
9. Finish: [Polished chrome-plated] [Rough brass or bronze] [Rough chrome-plated].
2.9 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Water-Motor-Operated Alarm:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Globe Fire Sprinkler Corporation. (globe-sprinkler.com)
      b. Tyco Fire & Building Products LP. (tyco-fire.com)
      c. Victaulic Company. (www.victaulic.com)
      d. Viking Corporation. (www.vikingcorp.com)
      e. <Insert manufacturer's name>.
   2. Standard: UL 753.
   3. Type: Mechanically operated, with Pelton wheel.
   5. Size: 10-inch diameter.
   6. Components: Shaft length, bearings, and sleeve to suit wall construction.
   8. Outlet: NPS 1 drain connection.

C. Electrically Operated Alarm Bell:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Notifier; a Honeywell International Company. (www.notifier.com)
      c. Potter Electric Signal Company. (www.pottersignal.com)
   3. Type: Vibrating, metal alarm bell.
   5. Size: [6-inch minimum] [8-inch minimum] [10-inch] diameter.

D. Water-Flow Indicators:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ADT Security Services, Incorporated (www.adt.com)
      b. McDonnell & Miller; ITT Industries. (bellgossett.com)
      c. Potter Electric Signal Company. (www.pottersignal.com)
      d. System Sensor; a Honeywell company. (www.systemsensor.com)
      e. Viking Corporation. (www.vikingcorp.com)
      f. Watts (www.watts.com)
   4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
   5. Type: Paddle operated.
   7. Design Installation: Horizontal or vertical.

E. Pressure Switches:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Potter Electric Signal Company. (www.pottersignal.com)
b. System Sensor; a Honeywell company. ([www.systemsensor.com](http://www.systemsensor.com))
c. Tyco Fire & Building Products LP. ([tyco-fire.com](http://tyco-fire.com))
d. United Electric Controls Company ([www.ueonline.com](http://www.ueonline.com))
e. Viking Corporation. ([www.vikingcorp.com](http://www.vikingcorp.com))

3. Type: Electrically supervised water-flow switch with retard feature.
5. Design Operation: Rising pressure signals water flow.

F. Valve Supervisory Switches:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Fire-Lite Alarms, Incorporated; a Honeywell company. ([www.firelite.com](http://www.firelite.com))
      b. Kennedy Valve; a division of McWane, Incorporated ([www.kennedyvalve.com](http://www.kennedyvalve.com))
      c. Potter Electric Signal Company. ([www.pottersignal.com](http://www.pottersignal.com))
      d. System Sensor; a Honeywell company. ([www.systemsensor.com](http://www.systemsensor.com))
   3. Type: Electrically supervised.
   5. Design: Signals that controlled valve is in other than fully open position.

G. Indicator-Post Supervisory Switches:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Potter Electric Signal Company. ([www.pottersignal.com](http://www.pottersignal.com))
      b. System Sensor; a Honeywell company. ([www.systemsensor.com](http://www.systemsensor.com))
      c. <Insert manufacturer's name>.
   3. Type: Electrically supervised.
   5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.10 MANUAL CONTROL STATIONS

A. Description: UL listed or FM approved, hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.11 CONTROL PANELS

A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
   1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
   2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
   3. Manual Control Stations: Hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
2.12 PRESSURE GAGES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. AMETEK; U.S. Gauge Division. (www.ametek.com)
   2. Ashcroft Incorporated (www.ashcroft.com)
   4. WIKA Instrument Corporation. (www.wika.us)

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0 to 250 psig minimum.

E. Pressure Gage Range: [0 to 250 psig minimum] [0 to 300 psig].

F. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.

G. Air System Piping Gage: Include [retard feature and] "AIR" or "AIR/WATER" label on dial face.

PART 3 EXECUTION

3.1 PREPARATION

A. Perform fire-hydrant flow test according to NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

B. Report test results promptly and in writing.

3.2 SERVICE-ENTRANCE PIPING

A. Connect fire-suppression standpipe piping to water-service piping at service entrance into building. Comply with requirements for exterior piping in Section 211100 "Facility Fire-Suppression Water-Service Piping."

B. Install shutoff valve, [backflow preventer,] pressure gage, drain, and other accessories at connection to fire-suppression water-service piping. [Comply with requirements for backflow preventers in Section 211100 "Facility Fire-Suppression Water-Service Piping."]

C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.3 EXAMINATION

A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.

B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 WATER-SUPPLY CONNECTIONS

A. Connect fire-suppression standpipe piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."

B. Install shutoff valve, [backflow preventer,] pressure gage, drain, and other accessories at connection to water-distribution piping. [Comply with requirements for backflow preventers in Section 221119 "Domestic Water Piping Specialties."]
C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

3.5 PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
   1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.

B. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.

C. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.

D. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

E. Install drain valves on standpipes. Extend drain piping to outside of building.

F. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.

G. Install alarm devices in piping systems.

H. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.

I. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

J. Drain dry-type standpipe system piping.

K. Pressurize and check dry-type standpipe system piping and [air-pressure maintenance devices] [air compressors].

L. Fill wet-type standpipe system piping with water.

M. Install electric heating cables and pipe insulation on wet-type, fire-suppression standpipe piping in areas subject to freezing. Comply with requirements for heating cables in Division 21 Section "Heat Tracing for Fire-Suppression Piping" and for piping insulation in Division 21 Section "Fire-Suppression Systems Insulation."

N. Connect compressed-air supply to dry-pipe sprinkler piping.

O. Connect air compressor to the following piping and wiring:
   1. Pressure gages and controls.
   2. Electrical power system.
   3. Fire-alarm devices, including low-pressure alarm.

P. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."

Q. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
R. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

### 3.6 JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

E. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

F. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

G. Copper-Tubing Grooved Joints: Roll rounded-edge groove in end of tube according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

H. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

### 3.7 VALVE AND SPECIALTIES INSTALLATION

A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 14 and authorities having jurisdiction.

B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

D. Specialty Valves:

1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
3. Deluge Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
4. Dry-Pipe Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
   a. Install air compressor and compressed-air supply piping.
   b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig adjustable range; and 175-psig maximum inlet pressure.
   c. Install compressed-air supply piping from building's compressed-air piping system.
3.8 HOSE-CONNECTION INSTALLATION
A. Install hose connections adjacent to standpipes.
B. Install freestanding hose connections for access and minimum passage restriction.
C. Install NPS 1-1/2 hose-connection valves with flow-restricting device.
D. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device.
E. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Division 10 Section "Fire Extinguisher Cabinets."

3.9 HOSE-STATION INSTALLATION
A. Install freestanding hose stations for access and minimum passage restriction.
B. Install NPS 1-1/2 hose-station valves with flow-restricting device unless otherwise indicated.
C. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device unless otherwise indicated.
D. Install freestanding hose stations with support or bracket attached to standpipe.
E. Install wall-mounted, rack hose stations in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Division 10 Section "Fire Extinguisher Cabinets."
F. Install hose-reel hose stations on wall with bracket.

3.10 FIRE-DEPARTMENT CONNECTION INSTALLATION
A. Install wall-type, fire-department connections.
B. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-Place Concrete."
1. Install [two] [three] protective pipe bollards [around] [on sides of] each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications."
C. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.11 IDENTIFICATION
A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14.
B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.12 FIELD QUALITY CONTROL
A. Perform tests and inspections.
B. Tests and Inspections:
1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect standpipe systems according to NFPA 14, "System Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Start and run air compressors.
6. Coordinate with fire-alarm tests. Operate as required.
7. Coordinate with fire-pump tests. Operate as required.
8. Verify that equipment hose threads are same as local fire-department equipment.

C. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.13 DEMONSTRATION

A. [Engage a factory-authorized service representative to train] [Train] Owner's maintenance personnel to adjust, operate, and maintain specialty valves.

3.14 PIPING SCHEDULE

A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with [threaded ends; cast-iron threaded fittings; and threaded] grooved ends; grooved-end fittings; and grooved joints.

B. Standard-pressure, wet-type fire-suppression standpipe piping, NPS 4 and smaller <Insert pipe size range>, shall be one of the following:
   1. [Schedule 40] [or] [Schedule 30], black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   2. [Schedule 40] [Schedule 30] [or] [thinwall], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   3. Standard-Weight, Schedule 30 or Schedule 10, black-steel pipe with cut-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   4. [Schedule 40] [or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   5. [Schedule 40] [or] [Schedule 30], black-steel pipe with plain ends; steel welding fittings; and welded joints.
   6. [Thinwall] [Schedule 10] [or] [lightwall] black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   7. [Thinwall] [Schedule 10] [or] [lightwall] black-steel pipe with plain ends; welding fittings; and welded joints.
   8. [Type L (Type B)] [Type M (Type C)], hard copper tube with plain ends; [cast-] [or] [wrought-]copper solder-joint fittings; and brazed joints.
   9. [Type L (Type B)] [Type M (Type B)], hard copper tube with roll-grooved ends; copper, grooved-end fittings; groove-end-tube couplings; and grooved joints.

C. Standard-pressure, wet-type, fire-suppression standpipe piping, [NPS 5 to NPS 8] <Insert pipe size range>, shall be [one of] the following:
   1. [Standard-weight] [Schedule 30] [or] [Thinwall], black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   2. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
3. [Standard-weight] [Or] [Schedule 30], black-steel pipe with [cut-] [or] [roll-] grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

4. [Standard-weight] [Or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

5. [Standard-weight] [Or] [Schedule 30], black-steel pipe with plain ends; steel welding fittings; and welded joints.

6. [Thinwall] [Schedule 10,] [Or] [Hybrid] black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

7. [Thinwall] [Schedule 10,] [Or] [Hybrid] black-steel pipe with plain ends; welding fittings; and welded joints.

8. [Type L] [Type M], hard copper tube with plain ends; [cast-] [or] [wrought-] copper solder-joint fittings; and brazed joints.

9. [Type L] [Type M], hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

D. Standard-pressure, wet-type, fire-suppression standpipe piping, [NPS 10 and NPS 12] <Insert pipe size range>, shall be [one of] the following:

1. [Standard-weight] [Or] [Schedule 30], black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

2. [Standard-weight] [Or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

3. [Standard-weight] [Or] [Schedule 30], black-steel pipe with [cut-] [or] [roll-] grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

4. [Standard-weight] [Or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

5. [Standard-weight] [Or] [Schedule 30], black-steel pipe with plain ends; steel welding fittings; and welded joints.

6. [Thinwall] [Schedule 10,] [Nonstandard OD, thinwall] [Or] [Hybrid] black-steel pipe with plain ends; welding fittings; and welded joints.

E. High-pressure, wet-type, fire-suppression standpipe piping, [NPS 4 and smaller] <Insert pipe size range>, shall be [one of] the following:

1. [Standard-weight] [Or] [Schedule 30], black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

2. [Standard-weight] [Or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

3. [Standard-weight] [Or] [Schedule 30], black-steel pipe with [cut] [cut- or roll] [roll]-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

4. [Standard-weight] [Or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

5. [Standard-weight] [Or] [Schedule 30], black-steel pipe with plain ends; steel welding fittings; and welded joints.

6. [Thinwall] [Schedule 10,] [Nonstandard OD, thinwall] [Or] [Hybrid] black-steel pipe with plain ends; welding fittings; and welded joints.

F. High-pressure, wet-type, fire-suppression standpipe piping, [NPS 5 and larger] <Insert pipe size range>, shall be [one of] the following:
1. [Standard-weight] [or] [Schedule 30], black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

2. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

3. [Standard-weight] [or] [Schedule 30], black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

4. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

5. [Standard-weight] [or] [Schedule 30], black-steel pipe with plain ends; steel welding fittings; and welded joints.

6. [Thinwall] [Schedule 10,] [Nonstandard OD, thinwall] [or] [Hybrid] black-steel pipe with plain ends; welding fittings; and welded joints.

G. Standard-pressure, dry-type, fire-suppression standpipe piping, [NPS 4 and smaller] <Insert pipe size range>, shall be one of the following:

1. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

2. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

3. [Type L] [Type M], hard copper tube with plain ends; [cast-] [or] [wrought-] copper solder-joint fittings; and brazed joints.

4. [Type L] [Type M], hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

H. Standard-pressure, dry-type, fire-suppression standpipe piping, [NPS 5 and NPS 6] <Insert pipe size range>, shall be one of the following:

1. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

2. [Standard-weight] [or] [Schedule 30], galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

3. [Type L] [Type M], hard copper tube with plain ends; [cast-] [or] [wrought-] copper solder-joint fittings; and brazed joints.

4. [Type L] [Type M], hard copper tube with roll-grooved ends; copper, grooved-end fittings; grooved-end-tube couplings; and grooved joints.

END OF SECTION
SECTION 211313
WET-PIPE SPRINKLER SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Pipes, fittings, and specialties.
      2. Specialty valves.
      5. Control panels.
      6. Pressure gages.
   B. Related Sections:
      1. Section 211200 "Fire-Suppression Standpipes" for standpipe piping.
      2. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
   C. Protection Limits:
      1. Provide 100 percent coverage for all new building areas, and all remodeled areas of the existing building.

1.3 DEFINITIONS
   A. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig maximum.

1.4 SYSTEM DESCRIPTIONS
   A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of product.
      1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   B. Shop Drawings: For wet-pipe sprinkler systems.
      1. Include plans, elevations, sections, and attachment details.
      2. Include diagrams for power, signal, and control wiring.
   C. Delegated-Design Submittal: For wet-pipe sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Plumbing piping.
   2. Compressed air piping.
   3. HVAC equipment, sheetmetal and hydronic piping.
   4. Ceiling components
   5. Items penetrating finished ceiling include the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Audio/Visual devices
      d. Fire Alarm devices

B. Qualification Data: For qualified Installer and professional engineer.

C. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
   1. Sprinklers shall be referred to on drawings, submittals, and other documentation, by the sprinkler identification or model number as specifically published in the appropriate agency listing or approval. Trade names or other abbreviated designations shall not be allowed.

D. Grooved joint couplings and fittings shall be referred to on drawings and product submittals and shall be identified by the manufacturer’s style or series designation. Trade names and abbreviations are not acceptable.

E. Fire-hydrant flow test report.

F. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping.”

G. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For wet-pipe sprinkler systems and specialties to include in emergency, operation, and maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.

1.9 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installer’s responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
B. All grooved joint couplings, fittings, valves, and specialties shall be of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components.
   1. All castings used for fittings, couplings, valve bodies, etc., shall include a cast date stamp for quality assurance and traceability.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
   1. NFPA 13, "Installation of Sprinkler Systems."

1.10 PROJECT CONDITIONS

A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
   1. Notify Architect, Construction Manager and Owner no fewer than seven days in advance of proposed interruption of sprinkler service.
   2. Do not proceed with interruption of sprinkler service without Owner's written permission.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
   2. FM Global

B. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.

C. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design wet-pipe sprinkler systems.
   1. Static and residual water pressure and water flow data shall be obtained from the local authority having jurisdiction.
   2. Minimum Pipe Sizes: Pipes shall not be smaller than sizes indicated on the drawings for connection to water supply piping, standpipes, and branches from standpipes to sprinklers.
   3. Maximum Water Velocity: Design water velocities shall not exceed 20 (FPS) feet per second in any fire protection piping.
   4. Sprinkler system design shall be approved by authorities having jurisdiction.
      a. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
      b. Sprinkler Occupancy Hazard Classifications:
         1) Educational Areas: Light Hazard
         2) Office and Public Areas: Light Hazard
         3) Dressing Rooms: Light Hazard
         4) Audience Chamber Seating Area: Light Hazard
         5) Building Service Areas: Ordinary Hazard, Group 1
         6) Electrical Equipment Rooms: Ordinary Hazard, Group 1.
         7) Dimmer rooms: Ordinary Hazard, Group 1.
         8) General Storage Areas: Ordinary Hazard, Group 1.
         9) Laundries: Ordinary Hazard, Group 1.
10) Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
11) Receiving Dock: Ordinary Hazard, Group 1.
12) Audio Rack Rooms: Ordinary Hazard, Group 1.
14) Scene Shop: Ordinary Hazard, Group 2.
15) Scene Repair: Ordinary Hazard, Group 2.
16) Prop Shop: Ordinary Hazard, Group 2.
17) Spray Booth and Spray Booth Exhaust Duct: Extra Hazard Group 2
18) Dust Collector: Extra Hazard Group 2
19) Loading Dock: Ordinary Hazard, Group 2.
20) Stage: Ordinary Hazard, Group 2.
21) Studio Theater: Ordinary Hazard, Group 2.
22) Costume Lab / Costume Storage: Ordinary Hazard, Group 2.

5. Minimum Density for Automatic-Sprinkler Piping Design:
   a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
   b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.
   c. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm over 1500-sq. ft. area.
   d. Extra-Hazard, Group 1 Occupancy: 0.30 gpm over 2500-sq. ft. area.
   e. Extra-Hazard, Group 2 Occupancy: 0.40 gpm over 2500-sq. ft. area.
   f. Special Occupancy Hazard: As determined by authorities having jurisdiction.

6. Maximum Protection Area per Sprinkler: According to UL listing.

7. Total Combined Hose-Stream Demand Requirement: According to NFPA 13, unless otherwise indicated:
   a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
   b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.
   c. Extra-Hazard Occupancies: 500 gpm for 90 to 120 minutes.

D. Spaces with Acoustic Reflectors
   1. In addition to other code requirements, in rooms containing acoustic reflectors or panels hung from structure, sprinklers may be required both in the panel and above in order to meet the requirements of NFPA 13. Provide coverage above and below the reflector as required by code and as necessary to meet aesthetic requirements.

2.2 PIPING MATERIALS
   A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.3 STEEL PIPE AND FITTINGS
   A. Standard Weight, Galvanized and Black Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.
   B. Schedule 40, Galvanized- and Black-Steel Pipe: ASTM A 135/A 135M; ASTM A 795/A 795M, Type E; or ASME B36.10M wrought steel.
   A. Schedule 10, Black-Steel Pipe: ASTM A 135/A 135M or ASTM A 795/A 795M, Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.
   C. Galvanized and Uncoated, Steel Couplings: ASTM A 865/A 865M, threaded.
F. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
   1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or EPDM rubber gasket.
      b. Class 150 and Class 300, Ductile-Iron or Steel, Raised-Face Flanges: Ring-type gaskets.
   2. Metal, Pipe-Flange Bolts and Nuts: Carbon steel unless otherwise indicated.

   1. Welding Filler Metals: Comply with AWS D10.12M/D10/12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. Grooved-Joint, Steel-Pipe Appurtenances:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Corcoran Piping System Co. (www.american-marsh.com)
      c. Shurjoint Piping Products. (www.shurjoint.com)
      d. Smith-Cooper International (www.smithcooper.com)
      e. Tyco Fire & Building Products LP. (tyco-fire.com)
      f. Victaulic Company. (www.victaulic.com)
   2. Pressure Rating: 175 psig minimum.
   4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and ASTM A449 bolts and nuts.
      a. Rigid Type: Coupling housings with offsetting, angle-pattern bolt pads shall be used to provide system rigidity and support and hanging in accordance with NFPA-13. Installation ready rigid coupling for direct stab installation without field disassembly. Couplings shall be fully installed at visual pad-to-pad offset contact. Tongue and recess type couplings, which require the use of a torque wrench to achieve the exact required gap between housings, are not permitted.
      b. Flexible Type: Use in locations where vibration attenuation and stress relief are required.

2.4 SPECIALTY VALVES
A. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."

B. Pressure Rating:

C. Body Material: Cast or ductile iron.

D. Size: Same as connected piping.

E. End Connections: Flanged or grooved.

F. Alarm Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Victaulic Company (www.victaulic.com)
      b. Viking Corporation (www.vikingcorp.com)
   3. Design: For vertical installation.
4. Internal components shall be replaceable without removing the valve from the installed position.
5. Drip Cup Assembly: Pipe drain with check valve to main drain piping.
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application

G. Automatic (Ball Drip) Drain Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Reliable Automatic Sprinkler Co. Inc. (www.reliablesprinkler.com)
   b. Tyco Fire & Building Products (tyco-fire.com)
4. Type: Automatic draining, ball check.

H. Dry-Pipe Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Victaulic Company (www.victaulic.com)
   b. Viking Corporation (www.vikingcorp.com)
4. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
5. Required air pressure shall be 13-psi (90-kPa).
6. Valve shall be externally resettable.
7. Internal components shall be replaceable without removing the valve from the installed position.
8. Air-Pressure Maintenance Device:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Globe Fire Sprinkler Corporation (www.globesprinkler.com)
      2) Reliable Automatic Sprinkler Co., Inc. (www.reliablesprinkler.com)
      3) Tyco Fire & Building Products (tyco-fire.com)
      4) Venus Fire Protection Ltd (www.venus-fire.com)
      5) Victaulic Company (www.victaulic.com)
      6) Viking Corporation (www.vikingcorp.com)
   c. Type: Automatic device to maintain minimum air pressure in piping.
   d. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig adjustable range, and 175-psig outlet pressure.
9. Air Compressor:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Gast Manufacturing Inc. (www.gastmfg.com)
      2) General Air Products, Inc. (www.generalairproducts.com)
      3) Victaulic Company (www.victaulic.com)
      4) Viking Corporation (www.vikingcorp.com)
2.5 SPRINKLER PIPING SPECIALTIES

A. Branch Outlet Fittings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the follow-
      ing:
      a. Anvil International (www.anvilintl.com)
      b. Shurjoint Piping Products (www.shurjoint.com)
      c. Tyco Fire & Building Products (tyco-fire.com)
      d. Victaulic Company (www.victaulic.com)
   5. Type: Mechanical-tee and -cross fittings.
   6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
   7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match
      connected branch piping.
   8. Branch Outlets: Grooved, plain-end pipe, or threaded.

B. Flow Detection and Test Assemblies:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Reliable Automatic Sprinkler Co. Inc. (www.reliablesprinkler.com)
      b. Tyco Fire & Building Products (tyco-fire.com)
      c. Victaulic Company (www.victaulic.com)
   4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
   5. Size: Same as connected piping.
   6. Inlet and Outlet: Threaded or grooved.

C. Branch Line Testers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Elkhart Brass Manufacturing Co, Inc. (www.elkhartbrass.com)
      b. Fire-End & Croker Corporation (www.croker.com)
      c. Potter Roemer LLC (www.potterroemer.com)
   2. Standard: UL 199.
   5. Size: Same as connected piping.
   6. Inlet: Threaded.
   7. Drain Outlet: Threaded and capped.
   8. Branch Outlet: Threaded, for sprinkler.

D. Sprinkler Inspector's Test Fittings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Victaulic Company (www.victaulic.com)
      b. Viking Corporation (www.vikingcorp.com)
   4. Body Material: Cast- or ductile-iron housing with sight glass.
   5. Size: Same as connected piping.
   6. Inlet and Outlet: Threaded.
E. Adjustable Drop Nipples:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Aegis Technologies, Inc. (aegistechnologiesinc.com)
      b. CECE, LLC (www.cecaforge.com)
      c. Corcoran Piping System Co.
      d. Merit Manufacturing
   5. Size: Same as connected piping.
   7. Inlet and Outlet: Threaded.

F. Flexible Sprinkler Hose Fittings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Fivalco Inc. (www.fivalcoinc.com)
      b. FlexHead Industries, Inc. (www.flexhead.com)
      c. Gateway Tubing, Inc. (www.gatewaytubing.com)
      d. Victaulic Company (www.victualic.com)
   3. Type: Flexible hose for connection to sprinkler, and with open-gate bracket for connection to ceiling grid. The bracket shall allow installation before the ceiling tile is in place.
   5. Size: Same as connected piping, for sprinkler.
   6. The drop shall include a UL approved Series AH2 braided hose with a bend radius to 2” to allow for proper installation in confined spaces. The hose shall be listed for 4 bends at 31” length.
   7. Union joints shall be provided for ease of installation.

2.6 SPRINKLERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Reliable Automatic Sprinkler Co. Inc (www.reliablesprinkler.com)
   b. Victaulic Company (www.victualic.com)
   c. Viking Corporation (www.vikingcorp.com)
B. Sprinkler body shall be integrally cast with a hex shaped wrench boss to reduce the risk of damage during installation. Wrenches shall be provided by the sprinkler manufacturer that directly engage the wrench boss. (Sprinklers shall not contain rubber O-rings.)
C. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
D. Pressure Rating for Automatic Sprinklers: 175-psig minimum.
E. Automatic Sprinklers with Heat-Responsive Element:
   1. Early-Suppression, Fast-Response Applications: UL 1767
   2. Nonresidential Applications: UL 199
   3. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
F. Sprinkler Finishes:
   1. Refer to application schedule in Part 3.
G. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
1. Ceiling Mounting: One piece, flat with color to match adjacent surface.
2. Sidewall Mounting: One piece, flat with color to match adjacent surface.

H. Sprinkler Guards:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Tyco Fire & Building Products LP.
   c. Victaulic Company.
   d. Viking Corporation.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

I. Guards and escutcheons shall be listed, supplied, and approved for use with the sprinkler by the sprinkler manufacturer.

2.7 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. All flow and supervisory devices shall initiate a building alarm, and report the condition to Carleton Campus Security through the Fire Alarm Panel.

C. Electrically Operated Alarm Bell:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Fire-Lite Alarms, Incorporated; a Honeywell company.
   b. Notifier; a Honeywell company.
   c. Potter Electric Signal Company.
3. Type: Vibrating, metal alarm bell.
4. Size: 6-inch minimum diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

D. Water-Flow Indicators:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ADT Security Services, Incorporated.
   b. McDonnell & Miller; ITT Industries.
   c. Potter Electric Signal Company.
   d. System Sensor; a Honeywell company.
   e. Viking Corporation.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
7. Design Installation: Horizontal or vertical.

E. Pressure Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AFAC Incorporated.
b. Detroit Switch, Incorporated.
c. Potter Electric Signal Company.
d. System Sensor; a Honeywell company.
e. Tyco Fire & Building Products LP.
f. United Electric Controls Company
g. Viking Corporation.

3. Type: Electrically supervised water-flow switch with retard feature.
5. Design Operation: Rising pressure signals water flow.

F. Valve Supervisory Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Fire-Lite Alarms, Incorporated; a Honeywell company.
b. Kennedy Valve; a division of McWane, Incorporated.
c. Potter Electric Signal Company.
d. System Sensor; a Honeywell company.
3. Type: Electrically supervised.
5. Design: Signals that controlled valve is in other than fully open position.

G. Indicator-Post Supervisory Switches:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
b. System Sensor; a Honeywell company.
3. Type: Electrically supervised.
5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.8 CONTROL PANELS
A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.9 PRESSURE GAGES
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AGF Manufacturing Inc. (www.testanddrain.com)
2. AMETEK, Inc. (www.ametek.com)
3. Ashcroft, Inc. (www.ashcroft.com)
4. Brecco Corporation
5. WIKI Instrument Corporation (www.wika.us)

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0- to 250-psig minimum.

E. Label: Include "WATER" label on dial face.

PART 3 EXECUTION

3.1 PREPARATION

A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

B. Report test results promptly and in writing.

3.2 SERVICE-ENTRANCE PIPING

A. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.3 PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.

B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.

C. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

D. Install unions adjacent to each valve in pipes NPS 2 and smaller.

E. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

F. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.

G. Install sprinkler piping with drains for complete system drainage.

H. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.

I. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.

J. Install alarm devices in piping systems.

K. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.
L. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

M. Fill sprinkler system piping with water.

N. Drain dry-pipe sprinkler piping.

O. Pressurize and check dry-pipe sprinkler system piping and air compressors.

P. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."

Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

R. Route fire protection piping so that system and area zone drains are not exposed to view.

3.4 PIPE PENETRATIONS

A. Install sleeves for pipes passing through noise sensitive spaces:
   1. Penetrations by ducts, pipes and conduit between noise critical spaces shall be sleeved, packed and sealed airtight with non-hardening sealant as described herein. Refer also to other requirements in plans and specifications. Where information is duplicated, in conflict, complementary, etc. the more stringent acoustic requirements shall apply.

3.5 JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
   1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
I. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints in accordance with the manufacturer’s published instructions. A factory trained representative (direct employee) shall provide on-site training for contractor’s field personnel in the use of grooving tools, application of groove, and product installation. The representative shall periodically visit the job site and review installation. Contractor shall remove and replace any improperly installed products.

J. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.6 VALVE AND SPECIALTIES INSTALLATION

A. All flow and supervisory devices shall initiate a building alarm, and report the condition to Wayne State University Security through the Fire Alarm Panel.

B. Control valves shall be equipped with a port to monitor street side of system.

C. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.

D. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

E. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

F. Specialty Valves:
   1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.

G. Dry-Pipe Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
   a. Install air compressor and compressed-air supply piping.
   b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig adjustable range; and 175-psig maximum inlet pressure.

3.7 SPRINKLER INSTALLATION

A. Sprinklers shall be located in a regular pattern, perpendicular and parallel with building lines, in perfect alignment with other ceiling components such as lights, air diffusers, grilles, and speakers.

B. Additional sprinklers (in excess of NFPA minimum requirements) may be required for aesthetics. Provide additional sprinklers heads located as directed by the Architect.
   1. Acoustical Ceiling Tile: Sprinklers shall be located in the center of tile; fully within a 4-inch diameter circle at the center of the tile. Locations shall be in the center of a 2-ft. x 2-ft. tile or in a 2 ft. x 2 ft. half of a 2 ft. x 4-ft. tile.
   2. Sprinklers shall be located no closer than 4 inches from any ceiling edge or from any other ceiling component.
   3. Sprinkler locations shall be reviewed and accepted by the Architect before any piping is fabricated or installed.
   4. Adjustments to sprinkler locations and number of sprinklers shall be anticipated during shop drawing review, and shall be allowed for in the Base Bid.
C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

D. Refer to theatrical drawings for additional information

E. Do not install sprinklers that have been dropped or show a visible loss of fluid. Never install sprinklers with cracked bulbs.

F. Sprinkler bulb protector must remain in place until the sprinkler is completely installed and before the system is placed in service. Remove bulb protectors carefully by hand after installation. Do not use any tools to remove bulb protectors.

3.8 IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 “Identification for Electrical Systems.”

3.9 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   4. Energize circuits to electrical equipment and devices.
   5. Coordinate with fire-alarm tests. Operate as required.
   6. Coordinate with fire-pump tests. Operate as required.
   7. Verify that equipment hose threads are same as local fire department equipment.

B. Sprinkler piping system will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.10 CLEANING

A. Clean dirt and debris from sprinklers.

B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.

3.11 PIPING SCHEDULE

A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.

C. Standard-pressure, wet-pipe sprinkler system, NPS 2 and smaller, shall be one of the following:
   1. Standard-weight or Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   2. Standard-weight or Schedule 40, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   3. Standard-weight or Schedule 40, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   4. Schedule 10 black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
D. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 to NPS 8, shall be one of the following:
   1. Standard-weight or Schedule 40, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   2. Standard-weight or Schedule 40, black-steel pipe with plain ends; steel welding fittings; and welded joints.

E. Standard-pressure, dry-pipe sprinkler system, NPS 2 and smaller, shall be one of the following:
   1. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   2. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

F. Standard-pressure, dry-pipe sprinkler system, NPS 2-1/2 to NPS 4, shall be one of the following:
   1. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
   2. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

3.12 SPRINKLER SCHEDULE

A. Coordination
   1. Contractor shall submit layout drawing to architect for review & approval of locations prior to installation.
   2. Refer to architectural drawings, ceiling plans, and details for additional requirements for sprinkler system layout, sprinklers and details.
   3. Allow for 10% more heads than code minimum for flexibility in arrangement and pattern.

B. Use sprinkler types in subparagraphs below for the following applications:
   1. Rooms without Ceilings: Upright, rough bronze finish sprinklers in all areas where ceiling is not painted. Where exposed ceiling is painted, sprinkler finish shall be black or white to match painted ceiling.
   2. Rooms with Suspended Ceilings: Concealed sprinklers with factory-painted flush white or black cover plate to match suspended ceiling color.
   3. Provide sprinklers with concealed heads and flush cover plates in gypsum board ceilings: Color of cover plate to match adjacent ceiling color.
   4. Wall Mounting: Sidewall sprinkler with white or chrome plating in finished spaces exposed to view and rough bronze in unfinished spaces not exposed to view
   5. Rooms with Suspended or Floating Panels: Upright or pendant, manufacturer's white or black finish sprinklers for heads above panels; concealed sprinklers with custom ordered flush cover plate to match adjacent surface, color and texture for sprinklers in panels. Sprinklers above panels shall match painted ceiling color.
   6. Rooms with "Wood" Ceilings or Panels: Concealed sprinklers with custom ordered flush cover plate to match adjacent surface, color and texture.
   7. Rooms with vertical baffles: Pendant, rough bronze finish sprinklers located tight to baffles.

C. Wire guards shall be added to exposed sprinklers in the following locations: Scene Shop, Studio Theater Tension Grid Level, Theater Storage spaces, Circulation between Stage and Scene Shop, Mechanical and Electrical rooms, Telecomm Room, Costume Shop, Laundry, Paint Room, Tool Rooms, and Prop Shop.
   1. Where sprinklers have factory or custom finish, wire guards shall be painted to match sprinkler finish.
D. Use high temperature heads in rooms with performance lighting – Studio Theater Tension Grid Level and Stage.

END OF SECTION
SECTION 213113
ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS

PART 1 GENERAL

1.1 SUMMARY
   A. Section Includes:
      1. Split-case fire pumps.
      2. Fire-pump accessories and specialties.

1.2 PERFORMANCE REQUIREMENTS
   A. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig minimum unless higher pressure rating is indicated.

1.3 SUBMITTALS
   A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
   B. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.
      1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
      2. Wiring Diagrams: For power, signal, and control wiring.
   C. Product Certificates: For each fire pump, from manufacturer.
   D. Source quality-control reports.
   E. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For fire pumps to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE
   A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   B. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."

1.6 COORDINATION
   A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR CENTRIFUGAL FIRE PUMPS
   A. Description: Factory-assembled and -tested fire-pump and driver unit.
   B. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
C. Finish: Red paint applied to factory-assembled and tested unit before shipping.

2.2 HORIZONTALLY MOUNTED, SINGLE-STAGE, SPLIT-CASE FIRE PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by the following but are not limited to, the following:
   1. A-C Fire Pump; a Xylem brand (acfirepump.com)
   2. Corcoran Piping Systems Co. (www.aadi.com)
   3. Patterson Pump Company; a Gorman-Rupp Company (www.pattersonpumps.com)
   4. Peerless Pump Company (www.peerlesspump.com)
   5. Reddy-Buffaloes Pump Company (www.listedfirepumps.com)
   6. S.A Armstrong Limited (www.armstrongfluidtechnology.com)

B. Pump:
   1. Standard: UL 448 for split-case pumps for fire service.
   3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
   5. Shaft and Sleeve: Steel shaft with bronze sleeve.
      a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
   6. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

D. Driver:
   1. Standard: UL 1004A.
   2. Type: Electric motor; NEMA MG 1, polyphase Design B.

A. Capacities and Characteristics:
   1. Refer to equipment schedules.

2.3 FIRE-PUMP ACCESSORIES AND SPECIALTIES

A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump casing.

B. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.

C. Relief Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by the following but are not limited to, the following:
      a. BERMAD Control Valves (www.bermad.com)
      b. CLA-VAL Automatic Control Valves (www.cla-val.com)
      c. Kunkle Valve (www.kunklevalve.pentair.com)
      d. OCV Control Valves (www.controlvalves.com)
      e. Watts; a Watts Water Technologies (www.wattswater.com)
      f. Zurn Industries, LLC (www.zurn.com)
   2. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.

D. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.

E. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.

F. Discharge Cone: Closed or open type.
G. Hose Valve Manifold Assembly:
   5. Manifold:
      a. Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
      b. Body: Exposed type, brass, with number of outlets required by NFPA 20.
      c. Escutcheon Plate: Brass or bronze; round.
      d. Exposed Parts Finish: Rough brass.
      e. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

2.4 GROUT
B. Characteristics: Nonshrink and recommended for interior and exterior applications.
C. Design Mix: 5000-psi, 28-day compressive strength.
D. Packaging: Premixed and factory packaged.

2.5 SOURCE QUALITY CONTROL
A. Testing: Test and inspect fire pumps according to UL 448 requirements for “Operation Test” and “Manufacturing and Production Tests.”
   1. Verification of Performance: Rate fire pumps according to UL 448.
B. Fire pumps will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements and for conditions affecting performance of fire pumps.
B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONCRETE BASES
A. Install concrete bases of dimensions indicated for fire pumps, pressure-maintenance pumps, and controllers. Refer to Division 21 Section “Common Work Results for Fire Suppression.”

3.3 INSTALLATION
A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
B. Equipment Mounting:
1. Install fire pumps on cast-in-place concrete equipment bases.

C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.

D. Support piping and pumps separately so weight of piping does not rest on pumps.

E. Install valves that are same size as connecting piping.

F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings.

G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.

H. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

3.4 ALIGNMENT

A. Align split-case pump and driver shafts per industry standards after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.

B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.

C. Align piping connections.

D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

E. Align vertically mounted, split-case pump and driver shafts after complete unit has been made plumb on concrete base, grout has set, and anchor bolts have been tightened.

3.5 CONNECTIONS

A. Comply with requirements for piping and valves specified in "Wet-Pipe Sprinkler Systems." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps and equipment to allow service and maintenance.

C. Connect water supply and discharge piping to fire pumps with flexible connectors. Connect water supply and discharge piping to pressure-maintenance pumps with flexible connectors. Refer to Division 21 Section "Water-Based Fire-Suppression Systems" for flexible connectors.

D. Connect relief-valve discharge to point of disposal.

E. Connect controllers to pumps.

F. Connect fire-pump controllers to building fire-alarm system. Refer to Division 28 Section "Fire Detection and Alarm."

G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

H. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
3.6 IDENTIFICATION
A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

3.7 FIELD QUALITY CONTROL
A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 213900 "Controllers for Fire-Pump Drivers."
B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
C. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
D. Tests and Inspections:
   1. After installing components, assemblies, and equipment including controller, test for compliance with requirements.
   2. Test according to NFPA 20 for acceptance and performance testing.
   3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
E. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
F. Prepare test and inspection reports.
G. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to Owner.

3.8 STARTUP SERVICE
A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.

3.9 DEMONSTRATION
A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fire pumps.

END OF SECTION
SECTION 213400
PRESSURE-MAINTENANCE PUMPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Vertical-turbine, pressure-maintenance pumps.
B. Related Section:
   1. Division 21 "Controllers for Fire-Pump Drivers" for pressure-maintenance-pump controllers.

1.3 PERFORMANCE REQUIREMENTS
A. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig minimum unless higher pressure rating is indicated.

1.4 SUBMITTALS
A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings: For pumps, accessories, and specialties. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For pumps to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.7 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided

PART 2 PRODUCTS

2.1 VERTICAL-TURBINE, PRESSURE-MAINTENANCE PUMPS
A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. A-C Fire Pump; a Xylem brand (www.acfirepump.com)
   2. Patterson Pump Company; a Gorman-Rupp Company (www.pattersonpumps.com)
   3. Peerless Pump Company (www.peerlesspump.com)
4. Pentair Pump Group (www.pentair.com)
5. Reddy-Buffaloes Pump Company (www.listedfirepumps.com)
6. Ruhrpumpen, Inc. (www.ruhrpumpen.com)
7. S.A Armstrong Limited (www.armstrongfluidtechnology.com)
8. Sulzer Pumps Inc. (www.sulzer)

B. Description: Factory-assembled and -tested, vertical, multistage, open-line-shaft turbine pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head.

C. Pump Construction:
   1. Pump Head: Cast iron, for surface discharge, with flange except connections may be threaded in sizes in which flanges are not available.
   2. Pump Head Seal: Stuffing box and stuffing.
   3. Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
   4. Line Shaft Bearings: Rubber sleeve, water lubricated.
   5. Line Shaft: Steel.
   7. Impeller Shaft: Monel metal or stainless steel.
   8. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
   9. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections 10 feet or less, with strainer of cast or fabricated bronze or stainless steel at bottom.

   1. Power Cord: Factory-connected to motor for field connection to controller and at least 10 feet long.

E. Base: Cast iron or steel with hole for electrical cable.

F. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

A. Capacities and Characteristics:
   1. Refer to equipment schedules.

2.2 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 21 "Common Motor Requirements for Fire Suppression Equipment."
   1. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

PART 3 EXECUTION

3.1 EQUIPMENT INSTALLATION

A. NFPA Standard: Comply with NFPA 20 for installation of pressure-maintenance pumps.

B. Base-Mounted Pump Mounting: Install pumps on concrete bases.

C. Install vertical-turbine, pressure-maintenance pumps according to HI 2.4.
3.2 **FIELD QUALITY CONTROL**

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.
   1. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Pressure-maintenance pumps will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.3 **ADJUSTING**

A. Lubricate pumps as recommended by manufacturer.

B. Set field-adjustable pressure-switch ranges as indicated.

**END OF SECTION**
PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contact, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Controllers for diesel-drive fire pumps.
      2. Controllers for pressure-maintenance pumps.

1.3 DEFINITIONS
   A. ATS: Automatic transfer switch(es).
   B. ECM: Electronic control module.
   C. MCCB: Molded-case circuit breaker.
   D. N.O.: Normally open.
   E. PID: Proportional integral derivative.
   F. VFC: Variable-frequency controller(s)

1.4 SUBMITTALS
   A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   B. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.
      1. Show tabulations of the following:
         a. Each installed unit's type and details.
         b. Enclosure types and details for types other than NEMA 250, Type 2.
         c. Factory-installed devices.
         d. Nameplate legends.
         e. Short-circuit current (withstand) rating of integrated unit.
         f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
      2. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
      3. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.
   C. Product Certificates: For each type of product indicated, from manufacturer.
   D. Manufacturer's factory test reports of fully assembled and tested equipment.
   E. Source quality-control reports.
F. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
   1. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
   2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of an NRTL.
B. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
D. Comply with standards of authorities having jurisdiction pertaining to materials and installation.
E. Comply with NFPA 20 and NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

1.8 PROJECT CONDITIONS

A. Environmental Limitations:
   1. Ambient Temperature Rating: Not less than 40 deg F and not exceeding 122 deg F unless otherwise indicated.
   2. Altitude Rating: Not exceeding 6600 feet unless otherwise indicated.
B. Interruption of Existing Electric Service: Notify Architect and Owner no fewer than seven days in advance of proposed interruption of electric service, and comply with NFPA 70E.

1.9 COORDINATION

A. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.
B. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 PRODUCTS

2.1 FULL-SERVICE CONTROLLERS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Firetrol
   2. Aquarius Fluid Products, Inc. (www.shopping.netsuite.com)
3. ASCO Power Technologies, LP; a business of Emerson Network Power (www.asco.com)
4. Eaton (www.eaton.com)
5. Hubbell Incorporated (www.hubbell-wiring.com)
6. Joslyn Clark Corporation (www.danaherspecialtyproducts.com)
7. Master Control Systems, Inc. (www.mastercontrols.com)
9. Tornatech (www.tornatech.com)

B. General Requirements for Full-Service Controllers:
1. Comply with NFPA 20 and UL 218.
2. Listed by an NRTL for electric-motor driver for fire-pump service.
3. Combined automatic and non-automatic operation.
4. Factory assembled, wired, and tested; continuous-duty rated.
5. Service Equipment Label: NRTL labeled for use as service equipment.

C. Method of Starting:
1. Pressure-switch actuated.
   a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
   b. System pressure recorder, electric ac driven, with spring backup.
   c. Programmable minimum-run-time relay to prevent short cycling.
   d. Programmable timer for weekly tests.
3. Solid-State Controller: Reduced-voltage type.
4. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.

D. Method of Stopping: Non-automatic.

E. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.

F. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and non-thermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.

G. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
2. Method of Control and Indication:
   a. Microprocessor-based logic controller, with multilane digital readout.
   b. Membrane keypad.
   c. LED alarm and status indicating lights.
3. Local and Remote Alarm and Status Indications:
   a. Controller power on.
   b. Motor running condition.
   c. Loss-of-line power.
   d. Line-power phase reversal.
   e. Line-power single-phase condition.
4. Audible alarm, with silence push button.
5. Non-automatic START and STOP push buttons or switches.

H. Optional Features:
1. Extra Output Contacts:
   a. One N.O. contact(s) for motor running condition.
   b. One set(s) of contacts for loss-of-line power.
c. One each, Form C contacts for high and low reservoir level.
2. Local alarm bell.
3. Door-mounted thermal or impact printer for alarm and status logs.

I. ATS:
1. Complies with NFPA 20, UL 218, and UL 1008.
2. Integral with controller as a listed combination fire-pump controller and power transfer switch.
3. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
4. Allows manual transfer from one source to the other.
5. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
6. Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with non-thermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.
7. Local and Remote Alarm and Status Indications:
   a. Normal source available.
   b. Alternate source available.
   c. In normal position.
   d. In alternate position.
   e. Isolating means open.
8. Audible alarm, with silence push button.
10. Engine test push button.
11. Start generator output contacts.
12. Timer for weekly generator tests.

2.2 CONTROLLERS FOR PRESSURE-MAINTENANCE PUMPS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Aquarius Fluid Products, Inc. (www.shopping.netsuite.com)
   2. ASCO Power Technologies, LP; a business of Emerson Network Power (www.asco.com)
   3. Eaton (www.eaton.com)
   4. Hubbell Incorporated (www.hubbell-wiring.com)
   5. Joslyn Clark Corporation (www.danaherspecialtyproducts.com)
   8. Tornatech (www.tornatech.com)

B. General Requirements for Pressure-Maintenance-Pump Controllers:
   1. Type: UL 508 factory assembled, wired, and tested, across-the-line; for combined automatic and manual operation.
   2. Enclosure: UL 508 and NEMA 250, Type 2 for wall-mounting.
   3. Factory assembled, wired, and tested.
   4. Finish: Manufacturer's standard color paint.

C. Rate controller for scheduled horsepower and include the following:
   1. Fusible disconnect switch.
   2. Pressure switch.
   4. Pilot light.
5. Running period timer.

2.3 REMOTE ALARM PANELS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Aquarius Fluid Products, Inc. (www.shopping.netsuite.com)
   2. ASCO Power Technologies, LP; a business of Emerson Network Power (www.asco.com)
   3. Eaton (www.eaton.com)
   4. Hubbell Incorporated (www.hubbell-wiring.com)
   5. Joslyn Clark Corporation (www.danaherspecialtyproducts.com)
   8. Tornatech (www.tornatech.com)

B. General Requirements for Remote Alarm Panels: Factory assembled, wired, and tested.

C. Supervisory and Normal Control Voltage: 120-V ac single source.

D. Audible and Visual Alarm and Status Indications:
   1. Driver running.
   2. Loss of phase.
   3. Phase reversal.
   4. Supervised power on.
   5. Separate trouble on the controller.
   6. Controller connected to alternate power source.

E. Audible and Visual Alarm and Status Indications: Manufacturer's standard indicating lights; non-push-to-test, with separate test push button.
   1. Unit running.
   2. Controller main switch turned to the off or manual position.
   3. Supervised power on.
   4. Separate trouble on the controller.
   5. Common pump room trouble.
   6. Controller connected to alternate power source.

F. Audible alarm, with silence push button.

G. Pump REMOTE START push button.

2.4 ENCLOSURES

A. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.
   1. Indoor, Dry and Clean Locations: Type 1 (IEC IP10)
   2. Indoor Locations Subject to Dripping Noncorrosive Liquids: Type 2 (IEC IP11).
   3. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12 (IEC IP12).

B. Enclosure Color: Manufacturer's standard "fire-pump-controller red".

C. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.

D. Optional Features:
   1. Floor stands, 12 inches high, for floor-mounted controllers.
   2. Space heater, 120-V ac with thermostat.
2.5 SOURCE QUALITY CONTROL
A. Testing: Test and inspect fire-pump controllers according to requirements in NFPA 20 and UL 218.
   1. Verification of Performance: Rate controllers according to operation of functions and features specified.
B. Fire-pump controllers will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine areas and surfaces to receive equipment, with Installer present, for compliance with re-
   quirements and other conditions affecting performance.
B. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONTROLLER INSTALLATION
A. Install controllers within sight of their respective drivers.
B. Connect controllers to their dedicated pressure-sensing lines.
C. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than 79 inches above finished floor, and bottom of enclosure not less than 12 inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Division 26 “Hangers and Supports for Electrical Systems.”
D. Floor-Mounting Controllers: Install controllers on 4-inch nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches above finished floor.
E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
F. Comply with NEMA ICS 15.

3.3 REMOTE ALARM PANEL INSTALLATION
A. Install panels on walls with tops not higher than 72 inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Division 26 “Hangers and Supports for Electrical Systems.”

3.4 POWER WIRING INSTALLATION
A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Division 26 "Low-Voltage Electrical Power Conductors and Cables."
3.5 CONTROL AND ALARM WIRING INSTALLATION

A. Install wiring between controllers and remote devices and facility's central monitoring system. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."

A. Install wiring between remote alarm and low-suction-shutdown panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Division 26 "Control-Voltage Electrical Power Cables."

B. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Division 28 "Digital, Addressable Fire-Alarm System."

C. Bundle, train, and support wiring in enclosures.

D. Connect remote manual and automatic activation devices where applicable.

3.6 IDENTIFICATION

A. Comply with requirements in NFPA 20 for marking fire-pump controllers.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Division 26 "Identification for Electrical Systems."

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Acceptance Testing Preparation:

1. Inspect and Test Each Component:
   a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
   b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
   c. Test continuity of each circuit.

2. Verify and Test Each Electric-Driver Controller:
   a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify Architect before starting the motor(s).
   b. Test each motor for proper phase rotation.

3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Field Acceptance Tests:

1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Architect and authorities having jurisdiction.

2. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
3. Engage manufacturer's factory-authorized service representative to be present during the testing.
4. Perform field acceptance tests as outlined in NFPA 20.
F. Controllers will be considered defective if they do not pass tests and inspections.
G. Prepare test and inspection reports.

3.8 STARTUP SERVICE
A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer’s written instructions.

3.9 ADJUSTING
A. Adjust controllers to function smoothly and as recommended by manufacturer.
B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.
C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
D. Set field-adjustable pressure switches.

3.10 PROTECTION
A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.11 DEMONSTRATION
A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controllers, remote alarm panels, and to use and reprogram microprocessor-based controls within this equipment.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Design Development
      1. Documents: Design development specifications may include plumbing and HVAC equipment not required for this project. Equipment and capacities are identified on the drawings. Refer to the specifications for equipment characteristics, components, accessories, and installation requirements. These documents are not for construction.
   B. GMP pricing documents: This is a preliminary copy of the contract documents. The documents (drawings and project manual) are incomplete and issued to present the design intent. Equipment, material, and labor required to provide complete operating systems shall be included in the GMP.
   C. This Section includes the following:
      1. Excavating and backfilling for pipe trenches.
      2. Piping materials and installation instructions common to most piping systems.
      3. Transition fittings.
      4. Dielectric fittings.
      5. Grout.
      6. Plumbing demolition.
      7. Equipment installation requirements common to equipment sections.
      8. Painting and finishing.
      9. Concrete bases.
     10. Supports and anchorages.

1.3 BASIS-OF-DESIGN
   A. Equipment manufacturers listed on the equipment schedules are the basis-of-design. Manufactures listed in the specification other than the basis-of design manufacture are acceptable substitutions. Equipment schedules are on the drawings. Refer to specifications for unscheduled equipment.

1.4 DEFINITIONS
   A. GMP: Guaranteed Maximum Price
   B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
   C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
   D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
E. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

F. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

G. The following are industry abbreviations for plastic materials:
2. CPVC: Chlorinated polyvinyl chloride plastic.
3. PE: Polyethylene plastic.
4. PVC: Polyvinyl chloride plastic.

H. The following are industry abbreviations for rubber materials:
1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

1.5 SUBMITTALS

A. Product Data: For the following:
   1. Transition fittings.
   2. Dielectric fittings.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Equipment Startup Reports.

C. Coordination Drawings: Submit one copy for the engineers use. Division 22 coordination drawings will not be returned.
   1. Detail major elements, components, and systems of plumbing equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Indicate if sequence and coordination of installations are important to efficient flow of the Work. Include the following:
      a. Planned piping layout, including valve and specialty locations and valve-stem movement.
      b. Clearances for installing and maintaining insulation.
      c. Clearances for servicing and maintaining equipment, accessories, and specialties, including space for disassembly required for periodic maintenance.
      d. Equipment and accessory service connections and support details
      e. Exterior wall and foundation penetrations.
      f. Fire- and smoke-rated wall and floor penetration.
      g. Sizes and locations of required concrete equipment curbs and bases.
      h. Scheduling, sequencing, movement, and positioning of large equipment into building during construction.
      i. Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.
      j. Access door and panel locations.
      k. Reflected ceiling plans to coordinate and integrate installation of air outlets and inlets, light fixtures, communication system components, sprinklers, and other ceiling-mounted items.

D. Pre-demolition test reports.
1.7 QUALITY ASSURANCE

A. Comply with ASHRAE Guideline 4 – 2008 Preparation of operating and maintenance documentation for building systems.

B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

E. Equipment Substitutions: Equipment of greater capacity or of greater physical size or weight may be furnished provided such proposed equipment is approved in writing. Approval will require that any necessary structural modifications are made, any connecting mechanical and electrical services are increased, and if accommodations can be made in the allocated space. No additional costs will be approved for any changes necessary to provide the larger equipment.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

D. Coordinate plumbing equipment installation with other building components.

E. Sequence, coordinate, and integrate installations of plumbing materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

F. Coordinate connection of plumbing systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate connection of plumbing equipment and systems with building electrical systems.
1.10 GUIDELINES, CODES AND STANDARDS
   A. Refer to the most recently published edition for references to guidelines, and standards (examples: ASHRAE, NFPA, AWWA, ASTM) unless a specific edition is listed.
   B. Installation and materials shall comply with applicable national, state, and local codes and ordinances.

2.1 NOISE SENSITIVE SPACES
   A. Penetrations by ducts, pipes and conduit between noise sensitive spaces shall be sleeved, packed and sealed airtight with non-hardening sealant as described herein. Refer also to other requirements in plans and specifications. Where information is duplicated, in conflict, complementary, etc. the more stringent acoustic requirements shall apply.

PART 2 PRODUCTS

2.2 MANUFACTURERS
   A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

   1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.3 PIPE, TUBE, AND FITTINGS
   A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.
   B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.4 JOINING MATERIALS
   A. Refer to individual Division 22 piping Sections for special joining materials not listed below.
   B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
      1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
         a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
         b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
      2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
   C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
   D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
   E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
   F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
   G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
H. Solvent Cements for Joining Plastic Piping:
   1. ABS Piping: ASTM D 2235.
   2. CPVC Piping: ASTM F 493.
   3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
   4. PVC to ABS Piping Transition: ASTM D 3138.

2.5 TRANSITION FITTINGS

A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
   1. Manufacturers:
      a. Cascade Waterworks Mfg. Company
      b. Dresser Industries, Incorporated; DMD Division
      c. Ford Meter Box Company, Incorporated (The); Pipe Products Division
      d. JCM Industries
      e. Smith-Blair, Incorporated
      f. Viking Johnson.
   2. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
   4. Aboveground Pressure Piping: Pipe fitting.

B. Plastic-to-Metal Transition Fittings: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
   1. Manufacturers:
      a. Eslon Thermostatics

C. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
   1. Manufacturers:
      a. Thompson Plastics, Incorporated

D. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.
   1. Manufacturers:
      a. NIBCO Incorporated
      b. NIBCO, Incorporated; Chemtrol Division

E. Flexible Transition Couplings for Underground Non-pressure Drainage Piping: ASTM C 1173 with elastomeric sleeve ends same size as piping to be joined, and corrosion-resistant metal band on each end.
   1. Manufacturers:
      a. Cascade Waterworks Mfg. Company
      b. Fernco, Incorporated
      c. Mission Rubber Company
      d. Plastic Oddities, Incorporated

2.6 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.
C. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
   1. Manufacturers:
      a. Capitol Manufacturing Company
      b. Central Plastics Company.
      c. Epco Sales, Incorporated
      d. Watts Industries, Incorporated; Water Products Division

D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   1. Manufacturers:
      a. Advance Products & Systems, Incorporated
      b. Calpico, Incorporated
      c. Central Plastics Company.
      d. Pipeline Seal and Insulator, Incorporated
   2. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
   1. Manufacturers:
      a. Calpico, Incorporated
      b. Lochinvar Corporation.

F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.
   1. Manufacturers:
      a. Perfection Corporation.
      b. Precision Plumbing Products, Incorporated
      c. Sioux Chief Manufacturing Company, Incorporated
      d. Victaulic Company of America.

2.7 GROUT
A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.1 TRENCHING AND BACKFILLING
A. Refer to civil drawings and specifications for trenching and backfilling within the building.

3.2 PLUMBING DEMOLITION
A. Refer to Division 01 Section "Cutting and Patching" and Division 02 Section "Selective Structure Demolition" for general demolition requirements and procedures.
B. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.

2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.

3. Equipment to Be Removed: Disconnect and cap services and remove equipment.

4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.

5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Verify final equipment locations for roughing-in.

M. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

J. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
   3. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   4. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
   5. PVC Non-pressure Piping: Join according to ASTM D 2855.
   6. PVC to ABS Non-pressure Transition Fittings: Join according to ASTM D 3138 Appendix.

K. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.

L. Plastic Non-pressure Piping Gasketed Joints: Join according to ASTM D 3212.

M. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   1. Plain-End Pipe and Fittings: Use butt fusion.
   2. Plain-End Pipe and Socket Fittings: Use socket fusion.

N. PEX Piping Joints: Join according to ASTM F 1807.

O. Steel-Piping Grooved Joints: Roll groove end of pipe. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

P. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.5 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:
   1. Install unions, in steel piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
   2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
   3. Dry Piping Systems: Install dielectric flanges to connect piping materials of dissimilar metals.

3.6 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install plumbing equipment according to the equipment manufacturer’s installation instructions and as indicated on the drawings. Resolve conflicting instructions, with the architect before mounting equipment.

B. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

D. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

E. Install equipment to allow right of way for piping installed at required slope.

F. Refer to equipment shop drawings for rough-in locations; do not scale drawings.

3.7 PRODUCT INSTALLATION

A. Manufacturer’s instructions:
   1. Except where more stringent requirements are indicated, comply with the product manufacturer’s instructions and recommendations.
   2. Consult with manufacturer’s technical representatives, who are recognized as technical experts, for specific instructions on special projects conditions.
   3. If conflict exists, notify the Owner’s in writing and obtain his instruction before proceeding with the work in question.

B. Movement of Equipment:
   1. Wherever possible, arrange for the movement and positioning of equipment so that enclosing partitions, walls and roofs will not be delayed or need to be removed.
   2. Otherwise, advise Contractor of opening requirements to be maintained for the subsequent entry of equipment.

C. Clearances:
   1. Install Piping:
      a. Straight and true.
      b. Aligned with other work.
      c. Close to walls and overhead structure (allowing for insulation).
      d. Concealed, where possible, in occupied spaces.
      e. Out-of-the-way with maximum passageway and headroom remaining in each space.
   2. Do not obstruct windows, doors and other openings.
   3. Coordinate location of piping systems required to slope for drainage (over other service lines and ductwork).

D. Access:
   1. Provide for removal, without damage to other parts, of plumbing systems.
   2. Connect equipment for ease of disconnecting with minimum of interference with other work.
   3. Provide unions where required.
   4. Locate operating and control equipment and devices for easy access.
   5. Provide access panels where equipment or devices are concealed by non-accessible finishes and similar work.
3.8 CLOSING-IN OF UN-INSPECTED WORK
A. Do not allow or cause any work to be covered up or enclosed until inspected, tested and approved.
B. Should any work be enclosed or covered up before such inspection and test, Contractor shall, at his/her own expense, uncover work and after it has been inspected, tested and approved, make repairs with such materials as necessary to restore his/her work and that of other Divisions to original and proper condition.

3.9 PAINTING
A. Painting of plumbing systems, equipment, and components is specified in architectural drawings and specifications.
B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.10 CONCRETE BASES
A. Concrete Bases and Curbs:
   1. Provide scaled layouts of bases and curbs with sizes and locations dimensioned to concrete walls and columns.
   2. Determine base and curb sizes and locations based on “Accepted” equipment shop drawings. Base and curb sizes shall not be scaled from the Drawings.
   3. Anchor equipment to concrete base according to equipment manufacturer’s written instructions and according to acoustic requirements at Project.
B. Construction Details:
   1. Provide concrete bases sized 4 inches larger in both directions than the supported equipment.
   2. Provide 4-inch high curbs and bases with finished edges, unless otherwise indicated.
   3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
   4. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   6. Install anchor bolts to elevations required for proper attachment to supported equipment.
   7. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   8. Use 3000-psi, 28-day compressive-strength concrete and reinforcement.
   9. Chamfer all outside corners of concrete bases and curbs.

3.11 ERECTION OF METAL SUPPORTS AND ANCHORAGES
A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
C. Field Welding: Comply with AWS D1.1.

3.12 ERECTION OF WOOD SUPPORTS AND ANCHORAGES
A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.

C. Attach to substrates as required to support applied loads.

3.13 GROUTING

A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

3.14 SEALANTS

3.15 CYBERSECURITY RISK MITIGATION STRATEGY

A. Coordinate with Owner’s IT Department to restrict external network access to Internet connected system through virtual private network (VPN) connections only.

B. Security Event Log: Coordinate with the Owner to configure security event logging. Access to security logs shall be limited to users with proper authentication. Security logs shall be time stamped with Time and Date metadata for auditing and back-up.

C. Disable any protocols for remote connectivity, unless constantly required for day-to-day operations.

D. All external transport data shall be routed through encrypted channels with 2048-bit secure sockets layer (SSL).

E. Coordinate with Owner’s IT Department to implement a Web server-based human machine interface (HMI) that relies on IT technologies to secure access and restrict ports that can be opened on the firewall. Coordinate with Owner’s IT Department to restrict access to known IP addresses only.

F. Where building system networks are not physically separate from IT business networks, coordinate with Owner’s IT Department to segregate networked and Internet connected systems from the IT business network using virtual local area network (VLAN) IT technologies to restrict internal attacks/breakdowns.

G. Set unique, cryptographically strong passwords for administrator and user accounts. Default passwords must be changed before systems are connected to the Owner’s network.

H. Collect only the data that is necessary for analytics and optimization.

I. References:
3.16 PRELIMINARY OPERATION
A. The Owner's Representative reserves the right to operate portions of the mechanical system on a preliminary basis without voiding the guarantee or relieving the Contractor of his/her responsibilities.

3.17 OPERATIONAL TESTS
A. Before operational tests are performed, demonstrate to the Owner's Representative that systems and components are complete and fully charged with operating fluid and lubricants. Systems shall be operable and capable of maintaining continuous uninterrupted operation during the operating and demonstration period.
B. After systems have been completely installed, connections made, and tests completed, operate the systems continuously for a period of five working days during the hours of a normal working day.
C. Rotating equipment shall be in dynamic balance and alignment.
D. Tests required in various sections herein shall be completed.
E. Notify the Owner's Representative, in writing, two weeks in advance of this operational period.
F. This operational test may be concurrent with instruction of the Owner's operating personnel.

3.18 COMPLIANCE TESTS
A. Conduct tests for individual components of all portions of the installation as may be required by the various Sections of this Division to comply with the Contract Documents. Tests shall be made in the presence of the Owner's Representative. Costs of tests shall be borne by the Contractor. Contractor shall provide all instruments, equipment, labor and materials to complete the tests. These tests may be required at any time between the installation of the work and the end of the warranty period. Should these tests expose any defective materials, poor workmanship or variance with requirements of Contract Documents, Contractor shall make any changes necessary and remedy any defects at no cost to the Owner.

END OF SECTION
SECTION 220502 - BASIC PLUMBING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Where contradictions occur between this Section and Division 01, the most stringent of the two shall apply. Architect shall decide which is most stringent.
B. These Basic Requirements apply to the entire Division 22 work.
C. All referenced and related provisions of Divisions 21, 23 and 26 shall also apply to the work of this section as if fully repeated herein.
D. Building systems commissioning: An independent third party Commissioning Agent will document completion of the Plumbing, HVAC, and Electrical Systems for the project. The Construction Manager, Division Contractors, and Test and Balance Contractor are members of the Commissioning Team and will facilitate completion of the Commissioning process. Refer to other sections for the project Commissioning requirements and roles and responsibilities of each member of the Commissioning Team.

1.2 SUMMARY
A. The definitions of Division 01 and the General Conditions of the Specification also apply to the Division 22 contract.
B. “Contract Documents” constitute the drawings, specifications, general conditions, project manuals, etc., prepared by engineer (or other design professional in association with Engineer) for contractor’s bid or contractor’s negotiations with the Owner. The Division 22 drawings and specifications prepared by the Engineer are not Construction Documents.
C. “Construction Documents”, “construction drawings”, and similar terms for Division 22 work refer to installation diagrams, shop drawings and coordination drawings prepared by the contractor using the design intent indicated on the Engineer’s contract documents. These specifications detail the contractor’s responsibility for “Engineering by Contractor” and for preparation of construction documents.
D. “Install” means to “set in place, connect and place in full operational order”.
   1. “Provide” means to “furnish and install”.
E. “Equal” or “Equivalent” means “meets the specifications of the referenced product or item in all significant aspects”. Significant aspects shall be as determined by the Owner’s Representative.
F. “Work by other(s) divisions”, “re: Division”, and similar expressions means work to be performed under the contract documents, but not necessarily under the division or section of the work on which the note appears. It is the contractors’ sole responsibility to coordinate the work of the contract between his/her suppliers, subcontractors and employees. If clarification is required, consult Owner’s Representative before submitting bid.
G. By inference, any reference to a “contractor” or “sub-contractor” means the entity, which has contracted with the Owner for the work of the Contract Documents.
H. “Engineer” means the design professional firm, which has preferred these contract documents. All questions, submittals, etc. of this division shall be routed to the Engineer (through proper contractual channels).
1.3 COORDINATION WITHIN DIVISION 22

A. Contract Documents:
   1. General: The Contract Documents are diagrammatic showing certain physical relationships, which must be established within Division 22 work and its interface with other work. Such establishment is the exclusive responsibility of the Contractor. Drawings shall not be scaled for the purpose of establishing dimensions, clearances or material quantities.
   2. Supplemental Instructions: The exact location for some items in this Specification may not be shown on the Drawings. The location of such items may be established by the Owner’s Representative during the progress of the work.
   3. Discrepancies:
      a. Examine Drawings and Specifications of all Divisions of the work.
      b. Report any discrepancies to the Owner’s Representative and obtain written instructions before proceeding.
      c. Should there be a conflict within or between the Specifications or Drawings, the most stringent or higher quality requirements shall apply.
      d. Items called for either in the Specifications or on the Drawings shall be required as if called for in both.
   4. Constructability:
      a. Examine Drawings and Specifications of all Divisions of the work.
      b. Report any issues to the Owner’s Representative which may prevent installation of Division 22 work in accordance with the Contract Documents and the original construction contract.

B. Contractor shall be responsible for providing proper documentation of equipment product data and shop drawings to all entities providing service.

C. Coordination Drawings: Prepare coordination drawings in accordance with Division 01, Section “Submittals” to scale of 1/4” = 1'-0" or larger, detailing major elements, components, and systems of mechanical equipment (i.e. equipment rooms, and exterior equipment areas) and materials in relationship with other system, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are important to the efficient flow of the work, including (but not necessarily limited to) the following:
   1. Indicate all major piping (HVAC, Plumbing and Fire Suppression), electrical equipment and conduits, structural, and architectural elements in these areas as well.
   2. Sizes and locations of required concrete pads, piers, curbs, and bases.
   3. Provide all necessary sections and elements for clarification.
   4. Indicate all seismic restraint and support systems to be used for all mechanical equipment throughout the project.
   5. Ductwork and piping transitions from rooftop units to shafts or horizontal ducts.
   6. Failure to produce or submit coordination drawings does not dismiss the Contractor’s responsibility for translating the design intent of the Contract Documents into Construction Drawings.

D. Deferred Approval Items: Division 01.

E. Utility Connections:
   1. Coordinate the connection of plumbing system with utilities and services.
   2. Comply with regulations of utility suppliers.
   3. The contract documents indicate the available information on existing utilities and services, and on new services (if any) to be provided to the project by utility companies and agencies.
      a. Notify the Owner’s Representative immediately if discrepancies are found.
   4. Coordinate mechanical utility interruptions one week in advance in writing with the Owner’s Representative and the Utility Company.
      a. Plan work so that duration of the interruption is kept to a minimum.
1.4 COORDINATION WITH OTHER DIVISIONS

A. General:
   1. Coordinate the Division 22 work with the progress of the work of the other trades.
   2. Complete the entire installation as soon as the condition of the building will permit.
   3. Contractor is responsible for coordination of his/her work with Owner’s facility staff engaged in
      building automation, commissioning of systems, fire alarm system, etc.

B. Chases, Inserts and Openings:
   1. Provide measurements, drawings, and layouts so that opening, inserts and chases in new
      construction can be built and coordinated as construction progresses.
   2. Check sizes and locations of openings provided.
   3. Any cutting and patching made necessary by failure to provide measurements, drawings, and
      layouts at the proper time shall be done at no additional cost to the Owner.

C. Support Dimensions: Provide dimensions and drawings so that concrete bases and other
   equipment supports to be provided under other Sections of the Specifications can be built at the
   proper time.

D. Deferred Approved Items: Division 01.

1.5 ENGINEERING BY CONTRACTOR

A. The construction of this building requires the Contractor to design several systems or subsystems.
   All such designs shall be the complete responsibility of the Contractor.

B. Systems or subsystems which require responsibility by the Contractor and submitted to the
   Engineer for review include, but are not limited to:
   1. Equipment and piping supports, not detailed in the drawings.
   2. Pipe hangers and anchors not specified in these documents, or catalogued by the
      manufacturer.
   4. Thermal pipe stress analysis.

1.6 REGULATORY REQUIREMENTS

A. General:
   1. Regulatory Compliance: Work performed under this Division shall comply with the latest
      currently adopted editions of Codes and Regulations including, but not limited to those listed
      below.
   2. Minimum Requirements: The requirements of the Drawings and Specifications are the
      minimum that will be allowed, unless such requirements are exceeded by applicable codes or
      Regulations, in which case the Code or Regulation requirement shall govern.
   3. Code Changes: Should a code change occur between time of proposal and date of permit
      issue, and the Contractor has unnecessarily delayed the acquisition of permits, the contractor
      shall hold the Owner free from additional expense resulting from such Code change.

B. Codes: Comply With the Currently Adopted (At Time of Contract Award) Codes

C. Comply With the Latest Editions of Applicable Regulations and Standards, Including:
   1. Uniform Plumbing Code
   3. Underwriter’s Laboratories, Inc. (UL).
   6. American Society of Mechanical Engineers (ASME).
9. Compressed Gas Association (CGA).
13. Plumbing and Drainage Institute (PDI).
15. Factory Mutual Standards

D. Requirements of Local Utility Companies: Comply with rules and regulations of local utility companies. Include in bid the cost of all valves, valve boxes, meter boxes, meters and such accessory equipment, which will be required for the project.

E. Additional Regulations: Follow additional regulations which appear in individual Sections of these Specifications.

F. Contradictions: Where codes are contradictory, follow the most stringent, unless otherwise indicated in Plans or Specifications. The Owner’s Representative shall determine which is most stringent.

G. Contract Documents Not in Compliance:
   1. Where it is not noted that the Drawings and Specifications do not comply with the minimum requirements of the codes, either notify the Owner’s Representative in writing during the Bidding Period of the revisions required to meet Code Requirements. After entering into contract, Contractor will be held to complete all work necessary to meet Code Requirements without additional expense to the Owner.
   2. Follow Drawings and Specifications where they are superior to Code Requirements.

H. Permits:
   1. Contractor shall pay for and obtain all permits required by authorities and agencies having jurisdiction for the work in this Division.
   2. Post permits as required.

I. Inspections and Tests:
   1. Arrange for all required inspections and tests.
   2. Pay all charges.
   3. Notify the Owner’s Representative in writing 72 hours before tests.
   4. Submit one copy for Owners record of permits. Licenses, inspection reports and test reports.

1.7 EQUIVALENTS AND SUBSTITUTIONS

A. The applicable paragraphs for General Requirements, Division 01 apply herein.

B. Basis for Design: The manufacturer’s name and product listed on the drawings, or listed first of several names in these Specifications, is used as a basis for design to establish space requirements, a standard of quality and performance.

C. Equivalents: Products of one or more other manufacturer’s names listed in these Specifications following the words “or equivalent by” may be selected, subject to paragraph below titled “Contractor’s Responsibility for Equivalent and Substitutions.”

D. Other Options:
   1. For products specified by naming only one manufacturer, refer to paragraph below under “Substitutions”.
   2. For products specified only by performance characteristics or reference standards, select any manufacturer meeting the requirements.
E. Substitutions: Requests for acceptance of a product of manufacturer’s name not listed in these specifications will be considered if any one of the following conditions is met:
1. The named product is not available because of strikes or discontinuance of manufacture, and the proposed product is equivalent to the named product.
2. The proposed product is superior to the named product, in the opinion of the Owner’s representative.
3. The proposed product is equivalent to the named product and its use will be to the advantage of the Owner, by the Owner receiving an equitable credit or cost savings. The Owner’s Representative reserves the right to reject any substitution.
4. Submit proposed substitutions with bid along with alternate price, complete descriptive data and a comparison of the substitute manufacturer’s product with specified product. Request for acceptance of a product of manufacturer’s name not listed in these specifications, is subject to the paragraph titled “Contractor’s Responsibility Equivalents and Substitutions”.

F. Contractor’s Responsibility for Equivalents and Substitutions:
1. Items submitted as a substitution to the basis of design or listed general equivalents shall be identified as such and shall include a written request for substitution indicating the following:
   b. Contract time adjustment.
   c. Item by item breakdown of differences between basis of design and substituted item.
   d. Operation, maintenance and energy cost difference.
2. Products of manufacturer must match the features, construction, performance and size of those selected for design. Standard catalogued may require certain modifications to meet specified requirements.
3. The responsibility for providing that specified requirements have been met remains with the manufacturer and contractor. Should the substituted item fail to perform in accordance with the Specifications, replace same with the originally specified item without extra cost to the contract.
4. When requesting review of an equivalent or substituted product, submit a comparison chart listing features, construction, performance and sizes of named product versus equivalent or substituted product.
5. Submittals for review of an equivalent or substituted product will be reviewed for acceptability when all the above requirements have been met. Contractor shall be responsible for all costs incurred by the Architect and Engineer for review of equivalency beyond initial review.
6. Coordinate the installation of the product with all trades.
7. Contractor shall be responsible for changes in electric wiring, materials and for all other additional costs of construction by all trades involved to accommodate the product to perform same as product used on the “Basis of Design”.
8. Coordination of General Equivalents and Substitutions: Where Contract Documents permit selection from general equivalents, or where substitutions are authorized, coordinate clearance and other interface requirements with mechanical and other work.
9. Provide necessary additional items so that selected or substituted item operates equivalent to the Basis of Design and properly fits in the available space allocated for the Basis of Design.
10. Contractor is responsible for assuring that piping, conduit, duct, flue and other service locations for general equivalents or substitutions do not cause access, service or operational difficulties any greater than would be encountered with the Basis of Design.
11. Failure to comply with these requirements will result in immediate rejection of the request for substitution.

1.8 GENERAL SUBMITTAL REQUIREMENTS
A. Refer to Division 01.
B. Coordination and Sequencing:
1. Coordinate submittals 3 weeks (minimum) prior to expected order date so that work will not be delayed by submittals.
2. Do not submit product data, or allow its use on the project until compliance, with requirement of Contract Documents has been confirmed by Contractor.
3. Submittal is for information and record, unless otherwise indicated, and is not a change order request.
4. Submitting contractor is responsible for routing reviewed submittals to all parties affected including but not limited to electrical, building automation and temperature control, and test and balance subcontractors.
5. Make submittals for group of similar products or materials such as valves, fixtures, pumps, insulation, etc., or area of work complete and at one time, not in piecemeal fashion.
6. Identify submittals with Architect’s project name and number, with item designation as indicated on drawings, and referenced to applicable paragraphs of the specifications. Submit in brochure form.
7. Submittals of products needed at start of Project for its installation, or those requiring a long lead time for assembly or manufacturing, should be submitted before the others.

C. Preparations of Submittals:
1. Refer to Division 01 requirements.
2. Provide permanent marking on each submittal to identify project, date, Contractor, Subcontractor, Supplier, submittal name and similar information to distinguish it from other submittals.
3. Indicate any portions of work, which deviate from the Contract Documents.
   a. Explain the reasons for the deviations.
   b. Show how such deviations coordinate with interfacing portions of other work.
4. Show Contractor’s executed review and approval marking.
5. Provide space for the Owner’s Representative “Action” marking.
6. Submittals, which are received from sources other than through Contractor’s office, will be returned “Without Action”.
7. Submittals shall be presented in a neat and legible fashion and shall be returned “Without Action” if presented in any other fashion.

D. Response to Submittals: Where standard product data has been submitted, it is recognized:
1. That the Submitter has determined that the products fulfill the specified requirements.
2. That the submittal is for the Owner’s Representative information only, but will be returned with appropriate action where observed to be not in compliance with the requirements.

E. If more than two submittals (either for shop drawings, as-builts drawings, or test and balance reports) are made by the contractor due to the incompleteness, non-compliance, errors, omissions, etc. the Owner reserves the right to charge the contractor for subsequent reviews by their consultants. Such extra fees shall be deducted from payments by the Owner to the Contractor.

1.9 SPECIFIC CATEGORY SUBMITTAL REQUIREMENTS
A. Manufacturer’s Data:
1. Where pre-printed data covers more than one distinct product, size, type, material, trim, accessory group or other variation, mark submitted copy with black ink to indicate which of the variations is to be provided.
2. Delete or mark-put significant portions of pre-printed data, which are not applicable.
3. Where operating ranges are shown, mark data to show portion of range required for project application.
4. For Each Product, Include the Following:
   a. Sizes.
   b. Weights.
c. Speeds.
d. Capacities.
e. Piping and electrical connection sizes and locations.
f. Statements of compliance with the required standards and regulations.
g. Performance data.

1.10 COMPATIBILITY

A. General: Provide products, which are compatible with other products of the mechanical work, and with other work, requiring interface with the mechanical work.

B. Power Characteristics: Where power characteristics are not stated in Division 22 Sections, refer to the Sections of Division 26 and the Electrical Drawings for the power characteristics of each power driven item of mechanical equipment. Coordinate available power with Electrical Contractor before ordering equipment. Mechanical Contractor shall be responsible for ordering equipment to meet the available power characteristics. If there is a conflict between Division 22 documents and Division 26 documents, provide a written notification to the Owner’s Representative for direction. Do not order equipment prior to determining the proper electrical service. No contract cost adjustment will be allowed for equipment ordered in conflict with the available power characteristics.

1.11 RECORD DRAWINGS

A. Drawings:
1. Record of Project Progress: Purchase from the Architect a complete set of reproducible contract drawings and maintain drawings available at the job site for inspection. Keep an accurate, legible and continuously updated record of installed locations and all project revisions other than revised drawings issued by the Architect, including source and date of authorization. Utilize only contract drawing symbols for recording the work. Drawing notations to be sufficiently clear in the representation of the work, for utilization by a CADD operator (drafts person) who is not necessarily familiar with the installed work.
2. Record of Installation: At the conclusion of the work, deliver one (1) set of blue prints of the progress drawings to the Owner’s Representative for review. Following the review, Contractor shall have incorporated by a competent CADD operator all of the installed data represented on the project progress drawings.

3. Include in Record Drawings the Following:
   a. Revisions, including sketches, bulletins, change orders, written addenda and directives, clarifications and responses generated by requests for information (RFIs), regardless of source of the revision.
   b. Location and configuration of equipment with related housekeeping pads.
   c. Location of fixtures, drains and appurtenances.
   d. Physical routing of piping, underground, exposed, and above ceiling with locations of valves and accessories plainly marked and identified.
   e. Location of piping below building and on exterior, valves, manholes, appurtenances and stub outs dimensioned from buildings and permanent structures, both horizontally and vertically.
   f. Location of wall and ceiling access panels.

B. Acceptance: As a condition for acceptance of the work, deliver two (2) sets of Auto CAD Latest Version CDs and one set of signed and dated reproducible drawings to the Owner’s Representative and obtain a receipt.

1.12 OPERATING AND MAINTENANCE DATA

A. Refer to Division 01 requirements.

B. Submission:
   1. Submit three typed and bound copies of Operating and Maintenance (O&M) Manuals prior to scheduling systems demonstrations for the Owner’s Representative, as specified in Division 01.
   2. Bind each Maintenance Manual in one or more vinyl covered, 3-ring binders, with pockets for folded drawings.
      a. Mark the spine of each binder with system identification and volume number.

C. Required Contents:
   1. Manuals shall have index with tab dividers for each major equipment section to facilitate locating information on a specific piece of equipment.
   2. Identify data within each section with drawing code numbers as they appear on Drawings and Specifications. Include as a minimum the following data:
      a. Alphabetical list of system components, with the name, address and 24 hour telephone number of the company responsible for servicing each item during the first year of operation. Include point of contact for company.
      b. Operating instructions for complete system including:
         1) Emergency procedures for fire and failure of major equipment.
         2) Major start, operation and shut down procedures.
      c. Maintenance Instructions for Each Piece of Equipment Including:
         1) Equipment lists.
         2) Proper lubricants and lubricating instructions for each piece of equipment.
         3) Necessary cleaning, replacement and/or adjustment schedule.
         4) Product data.
         5) Installation instructions.
         6) Parts list.
      d. Marked or changed prints locating concealed parts and variations from the original system design (as-built drawings).
      e. Valve schedule and associated piping schematics. See Section 220553, IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT.
f. Copies of any extended equipment warranties which are greater than one year.

1.13 WARRANTIES
A. The warranty period is two years after Date of Acceptance:
   1. During this period, provide labor and materials as required to repair or replace defects in the mechanical system at no additional cost to the Owner. Provide certificate with O&M Manual submittal, which guarantees same-day service response to Owners call for all such warranty service.
   2. Provide certificate for such items of equipment, which have warranties in excess of one year. Insert copies in O&M Manuals.
   3. Provide extended manufacturers warranties to cover two years from date of acceptance if standard warranty starts any time prior to that date.
   4. At time of bid, submit additional costs or extended warranties for principal equipment (e.g. point of use water heaters, pumps, air compressor, etc.).
B. Provide longer warranties where specified in individual specification sections.
C. Refer to Division 01 for additional requirements.

1.14 SPARE PARTS, SPECIAL TOOLS
A. Deliver spare parts to the Owner’s Representative and obtain receipts at the time operating instructions are given to the Owner’s personnel.
B. Include the Following:
   1. V-Belts: One complete set of each size.
   2. Fuses: each type used for all equipment utilizing fuses. Quantity 10%, but not less than two.
   3. Pilot Light Lamps: Each type used on the project. Quantity of 10%, but not less than two.
   4. Special Tools: Furnish special tools required for assembly, adjustment, setting or maintenance of equipment if such tool is not readily available on the commercial tool market.
   5. Maintenance Paint: Furnish one can of touch-up paint for each different factory finish, which is to be the final finished surface of the product.
   6. Alternate Parts: Under the individual mechanical sections, there are listed spare parts to be furnished under a bid alternate. Should the alternate be accepted, such spare parts shall be similarly delivered to the Owner.

1.15 SYSTEM ACCEPTANCE
A. Acceptance shall be contingent upon completion of final review and correction of all deficiencies. Satisfactory completion of the operational tests, which shall demonstrate compliance with all performance criteria, and the requirements of the Contract Documents.
B. Request a Final Review Prior to System Acceptance After Completion of the Following:
   1. Installation of all systems required by Contract Documents.
   2. Submission and acceptance of service manuals.
   3. Identification.
   4. Cleaning.
   5. Satisfactory operation of all systems for a period of one week.

1.16 MANDATORY GOVERNING PROVISION
A. Omissions of words or phrases, such as “the Contractor shall”, in conformity with”, “shall be”, “as noted on the Drawings”, “according to the Drawings”, “an”, “the”, and “all” are intentional.
B. Omitted words or phrases shall be supplied by inference.
1.17 OWNER FURNISHED EQUIPMENT
A. All equipment called out in the Specifications or shown on the Drawings as “Owner Furnished Equipment” shall be installed and connected under this contract. Provide rough-ins for all future connections indicated, unless otherwise specifically indicated on Drawings.

1.18 TEMPORARY FACILITIES
A. Light, heat, power, etc.
   1. Contractor shall be responsible for providing temporary electricity, heat and other facilities as specified in Division 01.
   2. Contractor shall be responsible for maintaining the equipment in an as-new condition. Equipment will not be turned over to the Owner until it is brought up to as-new condition.

1.19 SAFETY PROVISIONS
A. Equipment Nameplates: provide power-oriented plumbing equipment with a permanent nameplate attached by the manufacturer, indicating:
   1. The manufacturer.
   2. Product name.
   3. Model number.
   4. Serial number.
   5. Speed.
   6. Capacity.
   7. Power characteristics.
   8. Labels of testing, or inspecting agencies.
   9. Other similar data.

B. Where manufacturer affixed nameplate is not available, Contractor shall fabricate and attach nameplate.

C. Guards:
   1. Unless equivalent guards are provided integral with the equipment, enclose each belt drive (including sheaves) on both sides in a galvanized, one inch, mesh screen of No. 18 gauge steel wire or expanded metal, fastened to an approved, structural steel frame, securely fastened to the equipment or floor.
   2. Provide tachometer holes at shaft centers. Unless equivalent guards are provided integral with the equipment, install a solid guard of No. 20 gauge galvanized steel over the coupling of each item of direct-driven equipment.
   3. Sides are not required on these guards except to ensure rigidity.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION GENERAL REQUIREMENTS
A. Furnish, apply, install, connect, erect, clean, and condition manufactured materials and equipment as recommended in manufacturer’s printed directions (maintained on job site during installation).

B. Provide all attachment devices and materials necessary to secure materials together or to other materials.

C. Make allowance for ample and normal expansion and contraction for all building components and piping systems that are subject to such.
D. Install materials only when conditions of temperature, moisture, humidity and conditions of adjacent building components are conducive to achieving the best installation results.

E. Erect, install and secure components in a structurally sound and appropriate manner.

F. Where necessary, temporarily brace, shore, or otherwise support members until final connections are installed.

G. Leave all temporary bracing, shoring, or other structural supports in place as long as practical for safety and to maintain proper alignment.

H. Handle materials in a manner to prevent scratching, abrading, distortion, chipping, breaking, or other disfigurement.

I. Conduct work in a manner to avoid injury or damage to previously placed work.

J. Any work so impaired or damaged shall be replaced at no expense to Owner.

K. Fabricate and install materials true to line, plumb and level.

L. Leave finished surfaces smooth and flat, free from wrinkles, wraps, scratches, dents and other imperfections.

M. Furnish materials in longest practical lengths and largest practical sizes to avoid all unnecessary jointing.

N. Make all joints secure, tightly fitted, and as inconspicuous as possible by the best, accepted practice in joinery and fabrication.

O. Consult the Owner’s Representative for mounting height or position of any unit not specifically indicated or located on Drawings or specified in Specifications.

P. Job mixed multi-component materials used in the work shall be mixed in such regulated and properly sized batches that material can be used before it begins to “set”.

Q. Mixing of a partially “set” batch with another batch of fresh materials will not be accepted and entire batch shall be discarded and removed from site.

R. Clean all mixing tools and appliances that can be contaminated prior to mixing of fresh materials.

S. In addition to the above, refer to each Section of the Specifications for additional installation requirements for the proper completion of all work.

3.2 COORDINATION OF PLUMBING INSTALLATION

A. Inspection and Preparation:
   1. Examine the work interfacing with plumbing work, and the conditions under which the work will be performed, and notify the Owner’s Representative of conditions detrimental to the proper completion of the work at original contract price.
   2. Do not proceed with the work until unsatisfactory conditions have been corrected.

B. Layout:
   1. Layout the plumbing work in conformity with the Contract Drawings, Coordination Drawings and other Shop Drawings, product data and similar requirements so that the entire plumbing system will perform as an integrated system, properly interfaced with other work recognizing that portions of the work are shown only in diagrammatic form.
   2. Where coordination requirements conflict with individual system requirements, comply with the Owner’s Representative decision on resolution of the conflict.
   3. Take necessary field measurements to determine space and connection requirements.
   4. Provide sizes and shapes of equipment so the final installation conforms to the intent of the Contract Documents.
5. Provide necessary fittings to create offsets as required to coordinate with building structure and other trades, even if fittings are not shown on the Contract Drawings.

C. Integrate plumbing work in ceiling spaces with the ceiling suspension system, light fixtures and other work, so that required performance of each will be achieved.

3.3 PRODUCT INSTALLATION

A. Manufacturer’s instructions:
   1. Except where more stringent requirements are indicated, comply with the product manufacturer’s instructions and recommendations.
   2. Consult with manufacturer’s technical representatives, who are recognized as technical experts, for specific instructions on special projects conditions.
   3. If conflict exists, notify the Owner’s in writing and obtain his instruction before proceeding with the work in question.

B. Movement of Equipment:
   1. Wherever possible, arrange for the movement and positioning of equipment so that enclosing partitions, walls and roofs will not be delayed or need to be removed.
   2. Otherwise, advise Contractor of opening requirements to be maintained for the subsequent entry of equipment.

C. Heavy Equipment:
   1. Coordinate the movement of heavy items with shoring and bracing so that the building structure will not be overloaded during the movement and installation.
   2. Where plumbing products to be installed on the existing roof are too heavy to be hand-carried, do not transport across the existing roof deck. Position by crane or other device so as to avoid overloading or otherwise damaging the roof deck.

D. Clearances:
   1. Install Piping:
      a. Straight and true.
      b. Aligned with other work.
      c. Close to walls and overhead structure (allowing for insulation).
      d. Concealed, where possible, in occupied spaces.
      e. Out-of-the-way with maximum passageway and headroom remaining in each space.
   2. Do not obstruct windows, doors and other openings.
   3. Coordinate location of piping systems required to slope for drainage (over other service lines and ductwork).

E. Access:
   1. Provide For Removal, Without Damage To Other Parts, Of:
      a. Seals.
      b. Shafts.
      c. Gaskets.
      d. Drives.
      e. Filters.
      f. Strainers.
      g. Bearings.
      h. Control components.
      i. Other parts requiring periodic replacement or maintenance.
   2. Connect equipment for ease of disconnecting with minimum of interference with other work.
   3. Provide unions where required.
   4. Locate operating and control equipment and devices for easy access.
5. Provide access panels where equipment or devices are concealed by non-accessible finishes and similar work.

6. Ensure grease fittings for equipment are readily visible and accessible. Extend fittings when necessary.

3.4 EQUIPMENT SERVICE ACCESS AND MAINTAINABILITY

A. A "maintenance access" zone (vertically and horizontally) is to be defined and called out on coordination and shopdrawings and maintained through final construction. The maintenance access zone shall match the manufacturer’s recommendations and shall extend from the top of the unit or equipment to the finished floor without obstruction other than removable ceiling tile or moveable furnishings.

1. Coordination with architectural, mechanical, electrical, fire protection and plumbing equipment is required; no service access shall be blocked.

B. Accessible equipment is defined as:

1. Being capable of being reached without climbing or crawling under or over obstacles such as motors, pumps, belt guards, transformer, piping, ductwork, light fixture, structural members, conduits, fixed equipment, casework, and fixed furnishings.

2. Maximum access height of equipment:
   a. For equipment above lay-in ceilings: No more than 4’ above ceiling grid or an absolute maximum of 14’ above the finished floor.
   b. For equipment above hard ceilings, provide minimum 24”x24” access panel. Locate equipment no more than 4’ above ceiling height.

3. Equipment requiring service access shall include but not be limited to:
   a. Control valves
   b. Isolation Valves
   c. Sensors, switches and other control devices or instrumentation
   d. Motors
   e. Pumps
   f. Air bleeders or air vents
   g. Strainers
   h. Heat exchangers
   i. Meters

4. Pull space for coils and heat exchanger tube bundles needs to be defined and shown on plans and equipment elevation views. Isolation valves need to be located outside the coil pull space to allow for removal without draining down the entire system.

3.5 PROTECTION OF WORK

A. Provide protection against dust migration, rain, wind, storms, frost, or heat, so as to maintain all work, materials, apparatus and fixtures free from injury or damage.

B. At end of each day’s work, cover all new work likely to be damaged.

C. Do not interrupt the integrity of the building security overnight.

D. Refer to Division 01 for additional requirements.

E. All pipe ends, valves and equipment left unconnected shall be capped, plugged or otherwise properly protected to prevent damage and the intrusion of foreign matter.

F. Any equipment or piping systems found to have been damaged or contaminated above "MILL" or "SHOP" conditions shall be replaced or cleaned to the Owner’s Representative satisfaction.

G. Provide initial water seal fill for all waste P-traps or similar traps.
3.6 PROTECTION OF POTABLE WATER SYSTEMS
A. All temporary water connections shall be made with an approved back flow preventer.
B. All hose bibs shall have as a minimum, a vacuum breaker, to prevent back flow.
C. Direct connections to hydronic systems shall only be made through a reduced pressure back flow preventer.

3.7 OBJECTIONABLE NOISE AND VIBRATION
A. Mechanical equipment and piping system shall operate without objectionable noise and vibration, as determined by the judgment of the Owner’s Representative.
B. If objectionable noise and vibration should be produced, make necessary changes or additions required to produce satisfactory result without additional cost to the Owner.

3.8 CLOSING-IN OF UN-INSPECTED WORK
A. Do not allow or cause any work to be covered up or enclosed until inspected, tested and approved.
B. Should any work be enclosed or covered up before such inspection and test, Contractor shall, at his/her own expense, uncover work and after it has been inspected, tested and approved, make repairs with such materials as necessary to restore his/her work and that of other Divisions to original and proper condition.

3.9 CLEANING
A. After installation is complete, clean all systems as indicated below.
B. Piping and Equipment To Be Insulated: Clean exterior thoroughly to remove rust, plaster, cement and dirt before insulation is applied.
C. Piping and Equipment Remain Un-insulated: Clean exterior thoroughly to remove rust, plaster, cement, dirt and other foreign substances.
D. Piping and Equipment To Be Painted: Clean exterior to be exposed in completed structure. Remove rust, plaster, cement and dirt by wire brushing. Remove grease, oil and other foreign materials by wiping with clean rags and suitable solvents.
E. During Progress of Work: Carefully clean up the premises and keep all portions of the building free of debris.
F. Chrome Or Nickel Plated Work: Thoroughly polish.

3.10 DAMAGE RESPONSIBILITY
A. Contractor shall be responsible for damage to the grounds, buildings or equipment and the loss of refrigerants, fuels or gases, caused by leaks or breaks in pipes for equipment furnished or installed under this Division.

3.11 PRELIMINARY OPERATION
A. The Owner’s Representative reserves the right to operate portions of the mechanical system on a preliminary basis without voiding the guarantee or relieving the Contractor of his/her responsibilities.
3.12 OPERATIONAL TESTS

A. Before operational tests are performed, demonstrate to the Owner’s Representative that systems and components are complete and fully charged with operating fluid and lubricants. Systems shall be operable and capable of maintaining continuous uninterrupted operation during the operating and demonstration period.

B. After systems have been completely installed, connections made, and tests completed, operate the systems continuously for a period of five working days during the hours of a normal working day.

C. Rotating equipment shall be in dynamic balance and alignment.

D. Tests required in various sections herein shall be completed.

E. Notify the Owner’s Representative, in writing, two weeks in advance of this operational period.

F. This operational test may be concurrent with instruction of the Owner’s operating personnel.

3.13 COMPLIANCE TESTS

A. Conduct tests for individual components, such as chiller, boiler, cooling tower, air handling unit, etc. of all portions of the installation as may be required by the various Sections of this Division to comply with the Contract Documents. Tests shall be made in the presence of the Owner’s Representative. Costs of tests shall be borne by the Contractor. Contractor shall provide all instruments, equipment, labor and materials to complete the tests. These tests may be required at any time between the installation of the work and the end of the warranty period. Should these tests expose any defective materials, poor workmanship or variance with requirements of Contract Documents, Contractor shall make any changes necessary and remedy any defects at no cost to the Owner.

END OF SECTION
SECTION 220513
COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer’s factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION
A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

PART 2 PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS
A. Comply with requirements in this Section except when stricter requirements are specified in plumbing equipment schedules or Sections.
B. Comply with NEMA MG 1 unless otherwise indicated.
C. All motors controlled by variable speed controllers shall be equipped with a shaft grounding ring.

2.2 MOTOR CHARACTERISTICS
A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS
A. Description: NEMA MG 1, Design B, medium induction motor.
B. Efficiency: Premium efficient, as defined in NEMA MG 1.
C. Service Factor: 1.15.
   1. For motors with 2:1 speed ratio, consequent pole, single winding.
   2. For motors with other than 2:1 speed ratio, separate winding for each speed.
D. Multispeed Motors: Separate winding for each speed.
F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
G. Temperature Rise: Match insulation rating.
H. Insulation: Class F.
I. Code Letter Designation:
   1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
   2. Motors Smaller than 15 HP: Manufacturer’s standard starting characteristic.
J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.
K. Shaft grounding ring: Provide circumferential conduct micro fiber shaft grounding ring.

2.4 ADDITIONAL REQUIREMENTS FOR POLYPHASE MOTORS
A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   5. Shaft grounding ring: Provide circumferential conduct micro fiber shaft grounding ring.
C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS
A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
   1. Permanent-split capacitor.
   2. Split phase.
   3. Capacitor start, inductor run.
   4. Capacitor start, capacitor run.
B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
C. Bearings: Pre-lubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
D. Motors 1/20 HP and Smaller: Shaded-pole type.
E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 EXECUTION

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
1. Sleeves.
2. Stack-sleeve fittings.
3. Sleeve-seal systems.
4. Sleeve-seal fittings.
5. Grout.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.0 SLEEVES
A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral water stop unless otherwise indicated.
B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

2.1 SLEEVE-SEAL SYSTEMS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Advance Products & Systems, Inc.
2. CALPICO, Inc.
3. Metraflex Company (The).
4. Pipeline Seal and Insulator, Inc.
5. Proco Products, Inc.
B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Stainless steel.
3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.
2.2 SLEEVE-SEAL FITTINGS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Holdrite.
B. Description: Manufactured plastic, sleeve-type, water stop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber water stop collar with center opening to match piping OD.

2.3 GROUT
B. Characteristics: Non-shrink; recommended for interior and exterior applications.
C. Design Mix: 5000-psi, 28-day compressive strength.
D. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.1 SLEEVE INSTALLATION
A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
   1. Sleeves are not required for core-drilled holes in walls.
C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
   1. Cut sleeves to length for mounting flush with both surfaces.
      a. Exception: Extend sleeves installed in floors of mechanical equipment areas, pipe chases, or other wet areas 2 inches above finished floor level.
   2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in "Joint Sealants."
E. Fire-BARRIER Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire stop materials. Comply with requirements for fire stopping specified in "Penetration Firestopping."

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION
A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position water stop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

3.4 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Concrete Walls above Grade:
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.

2. Exterior Concrete Walls below Grade:
   a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

3. Concrete Slabs-on-Grade:
   a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

4. Concrete Slabs above Grade:
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.

5. Interior Partitions:
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.

END OF SECTION
SECTION 220518
ESCUTCHEONS FOR PLUMBING PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Escutcheons.
      2. Floor plates.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.1 ESCUTCHEONS
   A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and setscrew
      fastener One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish
      and spring-clip fasteners.
   B. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
   C. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed
      hinge and setscrew.
   D. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed
      hinge and setscrew.
   E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet hinge,
      and spring-clip fasteners.

2.2 FLOOR PLATES
   A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
   B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 EXECUTION

3.1 INSTALLATION
   A. Install escutcheons for exposed piping penetrations of walls, ceilings, and finished floors.
   B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that
      completely covers opening.
      1. Escutcheons for New Piping:
         a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.

c. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.

d. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.

e. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.

2. Escutcheons for Existing Piping in Renovated Areas:
   a. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.
   b. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated finish.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
   1. New Piping: One-piece, floor-plate type.
   2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION
SECTION 220519
METERS AND GAGES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 SUMMARY
A. Section Includes:
   1. Light-activated thermometers.
   2. Thermowells.
   3. Dial-type pressure gages.
   4. Gage attachments.
B. Related Sections:

1.2 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.3 INFORMATIONAL SUBMITTALS
A. Product Certificates: For each type of meter and gage, from manufacturer.

1.4 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 PRODUCTS

2.1 LIGHT-ACTIVATED THERMOMETERS
A. Direct-Mounted, Light-Activated Thermometers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Ashcroft
      b. Marshaltown
      c. Taylor
      d. Trerice, H. O. Company
      e. Weiss Instruments, Incorporated
   2. Case: Plastic 9-inch nominal size unless otherwise indicated.
   3. Scale(s): Degrees F and degrees C.
   6. Stem: Aluminum and of length to suit installation.
      a. Design for Thermowell Installation: Bare stem.
   8. Accuracy: Plus or minus 1 degree F.

2.2 THERMOWELLS
A. Thermowells:
   2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CRES or CSA.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: [Mixture of graphite and glycerin] <Insert material>.

2.3 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Ashcroft
      b. Marshaltown
      c. Taylor
      d. Trerice, H. O. Company
      e. Weiss Instruments, Incorporated
   3. Case Open-front, pressure relief type(s); cast aluminum or drawn steel; 3-1/2-inch dimension nominal diameter.
   4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
   5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
   6. Movement: Mechanical, with link to pressure element and connection to pointer.
   7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
   10. Ring: Metal.
   11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAGE ATTACHMENTS

A. Valves: Brass ball NPS 1/4, ASME B1.20.1 pipe threads.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.
B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
C. Install thermowells with extension on insulated piping.
D. Fill thermowells with heat-transfer medium.
E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
F. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

G. Install valve and snubber in piping for each pressure gage for fluids.

H. Install thermometers in the following locations:
   1. Domestic hot water service connection to the new addition / theater.
   2. Outlet of each recirculation pump.

I. Install pressure gages in the following locations:
   1. Building water service entrance into building.
   2. Suction and discharge of each domestic water pump.

3.2 CONNECTIONS
   A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.3 ADJUSTING
   A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE
   A. Thermometers at domestic hot water service connection to the addition shall be the following:
      1. Direct-mounted, light-activated type.
   B. Thermometers at inlet and outlet of each domestic water heater shall be the following:
      1. Direct-mounted, light-activated type.
   C. Thermometers at inlets and outlets of each domestic water heat exchanger shall be the following:
      1. Direct-mounted, light-activated type.
   D. Thermometers at inlet and outlet of each domestic hot-water storage tank shall be the following:
      1. Direct-mounted, light-activated type.
   E. Thermometers at outlet of each recirculation pump shall be the following:
      1. Direct-mounted, light-activated type.
   F. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE
   A. Scale Range: 0 degrees F. to 140 degrees F.

3.6 PRESSURE-GAGE SCHEDULE
   A. Pressure gages at discharge of each water service into building shall be one of the following:
      1. Open-front, pressure relief type, direct-mounted, metal case.
   B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be one of the following:
      1. Open-front, pressure relief type, direct-mounted, metal case
   C. Pressure gages at suction and discharge of each domestic water pump shall be one of the following:
      1. Open-front, pressure relief type, direct-mounted, metal case.
3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Water Service Piping: 0 to 160 psi.

END OF SECTION
SECTION 220523
BALL VALVES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Bronze ball valves.
   2. Chainwheels

1.3 DEFINITIONS
A. CWP: Cold working pressure.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of valve indicated.
   1. Certification that products comply with NSF 61 Annex G.

1.5 DELIVERY, STORAGE, AND HANDLING
A. Prepare valves for shipping as follows:
   1. Protect internal parts against rust and corrosion.
   2. Protect threads, flange faces, grooves, and weld ends.

B. Use the following precautions during storage:
   1. Maintain valve end protection.
   2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use hand-wheels or stems as lifting or rigging points.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES
A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:
   1. ASME B1.20.1 for threads for threaded end valves.
   2. ASME B16.1 for flanges on iron valves.
   3. ASME B16.5 for flanges on steel valves.
   4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
   6. ASME B31.9 for building services piping valves.

B. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

C. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

D. Valve Sizes: Same as upstream piping unless otherwise indicated.

E. Valve Actuator Types:
   1. Gear Actuator: For quarter-turn valves NPS 4 and larger.
   2. Handlever: For quarter-turn valves smaller than NPS 4.

F. Valves in Insulated Piping:
   1. Include 2-inch stem extensions.
   2. Extended operating handles of nonthermal-conductive material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
   3. Memory stops that are fully adjustable after insulation is applied.

2.2 BRONZE BALL VALVES

A. Bronze Ball Valves, Two-Piece with Full Port, and Bronze or Brass Trim:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Apollo Valves; Conbraco Industries, Inc. (www.apollovalves.com)
      b. Crane; Crane Energy Flow Solutions (www.cranecpe.com)
      c. FNW; Ferguson Enterprises, Inc. (www.fnw.com)
      d. Hammond Valve (www.hammondvalve.com)
      e. Lance Valves (lancevalves.com)
      f. Milwaukee Valve Company. (www.milwaukeevalve.com)
      g. NIBCO Incorporated (www.nibco.com)
      h. Watts; a Watts Water Technologies Company (www.watts.com)
      i. Zurn Industries, LLC (www.zurn.com)
   2. Description:
      b. CWP Rating: 600 psig.
      c. Body Design: Two piece.
      d. Body Material: Bronze.
      e. Ends: Threaded or soldered.
      f. Seats: PTFE.
      g. Stem: Bronze.
      h. Stem Extension: 1.25-inches
      i. Ball: Chrome-plated brass.
      j. Port: Full.

2.3 CHAINWHEELS

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Babbitt Steam Specialty Co. (www.babbittsteam.com)
   b. Roto Hammer Industries. (www.rotohammerinc.com)
   c. Trumbull Industries. (www.trumbull.com)

B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to handwheels.
PART 3 EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install chains on operators for ball valves more than 144 inches above floor except in shop areas. Extend chains to 12 inches above ceiling plane / lighting plane.

F. Install valve tags. Comply with requirements in Division 22 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.

B. Select valves with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.4 LOW-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE (150 PSIG OR LESS)

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze ball valves, two-piece with full port and bronze or brass trim.
3.5 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:
   1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
   2. Bronze ball valves, two-piece with full port and bronze or brass trim.

B. Pipe NPS 2-1/2 and Larger:
   1. Steel Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
   2. Steel ball valves, Class 150 with full port.

END OF SECTION
SECTION 220523
BUTTERFLY VALVES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Iron, single-flange butterfly valves.
      2. Iron, grooved-end butterfly valves.
      3. Chainwheels.

1.3 DEFINITIONS
   A. CWP: Cold working pressure.
   B. EPDM: Ethylene propylene-diene terpolymer rubber.
   C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of valve.
      1. Certification that products comply with NSF 61 Annex G.

1.5 DELIVERY, STORAGE, AND HANDLING
   A. Prepare valves for shipping as follows:
      1. Protect internal parts against rust and corrosion.
      2. Protect threads, flange faces, grooves, and weld ends.
      3. Set butterfly valves closed or slightly open.
   B. Use the following precautions during storage:
      1. Maintain valve end protection.
      2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
   C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use hand-wheels or stems as lifting or rigging points.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES
   A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

   B. ASME Compliance:
      1. ASME B16.1 for flanges on iron valves.
      2. ASME B16.5 for flanges on steel valves.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B31.9 for building service piping valves.

C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
F. Valve Sizes: Same as upstream piping unless otherwise indicated.
G. Valve Actuator Types:
   1. Gear Actuator: For valves NPS 8 and larger.
   3. Chainwheel: Device for attachment to gear, handlever, or stem; of size and with chain for mounting height, according to "Valve Installation" Article.
H. Valves in Insulated Piping: With 2-inch stem extensions.

2.2 IRON, SINGLE-FLANGE BUTTERFLY VALVES
A. Iron, Single-Flange Butterfly Valves with Aluminum-Bronze Disc:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ABZ Valve and Controls (www.f-e-t.com)
      b. Apollo Valves; Conbraco Industries, Inc. (www.apollovalves.com)
      c. Cooper Cameron Valves (www.c-a-m.com)
      d. DeZurik (www.dezurik.com)
      e. Flo Fab, Inc. (www.flofab.com)
      f. FNW; Ferguson Enterprises, Inc. (www.fnw.com)
      g. Hammond Valve (www.hammondvalve.com)
      h. Jenkins Valves; Crane Energy Flow Solutions. (www.cranecpe.com)
      i. KITZ Corporation (www.kitz.com)
      j. Legend Valve & Fitting, Inc. (www.legendvalve.com)
      k. Milwaukee Valve Company (www.milwaukeevalve.com)
      l. NIBCO, Inc. (www.nibco.com)
      m. Norriseal (www.norrisale.com)
      n. Red-white Valve Corporation (www.redwhitevalvecorp.com)
      o. Spence Strainers International (www.ssiequipment.com)
      p. Stockman; Crane Energy Flow Solutions (www.cranecpe.com)
      q. Watts; a Watts Water Technologies Company (www.watts.com)
   2. Description:
      a. Standard: MSS SP-67, Type I.
      b. CWP Rating: 200 psig.
      c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
      d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
      e. Seat: EPDM.
      f. Stem: One- or two-piece stainless steel.
      g. Disc: Aluminum bronze.

2.3 DUCTILE-IRON, GROOVED-END BUTTERFLY VALVES
A. Ductile Iron, Grooved-End Butterfly Valves, 175 CWP:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Kennedy Valve Company; a division of McWane, Inc. (www.kennedyvalve.com)
   b. Shurjoint Piping Products (www.shurjoint.com)
   c. Tyco Fire Products LP (tyco-fire.com)
   d. Victaulic Company, (www.victaulic.com)
   e. Zurn Industries, LLC (www.zurn.com)

2. Description:
   a. Standard: MSS SP-67, Type I.
   b. CWP Rating: 175 psig.
   c. Body Material: Coated, ductile iron.
   e. Disc: Coated, ductile iron.
   f. Seal: EPDM.

2.4 CHAINWHEELS

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Babbitt Steam Specialty Co. (www.babbittsteam.com)
   b. Roto Hammer Industries. (www.rotohammerinc.com)
   c. Trumbull Industries. (www.trumbull.com)

   A. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to handwheels.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine mating flange faces for damage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

D. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install chainwheels on operators for butterfly valves NPS 4 and larger and more than 144 inches above floor except in shop areas. Extend chains to 12 inches above ceiling plane / lighting plane.

F. Install valve tags. Comply with requirements in Division 22 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
3.3 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

A. Pipe NPS 2-1/2 and Larger:
   2. Ductile-Iron, Grooved-End Butterfly Valves: 175 CWP.

END OF SECTION
SECTION 220523
CHECK VALVES FOR PLUMBING PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Bronze swing check valves.
      2. Iron swing check valves.

1.3 DEFINITIONS
   A. CWP: Cold working pressure.
   B. EPDM: Ethylene propylene-diene terpolymer rubber.
   C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of valve.
      1. Certification that products comply with NSF 61 Annex G.

1.5 DELIVERY, STORAGE, AND HANDLING
   A. Prepare valves for shipping as follows:
      1. Protect internal parts against rust and corrosion.
      2. Protect threads, flange faces, grooves, and weld ends.
      3. Set check valves in either closed or open position.
   B. Use the following precautions during storage:
      1. Maintain valve end protection.
      2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
   C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES
   A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
   B. ASME Compliance:
      1. ASME B1.20.1 for threads for threaded end valves.
      2. ASME B16.1 for flanges on iron valves.
      3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B16.18 for solder joint.
5. ASME B31.9 for building services piping valves.

C. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.

E. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

F. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

G. Valve Sizes: Same as upstream piping unless otherwise indicated.

H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE SWING CHECK VALVES

A. Bronze Swing Check Valves and Bronze Disc, Class 125:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Valve, Inc. (www.americanvalve.com)
      b. Apollo Valves; Conbraco Industries, Inc. (www.apollovalve.com)
      c. Crane; Crane Energy Flow Solutions (www.cranecpe.com)
      d. Hammond Valve. (www.hammondvalve.com)
      e. Kitz Corporation. (www.kitz.com)
      f. Milwaukee Valve Company. (www.milwaukeevalve.com)
      g. NIBCO Incorporated. (www.nibco.com)
      h. Powell Valves. (www.powellvalves.com)
      i. Red-White Valve Corporation. (www.redwhitevalvecorp.com)
      j. Stockham; Crane Energy Flow Solutions (www.cranecpe.com)
      k. Watts; a Watts Water Technology Company (www.watts.com)

   2. Description:
      a. Standard: MSS SP-80, Type 3.
      b. CWP Rating: 200 psig.
      c. Body Design: Horizontal flow.
      e. Ends: Threaded or soldered. See valve schedule articles.
      f. Disc: Bronze.

2.3 IRON SWING CHECK VALVES

A. Iron Swing Check Valves with Metal Seats, Class 125:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Apollo Valves; Conbraco Industries, Inc. (www.apollovalve.com)
      b. Crane; Crane Energy Flow Solutions (www.cranecpe.com)
      c. FNW; Ferguson Enterprises, Inc. (www.fnw.com)
      d. Hammond Valve. (www.hammondvalve.com)
      e. Jenkins Valves; Crane Energy Flow Solutions (www.cranecpe.com)
      f. Kitz Corporation. (www.kitz.com)
      g. Legend Valve & Fitting, Inc. (www.legendvalve.com)
      h. Macon Group (The) (www.macongroup.com)
      i. Milwaukee Valve Company. (www.milwaukeevalve.com)
      j. NIBCO Incorporated. (www.nibco.com)
2. Description:
   a. Standard: MSS SP-71, Type I.
   b. CWP Rating: 200 psig.
   c. Body Design: Clear or full waterway.
   d. Body Material: ASTM A 126, gray iron with bolted bonnet.
   e. Ends: Flanged or threaded. See valve schedule articles.
   f. Trim: Bronze.
   g. Gasket: Asbestos free.

2.4 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

A. Iron Swing Check Valves with Lever- and Spring-Closure Control, Class 125:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Crane; Crane Energy Flow Solutions (www.cranecpe.com)
      b. Hammond Valve. (www.hammondvalve.com)
      c. Jenkins Valves; Crane Energy Flow Solutions (www.cranecpe.com)
      d. Milwaukee Valve Company. (www.milwaukeevalve.com)
      e. NIBCO Incorporated. (www.nibco.com)
      f. Stockham; Crane Energy Flow Solutions (www.cranecpe.com)
      g. Watts; a Watts Water Technology Company (www.watts.com)
   2. Description:
      a. Standard: MSS SP-71, Type I.
      b. CWP Rating: 200 psig.
      c. Body Design: Clear or full waterway.
      d. Body Material: ASTM A 126, gray iron with bolted bonnet.
      e. Ends: Flanged or threaded. See valve schedule articles.
      f. Trim: Bronze.
      g. Gasket: Asbestos free.
      h. Closure Control: Factory-installed, exterior lever and spring.

2.5 IRON, GROOVED-END SWING CHECK VALVES

A. Iron, Grooved-End Swing Check Valves, 300CWP:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Anvil International (www anvilintl.com)
      b. Shurjoint Piping Products (www.shurjoint.com)
      c. Tyco Fire Products LP (tyco-fire.com)
      d. Victaulic Company (www.victaulic.com)
   2. Description:
      a. CWP Rating: 300 psig.
      c. Seal: EPDM.
      d. Disc: Spring-operated, ductile iron or stainless steel.
PART 3 EXECUTION

3.1 EXAMINATION
A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
C. Examine threads on valve and mating pipe for form and cleanliness.
D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION
A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
B. Locate valves for easy access and provide separate support where necessary.
C. Install valves in horizontal piping with stem at or above center of pipe.
D. Install valves in position to allow full stem movement.
E. Install check valves for proper direction of flow and as follows:
   1. Swing Check Valves: In horizontal position with hinge pin level.
F. Lift Check Valves: With stem upright and plumb. Install valve tags. Comply with requirements in Division 22 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

3.3 ADJUSTING
A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS
A. If valve applications are not indicated, use the following:
   1. Pump-Discharge Check Valves:
      a. NPS 2 and Smaller: Bronze swing check valves with bronze or nonmetallic disc.
      b. NPS 2-1/2 and Larger for Domestic Water: Iron swing check valves with lever and weight or spring.
B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
C. End Connections:
   1. For Copper Tubing, NPS 2 and Smaller: Threaded or soldered.
   2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged or threaded.
   3. For Copper Tubing, NPS 5 and Larger: Flanged.
   4. For Steel Piping, NPS 2 and Smaller: Threaded.
   5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged or threaded.
   6. For Steel Piping, NPS 5 and Larger: Flanged.
   7. For Grooved-End Piping: Grooved.
3.5 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller: Bronze swing check valves, Class 125, bronze disc with soldered or threaded end connections.

B. Pipe NPS 2-1/2 and Larger:
   1. Iron swing check valves, Class 125 metal seats with threaded or flanged end connections.

END OF SECTION
SECTION 220529
HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Metal pipe hangers and supports.
   2. Trapeze pipe hangers.
   3. Fiberglass pipe hangers.
   4. Metal framing systems.
   5. Fiberglass strut systems.
   6. Thermal-hanger shield inserts.
   7. Fastener systems.
   8. Pipe stands.
   9. Pipe positioning systems.
  10. Equipment supports.

B. Related Sections:
   1. Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
   2. Section 220516 "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.
   3. Section 220548 "Noise and Vibration Controls for Plumbing Piping and Equipment" for vibration isolation devices.

1.3 DEFINITIONS
A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS
A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.5 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

B. Shop Drawings: Signed and sealed by a qualified professional engineer, if required by the local Authorities Having Jurisdiction. Show fabrication and installation details and include calculations for the following; include Product Data for components:
   1. Trapeze pipe hangers.
   2. Metal framing systems.
   3. Fiberglass strut systems.
   4. Pipe stands.
   5. Equipment supports.
C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Detail fabrication and assembly of trapeze hangers.
   2. Design Calculations: Calculate requirements for designing trapeze hangers.

1.6 INFORMATIONAL SUBMITTALS
A. Welding certificates.

1.7 QUALITY ASSURANCE
A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS
A. Carbon-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   2. Galvanized Metallic Coatings: Pre-galvanized or hot dipped.
   3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
   4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
B. Copper Pipe Hangers:
   1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.

2.2 TRAPEZE PIPE HANGERS
A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS
A. MFMA Manufacturer Metal Framing Systems:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit.
      b. Cooper B-Line, Inc.
      c. Flex-Strut Inc.
      d. GS Metals Corp.
      e. Thomas & Betts Corporation.
      f. Unistrut Corporation; Tyco International, Ltd.
      g. Wesanco, Inc.
2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
4. Channels: Continuous slotted steel channel within turned lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Metallic Coating: Hot dipped galvanized

2.4 THERMAL-HANGER SHIELD INSERTS
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Carpenter & Paterson, Inc.
4. ERICO International Corporation.
6. PHS Industries, Inc.
7. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
8. Piping Technology & Products, Inc.
9. Rilco Manufacturing Co., Inc.
10. Value Engineered Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS
A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened Portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

B. Mechanical-Expansion Anchors: Insert-wedge-type, stainless-steel anchors, for use in hardened Portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE POSITIONING SYSTEMS
A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.7 EQUIPMENT SUPPORTS
A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.
2.8 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and non-metallic grout; suitable for interior and exterior applications.

2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

E. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer’s operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer’s written instructions.

F. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.

G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

N. Insulated Piping:
1. Attach clamps and spacers to piping.
   a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
   b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
   c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
   a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
   a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
   a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
   b. NPS 4: 12 inches long and 0.06 inch thick.
   c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
   d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
   e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS
A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS
A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.
3.4 ADJUSTING
A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.5 PAINTING
A. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099600 "High-Performance Coatings."
B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE
A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
E. Use carbon-steel pipe hangers and supports or metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
F. Use stainless-steel pipe hangers and stainless-steel attachments for hostile environment applications.
G. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
H. Use padded hangers for piping that is subject to scratching.
I. Use thermal-hanger shield inserts for insulated piping and tubing.
J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated, stationary pipes NPS 1/2 to NPS 30.
   2. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
   3. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated, stationary pipes NPS 3/8 to NPS 3.
   4. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
   5. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
   6. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
   7. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
   8. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
9. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
   2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
   2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
   3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
   4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
   5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
   2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
   3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
   4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
   5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
   6. C-Clamps (MSS Type 23): For structural shapes.
   7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
   8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
   9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
      a. Light (MSS Type 31): 750 lb.
      b. Medium (MSS Type 32): 1500 lb.
      c. Heavy (MSS Type 33): 3000 lb.
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.

3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

O. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

P. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

Q. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

R. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION
PART 1 GENERAL

1.1 SECTION INCLUDES

A. Isolation of vibrations induced by Plumbing Systems from spaces for which Noise Criteria have been established in Division 1, including vibration isolators, equipment bases, and flexible connections.

1.2 SUMMARY

A. Mount rotating and reciprocating plumbing equipment and piping on vibration isolators as noted in the Contract Documents. Select, install and adjust isolators to prevent the transmission of objectionable vibration and noise to the building structure.

1.3 RELATED WORK

A. Perform vibration isolation work in this Contract, including work described in other Divisions, to meet the product and execution requirements of this Section. Related work includes:

1. Division 1 – General Requirements
2. Division 1 – General Acoustic Requirements
3. Division 3 – Concrete
4. Division 4 – Masonry
5. Division 5 – Metals
6. Division 14 – Conveying Equipment
7. Division 22 – Plumbing
8. Division 23 – Heating, Ventilating and Air Condition
9. Division 23 – Noise and Vibration Control for HVAC Systems
10. Division 26 – Electrical
11. Division 26 – Noise and Vibration Control for Electrical Systems

1.4 QUALITY ASSURANCE

A. Provide all vibration isolators and equipment bases for Division 22, 23 and 26 work from product line of a single manufacturer, unless otherwise accepted by the Acoustics Consultant.

B. Select isolators to provide uniform deflections within acceptable tolerances when supporting the equipment approved for this project. Coordinate as required with the equipment manufacturers to accomplish this.

C. Provide engineering, isolator selection, site supervision, and inspection by manufacturer’s personnel who shall perform these services directly. Alert the Engineer and Acoustics Consultant of isolator selections that may result in resonances with the equipment and structural systems they are intended to isolate. Replace isolators that upon installation are found to resonate with the supported equipment.

D. Provide complete isolation systems that include all elements recommended by the manufacturer for compliance with project requirements and applicable codes, ordinances, and regulations. Include all incidental products and materials required for a complete installation even if not explicitly described in the Construction Documents.
E. Installation & Verification:
   1. Install vibration isolation systems using skilled workers trained and licensed, as applicable, by the manufacturer for installations of the types used on this project.
   2. Upon completion of the Work, provide final inspection by the manufacturer's representative and submit to the Architect and Engineer a written report authored by the manufacturer's representative certifying the correctness of installation and compliance with the approved submittal data. Include tabulation of the static deflection expected under design and operating loads in comparison with the actual static deflection measured in the completed installations.

1.5 STANDARDS

1.6 ENGINEERING
A. The Construction Documents are indicative of isolation requirements. Provide complete engineering services for all components of isolation systems used in this project.

1.7 SUBMITTALS
A. Submit manufacturer's data, shop drawings, and product performance certifications in accordance with Division 1.
B. Manufacturer's Data: Submit technical product data confirming that products comply with specified requirements:
   1. Illustrations and descriptions of components including, but not limited to isolators, equipment bases, anchors, and accessories.
   2. Operation and maintenance instructions.
C. Shop Drawings
   1. Details of isolation systems, including plan and section drawings indicating isolator and flexible connection locations and types, isolator and connector schedules, details for resilient penetrations, and installation details.
   2. Isolator location drawings will be based on contractor's shop drawings rather than engineer's drawings whenever possible. If shop drawings are not used, the contractor will be required to make field-modifications, including but not limited to replacement and/or relocation of isolators, based on final field conditions at no cost to the owner.
   3. Indicate substrate construction required of other subcontractors.
   4. An initial submittal "For Type Only" is acceptable to confirm the scope of the isolators on the project if the necessary shop drawings by others (i.e. ductwork or equipment) are not yet available to provide final isolator sizing at the time of the initial submission. In this case a follow-up submittal will be required indicating precise isolator sizing and location as noted elsewhere in this section.
D. Samples: provide a sample of each type of isolator assembly used in the project. It is not necessary to submit samples of each spring capacity and pad hardness.
E. Supervision plan for manufacturer's representative in the field during installation of vibration isolation systems.
F. General Requirements for Vibration Isolation Mounts and Hangers: Provide catalog cut sheets, shop drawings, and other documents as necessary to describe the installation and its components. Include the following information:

1. Calculations:
   a. Submit manufacturer’s engineer’s calculations of loads, deflections, and natural frequencies for record only.

2. Color code legend for spring and elastomer capacities.

3. Certifications:
   a. Certify that elastomeric pads meet the requirements of AASHTO Highway Bridge Specification.

4. Springs Summary, for each spring-based isolator:
   a. Equipment name and number
   b. Operating Weight of Equipment
   c. Lowest reciprocating or rotating speed
   d. Isolator type
   e. Weight supported by isolator
   f. Scheduled deflection
   g. Proposed deflection under operating load
   h. Natural Frequency
   i. Spring free height
   j. Spring operating height
   k. Spring solid height at coil bind
   l. Spring diameter

5. Elastomeric Pads, for each elastomer-based isolator:
   a. Equipment name and number
   b. Operating Weight of Equipment
   c. Isolator type
   d. Weight supported by isolator
   e. Pad bearing area
   f. Pad free height
   g. Pad operating height
   h. Scheduled deflection
   i. Proposed deflection under operating load
   j. Percent deflection
   k. Natural Frequency
   l. Hardness and compliance with AASHTO Bridge Bearing Neoprene quality standard

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers listed below have demonstrated an ability to comply with specifications for vibration isolation products similar to those required for this project. However, specific products made by the listed manufacturers do not all comply with the requirements of this specification. Subject to the requirement for a single manufacturer and the restrictions regarding unacceptable types of isolators, the products of the following manufacturers are acceptable sources for this project:

1. Mason Industries, Inc. (Mason), Hauppauge, New York
2. Kinetics Noise Control (Kinetics), Dublin, Ohio
3. Vibration Mountings and Controls Group (VMC Group), Houston, Texas
4. CDM Novitec (CDM), Evanston, IL
5. E.A.R., Indianapolis (EAR), Indiana
6. Thybar Corporation (Thybar), Addison, IL
7. Carlisle Hardcast (Carlisle), Wylie, TX

2.2 SPRING REQUIREMENTS

A. Provide steel springs with static deflections equal to or greater than those shown on the schedule at the end of this section. Submittals based on rated deflections will be rejected.

B. Size springs to provide not less than 50 percent additional travel to solid, coil-bind condition beyond the deflection under operating load.

C. Size springs so that diameter is not less than 80 percent of the height of the spring at operating load.

D. Provide springs that do not permanently deflect after loading to a solid, coil-bind condition.

E. Do not weld springs to other components of the isolator assembly unless specifically noted in the Submittals and accepted by the Acoustics Consultant.

F. Color code springs to allow positive identification after installation. Match color coding to the color code legend provided with the submittals.

2.3 ELASTOMER REQUIREMENTS

A. Provide elastomeric elements with static deflections equal to or greater than those shown on the Construction Documents. Submittals based on rated deflections will be rejected.

B. Provide neoprene elements with a maximum hardness of 40 durometer, Shore A rating, where possible, but in no case exceeding 50 durometer. Where deflections called out in the construction documents exceed those required to achieve the specified natural frequencies, the greater deflection will govern.

C. Meet AASHTO Highway Bridge Specifications for all neoprene products installed in irretrievable locations and as required elsewhere in the Construction Documents.

2.4 CORROSION RESISTANCE

A. Treat isolators and associated hardware for resistance to corrosion to the following requirements:

B. Interior exposure:

1. Steel isolator components: PVC coating or phosphate treatment with finish coat of industrial grade enamel paint.
2. Structural steel bases and associated components: Cleaned of welding slag, primed with zinc chromate primer (steel) or metal etching primer (aluminum); industrial grade enamel finish coat.
3. Nuts, bolts, and other fasteners: zinc electroplate with etching primer and enamel paint finish coat.

C. Exterior exposure:

1. Steel components: PVC coating; or hot-dipped or electroplated zinc with neoprene or bitumastic finish coat.
2. Aluminum components: etched and painted with industrial grade enamel paint.
3. Nuts, bolts, and other fasteners: zinc electroplate with etching primer and enamel paint finish coat.
2.5 ACCEPTABLE PRODUCTS

A. Equipment Bases & Rails

1. Type B-1 Bases – Steel Bases
   a. Provide rigid steel frames that will not twist, deform, deflect, or crack in any manner that would affect the operation of the isolated equipment or the performance of the isolators. Size steel bases to support equipment housings, motors, and associated pipe and duct elbows, electrical control elements, and any other related components requiring resilient support because of its location on the equipment side of the flexible connections to distribution ductwork and piping. Supply steel frame under this specifications section.
   b. Provide bases with minimum depth of 6 inches. Increase depth as required to achieve required rigidity with a minimum depth of one tenth of the longest dimension of the base. Space isolators not more than ten times the steel depth apart. Provide a minimum of 2 inches clearance between floor or housekeeping pad and underside of steel base. Use height-saving brackets if required to maintain equipment clearances.
   c. Acceptable products:
      1) Mason WF
      2) Kinetics SFB or SBB
      3) VMC Group WFB

2. Type B-2 Bases – Steel Rails
   a. Provide structural steel sections sized to prevent deflection and distortion that would affect operation of equipment and performance of isolators. Include end-mounting brackets for attachment of isolators.
   b. Provide a minimum of 2 inches clearance between underside of rail and floor or housekeeping slab. Provide not less than 12 inches from underside of rails to roof deck.
   c. Acceptable products:
      1) Thybar TEMS 1, 2, or 3

3. Type B-3 Bases – Concrete Inertia Bases
   a. Provide inertia bases of normal weight concrete (150 pcf) and appropriate steel reinforcing within perimeter frames of steel channel, in a rigid assembly that will not twist, deform, deflect, or crack in any manner that would affect the operation of the isolated equipment or the performance of the isolators. Size inertia bases to support equipment housings, motors, and associated pipe and duct elbows, electrical control elements, and any other related components requiring resilient support because of its location on the equipment side of the flexible connections to distribution ductwork and piping. Supply steel frame under this specifications section. Provide concrete under this section or Division 3.
   b. Provide bases with minimum thickness of 6 inches. Increase thickness as required to achieve required mass according to the Isolation Schedule within this specification. Size perimeter steel depth to be not less than one twelfth of the longest dimension of the base. Space isolators not more than ten times the slab thickness apart. Provide a minimum of 2 inches clearance between floor or housekeeping pad and underside of slab. Use height-saving brackets if required to maintain equipment clearances.
   c. Acceptable products:
      1) Mason types K and BMK
      2) Kinetics Type CIB
      3) VMC Group CPF
B. Floor-Supported Mounts

1. Type M-1 Mounts – Neoprene Pads
   a. 3/4"-inch minimum thickness, waffled or ribbed neoprene.
   b. Where multiple layers are required to provide the specified deflections, interleave pads with 16 gauge steel shim plates. Size pads for deflection equal to 10 to 15 percent of unloaded height and provide pads of sufficient thickness to achieve the specified deflection. Provide load-distributing top plates if required for uniform loading.
   c. Acceptable products for individual pads:
      1) Mason W, SW, and Super W
      2) Kinetics RSP
      3) VMC Group NRC Pads
   d. Acceptable products for neoprene/steel composite pads:
      1) Mason WSW
      2) Kinetics RSP with steel shim
      3) VMC Group NRC Flex Plates

2. Type M-2 Mounts – Neoprene-in-Shear Mounts
   a. Provide double-deflection in-shear isolators with steel bottom plates with pre-drilled bolt holes for attachment to floor or base, a threaded steel insert at the top of the isolator for attaching the equipment, and friction surfaces at both top and bottom. Coat all metal surfaces with neoprene.
   b. Acceptable products:
      1) Mason ND
      2) Kinetics RD
      3) VMC Group RVD

3. Type M-3 Mounts – Open Springs
   a. Provide isolators of the general characteristics described in paragraph 2.2, above, that are freestanding and laterally stable with no housing and that are furnished with level-adjustment bolts for rigid connection to the isolated equipment. Provide with molded neoprene cup or 1/4 inch thick elastomeric friction pad between isolator baseplate and its support. Vary spring size as required for equal deflection under non-uniformly distributed equipment loads.
   b. Acceptable products:
      1) Mason SLF
      2) Kinetics FDS
      3) VMC Group AC

4. Type M-4 Mounts – Restrained Open Springs
   a. Provide built-in adjustable spring restraints for equipment with operating weight greater than weight upon installation to prevent equipment from deflecting (or rising) when the additional weight is applied (or removed in the future). Provide isolators as specified for Type M-4 but with restraint studs and adjustable nuts. Provide ½ inch minimum clearance around the restraint studs. Use bridge-bearing quality neoprene for elastomeric friction pads at chillers and cooling towers.
   b. Acceptable products:
      1) Mason SLR
      2) Kinetics FLS
      3) VMC Group M
      4) VMC Group M
C. Ceiling-Supported Hangers
1. Type H-1 Hangers – Not Used
2. Type H-2 Hangers – Neoprene-in-Shear Hangers
   a. Provide neoprene-in-shear element mounted in a rigid steel hanger box. Mold neoprene element with a rod isolation bushing that prevents rigid contact between hanger rod and housing from vertical through an angular deflection of not less than 30 degrees in any direction.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason HD and WHD
      2) Kinetics RH
      3) VMC Group RH
3. Type H-3 Hangers – Open Spring with Elastomer
   a. Provide neoprene-in-shear element of 1¼-inch minimum thickness and a spring of the general characteristics specified in Paragraph 2.2, above. Seat spring in a molded neoprene cup with steel washer reinforcing. Mold neoprene element with a rod isolation bushing that prevents rigid contact between hanger rod and housing from vertical through an angular deflection of not less than 15 degrees in any direction. Do not directly stack the spring and neoprene isolator elements.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason 30N
      2) Kinetics SRH
      3) VMC Group HSRA
4. Type H-4 Hangers – Pre-Compressed Open Spring with Elastomer
   a. Provide built-in adjustable spring restraints for equipment with operating weight greater than weight upon installation to prevent equipment from deflecting (or rising) when the additional weight is applied (or removed in the future). Provide isolators similar to Type H-3, but pre-compressed with restraint mechanisms that can be released to free the spring when subjected to its operational load. Provide an integral scale to indicate amount of deflection.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason PC30N
      2) Kinetics SRH, with restraints
      3) VMC Group HRSRA

D. Wall-Supported Equipment Mounts
1. Type W-1 Mount – Captive Neoprene
   a. Maximum 50 durometer solid neoprene or neoprene housed in steel casing. Provide threaded insert to receive equipment mounting bolt.
   b. Acceptable products:
      1) Mason BR, RBA, or RCA
      2) Kinetics RQ
      3) VMC Group MB, RSM
E.  Pipe Riser Supports & Guides

1.  Type P-1 Support – Neoprene Pipe Support
   a.  All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch- (13-mm-) thick, 60-durometer neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig (3.45 MPa) and for equal resistance in all directions.
   b.  Acceptable products:
       1)  Mason ADA
       2)  Kinetics KPA
       3)  VMC Group LD

2.  Type P-2 Support – Neoprene Pipe Guide
   a.  Telescopic arrangement of 2 steel tubes separated by a minimum of 1/2-inch- (13-mm-) thick, 60-durometer neoprene. Factory set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction. Shear pin shall be removable and re-insertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.
   b.  Acceptable products:
       1)  Mason VSG
       2)  Kinetics KPG
       3)  VMC Group AG

F.  Flexible Connections

1.  Type FC-1 Connector – Neoprene Twin-Sphere Piping Connectors
   a.  Provide flanged twin-sphere or threaded single-sphere isolators with Kevlar cord and peroxide-cured EPDM body with steel rings embedded in flanges to prevent pull-out. Connectors must accept elongation, compression, axial, and transverse motion. Select materials to suit system temperature, pressure, and fluid type. Do not use control rods or cables to limit extension of the isolator.
   b.  Acceptable products:
       1)  Twin-sphere connectors:
           (a)  Mason types SFDEJ, SFDCR
           (b)  Kinetics Type FTC
           (c)  VMC Group 2600
       2)  Single-sphere connectors (only acceptable for pipe sizes where twin-sphere connectors are not available, see Schedule):
           (a)  Mason types SFEJ, SFU
           (b)  Kinetics Type FC
           (c)  VMC Group 2800

2.  Type FC-2 Connector – Flexible Braided Stainless Steel Hose
   a.  Provide carbon steel flanges for pipes greater than 3 inches diameter. Male nipples are acceptable for pipe diameters smaller than 3 inches.
   b.  Acceptable products:
       1)  Mason FFL and MN
       2)  Kinetics Kinflex BFMC
       3)  VMC Group SS

3.  Type FC-4 Connector – Below-Grade Penetration Seals
   a.  Modular EPDM, nitrile, or silicone seal, as appropriate for specific field conditions, with accompanying sleeves, caps, and accessories. Provide fire- and high-temperature rated components where required by project conditions and applicable codes.
   b.  Acceptable products:
       1)  PSI-Thunderline, Link-Seal
G. Resilient Wrap for Small-Diameter Pipe

1. Type SD-1 Wrap – Closed Cell Rubber Foam
   a. Provide minimum 3/4-inch thick closed cell rubber or neoprene wrap in sheets to be cut to size, or in pre-molded form to slip over the pipe/conduit without gaps.
      1) Armacell Armafix or Armaflex
      2) K-Flex Isul-Lock DS
      3) Aeroflex Aerofix or Aerocell
   b. Where closed cell rubber foam insulation is provided for thermal purposes, this insulation may serve as SD-1 wrap without provision of additional wrap for acoustic purposes.

3.1 ISOLATION ACCESSORIES

A. Elastomeric Isolators for Mounting Bolts

1. Provide neoprene grommets, bushings, and washers for all bolts used to secure isolators to floors and housekeeping slabs and for all snubbers. Size bolt holes and washers to accommodate grommets, sleeves, and bushings and to preclude contact between rigid components that would cause bridging between isolated elements and the building structure. Baseplates for neoprene pads may be rigidly bolted to the floor or housekeeping slab if the bolts secure the baseplates only and do not continue through the neoprene to meet any other rigid material. Do not exceed 40 durometer, Shore A hardness.

2. Acceptable products:
   a. Mason HG, HLB and HLW
   b. E.A.R. Isodamp and C-1000
   c. VMC Group RB

B. Thrust Restraints & Sway Braces

1. Provide spring isolators with the same characteristics and deflection as the isolator springs. Preset thrust restraint isolators in the factory and fine tune in the field to allow for a maximum of 1/4-inch deflection between at-rest and maximum-thrust conditions. Furnish with appropriate brackets to attach to equipment and the structure. Install restraints on centerline of thrust and symmetrically on both sides of the equipment.

2. Acceptable products:
   a. Mason WB
   b. Kinetics HSR
      1) VMC Group TRK

PART 3 EXECUTION

3.2 GENERAL

A. Before commencing installation examine the substrate and surrounding conditions to ensure that there is nothing to prevent proper and timely execution of the installation. Beginning work specified in this Section indicates acceptance of the substrate and surrounding conditions.

1. Install isolation systems in strict compliance with manufacturer’s recommendations and engineering, and submittal data. Make no rigid connections to structure that would compromise the performance of the isolation systems.

2. Resiliently mount or hang plumbing equipment and piping on structural components indicated on the Drawings and as specified in this section.
3. For all isolated equipment, make connections of piping and conduit using flexible connections specified in this section. Make no connections to isolated equipment in a manner that would compromise the performance of the isolation systems. Refer to Section 260548 – Noise and Vibration Control for Electrical Systems for requirements related to isolation of electrical equipment and connections.

4. Establish isolator locations for ease of installation, adjustment, and inspection as well as specified performance.

5. Replace isolators found to resonate with building structure, at no additional cost to the Owner.

3.3 GENERAL REQUIREMENTS FOR MOUNTS AND HANGERS

A. Align mounts and hangers squarely above or below the equipment mounting holes to avoid introducing lateral loads and deflection.

B. Deflection requirements:
   1. Verify installed isolators have deflections equal to or greater than deflections specified on the submittals.
   2. Where multiple deflections apply to a single isolator (where a single isolator supports multiple isolated elements), the largest deflection governs.
   3. Vary the size and/or hardness of isolators as required to yield equal deflection for all isolators supporting a single piece of equipment or length of pipe. Consult manufacturer for direction when specified isolators do not yield required deflection and correct non-compliant isolators at no cost to the Owner.

C. Support equipment and piping independently. Do not hang from other isolated equipment, ductwork, piping, or conduit.

D. Maintain 2 inches of clearance between isolated elements and walls, ceilings, and other non-isolated building components.

E. Isolate drain piping attached to vibration isolated equipment from rigid components of the building.

F. Limit stops must be inactive and out of contact with the isolator during equipment operation.

G. Adjust leveling bolts and hanger rod lengths so that equipment is level and in alignment with connecting ductwork and piping.

H. Restrained isolators may be substituted for unrestrained isolators at installer’s option to simplify installation.

I. Isolate hanger rods passing through barrier ceilings with elastomeric sleeves or grommets or treat as resilient penetrations in accordance with the details and Section 079219 – Acoustical Sealants. Unless noted otherwise, locate equipment, piping, and ductwork below barrier ceilings.

3.4 EQUIPMENT MOUNTED ON FLOORS, HOUSEKEEPING PADS, AND STRUCTURAL ELEMENTS

A. For equipment with bases, locate isolators on the sides of the base that are parallel to the equipment shaft.

B. At housekeeping slabs and pedestals, position isolators with entire bearing plate on slab or pedestal. Do not cantilever baseplates beyond edges of slabs and pedestals. Coordinate isolator locations with housekeeping slabs so that outboard height-saving mounts do not contact the housekeeping slabs. Notify contractor of work by others requiring remediation for proper installation of isolators.
C. For floor-mounted equipment, provide a minimum of 2 inches operating clearance from the lowest point of the base to the floor or housekeeping slab. Verify that 2 inches of unobstructed clearance has been provided in the final installation under operating loads. Correct nonconforming conditions at no cost to the Owner. Provide height-saving brackets as required to maintain required equipment clearances.

D. For concrete inertia bases, set steel perimeter on bond breaker material, provide steel reinforcing in compliance with Manufacturer's recommendations, and pour normal weight concrete to the full depth of the perimeter steel. If no reinforcing is specified, provide ½-inch reinforcing bar at 6-inch centers each way, and weld reinforcing to the perimeter steel 1½ inches above the bottom of the steel. Provide required anchor bolts held in position by steel templates during the pour.

3.5 ISOLATION SCHEDULE – EQUIPMENT

A. Provide isolation mounts and hangers for Plumbing equipment as follows (see also notes after table). Static deflections indicated in the table below are minimum values.

<table>
<thead>
<tr>
<th>Equipment Type</th>
<th>On Grade Installation</th>
<th>Above Grade Installation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Base</td>
<td>Isolator</td>
</tr>
<tr>
<td>Base-Mounted Pumps &amp; Compressors</td>
<td></td>
<td></td>

<tr>
<td>Passive devices connected to rotating equipment (Expansion Tanks, Heat Exchangers, Deaerators, etc.)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Schedule Notes:
   a. The static deflection listed in the Schedule is a minimum acceptable value for installed deflection. Manufacturers may need to submit isolators with a higher "nominal" deflection in order to achieve the deflection listed above.
   b. For equipment specified with B-1 bases, it is acceptable to install the isolators directly under the equipment without the use of the base if the equipment is able to be supported by point loads. This must be confirmed by the equipment manufacturer.
   c. Where inertia bases (type B-3) are indicated, they will be sized as follows:

<table>
<thead>
<tr>
<th>Motor Size</th>
<th>Minimum Thickness of Inertia Base</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 to 20 horsepower</td>
<td>6 inches</td>

d. Quick reference for isolator types:
   1) Base B-1: Steel frame
   2) Base B-2: Steel rails
   3) Base B-3: Concrete inertia base
   4) Mount M-1: Neoprene pad
   5) Mount M-2: Neoprene-in-shear
   6) Mount M-3: Open spring
   7) Mount M-4: Restrained open spring
   8) Mount M-5: Pneumatic isolator
   9) Hanger H-1: Not used
   10) Hanger H-2: Neoprene-in-shear
   11) Hanger H-3: Open spring
   e. Hanger H-4: Pre-compressed open spring

### 3.6 ISOLATION SCHEDULE – PIPING, AND CONDUIT

A. Provide isolation mounts and hangers for piping and conduit as follows:

<table>
<thead>
<tr>
<th>Device</th>
<th>Flr/Clg</th>
<th>Wall</th>
<th>Defl.</th>
<th>Flr/Clg</th>
<th>Wall</th>
<th>Defl.</th>

<tr>
<td>Conduit (see section 260548)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Schedule Notes:
   a. The distance away from equipment (or crossing an AIJ/AIC) is measured along the run of the piping, or conduit.
   b. Multiple pipe/conduit may be installed on the same trapeze hanger, with isolators supporting the trapeze. In the case of such ganged installations, the highest-deflection isolator should be used for the trapeze isolators.
   c. Where wall support indicates an “H-#” type isolator, this requires that the pipe/conduit be hung of a bracket that is wall mounted, with isolators within the length of a threaded rod supporting it.
   d. Where piping is provided with jacketed fiberglass insulation wrap, this insulation can fulfill the requirements of SD-1 wrap without provision of additional wrap for acoustic purposes.
   e. All isolation for piping and conduit includes elements such as:
1) Pipe valves
2) Electrical pull boxes and junction boxes

f. Piping connected to fan coil units, fan-powered boxes, and reheat coils does not require isolation mounts for 30 ft beyond the equipment (see requirements for flexible connectors below).

g. Pipe supports do not require additional isolation if they are supported off the same isolated B-1 or B-3 base as the equipment to which they are connected.

2. Position isolators as high as possible in the hanger rod or strap assembly but not in direct contact with the building structure without manufacturer's written authorization. Provide 1 inch minimum clearance between isolator housing and structure above. Provide side clearance for hangers to allow full 360-degree rotation about the rod axis without contacting any object.

3. Drain pipes for air handling units shall be supported only from the isolated air handling unit frame. The condensate shall drip into a funnel that is supported from the floor or floor drain. A gap of at least 2 inches shall be maintained between the end of the air handling unit drain pipe and funnel or floor drain.

3.7 ISOLATION SCHEDULE – FLEXIBLE CONNECTIONS

A. Provide flexible connections for all piping and conduit:

<table>
<thead>
<tr>
<th>Device</th>
<th>Size</th>
<th>Connector</th>
</tr>
</thead>
<tbody>
<tr>
<td>Piping Connected to Reciprocating Equipment</td>
<td></td>
<td></td>

<td>All</td>
<td>FC-4</td>
</tr>
</tbody>
</table>

1. Schedule Notes
   a. FC-3 flexible duct connections are to be configured as follows:
      1) Crimp fabric into duct flanges and seal airtight.
      2) Provide minimum separation of 6 inches between duct and equipment.
      3) Provide 1½ inch minimum slack or as required to accommodate full range of equipment and duct movement when subjected to maximum operating and lateral loads simultaneously without becoming taut.
      4) Utilize thrust restraints as required to limit horizontal movement so that flexible connections do not become taut under any combination of operational loads.
5) Mount flexible duct connections as close to equipment housings as practical but in no case beyond the first duct hanger.

3.8 ISOLATION SCHEDULE – ACCESSORIES

A. Provide isolation accessories for all isolated plumbing equipment as follows:
   1. All bolted connections between equipment and non-isolated structure, or at other locations recommended by the isolation manufacturer, must be made using Elastomeric Isolators for Mounting Bolts.

3.9 TESTING, EVALUATION AND ACCEPTANCE PROCEDURES

A. Upon completion of the installation, the vibration isolation manufacturer will send a representative to the site to inspect and approve the installation. The manufacturer’s field report must certify that all of the isolators have been installed in accordance with the manufacturer’s instructions and will include the type and measured static deflection of all spring isolators.

B. If it is found that the construction fails the acoustic test measurements or performance requirements identified in the Contract Documents, make changes necessary to meet the requirements identified in the Contract Documents and be responsible for the costs associated with performing all additional acoustical tests to verify the acoustic performance of the construction. Costs for additional acoustical testing shall include consulting fees at per hour rates in effect at the time of testing along with related expenses including, but not limited to, travel expenses and test equipment use charges.

END OF SECTION
SECTION 22 05 49
NOISE CONTROL ACCESSORIES FOR PLUMBING SYSTEMS

PART 1 GENERAL

1.1 SCOPE
A. This section includes
   1. Lagging wrap

1.2 RELATED SECTIONS
A. Division 1 – General Acoustical Requirements
B. Division 7 – Sealants

1.3 REFERENCES
A. American Society for Testing and Materials:
   3. E413-87 – Classification for Rating Sound Insulation

1.4 QUALIFICATIONS
A. Installer: Company specializing in performing the work of this Section with minimum 3 years documented experience.

1.5 REGULATORY REQUIREMENTS
A. Piping accessory components and installation to conform to applicable building codes

1.6 PERFORMANCE REQUIREMENTS
A. Noise control accessories creating a barrier between noise producing elements and occupied building spaces to meet minimum performance as indicated in the Contract Documents, when tested in accordance with ASTM E90-97 for classification under ASTM E413-87.

1.7 SUBMITTALS
A. Submit manufacturer’s data, shop drawings, and product performance certifications in accordance with specified requirements.
B. Submit technical product data indicating acoustic performance as follows:
   1. Lagging Wrap
      a. Transmission Loss in octave bands from 125Hz to 4000Hz.

1.8 DELIVERY, STORAGE, AND HANDLING
A. Deliver products to site under provisions of Division 1.
B. Store and protect products under provisions of Division 1.
PART 2 PRODUCTS

2.1 LAGGING WRAP

A. Wrap:
   1. Lagging wrap to be comprised of mass loaded vinyl of 1 psf surface weight with fiberglass mesh reinforcing.
      a. Minimum operating temperature range of -40 degrees Fahrenheit to 180 degrees Fahrenheit
      b. Resistant to water, oil, fungi, weak acids and alkalis.
      c. Minimum transmission loss values (dB):

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>STC</th>
</tr>
</thead>
<tbody>
<tr>

<td>26</td>
</tr>
</tbody>
</table>

2. Acceptable products include:
   a. KNM-100RB by Kinetics Noise Control
   b. UN-10R by Unger
   c. AudioSeal AB10R by Acoustical Solutions

B. Insulation
   1. Glass fiber, mineral fiber or polyurethane foam insulation with density of 1.5pcf to 3pcf (24 to 48 kg/m^3).
   2. Insulation type to meet required thermal and fire ratings as indicated in the drawings.
   3. Thickness of insulation varies depending on the size of the element being wrapped in lagging material, refer to Part 3 of this specification.

C. Joint tape:
   1. Tape as recommended by lagging wrap manufacturer to seal joints and edges as required.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Beginning of installation means installer accepts existing conditions.

3.2 INSTALLATION

A. Lagging Wrap
   1. Follow all manufacturer’s instructions for material handling and installation.
   2. For piping with risk of condensation within the external insulation, spray-apply vapor absorber to the outside of the element before installing insulation or utilize polyethylene sheet as a vapor barrier.
   3. Insulation around the outside of the element.
      a. Use insulation of the following thickness where the following does not interfere with thermal or fire ratings:
         1) Use 1 inch thick insulation for piping of 3 inch and smaller diameter and ductwork of 144 square inches or less in free area.
         2) Use 2 inch insulation for larger piping and ductwork.
b. Use insulation compatible with required fire ratings and thermal insulation as defined in the drawings and elsewhere in the specifications, when this differs from the thickness described above.

4. Wrap each element individually and continuously on all sides with a minimum overlap of 2 inches at seams.
   a. Tape all seams airtight using tape recommended by the lagging manufacturer. Do not use duct tape for this purpose.
   b. If clearance above the element to the underside of the structural deck does not permit installation of the lagging between the element and the deck, request direction from the Acoustics Consultant.
   c. If the lagging material needs to be field-cut to fit, dress the edges of the material according to manufacturer’s instructions prior to installation.

5. Install a second layer of the lagging where indicated in the drawings. Stagger seams not less than 12 inches from those of the first layer and tape as described above.

6. All layers of lagging must extend for the full length of piping scheduled for lagging, including elbows, branches, and terminal devices such as roof drains. Tape and seal the ends of the installation to perimeter walls and slabs.

7. Cut in access flaps for valves, access panels, and other items requiring access. Tape edges of access flaps and indelibly label each flap for its purpose.

### 3.3 PERFORMANCE TESTING

A. Notify the Engineer when the installation is substantially complete so that performance testing may be scheduled in conjunction with final punch list review.

B. Performance testing to be performed by others.

**END OF SECTION**
SECTION 220553
IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Equipment labels.
   2. Warning signs and labels.
   3. Pipe labels.
   4. Valve tags.
   5. Warning tags.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated.
B. Samples: For color, letter style, and graphic representation required for each identification material and device.
C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
D. Ceiling tag identification for review and confirmation with Architect and owner.
E. Valve numbering scheme.
F. Valve Schedules: For each piping system to include in maintenance manuals.

1.4 COORDINATION
A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 PRODUCTS

2.1 EQUIPMENT LABELS
A. Plastic Labels for Equipment:
   1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
   2. Letter Color: Blue.
   4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
   5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

7. Fasteners: Stainless-steel rivets or self-tapping screws.

8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
   1. Review and confirm labels with owner prior to marking and installation.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Letter Color: Black.

C. Background Color: Yellow.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions. Review and confirm warning signs and labels with owner prior to marking and installation.

2.3 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pre-tensioned Pipe Labels: Pre-coiled, semi rigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
   1. Review and confirm pipe labels with owner prior to marking and installation.
   2. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
   3. Lettering Size: At least 1-1/2 inches high.
2.4 VALVE TAGS
A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
   1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
   2. Fasteners: Brass wire-link or beaded chain; or S-hook.
B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
   1. Review and confirm valve schedules with owner prior to marking and installation.
   2. Valve-tag schedule shall be included in operation and maintenance data.

2.5 WARNING TAGS
A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
   1. Size: Approximately 4 by 7 inches.
   2. Fasteners: Brass grommet and wire.
   3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."

PART 3 EXECUTION
3.1 PREPARATION
A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION
A. Install or permanently fasten labels on each major item of mechanical equipment.
B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION
A. Piping Color-Coding: Painting of piping is specified in Division 09 Section.
B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near each valve and control device.
   2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. At access doors, manholes, and similar access points that permit view of concealed piping.
   5. Near major equipment items and other points of origination and termination.
   6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
C. Pipe Label Color Schedule:
   1. Low-Pressure, Compressed-Air Piping:
      a. Background Color: Blue.
   2. Domestic Water Piping:
      a. Background Color: Green.
   3. Sanitary Waste and Storm Drainage Piping:
      a. Background Color: Green.

3.4 VALVE-TAG INSTALLATION
A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
   1. Valve-Tag Size and Shape:
      c. Compressed Air: 1-1/2 inches round.
   2. Valve-Tag Color:
      b. Hot Water: Green.
      c. Compressed Air: Blue.
   3. Letter Color:
      c. Compressed Air: White.

3.5 WARNING-TAG INSTALLATION
A. Write required message on, and attach warning tags to, equipment and other items where required.

3.6 CEILING-TAG INSTALLATION
A. For equipment and branch isolation valves located above suspended ceilings, label ceiling grid (not the tile) at key access points with a clear adhesive label with bold black lettering (font size 16) with equipment, etc., ID information.

END OF SECTION
SECTION 220719
PLUMBING PIPING INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes insulating the following plumbing piping services:
   1. Domestic cold-water piping.
   2. Domestic hot-water piping.
   3. Domestic recirculating hot-water piping.
   4. Exterior compressed air piping.
   5. Sanitary waste piping exposed to freezing conditions.
   6. Storm-water piping exposed to freezing conditions.
   7. Roof drains and rainwater leaders.
   8. Supplies and drains for handicap-accessible lavatories and sinks.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).

1.4 QUALITY ASSURANCE
A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
B. Comply with the following applicable standards and other requirements specified for miscellaneous components:

1.5 DELIVERY, STORAGE, AND HANDLING
A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION
A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 220529 “Hangers and Supports for Plumbing Piping and Equipment.”
B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING
A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 PRODUCTS

2.1 INSULATION MATERIALS

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Mineral-Fiber, Preformed Pipe Insulation:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Fibrex Insulations Inc.; Coreplus 1200.
      b. Johns Manville; Micro-Lok.
      c. Knauf Insulation; 1000-Degree Pipe Insulation.
      d. Manson Insulation Inc.; Alley-K.
      e. Owens Corning; Fiberglas Pipe Insulation.
   2. Type I, 850 Deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 MASS LOADED VINYL LAGGING
A. Composite limp vinyl sheet consisting of two layers of vinyl over a 1.4 psf barrier layer with a minimum STC rating of 28 and a 1" fiberglass batting decoupler layer.

B. Products
   1. Kinetics Noise Control KNM-100ALQ
   2. Acoustical Surfaces B-10 QFA-9
   3. Barymat BM-1C
   4. Engineer Approved Equal

C. Product Characteristics
   1. The barrier shall be constructed of a 0.12" thick mass loaded, limp vinyl sheet bonded to a thin layer of reinforced aluminum foil on one side.
      a. Nominal density of barrier: 1.6 psf
b. Minimum STC rating: 30

c. Minimum Flammability rating per Federal Test Standard No. 191-5903:
   1) 0.0 seconds flame-out
   2) 0.2" char length

d. NFPA 90A Flame Spread / Smoke Developed characteristics:
   1) Flame Spread: 10
   2) Smoke Developed: 40

e. Minimum thermal conductivity barrier layer:
   1) K value of 0.29

f. Rated service temperature range
   1) –40 degrees F to 220 degrees F

2. Decoupler layer
   a. 1" fibrous glass batting
   b. Non-woven porous scrim-coated glass cloth
   c. Quilting
      1) 4" diamond stitch to encapsulate glass fibers

3. Seams
   a. 6" overlap tab for field joint sealing
      1) 54" nominal barrier width
      2) 48" nominal decoupler width

2.3 INSULATING CEMENTS

   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Ramco Insulation, Inc.; Super-Stik.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Ramco Insulation, Inc.; Thermokote V.

   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.

2.4 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products: Subject to compliance with requirements, provide one of the following:
      b. Eagle Bridges - Marathon Industries; 225.
      d. Mon-Eco Industries, Inc.; 22-25.
   2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   1. Products: Subject to compliance with requirements, provide one of the following:
      b. Eagle Bridges - Marathon Industries; 225.
      d. Mon-Eco Industries, Inc.; 22-25.
   2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services’ “Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

D. PVC Jacket Adhesive: Compatible with PVC jacket.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 739, Dow Silicone.
      d. Speedline Corporation; Polyc VP Adhesive.
   2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services’ “Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

2.5 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
   1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
   1. Products: Subject to compliance with requirements, provide one of the following:
      b. Vimasco Corporation; 749.
   2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
   3. Service Temperature Range: Minus 20 to plus 180 deg F.
   4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.

2.6 SEALANTS

A. Joint Sealants:
   1. Products: Subject to compliance with requirements, provide one of the following:
      b. Eagle Bridges - Marathon Industries; 405.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealants shall comply with the testing and product requirements of the California Department of Health Services’ “Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
   1. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.

2.8 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Johns Manville; Zeston.
      c. Proto Corporation; LoSmoke.
      d. Speedline Corporation; SmokeSafe.
   2. Adhesive: As recommended by jacket material manufacturer.
   4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

2.9 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. ABI, Ideal Tape Division; 428 AWF ASJ.
      b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
      c. Compac Corporation; 104 and 105.
      d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
   2. Width: 3 inches.
   3. Thickness: 11.5 mils.
   5. Elongation: 2 percent.
   6. Tensile Strength: 40 lbf/inch in width.
   7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
2.10 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Engineered Brass Company.
      b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.
      c. McGuire Manufacturing.
      d. Plumberex.
      e. Truebro; a brand of IPS Corporation.
      f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
   2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

B. Protective Shielding Piping Enclosures:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Truebro; a brand of IPS Corporation.
      b. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
   2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
   1. Verify that systems to be insulated have been tested and are free of defects.
   2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.
H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
      a. For below-ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above-ambient services, do not install insulation to the following:
   1. Vibration-control devices.
   2. Testing agency labels and stamps.
   3. Nameplates and data plates.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
   1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
   1. Seal penetrations with flashing sealant.
   2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
   4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
   1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistant joint sealers.

F. Insulation Installation at Floor Penetrations:
   1. Pipe: Install insulation continuously through floor penetrations.
   2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 “Penetration Firestopping.”

3.5 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. But each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word “union.” Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
   1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
   2. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.

3.6 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
   3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
   4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
   4. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.7 MASS LOADED VINYL LAGGING INSTALLATION
A. Cut sound control lagging material to length, wrapped around the outside of the pipe or duct to which the material is to be applied
B. Fasten with mechanical fasteners or bands
C. Tapes or adhesives for FSK jacketing shall be used in addition to the mechanical fasteners
D. Install per manufacturer design guidelines.

3.8 FIELD-APPLIED JACKET INSTALLATION
A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer’s recommended adhesive.
   1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.9 FINISHES
A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 “Exterior Painting” and Section 099123 “Interior Painting.”
B. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
C. Do not field paint aluminum or stainless-steel jackets.

3.10 PIPING INSULATION SCHEDULE, GENERAL
A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor’s option.
B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
   1. Drainage piping located in crawl spaces.
   2. Underground piping.
   3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.11 INDOOR PIPING INSULATION SCHEDULE
A. Domestic Cold Water:
1. NPS 1-1/4 and Smaller: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1/2 inch thick.
2. NPS 1-1/2 and Larger: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1 inch thick.

B. Domestic Hot and Recirculated Hot Water:
1. NPS 1-1/2 and Smaller: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1 inch thick.
2. NPS 2 and Larger: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1-1/2 inch thick.

C. Domestic Chilled Water (Potable):
1. All Pipe Sizes: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1 inch thick.

D. Storm-water and Overflow:
1. Insulate roof drain bodies, down comers from roof drain bodies, horizontal piping to the connection at main vertical piping, and 10 feet down the vertical piping from the connection with the following:
a. Mineral-Fiber Pipe Insulation, Type I: 2 inch thick
2. Insulate overflow drain bodies, down comers from overflow roof drain bodies and piping within 10 feet of the overflow roof drains and overflow discharge conductors with the following:
a. Mineral-Fiber Pipe Insulation, Type I: 2 inch thick
3. Any storm and overflow water piping located within the Theater or Dance Studio shall be lagged with mass loaded vinyl or enclosed in a sheet rock lagging enclosure and shall not require insulation.

E. Condensate and Equipment Drain Water below 60 Degrees F:
1. Extend insulation to the connection to main sanitary or storm water piping, and all piping within 10 feet of the drain (including sanitary or storm water main piping).
2. All Pipe Sizes: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1/2 inch thick.

F. Floor Drains and floor sink traps, and Sanitary Drain Piping within 10 Feet of Drain Receiving Condensate and Equipment Drain Water below 60 Degrees F:
1. All Pipe Sizes: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1/2 inch thick.

G. Sump pump discharge: Insulate drain tile, elevator pit, and other clear water waste discharge piping from the pump to the point of connection to another drainage system, or until the pipe discharges to grade.
1. All Pipe Sizes: Insulation shall be the following:
a. Mineral-Fiber Pipe Insulation, Type I: 1 inch thick.

H. Plumbing Piping Where Heat Tracing Is Installed:
1. All Pipe Sizes: Insulation shall be the following:
a. Cellular Glass: 2 inches thick.

3.12 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Compressed Air Piping:
1. All Pipe Sizes: Insulation shall be the following:
a. Cellular Glass: 2 inches thick.
3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE
A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. If more than one material is listed, selection from materials listed is Contractor’s option.
C. Piping, Exposed:
   1. Piping located within 8 feet of the floor; less than 200 degrees F: PVC: 30 mils thick.

3.14 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE
A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. If more than one material is listed, selection from materials listed is Contractor’s option.
C. Piping, Exposed:
   1. Aluminum, Stucco Embossed with Z-Shaped Locking Seam: 0.016 inch

END OF SECTION
SECTION 221116
DOMESTIC WATER PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 ACTION SUBMITTALS
A. Product Data: For transition fittings and dielectric fittings.

1.3 INFORMATIONAL SUBMITTALS
A. System purging and disinfecting activities report.
B. Field quality-control reports.

PART 2 PRODUCTS

2.1 PIPING MATERIALS
A. Comply with requirements in “Piping Schedule” Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
B. Potable-water piping and components shall comply with NSF 14 and NSF 61. Plastic piping components shall be marked with “NSF-pw.”

2.2 COPPER TUBE AND FITTINGS
A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.
B. Soft Copper Tube: ASTM B 88, Type K water tube, annealed temper.
C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
F. Copper Unions:
   1. MSS SP-123.
   4. Solder-joint or threaded ends.

2.3 STAINLESS-STEEL PIPING
A. Potable-water piping and components shall comply with NSF 61.
B. Stainless-Steel Pipe: ASTM A 312/A 312M, Schedule 10
C. Stainless-Steel Pipe Fittings: ASTM A 815/A 815M.
D. Appurtenances for Grooved-End, Stainless-Steel Pipe:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Anvil International.
   b. Grinnell Mechanical Products; Tyco Fire Products LP.
   c. Shurjoint Piping Products.
   d. Victaulic Company.

3. Mechanical Couplings for Grooved-End, Stainless-Steel Pipe:
   a. AWWA C606 for stainless-steel-pipe dimensions.
   b. Stainless-steel housing sections.
   c. Stainless-steel bolts and nuts.
   d. EPDM-rubber gaskets suitable for hot and cold water.
   e. Minimum Pressure Rating:
      1) NPS 8 and Smaller: 600 psig.

2.4 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials:
   1. AWWA C110/A21.10, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
   2. Full-face or ring type unless otherwise indicated.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys.

D. Flux: ASTM B 813, water flushable.

E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

2.5 ENCASEMENT FOR PIPING

A. Standard: ASTM A 674 or AWWA C105/A21.5.

B. Form: Sheet or tube.

C. Color: Black or natural.

2.6 TRANSITION FITTINGS

A. General Requirements:
   1. Same size as pipes to be joined.
   2. Pressure rating at least equal to pipes to be joined.
   3. End connections compatible with pipes to be joined.

B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

C. Sleeve-Type Transition Coupling: AWWA C219.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Cascade Waterworks Manufacturing.
      b. Dresser, Inc.; Piping Specialties Products.
      c. Ford Meter Box Company, Inc. (The).
      d. JCM Industries.
      e. Romac Industries, Inc.
f. Smith-Blair, Inc.; a Sensus company.
g. Viking Johnson.

2.7 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
   b. Central Plastics Company.
   c. Matco-Norca.
   d. Watts; a division of Watts Water Technologies, Inc.
   e. Wilkins; a Zurn company.
3. Factory-fabricated, bolted, companion-flange assembly.
4. Pressure Rating: 125 psig minimum at 180 deg F.
5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

C. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Central Plastics Company.
   d. Pipeline Seal and Insulator, Inc.
2. Non-conducting materials for field assembly of companion flanges.
4. Gasket: Neoprene or Phenolic.
5. Bolt Sleeves: Phenolic or polyethylene.

D. Dielectric Nipples:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Elster Perfection Corporation.
   b. Grinnell Mechanical Products; Tyco Fire Products LP.
   c. Matco-Norca.
   d. Precision Plumbing Products, Inc.
   e. Victaulic Company.
3. Electroplated steel nipple complying with ASTM F 1545.
4. Pressure Rating and Temperature: 300 psig at 225 deg F.
5. End Connections: Male threaded or grooved.

PART 3 EXECUTION

3.1 EARTHWORK

A. Comply with requirements in Division 31 for excavating, trenching, and backfilling.
3.2 PIPING INSTALLATION
A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
B. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Section 221119 "Domestic Water Piping Specialties."
C. Install a set of shutoff valves, hose-end drain valve, strainer, and test tee with valve on each plumbing riser and floor take-offs in accessible location.
D. Install shutoff valves on domestic water piping such that the entire restroom may be shut-off.
E. Install shutoff valve immediately upstream of each dielectric fitting.
F. Install domestic water piping level and plumb.
G. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
H. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
I. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
J. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
K. Install piping to permit valve servicing.
L. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
M. Install piping free of sags and bends.
N. Install fittings for changes in direction and branch connections.
O. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
P. Install pressure gages on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping."
Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION
A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Brazed Joints for Copper Tubing: Comply with CDA’s "Copper Tube Handbook," "Brazed Joints" chapter.

E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA’s "Copper Tube Handbook."

F. Pressure-Sealed Joints for Copper Tubing: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.

G. Joint Construction for Grooved-End Steel Piping: Make joints according to AWWA C606. Roll groove ends of pipe as specified. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.

H. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Joint flanges with gasket and bolts according to ASME B31.9.

I. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.4 TRANSITION FITTING INSTALLATION

A. Install transition couplings at joints of dissimilar piping.

B. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: Plastic-to-metal transition fittings.

3.5 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or nipples.

C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.

D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.6 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for pipe hanger, support products, and installation in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
   1. Vertical Piping: MSS Type 8 or 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
   3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   4. Base of Vertical Piping: MSS Type 52, spring hangers.
B. Support vertical piping and tubing at base and at each floor.

C. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.

D. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
   2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
   3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
   4. NPS 2-1/2: 108 inches with 1/2-inch rod.
   5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.

E. Install supports for vertical copper tubing every 10 feet.

F. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
   6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
   7. NPS 6: 12 feet with 3/4-inch rod.
   8. NPS 8 to NPS 12: 12 feet with 7/8-inch rod.

G. Install supports for vertical steel piping every 15 feet.

H. Install hangers for stainless-steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
   6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
   7. NPS 6: 12 feet with 3/4-inch rod.
   8. NPS 8 to NPS 12: 12 feet with 7/8-inch rod.

I. Install supports for vertical stainless-steel piping every 15 feet.

J. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.

C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.

D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
   1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
   2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
3. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.

4. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.8 IDENTIFICATION

A. Identify system components. Comply with requirements for identification materials and installation in Section 220553 "Identification for Plumbing Piping and Equipment."

B. Label pressure piping with system operating pressure.

3.9 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Piping Inspections:
   a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
   b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
      2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
   c. Re-inspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for re-inspection.
   d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:
   a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
   b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
   c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
   e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
   f. Prepare reports for tests and for corrective action required.

B. Domestic water piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.10 ADJUSTING

A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
   a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
   b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.11 CLEANING
A. Clean and disinfect potable domestic water piping as follows:
   1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
      a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
      b. Fill and isolate system according to either of the following:
         1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
         2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
      c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
      d. Repeat procedures if biological examination shows contamination.
      e. Submit water samples in sterile bottles to authorities having jurisdiction.
B. Clean non-potable domestic water piping as follows:
   1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
      a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
      b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.
C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.
D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.12 PIPING SCHEDULE
A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
B. Flanges and unions may be used for aboveground piping joints NPS 4 and larger, unless otherwise indicated.
C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
D. Aboveground domestic water piping, NPS 3 and smaller, shall be one of the following:
   1. Hard copper tube, ASTM B 88, Type L; cast-or wrought-copper solder-joint fittings; and soldered joints.

E. Aboveground domestic water piping, NPS 4 and larger, shall be the following:
   1. Stainless-steel Schedule 10 pipe, grooved-joint fittings, and grooved joints.
   2. Hard copper tube, ASTM B 88, Type L; cast- or wrought- copper, solder-joint fittings; and brazed joints.

3.13 VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   1. Shutoff Duty: Use full-port ball valves for piping NPS 3 and smaller. Use butterfly, with flanged ends for piping NPS 4 and larger.
   2. Throttling Duty: Use ball valves for piping NPS 3 and smaller. Use butterfly valves with flanged ends for piping NPS 4 and larger.

B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

C. Iron grooved-end valves may be used with grooved-end piping.

END OF SECTION
SECTION 221119
DOMESTIC WATER PIPING SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Vacuum breakers.
      2. Backflow preventers.
      4. Temperature-actuated, water mixing valves.
      5. Strainers.
      6. Outlet boxes.
      8. Hose bibbs.
      9. Wall hydrants.
     10. Wall Faucet.
     11. Drain valves.
     13. Air vents.
     15. Flexible connectors.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product.
   B. Shop Drawings: For domestic water piping specialties.
      1. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
   A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES
   A. Potable-water piping and components shall comply with NSF 61.
2.2 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

2.3 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
      b. Cash Acme; a division of Reliance Worldwide Corporation.
      c. Conbraco Industries, Inc.
      d. FEBCO; a division of Watts Water Technologies, Inc.
      e. Rain Bird Corporation.
      f. Toro Company (The); Irrigation Div.
      g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      h. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   3. Size: NPS 1/4 to NPS 3, as required to match connected piping.
   5. Inlet and Outlet Connections: Threaded.
   6. Finish: Chrome plated.

B. Hose-Connection Vacuum Breakers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Arrowhead Brass Products.
      b. Cash Acme; a division of Reliance Worldwide Corporation.
      c. Conbraco Industries, Inc.
      d. Legend Valve.
      e. MIFAB, Inc.
      f. Prier Products, Inc.
      g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      h. Woodford Manufacturing Company; a division of WCM Industries, Inc.
      i. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
      j. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   5. Finish: Chrome or nickel plated.

C. Pressure Vacuum Breakers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
      b. Conbraco Industries, Inc.
      c. FEBCO; a division of Watts Water Technologies, Inc.
      d. Flomatic Corporation.
      e. Toro Company (The); Irrigation Div.
      f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      g. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   3. Operation: Continuous-pressure applications.
4. Pressure Loss: 5 psig maximum, through middle third of flow range.
5. Size: Refer to Drawings.
6. Design Flow Rate: Refer to Drawings.
7. Selected Unit Flow Range Limits: Refer to Drawings.
8. Pressure Loss at Design Flow Rate: Refer to Drawings.
9. Accessories:
   a. Valves: Ball type, on inlet and outlet.

2.4 BACKFLOW PREVENTERS

A. Intermediate Atmospheric-Vent Backflow Preventers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. FEBCO; a division of Watts Water Technologies, Inc.
      b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   2. Standard: ASSE 1012.
   3. Operation: Continuous-pressure applications.
   4. Size: NPS ¾
   5. Body: Bronze.
   7. Finish: Chrome plated.

B. Reduced-Pressure-Principle Backflow Preventers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. FEBCO; a division of Watts Water Technologies, Inc.
      b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   3. Operation: Continuous-pressure applications.
   4. Pressure Loss: 12 psig maximum, through middle third of flow range.
   5. Size: Refer to Drawings.
   6. Design Flow Rate: Refer to Drawings.
   7. Selected Unit Flow Range Limits: Refer to Drawings.
   8. Pressure Loss at Design Flow Rate: 5 psig for sizes NPS 2 and smaller; 8 psig for NPS 2-1/2 and larger.
   9. Body: Bronze for NPS 2 and smaller; stainless steel for NPS 2-1/2 and larger.
  10. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
  11. Configuration: Designed for horizontal, straight-through flow.
  12. Accessories:
      a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
      b. Valves NPS 2-1/2 and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.

C. Beverage-Dispensing-Equipment Backflow Preventers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Conbraco Industries, Inc.
      b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      c. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   3. Operation: Continuous-pressure applications.

D. Backflow-Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. FEBCO; a division of Watts Water Technologies, Inc.
   c. Flomatic Corporation.
   d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.

2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.5 BALANCING VALVES

A. Copper-Alloy Calibrated Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Flo Fab Inc.
   c. ITT Corporation; Bell & Gossett Div.
   d. NIBCO Inc.
   e. TAC.
   f. TACO Incorporated.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.

2. Type: Ball valve with two readout ports and memory-setting indicator.

4. Size: Same as connected piping, but not larger than NPS 2.

5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

B. Cast-Iron Calibrated Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Flo Fab Inc.
   c. ITT Corporation; Bell & Gossett Div.
   d. NIBCO Inc.
   e. TAC.
   f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.

2. Type: Adjustable with Y-pattern globe valve, two readout ports, and memory-setting indicator.

3. Size: Same as connected piping, but not smaller than NPS 2-1/2.

C. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

2.6 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Lawler Manufacturing Company, Inc.
   c. Leonard Valve Company.
   d. Powers; a division of Watts Water Technologies, Inc.
   e. Symmons Industries, Inc.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
4. Type: Exposed-mounted, thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Tempered-Water Setting: Refer to Schedules.
9. Tempered-Water Design Flow Rate: Refer to Schedules.
10. Selected Valve Flow Rate at 45-psig Pressure Drop: Refer to Schedules.
11. Pressure Drop at Design Flow Rate: Refer to Schedules.
13. Piping Finish: Copper.

B. Individual-Fixture, Water Tempering Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Cash Acme; a division of Reliance Worldwide Corporation.
   b. Conbraco Industries, Inc.
   c. Honeywell International Inc.
   d. Lawler Manufacturing Company, Inc.
   e. Leonard Valve Company.
   f. Powers; a division of Watts Water Technologies, Inc.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   h. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
2. Standard: ASSE 1016, thermostatically controlled, water tempering valve.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Finish: Rough or chrome-plated bronze.
8. Tempered-Water Setting: Refer to Schedules.
9. Tempered-Water Design Flow Rate: Refer to Schedules.

2.7 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:
1. Pressure Rating: 125 psig minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron [with interior lining that complies with AWWA C550 or that is FDA approved, epoxy coated and] for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
   a. Strainers NPS 2 and Smaller: 0.033 inch.
   b. Strainers NPS 2-1/2 to NPS 4: 0.062 inch.
   c. Strainers NPS 5 and Larger: 0.125 inch.

2.8 OUTLET BOXES

A. Icemaker Outlet Boxes:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
b. IPS Corporation.
c. LSP Products Group, Inc.
d. Oatey.
e. Plastic Oddities.
4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
5. Supply Shutoff Fitting: NPS 1/2 gate, globe, or ball valve and NPS 1/2 copper, water tubing.

2.9 HOSE BIBBS

A. Hose Bibbs:
   4. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
   5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
   8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
   10. Finish for Finished Rooms: Chrome or nickel plated.
   11. Operation for Equipment Rooms: Wheel handle or operating key.
   14. Include operating key with each operating-key hose bibb.
   15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

2.10 WALL HYDRANTS

A. Non-freeze Wall Hydrants:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Prier Products, Inc.
      b. Mansfield
   4. Operation: Loose key.
   5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
   6. Inlet: NPS 3/4 or NPS 1.
   7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
   8. Box: Deep, flush mounted with cover.
   12. Operating Keys(s): Two with each wall hydrant.

2.11 WALL FAUCET

A. Surface Mounted Wall Faucet:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Chicago Faucet Company.
2. Standard: ASME A112.21.3M.
3. Type: Non-freeze, concealed-outlet ground hydrant with box.
4. Operation: Loose key.
5. Casing and Operating Rod: Of at least length required for burial of valve below frost line.
8. Drain: Designed with hole to drain into ground when shut off.
11. Operating Key(s): Two with each ground hydrant.

2.12 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:
   2. Pressure Rating: 400-psig minimum CWP.
   4. Body: Copper alloy.
   5. Ball: Chrome-plated brass.
   8. Inlet: Threaded or solder joint.

B. Gate-Valve-Type, Hose-End Drain Valves:
   2. Pressure Rating: Class 125.
   5. Inlet: NPS 3/4 threaded or solder joint.
   6. Outlet: Garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

C. Stop-and-Waste Drain Valves:
   1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
   2. Pressure Rating: 200-psig minimum CWP or Class 125.
   5. Drain: NPS 1/8 side outlet with cap.

2.13 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AMTROL, Inc.
      b. Josam Company.
      c. MIFAB, Inc.
      d. Precision Plumbing Products, Inc.
      e. Sioux Chief Manufacturing Company, Inc.
g. Tyler Pipe; Wade Div.
h. Watts Drainage Products.
i. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.

3. Type: Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.14 AIR VENTS
A. Welded-Construction Automatic Air Vents:
   2. Pressure Rating: 150-psig minimum pressure rating.
   3. Float: Replaceable, corrosion-resistant metal.

2.15 FLEXIBLE CONNECTORS
1. Manufacturers: Subject to compliance with requirements, provide products by one of the follow-
   1. Flex-Hose Co., Inc.
   2. Flexicraft Industries.
   3. Flex Pression, Ltd.
   4. Flex-Weld Incorporated.
   5. Hyspan Precision Products, Inc.
   7. Metraflex, Inc.
   8. Proco Products, Inc.
   9. TOZEN Corporation.
   10. Unaflex.
   11. Universal Metal Hose; a Hyspan company.

B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and
   ends brazed to inner tubing.
   2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
   3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel
   wire-braid covering and ends welded to inner tubing.
   2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
   3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

PART 3 EXECUTION

3.1 INSTALLATION
A. Install backflow preventers in each water supply to mechanical equipment and systems and to
   other equipment and water systems that may be sources of contamination. Comply with authorities
   having jurisdiction.
   1. Locate backflow preventers in same room as connected equipment or system.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.

3. Do not install bypass piping around backflow preventers.

B. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.

C. Install water-control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gages on inlet and outlet.

D. Install balancing valves in locations where they can easily be adjusted.

E. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
   1. Install cabinet-type units recessed in or surface mounted on wall as specified.

F. Install Y-pattern strainers for water on supply side of each control valve, water pressure-reducing valve, solenoid valve, and pump.

G. Install outlet boxes recessed in wall or surface mounted on wall. Install 2-by-4-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."

H. Install hose stations with check stops or shutoff valves on inlets and with thermometer on outlet.
   1. Install cabinet-type units recessed in or surface mounted on wall as specified. Install 2-by-4-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."

I. Install water-hammer arresters in water piping according to PDI-WH 201.

J. Install air vents at high points of water piping. Install drain piping and discharge onto floor drain.

3.2 CONNECTIONS

A. Comply with requirements for ground equipment in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Fire-retardant-treated-wood blocking is specified in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical connections.

3.3 LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
   1. Pressure vacuum breakers.
   2. Intermediate atmospheric-vent backflow preventers.
   3. Reduced-pressure-principle backflow preventers.
   5. Dual-check-valve backflow preventers.
   7. Calibrated balancing valves.
   8. Primary, thermostatic, water mixing valves.
   11. Supply-type, trap-seal primer valves.
B. Before marking and installation, confirm labeling and identification with owner. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Test each pressure vacuum breaker, reduced-pressure-principle backflow preventer, double-check, backflow-prevention assembly, and double-check, detector-assembly backflow preventer according to authorities having jurisdiction and the device's reference standard.

B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.5 ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable flow set points of balancing valves.

C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

END OF SECTION
SECTION 221123
DOMESTIC WATER PUMPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. In-line, sealless centrifugal pumps
   B. Related Sections include the following:
      1. Division 22 Section "Domestic-Water Packaged Booster Pumps" for booster systems.

1.3 DEFINITIONS
   A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.4 SUBMITTALS
   A. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.5 QUALITY ASSURANCE
   A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.6 DELIVERY, STORAGE, AND HANDLING
   A. Retain shipping flange protective covers and protective coatings during storage.
   B. Protect bearings and couplings against damage.
   C. Comply with pump manufacturer's written rigging instructions for handling.

1.7 COORDINATION
   A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 PRODUCTS

2.1 IN-LINE, SEALLESS CENTRIFUGAL PUMPS
   A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
      1. Bell & Gossett Domestic Pump; ITT Corporation. (www.bell-gossett.com)
B. Description: Factory-assembled and -tested, in-line, close-coupled, canned-motor, sealless, overhung-impeller centrifugal pumps.

C. Pump Construction:
   1. Pump and Motor Assembly: Hermetically sealed replaceable-cartridge type with motor and impeller on common shaft and designed for installation with pump and motor shaft horizontal.
   2. Casing: Bronze, with threaded or companion-flange connections.
   4. Motor: Single speed, unless otherwise indicated.

D. Capacities and Characteristics: Refer to equipment schedules

2.2 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 "Common Motor Requirements for Plumbing Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2.3 CONTROLS

A. Refer also to Div. 23 Section “Sequence of Operation for HVAC Controls” for intended operation and BAS interface requirements.

B. Thermostats: Electric; adjustable for control of hot-water circulation pump.
   1. Type: Water-immersion temperature sensor, for installation in piping.
   2. Range: 65 to 200 deg F.
   4. Operation of Pump: On or off.

2.4 ELECTRICAL CONNECTION

A. Refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

3.2 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install in-line, sealless centrifugal pumps with shaft horizontal unless otherwise indicated.

C. Install horizontally mounted, in-line, separately coupled and close-coupled centrifugal pumps with shaft(s) horizontal.

D. Install thermostats in hot-water return piping.
3.3 CONNECTIONS
A. Comply with requirements for piping specified in Division 22 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to pumps to allow service and maintenance.
C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
   1. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Division 22 "General-Duty Valves for Plumbing Piping" and comply with requirements for strainers specified in Division 22 "Domestic Water Piping Specialties."
   2. Install pressure gage and snubber at suction of each pump and pressure gage and snubber at discharge of each pump. Install at integral pressure-gage tappings where provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Division 22 "Meters and Gages for Plumbing Piping."
D. Connect thermostats, to pumps that they control.
E. Interlock pump with building automation system.

3.4 IDENTIFICATION
A. Comply with requirements for identification specified in Division 22 "Identification for Plumbing Piping and Equipment" for identification of pumps.

3.5 STARTUP SERVICE
1. Complete installation and startup checks according to manufacturer's written instructions.
2. Check piping connections for tightness.
3. Clean strainers on suction piping.
4. Set thermostats for automatic starting and stopping operation of pumps.
5. Perform the following startup checks for each pump before starting:
   a. Verify bearing lubrication.
      b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
      c. Verify that pump is rotating in the correct direction.
6. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
7. Start motor.
8. Open discharge valve slowly.
9. Adjust temperature settings on thermostats.
10. Adjust timer settings.

3.6 ADJUSTING
A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
B. Adjust initial temperature set points.
C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION
SECTION 221316
SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Pipe, tube, and fittings.
      2. Specialty pipe fittings.
      3.

1.3 DEFINITIONS
   A. EPDM: Ethylene-propylene-diene terpolymer rubber.
   B. LLDPE: Linear, low-density polyethylene plastic.
   C. NBR: Acrylonitrile-butadiene rubber.
   D. PE: Polyethylene plastic.
   E. PVC: Polyvinyl chloride plastic.
   F. TPE: Thermoplastic elastomer.

1.4 PERFORMANCE REQUIREMENTS
   A. Components and installation shall be capable of withstanding the following minimum working
      pressure unless otherwise indicated:

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.

1.6 INFORMATIONAL SUBMITTALS
   A. Field quality-control reports.

1.7 QUALITY ASSURANCE
   A. Piping materials shall bear label, stamp, or other markings of specified testing agency.
   B. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for
      plastic piping components. Include marking with "NSF-DWV" for plastic drain, waste, and vent
      piping and "NSF-sewer" for plastic sewer piping.
PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 PIPING MATERIALS
A. Comply with requirements in “Piping Schedule” Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS
A. Pipe and Fittings: ASTM A 888 or CISPI 301.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AB&I Foundry
      b. Charlotte Pipe and Foundry
      c. Tyler Pipe; Soil Pipe Division

B. Heavy-Duty, Hubless-Piping Couplings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ANACO-Husky.
      b. Clamp-All Corp.
      c. Dallas Specialty & Manufacturing Company
      d. MIFAB, Incorporated
      e. Mission Rubber Company; a division of MCP Industries, Incorporated
      f. Stant.
      g. Tyler Pipe.
   3. Description: 301 Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, Neoprene sleeve with integral, center pipe stop.
   4. Bands:
      a. NPS 4 inches and less: 4 bands, 80 inch pounds torque.
      b. NPS 5 to NPS 6: 6 bands, 80 inch pounds torque.
      c. NPS 8 and NPS 10: 6 bands, 80 inch pounds torque.

2.4 GALVANIZED-STEEL PIPE AND FITTINGS
A. Galvanized-Steel Pipe: ASTM A 53/A 53M, Type E, Standard Weight class. Include square-cut-grooved or threaded ends matching joining method.

B. Steel Pipe Pressure Fittings:
   1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
   2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

2.5 PVC PIPE AND FITTINGS

A. Solid-Wall Sch 40 PVC Pipe: ASTM D 2665, drain, waste, and vent.
B. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
C. Adhesive Primer: ASTM F 656.
   1. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
D. Solvent Cement: ASTM D 2564.
   1. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Solvent cement shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"

2.6 SPECIALTY PIPE FITTINGS

A. Transition Couplings:
   1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
   2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
   3. Shielded, Non-pressure Transition Couplings:
      a. Manufacturers: Subject to compliance with requirements, [provide products by one of the following:
         1) Cascade Waterworks Manufacturing Company
         2) Mission Rubber Company; a division of MCP Industries, Incorporated
      c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
   4. Pressure Transition Couplings:
      a. Manufacturers: Subject to compliance with requirements, [provide products by one of the following:
         1) Cascade Waterworks Manufacturing Company
         2) Dresser, Incorporated
         3) EBAA Iron, Incorporated
         4) JCM Industries, Incorporated
         5) Romac Industries, Incorporated
         6) Smith-Blair, Incorporated; a Sensus company.
         7) The Ford Meter Box Company, Incorporated
         8) Viking Johnson.
c. Description: Metal, sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
d. Center-Sleeve Material: Manufacturer's standard.
e. Gasket Material: Natural or synthetic rubber.
f. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:
1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Capitol Manufacturing Company.
      2) Central Plastics Company.
      3) Hart Industries International, Incorporated
      4) Jomar International Ltd.
      5) Matco-Norca, Incorporated
      6) McDonald, A. Y. Manufacturing Company
      7) Watts Regulator Company; a division of Watts Water Technologies, Incorporated
      8) Wilkins; a Zurn company.
   b. Description:
      1) Standard: ASSE 1079.
      2) Pressure Rating: 125 psig minimum at 180 deg F
      3) End Connections: Solder-joint copper alloy and threaded ferrous.
3. Dielectric Flanges:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Capitol Manufacturing Company.
      2) Central Plastics Company.
      3) Matco-Norca, Incorporated
      4) Watts Regulator Company; a division of Watts Water Technologies, Incorporated
      5) Wilkins; a Zurn company.
   b. Description:
      1) Standard: ASSE 1079.
      2) Factory-fabricated, bolted, companion-flange assembly.
      3) Pressure Rating: 125 psig minimum at 180 deg F.
      4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

PART 3 - EXECUTION

3.1 EARTH MOVING
A. Comply with requirements for excavating, trenching, and backfilling specified in Division 31 Section "Earth Moving."

3.2 PIPING INSTALLATION
A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
B. Sanitary sewer piping more than 5-feet outside the building is specified in Division 33 Section "Sanitary Sewerage."

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

L. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:
   1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
   2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
   3. Vent Piping: 1/2 percent down toward vertical fixture vent or toward vent stack.

M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   1. Install encasement on underground piping according to ASTM A 674 or AWWA C105/A 21.5.

N. Install steel piping according to applicable plumbing code.

O. 

P. Install underground PVC piping according to ASTM D 2321.

3.3 PLUMBING SPECIALTIES

A. Install backwater valves in sanitary waste gravity-flow piping. Comply with requirements for backwater valves specified in Division 22 Section "Sanitary Waste Piping Specialties."

B. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Division 22 Section "Sanitary Waste Piping Specialties."

C. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Division 22 Section "Sanitary Waste Piping Specialties."
D. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

E. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

F. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

G. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

3.4 JOINT CONSTRUCTION

B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

E. Plastic, Non-pressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

3.5 SPECIALTY PIPE FITTING INSTALLATION

A. Transition Couplings:
   1. Install transition couplings at joints of piping with small differences in OD's.
   2. In Drainage Piping: Shielded, non-pressure transition couplings.

B. Dielectric Fittings:
   1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
   2. Dielectric Fittings for NPS 2 and Smaller: Use dielectric unions.
   3. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.
   4. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.6 VALVE INSTALLATION

A. General valve installation requirements are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves:
   1. Install shutoff valve on each sewage pump discharge.
2. Install full-port ball valve for piping NPS 3 and smaller.
3. Install gate valve for piping NPS 4 and larger.

C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to backflow.
   1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
   2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
   3. Install backwater valves in accessible locations.
   4. Comply with requirements for backwater valve specified in Division 22 Section "Sanitary Waste Piping Specialties."

3.7 HANGER AND SUPPORT INSTALLATION
A. Comply with requirements for pipe hanger and support devices and installation specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
   1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
   2. Install fiberglass pipe hangers for horizontal piping in corrosive environments.
   3. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
   4. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
   5. Vertical Piping: MSS Type 8 or Type 42, clamps.
   6. Install individual, straight, horizontal piping runs:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
   7. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls.
      Support pipe rolls on trapeze.
   8. Base of Vertical Piping: MSS Type 52, spring hangers.
B. Support horizontal piping and tubing within 18 inches of each fitting and coupling.
C. Support vertical piping and tubing at base and at each floor.
D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.
E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
   2. NPS 3: 60 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
   4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.
   5. NPS 10 and NPS 12: 60 inches with 7/8-inch rod.
   6. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.
F. Install supports for vertical cast-iron soil piping every 15 feet.
G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3: 12 feet with 1/2-inch rod.
6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
7. NPS 6 and NPS 8: 12 feet with 3/4-inch rod.
8. NPS 10 and NPS 12: 12 feet with 7/8-inch rod.

H. Install supports for vertical steel piping every 15 feet.
I. Install hangers for stainless-steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 2: 84 inches with 3/8-inch rod.
   2. NPS 3: 96 inches with 1/2-inch rod.
   3. NPS 4: 108 inches with 1/2-inch rod.
   4. NPS 6: 10 feet with 5/8-inch rod.
J. Install supports for vertical stainless-steel piping every 10 feet.
K. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4: 72 inches with 3/8-inch rod.
   2. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
   3. NPS 2-1/2: 108 inches with 1/2-inch rod.
   4. NPS 3 and NPS 5: 10 feet with 1/2-inch rod.
   5. NPS 6: 10 feet with 5/8-inch rod.
   6. NPS 8: 10 feet with 3/4-inch rod.
L. Install supports for vertical copper tubing every 10 feet.
M. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.
N. Bracing: Horizontal cast-iron pipe and fittings NPS 5 and larger shall be braced to prevent horizontal movement. Bracing shall be located at each branch connection and each change of direction.

3.8 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
C. Connect drainage and vent piping to the following:
   1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
   2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
   3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
   4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
   5. Install horizontal backwater valves with cleanout cover flush with floor.
   6. Comply with requirements for backwater valves, cleanouts, and drains specified in Division 22 Section "Sanitary Waste Piping Specialties."
   7. Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 and larger.
D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
E. Make connections according to the following unless otherwise indicated:
   1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
   2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.9 IDENTIFICATION
A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.10 FIELD QUALITY CONTROL
A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
   2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
B. Re-inspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.
C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
   1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
   2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
   4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
   5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
   6. Prepare reports for tests and required corrective action.

3.11 CLEANING AND PROTECTION
A. Clean interior of piping. Remove dirt and debris as work progresses.
B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
C. Place plugs in ends of uncompleted piping at end of day and when work stops.
D. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

3.12 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

B. Aboveground, soil and waste piping NPS 1.5 and smaller shall be the following:
   1. Hubless, cast-iron soil pipe and fittings; heavy duty hubless-piping couplings; and coupled joints.

C. Aboveground, soil and waste piping NPS 2 to NPS 10 shall be the following:
   1. Hubless, cast-iron soil pipe and fittings; heavy duty hubless-piping couplings; and coupled joints.

D. Aboveground, vent piping NPS 1.5 and smaller shall be the following:
   1. Hubless, cast-iron soil pipe and fittings; heavy duty hubless-piping couplings; and coupled joints.

E. Aboveground, vent piping NPS 2 to NPS 10 shall be the following:
   1. Hubless, cast-iron soil pipe and fittings; heavy duty hubless-piping couplings; and coupled joints.

F. Underground, soil, waste, and vent piping NPS 12 and smaller shall be the following:
   1. Solid wall PVC pipe, PVC socket fittings, and solvent-cemented joints.

G. Underground, soil and waste piping NPS 15 and larger shall be the following:
   1. Solid wall PVC pipe; PVC socket fittings; and solvent-cemented joints.

END OF SECTION
SECTION 221319
SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Cleanouts.
   2. Floor drains.
   3. Floor Sinks.
   4. Roof flashing assemblies.
   5. Through-penetration fire stops assemblies.
   7. Flashing materials.
B. Related Requirements:
   1. Division 22 Section "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
   2. Division 22 Section "Plumbing Fixtures" for hair interceptors.
   3. Division 33 Section "Storm Utility Drainage Piping" for storm draining piping and piping specialties outside the building.

1.3 DEFINITIONS
B. FRP: Fiberglass-reinforced plastic.
C. HDPE: High-density polyethylene plastic.
D. PE: Polyethylene plastic.
E. PP: Polypropylene plastic.
F. PVC: Polyvinyl chloride plastic.

1.4 PRODUCT ACTION SUBMITTALS
A. Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories.
B. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate size and location of roof penetrations.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

PART 2 PRODUCTS

2.1 CLEANOUTS

A. Exposed Metal Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   c. Tyler Pipe; Wade Div.
   d. Watts Drainage Products Inc.
   e. Zurn Plumbing Products Group; Specification Drainage Operation.
   f. Josam Company; Blucher-Josam Div.

2. Standard: ASME A112.36.2M for cast iron or ASME A112.3.1 for stainless steel for cleanout test tee.

3. Refer to cleanout schedule on drawings.

B. Metal Floor Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Oatey.
   c. Sioux Chief Manufacturing Company, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products Inc.
   g. Zurn Plumbing Products Group; Light Commercial Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.
   i. Kusel Equipment Co.

2. Standard: ASME A112.36.2M

3. Refer to cleanout schedule on drawings.

C. Cast-Iron Wall Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
e. Watts Drainage Products Inc.
f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M. Include wall access.
4. Refer to cleanout schedule on drawings.

2.2 FLOOR DRAINS
A. Cast-Iron Floor Drains:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Zurn Plumbing Products Group
   2. Standard: ASME A112.6.3.
   3. Refer to floor drain schedule on drawings:

2.3 FLOOR SINKS
A. Cast-Iron Floor Sinks:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Zurn Plumbing Products Group
   2. Standard: ASME A112.6.3.
   3. Refer to floor drain schedule on drawings:

2.4 ROOF FLASHING ASSEMBLIES
A. Roof Flashing Assemblies:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Acorn Engineering Company; Elmdor/Stoneman Div.
      b. Thaler Metal Industries Ltd.
   B. Description: Manufactured assembly made of 6.0-lb/sq. ft., 0.0938-inch-thick, lead flashing collar and skirt extending at least 6 inches from pipe, with galvanized-steel boot reinforcement and counter flashing fitting.
      1. Extended Vent Cap: With field-installed, vandal-proof vent cap.

2.5 THROUGH-PENETRATION FIRESTOP ASSEMBLIES
A. Through-Penetration Fire stop Assemblies:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ProSet Systems Inc.
   2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
   3. Size: Same as connected soil, waste, or vent stack.
   4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
   6. Special Coating: Corrosion resistant on interior of fittings.
2.6 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains:
   1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
   2. Size: Same as connected waste piping with increaser fitting of size indicated.

B. Deep-Seal Traps:
   1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
   2. Size: Same as connected waste piping.
      a. NPS 2: 4-inch minimum water seal.
      b. NPS 2-1/2 and Larger: 5-inch minimum water seal.

C. Floor-Drain, Trap-Seal Primer Fittings:
   1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
   2. Size: Same as floor drain outlet with NPS 1/2 side inlet.

D. Air-Gap Fittings:
   1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
   2. Body: Bronze or cast iron.
   3. Inlet: Opening in top of body.
   4. Outlet: Larger than inlet.
   5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

E. Sleeve Flashing Device:
   1. Description: Manufactured, cast-iron fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 2 inches above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
   2. Size: As required for close fit to riser or stack piping.

F. Stack Flashing Fittings:
   1. Description: Counter-flashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
   2. Size: Same as connected stack vent or vent stack.

G. Vent Caps:
   1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
   2. Size: Same as connected stack vent or vent stack.

H. Frost-Resistant Vent Terminals:
   1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper or galvanized steel.
   2. Design: To provide 1-inch enclosed air space between outside of pipe and inside of flashing collar extension, with counter-flashing.

I. Expansion Joints:
   1. Standard: ASME A112.21.2M.
   2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

2.7 FLASHING MATERIALS

A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:
   1. General Use: 4.0-lb/sq. ft., 0.0625-inch thickness.
   2. Vent Pipe Flashing: 3.0-lb/sq. ft., 0.0469-inch thickness.

B. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:
   1. General Applications: 12 oz./sq. ft.
   2. Vent Pipe Flashing: 8 oz./sq. ft.

C. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch minimum thickness, unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.

E. Fasteners: Metal compatible with material and substrate being fastened.

F. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.

G. Solder: ASTM B 32, lead-free alloy.

H. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.

B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
   1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
   2. Locate at each change in direction of piping greater than 45 degrees.
   3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
   4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

E. Install floor drains and floor sinks at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
1. Position floor drains for easy access and maintenance.
2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
   a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
   b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.
   c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

F. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
G. Install through-penetration fire stop assemblies in plastic conductors and stacks at floor penetrations.
H. Assemble open drain fittings and install with top of hub 2 inches above floor.
I. Install deep-seal traps on floor drains and other waste outlets, if indicated.
J. Install floor-drain and floor sink, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
   1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
   2. Size: Same as floor drain inlet.
K. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
L. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
M. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
N. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
O. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
P. Install wood-blocking reinforcement for wall-mounting-type specialties.
Q. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.2 CONNECTIONS
   A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
   B. Install piping adjacent to equipment to allow service and maintenance.
   C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
   D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
3.3 **FLASHING INSTALLATION**

A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:

1. **Lead Sheets:**  Burn joints of lead sheets 6.0-lb/sq. ft., 0.0938-inch thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft., 0.0625-inch thickness or thinner.
2. **Copper Sheets:** Solder joints of copper sheets.

B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.

1. **Pipe Flashing:** Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
2. **Sleeve Flashing:** Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
3. **Embedded Specialty Flashing:** Flat sheet, with skirt or flange extending at least 8 inches around specialty.

C. Set flashing on floors and roofs in solid coating of bituminous cement.

D. Secure flashing into sleeve and specialty clamping ring or device.

E. Install flashing for piping passing through roofs with counter-flashings or commercially made flashing fittings, according to Division 07 Section “Sheet Metal Flashing and Trim.”

F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.

G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 **PROTECTION**

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION
SECTION 221413
FACILITY STORM DRAINAGE PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Pipe, tube, and fittings.
      2. Specialty pipe fittings.
   B. Related Sections:
      1. Section 221429 "Sump Pumps" for storm drainage pumps.

1.3 DEFINITIONS
   A. Hub Drain: Open ended drainage pipe. The hub end of a hub and spigot cast iron, or PVC pipe;
      open pipe end of a cast iron no-hub system. Hub drain material shall be the same as the connecting
      drainage system.

1.4 PERFORMANCE REQUIREMENTS
   A. Components and installation shall be capable of withstanding the following minimum working pressure
      unless otherwise indicated:
      1. Storm Drainage Piping: 10-foot head of water.
      2. Storm Drainage, Force-Main Piping: 100 psig.
   B. Product Data: For each type of product indicated.

1.5 INFORMATIONAL SUBMITTALS
   A. Field quality-control reports.

1.6 QUALITY ASSURANCE
   A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.1 PIPING MATERIALS
   A. Comply with requirements in “Piping Schedule” Article for applications of pipe, tube, fitting materials,
      and joining methods for specific services, service locations, and pipe sizes.

2.2 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS
   A. Pipe and Fittings: ASTM A 888 or CISPI 301.
      1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         a. AB&I Foundry
b. Charlotte Pipe and Foundry
   c. Tyler Pipe; Soil Pipe Division

B. CISPI, Hubless-Piping Couplings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ANACO-Husky.
      c. Fernco Inc.
      d. Ideal
      e. Matco-Norca, Inc.
      f. MIFAB, Inc.
      g. Mission Rubber Company; a division of MCP Industries, Inc.
      h. Stant.
   3. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

C. Heavy-Duty, Hubless-Piping Couplings:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ANACO-Husky.
      b. Clamp-All Corp.
      d. Ideal
      e. MIFAB, Inc.
      f. Mission Rubber Company; a division of MCP Industries, Inc.
      g. Stant.
      h. Tyler Pipe.
   3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

2.3 GALVANIZED-STEEL PIPE AND FITTINGS

A. Galvanized-Steel Pipe: ASTM A 53/A 53M, Type E, Standard Weight. Include square-cut-grooved or threaded ends matching joining method.

C. Steel-Pipe Pressure Fittings:

D. Cast-Iron Flanges: ASME B16.1, Class 125.
   1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
   2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

E. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Anvil International.
   b. Grinnell Mechanical Products.
   c. Shurjoint Piping Products.
   d. Victaulic Company.

3. Grooved Mechanical Couplings for Galvanized-Steel Piping: ASTM F 1476, Type I. Include ferrous housing sections with continuous curved keys; EPDM-rubber gasket suitable for hot and cold water; and bolts and nuts.

2.4 DUCTILE-IRON PIPE AND FITTINGS

A. Ductile-Iron, Mechanical-Joint Piping:
   1. Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

B. Ductile-Iron, Grooved-Joint Piping:
   2. Ductile-Iron-Pipe Appurtenances:
   3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Anvil International.
      2) Shurjoint Piping Products.
      3) Star Pipe Products.
      4) Victaulic Company.

2.5 PVC PIPE AND FITTINGS

A. Solid-Wall PVC Pipe: ASTM D 2665, drain, waste, and vent.

B. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.

C. Adhesive Primer: ASTM F 656.
   1. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Solvent Cement: ASTM D 2564.
   1. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2.6 **SPECIALTY PIPE FITTINGS**

A. **Transition Couplings:**

1. **General Requirements:** Fitting or device for joining piping with small differences in OD’s or of different materials. Include end connections same size as and compatible with pipes to be joined.

2. **Fitting-Type Transition Couplings:** Manufactured piping coupling or specified-piping-system fitting.

3. **Unshielded, Non-pressure Transition Couplings:**

4. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
   
   2) Fernco Inc.
   3) Mission Rubber Company; a division of MCP Industries, Inc.
   4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.

   **b. Standard:** ASTM C 1173.

   **c. Description:** Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

   **d. Sleeve Materials:**
   2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
   3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

5. **Shielded, Non-pressure Transition Couplings:**

6. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

   2) Mission Rubber Company; a division of MCP Industries, Inc.

   **b. Standard:** ASTM C 1460.

   **c. Description:** Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

7. **Pressure Transition Couplings:**

8. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

   2) Dresser, Inc.
   3) EBAA Iron, Inc.
   4) Ford Meter Box Company, Inc. (The)
   5) JCM Industries, Inc.
   6) Romac Industries, Inc.
   7) Smith-Blair, Inc.; a Sensus company.
   8) Viking Johnson; c/o Mueller Co.

   **b. Standard:** AWWA C219.

   **c. Description:** Metal, sleeve-type couplings same size as, with pressure rating at least equal to and ends compatible with, pipes to be joined.

   **d. Center-Sleeve Material:** Carbon steel, Stainless steel and Ductile iron.

   **e. Gasket Material:** Natural or synthetic rubber.

   **Metal Component Finish:** Corrosion-resistant coating or material.
PART 3 EXECUTION

3.1 EARTH MOVING
   A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

3.2 PIPING INSTALLATION
   A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.
   B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
   C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
   D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
   E. Install piping to permit valve servicing.
   F. Install piping at indicated slopes.
   G. Install piping free of sags and bends.
   H. Install fittings for changes in direction and branch connections.
   I. Install piping to allow application of insulation.
   J. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
   K. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
   L. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
      1. Building Storm Drain: 2 percent downward in direction of flow for piping NPS 2 and smaller; 1 percent downward in direction of flow for piping NPS 3 and larger.
      2. Horizontal Storm-Drainage Piping: 1 percent downward in direction of flow.
   M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   N. Install steel piping according to applicable plumbing code.
   O. Install aboveground PVC piping according to ASTM D 2665.
   P. Install underground PVC piping according to ASTM D 2321.
   Q. Plumbing Specialties:
      1. Install backwater valves in storm drainage gravity-flow piping. Comply with requirements for backwater valves specified in Section 221423 "Storm Drainage Piping Specialties."
2. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Section 221423 "Storm Drainage Piping Specialties."

3. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Section 221423 "Storm Drainage Piping Specialties."

R. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

S. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

T. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."

U. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

V. Cleanouts shall be submitted to architecture for review and confirmation of location before installation.

3.3 JOINT CONSTRUCTION

B. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

C. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fittings. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

D. Plastic, Non-pressure-Piping, Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

3.4 SPECIALTY PIPE FITTING INSTALLATION

A. Transition Couplings:
   1. Install transition couplings at joints of piping with small differences in OD's.
   2. In Drainage Piping: Shielded, non-pressure transition couplings.
   4. In Underground Force-Main Piping:
      a. NPS 1-1/2 and Smaller: Fitting-type transition couplings.
      b. NPS 2 and Larger: Pressure transition couplings.
3.5 VALVE INSTALLATION
A. General valve installation requirements are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
B. Shutoff Valves: Install shutoff valve on each sump pump discharge.
   1. Install gate or full-port ball valve for piping NPS 2 and smaller.
   2. Install gate valve for piping NPS 2-1/2 and larger.
C. Check Valves: Install swing-check valve, between pump and shutoff valve, on each sump pump discharge.

3.6 HANGER AND SUPPORT INSTALLATION
A. Comply with requirements for pipe hanger and support devices and installation specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
   1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
   2. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
   3. Vertical Piping: MSS Type 8 or Type 42, clamps.
   4. Individual, Straight, Horizontal Piping Runs:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer than 100 Feet: MSS Type 1, adjustable, steel clevis hangers.
      c. Longer than 100 Feet: MSS Type 43, adjustable roller hangers.
      d. Longer than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
   5. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   6. Base of Vertical Piping: MSS Type 52, spring hangers.
B. Support horizontal piping and tubing within 18 inches of each fitting, valve, and coupling.
C. Support vertical piping and tubing at base and at each floor.
D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.
E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
   2. NPS 3: 60 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
   4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.
   5. NPS 10 and NPS 12: 60 inches with 7/8-inch rod.
   6. Spacing for 10-foot pipe lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.
F. Install supports for vertical cast-iron soil piping every 15 feet.
G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3: 12 feet with 1/2-inch rod.
   6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
   7. NPS 6 and NPS 8: 12 feet with 3/4-inch rod.
   8. NPS 10 and NPS 12: 12 feet with 7/8-inch rod.
H. Install supports for vertical steel piping every 15 feet.

I. Install supports for vertical copper tubing every 10 feet.

J. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/2 and NPS 2: 48 inches with 3/8-inch rod.
   2. NPS 3: 48 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
   4. NPS 6 and NPS 8: 48 inches with 3/4-inch rod.
   5. NPS 10 and NPS 12: 48 inches with 7/8-inch rod.

K. Install supports for vertical PVC piping every 48 inches.

L. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.
   1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
   2. Install horizontal backwater valves with cleanout cover flush with floor.
   3. Comply with requirements for cleanouts and drains specified in Section 221423 "Storm Drainage Piping Specialties."
   4. Cleanouts shall be submitted to architecture for review and confirmation of location before installation.

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

E. Make connections according to the following unless otherwise indicated:
   1. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

A. Identify exposed storm drainage piping. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
   2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Re-inspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
D. Test storm drainage piping according to procedures of authorities having jurisdiction and as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test storm drainage piping on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

3.10 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.
B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.11 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
B. Aboveground storm drainage piping NPS 6 and smaller shall be any of the following:
   1. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, hubless-piping couplings; and coupled joints.
   2. Galvanized-steel pipe, drainage fittings, and threaded joints.
C. Aboveground, storm drainage piping NPS 8 and larger shall be any of the following:
   1. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, hubless-piping couplings; and coupled joints.
   2. Galvanized-steel pipe, drainage fittings, and threaded joints.
D. Underground storm drainage piping NPS 6 and smaller shall be any of the following:
   1. Hubless, cast-iron soil pipe and fittings; CISPI, service weight, hubless-piping couplings; and coupled joints.
   2. Solid-wall Sch 40 PVC pipe, PVC socket fittings, and solvent-cemented joints.
E. Underground, storm drainage piping NPS 8 and larger shall be any of the following:
   1. Hubless, cast-iron soil pipe and fittings; CISPI, service weight, hubless-piping couplings; and coupled joints.
   2. Solid-wall Sch 40 PVC pipe, PVC socket fittings, and solvent-cemented joints.

END OF SECTION
SECTION 221423
STORM DRAINAGE PIPING SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Roof drains.
   2. Miscellaneous storm drainage piping specialties.
   3. Cleanouts.
   4. Through-penetration firestop assemblies.
   5. Flashing materials.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE
A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.1 ROOF DRAINS
A. Cast-Iron, Large-Sump, General-Purpose Roof Drains:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      c. Tyler Pipe.
      d. Watts Water Technologies, Inc.
      e. Zurn Plumbing Products Group; Specification Drainage Operation.
   2. Standard: ASME A112.6.4, for general-purpose roof drains.
   5. Combination Flashing Ring and Gravel Stop: Required.
   6. Outlet: Bottom.
   7. Extension Collars: Required.
   8. Underdeck Clamp: Required.
   10. Sump Receiver Plate: Required.
   11. Dome Material: Aluminum or Cast iron.
   12. Perforated Gravel Guard: Stainless steel – required only if ballasted roof system used.
   14. Water Dam: 2 inches high – Required for Overflow Drain bodies (RD-B).
   15. Refer to roof drain schedule for additional characteristics.
2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Downspout Adaptors:
   1. Description: Manufactured, gray-iron casting, for attaching to horizontal-outlet, parapet roof drain and to exterior, sheet metal downspout.
   2. Size: Inlet size to match parapet drain outlet.

B. Downspout Boots:
   1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 outlet; and shop-applied bituminous coating.
   2. Size: Inlet size to match downspout and NPS 4 outlet.

C. Conductor/Downspout Nozzles:
   1. Description: Bronze body with threaded inlet and bronze wall flange with mounting holes.
   2. Size: Same as connected piping.

D. Expansion Joints:
   1. Standard: ASME A112.21.2M.
   2. Body: Cast iron with bronze sleeve, packing, and gland.
   3. End Connections: Matching connected piping.
   4. Size: Same as connected piping.

2.3 CLEANOUTS

A. Floor Cleanouts:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      b. Oatey.
      c. Sioux Chief Manufacturing Company, Inc.
      e. Tyler Pipe.
      f. Watts Water Technologies, Inc.
      g. Zurn Plumbing Products Group; Light Commercial Products Operation.
      h. Zurn Plumbing Products Group; Specification Drainage Operation.
   2. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
   3. Size: Same as connected branch.
   4. Type: Adjustable housing.
   5. Body or Ferrule Material: Cast iron.
   6. Clamping Device: Not required.
   7. Adjustable Housing Material: Cast iron with threads.
   8. Frame and Cover Shape: Round.
   10. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

B. Test Tees:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      b. MIFAB, Inc.
      d. Tyler Pipe.
      e. Watts Water Technologies, Inc.
      f. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
3. Size: Same as connected drainage piping.
4. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil-pipe test tee as required to match connected piping.
5. Closure Plug: Countersunk, brass.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

C. Wall Cleanouts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   b. MIFAB, Inc.
   d. Tyler Pipe.
   e. Watts Water Technologies, Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
3. Size: Same as connected drainage piping.
4. Body Material: Hubless, cast-iron soil-pipe test tee as required to match connected piping.
5. Closure: Countersunk, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

2.4 THROUGH-PENETRATION FIRESTOP ASSEMBLIES
A. Through-Penetration Firestop Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   a. ProSet Systems Inc.
2. Standard: ASTM E 814, for through-penetration firestop assemblies.
3. Certification and Listing: Intertek Testing Service NA for through-penetration firestop assem-
   blies.
4. Size: Same as connected pipe.
5. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange
   on one end for installation in cast-in-place concrete slabs.
6. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring
   at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.

2.5 FLASHING MATERIALS
A. Copper Sheet: ASTM B 152/B 152M, 12 oz. /sq. ft.
B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch
   minimum thickness unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized
   finish for painting if indicated.
C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thick-
   ness.
D. Fasteners: Metal compatible with material and substrate being fastened.
E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units re-
   quired for installation; matching or compatible with material being installed.
PART 3 EXECUTION

3.1 INSTALLATION

A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions.
   1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
   2. Install expansion joints, if indicated, in roof drain outlets.
   3. Position roof drains for easy access and maintenance.

B. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.

C. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downspouts.

D. Install downspout boots at grade with top 18 inches above grade. Secure to building wall.

E. Install conductor downspout nozzles at exposed bottom of conductors where they spill onto grade.

F. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
   1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
   2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
   3. Locate cleanouts at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
   4. Locate cleanouts at base of each vertical soil and waste stack.

G. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

H. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

I. Install test tees in vertical conductors and near floor.

J. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.

K. Install through-penetration firestop assemblies in plastic conductors at concrete floor penetrations.

L. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Section 221413 "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 FLASHING INSTALLATION

A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
   1. Lead Sheets: Burn joints of 6.0-lb/sq. ft. lead sheets, 0.0938-inch thickness or thicker. Solder joints of 4.0-lb/sq. ft. lead sheets, 0.0625-inch thickness or thinner.
2. Copper Sheets: Solder joints of copper sheets.

B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
   1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches and with skirt or flange extending at least 8 inches around pipe.
   2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
   3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.

C. Set flashing on floors and roofs in solid coating of bituminous cement.

D. Secure flashing into sleeve and specialty clamping ring or device.

E. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION
SECTION 221429
SUMP PUMPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Submersible sump pumps.
   2. Sump-pump basins and basin covers.
B. Related Section:
   1. Division 22 "Sanitary Sewerage Pumps" for effluent and sewage pumps.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Wiring Diagrams: For power, signal, and control wiring.
C. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.5 DELIVERY, STORAGE, AND HANDLING
A. Retain shipping flange protective covers and protective coatings during storage.
B. Protect bearings and couplings against damage.
C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 PRODUCTS

2.1 SUBMERSIBLE SUMP PUMPS
A. Submersible, Fixed-Position, Single-Seal Sump Pumps:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following but are not limited to, the following:
      a. Bell & Gossett Domestic Pump; ITT Corporation. (www.bell-gossett.com)
      b. Goulds Pumps; ITT Corporation. (www.gouldspumps.com)
      c. Grundfos Pumps Corp. (www.grundfos.com)
      d. Liberty Pumps. (www.libertypumps.com)
      e. Little Giant Pump Co. (www.little-giantpump.com)
f. Weil Pump Company, Inc. (www.weilpump.com)

2.** Description:**
   a. The duplex pump system eliminates unwanted water from elevator sumps, garages, vaults and other areas where preventing the unwanted discharge of oil to the environment is required.
   b. The pump controller shall include a pre-set level sensor which consists of 3 metal probes and a float switch which will control two sump pumps, one designated for water service, and one for oil service. When water collects in the sump and contacts both the lowest and the middle probe, the water service sump pump will discharge the water until the level is below the lowest probe. If the water level increases to the highest probe, the high water alarm sounds signifying a high inflow condition or faulty pump.
   c. In the event of an oil leak, the spilled oil will collect in the sump and float on the surface of the water. Once the layer is thick enough to trip the high oil float, the pump will eliminate the oil and water in the sump; the water will be pumped to the drain and then the oil will be routed to the waste oil storage tank preventing unwanted contamination.

3. **Pump Type:** Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 1.1-1.2 and HI 1.3.

4. **Pump Casing:** Cast iron, with strainer inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.

5. **Impeller:** Statically and dynamically balanced, ASTM A 532/A 532M, abrasion-resistant cast iron design for clear wastewater handling, and keyed and secured to shaft.

6. **Pump and Motor Shaft:** Stainless steel, with factory-sealed, grease-lubricated ball bearings.

7. **Seal:** The pump shall have a unitized carbon / ceramic seal with stainless steel housings and spring, or engineered double lip seal with stainless steel springs. The motor plate / housing interface shall be sealed with a Buna-N o-ring.

8. **Motor:** Hermetically sealed with a Buna-N o-ring, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
   a. Motor Housing Fluid: Oil filled.

9. **Controls:**
   a. The controls shall be housed in a NEMA 4X rated enclosure with a transparent hinged door. The door shall be closed with hasps which are capable of being padlocked. The enclosure shall have a painted steel dead front to protect the user from the panel wiring while also allowing access to the Touchscreen controls and power breakers.
   b. The primary means of operator interface shall be by way of a touchscreen interface. This interface shall provide graphic feedback of the system status as well as allow for selection of Auto/Manual control of the pump and valves. The controls shall include dry contact for the alarm status of the system.
   c. The controls shall have a method to electronically record the operation and status of the system while saving this record to a removable USB storage device. The data which has been logged shall be downloadable to via USB connection in a CSV format.
   d. The single phase control panel shall wired such that the pump and the controls are on two separate power circuits. These circuits shall each be protected by a circuit breaker, sized in accordance to the loading of the circuit. The three phase control panel shall utilize a single three phase power source. This circuit shall each be protected by a circuit breaker, sized in accordance to the loading of the circuit.
   e. The control unit has three probes and a float ball switch. The water pump will activate when the middle probe contacts water, and will remain on until the first, longest probe no longer is in contact with water. A high water alarm is activated when third or shortest probe contacts water.
f. When the oil layer present is thick enough to change the state of the float switch, and there is not water in the sump, the controller shall turn on the oil pump to evacuate the oil from the sump. When the oil layer present is thick enough to change the state of the float switch, and water is detected in the sump, the controller shall run the water pump to evacuate the water from the sump, and subsequently run the oil pump moving the oil to the holding tank for safe disposal.

Control-Interface Features:

4. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:
   1) On-off status of pump.
   2) Alarm status.

10. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.

11. Guide-Rail Supports:
   b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
   c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
   d. Pump Yoke: Motor-mounted or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
   e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
   f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
   g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

2.2 SUMP PUMP CAPACITIES AND CHARACTERISTICS

A. Refer to equipment schedules.

2.3 SUMP-PUMP BASINS AND BASIN COVERS

A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall openings for pipe connections.
   1. Material: Fiberglass or Polyethylene.
   2. Reinforcement: Mounting plates for pumps, fittings, and accessories.
   3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.

B. Basin Covers: Fabricate cast iron or ductile iron cover with openings having gaskets, seals, and bushings; for access to pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.
   1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins installed in foot-traffic areas.

2.4 BUILDING AUTOMATION SYSTEM INTERFACE

A. Refer also to Sequence of Operation for necessary control and interface requirements.

PART 3 EXECUTION

3.1 EARTHWORK

A. Excavation and filling are specified in Division 31 "Earth Moving."
3.2 EXAMINATION
A. Examine roughing-in for plumbing piping to verify actual locations of storm drainage piping connections before sump pump installation.

3.3 INSTALLATION
A. Pump Installation Standards: Comply with HI 1.4 for installation of sump pumps.
B. Attach anchor flange to concrete slab to prevent the movement of the sump and basin. Provide any and all accessories, attachments, additional concrete and reinforcement as necessary.

3.4 CONNECTIONS
A. Comply with requirements for piping specified in Division 22 "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to equipment to allow service and maintenance.

3.5 FIELD QUALITY CONTROL
A. Tests and Inspections:
   1. Perform each visual and mechanical inspection.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
B. Pumps and controls will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

3.6 STARTUP SERVICE
A. Perform startup service. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING
A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.
B. Adjust control set points.

3.8 DEMONSTRATION
A. Train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION
SECTION 221513
GENERAL SERVICE COMPRESSED-AIR PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes piping and related specialties for general-service compressed-air systems operating at 150 psig or less.
B. Related Sections include the following:
   1. Division 22 Section "General-Service Packaged Air Compressors and Receivers" for general-service air compressors and accessories.

1.3 DEFINITIONS
A. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of 150 psig or less.

1.4 SUBMITTALS
A. Product Data: For the following:
   1. Plastic pipes, fittings, and valves.
   2. Dielectric fittings.
   4. Pressure regulators.
   5. Automatic drain valves.
   6. Filters.
   7. Lubricators.
   8. Quick couplings.
   9. Hose assemblies.
B. Qualification Data: For Installers.
C. Field quality-control test reports.
D. Operation and Maintenance Data: For general-service compressed-air piping specialties to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE
A. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications," or to AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."
B. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
C. ASME Compliance:
PART 2 PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

A. Copper Tube: ASTM B 88, Type K or L seamless, drawn-temper, water tube.
   1. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, wrought copper with dimensions for brazed joints.
   2. Cast-Copper-Alloy Flanges: ASME B16.24, Class 150 or 300.
   3. Copper Unions: ASME B16.22 or MSS SP-123.
   4. Press-Type Fittings, NPS 2 and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Viega; Plumbing and Heating Systems.
   5. Press-Type Fittings, NPS 2-1/2 to NPS 4: Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Viega; Plumbing and Heating Systems.

B. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

2.2 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for compressed-air piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
      a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.

E. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.3 VALVES

A. Metal Ball, Butterfly, Check, Gate, and Globe Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping."

2.4 DIELECTRIC FITTINGS

A. General Requirements for Dielectric Fittings: Combination fitting of copper alloy and ferrous materials with insulating material; suitable for system fluid, pressure, and temperature. Include threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Dielectric Unions: Factory-fabricated union assembly, for 250-psig minimum working pressure at 180 deg F.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
b. Central Plastics Company.
c. EPCO Sales, Inc.
d. Hart Industries International, Inc.
e. Watts Water Technologies, Inc.; Water Products Div.
f. Zurn Plumbing Products Group; Wilkins Div.

C. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Central Plastics Company.
      c. EPCO Sales, Inc.

D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Advance Products & Systems, Inc.
      b. Calpico, Inc.
      c. Central Plastics Company.
      d. Pipeline Seal and Insulator, Inc.

2.5 SPECIALTIES
A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, “Pressure Vessels,” construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet-type safety valve for compressed-air service.
   1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.

B. Air-Line Pressure Regulators: Diaphragm operated, aluminum alloy or plastic body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200-psig minimum inlet pressure, unless otherwise indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by:
      a. Norgren

2.6 QUICK COUPLINGS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Aeroquip Corporation; Eaton Corp.
   2. Bowes Manufacturing Inc.
   3. Foster Manufacturing, Inc.
   5. Parker Hannifin Corp.; Fluid Connectors Group; Quick Coupling Div.
   6. Rectus Corp.
   7. Schrader-Bridgeport; Amflo Div.
   9. Snap-Tite, Inc.; Quick Disconnect & Valve Division.
10. TOMCO Products Inc.
11. Tuthill Corporation; Hansen Coupling Div.

B. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.

C. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless-steel or nickel-plated-steel operating parts.
   1. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
   2. Plug End: Flow-sensor-bleeder, check-valve or Straight-through type with barbed outlet for attaching hose.

D. Valveless Quick Couplings: Straight-through brass body with stainless-steel or nickel-plated-steel operating parts.
   1. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching hose.
   2. Plug End: With barbed outlet for attaching hose.

2.7 HOSE ASSEMBLIES

A. Description: Compatible hose, clamps, couplings, and splicers suitable for compressed-air service, of nominal diameter indicated, and rated for 300-psig minimum working pressure, unless otherwise indicated.
   2. Hose Clamps: Stainless-steel clamps or bands.
   3. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or gasket-seal swivel coupling with barbed ends for connecting two sections of hose.
   4. Hose Splicers: One-piece, straight-through brass or stainless-steel fitting with barbed ends for connecting two sections of hose.
   5. Full Flow Stress Free Swivel
   6. Premium drive spring with declutching arbor and quiet latch cam.

PART 3 EXECUTION

3.1 PIPING APPLICATIONS

A. Low-Pressure Compressed-Air Distribution Piping: Use one of the following piping materials for each size range:
   1. NPS 2 and Smaller: Type K or L, copper tube; wrought-copper fittings; and brazed joints.
   2. NPS 2 and Smaller: Type K or L, copper tube; press-type fittings; and pressure-sealed joints.

3.2 VALVE APPLICATIONS

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for metal general-duty valves. Use metal valves, unless otherwise indicated.
   1. Metal General-Duty Valves: Use valve types specified in "Valve Applications" Article in Division 22 Section "General-Duty Valves for Plumbing Piping" according to the following:
      a. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
      b. Equipment Isolation NPS 2 and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.
3.3 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.

E. Install piping adjacent to equipment and machines to allow service and maintenance.

F. Install air and drain piping with 1 percent slope downward in direction of flow.

G. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.

H. Equipment and Specialty Flanged Connections:
   1. Use steel companion flange with gasket for connection to steel pipe.
   2. Use cast-copper-alloy companion flange with gasket and brazed joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.

I. Flanged joints may be used instead of specified joint for any piping or tubing system.

J. Extended-tee outlets with brazed branch connection may be used for copper tubing, within extruded-tee connection diameter to run tube diameter ratio for tube type, according to Extruded Tee Connections Sizes and Wall Thickness for Copper Tube (Inches) Table in ASTM F 2014.

K. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.

L. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.

M. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping."

N. Install piping to permit valve servicing.

O. Install piping free of sags and bends.

P. Install fittings for changes in direction and branch connections.

3.4 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints for Steel Piping: Join according to AWS D10.12/D10.12M.

E. Brazed Joints for Copper Tubing: Join according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

F. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Join according to ASTM B 828 or CDA's "Copper Tube Handbook."

G. Extruded-Tee Outlets for Copper Tubing: Form branches according to ASTM F 2014, with tools recommended by procedure manufacturer, and using operators qualified according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Use asbestos-free, nonmetallic gasket suitable for compressed air. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.

I. Pressure-Sealed Joints: Join with tools recommended by fitting manufacturer, using operators qualified according to Part 1 "Quality Assurance" Article.

J. Dissimilar Metal Piping Material Joints: Use dielectric fittings.

3.5 VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping."

B. Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.

C. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.

D. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

3.6 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. NPS 2 and Smaller: Use dielectric unions.

3.7 FLEXIBLE PIPE CONNECTOR INSTALLATION

A. Install flexible pipe connectors in discharge of each air compressor.

B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.

3.8 SPECIALTY INSTALLATION

A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.

B. Install air-line pressure regulators in branch piping to equipment.

C. Install air-line lubricators in branch piping to machine tools.

D. Install quick couplings at piping terminals for hose connections.

E. Install hose assemblies at hose connections.
3.9 **CONNECTIONS**
A. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.

3.10 **HANGER AND SUPPORT INSTALLATION**
A. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.
B. Vertical Piping: MSS Type 8 or 42, clamps.
C. Individual, Straight, Horizontal Piping Runs:
   1. 100 Feet or Less: MSS Type 1, adjustable, steel clevis hangers.
   2. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
D. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
E. Base of Vertical Piping: MSS Type 52, spring hangers.
F. Support horizontal piping within 12 inches of each fitting and coupling.
G. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.
H. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1/4: 60 inches with 3/8-inch rod.
   2. NPS 3/8 and NPS 1/2: 72 inches with 3/8-inch rod.
   4. NPS 1: 96 inches with 3/8-inch rod.
   6. NPS 1-1/2: 10 feet with 3/8-inch rod.
   7. NPS 2: 11 feet with 3/8-inch rod.
   8. NPS 2-1/2: 13 feet with 1/2-inch rod.
   9. NPS 3: 14 feet with 1/2-inch rod.
   10. NPS 3-1/2: 15 feet with 1/2-inch rod.
   11. NPS 4: 16 feet with 1/2-inch rod.
   12. NPS 5: 18 feet with 1/2-inch rod.
   14. NPS 8: 23 feet with 3/4-inch rod.
I. Install supports for vertical copper tubing every 10 feet.

3.11 **LABELING AND IDENTIFICATION**
A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.12 **FIELD QUALITY CONTROL**
A. Perform field tests and inspections.
B. Tests and Inspections:
1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig above system operating pressure, but not less than 150 psig. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
2. Repair leaks and retest until no leaks exist.
3. Inspect system for proper operation.

C. Prepare test reports.

END OF SECTION
SECTION 221519
GENERAL-SERVICE PACKAGED AIR COMPRESSORS AND RECEIVERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Lubricated, reciprocating air compressors.
   2. Inlet-air filters.

1.3 DEFINITIONS
A. Actual Air: Air delivered from air compressors. Flow rate is delivered compressed air measured in acfm.
B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
C. Standard Air: Free air at 68 deg F and 1 atmosphere (29.92 in. Hg) before compression or expansion and measured in scfm.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings:
   1. Include diagrams for power, signal, and control wiring.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For compressed-air equipment to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Air-Compressor, Inlet-Air-Filter Elements: Equal to 100 percent of amount installed, but no fewer than two units.
   2. Belts: Two for each belt-driven compressor.

1.7 FIELD CONDITIONS
A. Interruption of Existing Compressed-Air Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
1. Notify Construction Manager and Owner no fewer than seven days in advance of proposed interruption of compressed-air service.
2. Do not proceed with interruption of compressed-air service without Owner's written permission.

1.8 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 PRODUCTS

2.1 SYSTEM DESCRIPTION
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.

2.2 GENERAL REQUIREMENTS FOR PACKAGED AIR COMPRESSORS AND RECEIVERS
A. General Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty air compressors and receivers that deliver air of quality equal to intake air.
B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
   1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
   3. Control Voltage: 120-V ac or less, using integral control power transformer.
   5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
   6. Instrumentation: Include discharge-air pressure gage, air-filter maintenance indicator, hour meter, compressor discharge-air and coolant temperature gages, and control transformer.
   7. Alarm Signal Device: For connection to alarm system to indicate when backup air compressor is operating.
C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   1. Pressure Rating: At least as high as highest discharge pressure of connected compressors, and bearing appropriate code symbols.
   2. Interior Finish: Corrosion-resistant coating.
   3. Accessories: Include safety valve, pressure gage, drain, and pressure-reducing valve.

2.3 LUBRICATED, RECIPROCATING AIR COMPRESSORS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Atlas Copco (www.atlascopco.com)
   2. CompAir, Ltd. (www.compair.com)
   3. Curtis-Toledo. (us.fscurtis.com)
   5. General Air Products, Inc. (www.generalairproducts.com)
   6. Ingersoll-Rand (www.ingersollrandproducts.com)
   7. Kaeser Compressors, Inc. (www.kaeser.com)
   8. Powerex, Inc. (www.powerexinc.com)
9. Quincy Compressor (www.quincyccompressor.com)
10. Saylor-Beall Manufacturing Company (www.saylor-beall.com)

B. Provide duplex compressor unit consisting of oil-free air-cooled motor-compressor, air receiver, spring isolators, and operating controls.

C. Compressor(s): Lubricated, reciprocating-piston type with lubricated compression chamber and crankcase.
   1. Submerged gear-type oil pump.
   2. Oil filter.
   3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
   4. Belt guard totally enclosing pulleys and belts.

D. Capacities and Characteristics: Refer to equipment schedules.

2.4 INLET-AIR FILTERS

A. Description: Combination inlet-air filter-silencer, suitable for remote installation, for each air compressor.
   1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
   2. Capacity: Match capacity of air compressor, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.

B. Description: Combination inlet-air filter-silencer, suitable for remote installation, for multiple air compressors.
   1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
   2. Capacity: Match total capacity of connected air compressors, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.

2.5 COMPUTER INTERFACE CABINET

A. Description:
   1. Wall mounting.
   2. Welded steel with white enamel finish.
   3. Gasketed door.
   4. Grounding device.
   5. Factory-installed, signal circuit boards.
   7. Circuit breaker.
   8. Wiring terminal board.
   9. Internal wiring capable of interfacing 20 alarm signals.

2.6 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 “Common Motor Requirements for Plumbing Equipment.”

PART 3 EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Equipment Mounting:
1. Install air compressors on cast-in-place concrete equipment base(s).
2. Comply with requirements for vibration isolation devices specified in Division 22 "Vibration Controls for Plumbing Piping and Equipment."

B. Install compressed-air equipment anchored to substrate.
C. Arrange equipment so controls and devices are accessible for servicing.
D. Maintain manufacturer's recommended clearances for service and maintenance.
E. Install the following devices on compressed-air equipment:
   1. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
   2. Pressure Regulators: Install downstream from air compressors.

3.2 CONNECTIONS
A. Comply with requirements for piping specified in Division 22 "General-Service Compressed-Air Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Where installing piping adjacent to machine, allow space for service and maintenance.

3.3 IDENTIFICATION
A. Identify general-service air compressors and components. Comply with requirements for identification specified in Division 22 "Identification for Plumbing Piping and Equipment."

3.4 STARTUP SERVICE
A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Check for lubricating oil in lubricated-type equipment.
   3. Check belt drives for proper tension.
   4. Verify that air-compressor inlet filters and piping are clear.
   5. Check for equipment vibration-control supports and flexible pipe connectors, and verify that equipment is properly attached to substrate.
   6. Check safety valves for correct settings. Ensure that settings are higher than air-compressor discharge pressure, but not higher than rating of system components.
   7. Drain receiver tanks.
   8. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   9. Test and adjust controls and safeties.

3.5 DEMONSTRATION
A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air compressors.

END OF SECTION
SECTION 223400
FUEL-FIRED, DOMESTIC-WATER HEATERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   2. Domestic-water heater accessories.

1.3 ACTION SUBMITTALS
A. Product Data: For each type and size of domestic-water heater indicated. [Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.]
B. LEED Submittals:
   1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with applicable requirements in ASHRAE/IESNA 90.1, Section 7, “Service Water Heating.”
C. Shop Drawings:
   1. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Product Certificates: For each type of domestic-water heater, from manufacturer.
B. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
C. Source quality-control reports.
D. Field quality-control reports.
E. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For fuel-fired, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   A. ASHRAE/IESNA Compliance: Fabricate and label fuel-fired, domestic-water heaters to comply with ASHRAE/IESNA 90.1.
   B. ASME Compliance:
1. Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

2. Where ASME-code construction is indicated, fabricate and label commercial, finned-tube, domestic-water heaters to comply with ASME Boiler and Pressure Vessel Code: Section IV.

C. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

1.7 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.8 WARRANTY
A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-fired, domestic-water heaters that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including storage tank and supports.
   b. Faulty operation of controls.
   c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Periods: From date of Substantial Completion.
   a. Commercial, Gas-Fired, Domestic-Water Heaters:
      1) Heat Exchanger: Five years.
      2) Controls and Other Components: Two years.
      3) Separate Hot-Water Storage Tanks: Five years.
   b. Compression Tanks: Five years.

PART 2 PRODUCTS

2.1 COMMERCIAL, FINNED-TUBE, GAS-FIRED, DOMESTIC-WATER HEATERS
A. Commercial, Gas-Fired, Domestic-Water Heaters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. A.O. Smith Company (www.hotwater.com)
      b. Bradford White Corporation (www.bradfordwhite.com)
      c. CAMUS Hydronics Ltd. (www.camus-hydronics.com)
      d. HESco Industries, Inc. (hescoindustries.com)
      e. Laars Heating Systems Company (www.laars.com)
      f. Lochinvar, LLC (www.lochinvar.com)
      g. Raypak (www.raypak.com)
      h. RECO USA (www.recousaheaters.com)
      i. Rheem Manufacturing Company (www.rheem.com)
   3. Description: Packaged unit with boiler, storage tank, pump, piping, and controls.
      a. Heat Exchanger: Horizontal, straight, finned-copper tubes with bronze headers.
      b. Connections: Factory fabricated of materials compatible with boiler. Attach to boiler before testing.
         1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
2) NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

5. Boiler Appurtenances:
   a. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire boiler except connections and controls.
   b. Jacket: Steel with enameled finish.
   c. Burner: For use with gas-fired, domestic-water heaters and natural gas fuel.
   e. Temperature Control: Adjustable, storage-tank temperature-control fitting and flow switch, interlocked with circulator and burner.
   f. Safety Control: Automatic, high-temperature-limit cutoff device or system.

6. Support: Steel base or skids.

7. Hot-Water Storage Tank: Connected with piping to circulating pump and domestic-water heater.
   b. Tappings: Factory fabricated of materials compatible with tank. Attach tappings to tank before testing.
      1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
      2) NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.
   c. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.

8. Factory-Installed Storage-Tank Appurtenances:
   b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005, factory installed.
   c. Insulation: Comply with ASHRAE/IESNA 90.1. Surround entire storage tank except connections and controls.
   d. Jacket: Steel with enameled finish.
   e. Combination Temperature-and-Pressure Relief Valves: ANSI Z21.22/CSA 4.4-M. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

9. Circulating Pump: UL 778, all-bronze, centrifugal, overhung-impeller, separately coupled in-line pump as defined in HI 1.1-1.2 and HI 1.3. Include mechanical seals, 125-psig minimum working-pressure rating, and 225 deg F continuous-water-temperature rating.

10. Piping: Copper tubing; copper, solder-joint fittings; and brazed or flanged joints.

11. Mounting: Domestic-water heater, tank, and accessories factory mounted on skids.

B. Building Automation System Interface:
1. Provide domestic water heater with built in controls or all necessary accessories for building management system interface.
2. Control interface shall allow for enabling/disabling the water heater from building automation system, change temperature setpoints, and change temperature differentials.
3. Controller shall be able to perform the following:
   a. Configure protocols, network, characteristics, and client/server object definitions.
   b. Graphically interact with the internal database in real-time via USB connection
   c. Automatically discover and configure IP settings Ethernet gateways connected to the current subnet
4. Coordinate building automation system interface requirements including BACnet, wiring connections, and low-voltage power with building automation system provider.

C. Capacity and Characteristics:
1. Refer to equipment schedules for capacity and characteristics.

2.2 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AMTROL Inc. (www.amtrol.com)
      b. A.O. Smith Corporation (www.hotwater.com)
      c. Flexcon Industries (www.flexcondind.com)
      d. Honeywell International Inc. (Honeywell.com)
      e. Pentair Pump Group (www.pentair.com)
      f. State Industries (www.stateind.com)
      g. Taco, Inc. (www.taco-hvac.com)
   2. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air pre-charge to minimum system-operating pressure at tank.
   3. Construction:
      a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
      b. Interior Finish: Comply with NSF 61 Annex G barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
      c. Air-Charging Valve: Factory installed.
   4. Capacity and Characteristics: Refer to equipment schedules for capacity and characteristics.

B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1.

D. Manifold Kits: Domestic-water heater manufacturer's factory-fabricated inlet and outlet piping for field installation, for multiple domestic-water heater installation. Include ball-, butterfly-, or gate-type shutoff valves to isolate each domestic-water heater and calibrated balancing valves to provide balanced flow through each domestic-water heater.

E. Comply with requirements for ball-, butterfly-, or gate-type shutoff valves specified in Division 22 "Ball Valves for Plumbing Piping," Division 22 "Butterfly Valves for Plumbing Piping," and Division 22 "Gate Valves for Plumbing Piping."
   1. Comply with requirements for balancing valves specified in Division 22 "Domestic Water Piping Specialties."

G. Gas Pressure Regulators: ANSI Z21.18/CSA 6.3, appliance type. Include pressure rating as required to match gas supply.

I. Combination Temperature-and-Pressure Relief Valves: Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.

J. Pressure Relief Valves: Include pressure setting less than domestic-water heater working-pressure rating.
K. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4-M.
L. Domestic-Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting domestic-water heater and water. Provide dimension that will support bottom of domestic-water heater a minimum of 18 inches above the floor.
M. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater and water.

2.3 SOURCE QUALITY CONTROL
A. Factory Tests: Test and inspect assembled domestic-water heaters and storage tanks specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
B. Hydrostatically test commercial domestic-water heaters and storage tanks to minimum of one and one-half times pressure rating before shipment.
C. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 "Quality Requirements" for retesting and re-inspecting requirements and Division 01 "Execution" for requirements for correcting the Work.
D. Prepare test and inspection reports.

PART 3 EXECUTION
3.1 DOMESTIC-WATER HEATER INSTALLATION
   1. Exception: Omit concrete bases for commercial domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
   2. Maintain manufacturer's recommended clearances.
   3. Arrange units so controls and devices that require servicing are accessible.
   4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   7. Install anchor bolts to elevations required for proper attachment to supported equipment.
   8. Anchor domestic-water heaters to substrate.
B. Install domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
   1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Division 22 "Ball Valves for Plumbing Piping," Division 22 "Butterfly Valves for Plumbing Piping," and Division 22 "Gate Valves for Plumbing Piping."
C. Install gas-fired, domestic-water heaters according to NFPA 54.
   1. Install gas shutoff valves on gas supply piping to gas-fired, domestic-water heaters without shutoff valves.
   2. Install gas pressure regulators on gas supplies to gas-fired, domestic-water heaters without gas pressure regulators if gas pressure regulators are required to reduce gas pressure at burner.
3. Install automatic gas valves on gas supplies to gas-fired, domestic-water heaters if required for operation of safety control.

4. Comply with requirements for gas shutoff valves, gas pressure regulators, and automatic gas valves specified in other sections.

D. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

E. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Division 22 "Domestic Water Piping Specialties."

F. Install thermometer on outlet piping of domestic-water heaters. Comply with requirements for thermometers specified in Division 22 "Meters and Gages for Plumbing Piping."

G. Assemble and install inlet and outlet piping manifold kits for multiple domestic-water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each domestic-water heater. Include shutoff valve and thermometer in each domestic-water heater inlet and outlet, and throttling valve in each domestic-water heater outlet. Comply with requirements for valves specified in Division 22 "Ball Valves for Plumbing Piping," Division 22 "Butterfly Valves for Plumbing Piping," and Division 22 "Gate Valves for Plumbing Piping," and comply with requirements for thermometers specified in Division 22 "Meters and Gages for Plumbing Piping."

H. Install piping-type heat traps on inlet and outlet piping of domestic-water heater storage tanks without integral or fitting-type heat traps.

I. Fill domestic-water heaters with water.

J. Charge domestic-water compression tanks with air.

3.2 CONNECTIONS

A. Comply with requirements for domestic-water piping specified in Division 22 “Domestic Water Piping.”

B. Comply with requirements for fuel-oil piping specified in Division 22 "Facility Fuel-Oil Piping."

C. Comply with requirements for gas piping specified in other sections.

D. Drawings indicate general arrangement of piping, fittings, and specialties.

E. Where installing piping adjacent to fuel-fired, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

F. Building Automation System Interface: Factory or field install hardware and software to enable building automation system to monitor, control, and display domestic water heater status, alarms and setpoints.

3.3 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Division 22 "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 "Quality Requirements" for retesting and re-inspecting requirements and Division 01 "Execution" for requirements for correcting the Work.

C. Prepare test and inspection reports.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain domestic-water heaters and accessories.

END OF SECTION
SECTION 224000
PLUMBING FIXTURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following conventional plumbing fixtures and related components:
   1. Faucets.
   2. Flushometers.
   3. Toilet seats.
   4. Protective shielding guards.
   5. Fixture supports.
   7. Urinals.
   8. Lavatories.
  10. Service sinks.
  11. Service basins.

1.3 DEFINITIONS
B. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.
C. Cast Polymer: Cast-filled-polymer-plastic material. This material includes cultured-marble and solid-surface materials.
D. Cultured Marble: Cast-filled-polymer-plastic material with surface coating.
E. Fitting: Device that controls the flow of water into or out of the plumbing fixture. Fittings specified in this Section include supplies and stops, faucets and spouts, shower heads and tub spouts, drains and tailpieces, and traps and waste pipes. Piping and general-duty valves are included where indicated.
F. FRP: Fiberglass-reinforced plastic.
G. PMMA: Polymethyl methacrylate (acrylic) plastic.
H. PVC: Polyvinyl chloride plastic.

1.4 SUBMITTALS
A. Product Data: For each type of plumbing fixture indicated. Include selected fixture and trim, fittings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.
B. Shop Drawings: Diagram power, signal, and control wiring.
C. Operation and Maintenance Data: For plumbing fixtures to include in emergency, operation, and maintenance manuals.

D. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.
   1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

G. Comply with the following applicable standards and other requirements specified for plumbing fixtures:
   1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
   3. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.
   7. Vitreous-China Fixtures: ASME A112.19.2M.

H. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:
   1. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.

I. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:
2. Brass and Copper Supplies: ASME A112.18.1.

J. Comply with the following applicable standards and other requirements specified for miscellaneous components:
1. Floor Drains: ASME A112.6.3.
4. Off-Floor Fixture Supports: ASME A112.6.1M.

1.6 EXTRA MATERIALS
A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.
2. Faucet Cartridges and O-Rings: Equal to 5 percent of amount of each type and size installed.
3. Flushometer Valve, Repair Kits: Equal to 10 percent of amount of each type installed, but no fewer than 12 of each type.
4. Provide hinged-top wood or metal box, or individual metal boxes, with separate compartments for each type and size of extra materials listed above.
5. Toilet Seats: Equal to 5 percent of amount of each type installed.
6. Dry Urinal Trap-Seal Cartridges: Equal to 200 percent of amount of each type installed, but no fewer than 12 of each type.
7. Dry Urinal Trap-Seal Liquid: Equal to 1 gal for each urinal installed.

PART 2 PRODUCTS

2.1 LAVATORY FAUCETS
A. Lavatory Faucets: Refer to plumbing fixture schedule
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Standard Companies, Incorporated
   b. Chicago Faucets.
   c. Delta Faucets

2.2 SINK FAUCETS
A. Sink Faucets: Refer to plumbing fixture schedule.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Standard Companies, Incorporated
   b. Chicago Faucets.
   c. Delta Faucets

2.3 FLUSHOMETERS
A. Flushometers: Refer to plumbing fixture schedule
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Standard Companies, Incorporated
   b. Sloan

2.4 TOILET SEATS

A. Toilet Seats: Refer to plumbing fixture schedule
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard Companies, Incorporated
      b. Bemis Manufacturing Company.
      c. Church Seats.
      d. Kohler Company
      e. Olsonite Corp.

2.5 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers: Refer to plumbing fixture schedule.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. McGuire Manufacturing Company, Incorporated
      b. Plumberex Specialty Products Incorporated
      c. TCI Products.
      d. TRUEBRO, Incorporated
   2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

2.6 FIXTURE SUPPORTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Josam Company.
   2. Smith, Jay R. Mfg. Company
   3. Tyler Pipe; Wade Division
   4. Zurn Plumbing Products Group; Specification Drainage Operation.

B. Water-Closet Supports: Refer to plumbing fixture schedule
   1. Description: Combination carrier designed for accessible and standard mounting height of wall-mounting, water-closet-type fixture. Include single or double, vertical or horizontal, hub-and-spigot or hubless waste fitting as required for piping arrangement; faceplates; couplings with gaskets; feet; and fixture bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.

C. Urinal Supports: Refer to plumbing fixture schedule.
   1. Description: Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture and type II, urinal carrier with hanger and bearing plates for wall-mounting, urinal-type fixture. Include steel uprights with feet.

D. Lavatory Supports: Refer to plumbing fixture schedule.
   1. Description: Type I, lavatory carrier with exposed arms and tie rods, type II, lavatory carrier with concealed arms and tie rod, and type III, lavatory carrier with hanger plate and tie rod for wall-mounting, lavatory-type fixture. Include steel uprights with feet.

E. Sink Supports: Refer to plumbing fixture schedule.
   1. Description: Type I, sink carrier with exposed arms and tie rods, type II, sink carrier with hanger plate, bearing studs, and tie rod, and type III, sink carrier with hanger plate and exposed arms for sink-type fixture. Include steel uprights with feet.

2.7 WATER CLOSETS
A. Water Closets: Refer to plumbing fixture schedule
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard Companies, Incorporated
      b. Sloan

2.8 URINALS
A. Urinals: Refer to plumbing fixture schedule.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard Companies, Incorporated
      b. Sloan

2.9 LAVATORIES
A. Lavatories: Refer to plumbing fixture schedule.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard Companies, Incorporated
      b. Kohler Company

2.10 COMMERCIAL SINKS
A. Commercial Sinks: Refer to plumbing fixture schedule.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Krauss Stainless Steel Sinks.
      b. Elkay Manufacturing Company
      c. Just Manufacturing Company.

2.11 SERVICE SINKS
A. Service Sinks: Refer to plumbing fixture schedule.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard Companies, Incorporated
      b. Commercial Enameling Company.
      c. Eljer.
      d. Kohler Company

2.12 SERVICE BASINS
A. Service Basins: Refer to plumbing fixture schedule.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Fiat Plumbing Fixtures
   b. Mustee Plumbing Fixtures
   c. Crane Plumbing, L.L.C./Fiat Products.

PART 3 EXECUTION

3.1 COORDINATION
   A. Coordinate plumbing fixture rough-in locations and plumbing fixture manufactures installation requirements.

3.2 EXAMINATION
   A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
   B. Examine cabinets, counters, floors, and walls for suitable conditions where fixtures will be installed before rough-in.
   C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION
   A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers’ written instructions.
   B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
      1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
      2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
      3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
   C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.
   D. Install wall-mounting fixtures with tubular waste piping attached to supports.
   E. Install counter-mounting fixtures in and attached to casework.
   F. Install fixtures level and plumb according to roughing-in drawings.
   G. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
      1. Exception: Use ball valves if supply stops are not specified with fixture. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
   H. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.
   I. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.
   J. Install accessible urinals with rim height not more than 17-inches or less than 16.5-inches above the finished floor.
   K. Install flush valves for accessible urinals with handle centered 44-inches above the finished floor.
L. Install flush valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

M. Install toilet seats on water closets.

N. Install trap-seal liquid in dry urinals.

O. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

P. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.

Q. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

R. Install shower flow-control fittings with specified maximum flow rates in shower arms.

S. Install traps on fixture outlets.
   1. Exception: Omit trap on fixtures with integral traps.
   2. Exception: Omit trap on indirect wastes, unless otherwise indicated.

T. Install escutcheons at piping wall ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."

U. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section "Joint Sealants."

V. Connect hard wired flushometer valves to electrical power source in accordance with manufacturer's written instructions and in compliance with the National Electrical Code.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.

B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

E. Install fresh batteries in sensor-operated mechanisms.
3.6 ADJUSTING
A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
B. Operate and adjust disposers hot-water dispensers and controls. Replace damaged and malfunctioning units and controls.
C. Adjust water pressure at faucets and flushometer valves to produce proper flow and stream.
D. Replace washers and seals of leaking and dripping faucets and stops.

3.7 CLEANING
A. Clean fixtures, faucets, and other fittings with manufacturers’ recommended cleaning methods and materials. Do the following:
   1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
   2. Remove sediment and debris from drains.
B. After completing installation of exposed, factory-finished fixtures, faucets, and fittings, inspect exposed finishes and repair damaged finishes.

3.8 PROTECTION
A. Provide protective covering for installed fixtures and fittings.
B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION
SECTION 224500
EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY
A. This Section includes the following emergency plumbing fixtures:
   1. Combination units.
   2. Eyewash units

1.2 DEFINITIONS
A. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.

B. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Product Certificates: Submit certificates of performance testing specified in "Source Quality Control" Article.

D. Field quality control test reports.

E. Operation and Maintenance Data: For emergency plumbing fixtures to include in maintenance manuals.

1.4 QUALITY ASSURANCE

B. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

A. Comply with the following applicable code standards:
   1. Accessible plumbing fixtures shall comply with all of the requirements of CBC Section 1115B.
   2. Heights and location of all fixtures shall be according to CBC Section 1115B.4 and DSA Check List Fig. 15-A.

1.5 WARRANTY
A. Special Warranties: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of plumbing fixtures that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures of unit shell.
      b. Faulty operation of controls and valves.
   2. Warranty Period for Commercial Applications: Three years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 COMBINATION UNITS

A. Wall-Mounted, Plumbed Emergency Shower with Eyewash Combination Units:
   1. Basis of design equipment
      a. Haws Corporation model 8355WCW.
   2. Construction: 18 Gauge Type 304 Stainless Steel recessed cabinet.
   3. Piping:
      a. Material: Chrome-plated brass or stainless steel.
      b. Unit Supply: NPS 1-1/4 minimum to unit.
      c. Unit Drain: Outlet at back or side near bottom.
   4. Shower:
      a. Capacity: Not less than 20 gpm for at least 15 minutes.
      b. Supply Piping: NPS 1 with flow regulator and stay-open control valve.
      c. Control-Valve Actuator: Pull bar.
      d. Shower Head: 8-inch minimum diameter, chrome-plated brass or stainless steel.
      e. 1" supply piping from from shower head to control valve shall be recessed in wall and provided by contractor.
      f. Mounting: Ceiling Hanger.
   5. Eyewash Unit:
      a. Capacity: Not less than 0.4 gpm for at least 15 minutes.
      b. Supply Piping: NPS 1/2 with flow regulator and stay-open control valve.
      d. Spray-Head Assembly: Two receptor-mounted spray heads.
      e. Receptor: Chrome-plated brass or stainless steel bowl.
      f. Mounting: Wall mounting.

2.2 EYEWASH EQUIPMENT

A. Sink, Fixed-Position, Plumbed Eyewash Unit,
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following but are not limited to, the following:
   2. Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Acorn Safety; a division of Acorn Engineering Company.
      b. Bradley Corporation.
      c. Encon Safety Products.
      d. Guardian Equipment Co.
      e. Haws Corporation.
      f. Sellstrom Manufacturing Company.
      g. Speakman Company.
      h. WaterSaver Faucet Co.
   3. Capacity: Not less than 0.4 gpm for at least 15 minutes.
   4. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
   6. Spray-Head Assembly: Two spray heads positioned over sink.
   7. Mounting: Attached to sink receptor.

B. Sink, Swivel-Type, Plumbed Eyewash Unit,
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following but are not limited to, the following:
2. Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   a. Acorn Safety; a division of Acorn Engineering Company.
   b. Bradley Corporation.
   c. Encon Safety Products.
   d. Guardian Equipment Co.
   e. Haws Corporation.
   f. Sellstrom Manufacturing Company.
   g. Speakman Company.
   h. WaterSaver Faucet Co.

3. Capacity: Not less than 0.4 gpm for at least 15 minutes.
4. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
5. Control-Valve Actuator: Movement of spray-head assembly to position over sink.
6. Spray-Head Assembly: Two spray heads with offset piping.
7. Mounting: Deck next to sink.

2.3 SOURCE QUALITY CONTROL
A. Certify performance of plumbed and self-contained emergency plumbing fixtures by independent testing agency acceptable to authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine roughing-in for water and waste piping systems to verify actual locations of piping connections before plumbed emergency plumbing fixture installation.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EMERGENCY PLUMBING FIXTURE INSTALLATION
A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
B. Install fixtures level and plumb.
C. Fasten fixtures to wall per manufacturer’s instructions.
D. Install shutoff valves in water-supply piping to fixtures. Use ball valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Valves are specified in Division 22 Section “General Duty Valves for Plumbing Piping.”
   1. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
E. Install thermometers in supply and outlet piping connections to water-tempering equipment. Comply with requirements for thermometers specified in Division 22 “Meters and Gages for Plumbing Piping.”
F. Install trap and waste piping on drain outlet of emergency equipment receptors that are indicated to be directly connected to drainage system. Comply with requirements for waste piping specified in Division 22 “Sanitary Waste and Vent Piping.”
G. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system. Comply with requirements for waste piping specified in Division 22 “Sanitary Waste and Vent Piping.”

H. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

I. Locate equipment at elevations to meet all ADA and accessibility requirements including wheel chair accessibility.

3.3 CONNECTIONS

A. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Division 22 “Domestic Water Piping.”

B. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary waste and vent piping. Comply with requirements for waste piping specified in Division 22 "Sanitary Waste and Vent Piping."

C. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary waste or storm drainage piping.

D. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

3.4 FIELD QUALITY CONTROL

A. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.

B. Report test results in writing.

3.5 ADJUSTING

A. Adjust or replace fixture flow regulators for proper flow.

END OF SECTION
SECTION 224716
PRESSURE WATER COOLERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes pressure water coolers and related components.

1.2 SUBMITTALS
   A. Product Data: For each type of pressure water cooler.
      1. Include construction details, material descriptions, dimensions of individual components and
         profiles, and finishes.
      2. Include rated capacities, operating characteristics, electrical characteristics, and furnished spe-
         cialties and accessories.
   B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.3 EXTRA MATERIALS
   A. Furnish extra materials that match products installed and that are packaged with protective cover-
      ing for storage and identified with labels describing contents.
      1. Filter Cartridges: Equal to five percent of quantity installed for each type and size indicated, but
         no fewer than two of each.

PART 2 PRODUCTS

2.1 PRESSURE WATER COOLERS
   A. Pressure Water Coolers: Wall mounted, wheelchair accessible with bottle filler.
      1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
         lowing:
         a. Elkay Manufacturing Company (www.elkay.com)

PART 3 EXECUTION

3.1 EXAMINATION
   A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify ac-
      tual locations of piping connections before fixture installation.
   B. Examine walls and floors for suitable conditions where fixtures will be installed.
   C. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION
A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
B. Set freestanding pressure water coolers on floor.
C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
D. Install mounting frames, affixed to building construction, and attach recessed, pressure water coolers to mounting frames.
E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Install valves in locations where they can be easily reached for operation. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22 “Escutcheons for Plumbing Piping.”
G. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color.
H. Coordinate electrical connections with electrical contractor. Ensure that electrical connections are completely concealed from view within water cooler enclosure.

3.3 CONNECTIONS
A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
B. Comply with water piping requirements specified in Division 22 "Domestic Water Piping."
C. Install ball, gate, or globe shutoff valve on water supply to each fixture. Install valve upstream from filter for water cooler. Comply with valve requirements specified in Division 22 "General-Duty Valves for Plumbing Piping."
D. Comply with soil and waste piping requirements specified in Division 22 "Sanitary Waste and Vent Piping."

3.4 ADJUSTING
A. Adjust fixture flow regulators for proper flow and stream height.
B. Adjust pressure water-cooler temperature settings.

3.5 CLEANING
A. After installing fixture, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
B. Clean fixtures, on completion of installation, according to manufacturer’s written instructions.
C. Provide protective covering for installed fixtures.
D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION
SECTION 230500
COMMON WORK RESULTS FOR HVAC

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
B. This project is seeking LEED Certification. All materials and installation practices must be in accordance with USGBC guidelines for a LEED Certified project.

1.2 SUMMARY
A. Design Development
   1. Documents: Design development specifications may include plumbing and HVAC equipment not required for this project. Equipment and capacities are identified on the drawings. Refer to the specifications for equipment characteristics, components, accessories, and installation requirements. These documents are not for construction.
   2. GMP pricing documents: This is a preliminary copy of the contract documents. The documents (drawings and project manual) are incomplete and issued to present the design intent. Equipment, material, and labor required to provide complete operating systems shall be included in the GMP.
   C. This Section includes the following:
      1. Piping materials and installation instructions common to most piping systems.
      2. Transition fittings.
      3. Dielectric fittings.
      5. Equipment installation requirements common to equipment sections.
      6. Painting and finishing.
      7. Concrete bases.
      8. Supports and anchorages.

1.3 BASIS-OF-DESIGN
A. Equipment manufacturers listed on the equipment schedules are the basis-of-design. Manufactures listed in the specification other than the basis-of design manufacture are acceptable substitutions. Equipment schedules are on the drawings. Refer to specifications for unscheduled equipment.

1.4 DEFINITIONS
A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:
   1. CPVC: Chlorinated polyvinyl chloride plastic.
   2. PE: Polyethylene plastic.
   3. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:
   1. EPDM: Ethylene-propylene-diene terpolymer rubber.
   2. NBR: Acrylonitrile-butadiene rubber.

1.5 SUBMITTALS

A. Product Data: For the following:
   1. Transition fittings.
   2. Dielectric fittings.
   3. Escutcheons.

B. Welding certificates.

C. Coordination Drawings: Submit one copy for the engineers use. Division 23 coordination drawings will not be returned.
   1. Detail major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Indicate if sequence and coordination of installations are important to efficient flow of the Work. Include the following:
      a. Planned piping layout, including valve and specialty locations and valve-stem movement.
      b. Planned piping hanger layout including building attachments and building structural coordination.
      c. Clearances for installing and maintaining insulation.
      d. Clearances for servicing and maintaining equipment, accessories, and specialties, including space for disassembly required for periodic maintenance.
      e. Equipment and accessory service connections and support details
      f. Exterior wall and foundation penetrations.
      g. Fire- and smoke-rated wall and floor penetration.
      h. Sizes and locations of required concrete equipment curbs and bases.
      i. Scheduling, sequencing, movement, and positioning of large equipment into building during construction.
      j. Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.
      k. Access door and panel locations.
      l. Reflected ceiling plans to coordinate and integrate installation of air outlets and inlets, light fixtures, communication system components, sprinklers, and other ceiling-mounted items.

D. Equipment startup reports.
   1. Reports will indicate equipment was started and tested according to the manufactures recommendations and is operating as specified. Included test data.

E. Pre-demolition test reports.
1.6 QUALITY ASSURANCE
A. Comply with ASHRAE Guideline 4 – 2008 Preparation of operating and maintenance documentation for building systems.
B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
D. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.7 GUIDELINES, CODES AND STANDARDS
A. Refer to the most recently published edition for references to guidelines, and standards (examples: ASHRAE, NFPA, AWWA, ASTM) unless a specific edition is listed.
B. Installation and materials shall comply with applicable national, state, and local codes and ordinances.

1.8 DELIVERY, STORAGE, AND HANDLING
A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.
C. Deliver ducts and air handling equipment with factory or shop applied protective covering. Protective covering shall remain until installation.
D. Materials and equipment stored on site shall have a protective covering; open ends on equipment connections and ducts shall be covered. Duct liner shall be encapsulated.

1.9 COORDINATION
A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.
B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."
D. Coordinate HVAC equipment installation with other building components.
E. Sequence, coordinate, and integrate installations of HVAC materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.
F. Coordinate connection of HVAC systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate connection of HVAC equipment and systems with building electrical systems.

1.10 GUIDELINES, CODES AND STANDARDS

A. Refer to the most recently published edition for references to guidelines, and standards (examples: ASHRAE, NFPA, AWWA, ASTM) unless a specific edition is listed.

B. Installation and materials shall comply with applicable national, state, and local codes and ordinances.

1.11 NOISE CRITICAL SPACES

A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). These spaces are the Theater, all spaces within the theater footprint (grids AF.3 to AC.2 and A1 to A6), Studios, Classrooms, Meeting Rooms, Green Room, and the Scene Shop.

B. Penetrations by ducts, pipes and conduit between noise critical spaces shall be sleeved, packed and sealed airtight with non-hardening sealant as described herein. Refer also to other requirements in plans and specifications. Where information is duplicated, in conflict, complementary, etc. the more stringent acoustic requirements shall apply.

PART 2 PRODUCTS

2.0 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.1 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
   a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
   b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping:
   1. CPVC Piping: ASTM F 493.
   2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.

2.3 DIELECTRIC FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   2. Pipeline Seal and Insulator, Incorporated (Pipeline Seal and Insulator, Incorporated)
   3. Watts Industries, Incorporated; Water Products Division (www.watts.com)

B. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

C. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
   1. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

E. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 degrees F.

2.4 CONCRETE BASES

A. Refer to Division 03 Section "Cast-in-Place Concrete".

2.5 GROUT

A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.
   1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.1 HVAC DEMOLITION

A. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.
   1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
4. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.
B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
F. Install piping to permit valve servicing.
G. Install piping at indicated slopes.
H. Install piping free of sags and bends.
I. Install fittings for changes in direction and branch connections.
J. Install piping to allow application of insulation.
K. Select system components with pressure rating equal to or greater than system operating pressure.
L. Sleeves are not required for core-drilled holes through walls.
M. Verify final equipment locations for roughing-in.
N. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.3 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3.4 PIPING CONNECTIONS

A. Make connections according to the following unless otherwise indicated:
1. Install unions, in steel piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Wet Piping Systems: Install electric nipple fittings to connect piping materials of dissimilar metals.

B. Welded Joints: Construct joints according to AWS D1.12, using qualified processes and welding operators according to AWS D9.4/9.4M, Appendix. Plastic Piping: Select appropriate gasket material, size, type, and thickness for service application. Extend grease fittings to accessible locations.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated. To tube end, use lead-free solder alloy complying with ASTM B 32. Wet Piping Systems: Install electric nipple fittings to connect piping materials of dissimilar metals.

E. Threaded Joints: Thread pipe with tapered pipe thread according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

F. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix. PVC Pressure Piping: Join according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
3. PVC Non-pressure Piping: Join according to ASTM D 2855.
4. Use suitable lubricants on bolt threads.
F. Refer to equipment shop drawings for rough in locations; do not scale drawings.

3.6 PRODUCT INSTALLATION

A. Manufacturer’s instructions:
   1. Except where more stringent requirements are indicated, comply with the product manufacturer’s instructions and recommendations.
   2. Consult with manufacturer’s technical representatives, who are recognized as technical experts, for specific instructions on special projects conditions.
   3. If conflict exists, notify the Owner’s in writing and obtain his instruction before proceeding with the work in question.

B. Movement of Equipment:
   1. Wherever possible, arrange for the movement and positioning of equipment so that enclosing partitions, walls and roofs will not be delayed or need to be removed.
   2. Otherwise, advise Contractor of opening requirements to be maintained for the subsequent entry of equipment.

C. Heavy Equipment:
   1. Coordinate the movement of heavy items with shoring and bracing so that the building structure will not be overloaded during the movement and installation.
   2. Where plumbing products to be installed on the existing roof are too heavy to be hand-carried, do not transport across the existing roof deck. Position by crane or other device so as to avoid overloading or otherwise damaging the roof deck.

D. Clearances:
   1. Install Piping:
      a. Straight and true.
      b. Aligned with other work.
      c. Close to walls and overhead structure (allowing for insulation).
      d. Concealed, where possible, in occupied spaces.
      e. Out-of-the-way with maximum passageway and headroom remaining in each space.
   2. Do not obstruct windows, doors and other openings.
   3. Coordinate location of piping systems required to slope for drainage (over other service lines and ductwork).

E. Access:
   1. Provide for removal, without damage to other parts, of plumbing systems.
   2. Connect equipment for ease of disconnecting with minimum of interference with other work.
   3. Provide unions where required.
   4. Locate operating and control equipment and devices for easy access.
   5. Provide access panels where equipment or devices are concealed by non-accessible finishes and similar work.

3.7 CLOSING-IN OF UN-INSPECTED WORK

A. Do not allow or cause any work to be covered up or enclosed until inspected, tested and approved.

B. Should any work be enclosed or covered up before such inspection and test, Contractor shall, at his/her own expense, uncover work and after it has been inspected, tested and approved, make repairs with such materials as necessary to restore his/her work and that of other Divisions to original and proper condition.
3.8 PAINTING
A. Painting of HVAC systems, equipment, and components is specified in Division 09 Sections "Interior Painting" and "Exterior Painting."
B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.9 CONCRETE BASES
A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions.
   1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
   2. Provide 4-inch high curbs and bases with finished edges, unless otherwise indicated.
   3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
   4. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   6. Install anchor bolts to elevations required for proper attachment to supported equipment.
   7. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   8. Use 3000-psi, 28-day compressive-strength concrete and reinforcement.
   9. Chamfer all outside corners of concrete bases and curbs.

3.10 ERECTION OF METAL SUPPORTS AND ANCHORAGES
A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.
C. Field Welding: Comply with AWS D1.1.

3.11 ERECTION OF WOOD SUPPORTS AND ANCHORAGES
A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.
B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
C. Attach to substrates as required to support applied loads.

3.12 GROUTING
A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
B. Clean surfaces that will come into contact with grout.
C. Provide forms as required for placement of grout.
D. Avoid air entrapment during placement of grout.
E. Place grout, completely filling equipment bases.
F. Place grout on concrete bases and provide smooth bearing surface for equipment.
G. Place grout around anchors.
H. Cure placed grout.

3.13 SEALANTS
A. Comply with joint-sealant materials and applications specified in Section 078400 “Firestopping,” Section 078443 “Fire-resistant Joint Sealants,” Section 079000 “Joint Protection,” and Section 092900 “Gypsum Board: Acoustical sealants.”

3.14 CYBERSECURITY RISK MITIGATION STRATEGY
A. Coordinate with Owner’s IT Department to restrict external network access to Internet connected system through virtual private network (VPN) connections only.
B. Security Event Log: Coordinate with the Owner to configure security event logging. Access to security logs shall be limited to users with proper authentication. Security logs shall be time stamped with Time and Date metadata for auditing and back-up.
C. Disable any protocols for remote connectivity, unless constantly required for day-to-day operations.
D. All external transport data shall be routed through encrypted channels with 2048-bit secure sockets layer (SSL).
E. Coordinate with Owner’s IT Department to implement a Web server-based human machine interface (HMI) that relies on IT technologies to secure access and restrict ports that can be opened on the firewall. Coordinate with Owner’s IT Department to restrict access to known IP addresses only.
F. Where building system networks are not physically separate from IT business networks, coordinate with Owner’s IT Department to segregate networked and Internet connected systems from the IT business network using virtual local area network (VLAN) IT technologies to restrict internal attacks/breakdowns.
G. Set unique, cryptographically strong passwords for administrator and user accounts. Default passwords must be changed before systems are connected to the Owner’s network.
H. Collect only the data that is necessary for analytics and optimization.
I. References:

3.15 RESPONSIBILITY MATRIX (RECOMMENDED)
A. The responsibility matrix is a partial list of items requiring coordination and is only a recommendation to the contractor. The contractor is responsible for the complete installation and operation of equipment and materials.
B. Refer to Division 22 Section “Common Work results for Plumbing” for additional requirements.
C. Key:
   1. BAS Building Automation System (Temperature Control Installer)
2. FP Fire Protection (Division 21)
3. PLBG Plumbing Installer (Division 22)
4. HVAC Mechanical Installer (Division 23)
5. E Electrical Installer (Division 26)
6. D Data/Communication Cabling Installer (Division 27)
7. O Other

### 3.16 PRELIMINARY OPERATION

A. The Owner’s Representative reserves the right to operate portions of the mechanical system on a preliminary basis without voiding the guarantee or relieving the Contractor of his/her responsibilities.

### 3.17 OPERATIONAL TESTS

A. Before operational tests are performed, demonstrate to the Owner’s Representative that systems and components are complete and fully charged with operating fluid and lubricants. Systems shall be operable and capable of maintaining continuous uninterrupted operation during the operating and demonstration period.

B. After systems have been completely installed, connections made, and tests completed, operate the systems continuously for a period of five working days during the hours of a normal working day.

C. Rotating equipment shall be in dynamic balance and alignment.

D. Tests required in various sections herein shall be completed.

E. Notify the Owner’s Representative, in writing, two weeks in advance of this operational period.

F. This operational test may be concurrent with instruction of the Owner's operating personnel.
3.18 COMPLIANCE TESTS

A. Conduct tests for individual components of all portions of the installation as may be required by the various Sections of this Division to comply with the Contract Documents. Tests shall be made in the presence of the Owner’s Representative. Costs of tests shall be borne by the Contractor. Contractor shall provide all instruments, equipment, labor and materials to complete the tests. These tests may be required at any time between the installation of the work and the end of the warranty period. Should these tests expose any defective materials, poor workmanship or variance with requirements of Contract Documents, Contractor shall make any changes necessary and remedy any defects at no cost to the Owner.

END OF SECTION
SECTION 230502 - BASIC HVAC REQUIREMENTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Where contradictions occur between this Section and Division 01, and between contract specifications and drawings, the most stringent of the two shall apply. The Owner’s Representative shall decide which is most stringent.

B. All referenced and related provisions of Divisions 21, 22 and 26 shall also apply to the work of this Section as if fully repeated herein.

C. Provisions of this Section shall also apply to all Division 23 work.

D. Building systems commissioning: An independent third party Commissioning Agent will document completion of the Plumbing, HVAC, and Electrical Systems for the project. The Construction Manager and Division Contractors are members of the Commissioning Team and will facilitate completion of the Commissioning process. Refer to other sections for the project Commissioning requirements and roles and responsibilities of each member of the Commissioning Team.

1.2 DEFINITIONS

A. The definitions of Division 01 and the General Conditions of the Specifications also apply to the Division 23 contract.

B. “Contract Documents” constitute the drawings, specifications, general conditions, project manuals, etc., prepared by engineer (or other design professional in association with engineer) for contractor's bid or contractor's negotiations with the Owner. The Division 23 drawings and specifications prepared by the engineer are not Construction Documents.

C. “Construction Documents”, “construction drawings” and similar terms for Division 23 work refer to installation diagrams, shop drawings and coordination drawings prepared by the contractor using the design intent indicated on the Engineer’s Contract Documents. These specifications detail the contractor's responsibility for “Engineering by Contractor” and for preparation of construction documents.

D. “Furnish” means to “supply” and usually refers to an item of equipment.

E. “Install” means to “set in place, connect and place in full operational order”.

F. “Provide” means to “furnish and install”.

G. “Equal” or “Equivalent” means “meets the specifications of the referenced product or item in all significant aspects”. Significant aspects shall be as determined by the Owner’s Representative.

H. “Work by other(s) Divisions”, “re: Division” and similar expressions mean work to be performed under the contract documents, but not necessarily under the Division of Section of the work on which the note appears. It is the contractor’s sole responsibility to coordinate the work of the contract between his/her suppliers, subcontractors and employees. If clarification is required, consult Owner’s Representative before submitting bid.

I. By inference, any reference to a “contractor” or “sub-contractor” means the entity, which has contracted with the Owner for the work of the Contract Documents.

J. “Engineer” means the design professional firm, which has prepared these contract documents. All questions, submittals, etc. of this Division shall be routed to the Engineer (through proper contractual channels).
K. “Low Voltage Control Wiring” refers to all wiring systems which are 24 volts or less.
L. Exposed Locations: Locations in Mechanical Rooms or other areas exposed to view.
M. Concealed Locations: Locations in chases, shafts, furred spaces, attics, crawl spaces, above suspended ceilings, or other locations not exposed to view.

1.3 COORDINATION WITHIN DIVISION 23

A. Contract Documents:
1. General: The Contract Documents are diagrammatic showing certain physical relationships, which must be established within Division 23 work and its interface with other work. Such establishment is the exclusive responsibility of the Contractor. Drawings shall not be scaled for the purpose of establishing dimensions, clearances or material quantities.
2. Supplemental Instructions: The exact location for some items in this Specification may not be shown on the Drawings. The location of such items may be established by the Owner’s Representative during the progress of the work.
3. Discrepancies:
   a. Examine Drawings and Specifications of all Divisions of the work.
   b. Report any discrepancies to the Owner’s Representative and obtain written instructions before proceeding.
   c. Should there be a conflict within or between the Specifications or Drawings the most stringent or higher quality requirements shall apply.
   d. Items called for either in the Specifications or on the Drawings shall be required as if called for in both.
4. Constructability:
   a. Examine Drawings and Specifications of all Divisions of the work.
   b. Report any issues to the Owner’s Representative which may prevent installation of Division 23 work in accordance with the Contract Documents and the original construction contract.

B. Contractor shall be responsible for providing proper documentation of equipment product data and shop drawings to all entities providing service.

C. Coordination Drawings: Prepare coordination drawings in accordance with Division 01, Section “Submittals” to scale of 1/4” = 1'-0” or larger, detailing major elements, components, and systems of HVAC equipment (i.e. equipment rooms and exterior equipment areas) and materials in relationship with other systems, installations and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are important to the efficient flow of the work, including (but not limited to) the following:
1. Indicate all ductwork, piping (HVAC, Plumbing and Fire Suppression), electrical equipment and conduits, structural and architectural elements in these areas as well.
2. Ductwork shop drawings shall include manual volume dampers, access doors, airflows (cfm’s), etc.
3. Sizes and locations of concrete pads, piers, curbs and bases.
4. Provide all necessary sections and elements for clarification.
5. Indicate all seismic restraint and support systems to be used for all HVAC equipment throughout the project.
6. Ductwork and piping transitions from rooftop units to shafts or horizontal ducts.
7. Failure to produce or submit coordination drawings does not dismiss the Contractor’s responsibility for translating the design intent of the Contract Documents into Construction Documents.
8. The coordination drawings shall include all trades with different colors representing different trades; and shall be signed off by all parties, but not limited to electrical, plumbing, fire protection, building automation and temperature control, and test and balance subcontractors, having work in the area. These drawings shall be submitted to the Owner’s Representative for review and approval.

D. Deferred Approval Items: Division 01.

E. Utility Connections:
   1. Coordinate the connection of HVAC system with utilities and services.
   2. Comply with regulations of utility suppliers.
   3. The contract documents indicate the available information on existing utilities and services, and on new services (if any) to be provided by utility companies and agencies.
      a. Notify the Owner’s Representative immediately if discrepancies are found.
   4. Coordinate HVAC utility interruptions one week in advance in writing with the Owner’s Representative and the Utility Company.
      a. Plan work so that duration of the interruption is kept to a minimum.

1.4 COORDINATION WITH OTHER DIVISIONS

A. General:
   1. Coordinate the Division 23 work with the progress of the work of the other trades.
   2. Complete the entire installation as soon as the condition of the building will permit.
   3. Contractor is responsible for coordination of their work with the Owner’s facility staff engaged in building automation, commissioning of systems, fire alarm system, etc.

B. Chases, Inserts and Openings:
   1. Provide measurements, drawings and layouts so that openings, inserts and chases in new construction can be built and coordinated as construction progresses.
   2. Check sizes and locations of openings provided.
   3. Any cutting and patching made necessary by failure to provide measurements, drawings and layouts at the proper time shall be done at no additional cost to the Owner.

C. Support Dimensions: Provide dimensions and drawings so that concrete bases and other equipment supports to be provided under other Sections of the Specifications can be built at the proper time.

D. Deferred Approved Items: Division 01.

1.5 ENGINEERING BY CONTRACTOR

A. The construction of this building requires the Contractor to design several systems of subsystems. All such designs shall be the complete responsibility of the Contractor.

B. Systems or subsystems which require responsibility by the Contractor and submitted to the Engineer for review include, but are not limited to:
   1. Equipment, ductwork and piping supports, not detailed in the drawings.
   2. Pipe and duct hangers and anchors not specified in these documents, or catalogued by the manufacturer.
   4. Thermal pipe stress analysis.

1.6 REGULATORY REQUIREMENTS

A. General:
1. Regulatory Compliance: Work performed under this Division shall comply with the latest currently adopted editions of Codes and Regulations including, but not limited to those listed below.

2. Minimum Requirements: The requirements of the Drawings and Specifications are the minimum that will be allowed, unless such requirements are exceeded by applicable Codes or Regulations, in which case the Code or Regulation requirement shall govern.

3. Code Changes: Should a code change occur between time of proposal and date of permit issue, and the Contractor has unnecessarily delayed the acquisition of permits, the Contractor shall hold the Owner free from additional expense resulting from such Code change.

B. Codes: Comply with the Currently Adopted (at Time of Contract Award) Codes

C. Comply with the Latest Editions of Applicable Regulations and Standards, Including:
   2. Underwriter’s Laboratories, Inc. (UL).
   5. American Society of Mechanical Engineers (ASME).
   10. Sheet Metal and Air Conditioning Contractors National Association (SMACNA).
   11. American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE).

D. Requirements of Local Utility Companies: Comply with rules and regulations of local utility companies. Include in bid the cost of all valves, valve boxes, meter boxes, meters and such accessory equipment, which will be required for the project.

E. Markings on Controllers: All mechanical equipment furnished with a controller/starter shall be marked with electrical data per NEC Section 430.8.

F. Additional Regulations: Follow additional regulations which appear in individual Sections of Specifications.

G. Contradictions: Where codes are contradictory, follow the most stringent, unless otherwise indicated in Plans or Specifications. The Owner’s Representative shall determine which is the most stringent.

H. Contract Documents Not in Compliance:
   1. Where it is not noted that the Drawings and Specifications do not comply with the minimum requirements of the codes, notify the Owner’s Representative in writing during the Bidding Period of the revisions required to meet Code Requirements. After entering into contract, Contractor will be held to complete all work necessary to meet Code Requirements without additional expense to the Owner.
   2. Follow Drawings and Specifications where they are superior to Code Requirements.

I. Permits:
   1. Contractor shall pay for and obtain all permits required by authorities and agencies having jurisdiction for the work in this Division.
   2. Post permits as required.

J. Inspections and Tests:
   1. Arrange for all required inspections and tests.
   2. Pay all charges.
   3. Notify the Owner’s Representative in writing 72 hours before tests.
4. Submit one copy for Owner’s record of permits. Licenses, inspection reports and test reports.

1.7 EQUIVALENTS AND SUBSTITUTIONS

A. The applicable paragraphs for General Requirements, Division 01 apply herein.

B. Basis of Design: The manufacturer’s name and product listed on the drawings, or listed first of several names in these Specifications, is used as a basis for design to establish space requirements, a standard of quality and performance.

C. Equivalents: Products of one or more other manufacturer’s names listed in these Specifications following the words “or equivalent by” may be selected, subject to paragraph below titled “Contractor’s Responsibility for Equivalent and Substitutions”.

D. Other Options:
   1. For products specified by naming only one manufacturer, refer to paragraph below under “Substitutions”.
   2. For products specified only by performance characteristics or reference standards, select any manufacturer meeting the requirements.

E. Substitutions: Requests for acceptance of a product of manufacturer’s name not listed in these Specifications will be considered if any one of the following conditions is met:
   1. The named product is not available because of strikes or discontinuance of manufacture; and the proposed product is equivalent to the named product.
   2. The proposed product is superior to the named product, in the opinion of the Owner’s Representative.
   3. The proposed product is equivalent to the named product and its use will be to the advantage of the Owner, by the Owner receiving an equitable credit or cost savings. The Owner’s Representative reserves the right to reject any substitution.
   4. Submit proposed substitutions with bid along with alternate price, complete descriptive data and a comparison of the substitute manufacturer’s product with specified product. Request for acceptance of a product of manufacturer’s name not listed in these Specifications, is subject to the paragraph titled “Contractor’s Responsibility Equivalents and Substitutions”.

F. Contractor’s Responsibility for Equivalents and Substitutions:
   1. Items submitted as a substitution to the Basis of Design or listed general equivalents shall be identified as such and shall include a written request for substitution indicating the following:
      b. Contract time adjustment.
      c. Item by item breakdown of differences between Basis of Design and substituted item.
      d. Operation, maintenance and energy cost difference.
   2. Products of manufacturer must match the features, construction, performance and size of those selected for design. Standard catalogued may require certain modifications to meet specified requirements.
   3. The responsibility for providing that specified requirements have been met remains with the manufacturer and Contractor. Should the substituted item fail to perform in accordance with the Specifications, replace same with the originally specified item without extra cost to the contract.
   4. When requesting review of an equivalent or substituted product, submit a comparison chart listing features, construction, performance and sizes of name product versus equivalent or substituted product.
   5. Submittals for review of an equivalent or substituted product will be reviewed for acceptability when all the above requirements have been met. Contractor shall be responsible for all costs incurred by the Architect and Engineer for review of equivalency beyond initial review.
   6. Coordinate the installation of the product with all trades.
7. Contractor shall be responsible for changes in electric wiring, materials and for all other additional costs of construction by all trades involved to accommodate the product to perform the same as the product used in the “Basis of Design”.
8. Coordination of General Equivalents and Substitutions: Where Contract Documents permits selection from general equivalents, or where substitutions are authorized, coordinate clearance and other interface requirements with HVAC and other work.
9. Provide necessary additional items so that selected or substituted item operates equivalent to the Basis of Design and properly fits in the available space allocated for the Basis of Design.
10. Contractor is responsible for assuring that piping, conduit, duct, flue and other service locations for general equivalents or substitutions do not cause access, service or operational difficulties any greater than would be encountered with the Basis of Design.
11. Failure to comply with these requirements will result in immediate rejection of the request for substitution.

1.8 GENERAL SUBMITTAL REQUIREMENTS

A. Refer to Division 01 for additional requirements.

B. Coordination and Sequencing:
   1. Coordinate submittals 3 weeks (minimum) prior to expected order date so that work will not be delayed by submittals.
   2. Do not submit product data, or allow its use on the project until compliance with requirement of Contract Documents has been confirmed by Contractor.
   3. Submittal is for information and record, unless otherwise indicated, and is not a change order request.
   4. Submitting contractor is responsible for routing reviewed submittals to all parties affected including but not limited to electrical, building automation and temperature control, and test and balance subcontractors.
   5. Make submittals for group of similar products or materials such as valves, fixtures, pumps, air handling units, fans, insulation, etc. or area of work complete and at one time, not in piecemeal fashion.
   6. Identify submittals with Architect’s project name and number, with item designation as indicated on drawings, and referenced to applicable paragraphs of the specifications. Submit in brochure form.
   7. Submittals of products needed to start of Project for its installation, or those requiring a long lead time for assembly or manufacturing, should be submitted before the others.

C. Preparations of Submittals:
   1. Refer to Division 01 requirements.
   2. Provide permanent marking on each submittal to identify project, date, Contractor, Subcontractor, Supplier, submittal name and similar information to distinguish it from other submittals.
   3. Indicate any portions of work, which deviate from the Contract Documents.
      a. Explain the reasons for the deviations.
      b. Show how such deviations coordinate with interfacing portions of other work.
   4. Show Contractor’s executed review and approval marking.
   5. Provide space for the Owner’s Representative “Action” marking.
   6. Submittals, which are received from sources other than through Contractor’s office, will be returned “Without Action”.
   7. Submittals shall be presented in a neat and legible fashion and shall be returned “Without Action” if presented in any other fashion.

D. Response to Submittals: Where standard product data has been submitted, it is recognized:
   1. That the Submitter has determined that the products fulfill the specified requirements.
2. That the submittal is for the Owner’s Representative information only, but will be returned with appropriate action where observed to be not in compliance with the requirements.

E. If more than two submittals (either for shop drawings, or test and balance reports) are made by the Contractor due to the incompleteness, non-compliance, errors, omissions, etc. the Owner reserves the right to charge the Contractor for subsequent reviews by their consultants. Such extra fees shall be deducted from payments by the Owner to the Contractor.

1.9 SPECIFIC CATEGORY SUBMITTAL REQUIREMENTS

A. Manufacturer’s Data:
   1. Where pre-printed data covers more than one distinct product, size, type, material, trim, accessory group or other variation, mark submitted copy with black ink to indicate which of the variations is to be provided.
   2. Delete or mark-out significant portions of pre-printed data, which are not applicable.
   3. Where operating ranges are shown, mark data to show portion of range required for project application.
   4. For Each Product, Include the Following:
      a. Sizes.
      b. Weights.
      c. Speeds.
      d. Capacities.
      e. Piping and electrical connection sizes and locations.
      f. Statements of compliance with the required standards and regulations.
      g. Performance data.
      h. Manufacturer’s specifications and installation instructions.

B. Shop Drawings:
   1. Prepare HVAC shop drawings, except diagrams, to accurate scale.
      a. Show clearance dimensions at critical locations.
      b. Show dimensions of spaces required for operation and maintenance.
      c. Show interfaces with other work, including structural support.

C. Test Reports:
   1. Submit test reports, which have been signed and dated by the firm performing the test.
   2. Prepare test reports in the manner specified in the standard or regulation governing the test procedure (if any) as indicated.

D. Required Equipment and Shop Drawing Submittals:
   1. Provide a submittal schedule with bid.
   2. Provide equipment submittals for each item of equipment specified or scheduled in the Contract Documents.
   3. Submittal schedule shall show each item of equipment, applicable section of the Specifications where it is described, applicable drawing number and schedule name where it is scheduled, date of Contractor’s proposed submittal to the Owner's Representative, required date of receive submittal from the Owner’s Representative and schedule order date.
   4. Provide a HVAC Shop Drawing Schedule for submission to the Owner’s Representative with the Submitted Schedule.

1.10 COMPATIBILITY

A. General: Provide products, which are compatible with other products of the HVAC work, and with other work, requiring interface with the HVAC work.
B. Power Characteristics: Where power characteristics are not stated in Division 23 Sections, refer to the Sections of Division 26 and the Electrical Drawings for the power characteristics of each power driven item of HVAC equipment. Coordinate available power with Electrical Contractor before ordering equipment. HVAC Contractor shall be responsible for ordering equipment to meet the available power characteristics. If there is a conflict between Division 23 documents and Division 26 documents, provide a written notification to the Owner’s Representative for direction. Do not order equipment prior to determining the proper electrical service. No contact cost adjustment will be allowed for equipment ordered in conflict with the available power characteristics.

C. Mechanical units shall operate on the power supply as specified on the equipment schedule. Power and control connections shall have terminal block or terminal strip connections.

1.11 RECORD DRAWINGS

A. Drawings:
   1. Record of Project progress: Maintain drawings available at the job site for inspection. Keep an accurate, legible and continuously updated record of installed locations and all project revisions other than revised drawings issued by the Architect, including source and date of authorization. Utilize only contract drawing symbols for recording the work. Drawing notations to be sufficiently clear in the representation of the work, for utilization by a CADD operator (drafts person) who is not necessarily familiar with the installed work.
   2. Record of Installation: At the conclusion of the work, deliver one (1) set of updated drawings to the Owner’s Representative for review. Following the review, Contractor shall have incorporated by a competent CADD operator all of the installed data represented on the project progress drawings.
   3. Include in Record Drawings the Following:
      a. Revisions, including sketches, bulletins, change orders, written addenda and directives, clarifications and responses generated by requests for information (RFIs), regardless of source of the revision.
      b. Location and configuration of equipment with related housekeeping pads.
      c. Physical routing of ductwork, exposed and above ceilings with locations of fire dampers, combination fire/smoke dampers, smoke detectors, diffusers, registers, grilles, air terminal units, appurtenances, etc., plainly marked and identified.
      d. Location of room thermostats, humidistats and sensors.
      e. Physical routing of piping, underground, exposed and above ceiling with locations of valves and accessories plainly marked and identified.
      f. Location of piping below building and on exterior, valves, manholes, appurtenances and stub outs dimensioned from buildings and permanent structures, both horizontally and vertically.
      g. Location of wall and ceiling access panels.

B. Temperature Control Drawings:
   1. Indicate As-Built Conditions of Work Under This Contract Including:
      a. Ladder wiring diagram.
      b. Schematic diagrams.
      c. One line system diagram.
      d. Schematic of equipment with control devices located and identified.
      e. Wiring or tubing termination diagrams.
      f. Floor plan indicating all device locations, panels, etc.
      g. Control sequences.

C. Acceptance: As a condition for acceptance of the work, deliver two (2) sets of Auto CAD Latest Version CDs and one set of signed and dated reproducible drawings to the Owner’s Representative and obtain a receipt.
1.12 OPERATING AND MAINTENANCE DATA

A. Refer to Division 01 requirements.

B. Submission:
   1. Submit three typed and bound copies of Operating and Maintenance (O&M) Manuals prior to scheduling systems demonstrations for the Owner’s Representative, as specified in Division 01.
   2. Bind each Maintenance Manual in one or more vinyl covered, 3-ring binders, with pockets for folded drawings.
      a. Mark the spine of each binder with system identification and volume number.

C. Required Contents:
   1. Manuals shall have index with tab dividers for each major equipment section to facilitate locating information on a specific piece of equipment.
   2. Identifying data within each section with drawing code numbers as they appear on Drawings and Specifications. Include as a minimum the following data:
      a. Alphabetical list of system components, with the name, address and 24 hour telephone number of the company responsible for servicing each item during the first year of operation. Include point of contact for company.
      b. Operating instructions for complete system including:
         1) Emergency procedures for fire and failure of major equipment.
         2) Major start, operation and shut down procedures.
      c. Maintenance Instructions for Each Piece of Equipment Including:
         1) Equipment lists.
         2) Proper lubricants and lubricating instructions for each piece of equipment.
         3) Necessary cleaning, replacement and/or adjustment schedule.
         4) Product data.
         5) Installation instructions.
         6) Parts list.
         7) Temperature control diagrams and O&M information as specified above (as-built).
      d. Marked or changed prints locating concealed parts and variations from the original system design (as-built drawings).
      e. Balancing report.
      f. Valve schedule and associated piping schematics. See Section 230553, HVAC IDENTIFICATION.
      g. Copies of any extended equipment warranties which are greater than one year.

1.13 WARRANTIES

A. The warranty period is two years after Date of Acceptance.
   1. During this period, provide labor and materials as required to repair or replace defects in the HVAC system at no additional cost to the Owner. Provide certificate with O&M Manual submittal, which guarantees same-day service response to Owner’s call for all such warranty service.
   2. Provide certificate for such items of equipment, which have warranties in excess of one year. Insert copies in O&M Manuals.
   3. Provide extended manufacturers warranties to cover two years from date of acceptance if standard warranty starts any time prior to that date.
   4. Provide factory trained service personnel for all warranty work on the Building Automation and Automatic Temperature Control System.
   5. At time of bid, submit additional costs for extended warranties for principal equipment (e.g. AHUs, indirect evaporative units, heat exchangers, etc.).

B. Provide longer warranties where specified in individual specification sections.
C. Refer to Division 01 for additional requirements.

1.14 SPARE PARTS SPECIAL TOOLS
A. Deliver spare parts to the Owner’s Representative and obtain receipts at the time operating instructions are given to the Owner’s personnel.
B. Include the Following:
   1. V-Belts: One complete set of each size.
   2. Fuses: Each type used for all equipment utilizing fuses. Quantity 10%, but not less than two.
   3. Pilot Light Lamps: Each type used on the project. Quantity of 10%, but not less than two.
   4. Special Tools: Furnish special tools required for assembly, adjustment, setting or maintenance of equipment if such tool is not readily available on the commercial tool market.
   5. Maintenance Paint: Furnish one can of touch-up paint for each different factory finish, which is to be the final finished surfaced of the product.
   6. Alternate Parts: Under the individual HVAC sections, there are listed spare parts to be furnished under a bid alternate. Should the alternate be accepted, such spare parts shall be similarly delivered to the Owner.

1.15 SYSTEM ACCEPTANCE
A. Acceptance shall be contingent upon completion of final review and correction of all deficiencies. Satisfactory completion of the operational tests, which shall demonstrate compliance with all performance criteria, and the requirements of the Contract Documents.
B. Request a Final Review Prior to System Acceptance After Completion of the Following:
   1. Installation of all systems required by Contract Documents.
   2. Submission and acceptance of service manuals.
   3. Identification.
   4. Cleaning.
   5. Satisfactory operation of all systems for a period of one week.

1.16 MANDATORY GOVERNING PROVISION
A. Omissions of words or phrases, such as “the Contractor shall”, “in conformity with”, “shall be”, “as noted on the Drawings”, “according to the Drawings”, “an”, “the”, and “all” are intentional.
B. Omitted words or phrases shall be supplied by inference.

1.17 OWNER FURNISHED EQUIPMENT
A. All equipment called out in the Specifications or shown on the Drawings as “Owner Furnished Equipment” shall be installed and connected under this contract. Provide rough-ins for all future connections indicated, unless otherwise specifically indicated on the Drawings.

1.18 TEMPORARY FACILITIES
A. Light, heat, power, etc.:
   1. Contractor shall be responsible for providing temporary electricity, heat and other facilities as specified in Division 01.
   2. Contractor shall be responsible for maintaining the equipment in an as-new condition. Equipment will not be turned over to the Owner until it is brought up to as-new condition.
   3. Contractor shall be responsible for maintaining acceptable indoor air quality in adjacent occupied spaces.
B. Use of permanent building for temporary heating or cooling:
1. Permanent building equipment shall not be used without written permission from the Owner's Representative. If this equipment is used for temporary heating, cooling, or ventilation, it shall be adequately maintained per manufacturer's instructions and protected with filters, strainers, controls, relief, etc. The Contractor shall protect all equipment and systems as directed by the Owner’s Representative. The warranty period shall not start until the equipment is turned over to the Owner for his/her use. The Contractor shall provide extended warranties for parts and labor for such equipment. Equipment shall not be turned over to the Owner until the temperature controls have been tested and accepted by the Owner’s Representative.

1.19 SAFETY PROVISIONS

A. Equipment Nameplates: Provide power-oriented HVAC equipment with a permanent nameplate attached by the manufacturer, indicated:
   1. The manufacturer.
   2. Product name.
   3. Model number.
   4. Serial number.
   5. Speed.
   6. Capacity.
   7. Power characteristics.
   8. Labels of testing, or inspecting agencies 9. Other similar data.

B. Where manufacturer affixed nameplate is not available, Contractor shall fabricate and attach nameplate.

C. Guards:
   1. Unless equivalent guards are provided integral with the equipment, enclose each belt drive (including sheaves) on both sides in a galvanized, one inch, mesh screen of No. 18 gauge steel wire or expanded metal, fastened to an approved, structural steel frame, securely fastened to the equipment or floor.
   2. Provide tachometer holes at shaft centers. Unless equivalent guards are provided integral with the equipment, install a solid guard of No. 20 gauge galvanized steel over the coupling of each item of direct-driven equipment.
   3. Sides are not required on these guards except to ensure rigidity.

PARTS 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION

3.1 INSTALLATION GENERAL REQUIREMENTS

A. Furnish, apply, install, connect, erect, clean, and condition manufactured materials and equipment as recommended in manufacturer’s printed directions (maintained on job site during installation).

B. Provide all attachment devices and materials as necessary to secure materials together or to other materials.

C. Make allowances for ample and normal expansion and contraction for all building components and piping systems that are subject to such.

D. Install materials only when conditions of temperature, moisture, humidity and conditions of adjacent building components are conducive to achieving the best installation results.

E. Erect, install and secure components in a structurally sound and appropriate manner.
F. Where necessary, temporarily brace, shore, or otherwise support members until final connections are installed.

G. Leave all temporary bracing, shoring, or other structural supports in place as long as practical for safety and to maintain proper alignment.

H. Handle materials in a manner to prevent scratching, abrading, distortion, chipping, breaking, or other disfigurement.

I. Conduct work in a manner to avoid injury or damage to previously placed work.

J. Any work so impaired or damaged shall be replaced at no expense to Owner.

K. Fabricate and install materials true to line, plumb and level.

L. Leave finished surfaces smooth and flat, free from wrinkles, wraps, scratches, dents and other imperfections.

M. Furnish materials in longest practical lengths and largest practical sizes to avoid all unnecessary jointing.

N. Make all joints secure, tightly fitted, and as inconspicuous as possible by the best accepted practice in joinery and fabrication.

O. Consult the Owner’s Representative for mounting height or position of any unit not specifically indicated or located on Drawings or specified in Specifications.

P. Job mixed multi-component materials used in the work shall be mixed in such regulated and properly sized batches that material can be used before it begins to ‘set’.

Q. Mixing of a partially ‘set’ batch with another batch of fresh materials will not be accepted and entire batch shall be discarded and removed from site.

R. Clean all mixing tools and appliances that can be contaminated prior to mixing of fresh materials.

S. In addition to the above, refer to each Section of the Specifications for additional installation requirements for the proper completion of all work.

3.2 COORDINATION OF HVAC INSTALLATION

A. Inspection and Preparation:
   1. Examine the work interfacing with HVAC work, and the conditions under which the work will be performed, and notify the Owner’s Representative of conditions detrimental to the proper completion of the work at original contract price.
   2. Do not proceed with the work until unsatisfactory conditions have been corrected.

B. Layout:
   1. Layout the HVAC work in conformity with the Contract Drawings, Coordination Drawings and other Shop Drawings, product data and similar requirements so that the entire HVAC plant will perform as an integrated system, properly interfaced with other work recognizing that portions of the work are shown only in diagrammatic form.
   2. Where coordination requirements conflict with individual system requirements, comply with the Owner’s Representative decision on resolution of the conflict.
   3. Take necessary field measurements to determine space and connection requirements.
   4. Provide sizes and shapes of equipment so the final installation conforms to the intent of the Contract Documents.
   5. Provide necessary fittings to create offsets as required to coordinate with building structure and other trades, even if fittings are not shown on the Contract Drawings.
C. Integrate the HVAC work in ceiling spaces with suspension system, light fixtures and other work, so that required performance of each will be achieved.

3.3 PRODUCT INSTALLATION

A. Manufacturer’s Instructions:
   1. Except where more stringent requirements are indicated, comply with the product manufacturer’s instructions and recommendations.
   2. Consult with manufacturer’s technical representatives, who are recognized as technical experts, for specific instructions on special projects conditions.
   3. If conflict exists, notify the Owner’s Representative in writing and obtain his instruction before proceeding with the work in question.

B. Movement of Equipment:
   1. Wherever possible, arrange for the movement and positioning of equipment so that enclosing partitions, walls and roofs will not be delayed or need to be removed.
   2. Otherwise, advise Contractor of opening requirements to be maintained for the subsequent entry of equipment.

C. Heavy Equipment:
   1. Coordinate the movement of heavy items with shoring and bracing so that the building structure will not be overloaded during the movement and installation.
   2. Where HVAC products to be installed on the existing roof are too heavy to be hand-carried, do not transport across the existing roof deck. Position by crane or other device so as to avoid overloading or otherwise damaging the roof deck.

D. Clearances:
   1. Install Piping and Ductwork:
      a. Straight and true.
      b. Aligned with other work.
      c. Close to walls and overhead structure (allowing for insulation).
      d. Concealed, where possible, in occupied spaces.
      e. Out-of-the-way with maximum passageway and headroom remaining in each space.
   2. Do not obstruct windows, doors and other openings.
   3. Give the right-of-way to piping systems required to slope for drainage (over other service lines and ductwork).

E. Access:
   1. Provide for Removal, without Damage to Other Parts, of:
      a. Coils.
      b. Shafts.
      c. Fan wheels.
      d. Drives.
      e. Filters.
      f. Strainers.
      g. Bearings.
      h. Control components.
      i. Other parts requiring periodic replacement or maintenance.
   2. Connect equipment for ease of disconnecting with minimum of interface with other work.
   3. Provide unions where required.
   4. Locate operating and control equipment and devices for easy access.
   5. Provide access panels where equipment or devices are concealed by non-accessible finishes and similar work.
6. Ensure grease fittings for equipment are readily visible and accessible. Extend fittings when necessary.

3.4 EQUIPMENT SERVICE ACCESS AND MAINTAINABILITY

A. A “maintenance access” zone (vertically and horizontally) is to be defined and called out on coordination and shopdrawings and maintained through final construction. The maintenance access zone shall match the manufacturer’s recommendations and shall extend from the top of the unit or equipment to the finished floor without obstruction other than removable ceiling tile or moveable furnishings.

1. Coordination with architectural, mechanical, electrical, fire protection and plumbing equipment is required; no service access shall be blocked.

B. Accessible equipment is defined as:

1. Being capable of being reached without climbing or crawling under or over obstacles such as motors, pumps, belt guards, transformer, piping, ductwork, light fixture, structural members, conduits, fixed equipment, casework, and fixed furnishings.

2. Maximum access height of equipment:
   a. For equipment above lay-in ceilings: No more than 4’ above ceiling grid or an absolute maximum of 14’ above the finished floor.
   b. For equipment above hard ceilings, provide minimum 24”x24” access panel. Locate equipment no more than 4’ above ceiling height.

3. Equipment requiring service access shall include but not be limited to:
   a. Fire dampers/actuators
   b. Duct access doors
   c. VAV boxes
   d. Fan coil units (filter and controls)
   e. Damper actuators
   f. Valve actuators
   g. Control valves
   h. Isolation Valves
   i. Sensors, switches and other control devices or instrumentation
   j. Motors
   k. Pumps
   l. Air bleeders or air vents
   m. Strainers
   n. Compressors
   o. Meters

4. Where duct balancing dampers or isolation valves are above 16’ above the finished floor and cannot be easily accessed from below, provide remote means for balancing and isolation.

5. Pull space for coils and heat exchanger tube bundles needs to be defined and shown on plans and equipment elevation views. Isolation valves need to be located outside the coil pull space to allow for removal without draining down the entire system.

3.5 PROTECTION OF WORK

A. Provide protection against dust migration, rain, wind, storms, frost, or heat so as to maintain all work, materials, apparatus and fixtures free from injury or damage.

B. At the end of each day’s work, cover all new work likely to be damaged.

C. Do not interrupt the integrity of the building security overnight.

D. Refer to Division 01 for additional requirements.
E. All pipe ends, valves, ducts and equipment left unconnected shall be capped, plugged or otherwise properly protected to prevent damage and the intrusion of foreign matter.

F. Do not allow any fans in HVAC system to operate before the area served by the fan has been cleaned and vacuumed of all debris and dust which might enter the system. If any air handling system is to be used for temporary heating, cooling or ventilating as stated in Paragraph “Temporary Facilities” herein; a construction filter with minimum 20% efficiency must be provide at each return air grille and opening.

G. Any equipment, duct or piping systems found to have been damaged or contaminated above “MILL” or “SHOP” conditions shall be replaced or cleaned to the Owner’s Representative’s satisfaction.

H. Provide initial water seal fill for all condensate traps, or similar traps.

3.6 OBJECTIONABLE NOISE AND VIBRATION
   A. HVAC equipment and piping system shall operate without objectionable noise and vibration, as determined by the judgment of the Owner’s Representative.
   B. If objectionable noise and vibration should be produced, make necessary changes or additions required to produce satisfactory result without additional cost to the Owner.

3.7 CLOSING-IN OF UN-INSPECTED WORK
   A. Do not allow or cause any work to be covered up or enclosed until inspected, tested and approved.
   B. Should any work be enclosed or covered up before such inspection and test, Contractor shall, at his/her own expense, uncover work and after it has been inspected, tested and approved, make repairs with such materials as necessary to restore his/her work and that of other Divisions to original and proper condition.

3.8 CLEANING
   A. After installation is complete, clean all systems as indicated below.
   B. Ductwork, Piping and Equipment To Be Insulated: Clean exterior thoroughly to remove rust, plaster, cement and dirt before insulation is applied.
   C. Ductwork, Piping and Equipment To Be Un-insulated: Clean exterior thoroughly to remove rust, plaster, cement, dirt and other foreign substances.
   D. Ductwork, Piping and Equipment To Be Painted: Clean exterior to be exposed in completed structure. Remove rust, plaster, cement and dirt by wire brushing. Remove grease, oil and other foreign materials by wiping with clean rags and suitable solvents.
   E. During Progress of Work: Carefully clean up the premises and keep all portions of the building free of debris.
   F. Chrome or Nickel Plated Work: Thoroughly polish.

3.9 DAMAGE RESPONSIBILITY
   A. Contractor shall be responsible for damage to the grounds, buildings or equipment and the loss of refrigerants, fuels or gases, caused by leaks or breaks in pipes for equipment furnished or installed under this Division.
3.10 PRELIMINARY OPERATION
A. The Owner's Representative reserves the right to operate portions of the HVAC system on a preliminary basis without voiding the guarantee or relieving the Contractor of his/her responsibilities.

3.11 OPERATION TESTS
A. Before operational tests are performed, demonstrate to the Owner's Representative that systems and components are complete and fully charged with operating fluid and lubricants. Systems shall be operable and capable of maintaining continuous uninterrupted operation during the operating and demonstration period.

B. After systems have been completely installed, connections made, and tests completed, operate the systems continuously for a period of five working days during the hours of a normal working day.

C. Control system shall be completely operable with settings properly calibrated and adjusted.

D. Rotating equipment shall be in dynamic balance and alignment.

E. Tests required in various sections herein shall be completed.

F. Notify the Owner’s Representative, in writing two weeks in advance of this operational period. G. This operational test may be concurrent with instruction of the Owner's operating personnel.

3.12 COMPLIANCE TESTS
A. Conduct tests for individual components, such as chiller, boiler, cooling tower, air handling unit, air terminal units, fans, etc. of all portions of the installation as may be required by the various Sections of this Division to comply with the Contract Documents. Tests shall be made in the presence of the Owner's Representative. Costs of tests shall be borne by the Contractor. Contractor shall provide all instruments, equipment, labor and materials to complete the tests. These tests may be required at any time between the installation of the work and the end of the warranty period. Should these tests expose any defective materials, poor workmanship or variance with requirements of the Contract Documents, Contractor shall make any changes necessary and remedy any defects at no cost to the Owner.

END OF SECTION
SECTION 230513
COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 COORDINATION
   A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
      1. Motor controllers.
      2. Torque, speed, and horsepower requirements of the load.
      3. Ratings and characteristics of supply circuit and required control sequence.
      4. Ambient and environmental conditions of installation location.

PART 2 PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS
   A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
   B. Comply with current NEMA MG 1 unless otherwise indicated.
   C. Comply with current IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS
   A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
   B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS
   A. Description: NEMA MG 1, Design B, medium induction motor.
   B. Efficiency: Premium efficient, as defined in NEMA MG 1.
   C. Service Factor: 1.15.
   D. Multispeed Motors: Variable torque.
      1. For motors with 2:1 speed ratio, consequent pole, single winding.
      2. For motors with other than 2:1 speed ratio, separate winding for each speed.
   F. Bearings: Re-greasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
   G. Temperature Rise: Match insulation rating.
   H. Insulation: Class F.
I. Code Letter Designation:
   1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
   2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

K. Shaft: Grounded
   1. Provide Aegis SGR or approved equivalent for shaft grounding.
   2. Install per manufacturer instructions.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   5. Shaft: Grounded

C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
   1. Permanent-split capacitor.
   2. Split phase.
   3. Capacitor start, inductor run.
   4. Capacitor start, capacitor run.
   5. Brushless DC (ECM)

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

F. Brushless DC (ECM) motor requirements are specified in Division 23 equipment sections.

2.6 ELECTRICAL CONNECTION

A. Refer also to Mechanical Electrical Coordination schedule for electrical connection requirements including but not limited to starters, disconnects, wiring, installation, interconnections, etc.
PART 3 EXECUTION

END OF SECTION
SECTION 230514
VARIABLE-FREQUENCY MOTOR CONTROLLERS (VSD/VFD)

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes separately enclosed, preassembled, combination VSDs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.
   B. Variable Frequency Motor Controller Bypass
   C. Multi-motor VFMC Configurations
   D. VSD Filtering

1.3 DEFINITIONS
   A. CE: Conformite Europeene (European Compliance).
   B. CPT: Control power transformer.
   C. DDC: Direct digital control.
   D. EMI: Electromagnetic interference.
   E. LED: Light-emitting diode.
   F. NC: Normally closed.
   G. NO: Normally open.
   H. OCPD: Overcurrent protective device.
   I. PID: Control action, proportional plus integral plus derivative.
   J. PWM: Pulse Width Modulation
   K. RFI: Radio-frequency interference.
   L. VSD: Variable-frequency motor controller.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type and rating of VSD indicated.
      1. Include dimensions and finishes for VSDs.
      2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   B. Shop Drawings: For each VSD indicated.
      1. Provide coversheet indicating project title, project location, and vendor contact information.
      2. Organize submittal into logical sections and provide table of contents.
      3. Provide itemized bill of materials indicating model number and quantity for each product.
      4. On datasheets with multiple products, indicate which product is provided under this project.
5. Combine electronic submittals into one unified PDF document that is organized per the table of contents. The submittal shall be free of copyrighted files and proprietary file formats. Electronic links may be submitted to supplement product datasheets, but may not be used as a substitute for product datasheets that are required to be included in the unified PDF submittal.

6. Manufacturers' catalog sheets with complete technical data for each item being furnished.

7. Include mounting and attachment details.

8. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

9. Include diagrams for power, signal, and control wiring.

10. Detailed installation drawings including:
   a. Control terminals, designation, and locations
   b. Power circuit diagram identifying disconnects, bypass disconnect, filters or isolation transformer, and motor.
   c. Internal electrical wiring and control circuit diagram
   d. Wiring of auxiliary devices and optional inputs.
   e. Interconnection to harmonic filter traps, line reactors, and dV/dT filters.

11. Furnish a technical brochure or matrix detailing standard VSD features.
   a. Motor horse power and amperage rating.
   b. Power factor at full load.
   c. Input power characteristics.
   d. Full load Efficiency.
   e. Control interface requirements.
   f. Status display system.
   g. Options not listed in specifications.

12. Exceptions and variations from the specification.

13. Include steady state and fault current ratings.

14. Filter characteristics:
   a. Dimensional drawings with installed weight for each size.
   b. Power input characteristics.
   c. Wiring diagram

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Required working clearances and required area above and around VSDs.
   2. Show VSD layout and relationships between electrical components and adjacent structural and mechanical elements.
   3. Show support locations, type of support, and weight on each support.
   4. Indicate field measurements.

B. Qualification Data: For testing agency.

C. Product Certificates: For each VSD from manufacturer.

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For VSDs to include in emergency, operation, and maintenance manuals.
1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
   a. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and motor-circuit protector trip settings.
   b. Manufacturer's written instructions for setting field-adjustable overload relays.
   c. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
   d. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
   e. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.7 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
   3. Indicating Lights: Two of each type and color installed.
   4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
   5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

1.8 QUALITY ASSURANCE
A. Provide Variable Frequency Controllers suitable for operating with NEMA Design B induction motors. VSD's shall be compatible with standard 3 phase high efficiency motors.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.9 DELIVERY, STORAGE, AND HANDLING
A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and store according to manufacturer's requirements.
B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VSDs, including clearances between VSDs, and adjacent surfaces and other items.

1.10 WARRANTY
A. Special Warranty: Manufacturer agrees to repair or replace VSDs that fail in materials or workmanship within specified warranty period.
   1. VSD Warranty Period: Five years from date of Substantial Completion.
   2. Filter Warranty Period: Three years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS
A. Variable Frequency Motor Controller Manufacturers: Subject to compliance with requirements, provide products by one of the following:
B. Basis-of-Design Product: Subject to compliance with requirements, provide comparable product by one of the following:
   1. ABB Power Distribution, Incorporated; ABB Control, Incorporated Subsidiary.
   2. Danfoss
   3. Yaskawa

C. Harmonic Trap Filters, dV/dT, Filters, and Input Line Reactor Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Trans Coil Inc.
   2. MTE
   3. Myron Zucker
   4. Schaffner

2.2 VSD SYSTEM DESCRIPTION AND RATINGS

A. General Requirements for VSDs:
   1. VSDs and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA ICS 7, NEMA ICS 61800-2, and UL 508C.

B. Application: Variable torque.

C. VSD Description: Variable-frequency motor controller, consisting of power converter that employs pulse-width-modulated inverter, factory built and tested in an enclosure, with integral disconnecting means where integrated on drawings and schedules and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.
   1. Units suitable for operation of NEMA MG 1, Design A and Design B motors, as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
   2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
   3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.

D. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

E. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.

F. Unit Operating Requirements:
   1. Input AC Voltage Tolerance: Plus 10 and minus 15 percent of VSD input voltage rating.
   2. Input AC Voltage Unbalance: Not exceeding 5 percent.
   3. Input Frequency Tolerance: Plus or minus 3 percent of VSD frequency rating.
   4. Minimum Efficiency: 97 percent at 100 percent speed and greater than 85 percent at 50 percent speed.
   5. Minimum Displacement Primary-Side Power Factor: 96 percent under any load or speed condition.
   6. Minimum Power Factor: 95 percent at 100 percent speed and greater than 90 percent at 25 percent speed.
   7. Bus capacitance voltage ratings
      a. 208-240V VSD’s shall have a minimum bus voltage capacitance of 400 VDC.
b. 460-480V VSD’s shall have a minimum bus voltage capacitance of 800 VDC.

8. IGBT ratings
   a. 208-240V VSD’s shall be equipped with IGBT’s that have a minimum $V_{ce}$ rating of 600V.
   b. 460-480V VSD’s shall be equipped with IGBT’s that have a minimum $V_{ce}$ rating of 1200V.

10. Ambient Temperature Rating: Not less than 32 deg F and not exceeding 120 deg F.

11. Humidity Rating: Less than 95 percent (noncondensing).

12. Altitude Rating: Not exceeding 3300 feet (1000 m).

13. Audible noise shall not exceed 85 dBA measured at a point 3 feet from the VSD.

15. Overload Capability: 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.

16. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.

17. Speed Regulation: Plus or minus 5 percent.

18. Output Carrier Frequency: Selectable; 0.5 to 15 kHz.

19. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.

G. Converter Section
   1. Utilize six-pulse full wave diode or PWM bridge design to convert fixed voltage and frequency AC line power to fixed DC voltage.
   2. Operation of the converter section shall be unaffected by phase rotation.
   3. Input shall have MOVs (Metal Oxide Varistors) for surge protection.

H. DC Bus Section
   1. DC bus shall include a minimum 5% integrated DC link reactors to minimize harmonic distortion.
   2. DC bus shall have a passive capacitive filter to minimize ripple and maximize power-loss ride through.
   3. Provide balance discharge resistors to equalize charge voltage and permit safe discharge of capacitors upon loss of power.

I. Inverter Section
   1. Utilize isolated-gate bipolar transistors (IGBTs) to convert DC bus voltage to tree phase, variable frequency, and sinusoidal coded PWM waveform to control the motor. Six step and current source drives are not acceptable.
   2. PWM switching frequencies (Carrier Frequency): Selectable; 1.0 to 12 kHz. Factor set the carrier frequency at 3 kHz.
   3. VSD shall be capable of skipping over minimum of three critical frequencies to prevent the VSD from operating the load continuously at unstable speeds or undesirable noise conditions. VSD shall accelerate or decelerate through these ranges, but not be allowed to operate consistently in these ranges.

J. Inverter Logic: Microprocessor based, 32 bit, isolated from all power circuits.

K. Isolated Control Interface: Allows VSDs to follow remote-control signal over a minimum 40:1 speed range.

L. Internal Adjustability Capabilities:
   1. Minimum Speed: 5 to 25 percent of maximum rpm.
   2. Maximum Speed: 80 to 100 percent of maximum rpm.
   3. Acceleration: 0.1 to 999.9 seconds.
   4. Deceleration: 0.1 to 999.9 seconds.
   5. Current Limit: 30 to minimum of 150 percent of maximum rating.
M. Self-Protection and Reliability Features:
   1. Surge Suppression: Factory installed as an integral part of the VSD, complying with UL 1449 SPD, Type 1 or Type 2.
   2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
   4. Inverter overcurrent trips.
   5. VSD and Motor-Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VSDs and motor thermal characteristics, and for providing VSD over-temperature and motor-overload alarm and trip; settings selectable via the keypad.
   6. Critical frequency rejection, with three selectable, adjustable deadbands.
   7. Instantaneous line-to-line and line-to-ground overcurrent trips.
  10. Short-circuit protection.
  11. Motor-overtemperature fault.

N. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

O. Bidirectional Autospeed Search: Capable of starting VSD into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

P. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

Q. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

R. Integral Input Disconnecting Means and OCPD: UL 489, thermal-magnetic circuit breaker with pad-lockable, door-mounted handle mechanism.
   1. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VSD input current rating, whichever is larger.
   2. Auxiliary Contacts: NO or NC, arranged to activate before switch blades open.
   3. Auxiliary contacts “a” and “b” arranged to activate with circuit-breaker handle.
   4. NC and NO alarm contact that operates only when circuit breaker has tripped.

2.3 PERFORMANCE REQUIREMENTS

A. If audible motor noise created by the VSD exceeds 5 dB of the motor noise generated when the motor is directly connected to line power through an across the line starter, the VSD supplier shall remedy the situation at no cost.

2.4 CONTROLS AND INDICATION

A. Electrically isolate the following circuit systems from the main power circuits:
   1. Internal control circuiting regulating DC bus voltage and inverter output frequency.
   2. Circuitry supplying various microprocessors, controllers, sensors, etc., which provide the VSD’s operational and safety features.

B. Provide devices which will limit the following operational parameters:
   1. Permit field adjustment of minimum and maximum output frequency. The range shall be adjustable from 4 Hz to 60 Hz.
2. Permit field adjustment of the acceleration rate intervals from 0% to 100% speed. Unless noted otherwise, set full range acceleration rates initially at 60 seconds.
3. Permit field adjustment of the deceleration rate intervals from 0% to 100% speed. Unless noted otherwise, set full range deceleration rate at 60 seconds.

C. Status Lights: Door-mounted LED indicators displaying the following conditions:
   1. Power on.
   2. Run.
   3. Overvoltage.
   4. Line fault.
   5. Overcurrent.

D. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
   1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
   2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
      a. Control Authority: Supports at least four conditions: Off, local manual control at VSD, local automatic control at VSD, and automatic control through a remote source.

E. Historical Logging Information and Displays:
   1. Real-time clock with current time and date.
   2. Running log of total power versus time.
   3. Total run time.
   4. Fault log, maintaining last six faults with time and date stamp for each.

F. Indicating Devices: Digital display mounted flush in VSD door and connected to display VSD parameters including, but not limited to:
   1. Output frequency (Hz).
   5. Motor torque (percent).
   6. Fault or alarming status (code).
   7. PID feedback signal (percent).
   8. DC-link voltage (V dc).
   9. Set point frequency (Hz).
   10. Motor output voltage (V ac).
   11. Operating hours (with reset function)
   12. Kilowatt hours (with reset function)

G. VSD Monitoring and Alarming
   1. The VSD controller shall have the ability to display the following alarms and notifications at the VSD display as well as the relay to the building automation system via communications interface.
      a. Status indicators
         1) On/Off status
         2) Input power status
         3) Input power fault
         4) Over-current fault
5) Ground fault
6) Under-voltage
7) Over-voltage
8) Over-temperature fault
9) Motor over-load fault
10) Motor under-load fault
11) DC braking
12) Emergency off
13) Retry
14) Restart

b. Alarms
1) Over-voltage pre-alarm
2) Over-current pre-alarm
3) Under-voltage
4) Overheat pre-alarm
5) Overload pre-alarm
6) Communications Error
7) Tuning Error
8) Point setting alarm
9) Clear enabling indication
10) Emergency Stop Enabling indication
11) Setting Error Alarm
12) Momentary power loss slowdown
13) Lower-limit time-out stop
14) VSD in bypass

c. Faults
1) Over-current (start up)
2) Over-current (Acceleration, Deceleration, and Running)
3) U-phase short
4) V-phase short
5) W-phase short
6) Over-voltage (Acceleration, Deceleration, and Running)
7) Under-voltage
8) Over-frequency
9) Under-frequency
10) Over-heat
11) Over-heat (external)
12) Over-torque
13) Inverter overload
14) Motor overload
15) Ground Fault
16) Input phase failure
17) Output phase failure
18) Sequence error
19) Speed error
20) V/Hz control error
21) Communications error
22) Logic voltage error
23) Self-diagnostics alarm
24) VSD in bypass

d. VSD shall be equipped of automatic reset and restart circuit which will restart the motor 20 seconds after self-protection shut down. The VSD shall attempt no more than 5 automatic restarts. Each successive attempt shall occur at least 120 seconds after the last.
H. Control Signal Interfaces (I/O):
   1. Electric Input Signal Interface:
      a. A minimum of two programmable analog inputs: 0- to 10-V dc and 4- to 20-mA dc.
      b. A minimum of six multifunction programmable digital inputs.
   2. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the DDC system for HVAC or other control systems:
      a. 0- to 10-V dc.
      b. 4- to 20-mA dc.
      c. Potentiometer using up/down digital inputs.
      d. Fixed frequencies using digital inputs.
      e. Coordinate additional input requirements with Division 23 and 25 contractors. Refer also to 230933 Sequence of Operation and mechanical drawings for additional details.
   3. VSD shall be equipped with a 120 VAC safety circuit for fire alarm system shutdown. Confirm this requirement is acceptable with ASU Facilities Management staff before releasing approved submittals.
   4. Output Signal Interface: A minimum of two programmable analog output signal(s) 0- to 10-V dc and 4- to 20-mA dc, which can be configured for any of the following:
      a. Output frequency (Hz).
      b. Output current (load).
      c. DC-link voltage (V dc).
      d. Motor torque (percent).
      e. Motor speed (rpm).
      f. Set point frequency (Hz).
      g. Energy consumption (kW)
      h. Coordinate additional output requirements with Division 23 and 25 contractors. Refer also to 230933 Sequence of Operation and mechanical drawings for additional details.
   5. Remote Indication Interface: A minimum of two programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
      a. Motor running.
      b. Set point speed reached.
      c. Fault and warning indication (overtemperature or overcurrent).
      d. PID high- or low-speed limits reached.
      e. Coordinate additional output requirements with Division 23 and 25 contractors. Refer also to 230933 Sequence of Operation and mechanical drawings for additional details.
I. Communications Interface with DDC System for HVAC: Factory-installed hardware and software shall interface with DDC system for HVAC to monitor, control, display, and record data for use in processing reports. VSD settings shall be retained within VSD’s nonvolatile memory.
   1. Communication Interface: Comply with a minimum of ASHRAE 135. Communication shall interface with DDC system for HVAC to remotely control and monitor lighting from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the DDC system for HVAC.

2.5 LINE CONDITIONING AND FILTERING

A. Provide UL listed Filters for the application.
B. Filters shall be located adjacent to the VSD or contained in a common enclosure as the VSD it is serving.
C. Filter enclosures shall be meet the same requirements as specified for VSD’s.
D. Input Line Conditioning
   1. Provide a 5% input line reactor on the input of all VSD’s greater than 40 HP in addition to any internal line reactors and filters.
2. Provide harmonic filters on the input of all VSD’s serving motors greater than 40 HP
   a. Provide contactor within filter to disconnect capacitors from line power to the VSD when
      signal is received from the VSD. VSD shall be programed to disconnect capacitors at 25% load
      and energize capacitors at 30% load.
   b. Provide contactor to bypass entire filter when VSD has been bypassed. Provide interlock
      between bypass switch and contactor.
3. VSD disconnecting means shall disconnect power to input filter and reactors.

F. Output Filtering: Provide dV/dT filters for all locations where conductors between the motors and
   VSD are 75 feet or longer.

G. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for Category C2.

2.6 BYPASS REQUIREMENTS (ALL DRIVES)

A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit,
   manually, automatically, or both. Selector switches set modes and indicator lights indicate mode
   selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely
   disconnected from power converter.
   1. Minimum Short-Circuit Current (Withstand) Rating: 65 kA.

B. Bypass Mode: Manual operation only; requires local operator selection at VSD. Transfer between
   power converter and bypass contactor, and retransfer shall only be allowed with the motor at zero
   speed.

C. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or
   the bypass controller; with input isolating switch and barrier arranged to isolate the power converter
   input and output and permit safe testing and troubleshooting of the power converter, both energized
   and de-energized, while motor is operating in bypass mode.
   3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe
      troubleshooting and testing of the power converter, both energized and de-energized, while
      motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

D. Bypass Contactor Configuration: Full-voltage (across-the-line) for motors less than 40 HP. Re-
   duced-voltage (autotransformer) for motors 40 HP and larger type.
   1. NORMAL/BYPASS selector switch.
   2. HAND/OFF selector switch.
   3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VSD while the motor is run-
      ning in the bypass mode.
      a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufac-
         turer's standard matching control power or line voltage.
      b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to
         allow inspection and replacement without disturbing line or load wiring.
   5. Control Circuits: 120-V ac; obtained from integral CPT, with primary and secondary fuses with
      CPT of sufficient capacity to operate all integral devices and remotely located pilot, indicating,
      and control devices.
      a. CPT Spare Capacity: 50VA.
      b. Bimetallic Overload Relays:
         1) Inverse-time-current characteristic.
         2) Class 10 tripping characteristic.
         3) Heaters in each phase matched to nameplate full-load current of actual protected mo-
            tor and with appropriate adjustment for duty cycle.
4) Ambient compensated.
5) Automatic resetting.
   c. NC and NO isolated overload alarm contact.
   d. External overload, reset push button.

2.7 OPTIONAL FEATURES
A. Multiple-Motor Capability: VSD suitable for variable-speed service to multiple motors. Overload protection shuts down VSD and motors served by it, and generates fault indications when overload protection activates.
   1. Size VSD to accommodate 125% of the largest motor full load amps (FLA) plus 100% of the remaining motors FLA.
   2. Configure to allow two or more motors to operate simultaneously at the same speed; separate overload relay for each controlled motor.
B. Damper control circuit with end-of-travel feedback capability.
C. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VSD resumes normal operation.
D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
E. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
F. Remote digital operator kit.
G. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.

2.8 ENCLOSURES
A. VSD Enclosures: NEMA 250, to comply with environmental conditions at installed location.
   1. Dry and Clean Indoor Locations: Type 12.
   2. Outdoor Locations: Type 3R.
   3. Other Wet or Damp Indoor Locations: Type 4.
B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VSD as “Plenum Rated.”
C. Internal cooling fans and fillers shall be provided where required to maintain drive operating temperature.
D. Internal heating elements shall be provided where required to maintain drive operating temperature.
E. Provide lifting provisions for units weighing more than 80 pounds.
F. All units shall be provided with a grounding lug.
G. The enclosure shall have a through-the-door interlocking handle with padlocking provisions.
H. Wall units shall be provided with necessary mounting brackets.

2.9 ACCESSORIES
A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VSD enclosure cover unless otherwise indicated.
   1. Push Buttons: Covered.
4. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

B. Reversible NC/NO bypass contactor auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable [pneumatic] [solid-state] time-delay relays.

E. Supplemental Digital Meters:
   1. Elapsed-time meter.
   2. Kilowatt meter.

F. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

G. Spare control-wiring terminal blocks.

2.10 ELECTRICAL CONNECTION
A. Refer also to Mechanical Electrical Coordination schedule for electrical connection requirements including but not limited to starters, disconnects, wiring, installation, interconnections, etc.

2.11 SOURCE QUALITY CONTROL
A. Testing: Test and inspect VSDs according to requirements in NEMA ICS 61800-2.
   1. Test each VSD while connected to a motor that is comparable to that for which the VSD is rated.
   2. Verification of Performance: Rate VSDs according to operation of functions and features specified.

B. VSDs will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 EXECUTION
3.1 EXAMINATION
A. Examine areas, surfaces, and substrates to receive VSDs, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the Work.

B. Examine VSD before installation. Reject VSDs that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VSD installation.

D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work

E. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 COORDINATION

A. The VSD manufacturer shall obtain information about any critical speeds, which must be locked out in the VSD controls to avoid noise and vibration caused by harmonic resonance in the mechanical system.

B. Contractor shall coordinate final VSD locations with VSD manufacturer and mechanical equipment layouts.

3.3 INSTALLATION

A. Wall-Mounting Controllers: Install with tops at uniform height and with disconnect operating handles not higher than 79 inches (2000 mm) above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

B. Roof-Mounting Controllers: Install VSD on roofs with tops at uniform height and with disconnect operating handles not higher than 79 inches (2000 mm) above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.
   1. Structural-steel channels are specified in Section 260529 "Hangers and Supports for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Separate line, load, and control conductors in separate continuous metallic conduits. Provide ferrous metallic shielding around each VSD conductor group when conductors are installed in wire way or gutter. The contractor may submit shielded conductor cable assemblies designed for operation with VSD's.

E. Provide all power connection including wiring associated with any isolation transformer disconnect reactors, filters, and any accessories. Include power wiring from the VSD to the motor, as well as all grounding connections.

F. Where it is not possible to install motors within the sight of the VSD provide a disconnect switch at the motor as required by the NEC or required by the specifications. Provide an interlocking connection between the disconnect at the motor and the VSD to prevent the VSD from operating in a no load situation.

G. All connections to the VSD shall be with a minimum 18 inches of seal tight flexible conduit, allowing for ease of maintenance.

H. Provide separate grounding conductor to the VSD and between the VSD and the motor in addition to the conduit system.

I. Temperature control contractor shall provide all control connections to the VSD from any sensors or control devices.

J. Provide separate overload protection for each motor when a VSD serve multiple motors.

K. Install fuses in each fusible-switch VSD.

L. Install fuses in control circuits if not factory installed.

M. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors are installed.
N. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

O. Comply with NECA 1.

3.4 CONTROL WIRING INSTALLATION

A. Install wiring between VSDs and remote devices and facility’s central-control system.
B. Bundle, train, and support wiring in enclosures.
C. Connect selector switches and other automatic-control devices where applicable.
   1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switches are in manual-control position.
   2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor-overload protectors.

3.5 IDENTIFICATION

A. Identify VSDs, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
   1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each VSD with engraved nameplate.
   3. Label each enclosure-mounted control and pilot device.
B. Operating Instructions: Frame printed operating instructions for VSDs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VSD units.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
B. Manufacturer’s Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
C. Perform tests and inspections with the assistance of a factory-authorized service representative.
D. Tests and Inspections:
   1. Inspect VSD, wiring, components, connections, and equipment installation
   2. Test insulation resistance for each VSD element, component, connecting motor supply, feeder, and control circuits.
   3. Test continuity of each circuit.
   4. Verify that voltages at VSD locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Architect before starting the motor(s).
   5. Test each motor for proper phase rotation.
   7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   8. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
E. VSDs will be considered defective if they do not pass tests and inspections.
F. Prepare test and inspection reports, including a certified report that identifies the VSD and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. At a minimum perform the following operational checks and provide a report to the engineer that each VSD has met the following checks:
      a. Maximum output frequency = 60 Hz ± 1 Hz.
      b. Minimum output frequency = 4 Hz ± 1 Hz.
      c. Control signal setpoint ± 10% of that specified.
      d. Simulated power outage and control system reaction.
      e. Manual bypass switchover and operation tested.
      f. Starting into an already rotating motor load and determine if self-protection of the VSD is adequate.
      g. Acceleration rate from a dead stop to full speed at the maximum and minimum rate adjustment.
      h. Deceleration rate from full speed to dead stop at maximum and minimum rate adjustment.

3.8 ADJUSTING

A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

C. Adjust the trip settings of instantaneous-only circuit breakers and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to 6 times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed 8 times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Architect before increasing settings.

D. Set the taps on reduced-voltage autotransformer controllers.

E. Set field-adjustable circuit-breaker trip ranges.

F. Set field-adjustable pressure switches.

3.9 PROTECTION

A. Replace VSDs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, reprogram, and maintain VSDs.

END OF SECTION
SECTION 230516
EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Expansion joints
   2. Alignment guides and anchors.

1.3 PERFORMANCE REQUIREMENTS
A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
B. Delegated-Design Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
   2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
   3. Alignment Guide Details: Detail field assembly and attachment to building structure.
   4. Schedule: Indicate type, manufacturer’s number, size, material, pressure rating, end connections, and location for each expansion joint.

1.5 INFORMATIONAL SUBMITTALS
A. Product Certificates: For each type of expansion joint, from manufacturer.

1.6 CLOSEOUT SUBMITTALS
A. Maintenance Data: For expansion joints to include in maintenance manuals.

1.7 QUALITY ASSURANCE
A. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. ASME Boiler and Pressure Vessel Code: Section IX.
PART 2 - PRODUCTS

2.1 EXPANSION JOINTS

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flex-Hose Co., Inc.
   b. Flexicraft Industries.
   c. Flex-Weld, Inc.
   d. Garlock Sealing Technologies.
   e. General Rubber Corp.
   g. Metraflex, Inc.
   h. MG Piping Products Co.
   i. Proco Products, Inc.
   j. Red Valve Company, Inc.
   k. Senior Flexonics, Inc.; Pathway Division.
   l. Tozen America Corp.
   m. Unaflex Inc.
   n. Vibration Mountings & Controls, Inc.

2. Arch Type: Multiple arches.

3. Spherical Type: Multiple spheres.
   a. Minimum Pressure and Temperature Ratings for NPS 1-1/2 to NPS 4: 150 psig at 220 deg F.
   b. Minimum Pressure and Temperature Ratings for NPS 5 and NPS 6: 140 psig at 200 deg F.
   c. Minimum Pressure and Temperature Ratings for NPS 8 to NPS 12: 140 psig at 180 deg F.

4. Material: EPDM.

B. Flexible-Hose Expansion Joints: Manufactured assembly with two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose; with inlet and outlet elbow fittings, corrugated-metal inner hoses, and braided outer sheaths.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flex-Hose Co., Inc.
   b. Flexicraft Industries.
   c. Flex-Pression, Ltd.
   d. Metraflex, Inc.

2. Flexible-Hose Expansion Joints for Copper Piping: Copper-alloy fittings with solder-joint end connections.
   a. NPS 2N 50) and Smaller: Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
   b. NPS 2-1/2 to NPS 4: Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F and 225 psig at 450 deg F ratings.

3. Flexible-Hose Expansion Joints for Steel Piping: Carbon-steel fittings with threaded end connections for NPS 2 and smaller and flanged end connections for NPS 2-1/2 and larger.
   a. NPS 2 and Smaller: Stainless-steel hoses and single-braid, stainless-steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
   b. NPS 2-1/2 to NPS 6: Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.
c. NPS 8 to NPS 12: Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70 deg FkPa at 21 deg C) and 90 psig at 600 deg F ratings.

2.2 ALIGNMENT GUIDES AND ANCHORS

A. Steel guides shall be welded to the pipe at a maximum spacing of 90°. The outside diameter of the opposing guide bars shall be smaller than the inside diameter of the pipe riser clamp in accordance with standard field construction practice. Each end of the pipe guide shall be rigidly attached to an omnidirectional pipe anchor isolation mounting which in turn, shall be rigidly fastened to the steel framing within the shaft. See Detail on Drawings.

B. The omnidirectional pipe anchor isolation mountings shall consist of a telescoping arrangement of two sizes of steel tubing separated by a minimum of 12mm (1/2”) thick heavy duty neoprene and canvas duct isolation pad. Vertical restraints shall be provided by similar material arranged to prevent vertical travel in either direction. The allowable load on the isolation material shall not exceed 500 psi.

C. Low temperature piping guides shall be constructed with a 360° 10-gauge metal sleeve around the piping. The thermal insulation requirements for the piping shall be provided between the piping and the sleeve. Heavy duty neoprene and canvas duct isolation pad of thickness equal to thermal insulation requirements shall space the metal sleeve away from the piping with urethane or other suitable thermal insulation provided in the voids between the pipe-sleeve and isolation pan material. The metal sleeve outside diameter shall be smaller than the pipe riser clamp inside diameter in accordance with standard field construction practice. The pipe riser clamp shall be rigidly attached to the steel framing within the shaft.

D. Alignment Guides:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Adsco Manufacturing LLC. (www.adscomfg.com)
   b. Advanced Thermal Systems, Incorporated (www.advancedthermal.net)
   c. Flex-Hose Company Incorporated (www.flexhose.com)
   d. Flex-Weld, Inc. (www.flex-weld.com)
   e. Flexicraft Industries. (www.flexicraft.com)
   f. Hyspan Precision Products, Incorporated (www.hyspan.com)
   g. Mason Industries, Incorporated (www.mason-ind.com)
   h. Metraflex Company (The). (www.metraflex.com)
   i. Senior Flexonics Pathway. (www.sfpathway.com)
   j. U.S. Bellows, Incorporated (www.usbellows.com)
   k. Unisource Manufacturing, Inc. (www.unisource-mfg.com)

2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.

E. Anchor Materials:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened Portland cement concrete, with tension and shear capacities appropriate for application.
5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened Portland cement concrete, with tension and shear capacities appropriate for application.
a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.

PART 3 - EXECUTION

3.1 EXPANSION-JOINT INSTALLATION
A. Install expansion joints of sizes matching sizes of piping in which they are installed.
B. Install grooved-joint expansion joints to grooved-end steel piping
C. Install manufactured, nonmetallic expansion joints according to FSA’s “Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors.”
D. Install expansion joints, in serviceable locations, of sizes matching size of piping in which they are installed.
E. Install alignment guides to allow expansion and to avoid end-loading and torsional stress.

3.2 PIPE LOOP AND SWING CONNECTION INSTALLATION
A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
B. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.
C. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.
D. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.3 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION
A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
C. Attach guides to pipe and secure guides to building structure.
D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
E. Anchor Attachments:
   2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.
F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
   1. Anchor Attachment to Steel Structural Members: Attach by welding.
   2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer’s written instructions.
G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

SECTION 230517
SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Sleeves.
      2. Stack-sleeve fittings.
      3. Sleeve-seal systems.
      4. Sleeve-seal fittings.
      5. Grout.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.1 SLEEVES
   A. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel
      collar; zinc coated.
   B. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated,
      with plain ends.
   C. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded
      longitudinal joint.

2.2 STACK-SLEEVE FITTINGS
   A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group. (www.zurn.com)
      3. Josam Company
   B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring,
      bolts, and nuts for membrane flashing.
      1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS
   A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1. Advance Products & Systems, Incorporated (www.apsonline.com)
      2. CALPICO, Incorporated (www.calpicoinc.com)
      4. Pipeline Seal and Insulator, Incorporated (www.pipelineseal.com)
5. Proco Products, Incorporated (www.procoproducts.com)

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
   1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   2. Pressure Plates: Stainless steel.
   3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

### 2.4 SLEEVE-SEAL FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Presealed Systems. (ps.holdrite.com)
   2. GPT Industries
   3. The Metraflex Company

B. Description: Manufactured plastic, sleeve-type, water stop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber water stop collar with center opening to match piping OD.

### 2.5 GROUT

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

### PART 3 EXECUTION

#### 3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
   1. Sleeves are not required for core-drilled holes.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
   1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
   2. Cut sleeves to length for mounting flush with both surfaces.
      a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
   3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.

D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 079200 “Joint Sealants.”

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping outlined in other specification sections.

F. Install sleeves for pipes passing through Noise critical spaces:
   1. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). These spaces are the Theater, all spaces within the theater footprint (grids AF.3 to AC.2 and A1 to A6), Studios, Classrooms, Meeting Rooms, Green Room, and the Scene Shop.
   2. Penetrations by ducts, pipes and conduit between noise critical spaces shall be sleeved, packed and sealed airtight with non-hardening sealant as described herein. Refer also to other requirements in plans and specifications. Where information is duplicated, in conflict, complementary, etc. the more stringent acoustic requirements shall apply.

3.2 STACK-SLEEVE-FITTING INSTALLATION
A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing.
   3. Install section of cast-iron soil pipe to extend sleeve to 4 inches above finished floor level.
   4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION
A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.4 SLEEVE-SEAL-FITTING INSTALLATION
A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position water stop flange to be centered in concrete slab or wall.
C. Secure nailing flanges to concrete forms.
D. Using grout, seal the space around outside of sleeve-seal fittings.
3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Walls above Grade:

2. Exterior Concrete Walls below Grade:
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
   b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

3. Concrete Slabs-on-Grade:
   a. Piping Smaller Than NPS 6: Galvanized-steel sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
   b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

4. Concrete Slabs-on-Grade:
   a. Piping Smaller Than NPS 6: Galvanized-steel sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
   b. Piping NPS 6 and Larger: Galvanized-steel wall sleeves with sleeve-seal system.
      1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.

5. Slabs above Grade:
   b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.

6. Slabs above Grade in Mechanical Rooms, Equipment Rooms, Housekeeping Rooms, Catering Rooms, Janitor Rooms and Any Space Adjacent or Above to Galleries or Room Containing Collections:
   a. Piping Smaller Than NPS 6: Stack sleeves.
   b. Piping NPS 6 and Larger: Stack sleeves.

END OF SECTION
SECTION 220518
ESCUTCHEONS FOR HVAC PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Escutcheons.
      2. Floor plates.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.0 ESCUTCHEONS
   A. One-Piece, Cast-Brass Type: With finish to match adjacent surface and setscrew fastener.
   B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with finish to match adjacent sur-
      face and spring-clip fasteners.
   C. One-Piece, Stamped-Steel Type: With finish to match adjacent surface and spring-clip fasteners.
   D. Split-Casting Brass Type: With polished, chrome-plated and finish to match adjacent surface with
      concealed hinge and setscrew.
   E. One-Piece, Paintable Type: one-piece, low-profile paintable escutcheon plate.

2.1 FLOOR PLATES
   A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
   B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 EXECUTION

3.1 INSTALLATION
   A. Install escutcheons for exposed piping penetrations of walls, ceilings, and finished floors.
   B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that
      completely covers opening.
   1. Escutcheons for New Piping:
      a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
      b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass, split-casting brass type with finish to match adjacent surface, or one-piece paintable.
      c. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass, split-casting brass type with finish to match adjacent surface, or one-piece paintable.
d. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.
e. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with polished, chrome-plated rough-brass finish.
f. Exterior Piping at Building Penetration: One-piece, cast-brass, split-casting brass type with finish to match adjacent surface, or one-piece paintable.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
   1. New Piping: One-piece, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION
SECTION 230519
METERS AND GAGES FOR HVAC PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Liquid-in-glass thermometers.
   2. Light-activated thermometers.
   3. Thermowells.
   4. Dial-type pressure gages.
   5. Gage attachments.
   6. Test plugs.
   7. Test-plug kits.
   8. Flowmeters.
B. Related Sections:
   1. Division 23 Section “Steam and Condensate Heating Piping” for steam meters.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated.
B. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 PRODUCTS

2.1 LIQUID-IN-GLASS THERMOMETERS
A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Flo Fab Incorporated
      b. Miljoco Corporation.
      d. Tel-Tru Manufacturing Company.
      e. Trerice, H. O. Company
      f. Weiss Instruments, Incorporated
      g. Winters Instruments - U.S.
   3. Case: Cast aluminum; 9-inch nominal size unless otherwise indicated.
   4. Case Form: Adjustable angle unless otherwise indicated.
   5. Tube: Glass with magnifying lens and blue [or red] organic liquid.
   6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in degrees F.
   7. Window: Glass.
8. Stem: Aluminum and of length to suit installation.
   b. Design for Thermowell Installation: Bare stem.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 LIGHT-ACTIVATED THERMOMETERS

A. Direct-Mounted, Light-Activated Thermometers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Flo Fab Incorporated
      b. REOTEMP Instrument Corporation.
      c. Trerice, H. O. Company
      d. Weiss Instruments, Incorporated
      e. WIKA Instrument Corporation - USA.
      f. Winters Instruments - U.S.
   2. Case: Plastic; 7-inch nominal size unless otherwise indicated.
   3. Scale(s): Degrees F and degrees C.
   6. Stem: Aluminum and of length to suit installation.
      b. Design for Thermowell Installation: Bare stem.
   8. Accuracy: Plus or minus 1 degrees F.

2.3 THERMOWEELS

A. Thermowells:
   2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
   3. Material for Use with Copper Tubing: CNR or CUNI.
   4. Material for Use with Steel Piping: CRES or CSA.
   5. Type: Stepped shank unless straight or tapered shank is indicated.
   6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
   7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
   8. Bore: Diameter required to match thermometer bulb or stem.
   9. Insertion Length: Length required to match thermometer bulb or stem.
   10. Lagging Extension: Include on thermowells for insulated piping and tubing.
   11. Bushings: For converting size of thermowell’s internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.4 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AMETEK, Incorporated; U.S. Gauge.
      b. Ashcroft Incorporated
      c. Ernst Flow Industries.
d. Flo Fab Incorporated

e. Marsh Bellofram.

g. Noshok.

h. Palmer Wahl Instrumentation Group.

i. REOTEMP Instrument Corporation.

j. Tel-Tru Manufacturing Company.

k. Trerice, H. O. Company

l. Watts Regulator Company; a Division of Watts Water Technologies, Incorporated

m. Weiss Instruments, Incorporated

n. WIKA Instrument Corporation - USA.

o. Winters Instruments - U.S.

3. Case: Sealed type; cast aluminum; 4-1/2-inch nominal diameter.

4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.

5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.

6. Movement: Mechanical, with link to pressure element and connection to pointer.

7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.

11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.5 GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.

B. Siphons: Loop-shaped section of brass pipe with NPS 1/4 or NPS 1/2 pipe threads.

C. Valves: Brass ball, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.

D. Provide with coil syphons and gauge valves on hot pressure media such as steam systems.

2.6 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flow Design, Incorporated

3. National Meter, Incorporated

4. Peterson Equipment Company, Incorporated

5. Sisco Manufacturing Company, Incorporated

6. Trerice, H. O. Company

7. Watts Regulator Company; a Division of Watts Water Technologies, Incorporated

8. Weiss Instruments, Incorporated

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 275 degrees F.

F. Core Inserts: EPDM self-sealing rubber.
2.7 TEST-PLUG KITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Flow Design, Incorporated
   2. Miljoco Corporation
   3. National Meter, Incorporated
   4. Peterson Equipment Company, Incorporated
   5. Sisco Manufacturing Company, Incorporated
   6. Trerice, H. O. Company
   7. Watts Regulator Company; a Division of Watts Water Technologies, Incorporated
   8. Weiss Instruments, Incorporated

B. Furnish two test-plug kits containing **one** thermometers, one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.

C. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch-diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 degrees F and 104 degrees C.

D. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch-diameter dial and probe. Dial range shall be at least 0 to 200 psig.

E. Carrying Case: Metal or plastic, with formed instrument padding.

2.8 FLOWMETERS

A. Turbine Flowmeters

1. Manufacturers: Subject to compliance with requirements, provide control system component products by one of the listed manufacturers:
   a. Onicon Incorporated.

2. Insertion turbine flow meters made for insertion in hydronic piping fluid flow that measures flow in gallons per minute (GPM).
   a. Pipe sizes 2-inches and smaller: single turbine.
   b. Pipe sizes 2-1/2-inches and larger: Dual turbine.

3. Output: Flow meters will provide an analog electronic output signal compatible with the building automation system.

4. Sensing Method: Impedance sensing; non-magnetic and non-photoelectric.

5. Accuracy: 2 percent of flow rate from 0.4 to 20 feet per second.

6. Materials:
   b. Housing 316 stainless steel.
   c. Shaft: Tungsten carbide.
   d. Wetted Parts: Bronze and carbon steel.
   e. External Parts: Bronze and carbon steel.

B. Electromagnetic Flowmeters

1. Manufacturers: Subject to compliance with requirements, provide control system component products by one of the listed manufacturers:
   a. Onicon Incorporated.

2. In-line body electromagnetic flow meters made for use in hydronic piping fluid flow that measures flow in gallons per minute (GPM). Flow meter shall have no moving parts and shall have inherent bi-direction flow measurement.

3. Output: Flow meters will provide an analog electronic output signal compatible with the building automation system.

4. Accuracy:
   a. Velocities between 3.3 and 33 fps: within 0.2 percent of reading.
b. Velocities between 1.0 and 3.3 fps: within 0.75 percent of reading.
c. Velocities less than 1.0 fps: within 0.0075 fps.

5. Materials:
   a. Flow meter shall have no moving parts
   b. Body: Epoxy-coated carbon steel
   c. Body: 316 stainless steel
   d. Body: Type 316 stainless steel.
   e. Body Liner: PTFE
   f. Flow Tube: Type 304 stainless steel.
   g. Electrode: Type 316 stainless steel
   h. Electronics enclosure: Removable NEMA 250, Type 6.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.
B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
C. Install thermowells with extension on insulated piping.
D. Fill thermowells with heat-transfer medium.
E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
F. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
G. Install valve and snubber in piping for each pressure gage for fluids (except steam).
H. Install valve and syphon fitting in piping for each pressure gage for steam.
I. Install test plugs in piping tees.
J. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer’s written instructions.
K. Install flowmeter elements in accessible positions in piping systems.
L. Install wafer-orifice flowmeter elements between pipe flanges.
M. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer’s written instructions.
N. Install permanent indicators on walls or brackets in accessible and readable positions.
O. Install connection fittings in accessible locations for attachment to portable indicators.
P. Install thermometers in the following locations:
   1. Inlet and outlet of each hydronic coil in air-handling units.
   2. Inlet and outlet of each boiler and thermal-storage tank.
Q. Install pressure gages in the following locations:
   1. Discharge of each pressure-reducing valve.
   2. Inlet and outlet of each chiller chilled-water connection.
   3. Suction and discharge of each pump. Refer to piping detail.
3.2 CONNECTIONS
A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
B. Connect flowmeter-system elements to meters.
C. Connect flowmeter transmitters to meters.

3.3 ADJUSTING
A. After installation, calibrate meters according to manufacturer's written instructions.
B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE
A. Thermometers at inlets and outlets of building entrance piping (chilled water and steam):
   1. Direct-mounted, light-activated type.
B. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems shall be one of the following:
   1. Direct-mounted, light-activated type.
C. Thermometers at inlet and outlet of each boiler shall be one of the following:
   1. Direct-mounted, light-activated type.
D. Thermometers at inlets and outlets of each hydronic heat exchanger shall be one of the following:
   1. Direct-mounted, light-activated type.
   2. Test plug with EPDM self-sealing rubber inserts.
E. Thermometers at inlet and outlet of each thermal-storage tank shall be the following:
   1. Direct-mounted, light-activated type.
F. Upstream and downstream of main system mixing valves.
G. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE
A. Scale Range for Chilled-Water Piping: 0 to plus 100 degrees.
B. Scale Range for Heating, Hot-Water Piping: 0 to 200 degrees F.

3.6 PRESSURE-GAGE SCHEDULE
A. At a minimum, provide at these locations:
   1. Suction and discharge of each pump.
   2. Upstream and downstream of each pressure regulating device.
   3. Upstream and downstream of filters, separators and pump strainers.
   4. Upstream and downstream of hot water heaters/boilers.
   5. Upstream and downstream of each coil, or coil bank, in air handling units.
   6. Pressurized tanks/receivers.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE
A. Scale Range for Chilled-Water Piping: 0 to 100 psi.
B. Scale Range for Heating, Hot-Water Piping: 0 to 100 psi.
3.8 PRESSURE/TEMPERATURE TEST STATIONS
A. At a minimum, install upstream and downstream of:
   1. At each individual coil in air handling units with multiple coils.
   2. Each terminal coil.
   3. Each heat exchanger/converter.

3.9 FLOWMETER SCHEDULE
A. Flowmeters for Chilled-Water Piping: Impeller-Turbine.
   1. Where installed in locations where manufacturer's installation recommendations and requirements are not met, electromagnetic flow meters shall be used.
   1. Where installed in locations where manufacturer’s installation recommendations and requirements are not met, electromagnetic flow meters shall be used.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes the following general-duty valves:
      1. Copper-alloy ball valves.
      2. Ferrous-alloy butterfly valves.
      4. Steel spring check valves.
      5. Cast iron spring check valves.
      7. Chainwheel actuators.
   B. Related Sections include the following:
      1. Division 21 fire-suppression piping and fire pump Sections for fire-protection valves.
      2. Division 23 piping Sections for specialty valves applicable to those Sections only.
      3. Division 23 Section "Identification for HVAC Piping and Equipment" for valve tags and charts.
      4. Division 23 Section "Hydronic Piping" for calibrated balancing valves.
      5. Division 23 Section "Instrumentation and Control for HVAC" for control valves and actuators.

1.3 DEFINITIONS
   A. The following are standard abbreviations for valves:
      1. CWP: Cold working pressure.
      2. EPDM: Ethylene-propylene-diene terpolymer rubber.
      3. PTFE: Polytetrafluoroethylene plastic.
      4. SWP: Steam working pressure.
      5. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTALS
   A. Product Data: For each type of valve indicated. Include body, seating, and trim materials; valve
      design; pressure and temperature classifications; end connections; arrangement; dimensions; and
      required clearances. Include list indicating valve and its application. Include rated capacities;
      shipping, installed, and operating weights; furnished specialties; and accessories.

1.5 QUALITY ASSURANCE
   A. ASME Compliance: ASME B31.1 for power piping valves and ASME B31.9 for building services
      piping valves.
   B. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design
      criteria.

1.6 DELIVERY, STORAGE, AND HANDLING
   A. Prepare valves for shipping as follows:
1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

B. Use the following precautions during storage:
   1. Maintain valve end protection.
   2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
   1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 VALVES, GENERAL

A. Refer to Part 3 "Valve Applications" Article for applications of valves.
B. Bronze Valves: NPS 3 and smaller with threaded ends, unless otherwise indicated.
C. Ferrous Valves: NPS 4 and larger with flanged ends, unless otherwise indicated.
D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.
F. Valve Actuators:
   1. Chainwheel: For attachment to valves, of size and mounting height, as indicated in the "Valve Installation" Article in Part 3.
   2. Handwheel: For valves other than quarter-turn types.
   3. Lever Handle: For quarter-turn valves NPS 6 and smaller.
G. Extended Valve Stems: Valves in Insulated Piping: Valves shall have 2 inch stem extensions and the following features:
   1. Ball Valves: Shall have 2-1/4 inch extended stem and memory stops that are fully adjustable after insulation is applied.
   2. Butterfly Valves: Shall have extended necks.
H. Valve Flanges: ASME B16.1 for cast-iron valves, ASME B16.5 for steel valves; and ASME B16.24 for bronze valves.
I. Threaded: With threads according to ASME B1.20.1.
J. Valve Bypass and Drain Connections: MSS SP-45.
2.3 COPPER-ALLOY BALL VALVES

A. Manufacturers:
   1. Two-Piece, Copper-Alloy Ball Valves:
      a. American Valve
      b. Conbraco Industries, Incorporated; Apollo Division
      c. Hammond Valve.
      d. Jamesbury, Incorporated
      e. Milwaukee Valve Company.
      f. NIBCO Incorporated

B. Copper-Alloy Ball Valves, General: MSS SP-110.

C. Two-Piece, Copper-Alloy Ball Valves sizes ¼ to 3-inches: Bronze body with standard-port and threaded ends, stainless steel ball; PTFE or TFE seats; and 600-psig minimum CWP rating; 150-psig saturated steam and extended blowout-proof stem. 2-1/4-inch extended stem. Example: Conbraco #70-140 Series

D. Cast Iron Ball Valve size 4 inches and larger: Cast iron body with standard-port and flanged ends, Teflon fused solid iron ball; RPTFE seats; 125 psig minimum CWP rating; blowout-proof stainless steel stem. Example: American Valve model 4000

2.4 FERROUS-ALLOY BUTTERFLY VALVES

A. Manufacturers:
   1. Tapped Lug, Ferrous-Alloy Butterfly Valves:
      b. Velan Valve Corporation
      c. University approved equal

B. Tapped Lug Butterfly Valves: 4 Inches and Larger: 200 psi CWP (12 Inches and Smaller), 250 degrees F. continuous service, Ductile iron body and bonnet, 316 stainless steel shaft and disc, stainless-steel stem, field-replaceable EPDM sleeve and stem seals, extended neck, drilled and tapped lug end connections, "bubble-tight" shutoff at rated pressure. Body to have 2" extended neck for insulation. Lug style valves shall be capable of providing bi-directional “Dead End Service” at full pressure without the need for down stream blind flange. Not for steam service. Example: Tyco Vanessa 30,000 series.

2.5 BRONZE CHECK VALVES 2 INCHES AND SMALLER

A. Manufacturers:
   1. Bronze, Silent Spring Check Valves with Nonmetallic Disc:
      a. Milwaukee Valve Company.
      b. NIBCO Incorporated
      c. University approved equal

B. Bronze Check Valves, General: MSS SP-80.

C. Class 250, 300 lb WOG, Bronze, Spring Check Valves: Bronze body with nonmetallic disc and bronze seat. Example Milwaukee 510T.

2.6 STEEL SPRING CHECK VALVES

A. Manufacturers:
   1. Steel Spring Check Valves with Composition to Metal Seats:
      a. DFT Inc.
B. Steel Spring Valves, General: MSS SP-71.
   1. ANSI Class 150, carbon steel, spring-assisted non-slam check valves with soft seats and flanged ends. Example DFT GLC.

2.7 CAST IRON SPRING CHECK VALVES
A. Manufacturers:
   1. Cast Iron Spring Check Valves with Composition to Metal Seats
      a. Milwaukee.
B. Cast Iron Spring Check Valves, General: MSS SP-25.
   1. ANSI Class 125, cast iron, non-slam spring check valves with stainless steel springs and flanged ends. Example: Milwaukee 1800.

2.8 BRONZE GLOBE VALVES – WATER SERVICE
A. Manufacturers:
   1. Bronze Globe Valves with Nonmetallic Disc:
      a. Cincinnati Valve Company
      b. Crane Company; Crane Valve Group.
      c. Hammond Valve.
      d. Milwaukee Valve Company.
      e. NIBCO Incorporated
      f. Powell, Wm. Company
      g. Walworth Company
B. Bronze Globe Valves, General: MSS SP-80, with ferrous-alloy handwheel.
C. Class 150, Bronze Globe Valves: Bronze body with PTFE or TFE disc and union-ring bonnet.
   1. Example: NIBCO #T-235-Y or #S-235-Y

2.9 CHAINWHEEL ACTUATORS
A. Manufacturers:
   1. Babbitt Steam Specialty Company
   2. Roto Hammer Industries, Incorporated
B. Description: Valve actuation assembly with sprocket rim, brackets, and chain.
   1. Sprocket Rim with Chain Guides: Ductile iron, of type and size required for valve.
   2. Brackets: Type, number, size, and fasteners required to mount actuator on valve.
   3. Chain: Hot-dip, galvanized steel of size required to fit sprocket rim.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.
B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
D. Examine threads on valve and mating pipe for form and cleanliness.

E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

F. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE APPLICATIONS

A. Refer to piping Sections for specific valve applications. If valve applications are not indicated, use the following:

1. Shutoff Service:
   a. Water and water solutions:
      1) NPS 3 and smaller: Ball valves.
      2) NPS 4 and larger: butterfly valves.

2. Throttling Service:
   a. Water and water solutions:
      1) NPS 3 and smaller: Ball Valves.
      2) NPS 4 and larger: globe or butterfly valves.

B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP class or CWP ratings may be substituted.

C. Chilled-Water Piping: Use the following types of valves:

   1. Ball Valves, NPS 3 and Smaller: Two piece, 600-psig CWP rating, copper alloy.
   2. Butterfly Valves, NPS 4 and Larger: Tapped Lug, 150-psig CWP rating, ferrous alloy, with EPDM liner.

D. Heating Water Piping: Use the following types of valves:

   1. Ball Valves, NPS 3 and Smaller: Two-piece, 600-psig CWP rating, copper alloy.
   3. Spring Check Valves, NPS 2 and Smaller: Type 4, bronze
   4. Spring Check Valves, NPS 2.5 and Larger, ANSI Class 125 cast iron.

E. Select valves with the following end connections:

   1. For Copper Tubing, NPS 3 and Smaller: Threaded ends.
   2. For Steel Piping, NPS 2 and Smaller: Threaded ends.
   3. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged or welded ends.
   4. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.3 VALVE INSTALLATION

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

C. Locate valves for easy access and provide separate support where necessary.

D. Install valves in horizontal piping with stem at or above center of pipe.

E. Install valves in position to allow full stem movement.

F. Install chainwheels on operators for valves NPS 4 and larger and more than 144 inches above floor except in shop areas. Extend chains to 12 inches above ceiling plane / lighting plane.
G. Install check valves for proper direction of flow and as follows:
   1. Swing Check Valves: In horizontal position with hinge pin level.

3.4 JOINT CONSTRUCTION
   A. Refer to Division 23 Section "Common Work Results for HVAC" for basic piping joint construction.

3.5 ADJUSTING
   A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

   END OF SECTION
SECTION 230529
HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Metal pipe hangers and supports.
   2. Trapeze pipe hangers.
   3. Metal framing systems.
   4. Thermal-hanger shield inserts.
   5. Fastener systems.
   6. Pipe stands.
   7. Equipment supports.

B. Related Sections:
   1. Section 230516 "Expansion Fittings and Loops for HVAC Piping" for pipe guides and anchors.
   2. Section 230548 "Noise and Vibration Controls for HVAC" for vibration isolation devices.
   3. Section 233113 "Metal Ducts" for duct hangers and supports.

1.3 DEFINITIONS
A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS
A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
   1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
   2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

B. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Detail fabrication and assembly of trapeze hangers.
   2. Design Calculations: Calculate requirements for designing trapeze hangers.
1.6 QUALITY ASSURANCE

A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   2. Galvanized Metallic Coatings: Pre-galvanized or hot dipped.
   3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
   4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

B. Stainless-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

C. Copper Pipe Hangers:
   1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
   2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel or stainless steel.

2.2 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:
   1. Manufacturers: Subject to compliance with requirements provide products by one of the following:
      b. Cooper B-Line, Inc. (www.cooperindustries.com)
      c. Flex-Strut Inc. (www.flexstrut.com)
      d. Thomas & Betts Corporation. (www.tnb.com)
      e. Unistrut Corporation; Tyco International, Ltd. (www.unistrut.com)
      f. Wesanco, Inc. (www.wesan co.com)
   2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
   4. Channels: Continuous slotted steel channel with in-turned lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

2.4 THERMAL-HANGER SHIELD INSERTS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Carpenter & Paterson, Inc. (www.carpenterandpaterson.com)
   3. ERICO International Corporation. (www.erico.com)
   5. PHS Industries, Inc. (www.phsind.com)
   7. Piping Technology & Products, Inc. (www.pipingtech.com)

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened Portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE STANDS

A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

C. Low-Type, Single-Pipe Stand: One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

D. High-Type, Single-Pipe Stand:
   1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
   2. Base: [Plastic] [Stainless steel].
   3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
   4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

E. High-Type, Multiple-Pipe Stand:
1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
2. Bases: One or more; plastic.
3. Vertical Members: Two or more protective-coated-steel channels.
4. Horizontal Member: Protective-coated-steel channel.
5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.7 EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.8 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and non-metallic grout; suitable for interior and exterior applications.
   2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
   1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
   2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

E. Fastener System Installation:
   1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
   2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

F. Pipe Stand Installation:
   1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb.

G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

N. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
      b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
      c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
   2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
      a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
   3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
      a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
   4. Shield Dimensions for Pipe: Not less than the following:
      a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
      b. NPS 4: 12 inches long and 0.06 inch thick.
      c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
      d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
      e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
   5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
   6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make bearing surface smooth.

C. Provide lateral bracing, to prevent swaying, for equipment supports.
3.3 METAL FABRICATIONS
A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.4 ADJUSTING
A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.5 PAINTING
A. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099113 "Exterior Painting"; Section 099123 "Interior Painting" and Section 099600 "High Performance Coatings."
B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE
A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
B. Comply with MSS SP-69 and ANSI/MSS SP-58-2009 for pipe-hanger selections and applications that are not specified in piping system Sections.
C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
E. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers, and metal framing systems and attachments for general service applications.
F. Use stainless-steel pipe hangers and stainless-steel attachments for hostile environment applications.
G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
H. Use padded hangers for piping that is subject to scratching.
I. Use thermal-hanger shield inserts for insulated piping and tubing.
J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated, stationary pipes NPS 1/2 to NPS 30.
2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of non-insulated, stationary pipes NPS 3/4 to NPS 8.
7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
8. Adjustable Band Hangers (MSS Type 9): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of non-insulated, stationary pipes NPS 1/2 to NPS 8.
10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of non-insulated, stationary pipes NPS 3/8 to NPS 8.
11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated, stationary pipes NPS 3/8 to NPS 3.
12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Direct attachment to the composite roof deck in any exposed ceiling room is not allowed. Hang ducts, piping, and equipment from the joists. Provide separate sub-structure if required to span between joists as needed for hanger spacing.
2. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
3. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
4. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
5. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
6. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
7. C-Clamps (MSS Type 23): For structural shapes.
8. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
9. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
10. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
11. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
12. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
13. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
   a. Light (MSS Type 31): 750 lb.
   b. Medium (MSS Type 32): 1500 lb.
   c. Heavy (MSS Type 33): 3000 lb.
14. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
15. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
16. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

O. Comply with MSS SP-69 and ANSI/MSS SP-58-2009 for pipe-hanger selections and applications that are not specified in piping system Sections.

P. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
Q. Use powder-actuated fasteners instead of building attachments where required in concrete construction.

END OF SECTION
PART 1 GENERAL

1.1 SECTION INCLUDES
   A. Isolation of vibrations induced by HVAC Systems from spaces for which Noise Criteria have been established in Division 1, including vibration isolators, equipment bases, and flexible connections.

1.2 SUMMARY
   A. Mount rotating and reciprocating mechanical equipment, ductwork, and piping on vibration isolators as noted in the Contract Documents. Select, install and adjust isolators to prevent the transmission of objectionable vibration and noise to the building structure.

1.3 RELATED WORK
   A. Perform vibration isolation work in this Contract, including work described in other Divisions, to meet the product and execution requirements of this Section. Related work includes:
      1. Division 1 – General Requirements
      2. Division 3 – Concrete
      3. Division 4 – Masonry
      4. Division 5 – Metals
      5. Division 14 – Conveying Equipment
      6. Division 22 – Plumbing
      7. Division 23 – Heating, Ventilating and Air Condition
      8. Division 26 – Electrical
      9. Division 1 – General Acoustic Requirements
      10. Section 079219 – Acoustical Sealants
      11. Section 220548 – Noise and Vibration Control for Plumbing Systems
      12. Section 260548 – Noise and Vibration Control for Electrical Systems

1.4 QUALITY ASSURANCE
   A. Provide all vibration isolators and equipment bases for Division 22, 23 and 26 work from the product line of a single manufacturer, unless otherwise accepted by the Acoustics Consultant.
   B. Select isolators to provide uniform deflections within acceptable tolerances when supporting the equipment approved for this project. Coordinate as required with the equipment manufacturers to accomplish this.
   C. Provide engineering, isolator selection, site supervision, and inspection by manufacturer's personnel who shall perform these services directly. Alert the Engineer and Acoustics Consultant of isolator selections that may result in resonances with the equipment and structural systems they are intended to isolate. Replace isolators that upon installation are found to resonate with the supported equipment.
   D. Provide complete isolation systems that include all elements recommended by the manufacturer for compliance with project requirements and applicable codes, ordinances, and regulations. Include all incidental products and materials required for a complete installation even if not explicitly described in the Construction Documents.
   E. Installation & Verification:
1. Install vibration isolation systems using skilled workers trained and licensed, as applicable, by the manufacturer for installations of the types used on this project.

2. Upon completion of the Work, provide final inspection by the manufacturer's representative and submit to the Architect and Engineer a written report authored by the manufacturer's representative certifying the correctness of installation and compliance with the approved submittal data. Include tabulation of the static deflection expected under design and operating loads in comparison with the actual static deflection measured in the completed installations.

1.5 STANDARDS

1.6 ENGINEERING
A. The Construction Documents are indicative of isolation requirements. Provide complete engineering services for all components of isolation systems used in this project.

1.7 SUBMITTALS
A. Submit manufacturer's data, shop drawings, and product performance certifications in accordance with Division 1.

B. Manufacturer's Data: Submit technical product data confirming that products comply with specified requirements:
   1. Illustrations and descriptions of components including, but not limited to isolators, equipment bases, anchors, and accessories.
   2. Operation and maintenance instructions.

C. Shop Drawings
   1. Details of isolation systems, including plan and section drawings indicating isolator and flexible connection locations and types, isolator and connector schedules, details for resilient penetrations, and installation details.
   2. Isolator location drawings will be based on contractor's shop drawings rather than engineer's drawings whenever possible. If shop drawings are not used, the contractor will be required to make field-modifications, including but not limited to replacement and/or relocation of isolators, based on final field conditions at no cost to the owner.
   3. Indicate substrate construction required of other subcontractors.
   4. An initial submittal "For Type Only" is acceptable to confirm the scope of the isolators on the project if the necessary shop drawings by others (i.e. ductwork or equipment) are not yet available to provide final isolator sizing at the time of the initial submission. In this case a follow-up submittal will be required indicating precise isolator sizing and location as noted elsewhere in this section.

D. Samples: provide a sample of each type of isolator assembly used in the project. It is not necessary to submit samples of each spring capacity and pad hardness.

E. Supervision plan for manufacturer's representative in the field during installation of vibration isolation systems.

F. General Requirements for Vibration Isolation Mounts and Hangers: Provide catalog cut sheets, shop drawings, and other documents as necessary to describe the installation and its components. Include the following information:
   1. Calculations:
a. Submit manufacturer's engineer's calculations of loads, deflections, and natural frequencies for record only.

2. Color code legend for spring and elastomer capacities.

3. Certifications:
   a. Certify that elastomeric pads meet the requirements of AASHTO Highway Bridge Specification.

4. Springs Summary, for each spring-based isolator:
   a. Equipment name and number
   b. Operating Weight of Equipment
   c. Lowest reciprocating or rotating speed
   d. Isolator type
   e. Weight supported by isolator
   f. Scheduled deflection
   g. Proposed deflection under operating load
   h. Natural Frequency
   i. Spring free height
   j. Spring operating height
   k. Spring solid height at coil bind
   l. Spring diameter

5. Elastomeric Pads, for each elastomer-based isolator:
   a. Equipment name and number
   b. Operating Weight of Equipment
   c. Isolator type
   d. Weight supported by isolator
   e. Pad bearing area
   f. Pad free height
   g. Pad operating height
   h. Scheduled deflection
   i. Proposed deflection under operating load
   j. Percent deflection
   k. Natural Frequency
   l. Hardness and compliance with AASHTO Bridge Bearing Neoprene quality standard

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers listed below have demonstrated an ability to comply with specifications for vibration isolation products similar to those required for this project. However, specific products made by the listed manufacturers do not all comply with the requirements of this specification. Subject to the requirement for a single manufacturer and the restrictions regarding unacceptable types of isolators, the products of the following manufacturers are acceptable sources for this project:

1. Mason Industries, Inc. (Mason), Hauppauge, New York
2. Kinetics Noise Control (Kinetics), Dublin, Ohio
3. Vibration Mountings and Control Group (VMC Group), Houston, Texas
4. CDM Novitec (CDM), Evanston, IL
5. Thybar Corporation (Thybar), Addison, IL
6. E.A.R., Indianapolis (EAR), Indiana
7. PSI-Thunderline/Link-Seal (PSI-Thunderline), Houston, Texas
8. Ductmate Industries, Inc. (Ductmate), East Monongahela, PA
9. DynAir Inc. (DynAir), Lachine, QB
10. Carlisle Hardcast (Carlisle), Wylie, TX

2.2 SPRING REQUIREMENTS
A. Provide steel springs with static deflections equal to or greater than those shown on the Construction Documents. Submittals based on rated deflections will be rejected.
B. Size springs to provide not less than 50 percent additional travel to solid, coil-bind condition beyond the deflection under operating load.
C. Size springs so that diameter is not less than 80 percent of the height of the spring at operating load.
D. Provide springs that do not permanently deflect after loading to a solid, coil-bind condition.
E. Do not weld springs to other components of the isolator assembly unless specifically noted in the Submittals and accepted by the Acoustics Consultant.
F. Color code springs to allow positive identification after installation. Match color coding to the color code legend provided with the submittals.

2.3 ELASTOMER REQUIREMENTS
A. Provide elastomeric elements with static deflections equal to or greater than those shown on the Construction Documents. Submittals based on rated deflections will be rejected.
B. Provide neoprene elements with a maximum hardness of 40 durometer, Shore A rating, where possible, but in no case exceeding 50 durometer. Where deflections called out in the construction documents exceed those required to achieve the specified natural frequencies, the greater deflection will govern.
C. Meet AASHTO Highway Bridge Specifications for all neoprene products installed in irretrievable locations and as required elsewhere in the Construction Documents.

2.4 CORROSION RESISTANCE
A. Treat isolators and associated hardware for resistance to corrosion to the following requirements:
   1. Interior exposure:
      a. Steel isolator components: PVC coating or phosphate treatment with finish coat of industrial grade enamel paint.
      b. Structural steel bases and associated components: Cleaned of welding slag, primed with zinc chromate primer (steel) or metal etching primer (aluminum); industrial grade enamel finish coat.
      c. Nuts, bolts, and other fasteners: zinc electroplate with etching primer and enamel paint finish coat.
   2. Exterior exposure:
      a. Steel components: PVC coating; or hot-dipped or electroplated zinc with neoprene or bitumastic finish coat.
      b. Aluminum components: etched and painted with industrial grade enamel paint.
      c. Nuts, bolts, and other fasteners: zinc electroplate with etching primer and enamel paint finish coat.

2.5 ACCEPTABLE PRODUCTS
A. Equipment Bases & Rails
   1. Type B-1 Bases – Steel Bases
a. Provide rigid steel frames that will not twist, deform, deflect, or crack in any manner that would affect the operation of the isolated equipment or the performance of the isolators. Size steel bases to support equipment housings, motors, and associated pipe and duct elbows, electrical control elements, and any other related components requiring resilient support because of its location on the equipment side of the flexible connections to distribution ductwork and piping. Supply steel frame under this specifications section.

b. Provide bases with minimum depth of 6 inches. Increase depth as required to achieve required rigidity with a minimum depth of one tenth of the longest dimension of the base. Space isolators not more than ten times the steel depth apart. Provide a minimum of 2 inches clearance between floor or housekeeping pad and underside of steel base. Use height-saving brackets if required to maintain equipment clearances.

c. Acceptable products:
   1) Mason WF
   2) Kinetics SFB or SBB
   3) VMC Group WFB

2. Type B-2 Bases – Steel Rails
   a. Provide structural steel sections sized to prevent deflection and distortion that would affect operation of equipment and performance of isolators. Include end-mounting brackets for attachment of isolators.

b. Provide a minimum of 2 inches clearance between underside of rail and floor or housekeeping slab. Provide not less than 12 inches from underside of rails to roof deck.

3. Type B-3 Bases – Concrete Inertia Bases
   a. Provide inertia bases of normal weight concrete (150 pcf) and appropriate steel reinforcing within perimeter frames of steel channel, in a rigid assembly that will not twist, deform, deflect, or crack in any manner that would affect the operation of the isolated equipment or the performance of the isolators. Size inertia bases to support equipment housings, motors, and associated pipe and duct elbows, electrical control elements, and any other related components requiring resilient support because of its location on the equipment side of the flexible connections to distribution ductwork and piping. Supply steel frame under this specifications section. Provide concrete under this section or Division 3.

b. Provide bases with minimum thickness of 6 inches. Increase thickness as required to achieve required mass according to the Isolation Schedule within this specification. Size perimeter steel to be not less than one twelfth of the longest dimension of the base. Space isolators not more than ten times the slab thickness apart. Provide a minimum of 2 inches clearance between floor or housekeeping pad and underside of slab. Use height-saving brackets if required to maintain equipment clearances.

c. Acceptable products:
   1) Mason types K and BMK
   2) Kinetics Type CIB
   3) VMC Group CPF

B. Equipment Curbs
   1. Type C-1 Curbs – Low Deflection Spring Isolation Curbs
      a. Provide vibration isolation bases for curb-mounted rooftop equipment. Provide laterally-stable springs as otherwise specified in paragraph 2.2 and bearing on ¼ inch neoprene pads. Provide resilient snubbers not less than ¼ inch thick to limit lateral deflection under wind loads.

b. Flashing required to shed water may not affect the performance of the isolation system under any combination of design loads. Use flexible EPDM membrane for closure between isolation base and fixed curb.

c. Acceptable products:
   1) Mason CMAB
2) Kinetics ESR
3) Thybar Vibro-Curb III

2. Type C-2 Curbs – High Deflection Spring Isolation Curbs
   a. Provide vibration isolation bases for curb-mounted rooftop equipment. Provide laterally-
      stable springs as otherwise specified in paragraph 2.2 and bearing on ¼ inch neoprene
      pads. Provide resilient snubbers not less than ¼ inch thick to limit lateral deflection under
      wind loads.
   b. Flashing required to shed water may not affect the performance of the isolation system
      under any combination of design loads. Use flexible EPDM membrane for closure between
      isolation base and fixed curb.
   c. When lower curb is used as a plenum, provide not less than 2 inches of fiberglass
      insulation on outboard face of fixed curb, and ensure that flexible flashings and other
      components of the plenum are airtight without rigid contact between the upper and lower
      curbs.
   d. Acceptable products:
      1) Mason RSC
      2) Kinetics ESR
      3) Thybar Vibro-Curb III

C. Floor-Supported Mounts
   1. Type M-1 Mounts – Neoprene Pads
      a. 3/4”-inch minimum thickness, waffled or ribbed neoprene.
      b. Where multiple layers are required to provide the specified deflections, interleave pads with
         16 gauge steel shim plates. Size pads for deflection equal to 10 to 15 percent of unloaded
         height and provide pads of sufficient thickness to achieve the specified deflection. Provide
         load-distributing top plates if required for uniform loading.
      c. Acceptable products for individual pads:
         1) Mason W, SW, and Super W
         2) Kinetics RSP
         3) VMC Group NRC Pads
      d. Acceptable products for neoprene/steel composite pads:
         1) Mason WSW
         2) Kinetics RSP with steel shim
         3) VMC Group NRC Flex Plates
   2. Type M-2 Mounts – Neoprene-in-Shear Mounts
      a. Provide double-deflection in-shear isolators with steel bottom plates with pre-drilled bolt
         holes for attachment to floor or base, a threaded steel insert at the top of the isolator for
         attaching the equipment, and friction surfaces at both top and bottom. Coat all metal
         surfaces with neoprene.
      b. Acceptable products:
         1) Mason ND
         2) Kinetics RD
         3) VMC Group RVD
   3. Type M-3 Mounts – Open Springs
      a. Provide isolators of the general characteristics described in paragraph 2.2, above, that are
         freestanding and laterally stable with no housing and that are furnished with level-
         adjustment bolts for rigid connection to the isolated equipment. Provide with molded
         neoprene cup or 1/4 inch thick elastomeric friction pad between isolator baseplate and its
         support. Vary spring size as required for equal deflection under non-uniformly distributed
         equipment loads.
      b. Acceptable products:
         1) Mason SLF
2) Kinetics FDS
3) VMC Group AC

4. Type M-4 Mounts – Restrained Open Springs
   a. Provide built-in adjustable spring restraints for equipment with operating weight greater than weight upon installation to prevent equipment from deflecting (or rising) when the additional weight is applied (or removed in the future). Provide isolators as specified for Type M-4 but with restraint studs and adjustable nuts. Provide ½ inch minimum clearance around the restraint studs. Use bridge-bearing quality neoprene for elastomeric friction pads at chillers and cooling towers.
   b. Acceptable products:
      1) Mason SLR
      2) Kinetics FLS
      3) VMC Group M

D. Ceiling-Supported Hangers
1. Type H-1 Hangers – Not Used
2. Type H-2 Hangers – Neoprene-in-Shear Hangers
   a. Provide neoprene-in-shear element mounted in a rigid steel hanger box. Mold neoprene element with a rod isolation bushing that prevents rigid contact between hanger rod and housing from vertical through an angular deflection of not less than 30 degrees in any direction.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason HD and WHD
      2) Kinetics RH
      3) VMC Group RH
3. Type H-3 Hangers – Open Spring with Elastomer
   a. Provide neoprene-in-shear element of 1¼-inch minimum thickness and a spring of the general characteristics specified in Paragraph 2.2, above. Seat spring in a molded neoprene cup with steel washer reinforcing. Mold neoprene element with a rod isolation bushing that prevents rigid contact between hanger rod and housing from vertical through an angular deflection of not less than 15 degrees in any direction. Do not directly stack the spring and neoprene isolator elements.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason 30N
      2) Kinetics SRH
      3) VMC Group HSRA
4. Type H-4 Hangers – Pre-Compressed Open Spring with Elastomer
   a. Provide built-in adjustable spring restraints for equipment with operating weight greater than weight upon installation to prevent equipment from deflecting (or rising) when the additional weight is applied (or removed in the future). Provide isolators similar to Type H-3, but pre-compressed with restraint mechanisms that can be released to free the spring when subjected to its operational load. Provide an integral scale to indicate amount of deflection.
   b. For ductwork hung by straps, provide hangers with eyes on the top and bottom to allow for bolting to the straps.
   c. Acceptable products:
      1) Mason PC30N
      2) Kinetics SRH, with restraints
3) VMC Group HRSRA

E. Wall-Supported Equipment Mounts
   1. Type W-1 Mount – Captive Neoprene
      a. Maximum 50 durometer solid neoprene or neoprene housed in steel casing. Provide threaded insert to receive equipment mounting bolt.
      b. Acceptable products:
         1) Mason BR, RBA, or RCA
         2) Kinetics RQ
         3) VMC Group MB, RSM

F. Pipe Riser Supports & Guides
   1. Type P-1 Support – Neoprene Pipe Support
      a. All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch (13-mm-) thick, 60-durometer neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig (3.45 MPa) and for equal resistance in all directions.
      b. Acceptable products:
         1) Mason ADA
         2) Kinetics KPA
         3) VMC Group LD
   2. Type P-2 Support – Neoprene Pipe Guide
      a. Telescopic arrangement of 2 steel tubes separated by a minimum of 1/2-inch (13-mm-) thick, 60-durometer neoprene. Factory set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction. Shear pin shall be removable and re-insertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.
      b. Acceptable products:
         1) Mason VSG
         2) Kinetics KPG
         3) VMC Group AG

G. Flexible Connections
   1. Type FC-1 Connector – Neoprene Twin-Sphere Piping Connectors
      a. Provide flanged twin-sphere or threaded single-sphere isolators with Kevlar cord and peroxide-cured EPDM body with steel rings embedded in flanges to prevent pull-out. Connectors must accept elongation, compression, axial, and transverse motion. Select materials to suit system temperature, pressure, and fluid type. Do not use control rods or cables to limit extension of the isolator.
      b. Acceptable products:
         1) Twin-sphere connectors:
            (a) Mason types SFDEJ, SFDCR
            (b) Kinetics Type FTC
            (c) VMC Group 2600
         2) Single-sphere connectors (only acceptable for pipe sizes where twin-sphere connectors are not available, see Schedule):
            (a) Mason types SFEJ, SFU
            (b) Kinetics Type FC
            (c) VMC Group 2800
   2. Type FC-2 Connector – Flexible Braided Stainless Steel Hose
      a. Provide carbon steel flanges for pipes greater than 3 inches diameter. Male nipples are acceptable for pipe diameters smaller than 3 inches.
b. Acceptable products:
   1) Mason FFL and MN
   2) Kinetics Kinflex BFMC
   3) VMC Group SS

3. Type FC-3 Connector – Flexible Duct Connection to Equipment
   a. Provide Hypalon-coated, woven fiberglass, flameproof fabric (24 oz per square yard), serviceable from -40°F to 250°F.
   b. Acceptable products:
      1) Ductmate Pro-Flex
      2) Dyn-Air Connector-Plus
      3) Carlisle Hardcast Hypalon

4. Type FC-4 Connector – Below-Grade Penetration Seals
   a. Modular EPDM, nitrile, or silicone seal, as appropriate for specific field conditions, with accompanying sleeves, caps, and accessories. Provide fire- and high-temperature rated components where required by project conditions and applicable codes.
   b. Acceptable products:
      1) PSI-Thunderline, Link-Seal

H. Resilient Wrap for Small-Diameter Pipe and Conduit
1. Type SD-1 Wrap – Closed Cell Rubber Foam
   a. Provide minimum 3/4-inch thick closed cell rubber or neoprene wrap in sheets to be cut to size, or in pre-molded form to slip over the pipe/conduit without gaps.
      1) Armacell Armafix or Armaflex
      2) K-Flex Isul-Lock DS
      3) Aeroflex Aerofix or Aerocell
   b. Where closed cell rubber foam insulation is provided for thermal purposes, this insulation may serve as SD-1 wrap without provision of additional wrap for acoustic purposes.

I. Isolation Accessories
1. Elastomeric Isolators for Mounting Bolts
   a. Provide neoprene grommets, bushings, and washers for all bolts used to secure isolators to floors and housekeeping slabs and for all snubbers. Size bolt holes and washers to accommodate grommets, sleeves, and bushings and to preclude contact between rigid components that would cause bridging between isolated elements and the building structure. Baseplates for neoprene pads may be rigidly bolted to the floor or housekeeping slab if the bolts secure the baseplates only and do not continue through the neoprene to meet any other rigid material. Do not exceed 40 durometer, Shore A hardness.
   b. Acceptable products include:
      1) Mason HG, HLB and HLW
      2) E.A.R. Isodamp and C-1000
      3) VMC Group RB

2. Thrust Restraints & Sway Braces
   a. Provide spring isolators with the same characteristics and deflection as the isolator springs. Preset thrust restraint isolators in the factory and fine tune in the field to allow for a maximum of 1/4-inch deflection between at-rest and maximum-thrust conditions. Furnish with appropriate brackets to attach to equipment and the structure. Install restraints on centerline of thrust and symmetrically on both sides of the equipment.
   b. Acceptable products include:
      1) Mason WB
      2) Kinetics HSR
      3) VMC Group TRK
PART 3 EXECUTION

3.1 GENERAL

A. Before commencing installation examine the substrate and surrounding conditions to ensure that there is nothing to prevent proper and timely execution of the installation. Beginning work specified in this Section indicates acceptance of the substrate and surrounding conditions.

B. Install isolation systems in strict compliance with manufacturer’s recommendations and engineering, and submittal data. Make no rigid connections to structure that would compromise the performance of the isolation systems.

C. Resiliently mount or hang mechanical equipment, ductwork, piping, and other equipment on structural components indicated on the Drawings and as specified in this section.

D. For all isolated equipment, make connections of piping, ductwork, and conduit using flexible connections specified in this section. Make no connections to isolated equipment in a manner that would compromise the performance of the isolation systems. Refer to Section 230548 – Noise and Vibration Control for Electrical Systems for requirements related to isolation of electrical equipment and connections.

E. Establish isolator locations for ease of installation, adjustment, and inspection as well as specified performance.

F. Replace isolators found to resonate with building structure, at no additional cost to the Owner.

3.2 GENERAL REQUIREMENTS FOR MOUNTS AND HANGERS

A. Align mounts and hangers squarely above or below the equipment mounting holes to avoid introducing lateral loads and deflection.

B. Deflection requirements:
   1. Verify installed isolators have deflections equal to or greater than deflections specified on the submittals.
   2. Where multiple deflections apply to a single isolator (where a single isolator supports multiple isolated elements), the largest deflection governs.
   3. Vary the size and/or hardness of isolators as required to yield equal deflection for all isolators supporting a single piece of equipment or length of pipe or ductwork. Consult manufacturer for direction when specified isolators do not yield required deflection and correct non-compliant isolators at no cost to the Owner.

C. Support equipment, ductwork, conduit and piping independently. Do not hang equipment, ductwork, piping, or conduit from other isolated equipment, ductwork, piping, or conduit.

D. Maintain 2 inches of clearance between isolated elements and walls, ceilings, and other non-isolated building components.

E. Isolate drain piping attached to vibration isolated equipment from rigid components of the building.

F. Limit stops must be inactive and out of contact with the isolator during equipment operation.

G. Adjust leveling bolts and hanger rod lengths so that equipment is level and in alignment with connecting ductwork and piping.

H. Restrained isolators may be substituted for unrestrained isolators at installer’s option to simplify installation.
I. Isolate hanger rods passing through barrier ceilings with elastomeric sleeves or grommets or treat as resilient penetrations in accordance with the details and Section 079219 – Acoustical Sealants. Unless noted otherwise, locate equipment, piping, and ductwork below barrier ceilings.

### 3.3 EQUIPMENT MOUNTED ON FLOORS, HOUSEKEEPING PADS, AND STRUCTURAL ELEMENTS

A. For equipment with bases, locate isolators on the sides of the base that are parallel to the equipment shaft.

B. At housekeeping slabs and pedestals, position isolators with entire bearing plate on slab or pedestal. Do not cantilever baseplates beyond edges of slabs and pedestals. Coordinate isolator locations with housekeeping slabs so that outboard height-saving mounts do not contact the housekeeping slabs. Notify contractor of work by others requiring remediation for proper installation of isolators.

C. For floor-mounted equipment, provide a minimum of 2 inches operating clearance from the lowest point of the base to the floor or housekeeping slab. Verify that 2 inches of unobstructed clearance has been provided in the final installation under operating loads. Correct nonconforming conditions at no cost to the Owner. Provide height-saving brackets as required to maintain required equipment clearances.

D. For concrete inertia bases, set steel perimeter on bond breaker material, provide steel reinforcing in compliance with Manufacturer's recommendations, and pour normal weight concrete to the full depth of the perimeter steel. If no reinforcing is specified, provide ½-inch reinforcing bar at 6-inch centers each way, and weld reinforcing to the perimeter steel 1½ inches above the bottom of the steel. Provide required anchor bolts held in position by steel templates during the pour.

### 3.4 ISOLATION SCHEDULE – EQUIPMENT

A. Provide isolation mounts and hangers for equipment as follows (see also notes after table). Static deflections indicated in the table below are minimum values.

1. Schedule Notes:
   a. The static deflection listed in the Schedule is a minimum acceptable value for installed deflection. Manufacturers may need to submit isolators with a higher “nominal” deflection in order to achieve the deflection listed above.
   b. For equipment specified with B-1 bases, it is acceptable to install the isolators directly under the equipment without the use of the base if the equipment is able to be supported by point loads. This must be confirmed by the equipment manufacturer.
   c. Where inertia bases (type B-3) are indicated, they will be sized as follows:

<table>
<thead>
<tr>
<th>Motor Size</th>
<th>Minimum Thickness of Inertia Base</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 to 20 horsepower</td>
<td>6 inches</td>
</tr>
<tr>
<td>25 to 50 horsepower</td>
<td>8 inches</td>
</tr>
<tr>
<td>60 to 100 horsepower</td>
<td>10 inches</td>
</tr>
</tbody>
</table>
d. For air handling units or packaged rooftop units with internal isolation approved by the isolator manufacturer’s engineer, provide Type M-1 neoprene isolators between the unit or base and the floor, housekeeping slab, or curb. If the isolator manufacturer’s engineer cannot approve the internal isolation, the internal isolators must be locked down with shipping bolts and not used.

e. Fan-powered box isolation schedule assumes internally isolated neoprene mounting of fan. If no fan isolation is provided, additional isolation will be required (follow requirements for fan coil units).

f. Quick reference for isolator types:
   1) Base B-1: Steel frame
   2) Base B-2: Steel rails
   3) Base B-3: Concrete inertia base
   4) Curb C-1: Low-deflection spring isolation curb
   5) Curb C-2: High-deflection spring isolation curb
   6) Mount M-1: Neoprene pad
   7) Mount M-2: Neoprene-in-shear
   8) Mount M-3: Open spring
   9) Mount M-4: Restrained open spring
  10) Mount M-5: Pneumatic isolator
  11) Hanger H-1: Not used
  12) Hanger H-2: Neoprene-in-shear
  13) Hanger H-3: Open spring
  14) Hanger H-4: Pre-compressed open spring

3.5 ISOLATION SCHEDULE – DUCTWORK, PIPING, AND CONDUIT

A. Provide isolation mounts and hangers for ductwork, piping, and conduit:

<table>
<thead>
<tr>
<th>Device</th>
<th>Within 30ft. of Reciprocating Equipment or Within the Entirety of the Equipment Room (Whichever is Greater)</th>
<th>Within 8ft. of Crossing an Acoustic Isolation Joint or Acoustically-Isolated Construction; When Hung from the Underside of a Room with a Noise Criteria RC 20 or less</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Flr/Clg</td>

</tr>
<tr>
<td>1” diameter or less</td>
<td>SD-1</td>
<td>W-1/ SD-1</td>
</tr>
<tr>
<td>In Vertical Shaft (&gt;1” dia.)</td>
<td>P-1/P-2</td>
<td>--</td>
</tr>
</tbody>
</table>

1. Schedule Notes:
   a. The distance away from equipment (or crossing an AIJ/AIC) is measured along the run of the ductwork, piping, or conduit.
b. Multiple ducts/pipe/conduit may be installed on the same trapeze hanger, with isolators supporting the trapeze. In the case of such ganged installations, the highest-deflection isolator should be used for the trapeze isolators.

c. Where wall support indicates an “H-#” type isolator, this requires that the duct/pipe/conduit be hung of a bracket that is wall mounted, with isolators within the length of a threaded rod supporting it.

d. Where piping is provided with jacketed fiberglass insulation wrap, this insulation can fulfill the requirements of SD-1 wrap without provision of additional wrap for acoustic purposes.

e. All isolation for ductwork, piping and conduit includes elements such as:
   1) VAV boxes, dampers, reheat coils and other duct-mounted elements.
   2) Pipe valves
   3) Electrical pull boxes and junction boxes

f. Piping connected to fan coil units, fan-powered boxes, and reheat coils does not require isolation mounts for 30ft beyond the equipment (see requirements for flexible connectors below).

2. Position isolators as high as possible in the hanger rod or strap assembly but not in direct contact with the building structure without manufacturer’s written authorization. Provide 1 inch minimum clearance between isolator housing and structure above. Provide side clearance for hangers to allow full 360-degree rotation about the rod axis without contacting any object.

3. Drain pipes for air handling units shall be supported only from the isolated air handling unit frame. The condensate shall drip into a funnel that is supported from the floor or floor drain. A gap of at least 2 inches shall be maintained between the end of the air handling unit drain pipe and funnel or floor drain.

### 3.6 ISOLATION SCHEDULE – FLEXIBLE CONNECTIONS

A. Provide flexible connections for all ductwork, piping, and conduit as follows:

<table>
<thead>
<tr>
<th>Device</th>
<th>Size</th>
<th>Connector</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Ductwork</strong></td>
<td></td>
<td></td>

<tbody>
<tr>
<td>Heat Exchangers, Expansion Tanks, Glycol Tanks, Dearators, Reheat Coils</td>
<td>&lt; 2” diameter</td>
<td>FC-1 (single sphere)</td>
</tr>
<tr>
<td></td>
<td>2” to 14” diameter</td>
<td>FC-1</td>
</tr>
</tbody>
</table>
1. FC-3 flexible duct connections are to be configured as follows:
   a. Crimp fabric into duct flanges and seal airtight.
   b. Provide minimum separation of 6 inches between duct and equipment.
   c. Provide 1½ inch minimum slack or as required to accommodate full range of equipment and duct movement when subjected to maximum operating and lateral loads simultaneously without becoming taut.
   d. Utilize thrust restraints as required to limit horizontal movement so that flexible connections do not become taut under any combination of operational loads.
   e. Mount flexible duct connections as close to equipment housings as practical but in no case beyond the first duct hanger.

3.7 ISOLATION SCHEDULE – ACCESSORIES
A. Provide isolation accessories for all isolated HVAC equipment as follows:
   1. All bolted connections between equipment and non-isolated structure, or at other locations recommended by the isolation manufacturer, must be made using Elastomeric Isolators for Mounting Bolts.

3.8 TESTING, EVALUATION, AND ACCEPTANCE PROCEDURES
A. Upon completion of the installation, the vibration isolation manufacturer will send a representative to the site to inspect and approve the installation. The manufacturer’s field report must certify that all of the isolators have been installed in accordance with the manufacturer’s instructions and will include the type and measured static deflection of all spring isolators.
B. If it is found that the construction fails the acoustic test measurements or performance requirements identified in the Contract Documents, make changes necessary to meet the requirements identified in the Contract Documents and be responsible for the costs associated with performing all additional acoustical tests to verify the acoustic performance of the construction. Costs for additional acoustical testing shall include consulting fees at per hour rates in effect at the time of testing along with related expenses including, but not limited to, travel expenses and test equipment use charges.

END OF SECTION
SECTION 230553
IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Equipment labels.
   2. Warning signs and labels.
   3. Pipe labels.
   4. Duct labels.
   5. Valve tags.
   6. Warning tags.

1.3 ACTION SUBMITTALS
A. Pipe, Ductwork, Equipment and Valve identification schedule for review and confirmation with Engineer and owner.
B. Ceiling tag identification for review and confirmation with Architect and owner.
C. Product Data: For each type of product indicated.
D. Valve Schedules: For each piping system to include in maintenance manuals.

1.4 COORDINATION
A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.
D. Coordinate ceiling tag identification with owner and architect before installation.

PART 2 PRODUCTS

2.0 EQUIPMENT LABELS
A. Plastic Labels for Equipment:
   1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
   2. Letter Color: Blue.
   4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
   5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
Identification for HVAC Piping and Equipment

6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

7. Fasteners: Stainless-steel rivets or self-tapping screws.

8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
1. Review and confirm labels with owner prior to marking and installation.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.1 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Letter Color: Black.

C. Background Color: Yellow.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions. Review and confirm warning signs and labels with owner prior to marking and installation.

2.2 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pre-tensioned Pipe Labels: Pre-coiled, semi rigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
1. Review and confirm pipe labels with owner prior to marking and installation.
2. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
3. Lettering Size: At least 1-1/2 inches high.
2.3 VALVE TAGS
A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
   1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
   2. Fasteners: Brass wire-link or beaded chain; or S-hook.
B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
   1. Review and confirm valve schedules with owner prior to marking and installation.
   2. Valve-tag schedule shall be included in operation and maintenance data.

2.4 DUCT LABELS
A. General Requirements for Manufactured duct Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
B. Self-Adhesive Duct Labels: Printed plastic with contact-type, permanent-adhesive backing.
C. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
F. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
G. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
   1. Review and confirm duct labels with owner prior to marking and installation.
   2. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.
   3. Lettering Size: At least 1-1/2 inches high.

2.5 WARNING TAGS
A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
   1. Size: Approximately 4 by 7 inches.
   2. Fasteners: Brass grommet and wire.
   3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."

PART 3 EXECUTION
3.1 PREPARATION
A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.
3.2 EQUIPMENT LABEL INSTALLATION
A. Install or permanently fasten labels on each major item of mechanical equipment.
B. Locate equipment labels where accessible and visible.
C. Provide operational data including manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and similar essential data. Locate nameplates in an accessible location.
D. Identify all equipment with engraved laminated plastic with white lettering and black background. Lettering/numbering will be no less than ¾” in height. Nameplates exposed to sunlight will be made of UV resistant material.

3.3 PIPE LABEL INSTALLATION
A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near each valve and control device.
   2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. At access doors, manholes, and similar access points that permit view of concealed piping.
   5. Near major equipment items and other points of origination and termination.
   6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
B. Pipe Label Color Schedule:
   1. Chilled-Water Piping:
      a. Background Color: Blue.
      b. Letter Color: White
   2. Make-up Water Piping:
      a. Background Color: Green
      b. Letter Color: White
   3. Heating Water Piping:
      a. Background Color: Red.
   4. Condensate Piping:
      a. Background Color: Blue.

3.4 DUCT LABEL INSTALLATION
A. Install self-adhesive duct labels with permanent adhesive on air ducts in the following color codes:
   1. Blue: For cold-air supply ducts.
   2. Red: For hot-air supply ducts.
   4. ASME A13.1 Colors and Designs: For hazardous material exhaust.
B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 30 feet in each space where ducts are exposed or concealed by removable ceiling system.
3.5 **VALVE-TAG INSTALLATION**

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. **Valve-Tag Size and Shape:**

2. **Valve-Tag Color:**
   b. Hot Water: Natural.

3. **Letter Color:**
   b. Hot Water: Black.

3.6 **WARNING-TAG INSTALLATION**

A. Write required message on, and attach warning tags to, equipment and other items where required.

3.7 **CEILING-TAG INSTALLATION**

A. For equipment (VAV boxes, fans, fan coil units, equipment, filters, etc.) and branch isolation valves located above suspended ceilings, label ceiling grid (not the tile) at key access points with a clear adhesive label with bold black lettering (font size 16) with equipment, etc., ID information.

**END OF SECTION**
SECTION 230593
TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Balancing Air Systems:
      a. Constant-volume air systems.
      b. Variable-air-volume systems.
   2. Balancing Hydronic Piping Systems:
      a. Constant-flow hydronic systems.
      b. Variable-flow hydronic systems.
      c. Primary-secondary hydronic systems.
   3. HVAC equipment quantitative-performance settings.
   4. Exhaust hood airflow balancing.
   5. Space pressurization testing and adjusting.
   6. Verifying that automatic control devices are functioning properly.
   7. Existing systems TAB.
   8. Reporting results of activities and procedures specified in this Section.

1.3 DEFINITIONS
A. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.
B. Balance: To proportion flows within the distribution system, including sub mains, branches, and terminals, according to indicated quantities.
C. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.
D. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person’s skin than is normally dissipated.
E. NC: Noise criteria.
F. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
G. RC: Room criteria.
H. Report Forms: Test data sheets for recording test data in logical order.
I. Static Head: The pressure due to the weight of the fluid above the point of measurement. In a closed system, static head is equal on both sides of the pump.
J. Suction Head: The height of fluid surface above the centerline of the pump on the suction side.
K. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
L. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.

M. TAB: Testing, adjusting, and balancing.

N. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.

O. Test: A procedure to determine quantitative performance of systems or equipment.

P. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

S. TAB: Testing, adjusting, and balancing.

U. TAB Specialist: An entity engaged to perform TAB Work.

1.4 SUBMITTALS

C. Certified TAB Reports: Submit two copies of reports prepared, as specified in this Section, on approved forms certified by TAB firm.

D. Sample Report Forms: Submit two sets of sample TAB report forms.

1.5 QUALITY ASSURANCE

A. TAB Contractor Qualifications: Engage a TAB entity certified by either AABC or NEBB.

1. TAB Technician: Employee of the TAB contractor and who is certified by AABC, NEBB, or TABB as a TAB technician.

B. TAB Conference: Meet with Architect and Owners representatives and Commissioning Authority on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.

1. Agenda Items:
   b. The TAB plan.
   c. Coordination and cooperation of trades and subcontractors.

C. Coordination of documentation and communication flow. Certification of TAB Reports: Certify TAB field data reports. This certification includes the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
2. Certify that TAB team complied with approved TAB plan and the procedures specified and referenced in this Specification.

E. Instrumentation Type, Quantity, and Accuracy: As described in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems, "Section II, "Required Instrumentation for NEBB Certification."

F. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.
   1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

G. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

H. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.6 PROJECT CONDITIONS
A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

1.7 COORDINATION
A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.

B. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.

C. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.8 WARRANTY
A. National Project Performance Guarantee: Provide a guarantee on AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" forms stating that AABC will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Guarantee includes the following provisions:
   1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
   2. Systems are balanced to optimum performance capabilities within design and installation limits.

B. Special Guarantee: Provide a guarantee on NEBB forms stating that NEBB will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Guarantee shall include the following provisions:
   1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
   2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 PRODUCTS (Not Applicable)

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.
C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine ceiling plenums and under floor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 "Metal Ducts" division 23 "Nonmetal Ducts" and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.

F. Examine equipment performance data including fan and pump curves.
   1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
   2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

H. Examine test reports specified in individual system and equipment Sections.

I. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

J. Examine terminal units; such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.

K. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.

L. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.

M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

N. Examine system pumps to ensure absence of entrained air in the suction piping.

O. Examine operating safety interlocks and controls on HVAC equipment.

P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

A. Prepare a TAB plan that includes strategies and step-by-step procedures.

B. Complete system-readiness checks and prepare reports. Verify the following: 7
   1. Permanent electrical-power wiring is complete.
   2. Hydronic systems are filled, clean, and free of air.
   3. Automatic temperature-control systems are operational.
   4. Equipment and duct access doors are securely closed.
   5. Balance, smoke, and fire dampers are open.
   6. Isolating and balancing valves are open and control valves are operational.
   7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
   8. Windows and doors can be closed so indicated conditions for system operations can be met.
3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance", ASHRAE 111, NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems", SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.
   1. Comply with requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
   1. After testing and balancing, install test ports and duct access doors that comply with requirements in Division 23 "Air Duct Accessories."
   2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 "Duct Insulation," Division 23 "HVAC Equipment Insulation," and Division 23 "HVAC Piping Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Division 23 "Metal Ducts."

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
   1. Measure total airflow.
      a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
   2. Measure fan static pressures as follows to determine actual static pressure:
      a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
      b. Measure static pressure directly at the fan outlet or through the flexible connection.
c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
a. Report the cleanliness status of filters and the time static pressures are measured.

4. Obtain approval from Architect for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.

5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
1. Measure airflow of submain and branch ducts.
   a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.

C. Measure air outlets and inlets without making adjustments.
1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.
1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.6 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
3. Measure total system airflow. Adjust to within indicated airflow.
4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer’s written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.

5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
   a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.

6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
   a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.

8. Record final fan-performance data.

C. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
   1. Balance variable-air-volume systems the same as described for constant-volume air systems.
   2. Set terminal units and supply fan at full-airflow condition.
   3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
   4. Readjust fan airflow for final maximum readings.
   5. Measure operating static pressure at the sensor that controls the supply fan if one is installed, and verify operation of the static-pressure controller.
   6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
   7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
      a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.
   8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
      a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

D. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
   1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
   2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
   3. Set terminal units at full-airflow condition.
   4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
   5. Adjust terminal units for minimum airflow.
   6. Measure static pressure at the sensor.
7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

3.7 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.

B. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:

1. Open all manual valves for maximum flow.
2. Check liquid level in expansion tank.
3. Check makeup water-station pressure gage for adequate pressure for highest vent.
4. Check flow-control valves for specified sequence of operation, and set at indicated flow.
5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
6. Set system controls so automatic valves are wide open to heat exchangers.
7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.8 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

A. Measure water flow at pumps. Use the following procedures except for positive-displacement pumps:

1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
   a. If impeller sizes must be adjusted to achieve pump performance, obtain approval from Owner, Commissioning Authority and/or Engineer and comply with requirements in Section 232123 "Hydronic Pumps."
2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
   a. Monitor motor performance during procedures and do not operate motors in overload conditions.
3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
4. Report flow rates that are not within plus or minus 10 percent of design.

B. Measure flow at all automatic flow control valves to verify that valves are functioning as designed.

C. Measure flow at all pressure-independent characterized control valves, with valves in fully open position, to verify that valves are functioning as designed.

D. Set calibrated balancing valves, if installed, at calculated pre-settings.

E. Measure flow at all stations and adjust, where necessary, to obtain first balance.

1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.

F. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
G. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
   1. Determine the balancing station with the highest percentage over indicated flow.
   2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
   3. Record settings and mark balancing devices.

H. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.

I. Measure the differential-pressure-control-valve settings existing at the conclusion of balancing.

J. Check settings and operation of each safety valve. Record settings.

3.9 **PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS**

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

3.10 **PROCEDURES FOR PRIMARY-SECONDARY HYDRONIC SYSTEMS**

A. Balance the primary circuit flow first and then balance the secondary circuits.

3.11 **PROCEDURES FOR MOTORS**

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
   1. Manufacturer's name, model number, and serial number.
   4. Efficiency rating.
   5. Nameplate and measured voltage, each phase.
   6. Nameplate and measured amperage, each phase.
   7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.12 **PROCEDURES FOR BOILERS**

A. Measure entering- and leaving-water temperatures and water flow.

3.13 **PROCEDURES FOR HEAT-TRANSFER COILS**

A. Measure, adjust, and record the following data for each water coil:
   1. Entering- and leaving-water temperature.
   2. Water flow rate.
   3. Water pressure drop.
   4. Dry-bulb temperature of entering and leaving air.
   5. Wet-bulb temperature of entering and leaving air for cooling coils.
   6. Airflow.
   7. Air pressure drop.

B. Measure, adjust, and record the following data for each electric heating coil:
   1. Nameplate data.
   2. Airflow.
   3. Entering- and leaving-air temperature at full load.
   4. Voltage and amperage input of each phase at full load and at each incremental stage.
   5. Calculated kilowatt at full load.
   6. Fuse or circuit-breaker rating for overload protection.
C. Measure, adjust, and record the following data for each steam coil:
   1. Dry-bulb temperature of entering and leaving air.
   2. Airflow.
   3. Air pressure drop.
   4. Inlet steam pressure.

D. Measure, adjust, and record the following data for each refrigerant coil:
   1. Dry-bulb temperature of entering and leaving air.
   2. Wet-bulb temperature of entering and leaving air.
   3. Airflow.
   4. Air pressure drop.
   5. Refrigerant suction pressure and temperature.

3.14 PROCEDURES FOR TEMPERATURE MEASUREMENTS
A. During TAB, report the need for adjustment in temperature regulation within the automatic temperature-control system.
B. Measure indoor wet- and dry-bulb temperatures every other hour for a period of two successive eight-hour days, in each separately controlled zone, to prove correctness of final temperature settings. Measure when the building or zone is occupied.
C. Measure outside-air, wet- and dry-bulb temperatures.

3.15 PROCEDURES FOR EXHAUST HOODS
A. Measure, adjust, and record the airflow of each exhaust hood. Measure airflow by duct Pitot-tube traverse. If a duct Pitot-tube traverse is not possible, explain why, in the report, and explain the test method used.
B. After balancing is complete, do the following:
   1. Measure and record the static pressure at the hood exhaust-duct connection.
   2. Check the hood for capture and containment of smoke using a smoke emitting device. Observe the smoke pattern. Make adjustments to achieve optimum results.

3.16 TEMPERATURE-CONTROL VERIFICATION
A. Verify that controllers are calibrated and commissioned.
B. Check transmitter and controller locations and note conditions that would adversely affect control functions.
C. Record controller settings and note variances between set points and actual measurements.
D. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).
E. Check free travel and proper operation of control devices such as damper and valve operators.
F. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.
G. Check the interaction of electrically operated switch transducers.
H. Check the interaction of interlock and lockout systems.
I. Check main control supply-air pressure and observe compressor and dryer operations.
J. Record voltages of power supply and controller output. Determine whether the system operates on a grounded or non-grounded power supply.
K. Note operation of electric actuators using spring return for proper fail-safe operations.
3.17 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS

A. Perform a preconstruction inspection of existing equipment that is to be reused.
   1. Measure and record the operating speed, airflow, and static pressure of each air terminal device impacted by demolition, relocation and new work.
   2. Measure and record water flow and pressure of each air terminal device on pipe loops impacted by demolition, relocation and new work.
   3. Measure and record water flow and pressure of existing chiller.
   4. Measure and record water flow of each pump impacted by demolition, relocation and new work.
   5. Measure motor voltage and amperage. Compare the values to motor nameplate information.
   6. Check the condition of filters.
   7. Check the condition of coils.
   8. Check the operation of the drain pan and condensate drain trap.
   9. Check bearings and other lubricated parts for proper lubrication.
  10. Report on the operating condition of the equipment and the results of the measurements taken.
      Report deficiencies.

B. Before performing testing and balancing of existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished.
   1. New filters are installed.
   2. Coils are clean and fins combed.
   3. Drain pans are clean.
   4. Fans are clean.
   5. Bearings and other parts are properly lubricated.
   6. Deficiencies noted in the preconstruction report are corrected.

C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.
   1. Compare the indicated airflow of the renovated work to the measured fan airflows and determine the new fan, speed, filter, and coil face velocity.
   2. Compare the indicated water flow of impacted work to the measured water flows and balance systems to meet flow rates of existing systems.
   3. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
   4. If calculations increase or decrease the airflow and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated airflow and water flow rates. If 5 percent or less, equipment adjustments are not required.
   5. Air balance each air outlet.

3.18 TOLERANCES

A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
   1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus 5 to plus 10 percent.
   2. Air Outlets and Inlets: minus 5 to plus 10 percent.
   3. Heating-Water Flow Rate: 0 to minus 10 percent.
   4. Cooling-Water Flow Rate: 0 to minus 5 percent.

3.19 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
B. Status Reports: As work progress prepare progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.20 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
   1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
   2. Include a list of instruments used for procedures, along with proof of calibration.

B. Final Report Contents: In addition to certified field-report data, include the following:
   1. Pump curves.
   2. Fan curves.
   3. Manufacturers' test data.
   4. Field test reports prepared by system and equipment installers.
   5. Other information relative to equipment performance; do not include Shop Drawings and product data.

C. General Report Data: In addition to form titles and entries, include the following data:
   1. Title page.
   2. Name and address of the TAB contractor.
   3. Project name.
   4. Project location.
   5. Architect's name and address.
   6. Engineer's name and address.
   7. Contractor's name and address.
   9. Signature of TAB supervisor who certifies the report.
   10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
   11. Summary of contents including the following:
       a. Indicated versus final performance.
       b. Notable characteristics of systems.
       c. Description of system operation sequence if it varies from the Contract Documents.
   12. Nomenclature sheets for each item of equipment.
   13. Data for terminal units, including manufacturer's name, type, size, and fittings.
   14. Notes to explain why certain final data in the body of reports vary from indicated values.
   15. Test conditions for fans and pump performance forms including the following:
       a. Settings for outdoor-, return-, and exhaust-air dampers.
       b. Conditions of filters.
       c. Cooling coil, wet- and dry-bulb conditions.
       d. Face and bypass damper settings at coils.
       e. Fan drive settings including settings and percentage of maximum pitch diameter.
       f. Inlet vane settings for variable-air-volume systems.
       g. Settings for supply-air, static-pressure controller.
       h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
   1. Quantities of outdoor, supply, return, and exhaust airflows.
   2. Water and steam flow rates.
   3. Duct, outlet, and inlet sizes.
   4. Pipe and valve sizes and locations.
   5. Terminal units.

E. Air-Handling Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data: Include the following:
   a. Unit identification.
   b. Location.
   c. Make and type.
   d. Model number and unit size.
   e. Manufacturer's serial number.
   f. Unit arrangement and class.
   g. Discharge arrangement.
   h. Sheave make, size in inches (mm), and bore.
   i. Sheave dimensions, center-to-center, and amount of adjustments in inches (mm).
   j. Number of belts, make, and size.
   k. Number of filters, type, and size.

2. Motor Data:
   a. Make and frame type and size.
   b. Horsepower and rpm.
   c. Volts, phase, and hertz.
   d. Full-load amperage and service factor.
   e. Sheave make, size in inches (mm), and bore.
   f. Sheave dimensions, center-to-center, and amount of adjustments in inches (mm).

3. Test Data (Indicated and Actual Values):
   a. Total airflow rate in cfm.
   b. Total system static pressure in inches wg.
   c. Fan rpm.
   d. Discharge static pressure in inches w.g.
   e. Filter static-pressure differential in inches w.g.
   f. Preheat coil static-pressure differential in inches w.g.
   g. Cooling coil static-pressure differential in inches w.g.
   h. Heating coil static-pressure differential in inches w.g.
   i. Outside airflow in cfm.
   j. Return airflow in cfm.
   k. Outside-air damper position.
   l. Return-air damper position.
   m. Vortex damper position.

F. Apparatus-Coil Test Reports:

1. Coil Data:
   a. System identification.
   b. Location.
   c. Coil type.
   d. Number of rows.
   e. Fin spacing in fins per inch o.c.
   f. Make and model number.
   g. Face area in sq. ft.
   h. Tube size in NPS.
   i. Tube and fin materials.
   j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):
   a. Airflow rate in cfm.
   b. Average face velocity in fpm.
   c. Air pressure drop in inches w.g.
   d. Outside-air, wet- and dry-bulb temperatures in degrees F.
   e. Return-air, wet- and dry-bulb temperatures in degrees F.
f. Entering-air, wet- and dry-bulb temperatures in degrees F.
g. Leaving-air, wet- and dry-bulb temperatures in degrees F.
h. Water flow rate in gpm.
i. Water pressure differential in feet of head or psig.
j. Entering-water temperature in degrees F.
k. Leaving-water temperature in degrees F.
l. Refrigerant expansion valve and refrigerant types.
m. Refrigerant suction pressure in psig.
n. Refrigerant suction temperature in degrees F.
o. Inlet steam pressure in psig.

G. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:

1. Unit Data:
   a. System identification.
   b. Location.
   c. Coil identification.
   d. Capacity in Btuh.
   e. Number of stages.
   f. Connected volts, phase, and hertz.
   g. Rated amperage.
   h. Airflow rate in cfm.
   i. Face area in sq. ft.
   j. Minimum face velocity in fpm.

2. Test Data (Indicated and Actual Values):
   a. Heat output in Btuh.
   b. Airflow rate in cfm.
   c. Air velocity in fpm.
   d. Entering-air temperature in degrees F.
   e. Leaving-air temperature in degrees F.
   f. Voltage at each connection.
   g. Amperage for each phase.

H. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:
   a. System identification.
   b. Location.
   c. Make and type.
   d. Model number and size.
   e. Manufacturer's serial number.
   f. Arrangement and class.
   g. Sheave make, size in inches, and bore.
   h. Sheave dimensions, center-to-center, and amount of adjustments in inches.

2. Motor Data:
   a. Make and frame type and size.
   b. Horsepower and rpm.
   c. Volts, phase, and hertz.
   d. Full-load amperage and service factor.
   e. Sheave make, size in inches, and bore.
   f. Sheave dimensions, center-to-center, and amount of adjustments in inches.
   g. Number of belts, make, and size.

3. Test Data (Indicated and Actual Values):
   a. Total airflow rate in cfm.
   b. Total system static pressure in inches w.g.
   c. Fan rpm.
   d. Discharge static pressure in inches w.g.
e. Suction static pressure in inches w.g.

I. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:
   a. System and air-handling unit number.
   b. Location and zone.
   c. Traverse air temperature in degrees F.
   d. Duct static pressure in inches w.g.
   e. Duct size in inches.
   f. Duct area in sq. ft.
   g. Indicated airflow rate in cfm.
   h. Indicated velocity in fpm.
   i. Actual airflow rate in cfm.
   j. Actual average velocity in fpm.
   k. Barometric pressure in psig.

J. Air-Terminal-Device Reports:

1. Unit Data:
   a. System and air-handling unit identification.
   b. Location and zone.
   c. Test apparatus used.
   d. Area served.
   e. Air-terminal-device make.
   f. Air-terminal-device number from system diagram.
   g. Air-terminal-device type and model number.
   h. Air-terminal-device size.
   i. Air-terminal-device effective area in sq. ft.

2. Test Data (Indicated and Actual Values):
   a. Airflow rate in cfm.
   b. Air velocity in fpm.
   c. Preliminary airflow rate as needed in cfm.
   d. Preliminary velocity as needed in fpm.
   e. Final airflow rate in cfm.
   f. Final velocity in fpm.
   g. Space temperature in degrees F.

K. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:
   a. System and air-handling unit identification.
   b. Location and zone.
   c. Room or riser served.
   d. Coil make and size.
   e. Flowmeter type.

2. Test Data (Indicated and Actual Values):
   a. Airflow rate in cfm.
   b. Entering-water temperature in degrees F.
   c. Leaving-water temperature in degrees F.
   d. Water pressure drop in feet of head or psig.
   e. Entering-air temperature in degrees F.
   f. Leaving-air temperature in degrees F.

L. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:
   a. Unit identification.
   b. Location.
c. Service.
d. Make and size.
e. Model and serial numbers.
f. Water flow rate in gpm.
g. Water pressure differential in feet of head or psig.
h. Required net positive suction head in feet of head or psig.
i. Pump rpm.
j. Impeller diameter in inches.
k. Motor make and frame size.
l. Motor horsepower and rpm.
m. Voltage at each connection.
n. Amperage for each phase.
o. Full-load amperage and service factor.
p. Seal type.

2. Test Data (Indicated and Actual Values):
   a. Static head in feet of head or psig.
   b. Pump shutoff pressure in feet of head or psig.
   c. Actual impeller size in inches (mm).
   d. Full-open flow rate in gpm.
   e. Full-open pressure in feet of head or psig.
   f. Final discharge pressure in feet of head or psig.
   g. Final suction pressure in feet of head or psig.
   h. Final total pressure in feet of head or psig.
   i. Final water flow rate in gpm.
   j. Voltage at each connection.
   k. Amperage for each phase.

M. Instrument Calibration Reports:
   1. Report Data:
      a. Instrument type and make.
      b. Serial number.
      c. Application.
      d. Dates of use.
      e. Dates of calibration.

3.21 INSPECTIONS

A. Initial Inspection:
   1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.
   2. Check the following for each system:
      a. Measure airflow of at least 10 percent of air outlets.
      b. Measure water flow of at least 5 percent of terminals.
      c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
      d. Verify that balancing devices are marked with final balance position.
      e. Note deviations from the Contract Documents in the final report.

B. Final Inspection:
   1. Final test and balance report requires sign off by Owner.
   2. Architect, Owner, Engineer, or Commissioning Authority shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 20 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
   3. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as “FAILED.”
4. If the number of “FAILED” measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

5. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.

6. Request a second final inspection. If the second final inspection also fails, Owner shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents and deduct the cost of the services from the final payment.

C. TAB Work will be considered defective if it does not pass final inspections. If TAB Work fails, proceed as follows:

1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.

2. If the second final inspection also fails, Owner may contract the services of another TAB contractor to complete TAB Work according to the Contract Documents and deduct the cost of the services from the original TAB contractor's final payment.

D. Prepare test and inspection reports.

E. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

F. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION
SECTION 230700
HVAC INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes mechanical insulation for duct, equipment, and pipe, including the following:
   1. Insulation Materials:
      a. Flexible elastomeric.
      b. Mineral fiber.
      c. Phenolic
      d. Polyisocyanurate.
   2. Lagging
   3. Insulating cements.
   4. Adhesives.
   5. Mastics.
   7. Sealants.
   8. Factory-applied jackets.
   10. Tapes.
   11. Securements.
   12. Corner angles.
B. Related Sections include the following:
   1. Division 7 Section for fire stopping materials and requirements for penetrations through fire and smoke barriers.
   2. Division 23 Section "Metal Ducts" for duct liners.

1.3 DEFINITIONS
A. ASJ: All-service jacket.
B. FSK: Foil, scrim, kraft paper.
C. SSL: Self-sealing lap.
D. Domestic Water: Potable and non-potable.
E. Hydronic Runouts: Hydronic piping less than 2 inches diameter and less than 12 feet in length.
F. Unconditioned Space: An enclosed space within a building that is not a conditioned space or a semiheated space. Crawlspace, attics, and parking garages with natural or mechanical ventilation are not considered enclosed spaces.

1.4 SUBMITTALS
A. Product Data: For each type of product indicated, identify thermal conductivity, thickness, and jackets (both factory and field applied, if any).
B. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
1. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
   a. Sheet Form Insulation Materials: 12 inches square.
   c. Sheet Jacket Materials: 12 inches square.
   d. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

C. Field quality-control inspection reports.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application, duct Installer for duct insulation application, and equipment Installer for equipment insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.8 SCHEDULING

A. Schedule insulation application after pressure testing systems. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

C. Do not apply waterproofing membrane where surface temperature of substrate will exceed 165 degrees F or fall below -10 degrees F.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 INSULATION MATERIALS

A. Refer to Part 3 schedule articles for requirements about where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
   1. Products:
      a. Aeroflex USA Incorporated; Aerocel.
      b. Armacell LLC; AP Armaflex.
      c. Nomaco K-Flex
      d. RBX Corporation; Insul-Sheet 1800 and Insul-Tube 180.
   2. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to 1-1/2 inches as tested by ASTM E 84.

G. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, with factory-applied FSK jacket. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
   1. Products:
      a. CertainTeed Corporation; Duct Wrap.
      b. Johns Manville; Microlite.
      c. Knauf Insulation; Duct Wrap.
      d. Manson Insulation Incorporated; Alley Wrap.
      e. Owens Corning; All-Service Duct Wrap.

H. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA, or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. For equipment applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
   1. Products:
      a. CertainTeed Corporation; Commercial Board.
      b. Fibrex Insulations Incorporated; FBX.
      c. Johns Manville; 800 Series Spin-Glas.
      d. Knauf Insulation; Insulation Board.
      e. Manson Insulation Incorporated; AK Board.
      f. Owens Corning; Fiberglas 700 Series.

I. Mineral-Fiber, Preformed Pipe Insulation:
   1. Products:
- Fibrex Insulations Incorporated; Coreplus 1200.
- Johns Manville; Micro-Lok.
- Knauf Insulation; 1000 Pipe Insulation.
- Manson Insulation Incorporated; Alley-K.
- Owens Corning; Fiberglas Pipe Insulation.

2. Type I, 850 Degrees F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.

J. Mineral-Fiber, Pipe, and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semi-rigid board material with factory-applied FSK jacket complying with ASTM C 1393, Type II or Type III A Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb./cu. ft. or more. Thermal conductivity (k-value) at 100 degrees F is 0.29 Btu x in./h x sq. ft. x degrees F or less. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.

1. Products:
   - CertainTeed Corporation; CrimpWrap.
   - Johns Manville; MicroFlex.
   - Knauf Insulation; Pipe and Tank Insulation.
   - Manson Insulation Incorporated; AK Flex.
   - Owens Corning; Fiberglas Pipe and Tank Insulation.

K. Polyisocyanurate: Unfaced, preformed, rigid cellular Polyisocyanurate material intended for use as thermal insulation.

1. Products:
   - Apache Products Company; ISO-25.
   - ITW Insulation Systems; Trymer 2000 XP.
   - Duna USA Incorporated; Corafoam.
   - Elliott Company; Elfoam.

   2. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed 0.168 Btu x in./h x sq. ft. x Degrees F at 75 degrees F after 180 days of aging.

   3. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to 1-1/2 inches as tested by ASTM E 84.

   4. Flame-spread index shall be 25 or less and smoke-developed index shall be 450 or less for thickness 1-1/2 to 6 inches as tested by ASTM E 84.

   5. Fabricate shapes according to ASTM C 450 and ASTM C 585.

      a. Pipe Applications: ASJ-SSL.
      b. Equipment Applications: ASJ-SSL.

2.3 MASS LOADED VINYL LAGGING

A. Composite limp vinyl sheet consisting of two layers of vinyl over a 1.4 psf barrier layer with a minimum STC rating of 28 and a 1" fiberglass batting decoupler layer.

B. Products

1. Kinetics Noise Control KNM-100ALQ
2. Acoustical Surfaces B-10 QFA-9
3. Barymat BM-1C
4. Engineer Approved Equal

C. Product Characteristics

1. The barrier shall be constructed of a 0.12" thick mass loaded, limp vinyl sheet bonded to a thin layer of reinforced aluminum foil on one side.
a. Nominal density of barrier: 1.6 psf
b. Minimum STC rating: 30
c. Minimum Flammability rating per Federal Test Standard No. 191-5903:
   1) 0.0 seconds flame-out
   2) 0.2” char length
d. NFPA 90A Flame Spread / Smoke Developed characteristics:
   1) Flame Spread: 10
   2) Smoke Developed: 40
e. Minimum thermal conductivity barrier layer:
   1) K value of 0.29
f. Rated service temperature range
   1) – 40 degrees F to 220 degrees F
2. Decoupler layer
   a. 1” fibrous glass batting
   b. Non woven porous scrim-coated glass cloth
   c. Quilting
      1) 4” diamond stitch to encapsulate glass fibers
3. Seams
   a. 6” overlap tab for field joint sealing
      1) 54” nominal barrier width
      2) 48” nominal decoupler width

2.4 INSULATING CEMENTS
   1. Products:
      a. Insulco, Division of MFS, Incorporated; Triple I.
      c. Or Approved Equal
B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.
   1. Products:
      b. Vitcas
      c. Or Approved Equal
C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.
   1. Products:
      a. Insulco, Division of MFS, Incorporated; SmoothKote.
      c. Rock Wool Manufacturing Company; Delta One Shot.

2.5 ADHESIVES
A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
B. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
   1. Products:
      a. Aeroflex USA Incorporated; Aeroseal.
      b. Armacell LCC; 520 Adhesive.
      c. Foster Products Corporation, H. B. Fuller Company; 85-75.
      d. RBX Corporation; Rubatex Contact Adhesive.
C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products:
      a. Childers Products, Division of ITW; CP-82.
      c. ITW TACC, Division of Illinois Tool Works; S-90/80.
      d. Marathon Industries, Incorporated; 225.
      e. Mon-Eco Industries, Incorporated; 22-25.

D. Phenolic and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 degrees F.
   1. Products: Subject to compliance with requirements provide one of the following:
      c. Or Approved Equal

   1. Products:
      a. Childers Products, Division of ITW; CP-82.
      c. ITW TACC, Division of Illinois Tool Works; S-90/80.
      d. Marathon Industries, Incorporated; 225.
      e. Mon-Eco Industries, Incorporated; 22-25.

F. PVC Jacket Adhesive: Compatible with PVC jacket.
   1. Products:
      a. Dow Chemical Company (The); 739, Dow Silicone.
      c. P.I.C. Plastics, Incorporated; Welding Adhesive.
      d. Red Devil, Incorporated; Celulon Ultra Clear.
      e. Speedline Corporation; Speedline Vinyl Adhesive.

2.6 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.

B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
   1. Products:
      a. Childers Products, Division of ITW; CP-35.
      b. Foster Products Corporation, H. B. Fuller Company; 30-90.
      c. ITW TACC, Division of Illinois Tool Works; CB-50.
      d. Marathon Industries, Incorporated; 590.
      e. Mon-Eco Industries, Incorporated; 55-40.
      f. Vimasco Corporation; 749.

   2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perms at 43-mil dry film thickness.
      a. Service Temperature Range: Minus 20 to plus 180 Degrees F.

C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
   1. Products:
2.7 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.

1. Products:
   a. Childers Products, Division of ITW; CP-10.
   b. Foster Products Corporation, H. B. Fuller Company; 35-00.
   c. ITW TACC, Division of Illinois Tool Works; CB-05/15.
   e. Mon-Eco Industries, Incorporated; 55-50.
   f. Vimasco Corporation; WC-1/WC-5.

2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
   (a) Service Temperature Range: Minus 20 to plus 200 degrees F.

3. Solids Content: 63 percent by volume and 73 percent by weight.

2.8 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass, Phenolic-Foam, and Polyisocyanurate Products:
   a. Childers Products, Division of ITW; CP-76.
   b. Foster Products Corporation, H. B. Fuller Company; 30-45.
   c. Marathon Industries, Incorporated; 405.
   d. Mon-Eco Industries, Incorporated; 44-05.
   e. Pittsburgh Corning Corporation; Pittseal 444.
   f. Vimasco Corporation; 750.

2. Joint Sealants for Polystyrene Products:
   a. Childers Products, Division of ITW; CP-70.
   c. Marathon Industries, Incorporated; 405.
   d. Mon-Eco Industries, Incorporated; 44-05.
   e. Vimasco Corporation; 750.

3. Materials shall be compatible with insulation materials, jackets, and substrates.

4. Permanently flexible, elastomeric sealant.

B. Service Temperature Range: Minus 100 to plus 300 degrees F.

1. Color: White or gray.

C. FSK and Metal Jacket Flashing Sealants:

1. Products:
   a. Childers Products, Division of ITW; CP-76-8.
   b. Foster Products Corporation, H. B. Fuller Company; 95-44.
   c. Marathon Industries, Incorporated; 405.
   d. Mon-Eco Industries, Incorporated; 44-05.
2.9 FACTORY-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements provide one of the following:
   a. Johns Manville; Zeston. (www.jm.com)
   c. Proto Corporation; LoSmoke. (www.protocorporation.com)
   d. Speedline Corporation; SmokeSafe. (www.speedlinepvc.com)

2. Adhesive: As recommended by jacket material manufacturer.

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
   a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

D. Metal Jacket:

1. Products: Subject to compliance with requirements provide one of the following:
   b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing. (www.itwinsulation.com)
   c. RPR Products, Inc.; Insul-Mate. (www.rphouston.com)

   a. Sheet and roll stock ready for shop or field sizing.
   b. Finish and thickness are indicated in field-applied jacket schedules.
   c. Moisture Barrier for Outdoor Applications
   d. Factory-Fabricated Fitting Covers:
      1) Same material, finish, and thickness as jacket.
      2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
      3) Tee covers.
      4) Flange and union covers.
      5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

E. Self-Adhesive Outdoor Jacket: 0.055 - 0.060 inches thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with aluminum-foil facing.

1. **Products**: Subject to compliance with requirements provide one of the following:
   a. Polyguard Products, Inc.; Alumaguard LT. ([www.polyguardproducts.com](http://www.polyguardproducts.com))
   b. VentureClad

### 2.10 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. **Products**:
   a. Johns Manville; Zeston.
   c. Proto PVC Corporation; LoSmoke.
   d. Speedline Corporation; SmokeSafe.

2. **Adhesive**: As recommended by jacket material manufacturer.

3. **Color**: White

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
   a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

5. Factory-fabricated tank heads and tank side panels.

### 2.11 TAPES

A. **ASJ Tape**: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136 and UL listed.

1. **Products**:
   a. Ideal Tape Company, Incorporated, an American Biltrite Company; 428 AWF ASJ.
   b. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.

2. **Width**: 3 inches.

3. **Thickness**: 11.5 mils.

4. **Adhesion**: 90 ounces force/inch in width.

5. **Elongation**: 2 percent.

6. **Tensile Strength**: 40 lb./inch in width.

7. **ASJ Tape Disks and Squares**: Precut disks or squares of ASJ tape.

B. **FSK Tape**: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136, and UL listed.

1. **Products**:
   a. Ideal Tape Company, Incorporated, an American Biltrite Company; 491 AWF FSK.
   b. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.

2. **Width**: 3 inches.

3. **Thickness**: 6.5 mils.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
   1. Products:
      b. Venture Tape; 1506R.
   2. Width: 1-1/2 inches.
   3. Thickness: 6 mils.
   5. Elongation: 150 percent.
   6. Tensile Strength: 15 lb. /inch in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive and UL 723 listed.
   1. Products:
      a. Ideal Tape Company, Incorporated, an American Biltrite Company; 488 AWF.
      b. Venture Tape; 3520 CW.
   2. Width: 2.5 inches.
   3. Thickness: 7.3 mils.
   5. Elongation: 5 percent.
   6. Tensile Strength: 34 lbf/inch in width.

2.12 SECUREMENTS
A. Bands (material compatible with jacket):
   1. Products:
      a. Childers Products; Bands.
      b. PABCO Metals Corporation; Bands.
      c. RPR Products, Incorporated; Bands.
   2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 3/4 inch wide with wing or closed seal.
   3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing or closed seal.

B. Insulation Pins and Hangers:
   1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- or 0.135-inch-diameter shank, and length to suit depth of insulation indicated.
      a. Products:
         1) AGM Industries, Incorporated; CWP-1.
         2) GEMCO; CD.
         3) Midwest Fasteners, Incorporated; CD.
         4) Nelson Stud Welding; TPA, TPC, and TPS.
   2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- or 0.135-inch-diameter shank, and length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
      a. Products:
         1) AGM Industries, Incorporated; CWP-1.
2) GEMCO; Cupped Head Weld Pin.
3) Midwest Fasteners, Incorporated; Cupped Head.
4) Nelson Stud Welding; CHP.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Products:
      1) AGM Industries, Incorporated; Tactoo Insul-Hangers, Series T.
      2) GEMCO; Perforated Base.
      3) Midwest Fasteners, Incorporated; Spindle.
   b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
   c. Spindle: Copper- or zinc-coated, low carbon steel, Aluminum, or Stainless steel, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
   d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Products:
      1) GEMCO; Nylon Hangers.
      2) Midwest Fasteners, Incorporated; Nylon Insulation Hangers.
      3) Or Approved Equal²⁰
   b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
   c. Spindle: Nylon, 0.106-inch-diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
   d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Products:
      1) AGM Industries, Incorporated; Tactoo Insul-Hangers, Series TSA.
      2) GEMCO; Press and Peel.
      3) Midwest Fasteners, Incorporated; Self-Stick.
   b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
   c. Spindle: Copper- or zinc-coated, low carbon steel, Aluminum, or Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
   d. Adhesive-backed base with a peel-off protective cover.

6. Insulation-Retaining Washers: self-locking washers formed from 0.016-inch-thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Products:
      1) AGM Industries, Incorporated; RC-150.
      2) GEMCO; R-150.
      3) Midwest Fasteners, Incorporated; WA-150.
      4) Nelson Stud Welding; Speed Clips.
   b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Manufacturers:
      1) GEMCO.
      2) Midwest Fasteners, Incorporated
      3) Or Approved Equal

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.

D. Wire: 0.080-inch nickel-copper alloy, 0.062-inch soft-annealed, stainless steel or 0.062-inch soft-annealed, galvanized steel.
   1. Manufacturers:
      a. ACS Industries, Incorporated
      b. C & F Wire.
      c. Childers Products.
      d. PABCO Metals Corporation.
      e. RPR Products, Incorporated

2.13 CORNER ANGLES
A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.

B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or 316.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.
   1. Verify that systems and equipment to be insulated have been tested and are free of defects.
   2. Verify that surfaces to be insulated are clean and dry.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 COMMON INSTALLATION REQUIREMENTS
A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.
C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
      a. For below ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above ambient services, do not install insulation to the following:
   1. Vibration-control devices.
   2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Handholes.

3.4 PENETRATIONS
A. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
   1. Firestopping and fire-resistive joint sealers are specified in Division 7 Section "Through-Penetration Firestop Systems."
D. Insulation Installation at Floor Penetrations:
   1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
   2. Pipe: Install insulation continuously through floor penetrations.
   3. Seal penetrations through fire-rated assemblies according to Division 7 Section "Through-Penetration Firestop Systems."

3.5 DUCT AND PLENUM INSULATION INSTALLATION
A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
   1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
   2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
   3. Install capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
      a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
      b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.

3.6 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION
A. Secure insulation with adhesive and anchor pins and speed washers.
   1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
   2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
   3. Protect exposed corners with secured corner angles.
   4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
      a. Do not weld anchor pins to ASME-labeled pressure vessels.
      b. Select insulation hangers and adhesives that are compatible with service temperature and with substrate.
c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
d. Do not over compress insulation during installation.
e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
f. Impale insulation over anchor pins and attach speed washers.
g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

5. Secure each layer of insulation with stainless steel or aluminum bands. Select band material compatible with insulation materials.

6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch pre-stressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch pre-stressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.

7. Stagger joints between insulation layers at least 3 inches.

8. Install insulation in removable segments on equipment access doors, manholes, Handholes, and other elements that require frequent removal for service and inspection.

10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. Insulation Installation on Pumps:

1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch-diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.

2. Fabricate boxes from stainless steel, at least 0.050 inch thick.

3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.7 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this Article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.

2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.

3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyethylene, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.

2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.

3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.

4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

E. Refrigerant Piping
1. All refrigerant piping from the outdoor unit to the indoor units / heat recovery units must be insulated correctly for safety and usage. Y-branch connections, header branch connections, refrigerant piping, field-provided isolation ball valves (if present), service valves, and elbows must be properly and completely insulated using closed cell pipe insulation (up to the indoor unit piping connections). To prevent heat loss / heat gain through the refrigerant piping, all refrigerant piping including liquid lines and vapor lines shall be insulated separately.

2. Wrap insulation around the entire surface of each pipe, including the refrigerant pipes from the indoor unit to the service valves inside the outdoor unit, the branch joints, distribution header, and connection points on each pipe.

3. Do not wrap the vapor and liquid refrigerant pipes together.

4. For pipe connections between the indoor unit and the electronic expansion valve, leave manufacturer's recommended space between vapor and liquid pipe.

5. All insulation joints shall be glued with no air gaps. Insulation material shall fit snugly against the refrigeration pipe with no air space between it and the pipe.

6. Insulation passing through pipe hangers, inside conduit, and/or sleeves must not be compressed.

7. Protect insulation inside hangers and supports with a second layer.

3.8 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:
   1. Install pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation sections same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
   4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install mitered sections of pipe insulation.
   2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed valve covers manufactured of same material as pipe insulation when available.
   2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   3. Install insulation to flanges as specified for flange insulation application.
   4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.9 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation sections same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
   4. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
   3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   4. Install insulation to flanges as specified for flange insulation application.

E. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
   1. Apply adhesives according to manufacturer’s recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
   2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
   3. Install capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
      a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
      b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
      c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
      d. Do not over compress insulation during installation.
      e. Impale insulation over pins and attach speed washers.
      f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 degrees F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

F. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
   a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
   b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
   c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
   d. Do not over compress insulation during installation.
   e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
5. Install vapor stops for ductwork and plenums operating below 50 degrees F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.10 POLYISOCYANURATE INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.
   2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
   3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation sections same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed 1-1/2-inch thickness.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of Polyisocyanurate block insulation of same thickness as pipe insulation.

C. Insulation Installation on Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed sections of Polyisocyanurate insulation to valve body.
   2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   3. Install insulation to flanges as specified for flange insulation application.

3.11 MASS LOADED VINYL LAGGING INSTALLATION

A. Cut sound control lagging material to length, wrapped around the outside of the pipe or duct to which the material is to be applied.

B. Fasten with mechanical fasteners or bands

C. Tapes or adhesives for FSK jacketing shall be used in addition to the mechanical fasteners

D. Install per manufacturer design guidelines.

3.12 FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:
   1. Draw jacket material smooth and tight.
   2. Install lap or joint strips with same material as jacket.
   3. Secure jacket to insulation with manufacturer's recommended adhesive.
   4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-joint strips at end joints.
   5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturers recommended adhesive.
   1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.13 FINISHES

A. Exposed: Duct, Equipment, and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 9 painting Sections.
   1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

B. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

C. Do not field paint aluminum or stainless steel jackets.

3.14 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Supply air ductwork:
   1. Concealed or exposed, round or rectangular supply duct from air handling unit discharge up to air terminal unit (VAV box, heating/reheat coil) insulation shall be the following:
      a. Mineral-Fiber Blanket: 1-1/2 inches thick and 0.75-lb/cu. ft nominal density, with an overall installed thermal resistance value of not less than R 4.2.
   2. Concealed or exposed, round or rectangular supply duct from air terminal unit (VAV box, heating/reheat coil) to space air discharge shall be insulated when ductwork is not in the space the air terminal unit serves or in the concealed ceiling plenum of the space the air terminal unit serves. Insulation in this condition shall be the following:
      a. Mineral-Fiber Blanket: 1-1/2 inches thick and 0.75-lb/cu. ft nominal density, with an overall installed thermal resistance value of not less than R 4.2.
   3. Supply air ductwork shall not be required to be insulated where ductwork is located downstream of the air terminal unit (VAV box, heating/reheat coil) AND is exposed in the space it serves.

B. Return air ductwork:
   1. Not insulated unless noted otherwise on drawings.

C. Outdoor air ductwork:
   1. Concealed or exposed, rectangular or round outdoor-air duct insulation shall be the following:
      a. Mineral-Fiber Board: 2 inches thick and 3.0-lb/cu. ft nominal density for all other outdoor air ductwork.

D. Exhaust air ductwork:
   1. Concealed or exposed, rectangular or round, exhaust-air duct insulation between isolation damper and penetration of building exterior (minimum of 15 feet) shall be the following:
      a. Mineral-Fiber Blanket: 2 inches thick and 0.75-lb/cu. ft nominal density, with an overall installed thermal resistance value of not less than R 6.
2. Dust collector exhaust-air duct insulation between dust collector and penetration of building exterior shall be the following:
   a. Mineral-Fiber Blanket: 1-1/2 inches thick and 0.75-lb/cu. ft nominal density, with an overall installed thermal resistance value of not less than R 4.2.

E. Intake or relief louver plenums:
   1. Outdoor air intake plenums or relief air plenums shall be the following:
      a. Mineral-Fiber Board: 2 inches thick and 3.0-lb/cu. ft nominal density for all other outdoor air ductwork.

F. Items Not Insulated:
   1. Metal ducts with duct liner of sufficient thickness to comply with thermal insulation requirements above.
   2. Factory-insulated flexible ducts.
   3. Factory-insulated plenums and casings.
   4. Flexible connectors.
   5. Vibration-control devices.
   6. Factory-insulated access panels and doors.

3.15 EQUIPMENT INSULATION SCHEDULE

A. Insulate the following indoor equipment:
   1. Chilled-water air separators.
   2. Chilled-water pump housings.
   3. Heating hot-water air separators.
   4. Heating hot-water compression tanks.

B. Omit insulation from the following:
   1. Vibration-control devices.
   2. Testing agency labels and stamps.
   3. Nameplates and data plates.
   4. Handholes.

C. Insulation materials and thickness are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.

D. Insulate equipment in paragraphs below that is not factory insulated.
   1. Chilled-water pumps insulation shall be the following:
      a. Polyisocyanurate: 1 inch thick.
   2. Chilled-water air-separator and compression tank insulation shall be the following:
      a. Polyisocyanurate: 1 inch thick.
   3. Heating-hot-water air-separator and compression tank insulation shall be the following:
   4. Coil and Fan Housings, and duct silencer insulation:
      a. Mineral-Fiber Board: 1.5 inches thick and 2-lb/cu. ft. nominal density.

3.16 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
   1. Flexible connectors.
   2. Vibration-control devices.
3. Heating pipe within radiation enclosures.
4. Heating piping beyond control valve when located within a heated space and within 12 inches of terminal unit.
5. Expansion joints.
6. Cold non-ferrous piping located over a drain pan within unit cabinet.

3.17 PIPING INSULATION SCHEDULE
A. Chilled Water, above 40 Degrees F:
   1. NPS: All sizes
      a. Polyisocyanurate: 1 inch thick.
B. Heating-Hot-Water Supply and Return, 105 to 140 Degrees F:
   1. NPS 1-1/4 and Smaller: Insulation shall be the following:
   2. NPS 1-1/2 and Larger: Insulation shall be the following:
      a. Mineral-Fiber, Preformed Pipe, Type I, 1.5-inches thick.
C. Refrigerant Piping:
   1. NPS: All Sizes
      a. EPDM of suitable thickness to meet manufacturer’s recommendations and energy code requirements. EPDM must be rated up to 250 deg F operating temperature.

3.18 JACKET SCHEDULE
A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. Ducts and Plenums:
   1. Factory applied FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
C. Piping:
   1. Factory applied ASJ.
   2. Piping in finished spaces located within 8 feet of the floor; less than 200 degrees F: white PVC: 30 mils thick.

3.19 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE
A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. Ductwork, Exposed:
   1. Aluminum, Stucco Embossed with Z-Shaped Locking Seam: 0.016 inch minimum
C. Hydronic and Refrigerant Piping, Exposed:
   1. Self-Adhesive Outdoor Jacket
   2. Aluminum, Stucco Embossed with Z-Shaped Locking Seam: 0.016 inch minimum

END OF SECTION
SECTION 230900
INSTRUMENTATION AND CONTROLS FOR HVAC

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.

1. Refer to Division 21, 22, and 23 sections for required control and alarm points.
2. The system will use the BACnet/IP protocol at the TCP/IP level of the architecture.
3. Integrate the new DDC systems into the existing University DDC network. Interface with the digital addressable fire alarm system.
4. Interface with the safety and security system.

B. Related Sections include the following:

1. Division 23 Section "Meters and Gages for HVAC Piping" for measuring equipment that relates to this Section.
2. Division 23 Section "Sequence of Operations for HVAC Controls" for requirements that relate to this Section.
3. Division 28 Section "Safety and Security" for requirements that relate to this section.
4. Division 28 Section "Digital Addressable Fire Alarm System" for requirements that relate to this section.

C. Refer to Division-26 Sections for the following work.

1. Power from the power source to the power connection on control panels as indicated on the Electrical Drawings.
2. Interlock wiring between electrically operated equipment units, and between equipment and field-installed control devices as indicated on the Electrical Drawings.
3. The temperature control system shall be on emergency power.

1.3 DEFINITION OF TERMS/ACRONYMS/ABBREVIATIONS

A. In the preparation of submittals and reports use these definitions and abbreviations. Any terms or abbreviations used in submittals and reports that have not been defined in this section will be defined in the first section of the submittal or report prior to their use.

B. The following definitions serve as a guide for industry acronyms in the coming sections:

1. ANSI: American National Standards Institute
2. ASHRAE: American Society of Heating Refrigeration and Air Conditioning Engineers
3. BACnet: Building Automation and Controls Network
4. BAC/IP: BACnet communications protocol via IP
5. BIBBs: BACnet Interoperability Building Blocks
6. BMA: BACnet Manufacturers Association
7. BTL: BACnet Testing Laboratories
8. CSV: Comma Separated Value
9. DDC: Direct Digital Controls
10. EIA: Electronic Industries Association
12. IP: Internet Protocol
14. LAN: Local Area Network
15. LON: Local Operating Network
16. LONTalk: Open, published protocol
17. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.
18. MLWS: MultiLiant Workstation software.
19. MS/TP: Master slave/token passing.
20. NIST: National Institute of Standards and Technology
21. OWS: Operator workstation.
22. PC: Personal computer.
23. PICS: Protocol implementation conformance statement
24. PID: Proportional plus integral plus derivative.
25. RTD: Resistance temperature detector.
26. TCP: Transmission Control Protocol
27. UPS: Uninterruptible power supply
28. VAV: Variable air volume
29. WAN: Wide area network

C. Acceptance Date: The date that the installer demonstrates, to the owner or the owner’s representative, that all system components are functioning properly. Refer to demonstration article for demonstration requirements.

1.4 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

1. Air Movement and Control Association (AMCA)
2. American National Standards Institute (ANSI)
3. American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE)
   a. ASHRAE 135-2004 BACnet Standard
4. Federal Communications Commission (FCC)
5. Institute of Electrical and Electronics Engineers (IEEE)
6. International Organization for Standardization (ISO)
7. National Electrical Manufacturers Association (NEMA)
8. National Fire Protection Association (NFPA)

1.5 SYSTEM PERFORMANCE

A. Comply with the following performance requirements:
   1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 10 seconds.
   2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 8 seconds.
   3. Object Command: Reaction time of less than two seconds between operator command of a binary object and device reaction.
   4. Object Scan: Transmit change of state and change of analog values to control units or workstation within six seconds.
   5. Alarm Response Time: Annunciate alarm at workstation within 45 seconds. Multiple workstations must receive alarms within five seconds of each other.
   6. Program Execution Frequency: Run capability of applications as often as five seconds, but selected consistent with mechanical process under control.
   7. Performance: Programmable controllers shall execute DDC PID control loops, and scan and update process values and outputs at least once per second.
   8. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
      a. Water Temperature: Plus or minus 1 degrees F.
      b. Water Flow: Plus or minus 5 percent of full scale.
c. Water Pressure:  Plus or minus 2 percent of full scale.
d. Space Temperature:  Plus or minus 1 degrees F.
e. Ducted Air Temperature:  Plus or minus 1 degrees F.
f. Outside Air Temperature:  Plus or minus 2 degrees F.
g. Dew Point Temperature:  Plus or minus 3 degrees F.
h. Temperature Differential:  Plus or minus 0.25 degrees F.
i. Relative Humidity:  Plus or minus 2 percent.
j. Airflow (Pressurized Spaces):  Plus or minus 3 percent of full scale.
k. Airflow (Measuring Stations):  Plus or minus 5 percent of full scale.
l. Airflow (Terminal):  Plus or minus 10 percent of full scale.
m. Air Pressure (Space):  Plus or minus 0.01-inch water gage.
n. Air Pressure (Ducts):  Plus or minus 0.1-inch water gage.
o. Carbon Dioxide:  Plus or minus 50 ppm.
p. Electrical:  Plus or minus 5 percent of reading.

1.6 BUILDING SYSTEMS AUTOMATION NETWORK PERFORMANCE REQUIREMENTS

A. Provide hardware, software, and expertise necessary to tie the BACnet building controller(s) to the University private DDC control network. BACnet integration must conform to Data Link Layer Option BACnet/IP shown in BACnet ANSI/ASHRAE 135-2004 publication Annex J.

B. Install new building level controllers such that BACnet communications on the existing temperature control network are not derogated. Derogation includes router, switch, hub lockups, BACnet building controller lockups, site network excessive slowdowns, unnecessary and repeated ‘who is’ messages. Refer to NIST BACnet standard for definition of unnecessary who-is messages.

C. BACnet read property requests from the University Master BACnet Operator Workstation must not take more than 5 seconds to process once the BACnet Building Controller receives the read request. Object properties that are read requested that require multiple segmented packets must not take more than 5 seconds to process the request. Information that is received from a read property multiple or single read property must not be older that 10 seconds.

1.7 GRAPHIC STANDARDS FOR BUILDING SYSTEMS

A. Graphics will be generated from the vendor’s template library. New graphics will be created at the vendor’s workstation. System graphics will be developed for the vendors DDC system or at the integrated operator’s workstations, not both. Discuss graphic development as part of the installation process. The operator’s workstation (OWS) graphics will follow existing University graphic standards.

1. Hardware points shall have graphic(s) assigned
2. User adjustable software points shall have graphic(s) assigned
3. Create graphic for outside conditions (Outside air, humidity, enthalpy, etc.)
4. The graphics shall note the analog output range and normal position.

B. Each piece of equipment shall have one or more graphics to include the following:

1. Hardware points
2. User adjustable set points
3. Safety alarm points for the system (Fan, pump, static, freeze stat, etc)
4. Heating/cooling switchover points
5. Occupied/unoccupied points
6. Summer/Winter mode points
7. Create graphic(s) for fire systems and other life and safety system alarms (Fire system, refrigerant detection, etc).
8. Create graphic(s) for all other critical points (Elevator, phase outage, generator, etc.).
9. Create separate graphic(s) when more than five identical type of alarm points are monitored
10. Create miscellaneous graphic(s) for other non-critical points (roof drain, sump pump, etc.).
11. Create graphic(s) for building layout and network system configuration with identifying the bus layout.
12. Verify that all programmed points on each graphic are referencing the correct software/hardware point at the controller level.

C. Other graphic criteria:
1. Graphics systems shall use standard templates and colors.
2. Type of font and font sizes shall be identical when appropriate.
3. Text and controller points shall be aligned properly.
4. Points shall flash red when points are in alarm condition.
5. When screens have minimal information, maximize the usage of the screen by enlarging the graphic.
6. Use building equipment numbers when possible for all equipment.
7. Points and descriptors shall not overlap.
8. Meet with the Owner for a minimum of 8 hours to review graphics standards and user interface navigation prior to programming.

1.8 SUBMITTALS
A. Product Data: Include manufacturer’s technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated; and indicate where it will be applied.
   1. Include detailed product data sheets on integration devices.
   2. Samples for Initial Selection: For each color required, of each type of thermostat or sensor cover with factory-applied color finishes.
B. Text based documents and product data sheets will be 8 ½ inch by 11 inch format bound on the left edge. Documents will be submitted electronically in portable document format (PDF).
   1. DDC System Hardware
      a. A complete bill of materials of equipment to be used indicating quantity, manufacturer, and model number.
         (a) Manufacturer’s description and technical data for each unique device to include performance curves, product specification sheets, and installation instructions.
         When a manufacturer’s data sheet refers to a series of devices rather than a specific model, the data specifically applicable to the project will be highlighted or clearly indicated by other means.
         (b) This requirement applies to:
            (i) Controllers
            (ii) Transducers/Transmitters
            (iii) Sensors
            (iv) Actuators
            (v) Valves
            (vi) Relays and Switches
            (vii) Control Panels
            (viii) Power Supplies
            (ix) Batteries
            (x) Operator Interface Equipment
      b. An Instrumentation List for each controlled system.
         1) The list will be in a table format.
         2) Include name, type of device, manufacturer, model number, and product data sheet number.
      c. Binding Map
         1) A list of the device-to-device (peer-to-peer) data flow. This will not include the flow of data from devices to the OWS.
         2) Include:
            (a) Description of the variable.
            (b) Sending device.
            (c) Receiving device.
C. Shop drawings will be 11 inch by 17 inch, landscape, bound on the left edge. They will be produced with Microsoft Visio or Autodesk AutoCAD software. Documents will be submitted electronically in portable document format (PDF). At the request of the Owner, shop drawings will also be submitted in the native CAD format.

1. Floor plans indication the locations for; control panels, temperature sensors, thermostats, humidity sensors, and humidistats.
2. Anticipated elevations of locations for; temperature sensors, thermostats, humidity sensors, and humidistats with all wall mounted devices shown.
3. Bill of materials of equipment indicating quantity, manufacturer, and model number.
4. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.
5. Controlled Systems:
   a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
   b. A two-dimensional cross sectional diagram showing key components such as fans, coils, dampers, valves, pump, etc.
   c. Identify the locations and names of all sensors and end devices that are associated with the control system. Label the panel name and terminal numbers where the connections are landed.
   d. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
   e. Written description of sequence of operation including schematic diagram.
   f. Points list.
   g. A legend will be provided for all symbols used.
6. Schedule of dampers including size, leakage, and flow characteristics.
7. Schedule of valves including flow characteristics.
8. System Architecture Design Diagram
   a. This is a riser diagram that shall show the IP layer and all of the field bus layers.
   b. It shall show each computer, printer, router, repeater, controller, and protocol translator that is connected to either the IP layer or any of the field busses.
   c. Each component that is shown shall have a name that is representative of how it will be identified in the completed database and the manufacturer's name and model number.
   d. The physical relationship of one component to another component will reflect the proposed installation.
   e. This diagram shall not include power supplies, sensors or end devices.
9. Layout Design Drawing for each control panel:
   a. The layout drawing will be to scale with devices shown in their proposed positions.
   b. Control devices will be identified by name.
   c. Terminal strips and wire channels will be shown.
   d. Control transformers will be shown.
   e. 120 VAC receptacles will be shown.
   f. IP connection points will be shown.
10. Wiring Design Diagram for each control panel.
   a. The control voltage wiring diagram will clearly designate devices powered by each control transformer. The diagram will clearly show the consistent grounding of the appropriate power connection. Wire identification numbers will be annotated on the diagram.
   b. The Field Bus wiring diagram will clearly show the use of the daisy chain wiring concept, the order in which the devices are connected to the Field Bus, and the location of end of segment termination devices. Wire identification numbers will be annotated on the diagram.
   c. If shielded communication wiring is used, the grounding of the shield will be shown.
   d. The terminal strip wiring diagram will identify connections on both sides of the terminal strip. Wiring label numbers for wiring leaving the control panel will be annotated on the diagram.
11. Wiring Design Diagram for individual components (controllers, protocol translators, etc.): The wiring diagram for each component will identify all I/O, power, and communication wiring and the locations on the terminal blocks to which the wires are landed.

12. Installation Design Detail for each I/O device.
   a. A drawing of the wiring details for each sensor and/or end device.
   b. For devices with multiple quantities, a standard detail may be submitted.

13. Description and details regarding available control system expansion and methodology for adding additional systems and components.

14. Description and details regarding how system meets project requirements upon loss of power.

15. Dashboard graphics:
   a. “Cartoon” storyboard outlining hierarchy and configuration of each dashboard.
   b. Proposed graphic standards (colors, page design, logos, etc.)
   c. Color printed images of representative screens.

16. BACnet Compliance Documentation:
   a. BACnet Interoperability Building Blocks (BIBBs) and PICS Statement: Submit up-to-date PICS and BIBBs statements for each controller and workstation showing ANSI/ASHRA 135-2004 BACnet communication protocol standards that identifies all of the portions of BACnet that the vendor adheres to. The PIC statement must show conformance to the BACnet devices the vendor proposes to use. The vendor PICS statement will contain the following:
      1) BACnet protocol revision
      2) Applications software and firmware revision
      3) Vendor and BACnet object description
      4) BIBBs supported by the device
      5) The standardized BACnet device profile to which the device conforms
      6) The non-standardized BACnet device application services
      7) A list of all standard and proprietary object types that are supported
      8) For each object type that is supported, the University requires the following:
         (a) Optional properties that are supported with the device or BACnet server
         (b) A list of properties that can be written using BACnet services
         (c) Any object that can be dynamically created or deleted using BACnet services
         (d) Any restrictions in the data value range for properties
      9) Data link layer options supported
      10) Device address binding (necessary for two-way communication with MS/TP devices)
      11) Networking options (BBMD, MS/TP)
      12) Character sets supported
      13) Segmented requests or responses supported

D. Software files will be submitted on fully labeled CDs or USBs that will include a table of contents file in PDF format that provides a description of all of the files on the CD.

1. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
2. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.

E. Training manuals for each Training Course:

1. Submit the following six weeks in advance of the training:
   a. List of training objectives.
   b. Outline of the course with time allocations per topic.
   c. Training presentation material (slides, word documents, etc.).
   d. Copy of training reference material (product manuals to be used, etc.).
   e. Schematic of the training equipment to be used with model numbers on each component.
   f. A description of the measurement devices to measure training effectiveness (quizzes, programming exercises, course exam).
g. Instructor’s name and resume with an emphasis on experience in presenting training programs.

F. Startup testing plan: Submit a start up testing plan for each unique system.

1. The purpose of a startup test is to demonstrate the completeness of the physical tasks associated with installation and the performance of the components.
2. For each task on the startup test checklist, the plan shall require the technician to enter his or her initials and the date the test was completed along with any recorded data such as voltages, offsets, or tuning parameters. Any deviations from the submitted installation plan shall also be recorded.
3. Required elements of the startup testing include:
   a. Measurement of voltage sources, primary and secondary.
   b. Verification of proper controller power wiring.
   c. Verification of component inventory when compared to the submittals.
   d. Verification of labeling on components and wiring.
   e. Verification of connection integrity and quality (loose strands and tight connections).
   f. Verification of bus topology, grounding of shields and installation of termination devices.
   g. Verification of point checkout.
      1) Each I/O device is landed per the submittals and functions per the sequence of control.
      2) Analog sensors are properly scaled and a value is reported.
      3) Binary sensors have the correct normal position and the state is correctly reported.
      4) Analog outputs have the correct normal position and move full stroke when so commanded.
         (a) Analog outputs shall be tested to verify that any controlled pneumatic devices travel full stroke when the AO is varied from 0% to 100% output.
      5) Binary outputs have the correct normal state and respond appropriately to energize/de-energize commands.
   h. Documentation of analog sensor calibration (measured value, reported value and calculated offset).
   i. Documentation of loop tuning (sample rate, gain and integral time constant).
4. Submit at least two weeks prior to equipment startup.

G. Startup testing report.

1. Startup testing reports will be submitted on a per system basis.
2. Startup testing reports will be the documented results of the executed startup testing plans.

H. Software and Firmware Operational Documentation: Include the following:

1. Software operating and upgrade manuals.
2. Program Software Backup: Provide compact disc, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.
5. Software license required by and installed for DDC workstations and control systems.

I. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.

J. Record Documentation

1. Provide three (3) bound copies of Owner's Manuals (i.e. equipment Data drawings with sequence of operations, Operational Manuals, As-built drawings, etc.)
2. Include control equipment drawings. Drawings will include network diagrams, panel layout drawings, detailed equipment drawings, description of operation, wiring diagrams, termination details, point schedules; trunk layouts including power supplies at all bus levels, and room schedules. Drawings will be “B” sized 11 inches x 17 inches. Include in the submittals a detailed point list for each integrated building. The point list will detail the point descriptor, the type of input or output (i.e., DI, DO, AI, AO) and software points. The point list must be submitted to the Owner’s Representative for review and approval.
3. As-built drawings will each be stamped “As-Built” and have the as-built date on them. Copies of as-built drawings will include the following at a minimum: Detailed drawings for each piece of controlled and monitored equipment, point lists, sequence of operations, and hardware with part information, logic tables, room schedules, and O & M manuals. As part of the as-built drawings; provide a drawing that shows the detailed routing of all communication trunk wires (building-to-building and within building), locations of all network and integration devices, front-end workstations, UPS and campus network/LAN connections.

4. Project Record Documents: Record actual locations of control components, including control units, thermostats, and sensors. Revise Shop Drawings to reflect actual installation and operating sequences.

5. Provide electronic copies of as-built documentation to the University. The electronic copies will be stored on CDs and will be saved in an editable format. Acceptable formats include Microsoft Office program formats (i.e. Word, Excel, Access, etc.), Visio, and AutoCAD. Other formats must be approved by the University at time of project award.

1.9 QUALITY ASSURANCE

A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Startup Personnel Qualifications: Specially trained personnel, in the direct employ of manufacturer or franchise of the primary automatic-control-system provider, who are experienced with the installation and startup of automatic control systems installations similar to those required for this Project.

D. Codes and Standards: Equipment, materials, and labor; provided as work of this section shall comply with federal, state, and local standards, codes, and ordinances.

E. Comply with ASHRAE 135 for DDC system components.

1.10 OWNERSHIP OF PROPRIETARY MATERIAL

A. The University shall retain all rights to software for this project.

B. The University shall sign a copy of the manufacturer's standard software and firmware licensing agreement as a condition off this contractor. Such license shall grant use of all programs and application software to the Owner as defined by the manufacturer's license agreement, but shall protect the manufacturer's rights to disclosure of Trade Secrets contained within such software.

C. The licensing agreement shall not preclude the use of the software by individuals under contract to the owner for commissioning, servicing, or altering the system in the future. Use of the software by individuals under contract to the owner shall be restricted to use on the owner’s computers and only for the purpose of commissioning, servicing, or altering the installed system.

D. Project developed software, files and documentation shall become the property of the owner. These include but are not limited to:

1. Server and workstation software
2. Application programming tools
3. Configuration tools
4. Addressing tools
5. Application files
6. Configuration files
7. Graphic files
8. Report files
9. Graphic symbol libraries
10. Documentation.
1.11 DELIVERY, STORAGE, AND HANDLING
A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.
B. System Software: Update to latest version of software at Project completion.

1.12 COORDINATION
A. Alarms: Coordinate with Energy Management the software procedures for specific types of alarm lockouts. Coordinate high and low alarm limits for analog input points. Critical digital input points shall be programmed as alarm-able points.
B. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.
C. Coordinate the location and installation of automatic control dampers, instruments, and air control accessories. Automatic control dampers, instruments, and air control accessories will be installed according to Division 23 Section Duct Accessories.
D. Coordinate the location and installation of automatic control valves, instrument wells, and hydronic accessories. Control valves, instrument wells, and hydronic control accessories will be installed according to Division 23 Section Hydronic Piping.
E. Coordinate the location and installation of automatic control valves, instrument wells, and steam accessories. Control valves, instrument wells, and steam control accessories will be installed according to Division 23 Section Steam and Condensate Piping.
F. Coordinate the location and installation of automatic control valves, instrument wells, and plumbing control devices. Control valves, instrument wells, and plumbing control devices will be installed according to Division 22.
G. Coordinate equipment with Division 28 Section "Fire Detection and Alarm" to achieve compatibility with equipment that interfaces with that system.
H. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.
I. Coordinate equipment with Division 26 Section "Electrical Power Monitoring and Control" to achieve compatibility of communication interfaces.
J. Coordinate equipment with Division 28 Section "Access Control" to achieve compatibility with equipment that interfaces with that system.
K. Coordinate equipment with Division 26 Section "Network Lighting Controls" to achieve compatibility with equipment that interfaces with that system.
L. Coordinate equipment with Division 28 Section "Fire Detection and Alarm" to achieve compatibility with equipment that interfaces with that system.
M. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.
N. Coordinate equipment with Division 26 Section "Electrical Power Monitoring and Control" to achieve compatibility of communication interfaces.
O. Coordinate equipment with Division 26 Section "Panelboards" to achieve compatibility with starter coils and annunciation devices.
P. Coordinate equipment with Division 26 Section "Motor-Control Centers" to achieve compatibility with motor starters and annunciation devices.

1.13 TRAINING
A. Meet all applicable Training requirements of Division 1, Division 21-23, and the following:
1. Instruct the operators how to accomplish control of the system. Include basic troubleshooting and override of equipment and controls in the event of system failure.

2. Training Allowance: Provide not less than (4) hours formal training to the Owner’s designated operations personnel.

3. Trainers - Persons conducting the training shall hold an advanced certification, be knowledgeable in the workings of the system, and shall be regularly engaged in training exercises, so as to provide effective training. Acceptability of the trainers shall be at the discretion of the Owner.

4. Training Manuals - Include the following in training manuals.
   a. Manufacturer’s training brochures.
   b. Operation and maintenance manuals.
   c. Completed Field Acceptance Test Procedure.
   d. “As-installed” Drawings.
   e. Manufacturer’s Operation Manuals.
   f. Software interaction sheets to be used in instructing students how to use the control system, on a command-by-command basis.

5. Training Classes - Prior to conducting training, prepare and submit for approval the proposed training literature and topics. Submit this information at least two weeks prior to the first class.

6. Provide approved training manuals to the Owner at least one week prior to the first class.

7. Provide Audio Visual Tutorials both in a CD format and on the manufactures website instructing on the operation of the programming software tools as provided under this specification.
   a. As part of the training deliverable provide short video clips (each clip shall be a file) of various procedures such as but not limited to the following: Changing a Set point, Making Schedule Adjustments, Modifying Holiday Schedules Adding Special Events, Creating a Backup of the Database Running on the Supervisor, Adding a Schedule to the Database and Linking the Schedule to a Piece of Equipment, Adding a new Schedule to the Graphical User Interface, Using History Chart Builder to Save Your Trends on the Supervisor, Adding a Point to the Existing System, Adjusting the Value of a Point that has been Added to the System, Adding ModBus Points and/or Controllers to theE network.
   b. Video files shall be accessible thru the terminal in such a manner to allow for viewing in order to perform such changes on the BAS.

1.14 WARRANTY

A. Components, system software, parts and assemblies will be guaranteed against defects in materials and workmanship for one year from the acceptance date.

B. Labor, equipment, material, and software required to troubleshoot, repair, reprogram, or replace system components will be provided, at no charge to the owner during the one year warranty period.

C. Corrective software modifications made during warranty service periods will be updated on all user documentation and on user and manufacturer archived software disks. Provide the owner with a new compact disc whenever software changes are required.

D. Install current version DDC system and configuration software fix packs and patches at no cost to the University during the warranty period.

E. Install current version DDC system and configuration software version upgrades released during the warranty period at no cost to the University.

F. The installer will be capable of doing any repairs with factory trained technicians operating out of a local service office.

G. The installer will be capable of doing any repairs with factory trained technicians operating out of a local service office, and furnish the Owner with a local telephone number and email address where a factory-trained technician may be reached at all times.
H. The factory-trained technician shall arrive at the job-site ready to service the system within two hours upon receiving a request for repairs and will prosecute the work continuously until the system is back in proper reliable operating condition.

I. The installer will keep a permanent maintenance record at the local service office of all repairs performed and all service calls responded to during the warranty period (including labor and material used); copy of record will be presented to Owner's representative at completion of each service call.

J. Permanent maintenance records will include dial-up-type service calls made via the dial-up communications feature.

K. System components and local service will be available for a total of seven years.

L. The installer will furnish the Owner with a local telephone number where a factory-trained technician may be reached at all times.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Primary control equipment shall be manufactured by either Siemens Branch, Johnson Controls Branch, or Honeywell Branch.

B. All applicable devices shall be BTL (BACnet Testing Laboratories) Certified installers.

2.2 CONTROL SYSTEM

A. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multi-user, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.

2.3 INSTALLATION

A. The University’s Master Systems Integrator will provide discovery and integration into the BAS (Building Automation System) / BMS (Building Management System). The University will maintain a direct relationship with the BAS Master Integrator. All discovery, importation, intergradation, and graphics of all new components and/or systems installed will be performed by the Master Integrator.

B. Temperature control and building automation systems shall be provided and installed by factory branch operations only. Distributors or independent contractors shall not be permitted.

C. BLN (Building Level Network) wiring will be the responsibility of the (controls/general) contractor selected for perform the work.

2.4 BASIS OF DESIGN

A. Wayne State University (WSU) owns and maintains an existing Siemens Desigo CC Building Management System (BMS). Siemens Desigo CC is a native BACnet workstation and has been developed to conform to the BACnet Testing Laboratories “BACnet Advanced Workstation” (B-AWS) test specification. Desigo CC integrates control over a wide range of systems and is designed to communicate with Electrical and Direct Digital Controls (DDC) through building level controllers (Field panels, System Network Controllers, etc.) for the management of central plant equipment, building ventilation equipment, supplemental heating and cooling equipment, and terminal units connected to its communication trunks.
B. The WSU Desigo CC BMS shall provide an interface for building level controllers and associated field level devices to provide application control functions over the field systems. The BMS shall be capable of executing application control programs to provide:
1. Calendar functions
2. Scheduling
3. Trending
4. Alarm monitoring and routing
5. Integration of BACnet, MODBUS, OPC-DA, and SNMP controller data
6. Network management for BACnet based devices

2.5 BACNET INTEROPERABILITY:
A. BACnet interoperability refers to the ability to integrate BACnet products made by different manufacturers into a single system.

B. Unless otherwise specified by WSU, all components and controllers will require integration via BACnet and will adhere to the ASHRAE 135-2016 BACnet Standard to ensure interoperability between all systems. BACnet devices shall be via Ethernet (BACnet IP) and or RS-485 (BACnet MSTP) as specified.

C. Other acceptable industry-standard, open communication is currently limited to the following protocols:
   1. MODBUS IP - MODBUS IP communication
   2. OPC DA - OLE for Process Control, OPC DA 2.05, 3.0
   3. SNMP - SNMP Agents monitoring (V1 and V2)
   4. IEC 61850 - protocol for electrical substations and devices

D. Each BACnet device must be BTL (BACnet Testing Laboratories) listed and the devices supplier must show a Protocol Implementation and Conformance Statement (PICS) document and associated BACnet Interoperable Building Blocks (BIBBs) showing the installed devices compliance level.

E. Supplied software shall employ object-oriented technology (OOT) for representation of all data and controlled devices within the WSU Desigo CC BMS. Contractors shall convey all legal copies, legal licensing, and provide unrestricted/unlimited administrative access (administrative user account and password) for all configuration tools, management tools, and utilities used to install, commission, and operate equipment to the Master Systems Integrator and Wayne State University at project close out.

F. Contractors will be responsible to configure BACnet building controllers to serve BACnet data to the WSU Desigo CC BMS installed on the WSU IT network. Each BACnet building controller shall be configured and programmed to expose all BACnet Objects associated with devices that need to be supervised by the BACnet Building Controller. Contractors shall configure the BACnet Building Controllers to utilize a Change of Value (COV) subscription with the WSU Desigo CC BMS server. COV increments shall be set (tuned) to minimize network traffic.

G. All controller communication to the WSU Desigo CC BMS server requires the use of BACnet Broadcast Management Device configuration (BBMD). The BMS Master Systems Integrator maintains the BBMDs on the building automation networks and will expand the BACnet Distribution Table (BDT) as needed for the project. Coordination between the MSI and WSU IT may be required to determine the appropriate server level setup for proper BACnet network communication. Contractors shall provide proper personnel skilled at BBMD and IT configuration to work with the MSI personnel as needed.

2.6 SYSTEM ARCHITECTURE
A. The DDC system architecture shall consist of two layers, the TCP/IP layer and the field bus layer.

B. The TCP/IP layer connects all of the buildings on a single dedicated and isolated network. Fixed IP addresses for connections to the University private DDC network shall be used for each device.
C. BACnet Building Controllers (B-BC) shall be used to connect each field bus to the TCP/IP layer.

2.7 NETWORKING

A. IP Network: Devices that connect to the wide area network (WAN) shall be capable of operating at 100 megabits per second.

B. IP-to-Field Bus Routing Devices
   1. BACnet Building Controller shall be used to provide this functionality.
   2. These devices shall be configurable locally with RS232 or IP crossover cable and configurable via the IP network.
   3. The routing configuration shall be such that only data packets from the field bus devices that need to travel over the IP level of the architecture are forwarded.

C. Field Bus
   1. The wiring of components shall use a bus or daisy chain concept with no tees, stubs, or free topology.

D. Repeaters
   1. Where repeaters are required to connect two segments, repeaters shall be installed in an enclosure mounted in an accessible area.

2.8 BUILDING LEVEL CONTROLLERS (B-BC)

A. Building level DDC controllers shall be microprocessor-based, multi-tasking, multi-user, real-time digital control processors fully capable of being integrated with the operator workstation, or any third party BACnet workstation.

B. Building level DDC controllers shall utilize BACnet open standard communication protocol. Building level controllers shall communicate using BACnet/IP.

C. A BACnet Building Controller (B-BC) as defined by ASHRAE Annex L is a general purpose, field programmable device capable of carrying out a variety of building automation and control tasks. It enables the specification of the following:
   1. Data Sharing
      a. Ability to provide the values of any of its BACnet objects
      b. Ability to retrieve the values of BACnet objects from other devices
      c. Ability to allow modifications such as scheduling and present value of some or all of its BACnet objects by another device.
   2. Alarm and Event Management
      a. Generation of alarms / events notifications and the ability to direct them to recipients using the BACnet intrinsic alarming method
      b. Maintain a list of unacknowledged alarms / events retrievable using standard BACnet Services
      c. Maintain a list of alarms / events retrievable using standard BACnet Services
      d. Notifying other recipients that the acknowledgment has been received
      e. Adjustment of alarm / event parameters
   3. Scheduling
      a. Ability to schedule output actions, both in the local device and in other devices, both binary and analog, based on date and time
   4. Trending
      a. Collection and delivery of (time, value) pairs
   5. Device and Network Management
      a. Ability to respond to information about its status
      b. Ability to respond to requests for information about any of its objects
      c. Ability to respond to communication control messages
      d. Ability to upload its configuration and allow it to be subsequently restored
D. If Building Controllers have embedded I/O, all of the requirements for I/O that are described under Unit Level Controllers shall apply.

E. The B-BC device(s) shall support all ANSI/ASHRAE 135-2004 standard object required and optional properties. BACnet intrinsic alarming is required. Objects and object properties shall be supported so that alarms are sent from the BACnet device without having to be solicited from the University BACnet Operators Workstation (BOWS).

F. DDC panels and devices must utilize ANSI/ASHRAE 135-2004 BACnet Communications Protocol on a single building level network. BACnet communications must not cause derogated communications on the sites existing temperature control network. Derogation includes router, switch, or hub lockups, BACnet building controller lockups, excessive site network slowdowns, unnecessary and repeated ‘who is’ messages. Refer to NIST BACnet standard for definition of unnecessary that-is messages.

G. University BACnet Required Protocol Services supported:
   1. Acknowledge Alarm
   2. Confirmed Event Notify
   3. Get Alarm Summary
   4. Get Enrollment Sum
   5. Add List Element (for the purpose of allowing the addition of a recipient to the BB-C)
   6. Remove List Element (for the purpose of allowing the deletion of a recipient to the BB-C)
   7. Read Property
   8. Read Property Multiple
   9. Write Property
   10. Write Property Multiple
   11. Confirm Private Xfer
   12. I AM
   13. I Have
   14. Unconfirmed COV Notify
   15. Unconfirmed Event Notify
   16. Time Synchronization
   17. Who Has
   18. Who Is
   19. UTC Time Sync
   20. Get Event Info

H. Building controllers must be capable of having their databases uploaded, downloaded and viewed from the building operator workstation.

I. Building level controllers shall have a local port that can connect to a laptop PC or other hand-held tool for local service work, troubleshooting, etc. Each controller shall include the capability to store, retrieve and print alarm summaries, trends and other critical point summaries or reports.

J. Memory: Each DDC controller shall have sufficient memory to support its own operating system and databases and continuous trending on all analog points for that controller (AV, AI, and AO) based on 300 sample intervals.

K. Integrated On-line Diagnostics: Each DDC controller shall continuously perform self-diagnostics and communication diagnosis of all associated unit level equipment. The DDC controller shall provide both local and remote annunciation of any detected component failures, or repeated failure to establish communication. Indication of the diagnostic results shall be provided at each DDC controller and shall not require the connection of an auxiliary I/O device.
L. Power Fail Restart: In the event of the loss of normal power, there shall be an orderly shutdown of all DDC controllers to prevent the loss of database or operating system software. Non-volatile memory shall be incorporated for all critical controller configuration data, and battery back up shall be provided to support the real-time clock and all volatile memory for a minimum of seventy-two (72) hours. Upon restoration of normal power, the DDC controller shall automatically resume full operation without manual intervention. Should a DDC controller memory be lost for any reason, the user shall have the capability of reloading the DDC controller via the local area network or via the local interface port.

M. System architectural design shall eliminate dependence upon any single device, front-end or higher level of controller for alarm reporting and control execution. Each DDC controller shall operate independently by performing its own specified control, alarm management, operator I/O, and historical data collection. The failure of any single component or network connection shall not interrupt the execution of control strategies at other operational devices.

N. Building level DDC controllers shall be able to access any data from, or send control commands and alarm reports directly to any other building level controller or combination of controllers on the IP network without dependence upon a central processing device. Building level DDC controllers shall also be able to send alarm reports to multiple operator workstations without dependence upon a central processing device.

O. Ethernet network communications will use 100 MBPS communication rates or greater.

2.9 UNIT LEVEL CONTROLLERS

A. Each Unit Level DDC controller shall consist of modular hardware with plug-in enclosed processors, communication controllers, power supplies, input and output (DI, DO, AI, AO) capabilities.

B. Unit level DDC controllers shall utilize BACnet/MSTP or LON open standard communication protocol.

C. Unit level controllers, including VAV controllers, must be able to have their databases uploaded, downloaded and viewed from the building operator workstation.

D. Power Fail Restart: In the event of the loss of normal power, there shall be an orderly shutdown of DDC controllers to prevent the loss of database or operating system software. Non-volatile memory shall be incorporated for critical controller configuration data, and battery back up shall be provided to support the real-time clock and all volatile memory for a minimum of seventy-two (72) hours. Upon restoration of normal power, the DDC controller shall automatically resume full operation without manual intervention. Should a DDC controller memory be lost for any reason, the user shall have the capability of reloading the DDC controller via the local area network or via the local interface port.

E. Each controller will be programmed such that each controlled device will have a default value in which to be commanded to in the event of a control sensor failure. The acceptable default values are, last command, full open, or full closed.

F. Controller I/O Requirements

1. Analog Input Circuits
   a. The resolution of the A/D chip shall not be greater than 0.01 Volts per increment. For an A/D converter that has a measurement range of 0 to 10 VDC and is 10 bit, the resolution is 10/1024 or 0.00976 Volts per increment.
   b. For non-flow sensors, the control logic shall support a calibration offset such that the raw measured value is added to the (+/-) offset to create a calibration value to be used by the control logic and reported to the Operator Workstation (OWS).
   c. For flow sensors, the control logic shall provide support for the use of an adjustable gain and an adjustable offset such that a two point calibration concept can be executed (both a low range value and a high range value are adjusted to match values determined by a calibration instrument).
d. For non-linear sensors such as thermistors and flow sensors the controller shall provide software support for the linearization of the input signal.

2. Binary Input Circuits
   a. Dry contact sensors shall wire to the controller with two wires.
   b. An external power supply in the sensor circuit shall not be required.

3. Pulse Input Circuits
   a. Pulse input sensors shall wire to the controller with two wires.
   b. An external power supply in the sensor circuit shall not be required.
   c. The pulse input circuit shall be able to process up to 20 pulses per second.

4. True Analog Output Circuits
   a. The logical commands shall be processed by a digital to analog (D/A) converter chip. The 0% to 100% control signal shall be scalable to the full output range which shall be 0 to 10 VDC, 4 to 20 milliamps or 0 to 20 milliamps or to ranges within the full output range.
   b. The resolution of the D/A chip shall not be less than 0.04 Volts per increment or 0.08 milliamps per increment.

5. Binary Output Circuits
   a. Single pole, single throw or single pole, double throw relays.
   b. Voltage sourcing or externally powered triacs with support for up to 30 VAC and 0.5 amps at 24 VAC.

6. Program Execution
   a. Process control loops shall operate in parallel and not in sequence unless specifically required to operate in sequence by the sequence of control.
   b. The sample rate for a process control loop shall be adjustable and shall support a maximum sample rate of 1 second.
   c. The sample rate for process variables shall be adjustable and shall support a maximum sample rate of 1 second.
   d. The sample rate for algorithm updates shall be adjustable and shall support a maximum sample rate of 1 second.
   e. The application shall have the ability to determine if a power cycle to the controller has occurred and the application programmer shall be able to use the indication of a power cycle to modify the sequence of controller immediately following a power cycle.

7. Local Interface: The controller shall support the connection of a portable interface device such as a laptop computer or vendor specific hand-held device. Via this local interface, an operator shall be able to:
   a. Adjust application parameters.
   b. Execute manual control of input and output points.
   c. View dynamic data.

G. Unit level controllers shall not be dependent upon any other controller (unit or building level) to maintain safe operation of the controlled equipment.

H. PROHIBITED: The combination of master/slave panels or point expansion for PID control loops.

I. PROHIBITED: Splitting mechanical systems between more than one Unit Level controller.

2.10 DDC EQUIPMENT

A. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.

1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation or diagnostic terminal unit.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
   a. Global communications.
   b. Discrete/digital, analog, and pulse I/O.
   c. Monitoring, controlling, or addressing data points.
d. Software applications, scheduling, and alarm processing.
e. Testing and developing control algorithms without disrupting field hardware and controlled environment.

3. Standard Application Programs:
   a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, anti-short cycling, PID control, DDC with fine tuning, and trend logging.
   b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
   c. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
   d. Remote communications.
   e. Maintenance management.
f. Units of Measure: Inch-pound and SI (metric).

4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.

5. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

B. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.
   1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.
   2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
      a. Global communications.
      b. Discrete/digital, analog, and pulse I/O.
      c. Monitoring, controlling, or addressing data points.
   3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
   4. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

C. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.
   1. Binary Inputs: Allow monitoring of on-off signals without external power.
   2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
   3. Analog Inputs: Allow monitoring of low-voltage (0- to 10-V dc), current (4 to 20 mA), or resistance signals.
   4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation with three-position (on-off-auto) override switches and status lights.
   5. Analog Outputs: Provide modulating signal, either low voltage (0- to 10-V dc) or current (4 to 20 mA) with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer.
   7. Universal I/Os: Provide software selectable binary or analog outputs.

D. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
   1. Output ripple of 5.0 mV maximum peak to peak.
   2. Combined 1 percent line and load regulation with 100-mic.second response time for 50 percent load changes.
   3. Built-in over-voltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.
E. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:
   1. Minimum dielectric strength of 1000 V.
   3. Minimum transverse-mode noise attenuation of 65 dB.
   4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

2.11 WAYNE STATE GRAPHICAL AND NAMING REQUIREMENTS

A. Graphics acceptable to the University shall be provided, by the master integrator, for all mechanical and electrical systems and components which are controlled or monitored by the BMS. Graphics must also reside on the University’s central server/control center and be fully visible at the local building’s work station. All terminal device graphics should contain locations such as room numbers the device is serving. It should also note what air handler feeds the device. It should show room set point, room temperature, discharge temperature, damper command, damper position, cfm set point, cfm the unit is putting out, valve command, valve position and mode heat or cool and occupancy or vacancy.

B. Alarms on critical points, components, and systems are an important feature and require review and concurrence by the University during the design development phase of the BMS.

C. Programming shall include optimized start/stop for appropriate mechanical and electrical systems.

D. Point descriptors shall include upper/lower case characters. System or point names such as AHU #1; FEEDWATER PUMP #2; etc. shall be all upper case. For example, “CIRCULATING PUMP #1 - Mechanical Room 235”

E. Point descriptors including room numbers shall represent the University’s assigned nomenclature instead of construction document numbers, if different.

2.12 OPERATOR WORKSTATION INTERFACE

A. Basic Interface Description

1. Operator workstation interface software will minimize operator training using English language prompting, 30 character English language point identification, on-line help, and industry standard PC application software. The software will provide, as a minimum, the following functionality:
   a. Real-time graphical viewing and control of environment
   b. Scheduling and override of building operations
   c. Collection and analysis of historical data
   d. Point database editing, storage and downloading of controller databases.
   e. Alarm reporting, routing, messaging, and acknowledgment
   f. Display dynamic data trend plot.
      1) Must be able to run multiple plots simultaneously
      2) Each plot must be capable of supporting 10 pts/plot minimum
      3) Must be able to command points directly off dynamic trend plot application.
   g. Definition and construction of dynamic color graphic displays.
   h. Program editing
   i. Transfer trend data to third party software
   j. Scheduling reports
   k. Operator Activity Log

2. Provide a graphical user interface that will minimize the use of keyboard with a mouse or similar pointing device and "point and click" approach to menu selection.
3. The software will provide a multi-tasking type environment that allows the user to run several applications simultaneously. BAS software will run on most current version of Windows Professional operating system. These Windows applications will run simultaneously with the BAS software. The mouse will be used to quickly select and switch between multiple applications. The operator will be able to work in Microsoft Word, Excel, and other Windows based software packages, while concurrently annunciating on-line BAS alarms and monitoring information.
   a. Provide functionality such that any of the following may be performed simultaneously on-line, and in any combination, via user-sized windows. Operator will be able to drag and drop information between applications, reducing the number of steps (i.e. Click on a point on the alarm screen and drag it to the dynamic trend graph application to initiate a dynamic trend).
      1) Dynamic color graphics and graphic control
      2) Alarm management, routing to designated locations, and customized messages
         (a) Alarms will be available on remote wireless devices if requested by the University.
      3) Year in advance event and report scheduling
      4) Dynamic trend data definition and presentation
      5) Graphic definition and construction
      6) Program and point database editing on-line.
   b. Report and alarm printing will be accomplished via Windows Print Manager, allowing use of network printers.
   c. Operator specific password access protection will be provided to allow the user/manager to limit workstation control, display and data base manipulation capabilities as deemed appropriate for each user, based upon an assigned password. Operator privileges will "follow" the operator to any workstation logged onto (up to 999 user accounts will be supported).
4. Reports will be generated on demand or via pre-defined schedule and directed to CRT displays, printers, or disk. As a minimum, the system will allow the user to easily obtain the following types of reports:
   a. A general listing of all or selected points in the network
   b. List of all points currently in alarm
   c. List of all points currently in override status
   d. List of all disabled points
   e. List of all points currently locked out
   f. List of user accounts and access levels
   g. List all weekly schedules
   h. List of holiday programming
   i. List of limits and deadbands
   j. Custom reports from third party software
   k. System diagnostic reports including, list of DDC panels on line and communicating, status of all DDC terminal unit device points
   l. List of programs
5. Scheduling and Override: Provide a calendar type format for simplification of time-of-day scheduling and overrides of building operations. Schedules reside in the PC workstation, DDC Controller, and HVAC Mechanical Equipment Controller to ensure time equipment scheduling when PC is off-line; PC is not required to execute time scheduling. Provide override access through menu selection or function key. Provide the following spreadsheet graphic types as a minimum:
   a. Weekly schedules
   b. Zone schedules, minimum of 200 unique zones
   c. Scheduling for up to 365 days in advance
   d. Schedule reports to print at PC.
6. Collection and Analysis of Historical Data
a. Provide trending capabilities that allow the user to easily monitor and preserve records of system activity over an extended period. Any system point may be trended automatically at time-based intervals or change of value, both of which will be user-definable. Trend data may be stored on hard disk for future diagnostics and reporting. Additionally, trend data may be archived to network drives or removable disk media for future retrieval.

b. Trend data reports will be provided to allow the user to view all trended point data. Reports may be customized to include individual points or predefined groups of at least six points. Provide additional functionality to allow predefined groups of up to 250 trended points to be easily transferred on-line to Microsoft Excel. DDC contractor will provide custom designed spreadsheet reports for use by the owner to track energy usage and cost, equipment run times, equipment efficiency, and/or building environmental conditions. DDC contractor will provide setup of custom reports including creation of data format templates for monthly or weekly reports.

c. Provide additional functionality that allows the user to view real-time trend data on trend graph displays. A minimum of ten points may be graphed, regardless of whether they have been predefined for trending. The dynamic graphs will continuously update point values. At any time the user may redefine sampling times or range scales for any point. In addition, the user may pause the graph and take "snapshots" of screens to be stored on the workstation disk for future recall and analysis. Exact point values may be viewed and the graphs may be printed. A minimum of 8 true graphs will run simultaneously. Operator will be able to command points directly on the trend plot by double clicking on the point.

d. Provide trend reports for the following data: (Each air handling unit)
   1) Duct static pressure.
   2) Supply fan cfm.
   3) Return fan cfm.
   4) Outside air cfm.
   5) Discharge air temperature.
   6) Return air temperature.

B. Dynamic Color Graphic Displays

1. Create color graphic floor plan displays and system schematics for each piece of mechanical equipment to optimize system performance analysis and speed alarm recognition. Color graphic displays will include the following:
   a. Refer to Section 230993 “Sequence of Operation for HVAC Controls” for additional display requirements.

2. Operator Override: The system shall allow the operator to override control sequences and drive open or closed all automatic control dampers and valves.

3. Two position dampers and control valves shall be shown as “OPEN” or CLOSED.”

4. Two position smoke and combination fire/smoke dampers shall be shown as “OPEN” or CLOSED.”

5. Modulating dampers and control valves shall be displayed as a percentage of full open. Zero percent equals closed, and 100-percent equal's full open.

6. Modulating face and bypass dampers shall be displayed as a percentage of airflow through the coil. Zero percent equals closed, and 100-percent equal's full open.

7. The operator interface will allow users to access the various system schematics and floor plans via a graphical penetration scheme, menu selection, or text-based commands. Graphics software will permit the importing of AutoCAD or scanned pictures for use in the system.

8. Dynamic temperature values, humidity values, flow values and status indication will be shown in their actual respective locations and will automatically update to represent current conditions without operator intervention and without pre-defined screen refresh rates.
   a. Sizable analog bars will be available for monitor and control of analog values; high and low, alarm limit settings will be displayed on the analog scale. The user will be able to "click and drag" the pointer to change the set point.

   b. Provide the user the ability to display blocks of point data by defined point groups; alarm conditions will be displayed by flashing point blocks.
c. Equipment state can be changed by clicking on the point block or graphic symbol and selecting the new state (on/off) or set point.

d. State text for digital points can be defined up to eight characters.

9. Colors will be used to indicate status and change as the status of the equipment changes. The state colors will be user definable.
   a. “Green” will always represent normal operation.
   b. Alarms will be “red”.
   c. Manual Maintenance Mode: Motors that have been manually switched off by the system operator will be “Yellow”.

10. The windowing environment of the PC operator workstation will allow the user to simultaneously view several applications at a time to analyze total building operation or to allow the display of a graphic associated with an alarm to be viewed without interrupting work in progress.

11. Off the shelf graphic software, Microgafx Designer or Coral Draw software will be provided to allow the user to add, modify or delete system graphic displays.

12. A clipart library of HVAC and automation symbols will be provided including fans, valves, motors, chillers, AHU systems, standard ductwork diagrams, and laboratory symbols. The user will have the ability to add custom symbols to the clipart library.

13. A dynamic display of the site-specific architecture showing status of controllers, PC workstations, and networks will be provided.

C. Web Browser Clients: Provide for a series of browser accessible graphical screens that are resident on the BC and Server that represent the systems controllers and managed by that BC and its associated controllers. The Web browser client shall support at a minimum, the following functions:

1. User log-on identification and password shall be required. If an unauthorized user attempts access, a blank web page shall be displayed. Security using Java authentication and encryption techniques to prevent unauthorized access shall be implemented.

2. Graphical screens developed for the GUI shall be the same screens used for the Web browser client. Any animated graphical objects supported by the GUI shall be supported by the Web browser interface.

3. HTML programming shall not be required to display system graphics or data on a Web page.

4. Storage of the graphical screens shall be in the Building Controller (BC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.

5. Real-time values displayed on a Web page shall update automatically without requiring a manual “refresh” of the Web page.

6. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:
   a. Modify common application objects, such as schedules, calendars, and set points in a graphical manner.
      1) Schedule times will be adjusted using a graphical slider, without requiring any keyboard entry from the operator.
      2) Holidays shall be set by using a graphical calendar, without requiring any keyboard entry from the operator.
   b. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop-up menu. No entry of text shall be required.
   c. View logs and charts.
   d. View and acknowledge alarms.

7. The system shall provide the capability to specify a user’s (as determined by the log-on user identification) home page. Provide the ability to limit a specific user to just their defined home page. From the home page, links to other views, or pages in the system shall be possible, if allowed by the system administrator.
8. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.

D. System Configuration & Definition

1. Network wide control strategies will not be restricted to a single DDC Controller or HVAC Mechanical Equipment controller, but will be able to include data from any and all other network panels to allow the development of Global control strategies.

2. Provide automatic backup and restore of all DDC controllers and HVAC Mechanical Equipment controller databases on the workstation hard disk. In addition, all database changes will be performed while the workstation is on-line without disrupting other system operations. Changes will be automatically recorded and downloaded to the appropriate DDC Controller or HVAC Mechanical Equipment Controller. Changes made at the DDC Controllers or HVAC Mechanical Equipment Controllers will be automatically uploaded to the workstation, ensuring system continuity.

3. System configuration, programming, editing, graphics generation will be performed on-line. If programming and system back up must be done with the PC workstation off-line, the BAS contractor will provide at least 2 operator workstations.

E. Alarm Management

1. Alarm Routing will allow the user to send alarm notification to selected printers or PC location based on time of day, alarm severity, or point type.

2. Alarm Notification will be provided via two alarm icons, to distinguish between routine, maintenance type alarms and critical alarms. These alarm icons will be displayed when user is working in other Windows programs. The BAS alarm display screen will be displayed when the user clicks on the alarm icon.

3. Alarm Display will list the alarms with highest priority at the top of the display. The alarm display will provide selector buttons for display of the associated point graphic and message. The alarm display will provide a mechanism for the operator to sort alarms.

4. Alarm messages will be customizable for each point to display detailed instructions to the user regarding actions to take in case of an alarm.

2.13 DDC SYSTEM SOFTWARE

A. Graphic Page Creation and Editing

1. The Graphics Editor portion of the Engineering Software shall provide the following minimum capabilities:
   a. Create and save symbols.
   b. Create and save pages.
   c. Group and ungroup symbols.
   d. Modify an existing symbol.
   e. Modify an existing graphic page.
   f. Rotate and mirror a symbol.
   g. Place a symbol on a page.
   h. Place analog dynamic data in decimal format on a page.
   i. Place binary dynamic data using state descriptors on a page.
   j. Create motion through the use off gif, jpeg, bmp or svg files
   k. Place test mode indication on a page.
   l. Place manual mode indication on a page.
   m. Place links using a fixed symbol or flyover on a page.
      1) Links to other graphics.
      2) Links to web sites.
      3) Links to notes.
      4) Links to time schedules.
      5) Links to trends.
   n. Assign a background color.
   o. Assign a foreground color.
p. Place alarm indicators on a page.
q. Change a symbol color as a function of an analog variable.
r. Change a symbol color as a function of a binary state.
s. Change symbols as a function of a binary state.
t. Symbols used by the contractor in the creation of graphic pages shall be saved to a library file for use by the owner.

B. Event Logging
1. The system shall maintain a log of all operator activity, system messages, alarms, and alarm acknowledgments.
2. Operator activity is defined as any action by an operator such as changing the value of an application parameter, modifying a program, acknowledging an alarm, logging on, logging off, etc. Any change in the system caused by operator action shall be part of the log. The log shall include the event, the time of the event, the part of the system affected, and an identification of the operator and the OWS from which the change was made.
3. When the event deals with a value change, both the original and new values shall be part of the event record.
4. The Event Log shall be exportable to a report format that is printable.
5. The System Administrator shall be able to archive the event log.
6. The event data shall comply with 21 CFR Part 11 requirements for data integrity.
7. The Event Log shall have a search function with assignable criteria to identify subsets of the event log such as all points placed under manual control, etc.

C. Alarm Generation and Processing
1. Alarm creation is a two part process. The creation of a binary alarm indication is accomplished in a field level device where a binary state of zero shall indicate a normal condition and a binary state of one shall indicate an alarm condition. The binary alarm condition is read within a B-AAC, or Building Controller. The B-AAC or Building Controller shall assign a descriptive message, a category or priority number and a date and time stamp to the alarm and forward the information to the OWS in accordance with an alarm routing table.
2. Alarm parameters such as high limits, low limits, time to state, binary alarm conditions are setup within the programming of the field level devices. These parameters shall be viewable and editable in point lists and on configuration graphic pages.
3. The alarm message shall be descriptive.
   a. Building identification
   b. System identification
   c. Device identification
   d. Date
   e. Time to the second
   f. Nature of the alarm
      1) High value
      2) Low value
      3) Fail to start
   g. Value or state at the time of the alarm.
4. When the operator acknowledges the alarm, there shall be an opportunity to enter a message that becomes a permanent part of the alarm record recorded in the event log.
5. The system shall support the association of graphic pages, trend charts, reports and text documents with specific alarms.
   a. The operator shall have the ability to configure the system to auto-launch a specific graphic page when the alarm occurs.
   b. The system shall support the assignment of wav files to alarm signals on graphic pages.
   c. The operator shall have the ability to launch a specific trend chart from the alarm window when the alarm occurs.
   d. The operator shall have the ability to launch a specific text document when the alarm occurs.
e. An associated report shall automatically execute and write to the hard disk on the OWS when the alarm occurs. Configurations options shall include overwriting the previous report or creating a new file.

6. The system shall use selectable multiple colors on alarm messages for each of the following conditions:
   a. Alarm condition exists and has not been acknowledged
   b. Alarm condition has returned to normal but was never acknowledged
   c. Alarm condition exists and has been acknowledged

7. When an alarm condition no longer exists and has been acknowledged, it shall no longer be displayed in the alarm viewer but it shall be permanently recorded in the event list.

8. The Alarm Routing Table shall support the following:
   a. Multiple workstations at any time.
   b. Specific workstations at particular times (to include all of the time as one choice).
   c. Pagers
   d. Email addresses via simple mail transfer protocol (SMTP; RFC 821)
   e. Permanent comprehensive system wide alarm file
   f. Specific alarm file based on a building or equipment identification
   g. One or more alarm printers at any time
   h. Specific alarm printers at specific times
   i. Rerouting of alarms to a backup receiver when an acknowledgement has not been entered into the system within a specified time.

9. The system shall have a default audible indicator generated by the computer when an alarm is received.

10. Once an alarm is acknowledged at one OWS, it shall display as acknowledged at all operator workstations.

11. An operator shall be able to select multiple alarms for single action acknowledgement.

12. There shall be the ability to disable alarms.

13. The OWS alarm viewer shall be able to display the last 100 active alarms. If there are more than 100 active alarms, as alarms are acknowledged and removed from the viewer, older alarms shall be viewable to keep the viewer showing the last 100 active alarms until there are less than 100 active alarms.

D. Trends

1. Real Time Trends:
   a. At each OWS the operator shall be able to initiate a real time trending instance of up to 10 variables simultaneously.
   b. The polling interval setting shall be adjustable down to a rate of every second.
   c. The data for each instance shall be presented on a single graphical display that automatically updates with each new data collection cycle.
   d. The graphical presentation shall plot the variables on the Y axis and time on the X axis.
   e. A minimum of two Y axis scales shall be available.
   f. The operator shall have the ability to set the range on each Y axis scale or let the scales auto range to cover the range of the values being trended.
   g. Each element of data on the graphical display must be labeled by name or by a unique color. If color is used, a color legend must be included on the graph.
   h. The operator shall be able to open up to five instances simultaneously for a total of 100 points being trended at one time.
   i. An operator shall be able to print an instance of real time data.
   j. The system shall be capable of trending any variable in the system.
   k. The operator shall be able to save pre-configured instances of real time trending that can be initiated with simple point and click actions.

2. Historical Data Collection:
   a. Historical trend data shall be collected by field level devices and periodically uploaded to the data server.
   b. The trend log objects in the field level devices shall have the capacity to store 300 samples per variable. When the 301st sample is collected, the first sample shall be discarded.
c. The field level devices shall be configured to request an upload of data when the number of samples is not greater than 180. Uploads may be configured to occur at a greater frequency.

d. Initiation of historical data collection shall be configurable.
   1) By manual operator intervention in a point and click manner.
   2) By a user adjustable time schedule or date.
   3) Triggered by a binary status variable (when the fan status is on, start the trend of the mixed air temperature).
   4) The system shall be capable of trending any variable in the system.

e. The status and capacity of the trend logs in the field devices shall be viewable from the operator workstation.

3. Historical Data Presentation:
   a. An OWS shall have the capability to present the historical data for a variable in a tabular presentation of the values along with the date and time of the sample. The time period for the values to be presented shall be user adjustable.
   b. An OWS shall have the capability to present the historical data for a variable in a graphical presentation of the values plotted against time and date.
   c. The graphical presentation capabilities for historical trends shall equal those described above for real time trends.
   d. The operator shall be able to save pre-configured instances of historical trending that can be initiated with simple point and click actions.
   e. The operator shall be able to print the tabular presentations and graphical presentations of historical trend data.

4. The data collection, storage, retrieval and presentation system shall provide the features necessary for the owner to achieve certification under 21 CFR Part 11. The key issue is the integrity of the data, the ability to verify that the data has not been modified after collection by the system.

E. Application Programming
   1. The application programming tool may be based on Line Programming or Graphical Programming concepts.
   2. If the application programming is object based and graphical:
      a. There shall be an off-line simulation capability.
      b. There shall be the ability to view dynamic data displayed on the object diagram in real time.
   3. There shall be self checking for errors in programming to be used by the programmer.
   4. Key functions that must be supported are:
      a. Timer functions to include Delay Off, Delay On and Sample Rate Support
      b. Interval timer
      c. Math functions to include Addition, Subtraction, Multiplication, Division, Exponentiation, Trigonometric Functions and Logarithmic Functions (base 2 and base 10)
      d. If-Then-Else Instructions (also referred to as switching logic)
      e. Look up tables with a minimum of 100 entries, with and without extrapolation
      f. Bit Wise Logic
      g. Sample and hold binary
      h. Sample and hold analog
      i. Latch on and latch off functions with resets
      j. Input network variable definition
      k. Output network variable definition
      l. Sensor measurement definition
      m. End device control definition
      n. Logic functions to include And, Or, Not and Exclusive Or
      o. Detection of a power cycle
      p. Common function support (standard objects in graphical programs and subroutines in line programs). As a minimum the common functions shall include:
         1) PID with analog output
         2) PID with tri-state outputs
3) Enthalpy from temperature and relative humidity
4) Optimum start stop based on occupancy schedule, temperature, set point and outside air temperature.
5) Polynomial equation

F. Report Creation
1. The operator shall be able to extract historical data from the data collection files and present the data in a Microsoft Excel format. Data in the log shall be exportable to include the date, time and values.
2. The number of trend logs that can be inserted into a single Excel Workbook shall not be limited by the OWS software.
3. The operators shall be able to pre-configure reports for manual execution or automated execution.
4. The OWS shall be able to auto execute any report based on:
   a. A time schedule
   b. An alarm trigger
   c. The status of a binary point (state=1, execute the report)
5. The operators shall be able to pre-configure the destination of the report:
   a. OWS screen
   b. Write to file on the hard drive
   c. Send to a printer.
6. The generation of a report shall not interrupt the use of the OWS by the operator, that is, it shall execute in the background.

2.14 UNITARY CONTROLLERS
A. Unitized, capable of stand-alone operation with sufficient memory to support its operating system, database, and programming requirements, and with sufficient I/O capacity for the application.
1. Configuration: Local keypad and display; diagnostic LEDs for power, communication, and processor; wiring termination to terminal strip or card connected with ribbon cable; memory with bios; and 72 -hour battery backup.
2. Operating System: Manage I/O communication to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms. Perform scheduling with real-time clock. Perform automatic system diagnostics; monitor system and report failures.
3. ASHRAE 135 Compliance: Communicate using read (execute and initiate) and write (execute and initiate) property services defined in ASHRAE 135. Reside on network using MS/TP datalink/physical layer protocol and have service communication port for connection to diagnostic terminal unit.
4. Indoor enclosure: Dustproof rated for operation at 32 to 120 degrees F.
5. Outdoor enclosure: Waterproof rated for operation at -40 to 150 degrees F.

2.15 DDC RESIDENT SOFTWARE FEATURES
A. General:
1. The software programs specified in this section will be provided as an integral part of the DDC and HVAC mechanical equipment controllers and will not be dependent upon any higher level computer (or operator workstation) for execution.
2. All points will be identified by up to 30-character point name and 16 character point descriptor. The same names will be used at the operator workstation.
3. All digital points will have user defined two-state status indication (descriptors with minimum of 8 characters allowed per state (i.e. summer/winter)).

B. Control Software Description:
1. The DDC and HVAC mechanical equipment controllers will have the ability to perform the following pre-tested control algorithms:
   a. Two-position control
   b. Proportional control
c. Proportional plus integral control
d. Proportional, integral, plus derivative control
e. Automatic tuning of control loops

C. DDC and HVAC mechanical equipment controllers will provide the following energy management routines.

1. Start-Stop Time Optimization (SSTO) will automatically be coordinated with event scheduling. The SSTO program will start HVAC equipment at the latest possible time that will allow the equipment to achieve the desired zone condition by time of occupancy. The SSTO program will also shut down HVAC equipment at the earliest possible time before the end of the occupancy period, and still maintain desired comfort conditions.
   a. The SSTO program will operate in both the heating and cooling seasons.
   b. It will be possible to apply the SSTO program to individual fan systems.
   c. The SSTO program will operate on both outside weather conditions as well as inside zone conditions and empirical factors.
   d. The SSTO program will meet the local code requirements for minimum outside air while the building is occupied.

2. Event Scheduling: Provide a comprehensive menu driven program to automatically start and stop designated points or groups of points according to a stored time.
   a. It will be possible to individually command a point or group of points.
   b. For points assigned to one common load group, it will be possible to assign variable time delays between each successive start or stop within that group.
   c. The operator will be able to define the following information:
      1) Time, day
      2) Commands such as on, off, auto, and so forth.
      3) Time delays between successive commands.
   d. There will be provisions for manual overriding of each schedule by an appropriate operator.
   e. It will be possible to schedule events up to one year in advance.
      1) Scheduling will be calendar based.
      2) Holidays will allow for different schedules.

3. Enthalpy switchover (economizer). The energy management control software (EMCS) will control the position of the air handler relief, return, and outside air dampers. If the outside air enthalpy falls below changeover set point, the EMCS will modulate the dampers to provide 100 percent outside air. The user will be able to quickly changeover to an economizer system based on enthalpy and will be able to override the economizer cycle and return to minimum outside air operation at any time.

4. Temperature-compensated duty cycling.
   a. The DCCP (Duty Cycle Control Program) will periodically stop and start loads according to various patterns.
   b. The loads will be cycled such that there is a net reduction in both the electrical demands and the energy consumed.

5. Automatic Daylight Savings Time Switchover: The system will provide automatic time adjustment for switching to/from Daylight Savings Time.

6. Night setback control: The system will provide the ability to automatically adjust set points for night control.

7. The Peak Demand Limiting (PDL) program will limit the consumption of electricity to prevent electrical peak demand charges.
   a. PDL will continuously track the amount of electricity being consumed, by monitoring one or more electrical kilowatt-hour/demand meters. These meters may measure the electrical consumption (kWh), electrical demand (kW), or both.
   b. PDL will sample the meter data to continuously forecast the demand likely to be used during successive time intervals.
   c. If the PDL forecasted demand indicates that electricity usage is likely to exceed a user preset maximum allowable level, and then PDL will automatically shed electrical loads.
   d. Once the demand peak has passed, loads that have been shed will be restored and returned to normal control.
D. DDC and HVAC Mechanical Equipment Controllers will be able to execute custom, job-specific processes defined by the user, to automatically perform calculations and special control routines.

1. A single process will be able to incorporate measured or calculated data from any and all other DDC and HVAC Mechanical Equipment Controllers on the network. In addition, a single process will be able to issue commands to points in any and all other DDC and HVAC Mechanical Equipment Controllers on the network. Database will support 30 character; English language point names, structured for searching, and logs.

2. Processes will be able to generate operator messages and advisories to operator I/O devices. A process will be able to directly send a message to a specified device or cause the execution of a dial-up connection to a remote device such as a printer or pager.

3. DDC and HVAC Mechanical Equipment Controller will provide a HELP function key; providing enhanced context sensitive on-line help with task orientated information from the user manual.

4. DDC and HVAC Mechanical Equipment Controller will be capable of comment lines for sequence of operation explanation.

E. Alarm management will be provided to monitor and direct alarm information to operator devices. Each DDC and HVAC Mechanical Equipment Controller will perform distributed, independent alarm analysis and filtering to minimize operator interruptions due to non-critical alarms, minimize network traffic and prevent alarms from being lost. At no time will the DDC and HVAC Mechanical Equipment Controllers ability to report alarms be affected by either operator or activity at a PC workstation, local I/O device, or communications with other panels on the network.

1. All alarm or point change reports will include the point's English language description and the time and date of occurrence.

2. The user will be able to define the specific system reaction for each point. Alarms will be prioritized to minimize nuisance reporting and to speed operator response to critical alarms. A minimum of six priority levels will be provided for each point. Point priority levels will be combined with user definable destination categories (PC, printer, DDC Controller, etc.) to provide full flexibility in defining the handling of system alarms. Each DDC and HVAC Mechanical Equipment Controller will automatically inhibit the reporting of selected alarms during system shutdown and start-up. Users will have the ability to manually inhibit alarm reporting for each point.

3. Alarm reports and messages will be directed to a user-defined list of operator devices or PC’s based on time (after hours destinations) or based on priority.

4. In addition to the point's descriptor and the time and date, the user will be able to print, display, or store a 200 character alarm message to more fully describe the alarm condition or direct operator response.

5. In dial-up applications, operator-selected alarms will initiate a call to a remote operator device.

6. Alarm points will be individually addressed. Do not group alarm points.

F. A variety of historical data collection utilities will be provided to manually or automatically sample, store, and display system data for points as specified in the I/O summary.

1. Any point, physical or calculated may be designated for trending. Any point, regardless of physical location in the network, may be collected and stored in each DDC and HVAC Mechanical Equipment Controllers point group. Two methods of collection will be allowed: either by a pre-defined time interval or upon a pre-defined change of value. Sample intervals of 1 minute to 7 days will be provided. Each DDC and HVAC Mechanical Equipment Controller will have a dedicated RAM-based buffer for trend data and will be capable of storing data samples. All trend data will be available for transfer to a Workstation without manual intervention.

2. DDC and HVAC Mechanical Equipment Controllers will also provide high resolution sampling capability for verification of control loop performance. Operator-initiated automatic and manual loop tuning algorithms will be provided for operator-selected PID control loops as identified in the point I/O summary.
3. Loop tuning will be capable of being initiated both locally at the DDC and at HVAC Mechanical Equipment Controller, from a network workstation or remotely using dial-in modems. For all loop-tuning functions, access will be limited to authorized personnel through password protection.

G. DDC and HVAC Mechanical Equipment Controllers will be capable of automatically accumulating and storing run-time hours. For digital input and output points, and automatically sample, calculate, and store consumption totals for analog and digital pulse input type points, as specified in the point I/O schedule.

H. The peer to peer network will allow the DDC and HVAC Mechanical Equipment Controllers to access, any data from, or send control commands and alarm reports directly to any other DDC and HVAC Mechanical Equipment Controller. Or combination of controllers on the network without dependence upon a central or intermediate processing device. DDC and HVAC Mechanical Equipment Controllers will send alarm reports to multiple workstations without dependence upon a central or intermediate-processing device. The peer to peer network will also allow any DDC and HVAC Mechanical Equipment Controller to access, edit, modify, add, delete, back up, and restore all system point database and all programs.

I. The peer to peer network will allow the DDC and HVAC Mechanical Equipment Controllers to assign a minimum of 50 passwords access and control priorities to each point individually. The log on password (at any PC workstation or portable operator terminal) will enable the operator to monitor, adjust, and control the points that the operator is authorized to access. All other points will not be displayed on the PC workstation or portable terminal (e.g. all base building and all tenant points will be accessible to any base building operators, but only tenant points will be accessible to tenant building operators). Passwords and priorities for every point will be fully programmable and adjustable.

2.16 UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. Connect building automation system provided controllers for AHUs, Chillers, Boilers, and Pumps to power circuits connected to emergency generator.
1. Refer to electrical plans and EM800 for available emergency power circuits.
2. Controllers for VAV boxes, VRF System, FCUs, Unit Heaters, Exhaust Fans, and Plumbing Systems are not required

B. Where required controllers are not connected to emergency generator power, provide Uninterrupted Power to every level of Controller(s) which make up the control system. Include supporting devices such as air compressors, controlled device power supplies, etc

C. UPS shall be able to power associated BAS system controllers and maintain all programming, data, etc. for a minimum of 4 hours of complete loss of power.

D. When a UPS is required, it shall be an Eaton (MGE/Cutler Hammer), model PULSL1000T or approved equal.
1. Tower or mini-tower model, 1000 VA capacity, with an LCD screen. It shall be equipped with software for remote supervision.
2. The UPS shall be a true UPS meaning the inverter shall be active at all times, not just on a loss of input power.
3. UPS output shall be configured for four (4) 5-15R outlets.
4. Batteries shall be sealed, maintenance-free type.
5. UPS shall have a two year warranty on the assembly, including batteries.
6. IP network management shall be built in or if done via an optional card, included in the supplied hardware.
7. Provide UPS status outputs via relay contacts and an emergency stop.
8. For ease of service, the UPS shall be a plug in type and not hard wired.
9. A limited access outlet is needed to keep the UPS powered in an environment where someone may be in need of an outlet (See Part 3).
2.17 ANALOG CONTROLLERS

A. Step Controllers: 6- or 10-stage type, with heavy-duty switching rated to handle loads and operated by electric motor.

B. Electric, Outdoor-Reset Controllers: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range, adjustable set point, scale range minus 10 to plus 70 degrees F, and single- or double-pole contacts.

C. Electronic Controllers: Wheatstone-bridge-amplifier type, in steel enclosure with provision for remote-resistance readjustment. Identify adjustments on controllers, including proportional band and authority.

2.18 AIR TERMINAL CONTROLLER

A. Controller provides direct digital control for room temperature control in variable air volume systems. The controller will operate independently, stand-alone or networked to perform HVAC control, monitoring and energy management functions without relying on a higher level processor. The controller will include a pressure differential transducer and electronic controller.

B. Control algorithms will be preprogrammed; the operator's terminal may be used to adjust air volume set points and other parameters. The controller will be designed for operation and modification without vendor assistance.

C. The controller will interface with the following external devices:
   1. Averaging air velocity sensor.
   2. Floating control valve and damper actuators.
   3. Temperature sensors.
   4. Portable operators terminal
   5. Building Automation System.
   6. Digital input devices (alarm contacts)
   7. Digital output devices.

D. Controller requirements:
   1. Power requirements:
      a. Operating Range: 18 to 28 Vac.
      b. Power Consumption: 3.5 VA (Nominal) to 5.0 VA (Peak) at 24 Vac.
   2. Analog Inputs:
      a. One room temperature sensor.
      b. One velocity sensor.
      c. One relative humidity sensor.
      d. One set point
      e. One auxiliary temperature sensor.
   4. Outputs: Six DO 24 Vac. optically isolated solid state switches @ 0.5 amps.
   5. Controlled temperature accuracy: plus or minus 1.5°F.
   6. Controlled relative humidity accuracy: plus or minus 2.5% RH.
   7. Communications
      a. Remote: LAN Truck
      b. Local: Portable Operators Terminal.
   8. Ambient Conditions:
      a. Operating Temperature: 32°F to 122°F.
      b. Humidity Range: 10 to 95 percent.

E. Differential Pressure Transducer: The averaging air velocity sensor (provided by the VAV terminal unit manufacturer) sends an average air velocity measurement of the duct air velocity to the controller. The air velocity sensor connects to the differential pressure transducer and measures the average differential pressure. The air terminal controller converts this value to actual airflow in CFM. The controller will report CFM and set points.
F. Differential Pressure Transducer Requirements:
   1. Temperature range: 48°F to 112°F.
   2. Measurement Range: 0 to 4000 fpm.
   4. Measurement Accuracy
      a. 300 to 4000 fpm: Plus or minus 5-percent of actual reading
      b. 200 to 300 fpm: +12-percent to –15-percent of actual reading
   5. Repeatability: Plus or minus 8 fpm.

2.19 PERIPHERAL DEVICES

A. Provide sensors and transmitters required as outlined in the input/output summary and sequence of
   operation, and as required to achieve the specified accuracy as specified herein.

B. Temperature transmitters shall be equipped with individual zero and span adjustments. The zero
   and span adjustments shall be non-interactive to permit calibration without iterative operations.
   Provide a loop test signal to aid in sensor calibration.

C. Temperature transmitters shall be sized and constructed to be compatible with the medium to be
   monitored. Transmitters shall be equipped with a linearization circuit to compensate for non-
   lineairities of the sensor and bridge and provide a true linear output signal.

D. CU operating software shall be equipped with a self-calibrating feature for temperature sensors.

E. Sensors used in BTU or process calculations shall be accurate to ±0.10°F over the process
   temperature range.

F. Space Sensors and Transmitters:
   1. Manufacturers:
      a. Veris Industries
      b. Automation Components, Inc. (ACI)
      c. Johnson Controls Incorporated
      d. Honeywell
      e. Kele Incorporated
      f. Mamac Systems
      g. Schneider Electric
      h. Siemens Building Technologies Incorporated
   2. Space, Humidity and CO2 Sensors may be combined if performance requirements met.
   3. Space Temperature Sensors
      a. Space Temperature Sensor – Public Spaces, Lobby, Audience Chamber, Theater, Cortidors, Classrooms, Studios. BRUSHED STAINLESS STEEL
         1) Accuracy: 0.3 deg. C
         2) Range: 50 to 95 deg F.
         3) Platinum RTD
         4) Wire: Manufacturer’s standard cable assembly
         5) Sensor assembly shall include a temperature sensing element mounted under a flush, 
            standard cover plate size, brushed-stainless steel cover, with an insulated back and
            security screws.
         6) Provide a mounting plate that is compatible with the surface shape that it is mounted to
            and electrical box used.
         7) Concealed wiring connection.
      b. Space Temperature Sensor – Stage, Flex Theater, Control Room, All Spaces that are
         painted black. BLACK
         1) Accuracy: 0.3 deg. C
         2) Range: 50 to 95 deg F.
         3) Platinum RTD
         4) Wire: Manufacturer’s standard cable assembly
5) Sensor assembly shall include a temperature sensing element mounted under a standard cover plate size, black non-yellowing plastic cover, with an insulated back and security screws.

6) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.

7) Concealed wiring connection.

8) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

c. Space Temperature Sensor – Non-Sensitive, Regularly Occupied Spaces. **WHITE, OCCUPANCY OVERRIDE**
   1) Accuracy: 0.3 deg. C
   2) Range: 50 to 95 deg F.
   3) Platinum RTD
   4) Wire: Manufacturer’s standard cable assembly
   5) Sensor assembly shall include a temperature sensing element mounted under a standard cover plate size, bright white non-yellowing plastic cover, with an insulated back and security screws.
   6) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
   7) Concealed wiring connection.
   8) Set-Point Adjustment: Warmer/Cooler control.
   9) Set-Point Indication: Concealed
   10) Override Button: allows the occupant to change the occupied control schedule during the unoccupied cycle for a predetermined period of time.
   11) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

d. Space Temperature Sensor – Mechanical, Electrical, Telecomm, Custodial Rooms. **WHITE, DISPLAY, OCCUPANCY OVERRIDE**
   1) Accuracy: 0.3 deg. C
   2) Range: 50 to 95 deg F.
   3) Platinum RTD
   4) Wire: Manufacturer’s standard cable assembly
   5) Sensor assembly shall include a temperature sensing element mounted under a standard cover plate size, bright white non-yellowing plastic cover, with an insulated back and security screws.
   6) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
   7) Concealed wiring connection.
   8) Set-Point Adjustment: Exposed.
   9) Set-Point Indication: LCD display.
   10) Override Button: allows the occupant to change the occupied control schedule during the unoccupied cycle for a predetermined period of time.
   11) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

4. Space Humidity Sensors
   a. H1 Space Humidity Sensor - **WHITE, NO DISPLAY**
      1) Accuracy: 2% at 50% RH and 70 deg F.
      2) Accuracy including non-linearity, hysteresis, and repeatability: Within 1 percent from zero to 90 percent relative when operating between 60 to 77 deg F (16 to 25 deg C).
      3) Relative Humidity Range: Zero to 100 percent.
      4) Sensor assembly shall include a thin-film capacitance humidity sensing element mounted under a standard cover plate size, bright white non-yellowing plastic cover, with an insulated back and security screws.
      5) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
      6) Concealed wiring connection.
      7) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

5. Space CO2 Sensors
a. Space CO2 Sensor – All Spaces except Stage, Flex Theater, Control Room, and all Spaces that are painted black. **WHITE**
   1) Range 0 to 3000 PPM
   2) Accuracy: +/- 30 PPM +/- 2% of measured value
   3) Repeatability: +/- 20 PPM +/- 1% of measured value
   4) Sensor assembly shall include non-dispersive infrared diffusion sampling sensing element mounted under a standard cover plate size, bright white non-yellowing plastic cover, with security screws.
   5) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
   6) Concealed wiring connection.
   7) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

b. Space CO2 Sensor – Stage, Flex Theater, Control Room, All Spaces that are painted black. **BLACK**
   1) Range 0 to 3000 PPM
   2) Accuracy: +/- 30 PPM +/- 2% of measured value
   3) Repeatability: +/- 20 PPM +/- 1% of measured value
   4) Sensor assembly shall include non-dispersive infrared diffusion sampling sensing element mounted under a standard cover plate size, black non-yellowing plastic cover, with security screws.
   5) Provide a mounting plate that is compatible with the surface shape that it is mounted to and electrical box used.
   6) Concealed wiring connection.
   7) Port: Plug-in portable-operators terminal port; located on the bottom of the cover.

G. Outside Air Sensors
   1. Outside air sensors shall be designed to withstand the environmental conditions to which they will be exposed. They shall also be provided with a solar shield.
   2. Sensors exposed to wind velocity pressures shall be shielded by a perforated plate surrounding the sensor element.

H. Duct Type Sensors
   1. Duct mount sensors shall mount in a hand box through a hole in the duct and be positioned so as to be easily accessible for repair or replacement. A neoprene grommet (sealtite fitting and mounting plate) shall be used on the sensor assembly to prevent air leaks.
   2. Duct sensors shall be insertion type and constructed as a complete assembly including lock nut and mounting plate. Duct sensors probe shall be constructed of 304 stainless steel.
   3. For outdoor air duct applications, use a weatherproof mounting box with weatherproof cover and gasket.

I. Condensate Drain Pan Sensor
   1. Manufacturers:
      a. Kele – SS/SP SS3 with SG1
   2. Condensate overflow switch designed for installation on drain pans. Overflow switch shall have a solid-state electronic probe or magnetic reed switch with all necessary mounting adapters and hardware for drain pan installation. The condensate overflow alarm shall be wired across the normally closed contacts of the condensate switch. Sensor shall include alarm buzzer, flashing LED, and contacts to building automation system.

J. Pressure Transmitters/Transducers:
   1. Manufacturers:
      a. Air Monitor Corporation
      b. BEC Controls Corporation.
      c. General Eastern Instruments.
      d. MAMAC Systems, Incorporated
      e. ROTRONIC Instrument Corporation
2. Static-Pressure Transmitter: Non-directional sensor with suitable range for expected input, and temperature compensated.
   a. Accuracy: 1 percent of full scale with repeatability of 0.5 percent.
   b. Output: 4 to 20 mA.
   c. Building Static-Pressure Range: 0- to 0.50-inch water gage.
      1) Indoor shielded static air probe: 316 stainless steel recessed probe with integral volume chamber capable of sensing room pressure within 1 percent of actual pressure. (Example: Air Monitor Corporation model S.A.P./R)
      2) Outside static air probe: 316 stainless steel round probe with parallel plates capable of sensing pressure within 1 percent of actual pressure. Sensing accuracy unaffected by rain or snow or wind velocities less than 40 MPH. (Example: Air Monitor Corporation model S.O.A.P.)
   d. Duct Static-Pressure Range: 0- to 5-inch water gage.

3. Differential Pressure Transmitters and Accessories
   a. General Air and Water Pressure Transmitter Requirements:
      1) Pressure transmitters shall be constructed to withstand 100% pressure over-range without damage and to hold calibrated accuracy when subject to a momentary 40% over-range input.
      b. Pressure transmitters shall provide the option to transmit a 0-5VDC, 0-10VDC, or 4-20mA output signal.
      c. Locate transmitters in accessible local control panels wherever possible.
      d. Low air pressure, differential pressure transmitters used for room filter monitoring. Shall be equipped with a LED display indicating the transmitter output signal.
      e. Low Air Pressure Applications (0 to 0.5" WC)
         1) The pressure transmitter shall be capable of transmitting a linear electronic signal proportional to the differential of the room and reference static pressure input signals with the following minimum performance specifications.
            (a) Span: Not greater than two times the design space DP.
            (b) Accuracy: Plus or minus 0.5% of F.S.
            (c) Dead Band: Less than 0.3% of output.
            (d) Repeatability: Within 0.2% of output.
            (e) Linearity: Plus or minus 0.2% of span.
            (f) Response: Less than one second for full span input.
            (g) Temperature Stability: Less than 0.01% output shift per degree F. change.
         2) The transmitter shall utilize variable capacitance sensor technology and be immune to shock and vibration.
   e. Acceptable Manufacturers: Veris, Senva, Setra.

K. Combination Air Flow / Temperature Measurement Station (AFMS):
   1. General: Provide thermal dispersion type, EBTRON, Inc. Gold Series or equivalent combination airflow and air temperature measurement devices where indicated on the drawings and/or control sequences. Each measuring device shall consist of multi-point sensor nodes in one or more probe assemblies with a maximum of sixteen sensor nodes per location, and a single remotely mounted 32-bit microprocessor-based transmitter for each measurement location. Airflow/Temperature measuring devices shall be UL Listed as an entire assembly. Devices in UL-labeled enclosures are not equivalent and are not acceptable without a UL Listing for Standard 873.
      a. Design and installation shall use duct or plenum mounted devices to fullest extent possible.
      b. Fan inlet sensors shall not be substituted for duct or plenum sensor probes.
         1) Exception: where conditions otherwise make duct/plenum installation impractical and justifications of exceptions are reviewed with engineer and manufacturer’s authorized representative.
2) Where fan inlet mounting is otherwise unavoidable, mounting styles shall be indicated on the plans as either “face mounting” or “throat mounting.” Face mounting shall provide no mechanical fastening in the throat or on the surface of the inlet cone and shall be used on all performance-sensitive plenum-type or plug fans.

2. Sensor Assembly: Each sensing point shall independently determine the airflow rate and temperature at each node, which shall then be equally weighted in calculations by the transmitter prior to output as the cross-sectional average. No electronic components other than the sensor elements shall be located at the sensing node. Each ducted sensor probe shall have an integral, U.L. Listed, plenum rated cable. Cable jackets and conductor insulation shall be FEP, Teflon-FEP or Neoflon-FEP. Conductor insulation for internal probe wiring shall be Kynar. Devices which average multiple non-linear variables are not acceptable. Pitot arrays are not acceptable. Devices using chip-in-glass, epoxy-coated or diode-case chip thermistors are not acceptable. Vortex-shedding devices are not acceptable.

   a. Each independent airflow sensor shall have a sensor accuracy of +/-2% of Reading over the entire calibrated airflow range of 0 to 5,000 fpm (25.4 m/s) for ducted or plenum mounted probes, or not less than 0 to 10,000 fpm (50.8 m/s) for fan inlet mounted sensors. All sensor nodes shall be wind tunnel calibrated to at least 16 air velocities against standards that are traceable to NIST.

   b. Each independent temperature sensor shall have a calibrated accuracy of +/-0.14° F (0.08° C) over the entire operating temperature range of -20° F to 160° F (-28.9° C to 71° C) and be calibrated at 3 temperatures against standards that are traceable to NIST.

   c. Devices whose accuracy is the combined and independent accuracy of the transmitter and sensor probes must demonstrate that the total accuracy meets the performance requirements of this specification throughout the calibrated range.

3. Transmitter: Each transmitter shall have a display capable of simultaneously displaying both airflow and temperature. Airflow rate shall be field configurable to be displayed as velocity or volumetric rates, selectable as IP or SI units. Each transmitter shall operate on 24 VAC and be fused and protected from over voltage, over current and power surges. All integrated circuitry shall be temperature rated as ‘industrial-grade’.

   a. Each transmitter shall be capable of transmitting individual velocity and temperature measurements for every sensing point in an array for a single location. The traverse data from each independent sensor shall be available as part of the network data packet transmitted via the BACnet protocol.

   b. Each transmitter shall be capable of communicating with other devices using at a minimum the following interface option:

      1) Combined linear airflow and temperature analog output signals and one RS-485 network interface. This shall include: Two field selectable 0-5VDC / 0-10VDC / 4-20mA (4-wire) outputs, fuse protected and electrically isolated from all other circuitry; plus one field selectable network protocol: BACnet-MS/TP or BACnet-ARCNET. BACnet devices shall provide analog variables for airflow and temperature containing individual sensor airflow rate and temperature data.

   c. Transmitter shall include the following features: Enhanced Output Integration, Low Airflow Alarm functions for compliance with LEED Outdoor Air Delivery Monitoring credit and ASHRAE Standard 189.1 and a Field Calibration Wizard to simplify field setup for adjustments when desired.

L. Occupancy Sensor: Passive infrared, with time delay, daylight sensor lockout, sensitivity control, and 180-degree field of view with vertical sensing adjustment; for flush mounting.

M. Current Transformers – Provide current transformers with the following features:

   1. The current transformers shall be designed to be installed or removed without dismantling the primary bus or cables. The transformer shall be of a split core design.

   2. The core and windings shall be completely encased in a UL approved thermoplastic rated 94VA. No metal parts shall be exposed other than the terminals.

N. Current Sensing Switches - Current sensing switch shall be self-powered with solid-state circuitry and a dry contact output. Current sensing switches shall consist of a solid state current sensing circuit, adjustable trip point, solid state switch, SPDT relay and an LED indicating the on or off status. A conductor of the load shall be passed through the window of the device. It shall accept over current up to twice its trip into range. Acceptable Manufacturer: Senva, Veris.

O. Relays - Relays other than those associated with digital output cards shall be general purpose, enclosed plug-in type with status indicator. Number of contacts and operational function shall be as required.

P. Dirty Filter Differential Air Pressure Switch – Provide for a large diaphragm operated, SPDT switch, exposed adjustment, 1% repetitive accuracy. Acceptable Manufacturer: Dwyer, Cleveland; Dwyer A-302 static tips, or equal.

Q. Status Sensors -
1. Status Inputs for Fans: Differential-pressure switch with pilot-duty rating and with adjustable range of 0- to 5-inch water gage.
2. Status Inputs for Pumps: Differential-pressure switch with pilot-duty rating and with adjustable pressure-differential range of 8 to 60 psig, piped across pump.
3. Water-Flow Switches: Bellows-actuated mercury or snap-acting type with pilot-duty rating, stainless-steel or bronze paddle, with appropriate range and differential adjustment, in NEMA 250, Type 1 enclosure.
   a. Manufacturers:
      1) BEC Controls Corporation.
      2) T.M. Instruments Incorporated
      3) Or Approved Equal
4. Status Inputs for Electric Motors: Comply with ISA 50.00.01, current-sensing fixed- or split-core transformers with self-powered transmitter, adjustable and suitable for 175 percent of rated motor current.
5. Voltage Transmitter (100- to 600-V ac): Comply with ISA 50.00.01, single-loop, self-powered transmitter, adjustable, with suitable range and 1 percent full-scale accuracy.

R. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80 percent of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.
2. Combined 1 percent line and load regulation with 100-mic.second response time for 50 percent load changes.
3. Built-in over-voltage and overcurrent protection and be able to withstand 150 percent overload for at least 3 seconds without failure.

S. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:
1. Minimum dielectric strength of 1000 V.
3. Minimum transverse-mode noise attenuation of 65 dB.
4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

T. Power Monitor: 3-phase type with disconnect/shorting switch assembly, listed voltage and current transformers, with pulse kilowatt hour output and 4- to 20-mA kW output, with maximum 2 percent error at 1.0 power factor and 2.5 percent error at 0.5 power factor.

U. All temperature transmitters, flow transmitters and pressure differential transmitters shall have a digital indication of the sensed variable.

2.20 PNEUMATIC SENSORS

A. Digital-to-Pneumatic Transducers: Convert plus or minus 12-V dc pulse-width-modulation outputs, or continuous proportional current or voltage to zero to 20 psig.
1. Manufacturers:
   a. BEC Controls Corporation.
   b. MAMAC Systems, Incorporated

B. Pneumatic Valve/Damper Position Indicator: Potentiometer mounted in enclosure with adjustable crank-arm assembly connected to damper to transmit 0 to 100 percent valve/damper travel.

2.21 AIR FLOW MEASURING STATIONS (AFMS)

A. Pitot Style Fan Inlet Airflow Station: Multi-port traverse probe, self-averaging Pitot tube station measuring total and static pressure.
   1. Manufacturers:
      a. Air Monitor Corporation.
   2. Sensing Manifold: Copper or anodized aluminum manifold with bullet-nosed total and static pressure sensors positioned on equal area basis.
   3. Accuracy: 3-percent of actual air flow.

B. Duct Airflow Station: Combination of air straightener and multi-port, self-averaging Pitot tube station.
   1. Manufacturers:
      a. Air Monitor Corporation.
      b. Dwyer Instruments, Incorporated.
      c. Wetmaster Company, Ltd.
   4. Sensing Manifold: Copper or anodized aluminum manifold with total and static pressure sensors positioned on equal area basis.
   5. Accuracy: 2-percent of actual air flow.
   6. Velocity Range: 100 to 10,000 fpm.

C. Thermal Dispersion Fan Inlet Airflow Station: Thermal dispersion type station measuring temperature and air flow.
   1. Manufacturers:
      a. Ebtron model GTx116-B
      b. Ruskin
      c. Air Monitor Corporation
   2. Sensing Manifold: Multi-point "bead- in-glass", hermetically sealed thermistor sensors mounted on adjustable length, cadmium plated rods with type 304 stainless steel feet and sensor block.
      a. Provide transmitter that will average up to four sensors and provide two field selectable linear analog output signals (4-20mA and 0-10 VDC) proportional to airflow and temperature. Sensor electronic circuitry other than the temperature sensors shall not be exposed to the air stream and shall be protected from moisture to prevent failure.
   3. Sensor Probe Configuration: 2x1 for single inlet fans or 4x1 for dual inlet fans. Independently wired sensors.
   5. Airflow Sensor Accuracy: ±2% of reading
   6. Calibrated Range: 0-10000 FPM
   7. Temperature Sensor Accuracy: ±0.15°F
   8. Temperature: -20°F to +160°F
   9. Relative Humidity: 0 to 99% (non-condensing)

D. Duct Airflow Station: Thermal dispersion type station measuring temperature and air flow.
   1. Manufacturers:
      a. Ebtron.
      b. Model GTx116-P
      c. Air Monitor Corporation
      d. Or Approved Equal
2. Sensing Manifold: Multi-point “bead in glass” hermetically sealed thermistor sensors mounted in anodized 6061 aluminum alloy tubes with type 304 stainless steel mounting brackets.
   a. Provide transmitter that will average up to sixteen sensors and provide two field selectable linear analog output signals (4-20mA and 0-10 VDC) proportional to airflow and temperature. Sensor electronic circuitry other than the temperature sensors shall not be exposed to the air stream and shall be protected from moisture to prevent failure.

3. Sensor probe configuration: 2x8 or 4x4 independently wired sensors.

5. Airflow Sensor Accuracy: ±2% of reading

6. Calibrated Range: 0-5000 FPM

7. Temperature Sensor Accuracy: ±0.15°F

8. Temperature: -20°F to +140°F

9. Relative Humidity: 0 to 95% (non-condensing)

10. Duct mounted Probe Sensor Density:
    a. Area (sq. ft.)  Sensors
    b. <= 1.5  2
    c. >1.5 to <4  4
    d. 4 to <8  6
    e. 8 to <12  8
    f. 12 to <16  12
    g. >=16  15

E. Round Duct Airflow Station: Thermal dispersion type station measuring temperature and air flow.

1. Manufacturers:
   a. Ebtron
   b. Air Monitor Corporation
   c. Or Approved Equal

2. Model ELF/N RS-485
   a. Sensing Manifold: Multi-point “bead in glass” hermetically sealed thermistor sensors mounted in anodized 6063 aluminum alloy tubes with integral transmitter enclosure and type 5052 aluminum alloy mounting bracket.
   b. Transmitter will average two sensors and provide two field selectable linear analog output signals (4-20mA and 0-10 VDC) proportional to airflow and temperature. Sensor electronic circuitry other than the temperature sensors shall not be exposed to the air stream and shall be protected from moisture to prevent failure.
   c. Transmitter to include DIP-switch accessible on side of enclosure for field set up and selection of RS-485 BACnet MS/TP or Modbus communication interface with building automation system.

3. 3 ft. probe/transmitter cable length.

4. Sensor probe configuration: 1x2 independently wired sensors.

5. Sensor Distribution: Equal area.

6. Airflow Sensor Accuracy: ±2% of reading

7. Calibrated Range: 0-3000 FPM

8. Temperature Sensor Accuracy: ±0.15°F

9. Temperature: -20°F to +140°F

10. Relative Humidity: 0 to 99% (non-condensing)

11. Round Duct Size Limits: minimum 4 in. dia. to maximum 16 in. dia.

F. Integral airflow monitoring dampers

   a. Manufacturers: Subject to compliance with requirements, provide control damper products by one of the listed manufacturers:
      1) Ruskin Manufacturing Company
      2) Air Monitor Corporation
      3) Or Approved Equal

   b. Construction:
1) Frames: Extruded aluminum hat channels, 0.125-in. minimum thickness with mounting flanges on both sides of the frame.
2) Blades: Airfoil shaped extruded aluminum. Anodized monitoring blades are fixed within the damper frame and contain air pressure sensing ports.
3) Hardware: Molded synthetic bearings. Zinc plated steel axles, linkage brackets, connecting rods, and mounting bolts.
4) Seals: Flexible metal compression seals on the frame at blade end; extruded vinyl inflatable blade edge seals.

c. Leakage: Not more than 2 CFM per square foot damper area at differential pressure of 1-inch w.g. with applied torque at damper of 50 inch-pounds.
d. Operating Temperature: -22°F to 140°F.
e. Monitoring Velocity Range: 300 FPM to 2000 FPM.
f. Pressure: 2 inches w.g. maximum differential.
g. Pressure Drop: 0.13-inches w.g. at 1000 fpm.
h. Digital Controller: Application specific controller. Programming and logic in a nonvolatile EPROM.
i. Air Straightener Section: 5-inches long sleeve attached to the damper frame.
j. Damper sizes will be provided as indicated on the drawings. Damper sizes may be provided differently from those shown on the drawings, if improved performance can be demonstrated with calculations.

2.22 VALVES AND ACTUATORS

A. Hardware Warranty - Ball Valves, Ball Valve Actuators and Electronic Valve Actuators for Butterfly Valves shall be covered by a 4 year product warranty from the date of substantial project completion. Industrial-type Electronic Valve Actuators and Butterfly Valves shall be covered by a 36 month product warranty from date of substantial project completion.

B. Labor Warranty - All labor to replace failed Valves and Actuators shall be provided during the first 12 months of the warranty starting from the date of project completion.

C. Approved manufacturers:
   1. Belimo
   2. Siemens
   3. Honeywell

D. Electronic Air Damper Actuators:
   1. Electronic actuators shall be UL listed under standard 873, CUL, and have a CE certification. Electronic actuators shall be produced in accordance to ISO 9002 quality certification standards in a certified production facility.
   2. Electronic air damper actuators shall be capable of coupling directly to the damper shaft. Standard actuator mounting clamp shall be operated with a single fastener, and shall center the damper shaft in the actuator spline (hollow-shaft), with toothed edges gripping four sides of the shaft. Clamps that do not center the shaft, and as such require concentric motion for operation, are not acceptable. Universal U-shaped bolts, single point, or set screw type fastening techniques are not acceptable. Adaptors form fit to the damper shaft are acceptable.
   3. All electronic actuators shall include a manual positioning feature to allow for the full rotation of the actuator, in each direction with or without electrical power applied.
   4. All actuators shall be designed, developed, life cycle tested and manufactured with a high performance, brushless DC motor to offer a constant running time, independent of torque load and offer maximum product reliability and life expectancy. DC motors with brushes are not acceptable.
   5. Actuators shall be fully modulating / proportional and accept both 2…10 VDC and 0…10 VDC control inputs (as well as 4…20 mA using a load resistor) factory set or field selectable, floating/tri-state, two-position/on-off control. Actuators shall have visual position indicators for both standard mount and short-shaft mounting requirements.
6. All proportional actuators shall include a direct and reverse acting switch, to allow for easy adjustment of control direction of rotation. This switch must be concealed to protect it from damage and to avoid incorrect adjustment.

7. Actuators shall have an operating temperature range of -22 deg. F to 122 deg. F.

8. Actuators shall have internal electronic overload protection to protect the actuator from damage throughout its operating range. End switches to deactivate the actuator at the end of its rotation are not acceptable.

9. For power-failure/safety applications, an internal spring-return mechanism shall be built into the actuator housing. Spring-return actuators shall be capable of both CW and CCW mounting orientation. Electronic energy storage fail-safe systems incorporating high energy capacitors are an acceptable alternative to mechanical spring return mechanisms. These fail-safe systems shall provide sufficient energy to operate the actuator under full torque load. They shall include thermal compensation to the charging system of the Gold Cap capacitors, and incorporate the capacitor in the actuator control electronics to ensure long-term and consistent maintenance of voltage stored via the capacitor. During a loss of power, the electronic fail-safe systems shall mechanically lock the damper via its gear train into the desired fail-safe position.

10. For spring return proportional actuators using a 2-10 VDC control signal, the actuator shall fail open or closed based on receiving a minimum control signal of 1 VDC or less. Upon loss of power, a non-spring-return actuator shall maintain the last control position.

11. All proportional, electronic air damper and valve actuators shall be field switch adjustable for 0…10 VDC, 2…10 VDC (or 4…20 mA using a load resistor) control input.

E. Electronic Ball Valve Actuators

1. Electronic actuators shall be UL listed under standard 873, CUL, and have a CE certification.

2. Electronic valve actuators shall be capable of coupling directly to the valve stem, shaft or ISO mounting pad. Valve body and actuator shall be pre-assembled by the manufacturer to ensure adequate torque to operate and close the valve, and to provide accurate control direction and fail-safe direction assembly according to project specifications.

3. Control valve actuator shall provide minimum torque required for full valve shutoff position.

4. All electronic actuators shall include a manual positioning feature to allow for the full rotation of the actuator, in each direction with or without electrical power applied.

5. All actuators shall be designed, developed, life cycle tested and manufactured with a high performance, brushless DC motor to offer a constant running time, independent of torque load and offer maximum product reliability and life expectancy. DC motors with brushes are not acceptable.

6. All proportional actuators shall include a direct and reverse acting switch, to allow for easy adjustment of control direction of rotation. This switch must be concealed to protect it from damage and to avoid incorrect adjustment.

7. Actuators shall have an operating temperature range of -22 deg. F to 122 deg. F.

8. Actuators shall have internal electronic overload protection to protect the actuator from damage throughout its operating range. End switches to deactivate the actuator at the end of its rotation are not acceptable.

9. For power-failure/safety applications, an internal spring-return mechanism shall be built into the actuator housing. Spring-return actuators shall be capable of both CW and CCW mounting orientation. Electronic energy storage fail-safe systems incorporating high energy capacitors are an acceptable alternative to mechanical spring return mechanisms. These fail-safe systems shall provide sufficient energy to operate the actuator under full torque load. They shall include thermal compensation to the charging system of the Gold Cap capacitors, and incorporate the capacitor in the actuator control electronics to ensure long-term and consistent maintenance of voltage stored via the capacitor. During a loss of power, the electronic fail-safe systems shall mechanically lock the damper via its gear train into the desired fail-safe position.

10. For proportional actuators using a 2-10 VDC control signal, the actuator shall fail open or closed based on receiving a minimum control signal of 1 VDC or less. Upon loss of power, a non-spring-return actuator shall maintain the last control position.
11. All proportional, electronic air damper and valve actuators shall be field switch adjustable for 0…10 VDC, 2…10 VDC (or 4…20 mA using a load resistor) control input. Position feedback, running time and the programming of the micro-processor shall be factory set to avoid the introduction of electronic noise or interference with the BAS controller or other equipment. Field programming or changing of the factory set programming of the actuators is not acceptable. Actuators shall have visual position indicators for both standard mount and short-shaft mounting requirements.

F. Pneumatic Valve Operators: Rolling-diaphragm, spring-loaded, piston type with spring range as required and start-point adjustment and positioning relay for air handling unit coil valves only. Operator shall maintain full shutoff at maximum pump differential pressure.

G. Control Valves
   1. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.
   2. All control valves, including but not limited to, those provided as part of other equipment systems specified in other specification sections shall also meet all the requirements of this specification section.
   3. Pressure Independent Characterized Ball Control Valves - PICCV:
      a. The modulating control valves shall be pressure independent.
      b. The control valves shall accurately control the flow from 0 to 100% full rated flow with an equal percentage flow characteristic. The flow shall not vary more than +/- 5% due to system pressure fluctuations across the valve with a minimum of 5 PSID and maximum of 50 PSID across the valve.
      c. Provide means for pressure differential measurement either across orifice or valve to be used for flow verification.
      d. Forged or cast (for larger sizes) brass body nickel plated rated at no less than 400 PSI, chrome plated brass ball and stem, female NPT union ends, dual EPDM lubricated O-rings and TEFZEL characterizing disc.
      e. Combination of actuator and valve shall provide a minimum close-off pressure rating of 200 PSI.
      f. The control valve shall require no maintenance and shall not include replaceable cartridges.
      g. All actuators shall be electronically programmed by use of a handheld programming device or external computer software. Programming using actuator mounted switches or multi-turn actuators are NOT acceptable. Actuators for two-position ½"-1” pressure independent control valves shall fail in place and have a mechanical device inserted between the valve and the actuator for the adjustment of flow.
      h. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory via a single screw on a four-way DIN mounting-base.
      i. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
      j. The use of pressure independent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is NOT acceptable.
   4. Pressure Dependent Characterized Ball Control Valves – CCV (1/2" - 2"):
      a. The modulating control valves shall be pressure dependent.
      b. The control valves shall accurately control the flow from 0 to 100% full rated flow with an equal percentage flow characteristic.
      c. Forged brass body, nickel plated rated at no less than 400 PSI and 250 F, stainless steel ball and stem, female NPT union ends, Teflon PTFE seats, and EDPM seat O-rings, dual EPDM lubricated O-rings at stem and TEFZEL or stainless steel characterizing disc.
      d. Combination of actuator and valve shall provide a minimum close-off pressure rating of 200 PSI and 50 PSI differential.
      e. The control valve shall require no maintenance and shall not include replaceable cartridges.
f. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory via a single screw on a four-way DIN mounting-base.
g. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
h. The use of multiple pressure dependent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is NOT acceptable.

5. Pressure Dependent Characterized Ball Control Valves – CCV (2-1/2” - 3”):
   a. The modulating control valves shall be pressure dependent.
   b. The control valves shall accurately control the flow from 0 to 100% full rated flow with an equal percentage flow characteristic.
   c. Cast iron body, rated at no less than 175 PSI and 250 F, stainless steel ball and stem, female NPT union ends, Teflon PTFE seats, and EDPM seat 0-rings, dual EPDM lubricated O-rings at stem and stainless steel characterizing disc.
   d. Combination of actuator and valve shall provide a minimum close-off pressure rating of 100 PSI and 50 PSI differential.
   e. The control valve shall require no maintenance and shall not include replaceable cartridges.
   f. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory via a single screw on a four-way DIN mounting-base.
   g. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
   h. The use of multiple pressure dependent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is NOT acceptable.

6. Pressure Dependent Butterfly Ball Control Valves:
   a. The on/off control valves shall be pressure dependent.
   b. Ductile iron body, ANSI 125 class rated at 250 F, stainless steel disc and shaft, EDPM seats and 0-rings,
   c. Combination of actuator and valve shall provide a minimum close-off pressure rating of 200 PSI.
   d. The control valve shall require no maintenance and shall not include replaceable cartridges.
   e. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory via a single screw on a four-way DIN mounting-base.
   f. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
   g. The use of multiple pressure dependent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is NOT acceptable.

7. High Performance Segmented V-Ball Control Valves:
   a. Construction: Carbon steel body, hardened stainless steel V-notch ball and shaft, low friction bearings and a TFM 1700 ball seat. Seats and stem packing shall be field replaceable. Control valves shall be rated ANSI Class VI leakage rate, -20 F to 400 F temperature range and maximum 250 PSI allowable shutoff pressure.
   b. Valves shall be applicable for HVAC temperature control with water, steam and percentage glycol water mixes. Segmented V-notch ball valves shall have 90 degree rotation, minimum 200:1 range-ability (turn-down), with equal percentage control characteristic.
   c. Valve sizes and connections:
      1) Face to Face Dimension: ASME B16.10
      2) 1”, 1-1/2” & 2” shall be ANSI Class 150/300 multi-rated and have Universal End Connections for use with MPT or ANSI Class 150/300 wafer connections.
3) 2-1/2” and greater shall have ANSI Class 150 or 300 flanges as required by application.

d. Select valve Cv for acceptable range of control authority with least pressure drop for each application.

e. Operators shall close valves against pump shutoff head.

f. Acceptable Manufacturers:
   1) Belimo, VB V Ball series
   2) DeZurik, VPB
   3) Fisher, Vee-Ball
   4) Flow-Tek, V-Control
   5) KTM, Single V Control Ball
   6) Valve Solutions, Series V

2.23 DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide control damper products by one of the listed manufacturers:
   1. Arrow United Industries
   2. Belimo Aircontrols (USA), Incorporated
   3. Cesco Products
   5. Johnson Controls, Incorporated; Controls Group.
   6. Ruskin Manufacturing Company
   7. Siemens Building Technologies
   8. T.A.C, a division of Schneider Electric

B. Construction:
   1. Frames: Extruded aluminum hat channels, 0.125-in. minimum thickness.
   2. Blades: Extruded aluminum airfoil type, 6-inch maximum blade width.
   5. Leakage: Dampers shall be AMCA rated for Leakage Class 1A at 1 in w.g. (0.25 kPa) static pressure differential and not more than 8 cfm per sq. ft. of damper area, at differential pressure of 4-inch wg when damper is held by torque of 50 in. x lbf. Standard air leakage data to be certified under the AMCA Certified Ratings Program.

C. Operating Limits:
   1. Temperature: -20 to 200 degrees F.
   2. Pressure: 6 inches w.g. differential.
   3. Velocity: Up to 4000 FM.

D. Select Parallel blade dampers for proportional service. Opposed blade dampers shall be used for two-position service.
   1. Where outdoor air streams and return air streams are mixed, utilize parallel blade dampers with dampers positioned to promote mixing of airflow streams.

E. Damper sizes will be provided as indicated on the drawings. Damper sizes may be provided differently from those shown on the drawings, if improved performance can be demonstrated with calculations.

2.24 ENCLOSURES AND WEATHER SHIELDS

A. Enclosures shall meet the following minimum requirements:
   1. Outdoors: Enclosures located outdoors shall meet NEMA 250 Type 4 requirements.
   2. Mechanical and Electrical Rooms: Enclosures shall meet NEMA 250 Type 12 requirements.
   3. All Other Locations: Enclosures shall meet NEMA 250 Type 1 requirements.
4. All panels shall be self-supporting enclosures with keyed lock.  
5. Each panel shall be UL/ETL listed and stamped.

B. Weather shields shall meet the following minimum requirements:
1. They shall prevent the sun from directly striking the sensor.
2. They shall provide sufficient ventilation so that the sensing element measures the ambient conditions of the surroundings.
3. They shall prevent rain from directly striking or dripping onto the sensor.
4. When installed near outside air intake ducts, they shall be installed such that normal outside air flow does not cause rainwater to strike the sensor.
5. They shall be unpainted aluminum or they shall be white galvanized steel aluminum or PVC.

2.25 **BACNET/IP TO MS/TP ROUTER**
1. Provide network gateway to translate between BACnet/IP to MS/TP protocol.
2. Provides Routing Between:
   a. BACnet/IP and BACnet MS/TP
   b. BACnet Ethernet and BACnet MS/TP
   c. BACnet/IP and BACnet Ethernet
   d. BACnet/IP and BACnet Ethernet and BACnet MS/TP
   e. Two BACnet/IP networks
3. Communications
   a. 10/100 Mbps Ethernet with auto-negotiation and Auto-MDIX
   b. Optically isolated MS/TP port
   c. MS/TP baud rates range from 9.6-76.8 kbps
   d. Jumper-selectable MS/TP bias and termination
4. IP Network Support
   a. Web server for commissioning and troubleshooting
   b. Communication diagnostic web page
   c. BACnet/IP Broadcast Management Device (BBMD)
   d. Foreign Device Registration (FDR)
5. Installation
   a. 24 VAC/VDC (± 10%), 47-63 Hz input voltage
   b. Din-rail mounted
6. Manufacturer: Contemporary Controls used as basis of design manufacturer.

2.26 **DOMESTIC WATER METERS**
A. Manufacturers: Subject to compliance with requirements, provide control system component products by one of the listed manufacturers:
   1. Badger Water.
B. Output: Flow meters will provide an analog electronic output signal compatible with the building automation system.
C. Accuracy: 2 percent of flow rate from 0.4 to 20 feet per second.

2.27 **CONTROL CABLE**
A. Electronic and fiber-optic cables for control wiring are specified in Division 27 Section "Communications Horizontal Cabling."

2.28 **WIRE, CABLE, AND TRANSFORMERS**
A. Refer to Division 26 for conduits and conductors, except as noted.
B. Wire and cable shall meet the requirements of NFPA 70 and NFPA 90A.
C. Terminal blocks, which are not integral to other equipment, shall be insulated, modular, feed trough, clamp style with recessed captive screw-type clamping mechanism, shall be suitable for rail mounting, and shall have end plates and partition plates for separation or enclosed sides.

D. Control wiring for binary sensors shall be 18 AWG copper and shall be rated for 300-volt service.

E. Wiring for 120-volt circuits shall be 18 AWG or thicker stranded copper and shall be rated for 600-volt service.

F. Control wiring for analog signals shall be 18 AWG, copper, single or multiple strand, twisted (minimum 50 mm lay of twist), 100% shielded pairs and shall have 300 volt insulation. Each pair shall have a 20 AWG tinned-copper drain wire and individual overall pair insulation.

G. IP Network cable shall meet or exceed Category 5 cable as specified in ANSI/TIA/EIA 568-A.

H. Transformers shall be UL 1585 approved and shall be sized so that the connected load is no greater than 80% of the transformer rated capacity.

I. Electronic and fiber-optic cables for control wiring are specified in Division 27 Section "Communications Horizontal Cabling."

2.29 OTHER EQUIPMENT REQUIREMENTS

A. Building level controllers and unit level controllers monitoring and/or transmitting fire alarm points shall have UL 864 UOJZ listing with Underwriters Laboratories. The controls contractor shall provide a copy of the UL certificate for their controllers.

B. Controllers used for smoke control shall be UL 864 UUKL listed.

C. If the DDC system is controlling a piece of equipment that is on emergency power, the DDC panel shall be connected to the same source of emergency power.

D. DDC primary LAN controllers, PCs and communication equipment that monitor life safety and critical points (such as fire alarm and elevator emergency) shall be connected to emergency power and have an online four-hour uninterruptible power supply (UPS) with full-load rectification and inversion (double conversion).

2.30 HVAC CONTROL HARDWARE IDENTIFICATION

A. Automatic Control Valve Tags: Include
   1. Lubrication instructions.
   2. Identifying number and system.

B. Wire Tags: All multi-conductor cables in all pull boxes and terminal strip cabinets shall be tagged.

C. Conduit Tags: Provide tagging or labeling of all conduits so that it is readily observable which conduit was installed or used in implementation of this work.

D. Panels and Control Devices
   1. Control Panels (Enclosures) shall be labeled.
   2. All sensors, controllers, and controlled devices shall also be labeled. (Exclude space temperature sensors)
   3. Where physical space permits, the labels shall be made of black laminoid sheet with white lettering. They shall be affixed to the panel or device by screws if possible or glue if screws are not feasible. If physical space does not permit the use of labels with readable text, tags shall be used.
   4. Identification on the labels and tags will match the identification indicated on the as-built documents.

E. Flush-mounted sensors shall be provided with label indicating function. Label shall be reviewed and coordinated with architecture for final appearance.
F. Refer to Division 23 Section Identification for HVAC Piping and Equipment for identification materials and additional requirements.

G. All identification shall be reviewed and approved with University prior to installation.

2.31 COMPRESSED AIR SUPPLY

A. Controls contractor shall provide performance based design of pneumatic air compressor (PAC-1) and associated compressed air supply piping to serve new air handling unit pneumatic actuators.

B. Manufacturers
   1. Champion
   2. Drainview Products.
   3. Pneu-line Controls.

C. Control and Instrumentation Tubing: Copper tubing complying with ASTM B 88, Type K or ASTM B 280 Type ACR.
   1. Fittings: Cast-bronze solder fittings complying with ASME B16.18; or wrought-copper solder fittings complying with ASME B16.22, except forged-brass compression-type fittings at connections to equipment.
   2. Joining Method: Soldered or brazed.

D. Tank: ASME storage tank with drain test cock, automatic moisture removal trap, tank relief valve, and rubber-cork vibration isolation mounting pads.

E. Duplex Air Compressor: Capacity to supply compressed air to temperature-control system.
   1. Pressure control with adjustable electric contacts, set to start and stop both compressors at different pressures.
   2. Electrical alternation set with motor starters and disconnect to operate compressors alternately or on time schedule.

F. Compressor Type: Reciprocating.

G. Size compressor and tank to operate compressor not more than 20 minutes during a 60-minute period.

H. Compressor Accessories: Low-resistance intake-air filter, and belt guards.

I. System Accessories: Air filter rated for 97 percent efficiency at rated airflow, and combination filter/pressure-reducing station or separate filter and pressure-reducing station.

J. Refrigerated Air Dryer: Self-contained, refrigerated air dryer complete with heat exchangers, moisture separator, internal wiring and piping, and with manual bypass valve.
   2. Refrigeration Unit: Hermetically sealed, operating to maintain dew point of 13 deg F at 20 psig, housed in steel cabinet with access door and panel.
   3. Accessories: Air-inlet temperature gage, air-inlet pressure gage, on-off switch, high-temperature light, power-on light, refrigerant gage on back, air-outlet temperature gage, air-outlet pressure gage, and with contacts for remote indication of power status and high-temperature alarm.

K. Pressure Gages: Black letters on white background, 2-1/2-inches in diameter, flush or surface mounting, with front calibration screw to match sensor, and having a graduated scale in psig.

L. Instrument Pressure Gages: Black letters on white background, 1-1/2 inches in diameter, stem mounted, with suitable dial range.

M. Diaphragm Control and Instrument Valves: 1/4-inch forged-brass body with reinforced polytetrafluoroethylene diaphragm, stainless-steel spring, and color-coded phenolic handle.
N. Gage Cocks: Tee or level handle, bronze, rated for 125 psig.

O. Relays: For summing, reversing, and amplifying highest or lowest pressure selection; with adjustable I/O ratio.

P. Switches: With indicating plates and accessible adjustment; calibrated and marked.

Q. Pressure Regulators: Zinc or aluminum castings with elastomeric diaphragm, balanced construction to automatically prevent pressure buildup, and producing flat reduced-pressure curve.

R. Particle Filters: Zinc or aluminum castings with 97 percent filtration efficiency at rated airflow, quick-disconnect service devices, and aluminum or plastic bowl with metal guard and manual drain cock.

S. Combination Filter/Regulators: Zinc or aluminum castings with elastomeric diaphragm, balanced construction to automatically prevent pressure buildup, and producing flat reduced-pressure curve; with threaded pipe connections, quick-disconnect service devices, and aluminum or plastic bowl with metal guard and manual drain cock.

T. Airborne Oil Filter: Filtration efficiency of 99.9 percent for airborne lubricating oil particles of 0.025 micron or larger.

U. Pressure Relief Valves: ASME rated and labeled.
   1. High Pressure: Size for installed capacity.
   2. Low Pressure: Size for installed capacity of pressure regulators and set at 20 percent above low pressure.

V. Pressure-Reducing Stations: Two parallel pressure regulators.

**PART 3 EXECUTION**

3.1 EXAMINATION

A. Verify that conditioned emergency power supply is available to control units and operator workstation.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Install all control components in accordance with manufacturer's instructions and recommendations:
   1. Mount control panels adjacent to associated equipment on vibration-free walls or freestanding angle iron supports. One cabinet may accommodate more than one system in same equipment room. Provide nameplates for instruments and controls inside cabinet and nameplates on cabinet face.
   2. Install equipment, piping, wiring/conduit parallel to building lines (i.e., horizontal, vertical, and parallel to walls) wherever possible.
   3. Provide sufficient slack and flexible connections to allow for vibration of piping and equipment.
   4. Verify integrity of all wiring to ensure continuity and freedom from shorts and grounds.
   5. All equipment, installation, and wiring shall comply with acceptable industry specifications and standards for performance, reliability, and compatibility and be executed in strict adherence to local codes and standard practices.

B. Graphical User Interface PC Location

   1. Install Graphical User Interface desktop/laptop computer in the building managers office. Do not deliver the Graphical User Interface PC to the job site until a proper location has been prepared. Location shall be clean and dry, free from construction dust and debris.
   2. Location shall have a dedicated work surface (table or desk with chair). Work surface shall be provided by Owner or General Contractor for use by this Contractor.
3. Location shall have ample storage provisions for documentation and manuals, either shelving or a four drawer upright filing cabinet. Storage provisions shall be provided by Owner or General Contractor for use by this Contractor.

4. Location shall have a dedicated locked electrical circuit for use by this Contractor.

C. Ethernet Network Connection

1. All devices that require a connection to the LAN or access to an ISP shall be approved by the Owners Information Technology representative prior to installation.

2. All Ethernet communication connections shall be provided by the Owner.

3. COORDINATION

A. Site:

1. The contractor shall assist in coordinating space conditions to accommodate the work of each trade where work will be installed near or will possibly interfere with work of other trades. If installation with coordination causes interference with work of other trades, the contractor shall correct conditions without extra charge.
   a. Coordinate and schedule work with work in the same area and with work that is dependent upon other work to facilitate mutual progress.

B. Submittals: See Part 1.

C. Test and Balance

1. The contractor shall provide the Test and Balance Contractor a single set of necessary tools to interface with the control system for testing and balancing.

2. The contractor shall provide a minimum of 8 hours of training on the use of the interface tools.

3. The contractor shall provide a qualified technician to assist with the testing and balancing of one system controlled by a programmable controller and the first twenty terminal units.

4. The Test and Balance contractor is obligated to return the interface tools undamaged and in working condition at completion of the testing and balancing.

D. Network

1. The contractor shall allocate space in each Building Controller control panel for the installation of a network switch. The size of the network switch shall be selected such that a minimum of one spare port is available at each control panel at the completion of the project.

E. Life Safety

1. Duct smoke detectors required for air handler shutdown are provided under Division 28. The contractor shall interlock the smoke detectors to the air handlers for shutdown.

2. Smoke dampers and actuators required for duct smoke isolation are provided under Division 23. The contractor shall interlock the smoke dampers to the air handlers as required by the sequence of control.

F. Coordination with other controls specified in other sections or divisions: Other sections and/or division of this specification include controls and control devices that are to be part of or interfaced to the control system specified in this section. The contractor shall coordinate his integration of these devices as follows.

1. Each supplier of a controls product is responsible for the configuration, programming, start-up and testing of that product to meet the sequence of control.

2. The contractor shall coordinate and resolve any incompatibility issues that arise between the control products provided under this section and those provided under other sections or divisions of this specification.

3. The contractor is responsible for providing all controls described in the Contract Documents regardless of where within the Contract Documents these controls are described.

4. The contractor is responsible for the interface of control products provided by multiple suppliers regardless of where this interface is described within the Contract Documents.

G. Site Meetings
1. The project manager shall attend a weekly site coordination meeting that will be attended by all of the contractors involved in the project.
2. The contractor shall allocate at least 2 hours for this meeting.

3.4 INSTALLATION

A. Temperature control panels and enclosures in equipment rooms will be located at readily accessible walkup locations approved by the owner.
B. Install equipment level and plumb. Conduits and raceways shall be parallel to walls and structural elements.
C. Install equipment in readily accessible locations as defined by Chapter 1, Article 100, and Part A of the Nations Electrical Code (NEC).
D. Install software in control units and operator workstations. Implement all features of programs to specified requirements and as appropriate to sequence of operation.
E. Connect and configure equipment and software to achieve sequence of operation specified.
F. Mount compressor and tank unit on restrained spring isolators with 1-inch static deflection. Isolate air supply with wire-braid-reinforced rubber hose. Secure and anchor according to manufacturer's written instructions and seismic-control requirements.
   1. Pipe manual and automatic drains to nearest floor drain.
   2. Supply instrument air from compressor units through filter, pressure-reducing valve, and pressure relief valve, with pressure gages and shutoff and bypass valves.
G. Verify location of temperature sensors, humidity sensors, thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation.
   1. Where wall mounted sensors are mounted adjacent to light switches or occupancy sensors, install sensors to match the mounting height of the lighting control devices.
   2. Where wall mounted sensors are NOT mounted adjacent to lighting control devices, mount at same mounting height as lighting control devices.
   3. Where CO2 sensors and Humidity sensors are located with temperature sensors, it is acceptable to mount CO2 sensors and humidity sensors directly above temperature sensor and centered, with each device a few inches above the one below. Confirm arrangement before installation.
   4. Install averaging elements in ducts and plenums in crossing or zigzag pattern.
H. Install low limit (freeze protection) thermostats on the upstream face of cooling coils in a crossing or zigzag pattern to provide freeze protection for each square foot of coil surface.
I. Provide a dedicated “unitary controller” for each air handling unit. The controller shall be mounted on the air handling unit or as indicated on the drawings.
J. Install a minimum of one “unitary controller” in each mechanical equipment room.
K. Connect manual reset limit controls, such as low limit thermostats, and high limit pressure controls, directly (hard-wired) to motor-starters (or variable speed drives). Connect limit controls to stop the fans or pumps in both the “Hand” and the “Auto” selector switch positions.
L. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.
M. Install labels and nameplates to identify control components according to Division 23 Section "Identification for HVAC Piping and Equipment."
N. Install fan inlet air flow measuring stations according to the manufacturer's instructions.
O. Install duct mounted air flow measuring stations according to the manufacturer's instructions. Comply with manufactures mounting requirements to achieve specified instrument accuracy.
P. Install outside air static pressure probe according to the manufactures instructions.
Q. Connect end switches on smoke and combination fire/smoke dampers to BAS.
R. Install low voltage cabling according to Division 27 Section "Communications Horizontal Cabling."

3.5 ACTUATORS
A. Mount control damper actuators according to manufacturer's instructions.
B. When spring return actuators are used on normally closed dampers, the seals shall be compressed when the dampers have been closed by the actuator.
C. Damper/actuator combinations shall modulate smoothly from fully closed to fully open and return.
D. Actuator Selection
   1. Actuators for air handling unit coils shall be pneumatically driven with digital controls.
   2. Size damper actuators to operate the related control damper(s) with sufficient reserve power to provide smooth modulating action or two-position action.
   3. Actuators shall also be sized for proper speed of response at the velocity and pressure conditions to which the control damper is subject.
   4. Shall produce sufficient torque to close off against the maximum system pressures encountered.
   5. Shall produce sufficient torque to close off against the fan shutoff pressure as a minimum.
   6. The total damper area operated by an actuator shall not exceed 80% of the manufacturer's maximum area rating. Provide at least one actuator for each damper section. Each damper actuator shall not power more than 20 square feet of damper area.
   7. Use line shafting or shaft couplings (jack shafting) in lieu of blade-to-blade linkages or shaft coupling when driving axially aligned damper sections.

3.6 PNEUMATIC PIPING INSTALLATION
A. Provide hard-drawn copper tubing with soldered or brazed joints and tool-made bends.
B. Install piping in mechanical equipment rooms inside mechanical equipment enclosures, in pipe chases, or suspended ceilings with easy access.
   1. Install copper tubing with maximum unsupported length of 36 inches, for tubing exposed to view.
   2. Install polyethylene tubing in metallic raceways or electrical metallic tubing. Electrical metallic tubing materials and installation requirements are specified in Division 16.
C. Piping Exposed to view or Inaccessible: Provide hard-drawn copper tubing with soldered or brazed joints and tool-made bends. Or run polyethylene tubing within rigid enclosures, such as metallic raceways, EMT, or pipe where exposed to view. Or where subject to physical damage such as in mechanical equipment rooms.
D. Piping Accessible and Concealed: Provide copper or polyethylene tubing where accessible and concealed, such as within instrument panels or above suspended ceilings with easy access. Such tubing shall be run neatly, bundled, and sheathed, with a maximum unsupported length of 36 inches.
E. Terminal single-line connections less than 18 inches in length may be copper tubing, or polyethylene tubing run inside flexible steel protection.
F. In concrete slabs, furred walls, or ceilings with no access, install copper or polyethylene tubing in electrical metallic tubing or vinyl-jacketed polyethylene tubing.
   1. Protect embedded-copper and vinyl-jacketed polyethylene tubing with electrical metallic tubing extending 6 inches above finished slab and 6 inches into slab. Pressure test tubing before and after pour for leak and pinch.
   2. Install polyethylene tubing in electrical metallic tubing extending 6 inches above floor line; pull tubing into electrical metallic tubing after pour.
G. Purge tubing with dry, oil-free compressed air before connecting control instruments.
1. Bridge cabinets and doors with flexible connections fastened along hinge side; protect against abrasion. Tie and support tubing.

H. Number-code or color-code control air piping for future identification and service of control system, except local individual room control tubing.

I. Pressure Gages or Test Plugs: Install on branch lines at each receiver controller and on signal lines at each transmitter, except individual room controllers.

J. Pressure Test control air piping at 30 psi for 24 hours. Test fails if more than 5-psi loss occurs.

3.7 IDENTIFICATION

A. All identification shall be reviewed and approved with University prior to installation.

B. Install labels and nameplates to identify control components according to Division 23 Section "Identification for HVAC Piping and Equipment."

C. Enclosures: Building controllers and/or enclosures shall be clearly labeled with their device ID and IP address.

D. Unit level controllers and/or enclosures shall be clearly labeled with their Node address. Tag wiring on the DDC side of the interface panel identifying the associated point.

E. Mark DDC panels with circuit number and electrical panel number.

F. Identification of Hardware and Wiring

1. Label wiring and cable, including that within factory-fabricated panels, at each end and within 2 inches of the end of the cable with the DDC address or termination number.

2. Label pneumatic tubing at each end within 2 inches of the end with a descriptive identifier.

3. Label all control panels with minimum ½ inch letters on laminated plastic nameplates.

4. Identify all other control components with permanent labels. Plug-in components shall be labeled on both the removable component and the permanently installed base such that it is obvious where the removed component is to be re-installed.

5. Label room sensors relating to terminal box or valves with nameplates.

6. Manufacturer’s nameplates and UL or CSA labels are to be visible and legible after equipment is installed.

7. Identifiers shall match the as-built documents.

G. Warning Labels

1. Affix permanent warning labels to equipment that can be automatically started by the DDC system.

   a. Labels shall use white lettering, 12 point type or larger, on a red background.

   b. The labels shall read: “CAUTION: This equipment is operating under automatic control and may start or stop at any time without warning. Switch disconnect to the OFF position before servicing.”

2. Affix permanent warning labels to motor starters and control panels that are connected to multiple power sources utilizing separate disconnects.

   a. Labels shall use white lettering, 12 point type or larger, on a red background.

   b. The labels shall read: “CAUTION: This equipment is fed from more than one power source with separate disconnects. Disconnect all power sources before servicing.”

3.8 ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. Comply with all Division 26 Installation Requirements.

B. Wiring below 8’ above finished floor shall be mechanically protected. Wiring above 8’ above finished floor may share cable tray or be supported by properly spaced supporting devices.

C. Refer to Mechanical Electrical Coordination Schedules for additional details on electrical information, disconnects, starters, controls, devices, interlocks and accessories.
D. Provide low voltage interlock wiring between supply and exhaust fans, electrical wiring for relays for temperature and pressure indication.

E. Provide wiring, conduit and connections for low temperature thermostats, high temperature thermostats, alarms, flow switches, actuating devices for temperature, humidity, pressure and flow indication, point resets and user disconnect switches for electric heating, appliances controlled by this Section.

F. Provide all other wiring required for the complete operation of the specified systems.

G. Where required install all wiring raceway systems complying with the requirements of the National Electrical Code. All required conduit shall be installed in EMT.

H. Provide electrical disconnecting means for servicing, for each control panel, digital controller, transformer, power supply, and other devices that are served by 120VAC or higher voltage.

I. Enclosures shall be fabricated of 14ga. steel with sub-panels for component mounting and have removable, hinged doors. Enclosures shall be sized to house the controllers, power supplies, transformers, wire duct and miscellaneous equipment required to support the application. Enclosures shall be provided for all controllers that are not located within an OEM provided mechanical equipment or on a VAV box. Control panels shall be fabricated as UL-508A listed assemblies.

J. Input/Output Control Wiring
1. Platinum 1k ohms and 10k ohms thermistor type II wiring shall be, stranded, twisted pair, shielded, minimum number 18 wire gauge.
2. Other analog inputs shall be a minimum of number 18 wire gauge, stranded, twisted pair.
3. Digital inputs shall be a minimum of number 18 wire gauge, stranded, twisted pair.
4. Analog outputs shall be a minimum of number 18 wire gauge, stranded, twisted pair.
5. Digital outputs shall be a minimum of number 18 wire gauge, stranded, twisted pair.

K. All input and output wiring between controllers and field devices shall be splice-free.

L. Conduit and Fittings
1. Conduit for Control Wiring, Control Cable and Transmission Cable: Electrical metallic tubing (EMT) with compression fittings, cold rolled steel, zinc coated or zinc-coated rigid steel with threaded connections.
2. Outlet Boxes (Dry Location): Sheradized or galvanized drawn steel suited to each application, in general, four inches square or octagon with suitable raised cover.
3. Outlet Boxes (Exposed to Weather): Threaded hub cast aluminum or iron boxes with gasket device plate.
4. Pull and Junction Boxes: Size according to number, size, and position of entering raceway as required by National Electrical Codes. Enclosure type shall be suited to location.
5. Install low voltage power and LON and LAN communication trunks in conduit in the following locations regardless of local building code allowances otherwise.
   a. Mechanical rooms.
   b. Electrical rooms.
   c. Vertical risers (exception: fire rated continuous closet like a telephone closet).
   d. Open Areas where the wiring will be exposed to view or tampering.
6. Conceal conduit within finished shafts, ceilings and wall as required. Install exposed conduit parallel with or at right angles to the building walls.

M. Where Class 2 wires are in concealed and accessible locations including ceiling return air plenums, approved cables not in raceway may be used provided that:
1. Circuits meet NEC Class 2 (current-limited) requirements. (Low-voltage power circuits shall be sub-fused when required to meet Class 2 current-limit.)
2. All cables shall be UL listed for application, i.e., cables used in ceiling plenums shall be UL listed specifically for that purpose.
N. Do not install Class 2 wiring in conduit containing Class 1 wiring. Boxes and panels containing high voltage may not be used for low voltage wiring except for the purpose of interfacing the two (e.g., relays and transformers).

O. Where Class 2 wiring is run exposed, wiring to be run parallel along a surface or perpendicular to it, and NEATLY tied at 3m (10 ft.) intervals.

P. All wire-to-device connections shall be made at a terminal blocks or terminal strip. All wire-to-wire connections shall be at a terminal block, or with a crimped connector. All wiring within enclosures shall be neatly bundled and anchored to permit access and prevent restriction to devices and terminals.

Q. Plug or cap all unused conduit openings and stub-ups. Do not use caulking compound.

R. Route all conduit to clear beams, plates, footings and structure members. Do not route conduit through column footings or grade beams.

S. Set conduits as follows:
   1. Expanding silicone fire stop material sealed watertight where conduit is run between floors and through walls of fireproof shaft.
   2. Oakum and lead, sealed watertight penetration through outside foundation walls.

T. Cap open ends of conduits until conductors are installed.

U. Where conduit is attached to vibrating or rotating equipment, flexible metal conduit with a minimum length of 18 inches and maximum length of 36 inches shall be installed and anchored in such a manner that vibration and equipment noise will not be transmitted to the rigid conduit.

V. Where exposed to the elements or in damp or wet locations, waterproof flexible conduit shall be installed. Installation shall be as specified for flexible metal conduit.

W. Provide floor, wall, and ceiling plates for all conduits passing through walls, floors or ceilings. Use prime coated cast iron, split-ring type plates, except with polished chrome-plated finish in exposed finished spaces.

### 3.9 ALARMS

A. The completed system must be capable of transmitting fire alarms, emergency signals and building control points. A panel failure alarm must be transmitted to the third party BACnet system when a DDC controller or network fails. Alarm conditions shall be printed and stored in an electronic text format for immediate and future reference.

B. Binary alarm points shall be Normally Open contacts (closed contact mean alarm).

C. The system shall recognize alarm point limits and alarm point lockouts from field panels for Dynamic Alarm Synchronization. Control sequences that are seasonal in operation or have alarm limits controlled based on control logic, the alarm reporting will be automatically overridden when the equipment is shut off and the alarm condition will read normal if the limits are within the alarm range.

D. Alarms will be routed to a BACnet notification class capable of routing BACnet alarms to a third party BACnet device. Applicable alarmed points will be set to BACnet intrinsic. Proprietary alarming methods requiring use of vendor specific software to view alarms are prohibited. Alarmable points will be routed to the proper CENTRAL FACILITIES HEAD.

### 3.10 FIRE ALARM MONITORING

A. Fire alarm inputs shall be configured as normally closed (open contact indicates an alarm condition).

B. The DDC system shall accept up to four normally closed binary inputs (Alarm, Water Flow, Supervisory, and Trouble).
C. DDC devices and networking equipment that monitor and/or transmit fire alarm points shall be connected to emergency power.

D. Provide (UPS) uninterruptible power supplies for DDC and networking devices that monitor and/or transmit fire alarm points that are not connected to power circuits connected to emergency generator. Refer to electrical plans and EM800 for available emergency power circuits.

E. Where UPS is required, monitor uninterruptible power supplies (UPS) required under this section and report an alarm to CENTRAL FACILITIES HEAD END whenever the UPS senses a loss of primary power or indicates a fault of any kind.

3.11 SENSORS

A. The contractor shall install sensors in accordance with the manufacturer’s recommendations.

B. The contractor shall mount sensors rigidly and adequately for the environment within which the sensor operates.

C. Temperature sensor assemblies shall be readily accessible and adaptable to each type of application in such manner as to allow for quick, easy replacement and servicing without special tools or skills.

D. Strap-on mountings shall not be permitted.

E. Outdoor installations shall be of weatherproof construction or in appropriate NEMA enclosures. These installations shall be protected from solar radiation and wind effects.

F. Sensors shall be within enclosures where located in finished space.

G. Sensors in ducts shall be mounted in locations to sense the correct temperature of the air only and shall not be located in dead air spaces or positions obstructed by ducts, equipment, and so forth. Locations where installed shall be within the vibration and velocity limit of the sensing element. Ducts shall be securely sealed where elements or connections penetrate ducts to avoid measuring false conditions.

H. All sensors measuring temperatures in pipes larger than 2 inches in diameter or in pressure vessels shall be supplied with wells properly fabricated for the service. Wells shall be noncorrosive to the medium being measured and shall have sufficient physical strength to withstand pressures and velocities to which they are subjected. Wells shall be installed in the piping at elbows where piping is smaller than the length of the well to effect proper flow across the entire area of the well.

I. All field sensors, transmitters, actuators, switches, etc. shall be field calibrated. The calibration shall be guaranteed for the period of the control system warranty. Any corrections or re-calibration required during the warranty will be performed at no cost to Owner. Calibration methods, means, instruments, and standards shall be in strict accordance with ISO-9000 standards.

J. Wall mounted temperature sensors, thermostats, humidity sensors, and carbon dioxide sensors shall require elevation and location to be confirmed by architect. Devices shall be in alignment with adjacent devices.

K. Room temperature sensors shall be installed on concealed junction boxes properly supported by the wall framing.
   1. Where temperature sensors are located on exterior walls, the contractor shall completely insulate the concealed junction box. Insulation shall not impact sensor performance and shall not cause sensor to extend from wall.

L. All wires attached to sensors shall be air sealed in their raceways or in the wall to prevent air transmitted from other areas from affecting sensor readings.

M. Sensors used in mixing plenums and hot and cold decks shall be of the averaging type. Averaging sensors shall be installed in a serpentine manner vertically across the duct. Each bend shall be supported with a capillary clip.
N. Low-limit sensors used in mixing plenums shall be installed in a serpentine manner horizontally across the duct. Each bend shall be supported with a capillary clip. Provide 1 foot of sensing element for each square foot of coil area.

O. All pipe-mounted temperature sensors shall be installed in wells. Install all liquid temperature sensors with heat-conducting fluid in the thermal wells.

P. Install outdoor air temperature sensors on the north wall, complete with a sun shield at the designated location.

Q. Differential air static pressure sensors:
   1. For supply duct static pressure, pipe the high pressure tap to a duct probe that measures at a 90 degree angle to flow (to measure only the static pressure and not the effects of velocity). Pipe the low-pressure port to the plenum.
   2. For return duct static pressure, pipe the low pressure tap to a duct probe that measures at a 90 degree angle to flow (to measure only the static pressure and not the effects of velocity). Pipe the high-pressure port to the plenum.
   3. For zone static pressure control, pipe the ports to the locations shown on floor plans. Ports and sensors shall be hidden from view as much as possible.
   4. For building static pressure, pipe the low-pressure port of the sensor to the static pressure port located on the outside of the building through a high-volume accumulator. Pipe the high-pressure port to a location behind a thermostat cover.

R. Coordinate drain pan water sensor locations prior to installation. Install per manufacturer’s recommendations and adjust sensor probe and level for proper moisture detection. Conceal associated wiring.

S. The piping to the pressure ports on all pressure transducers shall contain a capped test port located adjacent to the transducer.

T. Mount transducers in a location accessible for service without the use of ladders or special equipment to the maximum extent possible.

U. All water differential pressure sensors shall have gauge tees mounted adjacent to the taps. Water gauges shall also have shutoff valves installed before the tee.

V. Annular pitot tubes shall be installed so that the total head pressure ports are set-in-line with the pipe axis upstream and the static port facing downstream. The total head pressure ports shall extend diametrically across the entire pipe. Annular pitot tubes shall not be used where the flow is pulsating or where pipe vibration exists.

3.12 FLOW SWITCHES

A. Airflow Switches
   1. Install in horizontal duct runs whenever possible.
   2. If a vertical duct run is the only option, then install in a location with an upward airflow.

B. Hydronic Switches
   1. Use the correct paddle type for the pipe diameter as described by the switch manufacturer and per equipment being monitored.
   2. Adjust the flow switch in accordance with the manufacturer’s instructions.

3.13 CONTROL VALVES, CONTROL DAMPERS AND ACTUATORS

A. Control Valves:
   1. Install in an accessible location, with room for actuator removal and service. Adjust the actuator to provide tight shutoff. Provide valve stem indicator and adjust to indicate proper travel.
   2. Where butterfly valves are used, permanently mark the end of the valve shaft to indicate the valve position.
3. Coordinate with the Mechanical contractor and verify that each control valve can be serviced, including adjustment and removal of the actuator.

4. All control valves shall have unions installed at each inlet and outlet to permit removal of the valve for servicing.

5. Valve Orientation:
   a. Where possible, install valves installed in horizontal piping with stems upright and not more than 15 degrees off of vertical, not inverted.
   b. Install valves in a position to allow full stem movement.
   c. Where possible, install butterfly valves that are installed in horizontal piping with stems in horizontal position and with low point of disc opening with direction of flow.

6. Install pipe reducers for valves smaller than line size. Position reducers as close to valve as possible but at distance to avoid interference and impact to performance. Install with manufacturer-recommended clearance.

7. Where indicated, install control valve with three-valve bypass manifold to allow for control valve isolation and removal without interrupting system flow by providing manual throttling valve in bypass pipe.

8. Install drain valves in piping upstream and downstream of each control valve installed in a three-valve manifold and for each control valve larger than NPS 4.

9. Install pressure temperature taps in piping upstream and downstream of each control valve larger than NPS 2.

10. Clearance:
    a. Locate valves for easy access and provide separate support of valves that cannot be handled by service personnel without hoisting mechanism.
    b. Install valves with at least 12 inches of clear space around valve and between valves and adjacent surfaces.

11. Threaded Valves:
    a. Note internal length of threads in valve ends, and proximity of valve internal seat or wall, to determine how far pipe should be threaded into valve.
    b. Align threads at point of assembly.
    c. Apply thread compound to external pipe threads, except where dry seal threading is specified.
    d. Assemble joint, wrench tight. Apply wrench on valve end as pipe is being threaded.

12. Flanged Valves:
    a. Align flange surfaces parallel.
    b. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

B. Control Dampers:

1. Install dampers in accordance with the manufacturer’s instructions to operate and to obtain leakage rates specified herein. Adjust the damper linkage such that the damper closes before the actuator is fully closed to assure tight shut-off of the damper.

2. Install smooth transitions, not exceeding 30 degrees, to dampers smaller than adjacent duct. Install transitions as close to damper as possible but at distance to avoid interference and impact to performance. Consult manufacturer for recommended clearance.

3. Clearance:
   a. Locate dampers for easy access and provide separate support of dampers that cannot be handled by service personnel without hoisting mechanism.
   b. Install dampers with at least 24 inches (600 mm) of clear space on sides of dampers requiring service access.

4. Service Access:
   a. Dampers and actuators shall be accessible for visual inspection and service.
   b. Install access door(s) in duct or equipment located upstream of damper to allow service personnel to hand clean any portion of damper, linkage, and actuator. Comply with requirements in Section 233300 "Air Duct Accessories."
5. Install dampers straight and true, level in all planes, and square in all dimensions. Install supplementary structural steel reinforcement for large multiple-section dampers if factory support alone cannot handle loading.

6. Install control dampers at inlet of roof or wall mounted exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.

7. Duct openings shall be free of any obstruction or irregularities that interfere with blade or linkage rotation or actuator mounting. Duct openings shall measure 1/4" larger than damper dimensions and shall be square, straight, and level.

8. Multiple damper sections will be square and free from racking, twisting, or bending. Measure diagonally from upper corners to opposite lower corners of each damper section. Both dimensions must be equal ±1/8-inches.

9. Install extended shaft or jackshaft per manufacturer's instructions. (Typically, a sticker on the damper face shows recommended extended shaft location. Attach shaft on labeled side of damper to that blade.)

10. Damper blades, axles, and linkage shall operate without binding. Before system operation, cycle damper after installation to assure proper operation. On multiple section assemblies, all sections must open and close simultaneously.

11. Provide a visible and accessible indication of damper position on the drive shaft end.

12. After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.

13. Blank-off and seal around dampers and between dampers and sleeves or frames to eliminate air by-pass.

14. For outdoor air damper assemblies, stage the opening of each section to prevent stratification and poor mixing of outside and return air.

15. Coordinate with the Mechanical contractor the service access requirements of the control dampers, and verify that each control damper can be serviced, including adjustment and removal of the actuator.

16. Furnish interconnecting hardware, linkages, etc. for installation of multiple section dampers by Mechanical Contractor.

C. Control Valve Selection

1. Sizes used in determining valve type shall not be line size but valve size based on pressure drop and CV.

2. Air Terminal Unit Valves
   a. CCV pressure dependent characterized control valves
   b. Normal Position: Normally closed (NC)
   c. Fail Position: Fail-in-place (FIP)

3. Air Handling Unit Valves
   a. Chilled Water
      1) PICCV series pressure independent characterized control valves
      2) Fail Position: Fail-in-place (FIP)
   b. Heating Hot Water - Preheat Position
      1) (1/2"-3") CCV pressure dependent characterized control valves and (>4") butterfly pressure dependent control valves
      2) Fail Position: Spring return fail open
   c. Heating Hot Water – Heating / Reheat Position
      1) (1/2"-3") CCV pressure dependent characterized control valves and (>4") butterfly pressure dependent control valves
      2) Fail Position: Fail-in-place (FIP)

4. Chiller and Boiler Valves
   a. Control Valves
      1) (1/2"-3") CCV pressure dependent characterized control valves and (>4") butterfly pressure dependent control valves
      2) Fail Position: Spring return fail open
5. Select valve CV for 3.0 psi pressure differential with the following expect that the Cv shall be a minimum of 1.2 such that the characterizing disc opening shall not be too small and raise the potential for flow restriction or total blockage of valve. 5-psig maximum pressure drop at design flow rate is allowed to improve selection.

6. Valves sizes shall be no less than 2 nominal sizes of the installed pipe size.

7. Two-position valves shall be line size.

8. Pressure Independent Control Valve Selection Commentary
   a. There are three criteria to consider when selecting Pressure Independent Control Valves:
      1) The brass valve body maximum flow rate
      2) The programmed flow rate of the actuator.
      3) The piping package with unions should be selected with all valve installations, this guarantees the correct number and locations of test ports to properly assess valve operation.
   b. While the programmed flow rate of the actuator can be modified up to the brass valve body peak flow rate utilizing either the electronic "tool" or a cable and software, the valve body maximum flow rate is set, and cannot be altered.
   c. The actuator flow rate, set from the factory allows the valve only to modulate over the preset maximum flow range. Therefore, a 10V signal from the control system will not cause the valve to open 100%, it will open to the designated position that results in the maximum program flow.
   d. Therefore, do not select specific valve model numbers down to 1/2 gpm, but select valves based on the maximum flow rate of the valve assemblies, with an allowance for flow rates near that maximum.

3.14 INSTALLATION OF AIRFLOW MEASUREMENT DEVICES

A. Installation
   1. Install in accordance with manufacturer’s placement instructions for optimum performance at the locations indicated on the plans. A written report shall be submitted to the engineer if any discrepancies are found.

B. Adjusting
   1. Fan inlet mounted devices may be adjusted during start up and commissioning only after having been checked against known volumetric values (or against another like device measuring the same air volume) at two or more points of operations.
   2. The manufacturer’s authorized representative shall review and approve placement and operating airflow rates for each measurement location indicated on the plans. A written report shall be submitted to the consulting mechanical engineer prior to installation if any measurement locations do not meet the manufacturer’s placement requirements.
   3. Field Installation: Install in accordance with manufacturer’s placement instructions for optimum performance at the locations indicated on the plans. A written report shall be submitted to the consulting mechanical engineer if any discrepancies are found.
   4. Adjustment: Duct and plenum devices shall not be adjusted without approval from the engineer. Fan inlet mounted devices may be adjusted during start up and commissioning only after having been checked against known volumetric values (or against another like device measuring the same air volume) at two or more points of operation.
   5. Calibration of Terminal Units: The controls contractor shall cooperate with the TAB Contractor for completing the calibration of VAVs, etc.

3.15 ACCESS DOORS

A. Mechanical Contractor shall provide access doors or other approved means of access through ducts for service to control equipment.
3.16 SOFTWARE AND GRAPHICS
A. Update DDC controllers to the latest released version of firmware at the completion of the project. Identical controllers will have the same software revision number when the project is complete.

B. Program schedules, parameters, high/low limits, control strategies, alarm values, descriptor, engineering units, map physical and software points into the DDC panels/work-stations or third party BACnet system.

C. The DDC operator interface will include software programming required to add the new building DDC databases and graphics to the existing University DDC network. The programmer for the DDC system will map physical and software points necessary for the operator to monitor and command physical points and adjust set points from the operator’s workstation without requiring any additional program modifications. Verify and remove points from the database that are not used in the program. The contractor will be responsible for point mapping and input/output object creation. A minimum of eight points shall be mapped from all VAV controllers to the master workstation and/or integrated system.

D. The addition of the DDC points to the new subsystem shall not cause that subsystem or any other subsystem to stop functioning (crash) or slow down the request for point information. Subsystem start up synchronization between field panels and operator workstations and any subsystem shall not cause that subsystem or any other subsystem to stop functioning (crash) or slow down the request for point information.

E. Database programs shall be complied and/or de-compiled for errors before saving to the master front-end hard drive. Follow the specific procedures for directory, path and file names.

F. Upload all DDC controller databases, including network controller level DDC programs, to the master operator workstation front end PC located in CENTRAL FACILITIES HEAD END. Primary and secondary bus controllers, including VAV box controllers, shall be uploaded and saved separately to the building (OWS) operator’s workstation.

G. The University shall have the capability to add, modify and delete time of day schedules, holiday schedules, weekday schedules, weekend schedules, temporary schedules, etc. from the vendor’s front end.

3.17 POINT NAMING/POINT LOGICAL GROUPING AND GRAPHICS
A. The programmer shall meet with CENTRAL FACILITIES personnel before proceeding with programming to review point naming, system layout, point logical grouping, graphics, graphical display response time, and tree structure. Contact CENTRAL FACILITIES personnel before deviating from University Standards.

B. Supervisory controllers must be named with their corresponding building number & panel number. Before database generation is started, controls contractors are advised to contact Energy Management for questions regarding naming. Energy Management reserves the right to require changes to point naming if the controls contractor does not clarify naming before start of the controller database(s).

C. BACnet Object Identification numbers must also include building number and panel number. Controls contractors must coordinate Object IDs & IP address information with Energy Management prior to the start of database generation.

3.18 PROGRAMMING FOR PROGRAMMABLE DEVICES
A. These requirements apply to Building Controllers and Unit Level Controllers.

B. Process control loops for an integral system shall reside in a single controller. Examples of integral systems are:
   1. Air handling units.
C. To the maximum extent possible, process control loops for built up systems shall reside in a single controller. The objective of this requirement is to use large point count primary controllers in lieu of multiple secondary controllers.

D. Supervisory logic for integral and built up systems may reside in building controllers with the output commands to the process control loops traversing the field bus to the controllers executing the process control.

E. Create and download application programs that meet the requirements of the sequence of operations, time scheduling requirements, trend logging requirements, alarm handling requirements and data visibility requirements at the OWS.
   1. Use the University point naming convention throughout the project.
   2. Time schedules shall be fully configured with weekly schedules and holidays identified by the owner.
   3. Trend logs identified in the sequence of control shall be fully configured and operational.
   4. Alarm handling shall be consistent with University alarming standards.
   5. Application parameters identified as (adj.) in the sequence of control shall be exposed as viewable parameters and appropriate initial values shall be set.
   6. Manual control of external points shall be configured with BACnet command priority eight (8) unless otherwise specified in the sequence of control.
   7. For variables broadcast onto the field bus, event driven communication shall be used to avoid data storms. As a minimum the program shall provide for the send on delta parameter and minimum send time parameter for each output variable.
   8. Embed into the programs sufficient comment statements to clearly describe each section of the program. This applies to both line programming and graphical programming systems.
   9. If graphical programming systems with multiple layers for the functional block diagrams are used, no more than two layers shall be used.

F. Device-to-device (peer-to-peer) data flow shall be in place and configured to meet the sequence of control.

G. The programmed applications for a single integrated system shall not be distributed over more than one field bus. Example:
   1. Multiple air handling units are controlled by controllers on field bus number 1. The chiller system is controlled by controllers on field bus number 2. The chiller control logic requires the chilled water valve positions from each of the air handling unit controllers. It is acceptable that these related but non-integral systems are controlled by controllers on different field busses.

3.19 SYSTEMS INTEGRATION

A. Provide on-site and off-site programming as required to provide a fully operational integrated system. Coordinate all programming and point mapping requirements with University personnel. Provide engineering and analysis work necessary to determine the method of network connectivity. Provide program hardware, wiring, network devices, cabling, software and graphics to connect the new DDC controls system to the University DDC network. The interface will allow, at a minimum, the following:
   1. Alarm annunciation in CENTRAL FACILITIES HEAD END
   2. Output control
   3. Analog and digital commands
   4. Reset commands
   5. Point enable and disable
   6. Set point adjustments
   7. Time of Day Scheduling
   8. Dynamic Alarm Synchronization
3.20 CYBERSECURITY RISK MITIGATION STRATEGY

A. Security levels and password access shall be incorporated in accordance with University’s FP&M requirements. Contractors will set-up an unrestricted WSU specific account with a unique password (Cautioned FP&M because C&IT requirements are different)

B. Coordinate with Owner’s IT Department to restrict external network access to Internet connected system through virtual private network (VPN) connections only.

C. All external transport data shall be routed through encrypted channels with 2048-bit secure sockets layer (SSL).

D. Coordinate with Owner’s IT Department to implement a Web server-based human machine interface (HMI) that relies on IT technologies to secure access and restrict ports that can be opened on the firewall. Coordinate with Owner’s IT Department to restrict access to known IP addresses only.

E. Where building system networks are not physically separate from IT business networks, coordinate with Owner’s IT Department to segregate networked and Internet connected systems from the IT business network using virtual local area network (VLAN) IT technologies to restrict internal attacks/breakdowns.

F. Set unique, cryptographically strong passwords for administrator and user accounts. Default passwords must be changed before systems are connected to the Owner’s network.

G. Collect only the data that is necessary for analytics and optimization.

H. References: As a minimum, adhere to practices described in the following network and cybersecurity standards documents:
   1. NIST Special Publication 800-14 – Generally Accepted Principles and Practices for Securing Information Technology Systems
   2. NIST Special Publication 800-54 Revisions 4 – Security and Privacy Controls for Federal Information Systems and Organizations

3.21 IP INTERFACE DEVICES

A. Install Building Controllers for each required connection to the dedicated DDC TCP/IP network.

B. The Building Controllers shall be configured and commissioned to ensure that the only data traffic on the TCP/IP is data that is essential for operation of the system. Messages between field devices on the same field bus shall not be allowed to pass onto the TCP/IP network.

3.22 FIELD QUALITY CONTROL

A. Manufacturer’s Field Service: Engage a factory service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
   2. Test and adjust controls and safeties.
   3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
   4. Test each point through its full operating range to verify that safety and operating control setpoints are as required.
   5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
   6. Test each system for compliance with sequence of operation.
7. Test software and hardware interlocks.

C. DDC Verification:
   1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
   2. Check instruments for proper location and accessibility.
   3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
   4. Check temperature instruments and material and length of sensing elements.
   5. Check control valves. Verify that they are in correct direction.
   6. Check DDC system as follows:
      a. Verify that DDC controller power supply is from emergency power supply, if applicable.
      b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
      c. Verify that spare I/O capacity has been provided.
      d. Verify that DDC controllers are protected from power supply surges.
   7. Verify software including automatic restart, control sequences, scheduling, reset controls, and occupied/unoccupied cycles.
   8. Verify operation of operator workstation.
   9. Verify local control units including self-diagnostics.

D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

3.23 ADJUSTING

A. Calibrating and Adjusting:
   1. Calibrate instruments.
   2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
   3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
   4. Control System Inputs and Outputs:
      a. Check analog inputs at 0, 50, and 100 percent of span.
      b. Check analog outputs using milliampere meter at 0, 50, and 100 percent output.
      c. Check digital inputs using jumper wire.
      d. Check digital outputs using ohmmeter to test for contact making or breaking.
      e. Check resistance temperature inputs at 0, 50, and 100 percent of span using a precision-resistant source.
   5. Flow:
      a. Set differential pressure flow transmitters for 0 and 100 percent values with 3-point calibration accomplished at 50, 90, and 100 percent of span.
      b. Manually operate flow switches to verify that they make or break contact.
   6. Pressure:
      a. Calibrate pressure transmitters at 0, 50, and 100 percent of span.
      b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
   7. Temperature:
      a. Calibrate resistance temperature transmitters at 0, 50, and 100 percent of span using a precision-resistance source.
      b. Calibrate temperature switches to make or break contacts.
   8. Stroke and adjust control valves and dampers without positioners, following the manufacturer's recommended procedure, so that valve or damper is 100 percent open and closed.
   9. Stroke and adjust control valves and dampers with positioners, following manufacturer's recommended procedure, so that valve and damper is 0, 50, and 100 percent closed.
10. Provide diagnostic and test instruments for calibration and adjustment of system.
11. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.
B. Adjust initial temperature and humidity set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other than normal occupancy hours for this purpose.

3.24 CONTROL SYSTEM CHECKOUT

A. Provide apparatus required to execute the start up testing plan. Key tasks to be executed and documented in the start up testing report include:

1. Verification of primary and secondary voltages.
2. Verification that power wiring for devices conforms to manufacturer’s instructions.
3. Verification that labeling is in place.
4. Inspection of wiring for loose strands and tight connections.
5. Verification of field bus topology, grounding of shields (if used) and installation of termination devices.
6. Verification that each I/O device is landed per the submittals and functions per the sequence of control.
   a. Analog sensors shall be properly scaled and a value reported to the OWS.
   b. Binary sensors shall have the specified normal position and the state is reporting properly to the OWS.
   c. Analog outputs have the specified normal position and move full stroke when so commanded.
   d. Binary outputs have the specified normal state and respond to energize/de-energize commands.
7. Analog sensors calibrated with high quality instrumentation suitable for the sensor being calibrated.
   a. The instruments shall display a current (12 month) NIST traceable calibration sticker. Associated instrument calibration certificates shall be made available within 24 hours of a request.
   b. The measured value, reported value, and the calculated offset that was entered into the database shall be recorded.
   c. Calibration criteria:
      1) Space Temperature: +/- 0.5 degrees F
      2) Air Temperature: +/- 0.5 degrees F
      3) Fluid Temperature: +/- 0.5 degrees F
      4) Air Flow Rate: +/- 5 %
      5) Liquid Flow Rate: +/- 5 %
      6) Differential Pressure: +/- 3 %
      7) Gauge Pressure: +/- 5%
      8) Relative Humidity: +/- 3 % relative humidity
      9) CO2: +/- 2 %
8. Loop Tuning
   a. Tune P, PI and PID control loops.
   b. The loop tuning criteria shall be a stable control loop where the average error over 15 minutes and 30 samples shall be less than:
      1) Space Temperature: +/- 0.75 degrees F
      2) Air Temperature: +/- 1.50 degrees F
      3) Air Humidity: +/- 5 % relative humidity
      4) Chilled Water Temp: +/- 1.00 degrees F
      5) Hot Water Temp: +/- 1.00 degrees F
      6) Duct Pressure: +/- 0.2 inches w.g.
3.25 TESTING AND COMMISSIONING

A. The HVAC and control systems will be commissioned in accordance with the project Commissioning Plan. If no Commissioning Plan has been prepared, the systems shall be commissioning in accordance with ASHRAE Guideline 1. The controls contractor shall provide assistance, staff and materials to support the commissioning activities.

B. Buildings transmitting fire alarm signals will be tested in accordance with NFPA 72; 4.5 Documentation, 4.5.1; Approval and Acceptance, sub-section 4.5.1.2, 4.5.2; Completion Documents and 4.5.3 Records. Test transmission of fire, trouble and supervisory signals. University staff and Code Officials are available for consultation and testing support.

C. Provide assistance, staff and materials to support the commissioning activities in the presence of a designated University Representative, which shall include the following tests:
   1. When installation is complete, verify and document communication transmission between each building, the vendor’s master workstation, and any third party BACnet workstation. The controls contractor is responsible for all final adjustments and testing. Submit test report to the Owners Representative as part of the final operational test.
   2. Field test the accuracy of points and verify that the vendor’s front end and third party BACnet workstation receives the change of states. Field point status must be in sync with the present alarm conditions, values, and status of points that are mapped into the third party BACnet workstation. Any device out of the specified range shall be identified in the checkout report. Field controller information for analog, digital, software points, etc, received at the integrated front end, shall not be more then 10 seconds old.
   3. Analog inputs shall be verified for accuracy according to the specifications for the device. Any device out of the specified range shall be replaced. The devices shall be tested against the calibrated instrument used in the initial setup of the device.
   4. Switch the status of digital inputs from the final field device. Verify that CENTRAL FACILITIES HEAD END received the change of state.
   5. The building control system shall provide commands to outputs. Proper operation shall be verified in the field.
   6. DDC panels shall be tested for panel alarm condition and communication trunk will be tested for panel no response alarm conditions at the vendor’s master workstation and at the MLWS.

D. Points shall be in the automatic mode when the project is turned over to the University.

E. Verification Testing.
   1. The University will perform verification tests on equipment installed as part of this project.
   2. The University will develop verification test plans for each system.
   3. The controls contractor is responsible for providing materials and labor to assist the University with verification testing. A University representative will witness verification testing.
   4. The University will compile a log of open and deficient items observed during the testing.
      a. The controls contractor shall complete required repairs, test the system, and inform the University that the open and deficient items have been resolved within one week after receipt of the log.
      b. The University will retest the corrected items to confirm they are complete. It is expected that the controls contractor will correct all deficiencies in a timely manner and that multiple retesting by University staff will not be required.

F. Test and Balance
   1. Provide the Test and Balance technician a single set of necessary tools to interface with the control system for testing and balancing.
   2. Provide a minimum of 4 hours of training on the use of the interface tools.
   3. Provide a qualified technician to assist with the testing and balancing of one system controlled by a programmable controller and the first twenty terminal units.
3.26 TRAINING

A. Engage a factory service representative to train Owner’s personnel to adjust, operate, and maintain control systems and components.
   1. Train Owner’s personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
   2. Provide operator training on data display, alarm and status descriptors, requesting data, executing commands, calibrating and adjusting devices, resetting default values, and requesting logs.

B. Schedule training with Owner, through Architect, with at least seven days’ advance notice.

C. An outline of the proposed training agenda will be submitted to the University’s Facility Management team for review.

D. The manufacturer will provide training for the Owner's building personnel in procedures for start-up, testing, and operating the Automatic Control System. Instruct the Owner's personnel so that they can troubleshoot and maintain integration hardware and databases, program, reprogram, and/or reenter the desired schedules, values, settings, and strategies.

E. During the startup phase of the installation, and when acceptable performance of the overall system's hardware and software has been established. The contractor will provide on-site operator instruction for the Owner's operating personnel.

F. Operator instruction about the automatic control system will include, but not be limited to the overall operational program, equipment functions (both individually and as part of the total integrated system), commands, system generation, advisories, and appropriate operator intervention required in responding to the automatic control system operation, a description of the chronological information flow from field sensors, contacts and devices and an overview of the automatic control system communication network explaining the interplay between initiating devices, field data-gathering panels, system communications and their importance within the operating system.

G. Provide on-site operator instruction during normal working hours. Instruction will be performed by experienced factory trained technical representatives familiar with the overall system’s software, hardware and accessories. Provide a minimum of forty (40) hours of on-site training for three (3) of the Owner's designated operating personnel.

3.27 CLOSEOUT

A. The University’s Master Integrator shall review the final control system information and shall provide confirmation whether the system meets all project requirements.

B. The following are items that will be reviewed to determine whether control system meets closeout requirements:
   1. BACnet IP over controller or incorporated gateway capable of networking full system information via BACnet over IP
   2. All points open read / write – Confirmed by University’s Master Integrator
   3. Point descriptors that are understandable not indecipherable abbreviations – Confirmed by University’s Master Integrator
   4. All nomenclature on selected unit(s), equipment, and components
   5. Sequence of operation for all units
   6. System layout drawing – Fans, dampers, coils, etc.
   7. Wiring Diagram(s) both schematic (ladder) and common diagram (Ladder shows logic and common shows location of components and connections within the unit)

END OF SECTION
SECTION 230993
SEQUENCE OF OPERATION FOR HVAC CONTROLS

Issued, Bulletin 14, 03/15/2022

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes control sequences for HVAC systems, subsystems, and equipment.
   1. Temperature, flow and pressure set points listed shall be adjustable.
   B. Related Sections include the following:
      1. Division 23 Section "Instrumentation and Control for HVAC" for control equipment and devices and for submittal requirements.

1.3 DESCRIPTION OF WORK:
   A. Control sequences are hereby defined as the manner and method by which automatic temperature controls function. Requirements for each type of operation are specified in this section.
   B. Refer to drawings for additional control system requirements.
   C. Operating equipment, devices, and system components required for control systems are specified in other Division-23 sections of these specifications.
   D. Provide all equipment, devices, and system components required to accomplish the control sequences described in this section. Equipment, devices, and system components not specified in other Division-23 sections but necessary to accomplish the sequences specified in this division shall be provided.

1.4 SUBMITTALS
   A. Shop Drawings: Submit shop drawings for each system automatically or manually controlled. Refer to specification 230900 for submittal requirements.

1.5 DEFINITIONS
   A. Alarm: An indication of a dangerous situation annunciated to the automatic control system. In addition, alarms should sound a horn to alert the operator that corrective action needs to be taken immediately.
   B. Closed: When used to describe a control valve or damper means fully closed (no flow).
   C. Control Screens: The graphical interface of the automatic control system shall have schematic diagrams of each system, and operating details of major equipment. The control set points, operating parameters noted within the following sequences shall be provided on the related screen.
   D. DDC: Direct-digital controls.
   E. Modulate: Linear infinite positioning from fully open to fully closed.
   F. Full(y) open: The term full open or fully open when used to describe variable air volume terminal units means that the terminal damper is 100% open.
G. Open: The term full open or fully open when used to describe variable air volume terminal units means that the terminal is open to the setpoint volume.

H. Temperatures: All temperatures listed are degrees Fahrenheit.

I. Set Points: All system set points will be operator adjustable unless specifically noted. All offsets and time delays shall likewise be adjustable and accessible by the operator. Some items are specifically noted as adjustable (adj.), to alert the operator that the point must be tuned from experience. This does not preclude other setpoints, offsets and time delays from being adjustable.

J. Warning: An indication of an abnormal or potential problem condition. Warnings shall be annunciated to the automatic control system.

K. VAV: Variable air volume.

L. VSD: Variable speed drive.

M. BAS/BMS: Building Automation/Management System

PART 2 PRODUCTS  
(Not applicable to this section)

PART 3 EXECUTION

3.1 GENERAL

A. Provide all necessary instrumentation to obtain setpoints, readings, etc. listing in sequence of operation.

B. Wayne State University has and existing Siemens Building Automation System (BAS) front-end which includes a web interface and centrally managed data collection server. All building monitoring shall be hardwired back to the nearest Siemens Building Automation System connection. All BAS cabinets, power monitors, and associated devices must communicate back to the campus enterprise network. Data is managed and pulled stored in 15 minutes intervals at Wayne State’s centralized Siemens’s server and then pushed to the System server via a CSV (Siemens) file transfer. All programming shall be coordinated with Wayne State University and appropriate staff.

3.2 TREND LOGS

A. Trends logs are historical archives stored in the BMS that document the operation of the systems and equipment. Trends can be interval recordings of system I/O parameters or Change of Value based trends that record when a system value changes by more than a specified threshold.

B. Sample times indicated as COV (±) or change of value mean that the changed parameter only needs to be recorded after the value changes by the amount listed. When output to the trending file, the latest recorded value shall be listed with any given time increment record.

C. Data shall include a single row of field headings and the data thereafter shall be contiguous. Each record shall include a date and time field. Recorded parameters for a given piece of equipment or component should be trended at the same intervals.

D. Trending Requirements: At a minimum, trend the following on 15 min. intervals for analog values and change of value for binary values:

<p>| Equipment ID / Trending Interval (minutes) |</p>

E. Trending to document functional tests may require a more frequent interval. Coordinate with the CxA to determine the correct intervals to prove operational testing and modify intervals as required.

F. The BMS contractor shall set up the trends logs, ensure they are being stored properly, and then forward the data in electronic format to the CxA. Data shall be forwarded in one of the following formats:
   a. Microsoft EXCEL Spreadsheet (.xls)
   b. Comma Separated Value (.csv or .txt) preferably with quotes delimiting text fields and # delimiting date/time fields

G. Data storage shall be provided such that trend data is archived for at least 36 months.

H. The CxA shall analyze trend logs of the system operating parameters to evaluate normal system functionality.

I. The BMS contractor shall allow the CxA BMS access to view the trend log data and allow
3.3 TREND GRAPHS

A. Trend graphs are generally used to facilitate and document testing. The BMS contractor shall prepare controller and workstation software to display graphical trends.

B. On the trend graphs, lines shall be labeled and shall be distinguishable from each other by using either different line types, or different line colors.

C. Indicate engineering units of the y-axis values; e.g. degrees F, inches w.g., Btu/lb, percent wide open, etc. The y-axis scale shall be set such that all trended values are in a readable range.

D. Trend outside air temperature, humidity, and enthalpy during each period in which any other points are trended.

E. All points trended for one HVAC subsystem shall be trended during the same trend interval.

F. Each graph shall be clearly labeled with HVAC subsystem title, date, and times.

G. The BMS contractor shall forward the trend graphs to the CxA for review.

3.4 TIME SCHEDULE

A. HVAC equipment will be scheduled for occupied and unoccupied status.

B. The daily scheduler will allow the system operator to switch between occupied and unoccupied status a minimum of five times per day. Holidays, events and weekends will be scheduled separately.

C. The initial schedule will incorporate all equipment connected to the building automation system. Coordinate the initial scheduled occupied/unoccupied hours with the owner and incorporate the schedules before substantial completion.

3.5 AIR HANDLING UNITS: GENERAL

A. Operator Station Display: Indicate the following on operator workstation display terminal for each air handling unit:

   1. DDC system graphic
   2. DDC system on-off indication
   3. DDC system occupied/unoccupied mode
   4. Outdoor-air-temperature indication
   5. Supply-fan on-off indication
   6. Supply-fan-discharge static-pressure indication
   7. Supply-fan-discharge static-pressure set point
   8. Supply-fan airflow rate
   9. Supply-fan speed
   10. Relief-fan on-off indication
   11. Relief-air static-pressure indication
   12. Relief-air static-pressure set point
   13. Relief-fan airflow rate
   14. Relief-fan speed
   15. Building static-pressure indication
   16. Building static-pressure set point
   17. High building static-pressure alarm
   18. Low building static-pressure alarm
   19. Zone/space static-pressure indication
   20. Zone/space static-pressure set point
   21. High zone/space static-pressure alarm
   22. Low zone/space static-pressure alarm
23. Mixed-air-temperature indication
24. Mixed-air damper position
25. Return-air damper position
26. Outdoor-air damper position
27. Outdoor-air airflow rate
28. Outdoor-air damper end switch position indicator
29. Outdoor-air damper end switch position alarm
30. Space humidity indication
31. Space humidity set point
32. Space high humidity warning indication
33. Space high humidity alarm indication
34. Pre-filter air-pressure-drop indication
35. Pre-filter high-air-pressure set point
36. Pre-filter high-air-pressure warning
37. Final-Filter air-pressure-drop indication
38. Final-Filter high-air-pressure set point
39. Final-Filter high-air-pressure warning
40. Fan-discharge air-temperature indication
41. Fan-discharge air-temperature set point
42. High fan-discharge air-temperature warning
43. Low fan-discharge air-temperature warning
44. Discharge air temperature setpoint
45. Heating-coil air-temperature
46. Heating-coil control-valve position
47. Heating-coil hot water return temperature
48. Re-Heating-coil air-temperature
49. Re-Heating-coil control-valve position
50. Re-Heating-coil hot water return temperature
51. Cooling-coil air-temperature indication
52. Cooling-coil air-temperature set point
53. Cooling-coil control-valve position
54. Cooling-coil chilled water return temperature
55. Room temperature indication
56. Room temperature set point
57. High zone temperature alarm
58. Low zone temperature alarm
59. Smoke alarm
60. Temperature low limit / freezestat alarm
61. High static pressure alarm (supply, return and relief fans)
62. Low static pressure alarm (supply, return and relief fans where indicated)
63. Supply fan failure alarm
64. Supply fan in hand alarm
65. Supply fan belt failure alarm
66. Supply fan VSD fault alarm
67. Relief fan failure alarm
68. Relief fan in hand alarm
69. Relief fan belt failure alarm
70. Relief fan VSD fault alarm
71. Paint booth exhaust fan status
72. Dust collector status
73. Dust collector alarm
74. Fog haze mode status

3.6 AIR HANDLING UNIT AHU-1 CONTROL SEQUENCE

A. General
1. System is a single-zone, variable volume, variable air temperature (reset) type air-handling system which provides heating, cooling, dehumidification, fog/haze exhaust to provide space temperature control and support stage production events.

2. The units consist of supply fan(s), outside air/return air/relief air dampers, chilled water cooling coil(s), hot water heating coil(s), economizer dampers, outdoor air dampers, air filters, and return/relief fan(s).

3. The air handling system shall be controlled automatically through local direct digital control panels using PI and PID control methods. Sensing elements, damper and valve operators shall be electronic types. Safety and limit controls shall utilize local electric control loops.

4. Supply and return fans shall be interlocked via DDC to start and stop simultaneously under normal conditions.

5. In addition, signals from freezestat(s), fan differential, smoke detection, or pressure shutdown switches shall shut-down all fans including associated supply and return fans.

6. Air handling unit shall have individual setpoints, schedules, alarms, safeties, etc. unless specifically noted elsewhere.

B. Safety and Unit Protection

1. Smoke Detectors: Refer to Division 28 for smoke detector and system shut down requirements.

2. Air Handling Unit Smoke Shutdown.
   a. Signal(s) from the fire alarm system shall be extended to connection points in the supply and/or return fan variable speed drive(s) to stop the unit fans if smoke is sensed within the air handling unit and/or a smoke zone/compartment served by the AHU. Upon fire alarm signal termination, AHU operation shall return to the normal operating conditions.
   b. Smoke alarms shall be programmable to allow (with approval of the Responding Authority) them to be defeated during use of heavy stage fog effects.
   c. AHU smoke detectors and fire alarm signal wiring to the fan variable speed drives will be provided by the Fire Alarm Contractor as work of Division 28.
   d. Refer to supply and return/relief fan articles for AHU related smoke/fire damper control.
   e. Means shall be available to terminate the AHU operation (stop fan operation) from a manual reset at the BAS and/or Fire Alarm Panel.

3. Supply Fan Discharge Static Pressure High Limit.
   a. A high limit pressure control shall stop the supply fan if the static pressure at the fan discharge exceeds the setpoint. The pressure sensing element shall be located between the fan and the first automatic control or fire/smoke damper. The high limit pressure switch shall be manually reset at the Operator Workstation.
   b. A supervisory alarm on the BAS shall indicate that the fan has tripped on high limit.

4. Return Fan Static Pressure High Limit.
   a. A high limit pressure control shall stop the return fan if the static pressure at the fan inlet exceeds the setpoint. The high limit pressure switch shall be manually reset at the Operator Workstation.
   b. A supervisory alarm on the BAS shall indicate that the fan has tripped on high limit.

5. Temperature Low Limit
   a. An averaging serpentined low limit temperature sensor located downstream of the heating coil shall provide a supervisory alarm on the BAS if signal an alarm onto the BAS if the temperature falls below 38° F. Unit shall shut down on low temperature limit if the temperature downstream of the unit coil(s) is below 35° F for any 1 foot section of sensor.
   b. Temperature low limit shall be manually reset through the Operator Workstation.

6. Provide a local alarm defeating switch for each air handling system.

C. Run Conditions

1. The air handling unit shall be operated continuously according to the building operating schedule and during schedulable events such as evening and weekend performances.

2. During unoccupied periods, the system shall maintain critical space temperature setpoints and all other space temperature at an adjustable minimum unoccupied heating temperature setpoint of 66 degrees and 78 degrees unoccupied cooling setpoint.
a. Provide operator adjustable setback setpoints and warm-up and cool-down operations for the system.
b. Setback mode shall include operating a single fan at an adjustable minimum speed.
c. Provide settings for opening up air terminal units / VAV boxes to adjustable minimum positions during setback operations.
d. Provide option (selectable by the operator) for outside-air damper(s) to be fully closed during unoccupied and warm-up and cool-down operations.

3. AHU Optimal Start: The unit shall start prior to scheduled occupancy based on the time necessary for the zone(s) to reach the( ir) occupied setpoint(s). The start time shall automatically adjust based on changes in outside air and zone temperatures.

D. Off Condition.
1. When the supply fan is off, the air-handling system components shall remain in the following positions:
   a. Return fans are off.
   b. Cooling coil chilled water control valve is closed.
      1) In the event of power failure, the valve shall fail open.
   c. Heating coil control valve shall modulate to maintain temperature sensed downstream of the coil at 38º F (adjustable).
      1) In the event of power failure, the valve shall fail open.
   d. Re-Heating coil control valve valves is closed.
      1) In the event of power failure, the valve shall fail closed.
   e. Outside air dampers shall be closed.
   f. Return air damper shall be open.
   g. Relief air dampers shall be closed

E. Supply Air Volume and Temperature Control
1. Space temperature sensors shall provide a signal to proportionally adjust the unit flow rate, the chilled-water cooling coil and the hot water heating coil in sequence to provide cooling or heating to maintain the space temperature setpoint.
2. Airflow measuring stations located in each supply fan inlet shall provide airflow (CFM) monitoring and tracking of actual fan volume.
3. Supply Air Temperature Control
   a. On a call for either heating or cooling, a supply air temperature sensor (DAT) located in the supply air plenum (downstream of the supply fan) and upstream of re-heat coil shall modulate the chilled water cooling coil control valve and heating valve to maintain an adjustable supply air temperature setpoint. The supply air temperature sensor shall be an averaging capillary type sensor. Initial setpoint is 54 Deg F.
      1) The chilled water cooling coil control valve shall be a pressure independent two-way modulating valve, normally open.
      2) The heating coil control valve shall be a two-way modulating valve, normally open.
      3) Monitor hot water return temperature from coil. Alarm if hot water return temperature drops below 60 deg F (adj).
      4) Monitor chilled water return temperature from coil.
   b. Dehumidification reset control: The supply air temperature set-point shall be reset downward in .5 deg F increments to 50 Deg F to maintain maximum return air humidity set-point of 56% (adj). Reset shall temperature shall utilize PID controls. Discharge air temperature shall return to initial setpoint at start of new occupied period.
4. On a call for heating, the fan shall modulate to minimum cfm and the downstream reheating water control valve shall be proportionally positioned from fully closed to fully open to maintain the space temperature setpoint. After heating coil at full open and temperature not satisfied, sequence fan cfm from minimum position to design airflow to satisfy space temperature setpoint. Initial minimum cfm is 30% design cfm (adj).
5. On a call for cooling, the fan shall modulate to minimum cfm and the chilled water control valve shall be proportionally positioned to meet setpoints listed above from fully closed to fully open to maintain the space temperature setpoint. After cooling coil is full open and temperature not satisfied, sequence fan cfm from minimum position to design airflow to satisfy space temperature setpoint. Initial minimum cfm is 30% design cfm (adj).

6. The supply fan(s) shall be operated continuously during scheduled occupied hours to maintain scheduled airflow rate (Adj) and during unoccupied hours to maintain airflow rate setpoint (adj).

7. The supply fan shall be soft started through the variable speed drive. Normal position shall be zero rpm. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive to provide stable operation and to prevent tripping of the high limit pressure control.

8. A duct static pressure sensor / transmitter(s) shall provide signal to monitor the supply air duct static pressure. Provide a second sequence of supply fan control where the duct static pressure is used to vary supply fan speed to meet zone temperature requirements. This sequence shall only be used if air flow measurement is found to be unstable and can be manually switched over by the building automation system operator.

9. Minimum alarms shall be provided as follows:
   a. Provide alarm per fan if loss of signal, VSD alarm, or individual fan airflow drops below 1000 cfm (Adj).
   b. Supply Fan Failure: Commanded on, but the status is off.
   c. Supply Fan in Hand: Commanded off, but the status is on.
   d. Supply Fan Belt Failure (if belt driven): Commanded on, status is on, but airflow is zero.
   e. Supply Fan VSD fault.

10. Minimum warnings shall be provided as follows:
   a. High supply air static pressure: If the supply air static pressure is 30% higher than setpoint
   b. Low supply air static pressure: If the supply air static pressure is 30% less than setpoint.

F. Outdoor Air / Economizer Control

1. Minimum Outside Air Damper Control
   a. Minimum outdoor air quantities are as follows:

<table>
<thead>
<tr>
<th>Unoccupied Mode</th>
<th>Demand Control Minimum Mode</th>
<th>Minimum Occupied Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHU-1</td>
<td>0 cfm (adj)</td>
<td>500 cfm</td>
</tr>
<tr>
<td></td>
<td>Refer to AHU Schedule (adj)</td>
<td></td>
</tr>
</tbody>
</table>

   b. Whenever the supply fan is started, the outside air damper shall be proportionally opened and controlled to maintain the adjustable minimum outside air quantity.

   c. Minimum ventilation control
      1) During occupied mode, the system shall provide the demand control minimum outside air CFM volume according to ASHRAE 62.1.
      2) Minimum outdoor air CFM quantity shall be the determined by one of the following:
         (a) Minimum Demand Control Mode outdoor air volume
         (b) The minimum amount of outdoor air required to meet static pressure setpoint but minimum outdoor air shall not raise above Minimum Occupied Mode outdoor air cfm.
      3) Demand Control Minimum Ventilation Control
         (a) The Demand Ventilation Controls shall first increase zone minimum airflow to satisfy ventilation requirements, and then increase the outdoor air rate at the air handler as described in the following sequence.
         (b) At any zone with CO2 sensors: Upon a rise in zone CO2 concentration above setpoint (1200 ppm initial setpoint), the minimum occupied airflow setpoint at the zone VAV terminal shall first slowly raise from the current airflow rate up to full flow until CO2 setpoint is maintained.
         (c) At the Air Handler: Upon continued call for ventilation (based on continued rise in critical zone CO2 concentration with VAV terminal at ventilation override maximum setpoint, then increase the minimum outdoor air rate (or damper position) from Demand Control minimum to Minimum occupied mode cfm.
(d) Provide warning alarm whenever any space CO2 concentrations exceed 1,300 ppm for longer than 20 minutes (adj).
(e) This function shall be operational only during minimum outside air modes.

2. Economizer Outdoor Air Control
   a. BAS shall modulate the outdoor air damper and mixed air damper to provide “free cooling” when conditions merit.
   b. While conditions merit, dampers shall be modulated in a DA PID loop to maintain mixed air temperature at a setpoint as specified for the individual unit. Economizer logic shall remain enabled during setback cooling where applicable.
   c. Dry Bulb Switch: Economizer mode shall be active while: 1) The unit is energized 2) AND, when outside air temperature falls below the switching setpoint of 63°F (adj.) (with 2°F (adj.) cycle differential - Enable at 63°F, Disable at 65°F). 3) AND, either of the following are true:
      1) Outside air temperature is less than 55°F (adj.)
      2) OR, Return (exhaust) air humidity is not greater than 55% (with 2% (adj.) cycle differential)
   d. Economizer mode shall be inactive when outside air temperature rises above switching setpoint, dampers shall return to their scheduled minimum positions as specified above.

3. Monitor outdoor air and return air mixing plenum pressure.

G. Return Fan Control:
   1. The return fans will start once the supply fans status has been proven on. Once the return fans have started, the return fan VFD speed, will ramp up slowly and then modulate to maintain the static pressure, ahead of relief air damper, at set-point of 0.1" WC (adj. and shall be determined by the controls contractor in conjunction with the testing and balancing contractor). If the return fan is commanded on and the status is not received within 60 seconds (adj.) an alarm will be generated.
   2. The return/relief fan shall be soft-started through the variable speed drive. Normal position shall be zero RPM. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive.
   3. Where the unit has multiple fans and the variable speed drives and fans shall modulate together to maintain static pressure setpoint.
   4. The return fan(s) shall run as described unless shut down on safeties.
   5. Airflow measuring stations provided by others located in each return fan inlet shall provide airflow (CFM) monitoring and tracking of actual fan volume.
   6. Minimum alarms shall be provided as follows:
      a. Provide alarm per fan if loss of signal, VSD alarm, or individual fan airflow drops below 1000 cfm (Adj).
      b. Return Fan Failure: Commanded on, but the status is off.
      c. Return Fan in Hand: Commanded off, but the status is on.
      d. Return Fan Belt Failure (if belt driven): Commanded on, status is on, but airflow is zero.
      e. Return Fan VSD fault.

H. Building Static Pressure / Relief Damper Control.
   1. Building differential static pressure sensors/transmitters shall provide a signal to monitor and control the air handling unit static pressure.
   2. The static pressure control shall provide a signal to proportionally position the relief air damper to maintain the static pressure at an adjustable setpoint.
      a. AHU-1: The unit shall maintain a positive pressure between the Stagehouse and the exterior. The sensors shall be located at accessible location at the upper catwalk and at the exterior wall and with the final location requiring confirmation with the design team. Initial setpoint is 0.01 inches w.g. positive.
   3. The static pressure control per air handling unit shall be individually tuned and delayed so that short term fluctuations in pressure due to entrances and wind shall not adversely impact performance.
      a. Alarms
1) A high space static pressure alarm shall be reported to the BAS if the pressure rises above an Operator adjustable setpoint. Initial setpoint 0.05 inches w.g. positive.
2) A low space static pressure alarm shall be reported to the BAS if the pressure drops below an Operator adjustable setpoint. Initial setpoint 0.05 inches w.g. negative.

I. Filter differential pressure monitor
   1. The controller shall measure the differential pressure across each filter bank.
   2. Warnings shall be provided as follows:
      a. Pre-filter change required: Filter differential pressure exceeds an adjustable user definable limit. Initial setpoint: 0.5 in. w.g.
      b. Final-filter change required: Filter differential pressure exceeds an adjustable user definable limit. Initial setpoint: 1.0 in. w.g.

J. Additional Warnings
   1. Provide the following additional warnings:
      a. High supply air temp (Greater than 10 degrees above setpoint)
      b. Low supply air temp (Greater than 10 degrees below setpoint)
      c. Return Fan Failure: Commanded on, but the status is off.
      d. Return Fan in Hand: Commanded off, but the status is on.
      e. Return Fan Belt Failure: Commanded on, status is on, but airflow is zero.
      f. Return Fan VSD fault
      g. High chilled water supply temperature (greater than 48° F).
      h. Outdoor air damper end-switch (alarm if damper is not closed when commanded closed)

K. Coordination of Air-Handling Unit Sequences: Ensure that all controls have common inputs and do not overlap in function.

L. Variable Frequency Drive Metering: The BAS shall monitor and record the peak (high and low) power demand readings from the variable frequency drives. These readings shall be recorded on a daily, month-to-date, and year-to-date basis and stored.

M. Theatrical Fog and Haze Effects: AHU-1 with AHU-5 Integration
   1. General: The air handling system shall be used to exhaust theatrical fog and haze effects. During this event, the air handling unit shall be operated as a 100% outdoor air volume unit with the relief air damper at 100% open.
   2. Fog Exhaust Control (BUL-14)
      a. A toggle switch controlled by the building automation system at the operator workstation shall allow for the system to be operated by a local Spring Wound Timer control panel with buttons as listed on M3.2B. The timer switch shall be located at the stage manager’s operation station position in the control room.
      b. Provide theatrical fog exhaust indicator lights adjacent to Spring Wound Timer control panel in control room. Lights shall be on as associated with each button of control. Red = Theatrical Fog Exhaust Off at BAS; Yellow/Amber = Theatrical Fog Exhaust Ready; and Green = Theatrical Fog Exhaust On.
      c. The spring wound time shall allow the occupant to operate the fan for an adjustable period of time of 1530 minutes. At the expiration of this time, the exhaust fan shall turn off.
      d. Provide a plastic laminate label with following text: that is indicated on M3.2B.
         Theatrical Fog Exhaust Status
         Green: Safe/Off
         Yellow: Ready
         Red: Exhaust On
         Note: Plastic laminate label shall match architectural signage requirements and shall be reviewed and confirmed by architecture.
      e. In addition, provide theatrical fog exhaust indicator lights on south wall of scene shop for remote monitoring of system. Lights shall be Red – Theatrical Fog Exhaust Off at BAS; Yellow/Amber – Theatrical Fog Exhaust Ready; and Green - Theatrical Fog Exhaust On.
      f. Control panel Spring wound timer, indicator lights, label, associated power and interlock wiring shall be provided by Division 23
3. Fog Exhaust Control
   a. Whenever the fog exhaust system is engaged by button timer operation, the indicator light shall be on for that mode, go from Red to Yellow/Amber and the following shall occur:
      1) AHU-5 Return fan shall be shutdown.
         (a) Theatrical fog exhaust system requires that the AHU-5 return air fan acceleration and deceleration rates shall be as fast as practically possible. These fan acceleration and deceleration rates are required to be tested and optimized by the controls contractor and shall be separately programmed with the associated theatrical fog exhaust sequence.
      2) AHU-1 Economizer outdoor air damper shall fully open.
         (a) Theatrical fog exhaust system requires that outdoor air economizer damper shall be a fast-operating type, with full stroke (closed to open) occurring in less than 5 seconds.
   b. Stagehouse relief damper control (BUL-14)
      1) Performance mode – Fog (dry ice)
         (a) Relief damper in Haze relief ductwork shall be closed.
         (b) Normal return motorized damper shall be open.
         (c) Result: Exhaust location will be low in north side of stagehouse
      2) Performance mode – Haze (haze/fog machine)
         (a) Relief damper in Haze relief ductwork shall be open.
         (b) Normal return motorized damper shall be closed.
         (c) Result: Exhaust location will be high in rear of stagehouse
   c. AHU-5 (make-up air) control
      1) The AHU-5 economizer air VAV boxes shall open and all remaining AHU-5 VAV boxes shall close.
      2) AHU-5 Economizer outdoor air damper shall fully open.
         (a) Theatrical fog exhaust system requires that outdoor air economizer damper shall be a fast-operating type, with full stroke (closed to open) occurring in less than 5 seconds.
      3) AHU-5 exhaust air damper shall fully open.
         (a) Theatrical fog exhaust system requires that relief air economizer damper shall be a fast-operating type, with full stroke (closed to open) occurring in less than 5 seconds.
      4) AHU-5 Economizer return air damper shall fully close.
         (a) Theatrical fog exhaust system requires that return economizer damper shall be a fast-operating type, with full stroke (closed to open) occurring in less than 5 seconds.
         (b) Return air damper shall be shutoff rated for return fan and supply fan full flow operating pressure with no leakage.
      5) AHU-5 Minimum outdoor air damper shall close.
   d. AHU-1 and AHU-5 Fan Control
      1) Once dampers have been positioned, AHU-5 Return Fan shall be off and AHU-1 supply and return air fan shall operate at full flow conditions (adj).
(a) Theatrical fog exhaust system requires that the AHU-1 and AHU-5 return air fan and supply air fan acceleration and deceleration rates shall be as fast as practically possible. These fan acceleration and deceleration rates are required to be tested and optimized by the controls contractor and shall be separately programmed with the associated theatrical fog exhaust sequence.

e. Fog Exhaust Air Temperature Control
1) An air temperature sensor located in the AHU-1 economizer air duct shall modulate AHU-5 chilled water coil and hot water coils to maintain an adjustable temperature setpoint. The temperature sensor shall be an averaging capillary type sensor. Initial setpoint is 65 Deg F.
   (a) AHU-5 Hot Water Heating Coil
      (i) The pre-heating coil control valve shall be proportionally positioned to maintain the temperature setpoint.
      (ii) The pre-heating coil control valve shall be a two-way modulating valve, normally open.
      (iii) Monitor hot water return temperature from coil. Alarm if hot water return temperature drops below 35 deg F (adj).
   (b) AHU-5 Cooling Coil
      (i) The cooling coil control valve shall modulate to maintain the temperature setpoint.
      (ii) The cooling coil control valve (normally open) shall be a two-way throttling valve.
      (iii) Monitor chilled water return temperature from coil.
2) In addition to AHU-5 discharge air temperature control, AHU-1 heating coil, AHU-1 chilled water coil, and AHU-1 hot water re-heat coil shall continue to operate to maintain discharge air and space temperature control setpoint. The air temperature sensor located in the AHU-1 economizer air duct shall modulate AHU-5 chilled water coil and hot water coils to maintain an adjustable temperature setpoint. The temperature sensor shall be an averaging capillary type sensor. Initial setpoint is 65 Deg F.

4. At the end of Fog Exhaust mode, systems shall be staged to return to normal operation. When returning to normal operation, damper operation and fan acceleration and deceleration rates shall have individual adjustment rates to create stable operation back to normal operation. Additional Warnings
5. Provide indicator on AHU-1 and AHU-5 graphics when Fog Exhaust operation is in operation.

3.7 AIR HANDLING UNITS AHU-2 THROUGH AHU-5 CONTROL SEQUENCE

A. General
1. Systems are variable volume, multi-zone, variable temperature system which provides heating, cooling, and dehumidification.
2. The units consist of supply fan(s), outside air/return air/relief air dampers, chilled water cooling coil(s), hot water heating coil(s), economizer dampers, outdoor air dampers, air filters, and return/relief fan(s).
3. The air handling system shall be controlled automatically through local direct digital control panels using PI and PID control methods. Sensing elements, damper and valve operators shall be electronic types. Safety and limit controls shall utilize local electric control loops.
4. Supply and return fans shall be interlocked via DDC to start and stop simultaneously under normal conditions.
5. In addition, signals from freezestat(s), fan differential, smoke detection, or pressure shutdown switches shall shut-down all fans including associated supply and return fans.
6. Each air handling unit shall have individual setpoints, schedules, alarms, safeties, etc. unless specifically noted elsewhere.
7. Refer to AHU-1 sequence of operation for AHU-5 operation during stage Fog / Haze operation.
8. Smoke Detectors: Refer to Division 28 for smoke detector and system shut down requirements.
9. Air Handling Unit Smoke Shutdown.
   a. Signal(s) from the fire alarm system shall be extended to connection points in the supply
      and/or return fan variable speed drive(s) to stop the unit fans if smoke is sensed within the
      air handling unit and/or a smoke zone/compartment served by the AHU. Upon fire alarm
      signal termination, AHU operation shall return to the normal operating conditions.
   b. Smoke alarms shall be programmable to allow (with approval of the Responding Authority)
      them to be defeated during use of heavy stage fog effects.
   c. AHU smoke detectors and fire alarm signal wiring to the fan variable speed drives will be
      provided by the Fire Alarm Contractor as work of Division 28.
   d. Refer to supply and return/relief fan articles for AHU related smoke/fire damper control.
   e. Means shall be available to terminate the AHU operation (stop fan operation) from a
      manual reset at the BAS and/or Fire Alarm Panel.
10. Supply Fan Discharge Static Pressure High Limit.
    a. A high limit pressure control shall stop the supply fan if the static pressure at the fan
       discharge exceeds the setpoint. The pressure sensing element shall be located between
       the fan and the first automatic control or fire/smoke damper. The high limit pressure switch
       shall be manually reset at the Operator Workstation.
    b. A supervisory alarm on the BAS shall indicate that the fan has tripped on high limit.
11. Return Fan Static Pressure High Limit.
    a. A high limit pressure control shall stop the return fan if the static pressure at the fan inlet
       exceeds the setpoint. The high limit pressure switch shall be manually reset at the Operator
       Workstation.
    b. A supervisory alarm on the BAS shall indicate that the fan has tripped on high limit.
12. Temperature Low Limit
    a. An averaging serpentined low limit temperature sensor located downstream of the heating
       coil shall provide a supervisory alarm on the BAS if signal an alarm onto the BAS if the
       temperature falls below 38° F. Unit shall shut down on low temperature limit if the
       temperature downstream of the unit coil(s) is below 35° F for any 1 foot section of sensor.
    b. Temperature low limit shall be manually reset through the Operator Workstation.
13. Provide a local alarm defeating switch for each air handling system.

B. Run Conditions
1. The air handling unit shall be operated continuously according to the building operating
   schedule and during schedulable events such as evening and weekend performances.
2. During unoccupied periods, the system shall maintain critical space temperature setpoints and
   all other space temperature at an adjustable minimum unoccupied heating temperature setpoint
   of 66 degrees and 78 degrees unoccupied cooling setpoint.
   a. Provide operator adjustable setback setpoint and warm-up and cool-down operations for
      the system.
   b. Setback mode shall include operating a single fan at an adjustable minimum speed.
   c. Provide settings for opening up air terminal units / VAV boxes to adjustable minimum
      positions during setback operations.
   d. Provide option (selectable by the operator) for outside-air damper(s) to be fully closed
      during unoccupied and warm-up and cool-down operations.
3. AHU Optimal Start: The unit shall start prior to scheduled occupancy based on the time
   necessary for the zone(s) to reach the(ir) occupied setpoint(s). The start time shall
   automatically adjust based on changes in outside air and zone temperatures.

C. Off Condition.
1. When the supply fan is off, the air-handling system components shall remain in the following
   positions:
   a. Return fans are off.
   b. Cooling coil chilled water control valve is closed.
      1) In the event of power failure, the valve shall fail open.
c. Heating coil control valve shall modulate to maintain temperature sensed downstream of the coil at 38°F (adjustable).
   1) In the event of power failure, the valve shall fail open.
d. Outside air dampers shall be closed.
e. Return air damper shall be open.
f. Relief air dampers shall be closed

D. Supply Fan Control
1. The supply fan(s) shall be operated continuously during building zone occupied hours and shall be off otherwise, except as to maintain minimum unoccupied temperature settings.
2. The supply fan shall be soft started through the variable speed drive. Normal position shall be zero rpm. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive to provide stable operation and to prevent tripping of the high limit pressure control.
3. Where the unit has multiple fans and the variable speed drives and fans shall modulate together to maintain static pressure setpoint.
4. The supply fan(s) shall run as described unless shut down on safeties.
5. To prevent short cycling, the supply fan shall have an operator adjustable minimum run time. Initial minimum run time setting is 30 minutes.
6. Airflow measuring stations provided by others located in each supply fan inlet shall provide airflow (CFM) monitoring and tracking of actual fan volume.
7. Minimum alarms shall be provided as follows:
   a. Provide alarm per fan if loss of signal, VSD alarm, or individual fan airflow drops below 1000 cfm (Adj).
   b. Supply Fan Failure: Commanded on, but the status is off.
   c. Supply Fan in Hand: Commanded off, but the status is on.
   d. Supply Fan Belt Failure (if belt driven): Commanded on, status is on, but airflow is zero.
   e. Supply Fan VSD fault.

E. Supply Air Duct Pressure Control
1. Duct static pressure sensor / transmitter(s) shall provide signal to maintain the supply air duct static pressure at the setpoint by signaling the variable speed drives through the local control panel to vary the supply fan’s rotational speed.
2. The setpoint shall be the minimum static pressure necessary to operate the most hydraulically remote air terminal. Actual setpoint shall be field determined with the most hydraulically remote air terminal identified on the as-built drawings. Initial setpoint is 1 w.c. positive pressure.
3. The supply air static pressure setpoint shall be reset downward from the initial setpoint in increments to create stable operating conditions and eliminate hunting. The BAS contractor shall determine minimum static pressure setpoint during minimal fan operations and under a call for heating or cooling from any zone.
   a. Note: Supply air static pressure pressure reset shall occur only after supply air temperature reset has been satisfied (lowest priority reset sequence).
4. Minimum warnings shall be provided as follows:
   a. High supply air static pressure as described above
   b. Low supply air static pressure: If the supply air static pressure is 20% less than setpoint.

F. Supply Air Temperature Control
1. A supply air temperature sensor (DAT) located in the supply air plenum (downstream of the supply fan) shall modulate the chilled water cooling coil control valve to maintain an adjustable supply air temperature setpoint. The supply air temperature sensor shall be an averaging capillary type sensor. Initial setpoint is 54 Deg F.
2. Dehumidification reset control: The supply air temperature set-point shall be reset downward in .5 deg F increments to 50 Deg F to maintain maximum return air humidity set-point of 56% (adj). Reset shall temperature shall utilize PID controls. Discharge air temperature shall return to initial setpoint at start of new occupied period.
3. Supply air temperature reset control: The supply air temperature set-point shall be reset upwards in 1 deg F increments (adj) over 30 minutes (adj) up to a discharge air temperature of 60 Deg F (adj) based on air terminal unit/reheat coil needs and to maintain the space humidity set-point using the highest supply air temperature possible. Reset shall temperature shall utilize PID controls.
   a. Reset control shall only be allowed if all temperature and humidity setpoints are maintained.
   b. Supply air temperature reset up shall be engaged whenever all air terminal unit/reheat coil valves are at least 60% open (adj)
   c. Supply air temperature shall return back to initial temperature setpoint once any air terminal unit/reheat coil valve is 20% open or less (adj).
   d. Discharge air temperature shall return to initial setpoint at start of new occupied period.

G. Chilled-Water Cooling Coil Control
1. The cooling coil control valve shall be proportionally positioned to maintain the AHU DAT / supply air temperature set-point.
2. The cooling coil control valve (normally open) shall be a pressure independent two-way throttling valve.
3. Monitor chilled water return temperature from coil.

H. Hot Water Heating Coil
1. The heating coil control valve shall be proportionally positioned to maintain the discharge air setpoint.
2. The pre-heating coil control valve shall be a two-way modulating valve, normally open.
3. Monitor hot water return temperature from coil. Alarm if hot water return temperature drops below 60 deg F (adj).

I. Outdoor Air / Economizer Control
1. Minimum Outside Air Damper Control
   a. Minimum outdoor air quantities are as follows:

<table>
<thead>
<tr>
<th></th>
<th>Unoccupied Mode</th>
<th>Demand Control Minimum Mode</th>
<th>Minimum Occupied Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHU-2</td>
<td>0 cfm (adj)</td>
<td>3,000 cfm</td>
<td>Refer to AHU Schedule (adj)</td>
</tr>
<tr>
<td>AHU-3</td>
<td>0 cfm (adj)</td>
<td>2,500 cfm</td>
<td>Refer to AHU Schedule (adj)</td>
</tr>
<tr>
<td>AHU-4</td>
<td>0 cfm (adj)</td>
<td>1,000 cfm</td>
<td>Refer to AHU Schedule (adj)</td>
</tr>
<tr>
<td>AHU-5</td>
<td>0 cfm (adj)</td>
<td>1,000 cfm</td>
<td>2,000 cfm</td>
</tr>
</tbody>
</table>

   b. Whenever the supply fan is started, the outside air damper shall be proportionally opened and controlled to maintain the adjustable minimum outside air quantity.
   c. Minimum ventilation control
      1) During occupied mode, the system shall provide the demand control minimum outside air CFM volume according to ASHRAE 62.1.
      2) Minimum outdoor air CFM quantity shall be the determined by the maximum of one of the following:
         (a) Minimum Demand Control Mode outdoor air volume
         (b) The minimum amount of outdoor air required to meet static pressure setpoint but minimum outdoor air shall not raise above Minimum Occupied Mode outdoor air cfm.
         (c) For AHU-3 and AHU-5, the minimum outdoor needed to maintain pressurization whenever the dust collector or paint booth is in operation.
      3) Demand Control Minimum Ventilation Control
         (a) The Demand Ventilation Controls shall first increase zone minimum airflow to satisfy ventilation requirements, and then increase the outdoor air rate at the air handler as described in the following sequence.
(b) At any zone with CO2 sensors: Upon a rise in zone CO2 concentration above setpoint (1200 ppm initial setpoint), the minimum occupied airflow setpoint at the zone VAV terminal shall first slowly raise from the current airflow rate up to full flow until CO2 setpoint is maintained.
   (i) In the case of AHU-5, use return air CO2 reading for demand control reading.

(c) At the Air Handler: Upon continued call for ventilation (based on continued rise in critical zone CO2 concentration with VAV terminal at ventilation override maximum setpoint, then increase the minimum outdoor air rate (or damper position) from Demand Control minimum to Minimum occupied mode cfm.

(d) Provide warning alarm whenever any space CO2 concentrations exceed 1,300 ppm for longer than 20 minutes (adj).

4) Dust Collector and Paint Booth Minimum Outdoor Air Override
   (a) AHU-5: Monitor the status of the dust collector system. Whenever the dust collector is in operation, the minimum outdoor air shall be at a minimum of 3,500 cfm (adj).
   (b) AHU-3: Monitor the status of the paint booth system. Whenever the paint booth is in operation, the minimum outdoor air shall be at a minimum of 5,100 cfm (adj).

5) This function shall be operational only during minimum outside air modes.

2. Economizer Outdoor Air Control
   a. BAS shall modulate the outdoor air damper and mixed air damper to provide “free cooling” when conditions merit.
   b. While conditions merit, dampers shall be modulated in a DA PID loop to maintain mixed air temperature at a setpoint as specified for the individual unit. Economizer logic shall remain enabled during setback cooling where applicable.
   c. Dry Bulb Switch: Economizer mode shall be active while: 1) The unit is energized 2) AND, when outside air temperature falls below the switching setpoint of 63°F (adj.) (with 2°F (adj.) cycle differential - Enable at 63°F, Disable at 65°F). 3) AND, either of the following are true:
      1) Outside air temperature is less than 55°F (adj.)
      2) OR, Return (exhaust) air humidity is not greater than 55% (with 2% (adj.) cycle differential)
   d. Economizer mode shall be inactive when outside air temperature rises above switching setpoint, dampers shall return to their scheduled minimum positions as specified above.

3. Monitor outdoor air and return air mixing plenum pressure.

J. Return Fan Control:
   1. The return fans will start once the supply fans status has been proven on. Once the return fans have started, the return fan VFD speed, will ramp up slowly and then modulate to maintain the static pressure, ahead of relief air damper, at set-point of 0.1" WC (adj. and shall be determined by the controls contractor in conjunction with the testing and balancing contractor). If the return fan is commanded on and the status is not received within 60 seconds (adj.) an alarm will be generated.
   2. The return/relief fan shall be soft-started through the variable speed drive. Normal position shall be zero RPM. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive.
   3. Where the unit has multiple fans and the variable speed drives and fans shall modulate together to maintain static pressure setpoint.
   4. The return fan(s) shall run as described unless shut down on safeties.
   5. Airflow measuring stations provided by others located in each return fan inlet shall provide airflow (CFM) monitoring and tracking of actual fan volume.
   6. Minimum alarms shall be provided as follows:
      a. Provide alarm per fan if loss of signal, VSD alarm, or individual fan airflow drops below 1000 cfm (Adj).
      b. Return Fan Failure: Commanded on, but the status is off.
      c. Return Fan in Hand: Commanded off, but the status is on.
      d. Return Fan Belt Failure (if belt driven): Commanded on, status is on, but airflow is zero.
K. Building Static Pressure / Relief Damper Control.
   1. Building differential static pressure sensors/transmitters shall provide a signal to monitor and control each air handling unit static pressure.
   2. The static pressure control shall provide a signal to proportionally position the relief air damper to maintain the static pressure at an adjustable setpoint.
      a. AHU-2: The unit shall maintain a positive pressure between the Audience Chamber and the Lobby to the east. The sensors shall be located at accessible locations on the separating wall that is visually inconspicuous and with the final location requiring confirmation with the design team. Initial setpoint is 0.01 inches w.g. positive.
      b. AHU-3: The unit shall maintain a positive pressure between the Sector C corridor and the building exterior to the West. The exterior building pressure input shall utilize a global signal, and the interior sensor shall be located at an accessible location in the corridor that is visually inconspicuous and with the final location requiring confirmation with the design team. Initial setpoint is 0.02 inches w.g. positive.
      c. AHU-4: The unit shall maintain a positive pressure between the Lobby and the building exterior. The exterior building pressure input shall utilize a global signal, and the interior sensor shall be located at an accessible location in the Lobby that is visually inconspicuous and with the final location requiring confirmation with the design team. Initial setpoint is 0.02 inches w.g. positive.
      d. AHU-5: The unit shall maintain a positive pressure between the Scene Shop and the building exterior. The exterior building pressure input shall utilize a global signal, and the interior sensor shall be located at an accessible location that is visually inconspicuous and with the final location requiring confirmation with the design team. Initial setpoint is 0.01 inches w.g. positive.

   3. Each static pressure control per air handling unit shall be individually tuned and delayed so that short term fluctuations in pressure due to entrances and wind shall not adversely impact performance.
      a. Alarms
         1) A high space static pressure alarm shall be reported to the BAS if the pressure rises above an Operator adjustable setpoint. Initial setpoint 0.05 inches w.g. positive.
         2) A low space static pressure alarm shall be reported to the BAS if the pressure drops below an Operator adjustable setpoint. Initial setpoint 0.05 inches w.g. negative.

L. Filter differential pressure monitor
   1. The controller shall measure the differential pressure across each filter bank.
   2. Warnings shall be provided as follows:
      a. Pre-filter change required: Filter differential pressure exceeds an adjustable user definable limit. Initial setpoint: 0.5 in. w.g.
      b. Final-filter change required: Filter differential pressure exceeds an adjustable user definable limit. Initial setpoint: 1.0 in. w.g.

M. Additional Warnings
   1. Provide the following additional warnings:
      a. High supply air temp (Greater than 10 degrees above setpoint)
      b. Low supply air temp (Greater than 10 degrees below setpoint)
      c. Relief Fan Failure: Commanded on, but the status is off.
      d. Relief Fan in Hand: Commanded off, but the status is on.
      e. Relief Fan Belt Failure: Commanded on, status is on, but airflow is zero.
      f. Relief Fan VSD fault
      g. High chilled water supply temperature (greater than 48° F).
      h. Outdoor air damper end-switch (alarm if damper is not closed when commanded closed)

N. Coordination of Air-Handling Unit Sequences: Ensure that all controls have common inputs and do not overlap in function.
O. “Rogue Zone” lockout: Operator shall be able to identify up to 10 “rogue zones” on each air handling unit which do not tend to follow the same heating/cooling pattern as the rest of the system. These zones shall be ignored by any polling of the sequences described above.

P. Variable Frequency Drive Metering: The BAS shall monitor and record the peak (high and low) power demand readings from the variable frequency drives. These readings shall be recorded on a daily, month-to-date, and year-to-date basis and stored.

Q. Black Box Fog/Control:
   1. General: AHU-2 and VAV 2.08 shall be used to purge theatrical fog and haze effects.
   2. Fog Control (BUL-14)
      a. Provide a toggle switch controlled by the building automation system and a local control panel spring Wound Timer at the operator workstation in Control Room 2223. Toggle switch shall allow for the Fog system to be operated by the local button Spring Wound Timer.
      b. Provide exhaust indicator lights adjacent to Spring Wound Timer control panel in control room. Lights shall be on as associated with each button of control. Green—Theatrical Fog Off at BAS; and Red—Theatrical Fog On.
      c. The spring wound time shall allow the occupant to operate the VAV box airflow for an adjustable period of time of 1530 minutes. At the expiration of this time, the VAV box shall return to normal operation.
      d. Provide a plastic laminate label with following text:
         1) Theatrical Fog Status
         2) Green: Safe Normal/Off
         3) Red: Air Exhaust On
         4) Note: Plastic laminate label shall match architectural signage requirements and shall be reviewed and confirmed by architecture.
      e. Toggle switch, spring wound timer, indicator lights, label, associated power and interlock wiring shall be provided by Division 23.
   3. Fog System Control: Whenever the fog exhaust system is engaged by timer operation, the indicator light shall be on from Green to Red and the following shall occur:
      a. VAV 2.08 shall be fully open and AHU-2 supply fan static pressure setpoint shall raise to operating setpoint to allow full box airflow setting.
      b. AHU-2 Minimum Outside Air Damper Control: Whenever mode is in operation and not in Economizer mode, the outdoor air flow setpoint shall be at Minimum Occupied outdoor air setpoint and not Demand Control setpoint. Outdoor Air Damper Control shall return to normal operation at end of Fog sequence.
      c. AHU-2 Fan Control: Theatrical fog system requires that the AHU-2 fan acceleration and deceleration rates shall be as fast as practically possible. These fan acceleration and deceleration rates are required to be tested and optimized by the controls contractor and shall be separately programmed with the associated theatrical fog sequence.
      d. Fog Exhaust Air Temperature Control: VAV 2.08 shall be controlled to maintain space temperature setpoint.
      e. At the end of the Fog mode, systems shall be staged to return to normal operation prior to activation of sequence. When returning to normal operation, fan acceleration and deceleration rates shall have individual adjustment rates to create stable operation back to normal operation.
   4. Provide indicator on AHU-2 and VAV 2.08 graphics when Fog operation is in operation

3.8 AIR HANDLING UNITS: EXISTING VALADE AHU-2

A. General
   1. Existing air handling unit shall be modified to be variable volume, single-zone, variable temperature system which provides heating, cooling, and dehumidification.
   2. The units consist of an existing supply fan, new outside air/return air/relief air dampers, chilled-water cooling coil, steam heating coil, air filters, and existing return.
3. The air handling system shall be controlled automatically through local direct digital control panels using PI and PID control methods. Sensing elements, damper and valve operators shall be electronic types. Safety and limit controls shall utilize local electric control loops.

4. Supply and return fans shall be interlocked via DDC to start and stop simultaneously under normal conditions.

5. In addition, signals from new upstream temperature sensor and smoke detection shall shut-down supply and return fans.

6. Air handling unit shall have individual setpoints, schedules, alarms, safeties, etc. unless specifically noted elsewhere.

Safety and Unit Protection

1. Smoke Detectors: Refer to Division 28 for smoke detector and system shut down requirements.

2. Air Handling Unit Smoke Shutdown.
   a. Existing AHU smoke detectors and fire alarm signal wiring shall be re-wired to the new fan variable speed drives will be provided by the Fire Alarm Contractor as work of Division 28.
   b. Refer to supply and return/relief fan articles for AHU related smoke/fire damper control.
   c. Means shall be available to terminate the AHU operation (stop fan operation) from a manual reset at the BAS and/or Fire Alarm Panel.

3. Temperature Low Limit
   a. The mixed air temperature sensor located upstream of coils shall provide a supervisory alarm on the BAS if signal an alarm onto the BAS if the temperature falls below 38° F. Unit shall shut down on low temperature limit if the temperature downstream of the unit coil(s) is below 35° F.
   b. Temperature low limit shall be manually reset through the Operator Workstation.

B. Run Conditions

1. The air handling unit shall be operated continuously according to the building operating schedule and during schedulable events such as evening and weekend performances.

2. During unoccupied periods, the system shall maintain critical space temperature setpoints and all other space temperature at an adjustable minimum unoccupied heating temperature setpoint of 66 degrees and 78 degrees unoccupied cooling setpoint.
   a. Provide operator adjustable setback setpoints and warm-up and cool-down operations for the system.
   b. Provide option (selectable by the operator) for outside-air damper(s) to be fully closed during unoccupied and warm-up and cool-down operations.

3. AHU Optimal Start: The unit shall start prior to scheduled occupancy based on the time necessary for the zone(s) to reach the(ri) occupied setpoint(s). The start time shall automatically adjust based on changes in outside air and zone temperatures.

C. Off Condition.

1. When the supply fan is off, the air-handling system components shall remain in the following positions:
   a. Return fans are off.
   b. Cooling coil chilled water control valve is closed.
      1) In the event of power failure, the valve shall fail open.
   c. Existing steam heating coil control valve shall modulate to maintain temperature sensed downstream of the coil at 38º F (adjustable).
      1) In the event of power failure, the valve shall fail open.
   d. Outside air dampers shall be closed.
   e. Return air damper shall be open.
   f. Relief air dampers shall be closed

2. Provide operator adjustable sequence to allow return fan to operate during unoccupied periods at adjustable operating speeds and then return to normal operation on a call for temperature control or occupancy.

D. Supply Air Volume and Temperature Control
1. Space temperature sensors shall provide a signal to proportionally adjust the unit flow rate, the chilled water cooling coil and the steam heating coil in sequence to provide cooling or heating to maintain the space temperature setpoint.

2. Space temperature setpoints:
   a. Initial space temperature set points
      1) Occupied Temperature (cooling): 74 degrees F
      2) Occupied Temperature (heating): 70 degrees F
      3) Unoccupied Temperature (cooling): 78 degrees F
      4) Unoccupied Temperature (heating): 66 degrees F

3. The supply fan shall be soft started through the variable speed drive. Normal position shall be zero rpm. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive to provide stable operation and to prevent tripping of the high limit pressure control.

4. On a call for heating, the fan shall modulate to minimum fan speed and the steam control valve shall be proportionally positioned from fully closed to fully open to maintain the space temperature setpoint. After heating coil is full open and temperature not satisfied, sequence fan cfm from minimum position to design airflow to satisfy space temperature setpoint. Initial minimum supply fan speed is 50% (adj).

5. On a call for cooling and when cooling is available based on monitoring of chilled water temperature sensor, the fan shall modulate to minimum fan speed and the chilled water control valve shall be proportionally positioned from fully closed to fully open to maintain the space temperature setpoint. After cooling coil is full open and temperature not satisfied, sequence fan cfm from minimum position to design airflow to satisfy space temperature setpoint. Initial minimum supply fan speed is 50% (adj).

6. Dehumidification reset control: When chilled water is available and the return air return air humidity exceeds a set-point of 58% (adj), the chilled water coil shall be modulate to maintain a discharge air temperature of 53 deg F (adj). Dehumidification reset control shall be disengaged whenever return air humidity is lower than 50% (adj).

E. Chilled Water Cooling Coil Control
   1. The building automation system shall monitor existing Valade chilled water system temperature to determine if chilled water is available.
   2. When chilled water is available, the cooling coil control valve shall be proportionally positioned to maintain the space temperature set-point.
   3. The cooling coil control valve (normally open) shall be a two-way throttling valve.
   4. On a call for cooling and if chilled water temperature is not available, a supervisory alarm shall be sent to the building automation system.

F. Steam Heating Coil
   1. The existing heating coil control valve shall be proportionally positioned to maintain the space temperature setpoint.

G. Outdoor Air / Economizer Control
   1. Minimum Outside Air Damper Control
      a. Minimum outdoor air quantities are as follows:

      | Unoccupied Mode | Demand Control Minimum Mode | Minimum Occupied Mode |
      |-----------------|----------------------------|-----------------------|
      | 0 cfm (adj)     | 1,000 cfm                 | 2,000 cfm             |

      b. Whenever the supply fan is started, the outside air damper shall be proportionally opened and controlled to maintain the adjustable minimum outside air quantity.
      c. Minimum ventilation control
         1) During occupied mode, the system shall provide the demand control minimum outside air CFM volume according to ASHRAE 62.1.
         2) Demand Control Minimum Ventilation Control
(a) The Demand Ventilation Controls shall first increase supply fan speed to satisfy ventilation requirements, and then increase the outdoor air rate at the air handler as described in the following sequence.

(b) Upon a rise in zone CO2 concentration above setpoint (1200 ppm initial setpoint), the minimum supply fan speed shall first slowly raise from the current speed rate up to full flow until CO2 setpoint is maintained.

(c) Upon continued call for ventilation (based on continued rise in critical zone CO2 concentration with supply fan at maximum setpoint, then increase the minimum outdoor air rate (or damper position) from Demand Control minimum to Minimum occupied mode cfm.

(d) Provide warning alarm whenever any space CO2 sensor exceed 1,300 ppm for longer than 20 minutes (adj).

3) This function shall be operational only during minimum outside air modes.

2. Economizer Outdoor Air Control

   a. BAS shall modulate the outdoor air damper and mixed air damper to provide “free cooling” when conditions merit.

   b. While conditions merit, dampers shall be modulated in a DA PID loop to maintain mixed air temperature at a setpoint as specified for the individual unit. Economizer logic shall remain enabled during setback cooling where applicable.

   c. Dry Bulb Switch: Economizer mode shall be active while: 1) The unit is energized 2) AND, when outside air temperature falls below the switching setpoint of 63°F (adj.) (with 2°F (adj.) cycle differential - Enable at 63°F, Disable at 65°F). 3) AND, either of the following are true:

      1) Outside air temperature is less than 55°F (adj.)
      2) OR, Return (exhaust) air humidity is not greater than 55% (with 2% (adj.) cycle differential)

   d. Economizer mode shall be inactive when outside air temperature rises above switching setpoint, dampers shall return to their scheduled minimum positions as specified above.

H. Return Fan Control:

   1. The return fans will start once the supply fans status has been proven on. Once the return fans have started, the return fan VFD speed, will ramp up slowly and then modulate to maintain a fixed fan speed offset from the supply speed. Initial offset is 10% (adj) from supply fan speed.

   2. The return/relief fan shall be soft-started through the variable speed drive. Normal position shall be zero RPM. Fan acceleration and deceleration rates shall be adjustable at the variable speed drive.

   3. The return fan(s) shall run as described unless shut down on safeties.

I. Additional Warnings

   1. Provide the following additional warnings:

      a. High supply air temp (Greater than 10 degrees above setpoint)
      b. Low supply air temp (Greater than 10 degrees below setpoint)
      c. Return Fan Failure: Commanded on, but the status is off.
      d. Return Fan in Hand: Commanded off, but the status is on.
      e. Return Fan Belt Failure: Commanded on, status is on, but airflow is zero.
      f. Return Fan VSD fault
      g. High chilled water supply temperature (greater than 48° F).

J. Coordination of Air-Handling Unit Sequences: Ensure that all controls have common inputs and do not overlap in function.

K. Variable Frequency Drive Metering: The BAS shall monitor and record the peak (high and low) power demand readings from the variable frequency drives. These readings shall be recorded on a daily, month-to-date, and year-to-date basis and stored.
3.9 AIR COOLED CHILLER AND PUMPS OPERATING SEQUENCE

A. Scope: This control type applies to the chilled water system air-cooled chiller system, the variable-chilled water pumps, motorized chilled water shut-off valves at the chiller, motorized modulating chilled water valves at air handling unit, chiller on-board controllers, interface with the building DDC systems, variable speed drives for the variable-speed pumps, controls/sensors for monitoring and control to form a complete and operating system.

B. The building DDC system (this temperature control contractor) shall sequence the running of chiller and pumps through interface with the chiller controllers and the variable-primary pump variable speed drives. The building air handling units shall be provided with a continuous supply of chilled water during cooling season, when outdoor air economizer operation is not possible due to conditions outdoors.

C. The temperature control contractor shall provide the following:
   1) Supply and return chilled water temperature and pressure reference sensors on the primary main supply and return headers to the chiller and building piping systems and coils.
   2) Modulating DDC control valves at each air handling unit cooling coil and heat exchanger (installed by the mechanical contractor).
   3) Full interface control and monitoring of the chiller through the on-board chiller controllers.
   4) Alternating variable-primary chilled water pump operation, to allow for equal run time of each pump, including the backup (redundant) pump.
   5) Chilled water flow proving switch at chiller return, to prove chiller flow.
   6) Motorized isolation valve for chiller, when not running, located on the return side of each chiller.
   7) Monitoring of all temperature and pressure sensors through DDC system.
   8) Monitoring of chiller on-board safety controls.
   9) Pressure differential reference sensors for control of the VSD speed control of the pumps.
   10) Field wiring/interface with the chiller systems.

D. Chiller Control Sequence
   1. Through the DDC system preset outdoor temperature schedule, upon sensing outdoor temperatures above a temperature (initial setpoint 42 F) and humidity levels (enthalpy conditions), command the chillers on to energize to generate chilled water for the building. The motorized valve for the chiller shall fully open first and prove through end switch that it is open. When valve is open, the variable-primary pump shall energize through the VSD and shall modulate the speed to maintain system flow requirements based on the differential pressure reference sensor. Upon proving water flow through the operating chiller, energize the chiller through the on-board controller and generate chilled water at temperature scheduled. Operate chillers through steps of capacity.

E. Chilled Water Pump Controls:
   1. Variable-Primary Pumps: The DDC system shall command each of the variable-primary chilled water pumps to start. One of the variable-primary pumps is always redundant, for emergency operation in the event of an operating pump failure. Mount the flow switch in the primary chilled water circuit. Upon command to energize a pump, the switch shall prove flow before allowing the chiller to energize. Provide current sensors at each pump. In the event of loss of flow/pump motor failure, command the backup pump to operate. Send failure alarm to the DDC system.
   2. To maintain the required minimum evaporator flow rate in the chiller the chilled water bypass valve located between the chilled water supply and return lines shall modulate open to maintain the following minimum flows as measured by the flow meter (verify actual minimum GPM flow requirement with chiller manufacturer).
   3. Circulating Pump(s): N+1, Variable Volume.
a. The chiller control system will start and stop the pumps. Lead pump shall operate continuously. System software command will adjust the variable speed drive to maintain system DP pressure set point as measured by a DP water pressure sensor located near the remote end of each loop.

b. Automatic back-up Pump Operation: Provide programmable automatic lead –lag pump controls with automatic operation of lag pump in the event of lead pump failure along with pump fail alarms. Manual return the system to normal primary pump operation after pump failure has been corrected. Clear failure alarms.

c. Alternate the operation of the pumps to provide equal run time for each. The DDC system shall automatically switch operation of the pumps based on a runtime schedule.

4. If chilled water loop temperature setpoint is met while both chillers are not in operation, ensure that one chiller control valve is open.

5. If there is ever a call for chilled water pump operation, one of the chiller chilled water control valves shall be open.

F. Start and Stop Chiller:

1. The DDC system shall command the chiller system to start based on a preset outdoor temperature schedule. The chiller shall not be allowed to energize until flow has been proven through the flow switch in the primary chilled water mains. Upon proof of flow, the chiller controller shall energize and modulate the operation of the compressors to maintain required discharge chilled water temperatures. The chiller shall be off when outdoor temperature conditions permit use of full economizer damper operation at the air handling/fan coil systems.

2. The outdoor temperature schedule shall not disengage chilled water pump operation if chilled water loop temperature setpoint is met and there is still a need for cooling.

3. Alarm Chiller Start Failure: The chiller controller shall signal a chiller failure to start alarm at the DDC system.

G. Chilled-Water Supply Temperature:

1. Provide temperature sensors in each of the common chilled water supply and return piping loops.

2. Chilled water temperature shall be maintained to provide between 42 Degrees F and 48 Degrees F based on AHU chilled water control valve positions / demand to provide the warmest supply water temperature required to maintain the space temperature and/or humidity conditions.

   a. Provide a BAS warning whenever chilled water temperature setpoint is 2 deg F (adj) outside of temperature setpoint.

   b. Provide a BAS alarm whenever chilled water temperature setpoint is 4 deg F (adj) outside of temperature setpoint.

H. Chilled Water System Staging:

1. The chiller plant control system will start and stop the chilled water pumps and chillers based upon chiller plant supply water temperature setpoint and outdoor air temperature.

2. The chiller plant control system shall initiate the start of the next chiller in the sequence whenever the chilled water load, as determined by the system supply water temperature, is not met for 20 (adj) minutes. System shall use PI and PID control methods to optimizing sequencing of chillers and associated systems on and off.

   a. When staging the next chiller on, the associated chiller chilled water control valve shall first open slowly enough so that chilled water flow rate and system pressure shall not drop below minimum chiller operating points.

   b. The chiller plant control system will unload operating chillers to an operator editable current limit prior to starting a lag chiller.

   c. Lag chillers shall start in a similar manner to the lead chiller start sequence.

3. The chiller plant control system shall initiate the shut down of the next chiller in the sequence whenever excess chilled water capacity exists, as determined by percent run load amps, for 20 minutes. System shall use PI and PID control methods to optimizing sequencing of chillers and associated systems on and off.
a. When staging the next chiller off, the associated chiller shall be disengaged first before slowly closing the chilled water control valve so that chilled water flow rate and system pressure shall not rise significantly to cause issues with system control.

   a. Chiller rotation shall be initiated based on an operator entered runtime interval or manually through a software switch at the Operator Workstation. The method of sequence shall be operator selectable.
   b. Chiller cycling caused by normal system load fluctuations shall cause the chillers to change rotation sequence or at the operator’s option, chillers may be forced into the new rotation sequence at the time of sequence change.
   c. Provide an operator option for manual selection of lead chiller. Indicate selectable option on operator station display.

I. Interface the chiller with the building automation system (BAS) so the following features are provided at the Central Building Control Station.
   a. Evaporator refrigerant pressure
   b. Evaporator refrigerant temperature
   c. Evaporator approach temperature
   d. Condenser refrigerant pressure
   e. Condenser refrigerant temperature
   f. Condenser approach temperature
   g. Compressor refrigerant discharge temperature
   h. Compressor refrigerant suction temperature

3.10 HEATING WATER SYSTEM CONTROL

A. Heating-Water Supply Temperature: Integral boiler controls modulate burners, stage lead-lag boilers, or stage burner level to maintain heating water loop temperature set point of 120 degrees F.

B. Through the DDC system preset outdoor temperature schedule, upon sensing outdoor temperatures below a temperature (initial setpoint 80 F), command the boiler systems on to energize to generate hot water for the building. The motorized valve for the lead boiler shall fully open first and prove through end switch that it is open. When valve is open, the variable-primary pump shall energize through the VSD and shall modulate the speed to maintain system flow requirements based on the differential pressure reference sensor. Upon proving water flow through the boiler, energize the boiler through the on-board controller and generate boiler water at temperature scheduled. Operate boiler system through steps of capacity.

C. Boiler System
   1. Boiler Status: Start/Stop:
      a. The system operator will manually enable and disable each of the boilers through the DDC system software interface to the boiler control panels.
   2. Emergency shut off:
      a. A wall switch located near the boiler room exit will be hard wired to the boiler control panel to shutdown the boilers and provide a DDC system alarm. Provide a manual reset at the boiler control panel.
   3. Operation: The boiler control panel shall control the following for each boiler system:
      a. Boiler sequencing
      b. Boiler output
      c. Pump start / stop
      d. Temperature reset
   4. Boiler-Water Supply Temperature Reset:
      a. DDC system software will reset heating-water supply temperature when outdoor-air temperature drops below the following conditions:
         1) 140 degrees F (adj) heating water when outdoor-air temperature is 10 degrees F (adj) outdoor-air temperature or colder.
2) System shall return to normal operating setpoint (120 degrees F) when outdoor-air temperature is above 10 deg F (adj).

5. Display: Include custom dynamic color graphics for each system including the following:
   1) Boiler(s) status: enabled/disabled
   2) Boiler Operation: On/Off
   3) Emergency Shutoff status: Enable/Disable
   4) Outdoor-air temperature.
   5) System on/setpoint.
   6) Heating-water return temperature.
   7) Heating-water supply temperature.
   8) Heating-water supply temperature set point.
   9) Heating-water supply temperature reset schedule and setpoints
   10) Pump operation
   11) Pump speed
   12) Alarms

D. Heating Hot Water Pump Operation
   1. Differential pressure sensors (two) with their sensing elements located in the heating hot water supply and return piping shall provide signals to maintain the differential pressure at setpoint by varying the rotational speed of the pump(s).
   2. The differential pressure stations locations are indicated in the floor plans and system schematics in the Drawings.
   3. The controller shall monitor the two differential pressure setpoints, and shall vary the speed of the pumps in order to maintain the differential pressure of the branch with the greatest proportional offset from setpoint. Both setpoints shall be adjustable.
   4. The differential pressure setpoint shall be the minimum system differential pressure necessary to operate the most hydraulically remote coil or terminal unit. Actual system differential pressure setpoints to be field determined.
   5. The system differential pressure setpoint shall be optimized according to valve position.
   6. Pump Lead/Lag operation
      a. The two heating hot water pumps shall operate in a lead/lag fashion.
      b. The controller shall measure system heating hot water differential pressure and modulate the hot water pump variable speed drives in sequence to maintain the system hot water differential pressure setpoint.
      c. Once started, the minimum variable speed drive speed is 25% adjustable
   7. Lead/Lag Pump Rotation
      a. The designated lead pump shall rotate to the second pump upon one of the following conditions:
         1) Manually through a software switch at the Operator Workstation
         2) If pump runtime (adjustable) is exceeded
      b. In the event of a failure of the lead pump or the VSD for the lead pump, the lag pump shall automatically assume the status of lead pump.
   8. System Bypass Valve Operation
      a. To allow for minimum flow in the system in the event that the load control valves are closed or modulated below the minimum stable flow on the pump, the Controller shall open the heating water system bypass valve under the following conditions:
         1) If only one pump is running to maintain system differential pressure at set point, and the VFD of that pump is at minimum pump setting, modulate system bypass valve to maintain differential pressure setpoint.
         2) Once the pump speed is 5 Hz above minimum setting (adjustable) for more than 5 minutes (adjustable), close the bypass valve.
   9. If there is ever a call for hot water pump operation, one of the boiler hot water control valves shall be open.

E. Operator Station Display: Indicate the following on operator workstation display terminal:
   1. DDC system graphic.
2. DDC system on-off indication.
3. Heating system status: (enabled/disabled)
4. Emergency Shutoff status: Enable/Disable
5. Time and time schedule.
6. Boiler status
7. Boiler fire rate
8. Boiler valve position
9. Boiler pump status
10. Hot-water pump(s) on-off status. (One for each pump)
11. Hot-water pump(s) on-off indication. (One for each pump)
12. Hot-water flow indication: gpm (One for each pump)
13. Hot-water supply temperature.
14. Hot-water supply temperature: Set point
15. Hot-water return temperature.
16. Heating-water supply temperature reset schedule and setpoints
17. Hot water differential pressure.
18. Calculated heating system use in MBH (based on flow rate, supply and return temperatures)
19. Hot water system Bypass Valve position
20. Outdoor air temperature
21. Alarms shall be provided as follows:
   a. High supply water temperature: Supply water temperature exceeds 160 °F (adjustable)
   b. Low supply water temperature: Supply water temperature is below 110 °F (adjustable)
   c. High Hot Water Differential Pressure: If the hot water differential pressure is 25% (adjustable) greater than setpoint.
   d. Low Hot Water Differential Pressure: If the hot water differential pressure is 25% (adjustable) lower than setpoint.
   e. Boiler alarm
   f. Pump Failure: Pump commanded on, status is off. (One alarm per pump)
   g. Pump running in Hand: Pump Commanded off, status is on (One alarm per pump)
   h. Pump run-time exceeded. (One per pump)

### 3.11 VRV CONDENSING UNIT & FAN COIL UNITS

A. Sequences shall be performed by combination of factory controllers and building automation system.

B. Operational information provided by factory BACnet controller accessed through BAS. Space temperatures to be displayed on operator interface.

C. Supply Temperature and Fan Control
   1. The unit shall run according to a user definable time schedule in the following modes:
      a. The unit shall maintain:
         1) A 75 deg F cooling zone setpoint
         2) A 68 deg F heating zone setpoint
   2. Zone temperature warnings shall be provided as follows for each fan coil unit:
      a. High Zone temperature: If the zone is above setpoint by an adjustable, user defined margin. Initial margin setting: 5 deg F.
      b. Low Zone Temperature: If the zone is below setpoint by an adjustable, user defined margin. Initial margin setting: 10 deg F.
   3. Zone overrides
      a. A timed local override control shall allow an occupant to override the schedule and place the unit into an occupied mode for an adjustable period of time. Initial override time 2 hours. At the expiration of this time, the control of the unit shall automatically return to the schedule.
   4. Unit alarms shall include:
      a. Unit Failure: Commanded on, but status is off
      b. Unit in Hand: Commanded off, but status is on
c. Unit in manual override

D. Operator Station Display: Indicate the following on operator workstation display terminal for each fan coil unit:

1. DDC system graphic
2. DDC system on-off indication
3. DDC system occupied/unoccupied mode
4. Room temperature indication
5. Room temperature set point
6. Zone occupied status
7. Unit on-off indication
8. Condensing unit alarms (from unit controls and per condensing unit)
9. Unit Alarms shall include:
   a. Unit Failure: Commanded on, but status is off
   b. Unit in Hand: Commanded off, but status is on
   c. Unit in manual override

3.12 EXHAUST FAN CONTROL

A. Exhaust Fan and Damper Alarms: Typical of all Exhaust Fans

1. Damper Failure: Commanded open, but status is closed.
2. Damper in Hand: Commanded closed, but status is open.
3. Fan Failure: Commanded on, but status is off
4. Fan in Hand: Commanded off, but status is on
5. Fan Status shall be reported to the BAS.

B. Exhaust fan Control (General Exhaust – Toilets, Elevators, and Custodial Closets)

1. The exhaust fans provide toilet room, elevator machine room and custodial closet exhaust ventilation.
2. The exhaust fans shall be operated continuously whenever associated AHU is occupied and shall be off whenever associated AHU is unoccupied.
3. A two-position motor-operated damper near the duct connection to the relief louver shall open whenever the fan is operating and shall be closed whenever the fan is off. The damper operator shall be electronic and operated with a low-voltage signal.
4. A damper end switch shall be provided. The exhaust fan shall not engage until the position of the end switch indicates that the damper is fully open. When the exhaust fan is disengaged, the motor operated damper shall not close until a 30 second (adjustable) time delay has elapsed, allowing the fan to decelerate.

C. Exhaust fan Control (General Exhaust – Valade)

1. The exhaust fans provide toilet room and dressing room exhaust ventilation.
2. Each exhaust fan shall be operated according to separate, user defined schedule.
3. A two-position motor-operated damper near the duct connection to the relief louver shall open whenever the fan is operating and shall be closed whenever the fan is off. The damper operator shall be electronic and operated with a low-voltage signal.
4. A damper end switch shall be provided. The exhaust fan shall not engage until the position of the end switch indicates that the damper is fully open. When the exhaust fan is disengaged, the motor operated damper shall not close until a 30 second (adjustable) time delay has elapsed, allowing the fan to decelerate.

D. Exhaust Fan Control (Paint Booth Exhaust)

1. The exhaust fan provides process exhaust for the Paint Booth.
2. The exhaust fan shall be operated by a manual two position switch located within 48” of the exhaust hood.
3. Manual switch, associated power and interlock wiring shall be provided by Division 26.
4. Provide a plastic laminate sign per Division 23 section “Identification for HVAC Piping and Equipment” with the following text:
a. Paint Booth Exhaust.
5. A two-position motor-operated damper at the exhaust louver shall be open whenever the fan is operating and shall be closed whenever the fan is off. The damper operator shall be electronic and operated with a low-voltage signal.

E. Exhaust Fan Control (Dye Vat Exhaust)
1. The exhaust fan provides process exhaust for the dye vat kettle exhaust hood.
2. The exhaust fan shall be operated by a manual two position switch located within 48” of the exhaust hood.
3. Manual switch, associated power and interlock wiring shall be provided by Division 26.
4. Provide a plastic laminate sign per Division 23 section “Identification for HVAC Piping and Equipment” with the following text:
   a. Power switch for dye vat exhaust fan. Fan must be on whenever dye vat is in use.
5. A two-position motor-operated damper in the fan inlet duct shall open whenever the fan is operating and shall be closed whenever the fan is off. The damper operator shall be electronic and operated with a low-voltage signal.

F. Exhaust Fan Control (Catering).
1. The exhaust fan is a general exhaust fan for the catering area.
2. The exhaust fan shall operate continuously, whenever associated AHU supply fans are running.
3. A motor-operated damper shall open whenever the fan is started, and shall close whenever the fan is stopped.
4. Local override: A timed local override control shall allow an occupant to operate the fan at full flow (Adj) for an adjustable period of time. Initial override time 1 hour. At the expiration of this time, the exhaust fan return to normal operation.
   a. Provide local exhaust fan indicator light (green) in local override switch cover plate. Light shall be on whenever exhaust fan is on.
   b. Provide a plastic laminate sign per Division 23 section “Identification for HVAC Piping and Equipment” with the following text: Vent fan indication.
   c. Switch, associated power and interlock wiring shall be provided by Division 23.
5. Fan Schedule Control Override
   a. Contractor shall create functionality for exhaust fan to be controlled by programmable yearly schedule – one yearly schedule per zone. In this control mode,
   b. Fan schedule control functionality shall be manually turned on and off by building operator.

3.13 DUST COLLECTOR CONTROL

A. Factory hardware and software shall enable building management system to monitor, and display dust collector status and alarms. Refer to Division 23 Section “Dust Collectors.” All associated interlock wiring, relays, and other components required connect factory installed hardware to building management system shall be provided by Division 23. Confirm the best method of status and alarm monitoring with the dust collector manufacturer.

B. Dust collector shall be operated by a manual two position switch on the wall of the Scene Shop with a plastic laminate sign per Division 23 section “Identification for HVAC Piping and Equipment” with the following text: Dust Collector Operation.

C. All associated power and interlock wiring, relays, and other components required to provide interlock shall be provided by Division 23.

D. Provide pressure drop alarm messages listed below with adjustable setpoints to BAS. Initial setpoints per manufacturer’s recommendations.
   1. Low pressure drop
   2. High pressure drop alarm

E. Performance override: A toggle switch controlled by the building automation system at the operator workstation shall allow for the exhaust fan to be disabled during scheduled performances.
F. Operator Station Display: Indicate the following on operator workstation display terminal for the dust collector:
   1. DDC system graphic
   2. DDC system on-off indication
   3. Fan on-off indication
   4. Filter pressure drop
   5. Low pressure drop alarm setpoint
   6. High pressure drop alarm setpoint
   7. Low cleaning pressure drop setpoint
   8. High cleaning pressure drop setpoint
   9. Warning: Pressure drop within 0.2” w.c. of low cleaning pressure drop setpoint
   10. Warning: Pressure drop within 0.2” w.c. of high cleaning pressure drop setpoint
   11. Warning: Pressure drop at or below low pressure drop alarm setpoint
   12. Alarm: Pressure drop at or above high pressure drop alarm setpoint
   13. Alarm: Fan or belt failure (fan commanded on, but no airflow)

3.14 AIR TERMINAL UNIT OPERATING SEQUENCE

A. General
   1. Air terminal units shall be controlled automatically through the local direct digital control panels using PI and PID control methods. Sensing elements and valve operators shall be electronic types. Safety and limit controls shall utilize local electric or electronic control loops.
   2. Pressure Independent Control: Airflow measuring sensors at the air terminal unit inlet shall provide a signal to control the unit airflow proportionally between the minimum and maximum CFM set points regardless of upstream duct pressure.
   3. Heating water control valves shall be fully modulating electrically operated two-way throttling valves, normally open, unless otherwise indicated on the Drawings.

B. Shutoff VAV Unit Control
   1. A low-voltage space temperature sensor shall provide a signal to proportionally position the unit damper from minimum (zero) to maximum airflow to provide cooling to maintain the space temperature.
   2. Initial cooling set point 75°F.

C. Constant-Volume, Terminal Air Units, Hydronic
   1. Electronic sensor will indicate space temperature, the control system will modulate the damper to maintain scheduled airflow. A normally open, heating control valve will modulate to maintain the space temperature set point.
      a. Initial space temperature set points
         1) Occupied Temperature (cooling): 75 degrees F
         2) Occupied Temperature (heating): 72 degrees F
         3) Unoccupied Temperature (cooling): 78 degrees F
         4) Unoccupied Temperature (heating): 65 degrees F

D. Variable Air Volume Terminal Air Units with Hydronic Heating Coils
   1. Electronic space temperature sensor and DDC system will modulate damper and valve to maintain space temperature set point; sequence damper from full open to minimum position, then valve from closed to fully open.
      a. Initial space temperature set points
         1) Occupied Temperature (cooling): 75 degrees F
         2) Occupied Temperature (heating): 72 degrees F
         3) Unoccupied Temperature (cooling): 78 degrees F
         4) Unoccupied Temperature (heating): 65 degrees F
   2. Dual-Max VAV Control
      a. VAV air terminal units may utilize dual-max VAV control. An operator selectable option shall allow for separate VAV control sequence and control cooling and heating minimums to the values listed below:
1) Initial cooling minimum airflow setpoint is 20% of cooling max airflow.
2) Initial heating minimum airflow setpoint is 50% of cooling max airflow.

E. Carbon Dioxide Control
1. Variable air volume terminal units with carbon dioxide sensors shall modulate towards full open whenever associated air handling maximum CO2 level is exceeded. Reheat coil shall modulate to maintain space temperature.
   a. Alarm condition shall occur whenever space carbon dioxide setpoint is exceeded for more than 60 minutes (adj.)
   b. Initial setpoint: 1300 ppm.

F. Occupancy Sensor Control
1. In spaces with lighting provided occupancy/vacancy sensors, the BAS contractor shall interface to auxiliary contacts to monitor space occupancy status.
2. BAS shall modulate unit from unoccupied to occupied setpoints whenever space occupancy/vacancy controller detects occupancy. Units shall return to unoccupied status after 30 minutes of inactivity (adj.).
3. Occupancy sensor control functionality shall be manually turned on and off per zone by building operator and operation return to default schedule control.
4. Refer to electrical drawings for occupancy and vacancy sensor locations.
5. It is the responsibility of the Div 23 contractor for all wiring and interface to auxiliary contacts for connection to occupancy and vacancy sensors provided by others.

G. Additional alarms
1. Provide the following additional alarms:
   a. Alarm: High discharge temperature alarm. Provide an alarm to indicate that the discharge air temperature off of a terminal unit exceeds an adjustable high limit. Initial setpoint 100 deg F.
   b. Alarm: High room temperature alarm. Room temperature exceeds setpoint by 5 degrees F (adjustable).
   c. Alarm: Low room temperature alarm. Room temperature is lower than setpoint by 5 degrees F (adjustable).
   d. Critical zone temperature alarms shall be provided as follows for each critical zone:
      1) High Zone temperature: If the zone is above setpoint by an adjustable, user defined temperature. Initial high temperature zone alarm: 73 deg F.
      2) Low Zone Temperature: If the zone is below setpoint by an adjustable, user defined temperature. Initial low temperature zone alarm: 67 deg F.

3.15 HYDRONIC TERMINAL UNIT CONTROL
A. General.
1. Hydronic terminal units shall be controlled with local electronic controls, except as otherwise noted.

B. Finned Tube Radiation Control.
1. Finned Tube Radiation shall be controlled by one of two sequences:
   a. The BAS shall modulate each finned tube radiation heating water control valve to maintain the zone temperature setpoint.
   b. A second radiation sequence shall be utilized to operate fin tube radiation based on outdoor air temperature.
      1) Provide outdoor air linear fin tube radiation operation. Whenever outdoor air temperature is 30 deg F, fin tube control valves shall open to minimum position. Initial minimum position is 30% open. Fin tube control valve shall be at full open at 5 deg F.
      2) Space temperature sensor shall modulate the control valve open further if space setpoint is not satisfied.
      3) If space room temperature is two degrees (adj) above setpoint, fin tube radiation outdoor air sequence shall be over-ridden and control valve shall modulate closed.
2. Outdoor air temperature fin tube sequence control functionality shall be programmed to be manually turned on and off per zone by building operator and operation return to control (toggle switch on BAS).

3. Provide operator selectable function where finned tube radiation shall be prevented from operating whenever the outside air temperature is above 50 deg F (adj)

C. Operator Station Display: Indicate the following on operator workstation display terminal:
   1. DDC system graphic.
   2. DDC system on-off indication.
   3. DDC system occupied/unoccupied mode.
   4. Room/area served.
   5. Room occupied/unoccupied.
   6. Room temperature.
   7. Room temperature set point, heating.
   8. Room temperature set point, cooling.
   9. Room temperature set point, occupied.
  10. Room temperature set point, unoccupied.
  11. Air-damper position as percent open.
  12. Control-valve position as percent open.
  13. Duct mounted reheat coil discharge temperature.
  14. Alarm: High discharge temperature alarm. Provide an alarm to indicate that the discharge air temperature off of a terminal unit exceeds an adjustable high limit. Initial setting is 100 degrees F.
  15. Alarm: High room temperature alarm. Room temperature exceeds setpoint by 5 degrees F.
  16. Alarm: Low room temperature alarm. Room temperature is lower than setpoint by 5 degrees F.

3.16 UNIT HEATER CONTROL SEQUENCES

A. Electric Unit Heaters
   1. Manufacturer controls shall modulate the electric unit heaters to maintain space temperature.
   2. The DDC system shall monitor unit status and an electronic space temperature sensor shall monitor space temperature set point.
   3. Initial set point 68°F.
   4. Display:
      a. DDC system graphic
      b. Unit status (on/off)
      c. Room temperature indication
      d. Control valve position
      e. Occupancy status
      f. Alarm: Low room temperature alarm.

B. Hydronic Unit Heaters
   1. Electronic space temperature sensor and controller will cycle fan and two-position normally-open control valve to maintain space temperature set point.
   2. Display:
      a. DDC system graphic
      b. Unit status (on/off)
      c. Room temperature indication
      d. Room temperature set point
      e. Control valve position
      f. Occupancy status
      g. Alarm: Low room temperature alarm. Room temperature is lower than setpoint by 5 degrees F (adjustable).

3.17 FAN COIL UNIT CONTROL

A. General.
1. Unit includes a supply fan, chilled water cooling coil, hot water heating coil, and air filters.
2. Unit is a constant volume, variable temperature type which provides space heating and cooling.
3. The air unit shall be controlled automatically through local direct digital control panels using PI and PID control methods. Safety and limit controls shall utilize local electric control loops.
4. Unit shall be interlocked via DDC to start and stop.

B. Supply Fan Control
1. The unit shall run according to a user definable time schedule in the following modes:
   a. Occupied mode: The unit shall maintain:
      1) A 74 deg F cooling zone setpoint (adjustable)
      2) A 70 deg F heating zone setpoint (adjustable)
   b. Unoccupied Mode:
      1) An 80 deg F cooling zone setpoint (adjustable)
      2) A 60 deg F heating zone setpoint (adjustable)
   c. Fan coil units serving elevator, mechanical, electrical, telecommunications, and audio equipment rooms shall run continuously, as needed for space cooling.
2. Fan Alarms shall include:
   a. Fan Failure: Commanded on, but status is off
   b. Fan in Hand: Commanded off, but status is on
   c. Unit in manual override
3. For fan coils with VFDs, modulate the fan speed and coil valve positions in sequence to maintain space temperature.
4. Zone Unoccupied override
   a. A timed local override control shall allow an occupant to override the schedule and place the unit into an occupied mode for an adjustable period of time. Initial override time 2 hours. At the expiration of this time, the control of the unit shall automatically return to the schedule.
5. Unit Supply-Air Fan Operation:
   a. Occupied Periods: Fan runs continuously.
   b. Unoccupied Periods: Fan cycles to maintain room setback temperature.

C. Hydronic-Cooling-Coil Operation:
1. Occupied Periods: Modulate control valve to maintain room temperature.
2. Unoccupied Periods: Close control valve.
3. The cooling coil control valve shall be a two-way modulating valve, normally open (fail open).

D. Heating-Coil Operation:
1. Occupied Periods: Modulate control valve to provide heating if room temperature falls below thermostat set point.
2. Unoccupied Periods: Start fan and modulate control valve if room temperature falls below setback temperature.
3. The heating coil control valve shall be a two-way modulating valve, normally open.

E. Outdoor-Air Damper Operation (Outdoor Temperature Based Economizer):
1. Sequence for fan coil units with outdoor air connections.
2. Occupied Periods:
   a. Outdoor-Air Temperature below Room Temperature: If room temperature is above set point and the Outdoor Air temperature is below the supply air temperature set point, modulate outdoor-air damper to maintain supply air temperature at setpoint (adjustable - initially 55 degrees F) (outdoor-air economizer).
      1) If room temperature is below set point, close outdoor air damper.
   b. Outdoor-Air Temperature above Supply Temperature set point: Close outside air damper. Modulate coil valves to maintain room temperature at set point.
   c. Modulate return/relief damper(s) equal and opposite the outside air damper.
3. Unoccupied Periods: Close outdoor-air damper and open return-air damper.
F. Operator Station Display: Indicate the following on operator workstation display terminal for each fan coil unit:
   1. DDC system graphic.
   2. DDC system on-off indication.
   3. DDC system occupied/unoccupied mode.
   4. Room temperature indication.
   5. Room temperature set point.
   6. Zone occupied status
   7. Cooling coil control-valve position.
   8. Heating coil control valve position
   9. Outside air damper position (units with air side economizer).
  10. Return air damper position (units with air side economizer)
  11. Relief air damper position
  12. Supply air temperature
  13. Fan on-off indication
  14. Filter differential pressure
  15. Filter change advisory message: Filter differential pressure exceeds adjustable setpoint. Initial setpoint 0.5 in. w.g.
  16. Alarm: High supply air temperature (Temperature over an adjustable setpoint. Initial setpoint 105° F.)
  17. Alarm: Low supply air temperature (Temperature below an adjustable setpoint. Initial setpoint: 48° F)
  18. Zone temperature alarms shall be provided as follows for each fan coil unit:
      a. High Zone temperature. If the zone is above setpoint by an adjustable, user defined margin. Initial margin setting: 6 deg F.
      b. Low Zone Temperature. If the zone is below setpoint by an adjustable, user defined margin. Initial margin setting: 5 deg F.
  19. Unit discharge air temperature alarms
      a. Low discharge air temperature. If the unit discharge air temperature is below 50 deg F (adjustable).
  20. Fan Alarms shall include:
      a. Fan Failure: Commanded on, but status is off
      b. Fan in Hand: Commanded off, but status is on
      c. Unit in manual override

3.18 LOCAL HUMIDIFIER CONTROL

A. General
   1. Packaged humidifier unit with self-contained controls.
   2. The unit shall be controlled automatically through the local packaged controls but shall additionally be addressable and monitored on the DDC.
   3. The unit shall be interlocked through the DDC to start and stop.

B. Whenever there is a call for room humidification, the local fan coil unit fan shall be at full flow. On a call for room humidification, the building automation system engage the associated fan coil unit to operate fan at full flow condition. Provide user adjustable humidifier delays and additional fan runtime when humidity setpoints are met.

C. Provide separate room RH sensor, located remotely from the humidifier unit, not closer than 10’ from the humidifier.

D. Whenever room relative humidity exceeds high humidity alarm, the humidifier shall be staged off.

E. Operator Station Display: Indicate the following on operator workstation display terminal for each wall mounted electronic humidifier:
   1. DDC system graphic.
   2. DDC system on-off indication.
   3. DDC system occupied/unoccupied mode.
4. Room/area served.
5. Space temperature
6. Space temperature setpoint
7. Space relative humidity – measured at humidifier
8. Space relative humidity – measured at remote RH sensor
9. Space relative humidity setpoint
11. Alarm: High humidity (Humidity above adjustable setpoint. Initial setpoint: 60% RH.)
12. Alarm: Low humidity (Humidity below adjustable setpoint: Initial setpoint: 30% RH.)
13. Alarm: Low water level

3.19 OUTSIDE AIR CONDITIONS

A. The BAS shall monitor and display the outside air temperature and humidity and calculate the outside air enthalpy on a continual basis. These values shall be made available to the system at all times.

B. Outside Air Temperature and Humidity History
1. The BAS shall monitor and record the high and low temperature and humidity readings for the outside air. These readings shall be recorded on a daily, month-to-date, and year-to-date basis.

C. Cooling Degree Day History
1. The BAS shall provide a Degree Day history index that reflects the energy consumption for the facility cooling demand. Computations shall use a mean daily temperature of 65 deg. F (adjustable). The Degree Day peak value readings shall be recorded on a daily, month-to-date, and year-to-date basis.

D. Heating Degree Day History
1. The BAS shall provide a Degree Day history index that reflects the energy consumption for the facility cooling demand. Computations shall use a mean daily temperature of 65 deg. F (adjustable). The Degree Day peak value readings shall be recorded on a daily, month-to-date, and year-to-date basis.

E. Sensor failure alarm: Sensor reading indicates shorted or disconnected sensor.

F. Additional alarms
1. Provide the following additional alarms:
   a. Alarm: Sensor failure: Sensor reading indicates shorted or disconnected sensor

3.20 VARIABLE FREQUENCY DRIVE (VARIABLE SPEED DRIVE) MONITORING INTERFACE

A. Provide monitoring of current VFD(VSD) status and operating conditions through the drive BACNet communications interface port.

B. Operator Station Display: Indicate the following on operator workstation display terminal:
1. DDC system graphic.
2. DDC system on-off indication.
3. DDC system occupied/unoccupied mode.
4. Drive number and motor served
5. Motor speed (RPM)
6. Motor frequency (Hz)
8. Motor run time
9. VFD status
10. Alarm the following conditions:
    a. Motor overspeed condition
    b. Motor overcurrent condition
    c. VFD Fault
3.21 POWER MONITORING AND REPORTING

A. The BAS shall meter, monitor and record each of the points below. The contractor must refer to the electrical one-line diagram E010, generator and transfer switch specifications, and panelboard schedules to for additional information.

1. Generator power from generator controller.
   a. kW demand
   b. kVA demand
   c. kWh

2. Air Cooled Chiller power consumption

3. Air Handling Unit power consumption (aggregated from VFDs)

4. System hot water system flow rate (gpm)

5. System hot water supply and return water temperature

6. System hot water btu consumption (calculated)

7. System chilled water system flow rate (gpm)

8. System chilled water supply and return water temperature

9. System chilled water btu consumption (calculated)

10. Outdoor-air temperature

11. Outdoor-air relative humidity

12. Daily, month to date, and year to date high outdoor-air temperature

13. Daily, month to date, and year to date low outdoor-air temperature

14. Daily, month to date, and year to date cooling degree days

15. Daily, month to date, and year to date heating degree days

B. Monitoring Information

1. The BAS shall monitor and record the peak (high and low) demand readings from the meters.

2. The readings shall be taken at no less than 15 minute intervals.

3. These readings shall be recorded on a daily, month-to-date, and year-to-date basis.

C. It is the responsibility of the temperature controls contractor to obtain information from shop drawings, other trades, etc. to confirm meter points information. Notify Engineer immediately if information needed for metering is not available.

D. Generate and transmit reports of the monitoring points and data listed above. The reports shall be generated and emailed every month (adjustable) to a list of members identified by the Owner.

E. History and Frequency: The readings shall be taken at no less than 15 minute intervals, and shall be logged, trended and stored for no less than one year. These readings shall also be recorded on a daily, month-to-date, and year-to-year basis. Once a month, data shall be automatically exported to CSV file and saved on the network and operator station. Coordinate file saving and naming conditions with the Bowdoin facilities, Commissioning authority and Engineer.

F. Refer to both Division 22, 23 and 26 for additional information regarding metering and monitoring. It is the responsibility of the temperature controls contractor to obtain information from shop drawings, other trades, etc. and develop calculated performance information. Notify Engineer immediately if information needed for calculation is not available.

3.22 LOSS OF POWER

A. The BAS shall monitor main building power status. Upon loss of power, the system shall provide a high-priority alarm. The high-priority alarm shall be configured to communicate with specific communication protocols (ie emails, texts, etc.) and to specific groups identified by the owner. Coordinate specific requirements with owner, commissioning authority, and engineer.

1. It is the responsibility of the Division 23 contractor to provide all necessary monitoring devices and necessary potential transformer, current transducers, wiring, accessories, etc. of the main building power status by monitoring the automatic transfer switch, generator, or provide
B. Upon loss of power, the BAS shall have a UPS system (provided by DIV 23) that shall maintain all building automation system programming, reporting, and control functionality only (not equipment power, just control power). UPS shall be able to power BAS system and maintain all programming, data, etc. for a minimum of 4 hours of complete loss of power.

1. In addition to maintaining the main BAS system, it is the responsibility of the controls contractor that the building automation system and associated UPS shall maintain all functionality of mechanical systems and associated controllers tied to the generator. Equipment and systems that need to be functional are identified in EM800 series of electrical drawings.

C. Emergency Generator Interface

1. The control contractor shall coordinate communication protocol with Division 26 to provide a communications interface with the generator and alternate critical mechanical systems generator with the BAS.

2. Coordinate with the emergency generator vendor(s) to obtain system points list to map appropriate points to be monitored through the BAS.

3.23 SUMP PUMP MONITORING

A. Refer to Division 22 Sections “Sump Pumps” for a description of the automatic control sequence for the sump pump.

B. Interface with sump pump motor control panel located near pump control panel to monitor the following:

1. Pump motor on-off status (one each)
2. Alarm (one each)

3.24 DOMESTIC WATER HEATER CONTROL

A. Refer to Division 22 Sections “Domestic Water Heaters” and “Domestic Water Pumps” for a description of the automatic control sequence for the domestic water heaters and domestic water circulating pumps.

B. Interface to the domestic hot water heaters to provide monitoring, control and setpoint adjustment of the following:

1. Domestic water supply temperature setpoint
2. Domestic water supply temperature
3. Heater on-off indicator (one for each hot water heater)
4. Heater alarm (one for each hot water heater)
5. Pump on-off indicator

3. Provide the following alarms:
   a. High water temperature: If water supply temperature is greater than an adjustable setpoint.
   b. Heater Failure: If water supply temperature is lower than an adjustable setpoint.
   c. Pump Failure: If pump is commanded on, and status is off.

3.25 MISCELLANEOUS

A. The BAS shall monitor the following:

1. Emergency generator status (alarm)
2. Emergency generator fault (alarm)
3. Piano Storage Room condensate drain pan water sensor (alarm)

B. Override Reporting

1. Create and provide a report of all sequences, settings, setpoints, etc. that are operating in an override mode (non-automatic function). Report shall include associated system, equipment
name, and date of change. Report shall be created upon a single request command by the building operator.

END OF SECTION
SECTION 231123
FACILITY NATURAL-GAS PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Pipes, tubes, and fittings.
      2. Piping specialties.
      3. Piping and tubing joining materials.
      4. Valves.
      5. Pressure regulators.
      7. Concrete bases.

1.3 DEFINITIONS
   A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
   B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
   C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
   D. Low Pressure Gas System (LPG): Systems that operate at pressures not exceeding 14-inches water column.
   E. Medium Pressure Gas System (MPG): Systems that operate at pressures greater than 14-inches water column and not greater than 5 psig.
   F. High Pressure Gas System (HPG): Systems that operate at pressures greater than 5-psig.

1.4 PERFORMANCE REQUIREMENTS
   A. Minimum Operating-Pressure Ratings:
      1. Piping and Valves: 125 psig minimum unless otherwise indicated.
      2. Service Regulators: 65 psig minimum unless otherwise indicated.
      3. Minimum Operating Pressure of Service Meter: 5 psig – verify with local utility requirements.
   B. Natural-Gas System Pressure: More than 0.5 psig but not more than 2 psig.

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of the following:
      1. Piping specialties.
      2. Corrugated, stainless-steel tubing with associated components.
      3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
      4. Pressure regulators. Indicate pressure ratings and capacities.
5. Service meters. Indicate pressure ratings and capacities. Include bypass fittings and meter bars and supports.
6. Dielectric fittings.

B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
   1. Shop Drawing Scale: 1/4 inch per foot.
   2. Detail mounting, supports, and valve arrangements for service meter assembly and pressure regulator assembly.

1.6 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
B. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities
C. Welding certificates.
D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For motorized gas valves, pressure regulators, and service meters to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE
A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.9 DELIVERY, STORAGE, AND HANDLING
A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction.
B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
D. Protect stored PE pipes and valves from direct sunlight.

1.10 PROJECT CONDITIONS
A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

1.11 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided.
B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 “Access Doors and Frames.”

PART 2 PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
   4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
      b. End Connections: Threaded or butt welding to match pipe.
      c. Lapped Face: Not permitted underground.
      e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
   5. Mechanical Couplings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Dresser Piping Specialties; Division of Dresser, Incorporated. (www.dresser.com)
         2) Smith-Blair, Incorporated. (www.smith-blair.com)
      b. Steel flanges and tube with epoxy finish.
      c. Buna-nitrile seals.
      d. Stainless-steel bolts, washers, and nuts.
      e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
      f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.

B. PE Pipe: ASTM D 2513, SDR 11.
   1. PE Fittings: ASTM D 2683, socket-fusion type or ASTM D 3261, butt-fusion type with dimensions matching PE pipe.
   2. PE Transition Fittings: Factory-fabricated fittings with PE pipe complying with ASTM D 2513, SDR 11; and steel pipe complying with ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
      a. Underground Portion: PE pipe complying with ASTM D 2513, SDR 11 inlet connected to steel pipe complying with ASTM A 53/A 53M, Schedule 40, Type E or S, Grade B, with corrosion-protective coating for aboveground outlet.
      b. Outlet shall be threaded or flanged or suitable for welded connection.
      c. Bridging sleeve over mechanical coupling.
      d. Factory-connected anode.
      e. Tracer wire connection.
      f. Ultraviolet shield.
      g. Stake supports with factory finish to match steel pipe casing or carrier pipe.
   4. Plastic Mechanical Couplings, NPS 1-1/2 and Smaller: Capable of joining PE pipe to PE pipe.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         2) Mueller Company; Gas Products Division (www.muellercompany.com)
      b. PE body with molded-in, stainless-steel support ring.
c. Buna-nitrile seals.
d. Acetal collets.
e. Electro-zinc-plated steel stiffener.

5. Plastic Mechanical Couplings, NPS 2 and Larger: Capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      2) Mueller Company; Gas Products Division (www.muellercompany.com)
   b. Fiber-reinforced plastic body.
c. PE body tube.
d. Buna-nitrile seals.
e. Acetal collets.
f. Stainless-steel bolts, nuts, and washers.

6. Steel Mechanical Couplings: Capable of joining plain-end PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Dresser Piping Specialties; Division of Dresser, Incorporated. (www.dresser.com)
      2) Smith-Blair, Incorporated. (www.smith-blair.com)
   b. Stainless-steel flanges and tube with epoxy finish.
c. Buna-nitrile seals.
d. Stainless-steel bolts, washers, and nuts.
e. Factory-installed anode for steel-body couplings installed underground.

2.2 PIPING SPECIALTIES

A. Appliance Flexible Connectors:
   2. Corrugated stainless-steel tubing with polymer coating.
   3. Operating-Pressure Rating: 0.5 psig.
   5. Threaded Ends: Comply with ASME B1.20.1.
   6. Maximum Length: 72 inches

B. Y-Pattern Strainers:
   1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
   2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
   3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.

C. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.
2.4 MANUAL GAS SHUTOFF VALVES

A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.

B. General Requirements for Metallic Valves, NPS 2 and Smaller: Comply with ASME B16.33.
   1. CWP Rating: 125 psig.
   3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
   5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
   6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.

C. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with ASME B16.38.
   1. CWP Rating: 125 psig.
   2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
   4. Service Mark: Initials "WOG" shall be permanently marked on valve body.

D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BrassCraft Manufacturing Company; a Masco company. (www.brasscraft.com)
      b. Conbraco Industries, Incorporated; Apollo Division (www.apollovalves.com)
   3. Ball: Chrome-plated bronze.
   4. Stem: Bronze; blowout proof.
   5. Seats: Reinforced TFE; blowout proof.
   6. Packing: Threaded-body pack nut design with adjustable-stem packing.
   8. CWP Rating: 600 psig.
   9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
   10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

E. Bronze Plug Valves: MSS SP-78.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Lee Brass Company. (www.leebrass.com)
   5. Operator: Square head or lug type with tamperproof feature where indicated.
   6. Pressure Class: 125 psig.
   7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
   8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

F. Cast-Iron, Non-lubricated Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. Mueller Company; Gas Products Division (www.muellercompany.com)
   c. Xomox Corporation; a Crane company. (www.cranechempharma.com)

2. Body: Cast iron, complying with ASTM A 126, Class B.

3. Plug: Bronze or nickel-plated cast iron.

4. Seat: Coated with thermoplastic.

5. Stem Seal: Compatible with natural gas.

7. Operator: Square head or lug type with tamperproof feature where indicated.

8. Pressure Class: 125 psig.

9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.

10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

G. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flowserve. (www.flowserve.com)
   b. Homestead Valve; a division of Olson Technologies, Incorporated (www.homesteadvalve.com)
   d. Milliken Valve Company. (www.millikenvalve.com)
   e. Mueller Company; Gas Products Division (www.muellercompany.com)

2. Body: Cast iron, complying with ASTM A 126, Class B.

3. Plug: Bronze or nickel-plated cast iron.

4. Seat: Coated with thermoplastic.

5. Stem Seal: Compatible with natural gas.

7. Operator: Square head or lug type with tamperproof feature where indicated.

8. Pressure Class: 125 psig.

9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.

10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

H. PE Ball Valves: Comply with ASME B16.40.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Kerotest Manufacturing Corporation (www.kerotest.com)

2. Body: PE.

3. Ball: PE.

5. Seats and Seals: Nitrile.

6. Ends: Plain or fusible to match piping.

7. CWP Rating: [80 psig].

8. Operating Temperature: [Minus 20 to plus 140 degrees F].

9. Operator: Nut or flat head for key operation.

10. Include plastic valve extension.

11. Include tamperproof locking feature for valves where indicated on Drawings.

I. Valve Boxes:

1. Cast-iron, two-section box.

2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of 5 inches in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.5 MOTORIZED GAS VALVES

   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ASCO Power Technologies, LP; Division of Emerson. (www.ascovalve.com)
      b. Dungs, Karl, Incorporated (www.dungs.com)
      c. Eaton Corporation; Controls Division (www.eaton.com)
      d. Eclipse Combustion, Incorporated (www.eclipsenet.com)
      e. Honeywell International Incorporated (www.honeywell.com)
      f. Johnson Controls. (www.johnsoncontrols.com)

2. Body: Brass or aluminum.
5. Normally closed.
7. Electrical operator for actuation by appliance automatic shutoff device.

B. Electrically Operated Valves: Comply with UL 429.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ASCO Power Technologies, LP; Division of Emerson. (www.ascovalve.com)
      b. Dungs, Karl, Incorporated (www.dungs.com)
      c. Eclipse Combustion, Incorporated (www.eclipsenet.com)
      d. Magnatrol Valve Corporation. (www.magnatrol.com)
      e. Parker Hannifin Corporation; Parflex Division. (www.parker.com)
      f. Watts Regulator Co.; Division of Watts Water Technologies, Inc. (www.watts.com)

2. Pilot operated.
3. Body: Brass or aluminum.
5. Springs and Valve Trim: Stainless steel.
6. 120-V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
7. NEMA ICS 6, Type 4, coil enclosure.

2.6 PRESSURE REGULATORS

A. General Requirements:
   1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.

B. Service Pressure Regulators: Comply with ANSI Z21.80.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Fisher Control Valves and Regulators; Division of Emerson Process Management. (www2.emersonprocess.com)
      b. Invensys. (www.invensys.com)
      c. Itron Incorporated (www.itron.com/)
d. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 100 psig.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Actaris.
   b. American Meter Company.
   c. Eclipse Combustion, Incorporated (www.eclipsenet.com)
   d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
   e. Invensys. (www.invensys.com)
   f. Maxitrol Company.
   g. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 5 psig.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Canadian Meter Company Incorporated (www.elster.com)
   b. Eaton Corporation; Controls Division (www.eaton.com)
   c. Harper Wyman Company
   d. Maxitrol Company. (www.maxitrol.com)
   e. SCP, Incorporated
5. Seat Disc: Nitrile rubber.
8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.

2.7 DIELECTRIC FITTINGS
A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
B. Dielectric Flanges:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Central Plastics Company. (www.centralplastics.com)
      b. Watts Regulator Co.; Division of Watts Water Technologies, Inc. (www.watts.com)
      c. Wilkins; a Zurn company.
   2. Description:
      b. Factory-fabricated, bolted, companion-flange assembly.
      c. Pressure Rating: 150 psig.
      d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
C. Dielectric-Flange Insulating Kits:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Calpico, Incorporated (www.calpicoinc.com)
      c. Central Plastics Company. (www.centralplastics.com)
      d. Pipeline Seal and Insulator, Incorporated (www.pipelineseal.com)
   2. Description:
      a. Non-conducting materials for field assembly of companion flanges.
      b. Pressure Rating: 150 psig.
      c. Gasket: Neoprene or Phenolic.
      d. Bolt Sleeves: Phenolic or polyethylene.
      e. Washers: Phenolic with steel backing washers.

2.8 LABELING AND IDENTIFYING
A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

PART 3 EXECUTION
3.1 EXAMINATION
A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION
A. Inspect natural-gas piping according to NFPA 54 and the Michigan Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.

3.3 VALVE INSTALLATION
A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
B. Install underground valves with valve boxes.
C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
D. Install anode for metallic valves in underground PE piping.

3.4 PIPING JOINT CONSTRUCTION
A. Ream ends of pipes and tubes and remove burrs.
B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
C. Threaded Joints:
   1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
   2. Cut threads full and clean using sharp dies.
   3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
   4. Apply appropriate tape or thread compound to external pipe threads unless Dryseal threading is specified.
   5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
D. Welded Joints:
   2. Bevel plain ends of steel pipe.
   3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not over-tighten.
H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   1. Plain-End Pipe and Fittings: Use butt fusion.
   2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.5 HANGER AND SUPPORT INSTALLATION
A. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
B. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
   1. NPS 1 and Smaller: Maximum span, 96 inches; minimum rod size, 3/8 inch.
   2. NPS 1-1/4: Maximum span, 108 inches; minimum rod size, 3/8 inch.
   3. NPS 1-1/2 and NPS 2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
   4. NPS 2-1/2 to NPS 3-1/2: Maximum span, 10 feet; minimum rod size, 1/2 inch.
   5. NPS 4 and Larger: Maximum span, 10 feet; minimum rod size, 5/8 inch.
3.6 CONNECTIONS
A. Connect to utility's gas main according to utility's procedures and requirements.
B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
C. Install piping adjacent to appliances to allow service and maintenance of appliances.
D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.7 LABELING AND IDENTIFYING
A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below sub grade under pavements and slabs.

3.8 PAINTING
A. Comply with requirements in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for painting interior and exterior natural-gas piping.
B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.
   1. Alkyd System: MPI EXT 5.1D.
      c. Topcoat: Exterior alkyd enamel flat.
      d. Color: Gray.
C. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.9 FIELD QUALITY CONTROL
A. Perform tests and inspections.
B. Tests and Inspections:
   1. Test, inspect, and purge natural gas according to NFPA 54 and the Michigan Fuel Gas Code and authorities having jurisdiction.
C. Natural-gas piping will be considered defective if it does not pass tests and inspections.
D. Prepare test and inspection reports.

3.10 PIPING SCHEDULE
A. Aboveground natural-gas piping shall be one of the following:
   1. Steel pipe with malleable-iron fittings and threaded joints.
   2. Steel pipe with wrought-steel fittings and welded joints.

3.11 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE
A. Valves for pipe sizes NPS 2 and smaller at service meter shall be the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.

B. Distribution piping valves for pipe sizes NPS 2 and smaller shall be the following:
   1. Two-piece, full-port, bronze ball valves with bronze trim.

C. Distribution piping valves for pipe sizes NPS 2-1/2 and larger shall be the following:
   1. Bronze plug valve.
   2. Cast-iron, lubricated plug valve.

D. Valves in branch piping for single appliance shall be the following:
   1. Two-piece, full-port, bronze ball valves with bronze trim.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes pipe and fitting materials and joining methods for the following:
      1. Hot-water heating piping.
      2. Chilled-water piping.
      3. Makeup-water piping.
      4. Condensate-drain piping.
      5. Air-vent piping.

1.3 ACTION SUBMITTALS
   A. Delegated-Design Submittal:
      1. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
      2. Locations of pipe anchors and alignment guides and expansion joints and loops.
      3. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
      4. Locations of and details for penetration and fire-stopping for fire- and smoke-rated wall and floor and ceiling assemblies.

1.4 INFORMATIONAL SUBMITTALS
   A. Coordination Drawings: Piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
      1. Suspended ceiling components.
      2. Other building services.
      3. Structural members.
   B. Field quality-control reports.
   C. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.

1.5 QUALITY ASSURANCE
   A. Installer Qualifications:
   B. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   C. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
      2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
D. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

1.6 COORDINATION

A. Coordinate layout and installation of hydronic piping and suspension system components with other construction, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

B. Coordinate pipe sleeve installations for foundation and exterior wall penetrations. Coordinate with requirements specified in Division 7 Sections for sealing pipe penetrations through exterior and foundation walls.

C. Coordinate pipe fitting pressure classes with products specified in related Sections.

D. Coordinate power requirements for hydronic specialties with Division 26 installer.

E. Coordinate the installation of hydronic control devices with Section 230900 "Instrumentation and Controls for HVAC".

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:

1. Hot-Water Heating Piping: 125 psig at 200 degrees F.
2. Chilled-Water Piping: 125 psig at 200 degrees F.
3. Makeup-Water Piping: 80 psig at 150 degrees F.
4. Condensate-Drain Piping: 150 degrees F.
5. Air-Vent Piping: 200 degrees F.
6. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.

2.2 NOISE CONTROL FOR MECHANICAL SYSTEMS

A. Some systems and equipment requirements may also be included in specification section 230548 "Noise Control for Mechanical Systems." Refer to both specification sections for acoustic requirements. Where specifications differ, the more stringent acoustic requirement applies.

2.3 COPPER TUBE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide copper tubing and fittings manufactured by one of the following:

- Cambridge-Lee Industries Incorporated.
- Cerro Flow Products Incorporated.
- Mueller Industries Incorporated.
- Nibco Incorporated

B. Drawn-Temper Copper Tubing: ASTM B 88, Type L

C. DWV Copper Tubing: ASTM B 306, Type DWV.

D. Copper or Bronze Pressure-Seal Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   - NIBCO INC.
   - Viega.
2. Housing: Copper.
3. O-Rings and Pipe Stops: EPDM.
4. Tools: Manufacturer's special tools.
5. Minimum 200-psig working-pressure rating at 250 deg F.
2.4 STEEL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide steel pipe manufactured by one of the following:
   1. American Steel Pipe; Division of American Cast Iron Pipe Company.
   2. Central Steel and Wire Company.
   3. LaBarge Pipe and Steel Company.

B. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; welded and seamless, Grade B, and wall thickness as indicated in "Piping Applications" Article.

C. Stainless-Steel Pipe and Fittings: Schedule 10, ASTM A 312/A 312M, Grade TP304L or TP316L, unless otherwise indicated; seamless pipe and ASTM A 403/A 403M, Class S, seamless fittings matching pipe thickness and grade, for welded joints.

D. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in "Piping Applications" Article.

F. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in "Piping Applications" Article.

G. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping Applications" Article.

H. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.

I. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   2. End Connections: Butt welding.
   3. Facings: Raised face.

J. Grooved Mechanical-Joint Fittings and Couplings:
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Anvil International, Inc.
      b. Central Sprinkler Company; a division of Tyco Fire & Building Products.
      c. National Fittings, Inc.
      d. Victaulic Company.
   2. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106/A 106M, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
   3. Couplings: Ductile- or malleable-iron housing and EPDM or nitrile gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

K. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.5 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.
      a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.

E. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

F. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

PART 3 EXECUTION

3.1 PIPE PENETRATIONS

A. HVAC, DOMESTIC WATER, SEWER, DRAIN AND VENT PIPING
   1. Where a pipe passes through a wall, ceiling or floor slab, a steel sleeve shall be cast or grouted into the structure. The internal diameter of the sleeve shall be 50mm (2") larger than the external diameter of the pipe passing through it. After all of the piping is installed in that area, the Contractor shall check the clearance and correct it, if necessary, to within 1/50mm (2"). Then the void shall be packed full depth with glass/mineral fiber and sealed at both ends, 25mm (1") deep, with sealant backed by foam rod.

3.2 PIPING APPLICATIONS

A. Hot-water heating piping, aboveground, NPS 3 and smaller, shall be any of the following:
   1. Type L drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

B. Hot-water heating piping, aboveground, NPS 4 and larger shall be the following:
   1. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

C. Chilled-water piping, aboveground, NPS 3 and smaller shall be the following:
   1. Type L drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

D. Chilled-water piping, aboveground, NPS 4 and larger shall be the following:
   1. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

E. Makeup-water piping installed aboveground shall be the following:
   1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

F. Condensate-Drain Piping: Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

G. Air-Vent Piping:
   1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
   2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.

H. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.

3.3 PIPING INSTALLATIONS

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
B. Install exterior underground piping and fittings according to the manufacturer’s published instructions. Provide a minimum of four feet of cover.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

M. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

N. Install piping at a uniform grade of 0.2 percent upward in direction of flow.

O. Reduce pipe sizes using eccentric reducer fitting installed with level side up.

P. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.

Q. Install valves according to Section 230523 "General-Duty Valves for HVAC Piping."

R. Install unions in steel piping, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

S. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

T. Install shutoff valve immediately upstream of each dielectric fitting.

U. Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.

V. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for identifying piping.

W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

Z. Install drain traps for each condensate drain pan for cooling coils in air handling units and fan-coil units. Provide vented water seal and terminate with a turned-down elbow at a floor drain.
   1. For roof-mounted equipment, provide drain traps with vented water seal and a turned-down elbow to discharge into the roof drain.

AA. Install drain piping for outside air and relief/exhaust air plenums, and as indicated. Provide a waste fitting on the sheet metal plenum, and extend a turned-down elbow at a floor drain. Do not trap. Do not use plastic pipe.
3.4 DIELECTRIC FITTING INSTALLATION
A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric nipples or flanges.
C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.
D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.5 HANGERS AND SUPPORTS
A. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hanger, support, and anchor devices. Comply with the following requirements for maximum spacing of supports.
B. Install the following pipe attachments:
   1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
   2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
   3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
   4. Spring hangers to support vertical runs.
   5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
   6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.
C. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
   1. NPS 3/4: Maximum span, 7 feet.
   2. NPS 1: Maximum span, 7 feet.
   3. NPS 1-1/2: Maximum span, 9 feet.
   4. NPS 2: Maximum span, 10 feet.
   5. NPS 2-1/2: Maximum span, 11 feet.
   6. NPS 3 and Larger: Maximum span, 12 feet.
D. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:
   1. NPS 3/4: Maximum span, 5 feet; minimum rod size, 1/4 inch.
   2. NPS 1: Maximum span, 6 feet; minimum rod size, 1/4 inch.
   3. NPS 1-1/4: Maximum span, 7 feet; minimum rod size, 3/8 inch.
   4. NPS 1-1/2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
   5. NPS 2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
   6. NPS 2-1/2: Maximum span, 9 feet; minimum rod size, 3/8 inch.
   7. NPS 3 and Larger: Maximum span, 10 feet; minimum rod size, 3/8 inch.
E. Plastic Piping Hanger Spacing: Space hangers according to pipe manufacturer's written instructions for service conditions. Avoid point loading. Space and install hangers with the fewest practical rigid anchor points.
F. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

3.6 PIPE JOINT CONSTRUCTION
A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
C. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

F. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

H. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   3. PVC Pressure Piping: Join ASTM D 1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D 2855.
   4. PVC Non-pressure Piping: Join according to ASTM D 2855.

I. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

J. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.

3.7 PIPES CROSSING ACOUSTIC JOINTS
A. Any pipe crossing an acoustical joint shall have a twin-sphere neoprene flexible connector at the joint, with the exception of piping associated with fire protection, gas and compressed air, and shall be suspended by Type D isolators as follows:
   1. Pipes with inner diameters less than 50mm (2") shall be suspended by Type E isolators for a minimum distance of 6m (20') on each side of the joint.
   2. Pipes with an inner diameter of 50mm (2") or greater shall be suspended on Type D isolators for a minimum distance of 6m (20') on the non-isolated structure and for the entire pipe length on the isolated structure.

3.8 TERMINAL EQUIPMENT CONNECTIONS
A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install control valves in accessible locations close to connected equipment.

C. Install ports for pressure gages and thermometers at coil inlet and outlet connections. Comply with requirements in Section 230519 "Meters and Gages for HVAC Piping."

3.9 CHEMICAL TREATMENT
A. Refer to HVAC Water Treatment specification for required chemical treatment.

3.10 FIELD QUALITY CONTROL
A. Prepare hydronic piping according to ASME B31.9 and as follows:
   1. Leave joints, including welds, uninsulated and exposed for examination during test.
   2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
   3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.

5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
3. Isolate expansion tanks and determine that hydronic system is full of water.
4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

C. Perform the following before operating the system:
1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Clean all strainers.
4. Set makeup pressure-reducing valves for required system pressure.
5. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
6. Set temperature controls so all coils are calling for full flow.
7. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
8. Verify proper chemical treatment for each system.

END OF SECTION
SECTION 232116
HYDRONIC PIPING SPECIALTIES

PART 1 GENERAL

1.1 SUMMARY
A. Section includes special-duty valves and specialties for the following:
   1. Hot-water heating piping.
   2. Chilled-water piping.
   3. Dual-temperature piping.
   4. Makeup-water piping.
   5. Condensate-drain piping.
   7. Air-vent piping.
   8. Condensate Coolers

1.2 ACTION SUBMITTALS
A. Product Data: For each type of the following:
   1. Valves: Include flow and pressure drop curves based on manufacturer’s testing for calibrated-orifice balancing valves and automatic flow-control valves.
   2. Air-control devices.
   3. Hydronic specialties.

1.3 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For air-control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

1.4 MAINTENANCE MATERIAL SUBMITTALS
A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flow meter, probes, hoses, flow charts, and carrying case.

1.5 QUALITY ASSURANCE
A. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
   1. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
   1. Hot-Water Heating Piping: 125 psig at 200 degrees F.
   2. Chilled-Water Piping: 125 psig at 200 degrees F.
   3. Makeup-Water Piping: 80 psig at 150 degrees F.
   4. Condensate-Drain Piping: 150 degrees F.
   5. Air-Vent Piping: 200 degrees F.
   6. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.
2.2 VALVES

A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Section 230523 “General-Duty Valves for HVAC Piping.” Section 15112 “General-Duty Valves for HVAC Piping.”

B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Section 230900 “Instrumentation and Control for HVAC.”

C. Bronze, Calibrated-Orifice, Balancing Valves:
   1. Valve sizes up to NPS 3
   2. Manufacturers: Subject to compliance with requirements, provide products by the following:
      b. Bell & Gossett Domestic Pump.
      c. Gerand Engineering Co.
      d. Tour & Andersson; available through Victaulic Company.
   3. Body: Bronze, ball or plug type with calibrated orifice or venturi.
   4. Ball: Brass or stainless steel.
   5. Plug: Resin.
   6. Seat: PTFE.
   7. End Connections: Threaded or socket.
   9. Handle Style: Lever, with memory stop to retain set position.
   11. Maximum Operating Temperature: 250 degree F.

D. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
   1. Valve sizes NPS 4 and up
   2. Manufacturers: Subject to compliance with requirements, provide products by the following:
      b. Bell & Gossett Domestic Pump.
      c. Gerand Engineering Co.
      d. Tour & Andersson; available through Victaulic Company.
   3. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
   4. Ball: Brass or stainless steel.
   5. Disc: Glass and carbon-filled PTFE.
   6. Seat: PTFE.
   7. End Connections: Flanged or grooved.
   9. Handle Style: Lever, with memory stop to retain set position.
   11. Maximum Operating Temperature: 250 degree F.

   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Amtrol, Incorporated.
      b. Armstrong Pumps, Incorporated.
      c. Bell & Gossett Domestic Pump.
      d. Conbraco Industries, Incorporated.
      f. Watts Regulator Co.
   2. Body: Bronze or brass.
   3. Disc: Glass and carbon-filled PTFE.
   5. Stem Seals: EPDM O-rings.
   6. Diaphragm: EPT.
8. Inlet Strainer: stainless steel removable without system shutdown.
10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

F. Automatic Flow-Control Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   b. Griswold Controls.
   c. Nexus Valve, Incorporated.
2. Body: Brass or ferrous metal.
3. Piston and Spring Assembly Corrosion resistant, tamper proof, self-cleaning, and removable.
4. Combination Assemblies: Include bronze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
9. Maximum Operating Temperature: 250 degrees F.

2.3 FLOW MEASURING DEVICES
A. Manufacturers:
1. Calibrated Balancing Valves
   b. Bell & Gossett Domestic Pump.
   c. Gerard Engineering Co.
   d. Tour & Andersson; available through Victaulic Company.
B. Venturi:
1. Description: Differential-pressure-design flow-element.
2. Construction: Cast-brass 2-inches and smaller, (Steel 2-1/2-inches and larger) flow element body, brass nipples, brass ball valves and push-type disconnect for connection to a differential pressure meter; threaded or flanged ends.
3. Calibrated Nameplate: Chained metal tag with element size, location, G.P.M., and differential pressure at design flow condition.
4. Permanent Head Loss: Not more than 25 inches’ w.g.
7. Accuracy: Plus or minus 1.0 percent.

2.4 AIR-CONTROL DEVICES
A. Manual Air Vents:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Amtrol, Incorporated.
   b. Armstrong Pumps, Incorporated.
   c. Bell & Gossett Domestic Pump.
   d. Nexus Valve, Incorporated.
   e. Taco, Incorporated.
2. Body: Bronze.
3. Internal Parts: Nonferrous.
4. Operator: Screwdriver or thumbscrew.
5. Inlet Connection: NPS 1/2.
7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 225 degree F.

B. Automatic Air Vents:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Amtrol, Incorporated.
   b. Armstrong Pumps, Incorporated.
   c. Bell & Gossett Domestic Pump.
   d. Nexus Valve, Incorporated.
   e. Taco, Incorporated.
2. Body: Bronze or cast iron.
3. Internal Parts: Nonferrous.
5. Inlet Connection: NPS 1/2.
7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 240 degree F.

C. Diaphragm-Type Expansion Tanks:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Amtrol, Incorporated.
   b. Armstrong Pumps, Incorporated.
   c. Bell & Gossett Domestic Pump.
   d. Taco, Incorporated.
2. Tank: Welded steel, rated for 125-psig (860-kPa) working pressure and 375 degree F (191 degree C) maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
5. Each floor-mounted unit shall be supported on elastomeric pads. Each suspended unit shall be supported on Type D hangers. Where piping on isolators is connected to these units, the connection shall be made with a neoprene flexible connector.

D. Coalescing Tangential-Type Air Separators:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Bell and Gossett CRS
2. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 degree F maximum operating temperature.
3. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
4. Tangential Inlet and Outlet Connections: Threaded for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger.
5. Blowdown Connection: Threaded.
7. Each floor-mounted unit shall be supported on elastomeric pads. Each suspended unit shall be supported on Type D hangers. Where piping on isolators is connected to these units, the connection shall be made with a neoprene flexible connector.

2.5 HYDRONIC PIPING SPECIALTIES
A. Y-Pattern Strainers:
1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 60-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
4. **CWP Rating:** 125 psig.

**B. Basket Strainers:**
1. **Body:** ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. **End Connections:** Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. **Strainer Screen:** 60-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
4. **CWP Rating:** 125 psig.

**C. Spherical, Rubber, Flexible Connectors:**
1. **Manufacturers:** Subject to compliance with requirements, provide spherical, rubber, flexible connectors manufactured by one of the following:
   a. Mason Industries
   b. Metraflex
2. **Description**
   a. **Body:** Peroxide cured EPDM with Kevlar tire cord reinforcement. Raised face rubber flanges shall encase solid steel rings.
      1) 14-inches and smaller: Ductile-iron ring between two spheres.
      2) 16-inches through 24-inches: Single sphere
   b. **End Connections:** Steel flanges drilled to align with Classes 150 and 300 steel flanges.
   c. **CWP Rating:**
      1) 14-inches and smaller: 250 psi at 170°F; 215 psi at 250°F.
      2) 16-inches through 24-inches: 180 psi at 170°F; 150 psi at 250°F.
   d. **Maximum Operating Temperature:** 250 degrees F.

**D. Expansion Fittings:** Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping."

### 2.6 CONDENSATE COOLERS

**A. General:**
1. Device to mix hot condensate or hot water with a non-potable cold water supply to reduce the outlet temperature to an acceptable discharge drain temperature.

**B. Manufacturers:**
1. Armstrong International
2. Cemline Corporation
3. Spirax Sarco

**C. Materials**
1. **Body:** ASTM A48 Cast iron or Carbon Steel
2. **Pipe and Fittings:** Malleable iron
3. **Controller body:** Brass
4. **Sensing bulb material:** Bronze

**D. Tempered condensate outlet temperature:**
1. **Factory preset:** 135 degrees F
2. **Field adjustable:** 115 to 180 degrees F

**E. Maximum cold water pressure:** 150 psig

**F. Pre-assembled, packaged with integral flow and temperature mixing valve controls**

**G. Sizing**
1. Contractor shall size condensate cooler to accommodate the total condensate and non-potable cooling water flow within the acceptable range per the manufacturer’s written instructions.
PART 3 EXECUTION

3.1 VALVE APPLICATIONS

A. Tripe duty valves and three-way valves are not permitted.

B. Install shutoff-duty valves at each branch connection to supply mains and at supply and return connections to each piece of equipment.

C. Install calibrated balancing valves on the inlet of all hydronic terminal units with inlets 1-1/2-inches and smaller. This includes but is not limited to fan coils, unit heaters, radiation, radiant panels, and coils. Refer to drawing details for additional information.

D. Install check valves at each pump discharge and elsewhere as required to control flow direction.

E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.2 HYDRONIC SPECIALTIES INSTALLATION

A. Air bleeders shall be square shank 5126 loose key by Moon, Inc.

B. Install manual air vents at high points in piping, at heat-transfer coils, and as required for system air venting. Install manual air vents as indicated on the piping details. Use 3/8-inch ball valves for manual air vents on main piping and heat-transfer coils. Air vent valves shall be vertically mounted with a discharge tube curved 180 degrees.

C. Install automatic air vents in mechanical equipment rooms only.

D. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

E. Install tangential air separator in pump suction. Install blow down piping with full-port ball valve; extend full size to nearest floor drain.

F. Install bypass chemical feeders in each hydronic system, in upright position with top of funnel not more than 48 inches above the floor. Install feeder in minimum NPS 3/4 bypass line, from main with full-size, full-port, ball valve in the main between bypass connections. Install NPS 3/4 pipe from chemical feeder drain, to nearest equipment drain and include a full-size, full-port, ball valve.

G. Install diaphragm expansion tanks on the floor or suspended from the structure above as indicated on the drawings. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

1. Install expansion tank isolation valve, manual air vent, and pressure gauge adjacent to tank pipe connection.

H. Install automatic control valves and sensor immersion wells in piping systems as required. Refer to Division 23 Section “Instrumentation And Control For HVAC”.

1. Install automatic control valves according to manufacturer’s recommendations, and where accessible and serviceable. Install automatic control valves in piping with union or flange connections, and between isolation valves such that the valves can be serviced without draining the piping system.

2. Install sensor immersion wells in piping where control devices are accessible and serviceable.

I. Install spherical rubber flexible connectors according to the manufactures installation instructions. Provide flexible connectors for connection to pumps, chillers, and other vibration producing equipment.
J. Flow measuring device: Install differential-pressure-type venturi's where indicated on the drawings with straight lengths of pipe upstream and downstream from element as prescribed by manufacturer's written instructions.

END OF SECTION
SECTION 232123
HYDRONIC PUMPS

PART 1 GENERAL

1.1 SUMMARY
A. Section Includes:
2. Separately coupled, base mounted, end-suction centrifugal pumps.
3. Automatic condensate pump units.

1.2 DEFINITIONS
A. Buna-N: Nitrile rubber.
B. EPT: Ethylene propylene terpolymer.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of pump. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump’s operating point on curves.
B. Shop Drawings: For each pump.
1. Show pump layout and connections.
2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
3. Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.
B. Startup Report.

1.5 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Mechanical Seals: One mechanical seal for each pump.

PART 2 PRODUCTS

2.1 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ITT Corporation; Bell & Gossett. (www.bell-gossett.com)
B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
C. Pump Construction:
1. Casing: Radially split, cast iron, with threaded gage tapping’s at inlet and outlet, and threaded companion-flange connections.
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.

3. Pump Shaft: Steel, with copper-alloy shaft sleeve.

4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket. Include water slinger on shaft between motor and seal.

5. Pump Bearings: Oil lubricated; bronze-journal or thrust type.

D. Motor: Single speed and rigidly mounted to pump casing.
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
      a. Enclosure: Totally enclosed, fan cooled.
      b. Enclosure Materials: Cast iron.
      c. Motor Bearings: Permanently lubricated ball bearings.
   3. Shaft: Grounded – for motors with variable frequency drives
      a. Provide Aegis SGR or approved equivalent for shaft grounding.
      b. Install per manufacturer instructions.

E. Refer to drawing schedules for capacities and characteristics

2.2 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Pumps Incorporated (www.armstrongpumps.com)
   2. ITT Corporation; Bell & Gossett. (www.bell-gossett.com)
   3. TACO Incorporated. (www.taco-hvac.com)

B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.

C. Pump Construction:
   1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and flanged connections. Provide integral mount on volute to support the casing, and provide attached piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft.
   2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.
   3. Pump Shaft: Steel, with copper-alloy shaft sleeve.
   4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket.
   5. Seal: Packing seal consisting of stuffing box with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.

D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor. EPDM coupling sleeve for variable-speed applications.

E. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.
F. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

G. Motor: Single speed, secured to mounting frame, with adjustable alignment.
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
      a. Enclosure: Totally enclosed, fan cooled.
      b. Enclosure Materials: Cast iron.
   3. Shaft: Grounded – for motors with variable frequency drives
      a. Provide Aegis SGR or approved equivalent for shaft grounding.
      b. Install per manufacturer instructions.

H. Refer to drawing schedules for capacities and characteristics:

2.3 AUTOMATIC CONDENSATE PUMP UNITS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   3. Little Giant Pump Co. (www.littlegiant.com)
   4. Mepco, LLC. (www.mepcollc.com)
B. Description: Packaged units with corrosion-resistant pump, plastic tank with cover, and automatic controls. Include factory- or field-installed check valve and a 72-inch- (1800-mm-) minimum, electrical power cord with plug.
   1. For condensate pumps located in return air plenums, pump must be plenum-rated (aluminum construction, hard-wired power connection)
C. Condensate pumps shall be equipped with alarm contacts.
D. Capacities and Characteristics:
   1. Refer to the schedule on the Drawings

2.4 PUMP SPECIALTY FITTINGS
A. Suction Diffuser:
   1. Angle pattern.
   2. 175-psig pressure rating, ductile-iron body and end cap, pump-inlet fitting.
   3. Bronze startup and bronze or stainless-steel permanent strainers.
   4. Bronze or stainless-steel straightening vanes.
   5. Drain plug.
   6. Factory-fabricated support.

2.5 ELECTRICAL CONNECTION
A. For all pumps, refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

2.6 BUILDING AUTOMATION SYSTEM INTERFACE
A. Refer also to Sequence of Operation for necessary control and interface requirements.
PART 3 EXECUTION

3.1 EXAMINATION

A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.

C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.

C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.

D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

E. Equipment Mounting: Install base-mounted pumps on cast-in-place concrete equipment base(s) using restrained spring isolators. Comply with requirements for equipment bases specified in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 23 sections.

F. Floor mounted pumps shall be installed on 1” shim to allow for grout to flow under base.

G. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and spring hangers with vertical-limit stop of size required to support weight of in-line pumps.

H. Equipment Mounting: Install base-mounted pumps on cast-in-place concrete equipment base(s) using restrained spring isolators.

3.3 ALIGNMENT

A. Engage a factory-authorized service representative to perform laser alignment service.

B. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.

C. Comply with pump and coupling manufacturers' written instructions.

D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill base-plate with non-shrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.4 CONNECTIONS

A. Where installing piping adjacent to pump, allow space for service and maintenance.

B. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

C. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

D. Install check valve, calibrated balancing valve, and flow measuring device on discharge side of pumps.

E. Install Y-type strainer and suction diffuser and shutoff valve on suction side of pumps.
F. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

G. Install single gage with multiple-input selector valve.

H. Install check valve and gate or ball valve on each condensate pump unit discharge.

I. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service and startup report.

1. Complete installation and startup checks according to manufacturer's written instructions.

2. Check piping connections for tightness.

3. Clean strainers on suction piping.

4. Perform the following startup checks for each pump before starting:
   a. Verify bearing lubrication.
   b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
   c. Verify that pump is rotating in the correct direction.
   d. Verify fluid pH; do not operate pumps outside of the manufacturer's limitations.

5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.

7. Open discharge valve slowly.

8. Measure water flow, gallons per minute, and include in startup report.

9. Measure pump pressure, feet of head, and include in startup report.

10. Measure motor amp draw; include in startup report.

B. Startup reports shall indicate that items listed in this article have been completed and include required data.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.

END OF SECTION
SECTION 232300
REFRIGERANT PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes refrigerant piping used for air-conditioning applications related to Split-System Air Conditioning Units.

1.3 PERFORMANCE REQUIREMENTS
A. Line Test Pressure for Refrigerant R-410A:

1.4 SUBMITTALS
A. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for the following:
   1. Thermostatic expansion valves.
   2. Solenoid valves.
   3. Hot-gas bypass valves.
   4. Filter dryers.
   5. Strainers.
   6. Pressure-regulating valves.
B. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.
   1. Shop Drawing Scale: 1/4 inch equals 1 foot.
   2. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
C. Welding certificates.
D. Field quality-control test reports.
E. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5 QUALITY ASSURANCE
A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."
1.6 PRODUCT STORAGE AND HANDLING
A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

1.7 COORDINATION
A. Coordinate layout and installation of refrigerant piping and suspension system components with other construction, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.
B. Coordinate pipe sleeve installations for foundation wall penetrations.
C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 7 Section "Roof Accessories."
D. Coordinate pipe sleeve installations for penetrations in exterior walls and floor assemblies. Coordinate with requirements for firestopping specified in Division 7 Section "Through-Penetration Firestop Systems" for materials and methods for sealing pipe penetrations through fire and smoke barriers.
E. Coordinate pipe fitting pressure classes with products specified in related Sections.

PART 2 PRODUCTS

2.1 COPPER TUBE AND FITTINGS
A. Copper Tube: ASTM B 280, Type ACR.
B. Wrought-Copper Fittings: ASME B16.22.
C. Wrought-Copper Unions: ASME B16.22.
D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
E. Brazing Filler Metals: AWS A5.8.
F. Flexible Connectors:
   2. End Connections: Socket ends.
   3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
   5. Maximum Operating Temperature: 250 degrees F.

2.2 STEEL PIPE AND FITTINGS
A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; Type, Grade, and wall thickness as selected in Part 3 piping applications articles.
B. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
C. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, bevel-welded end connection, and raised face.
E. Flanged Unions:
   1. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 and ductile iron for NPS 2 to NPS 3. Apply rust-resistant finish at factory.
   2. Gasket: Fiber asbestos free.
3. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Apply rust-resistant finish at factory.

4. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.

5. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.

7. Maximum Operating Temperature: 330 degrees F.

F. Flexible Connectors:
   2. End Connections:
      a. NPS 2 and Smaller: With threaded-end connections.
      b. NPS 2-1/2 and Larger: With flanged-end connections.
   3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
   5. Maximum Operating Temperature: 250 degrees F.

2.3 VALVES AND SPECIALTIES

A. Diaphragm Packless Valves:
   1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
   3. Operator: Rising stem and hand wheel.
   5. End Connections: Socket, union, or flanged.
   7. Maximum Operating Temperature: 275 degrees F.

B. Packed-Angle Valves:
   1. Body and Bonnet: Forged brass or cast bronze.
   2. Packing: Molded stem, back seating, and replaceable under pressure.
   3. Operator: Rising stem.
   5. Seal Cap: Forged-brass or valox hex cap.
   6. End Connections: Socket, union, threaded, or flanged.
   8. Maximum Operating Temperature: 275 degrees F.

C. Check Valves:
   1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
   2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
   6. End Connections: Socket, union, threaded, or flanged.
   7. Maximum Opening Pressure: 0.50 psig.
   9. Maximum Operating Temperature: 275 degrees F.

D. Service Valves:
   1. Body: Forged brass with brass cap including key end to remove core.
   2. Core: Removable ball-type check valve with stainless-steel spring.
   4. End Connections: Copper spring.

E. Solenoid Valves: Comply with ARI 760 and UL 429; listed and labeled by an NRTL.
   4. End Connections: Threaded.
   5. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24V ac coil.
   7. Maximum Operating Temperature: 240 degrees F.

F. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
   1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
   4. End Connections: Threaded.
   6. Maximum Operating Temperature: 240 degrees F.

G. Thermostatic Expansion Valves: Comply with ARI 750.
   1. Body, Bonnet, and Seal Cap: Forged brass or steel.
   4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
   5. Suction Temperature: 40 degrees F.
   7. Reverse-flow option (for heat-pump applications).
   8. End Connections: Socket, flare, or threaded union.

H. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
   1. Body, Bonnet, and Seal Cap: Ductile iron or steel.
   5. Seat: Polytetrafluoroethylene.
   7. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24-V ac coil.
   11. Maximum Operating Temperature: 240 degrees F.

I. Straight-Type Strainers:
   2. Screen: 100-mesh stainless steel.
   3. End Connections: Socket or flare.
   5. Maximum Operating Temperature: 275 degrees F.

J. Angle-Type Strainers:
   1. Body: Forged brass or cast bronze.
   2. Drain Plug: Brass hex plug.
3. Screen: 100-mesh Monel.
4. End Connections: Socket or flare.
6. Maximum Operating Temperature: 275 degrees F.

K. Moisture/Liquid Indicators:
   2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
   3. Indicator: Color coded to show moisture content in ppm.
   5. End Connections: Socket or flare.
   7. Maximum Operating Temperature: 240 degrees F.

L. Replaceable-Core Filter Dryers: Comply with ARI 730.
   1. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and neoprene gaskets.
   2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
   4. Designed for reverse flow (for heat-pump applications).
   5. End Connections: Socket.
   9. Maximum Operating Temperature: 240 degrees F.

M. Permanent Filter Dryers: Comply with ARI 730.
   2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
   4. Designed for reverse flow (for heat-pump applications).
   5. End Connections: Socket.
   9. Maximum Operating Temperature: 240 degrees F.

N. Receivers: Comply with ARI 495.
   1. Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
   2. Comply with UL 207; listed and labeled by an NRTL.
   4. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
   5. End Connections: Socket or threaded.
   7. Maximum Operating Temperature: 275 degrees F.

O. Liquid Accumulators: Comply with ARI 495.
   2. End Connections: Socket or threaded.

2.4 REFRIGERANTS
   A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
PART 3 EXECUTION

3.1 PIPING APPLICATIONS FOR REFRIGERANT R-410A

A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.

B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications: Copper, Type ACR, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.

C. Safety-Relief-Valve Discharge Piping: Copper, Type L, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.

3.2 VALVE AND SPECIALTY APPLICATIONS

A. Install diaphragm packless valves in suction and discharge lines of compressor.

B. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.

C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.

D. Except as otherwise indicated, install diaphragm packless valves on inlet and outlet side of filter dryers.

E. Install a full-sized, three-valve bypass around filter dryers.

F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.

G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
   1. Install valve so diaphragm case is warmer than bulb.
   2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
   3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.

H. Install safety relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.

I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for device being protected:
   1. Solenoid valves.
   2. Thermostatic expansion valves.
   3. Hot-gas bypass valves.
   4. Compressor.

K. Install filter dryers in liquid line between compressor and thermostatic expansion valve.

L. Install receivers sized to accommodate pump-down charge.

M. Install flexible connectors at compressors.
3.3 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

B. Install refrigerant piping according to ASHRAE 15.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping adjacent to machines to allow service and maintenance.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Select system components with pressure rating equal to or greater than system operating pressure.

J. Refer to Division 23 Sections "Instrumentation and Controls for HVAC" and "Sequence of Operation" for solenoid valve controllers, control wiring, and sequence of operation.

K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Division 8 Section "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.

M. Install refrigerant piping in protective conduit where installed belowground.

N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.

O. Slope refrigerant piping as follows:
   1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
   2. Install horizontal suction lines with a uniform slope downward to compressor.
   3. Install traps and double risers to entrain oil in vertical runs.
   4. Liquid lines may be installed level.

P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

Q. Install pipe sleeves at penetrations in exterior walls and floor assemblies.

R. Seal penetrations through fire and smoke barriers according to Division 7 Section "Through-Penetration Firestop Systems."

S. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.

T. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.

U. Seal pipe penetrations through exterior walls according to Division 7 Section "Joint Sealants" for materials and methods.
V. Identify refrigerant piping and valves according to Division 23 Section “Identification for HVAC Piping and Equipment.”

3.4 PIPE JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
C. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
   1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
   2. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.
E. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

3.5 HANGERS AND SUPPORTS

A. Hanger, support, and anchor products are specified in Division 23 Section “Hangers and Supports for HVAC Piping and Equipment.”
B. Install roof supports according to the roof support manufacturer’s recommendations. Refer to Division 23 Section “Hangers and Supports for HVAC Piping and Equipment” for roof supports.
C. Install the following pipe attachments:
   1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
   2. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
D. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
   1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
   2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
   3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
   4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
   5. NPS 1-1/2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
   6. NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
   7. NPS 2-1/2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
   8. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.
   9. NPS 4: Maximum span, 12 feet; minimum rod size, 1/2 inch.
E. Support multi-floor vertical runs at least at each floor.

3.6 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.
B. Tests and Inspections:
   1. Comply with ASME B31.5, Chapter VI.
   2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
   3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
      a. Fill system with nitrogen to the required test pressure.
      b. System shall maintain test pressure at the manifold gage throughout duration of test.
c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.

d. Remake leaking joints using new materials and retest until satisfactory results are achieved.

3.7 SYSTEM CHARGING

A. Charge system using the following procedures:
   1. Install core in filter dryers after leak test but before evacuation.
   2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
   3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
   4. Charge system with a new filter-dryer core in charging line.

3.8 ADJUSTING

A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.

B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.

C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.

D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
   1. Open shutoff valves in condenser water circuit.
   2. Verify that compressor oil level is correct.
   3. Open compressor suction and discharge valves.
   4. Open refrigerant valves except bypass valves that are used for other purposes.
   5. Check open compressor-motor alignment and verify lubrication for motors and bearings.

E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION
SECTION 232500
HVAC WATER TREATMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following HVAC water-treatment systems:
   1. Bypass chemical-feed equipment and controls.
   2. Chemical treatment test equipment.
   3. HVAC water-treatment chemicals.
   4. Water filtration units for HVAC makeup water.

1.3 PERFORMANCE REQUIREMENTS
A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.
B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
C. Closed hydronic systems, including hot-water heating, chilled water, shall have the following water qualities:
   1. PH: Maintain a value within 7.0 to 9.0.
   2. "P" Alkalinity: Maintain a value within 100 to 500 ppm.
   3. Boron: Maintain a value within 100 to 200 ppm.
   4. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
   5. Soluble Copper: Maintain a maximum value of 0.20 ppm.
   6. TDS: Maintain a maximum value of 10 ppm.
   9. Microbiological Limits:
      a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
      b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/ml.
      c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
      d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
      e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.

1.4 SUBMITTALS
A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
   1. Bypass feeders.
   2. Chemical test equipment.
   3. Chemical material safety data sheets.
   4. Bag- or cartridge-type filters.
B. Shop Drawings: Chemical treatment equipment, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections, details, and attachments to other work.

C. Field quality-control test reports.

D. Operation and Maintenance Data: For sensors, injection pumps, water softeners, RO equipment, water filtration units, and controllers to include in emergency, operation, and maintenance manuals.

E. Other Informational Submittals:
   1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in the "Performance Requirements" Article above.

1.5 QUALITY ASSURANCE

A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 MAINTENANCE SERVICE

A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion, scale formation, and biological growth for:
   1. Cooling equipment; chilled-water piping.
   2. Heating equipment, hot-water piping.

B. Services and chemicals shall be provided for a period of not less than one year from date of Substantial Completion, and shall include the following:
   1. Initial water analysis and HVAC water-treatment recommendations.
   2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
   3. Periodic field service and consultation.
   5. Laboratory technical analysis.
   6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

PART 2 PRODUCTS

2.1 SERVICE VENDORS

A. Eldon Water.

B. Subject to approval by Wayne State University.

2.2 STAINLESS-STEEL PIPES AND FITTINGS

A. Stainless-Steel Tubing: Comply with ASTM A 269, Type 316.

B. Stainless-Steel Fittings: Complying with ASTM A 815/A 815M, Type 316, Grade WP-S.

C. Two-Piece, Full-Port, Stainless-Steel Ball Valves: ASTM A 351, Type 316 stainless-steel body; ASTM A 276, Type 316 stainless-steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and 250-psig SWP and 600-psig CWP ratings.
2.3 CHEMICAL TREATMENT TEST EQUIPMENT
A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.

B. Sample Cooler:
   1. Tube: Sample.
      a. Size: NPS 1/4 tubing.
      b. Material: ASTM A 666, Type 316 stainless steel.
      d. Temperature Rating: Minimum 850 deg F.
   2. Shell: Cooling water.
      a. Material: ASTM A 666, Type 304 stainless steel.
      c. Temperature Rating: Minimum 450 deg F.

C. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
   1. Two-station rack for each closed-loop systems.

2.4 CHEMICALS
A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in Part 1 "Performance Requirements" Article.

2.5 FILTRATION EQUIPMENT
A. Bag or Cartridge-Type Filters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Haramscoc – HIF housing model
   2. Description: Floor-mounting housing with filter cartridges for removing particles from water.
      a. Housing: Corrosion resistant; designed to separate inlet from outlet and to direct inlet through cartridge-type water filter; with base, feet, or skirt.
         1) Pipe Connections NPS 2 and Smaller: Threaded according to ASME B1.20.1.
         2) Steel Housing Pipe Connections NPS 2-1/2 and Larger: Steel, Class 150 flanges according to ASME B16.5 or grooved according to AWWA C606.
         3) Plastic Housing Pipe Connections NPS 2-1/2 and Larger: 150-psig plastic flanges.
      b. Cartridge: Replaceable; of shape to fit housing.
   3. Capacities and Characteristics:
      a. Filter Design:
         1) Water Flow Rate: 12 gpm
         2) Filtration Efficiency: 98 percent.
         3) Particle Size: 5 microns and larger.
         4) Clean Pressure Loss: .15 psig.
5) Pressure Loss at Replacement: 4 psig.

b. Housing:
   1) Material: Type 316 Stainless Steel.
   2) Pressure Rating: 150 psig.
   3) Seal Material: EPDM.
   4) Diameter: 13 inches
   5) Height or Length: 19.5 inches
   6) Inlet and Outlet Size: 1-1/2" NPT
   7) Drain Size: 1" NPT
   8) Bag Support Basket Material: Stainless steel

c. Cartridge: Haramsco WaterBetter
   1) Number Required: 4
   2) Nominal Diameter: 2-3/4 inches
   3) Nominal Length: 9-3/4 inches
   4) Media Material: Polyester.

2.6 BYPASS WATER FILTER / CHEMICAL FEEDER

A. Description: Stainless Steel upflow water filter assembly with removable head
   1. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.
   2. Material: 304 Stainless Steel
   3. Holding Rods: 304 Stainless Steel
   4. Rim Gaskets: EPDM
   5. O-Rings: Buna-N
   6. Bottom Seals: EPDM
   7. Pressure Rating: 150 psig

B. Manufacturer
   1. Haramsco – HF Series

PART 3 EXECUTION

3.1 WATER ANALYSIS

A. Perform an analysis of supply water to determine quality of water available at Project site.

3.2 OWNER REQUIREMENTS

A. Verify if water treatment chemical will be provided by Owner or purchased through the owner.
B. Owner’s water treatment company shall verify all water treatment testing and results.

3.3 INSTALLATION

A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer’s recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
B. Install interconnecting control wiring for chemical treatment controls and sensors.
C. Mount sensors and injectors in piping circuits.
D. Bypass Feeders: Install in closed hydronic systems, including hot-water heating and chilled water, and equipped with the following:
   1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
   2. Install water meter in makeup water supply.
3. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
5. Install a swing check on inlet after the isolation valve.

E. Water Filters: Install in closed hydronic systems, including hot-water heating and chilled water, and glycol cooling, and equipped with the following:
1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
2. Install water meter in makeup water supply.
3. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
5. Install a swing check on inlet after the isolation valve.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to equipment to allow service and maintenance.
C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Division 23 Section "Common Work Results for HVAC."
D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Division 23 Section "General-Duty Valves for HVAC Piping."
E. Refer to Division 22 Section "Domestic Water Piping Specialties" for backflow preventers required in makeup water connections to potable-water systems.
F. Confirm applicable electrical requirements in Division 26 Sections for connecting electrical equipment.
G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
H. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
B. Tests and Inspections:
1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.

7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.

8. Repair leaks and defects with new materials and retest piping until no leaks exist.

C. Remove and replace malfunctioning units and retest as specified above.

D. At four-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Owner of changes necessary to adhere to Part 1 “Performance Requirements” Article.

E. Comply with ASTM D 3370 and with the following standards:

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment. Refer to Division 01 Section "Demonstration and Training."

B. Training: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

END OF SECTION
PART 1 – GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
      and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes metal ducts for supply, return, outside, and exhaust air-distribution systems in
      pressure classes from minus 2-inches to plus 10-inches wg. Metal ducts include the following:
      1. Rectangular ducts and fittings.
      2. Single-wall round longitudinal-seam ducts and formed fittings.
      4. Duct liner.
      5. Dust collector ductwork
      6. Paint booth ductwork
   B. Related Sections include the following:
      1. Refer to Division 7 Section "Joint Sealants" for fire-resistant sealants for use around duct
         penetrations and fire-smoke damper installations in fire-smoke rated floors, partitions, and
         walls.
      2. Refer to Division 8 Section "Access Doors" for wall and ceiling-mounted access doors for
         access to concealed ducts.
      3. Refer to Division 10 Sections “Louvers and Vents” for intake air, exhaust air, and relief air
         louvers connected to ducts and installed in exterior walls.
      4. Division 23 Section "Duct Accessories" for dampers, sound-control devices, duct-mounting
         access doors and panels, turning vanes, and flexible ducts.

1.3 DEFINITIONS
   A. Exposed Duct: Ducts that are visible; except in mechanical equipment rooms.

1.4 SYSTEM DESCRIPTION
   A. Duct system design, as indicated, has been used to select size and type of air-moving and -
      distribution equipment and other air system components. Changes to layout or configuration of
      duct system must be specifically approved in writing by Architect. Accompany requests for layout
      modifications with calculations showing that proposed layout would provide original design results
      without increasing system total pressure.

1.5 SUBMITTALS
   A. Product Data: Include details of construction, materials, and dimensions of individual components,
      profiles, and finishes for the following items:
      1. Fire Stopping Materials.
      2. Duct Transverse Joints.
      3. Liners and adhesives.
      4. Sealants and gaskets.
      5. Duct Connection Systems
   B. Shop Drawings: Drawn to scale not smaller than 1/4 inch equals 1 foot. Show fabrication and
      installation details for the size and types of metal ducts in the Project.
      1. Duct fabrication, assembly, and installation details.
      2. Duct sizes and materials thickness for the various systems and duct pressure classes.
      3. Sealing class.
      4. Fittings.
5. Reinforcement and spacing.
6. Seam and joint construction.
7. Penetrations through fire-rated and other partitions.
8. Hangers and supports.
11. Plenums.

C. Coordination Drawings: Floor plans, or reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other and with the Work of other trades.
1. Duct layout plans indicating size and pressure class. Include elevations and sections, as may be necessary to demonstrate coordination.
2. Dimensions of main duct run from building grid lines.
3. Elevations of top and bottom of ducts.
4. Duct cross-over/under details.
5. Equipment installation based on equipment being used on Project.
6. Ceiling suspension assembly members.
7. Other systems installed in the same space as ducts.
8. Ceiling and wall-mounted access doors and panels required to provide access to dampers and other operating devices.
9. Ceiling-mounted lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special details or moldings.

D. Welding certificates.
E. Field quality-control test reports.

1.6 QUALITY ASSURANCE
A. Welding: Qualify procedures and personnel according to:

B. NFPA Compliance:
2. NFPA 90B, “Installation of Warm Air Heating and Air Conditioning Systems.”

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 SHEET METAL MATERIALS
A. Comply with SMACNA’s "HVAC Duct Construction Standards--Metal and Flexible" for acceptable materials, material thickness, and duct construction methods, unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
B. Galvanized Sheet Steel: Lock-forming quality; complying with ASTM A 653 and having G90 coating designation.
1. Ducts shall have mill-phosphatized “Paint-Grip” finish for surfaces of ducts exposed to view that are scheduled for field painting.
C. Carbon-Steel Sheets: ASTM A1008/A1008M, cold-rolled sheets; commercial quality; with oiled, matte finish for exposed ducts.
D. Stainless Steel: ASTM A 480, Type 316, and having a No. 2D finish for concealed ducts and No. 4 finish for exposed ducts.

E. Aluminum Sheets: ASTM B 209, alloy 3003, temper H14; with mill finish for concealed ducts and standard, 1-side bright finish (mechanically polished) for exposed ducts.

F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts.
   1. Black steel reinforcement may be used on galvanized sheet metal ducts and on aluminum or stainless steel ducts if painted with zinc-chromate primer prior to fabrication.
   2. Use aluminum or stainless steel reinforcement on aluminum or stainless steel ducts exposed to view.

G. Tie Rods: Galvanized steel, 3/8-inch minimum diameter. Rigid conduit, minimum 3/4-inch, can be used in accordance with referenced standards.

2.3 SEALANT MATERIALS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
   1. Ductmate Industries, Incorporated (PROseal & FIBERseal)

B. Water-Based Joint and Seam Sealant: Flexible, adhesive sealant, resistant to UV light when cured, UL 723 listed, and complying with NFPA requirements for Class 1 ducts.

C. Flanged Joint Mastic: One-part, acid-curing, silicone, elastomeric joint sealant complying with ASTM C 920, Type S, Grade NS, Class 25, use O.

D. Flange Gaskets: Butyl rubber or EPDM polymer with polyisobutylene plasticizer.

2.4 FIRESTOPPING
A. Refer to Division 7 for fire-resistant sealants and fire-stopping materials for use around duct penetrations and fire damper installations in fire rated floors, partitions, and walls.

2.5 HANGERS AND SUPPORTS
A. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Use powder-actuated concrete fasteners for standard-weight aggregate concrete’s or for slabs more than 4 inches thick.
   2. Exception: Do not use powder-actuated concrete fasteners for lightweight-aggregate concrete’s or for slabs less than 4 inches thick.
   3. Exception: Do not use powder-actuated concrete fasteners in post-tensioned concrete slabs where the cable locations are not known. Fasteners shall not exceed 3/4-inch embedment.

B. Hanger Materials: Galvanized sheet steel or threaded steel rod.
   1. Hanger’s installed in Corrosive Atmospheres: Electro-galvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer prior to installation.
   2. Strap and Rod Sizes: Comply with SMACNA’s "HVAC Duct Construction Standards--Metal and Flexible" for steel sheet width and thickness and for steel rod diameters.
   3. Use stainless steel straps or rods for stainless steel ducts exposed to view. Steel materials may be used for concealed ducts if painted with zinc-chromate primer prior to installation.
   4. Use aluminum straps or rods for aluminum steel ducts exposed to view. Steel materials may be used for concealed ducts if painted with zinc-chromate primer prior to installation.

C. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

D. Trapeze and Riser Supports: Steel shapes complying with ASTM A 36.
   1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates. Black steel shapes and plates may be used if painted with zinc-chromate primer prior to installation.
2. Supports for Stainless-Steel Ducts: Stainless-steel support materials if ducts are exposed to view. Steel materials may be used for concealed ducts if painted with zinc-chromate primer prior to installation.
3. Supports for Aluminum Ducts: Aluminum supports materials if ducts are exposed to view. Steel materials may be used for concealed ducts if contact surfaces are painted with zinc-chromate primer prior to installation.

2.6 DUCT FABRICATION-GENERAL
A. Comply with SMACNA’s “HVAC Duct Construction Standards--Metal and Flexible,” and with the requirements of this Section.
B. Comply with SMACNA’s “Rectangular Industrial Duct Construction Standards” for acceptable materials, material thickness, and duct construction methods outside the scope of SMACNA’s “HVAC Duct Construction Standards--Metal and Flexible.”
C. Duct Pressure Classification: Construct duct systems for the following pressure classifications:
   1. Supply Air Ducts:
      a. Supply air ducts on variable-volume air systems between fan outlet and air terminal units: 4-inches water gage positive pressure.
      b. Supply air ducts on all constant volume air systems, and all supply ducts downstream of air terminal units on variable volume air systems: 2 inches water gage, positive pressure.
   2. Return and Relief Air Ducts: 2 inches water gage, negative pressure.
   3. Exhaust Air Ducts: 2 inches water gage, negative pressure.
   4. Laboratory Fume Hood Exhaust Air Ducts: 3 inches water gage, negative pressure.
   5. Organ blower ducts: 20 inches water gage positive pressure
   6. Other Ducts: 2 inches water gage positive or negative pressure.
D. Duct Sealing Classification: Provide SMACNA “Seal Class A” for all duct pressure classifications.
   1. Seal all transverse joints, longitudinal seams, and duct penetrations.
   2. Seal to achieve no visible or audible leaks.
E. Materials: All ducts shall be galvanized steel, except as follows:
   1. Ducts at Duct-Mounted Humidifiers.
   2. Ducts noted otherwise on the Drawings.

2.7 RECTANGULAR DUCT FABRICATION
A. General: Fabricate ducts, elbows, transitions, offsets, branch connections, and other construction according to SMACNA’s “HVAC Duct Construction Standards--Metal and Flexible.” Comply with requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals, and with the requirements of this Section.
   1. Lengths: Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure class.
   2. Deflection: Duct systems shall not exceed deflection limits according to SMACNA's “HVAC Duct Construction Standards--Metal and Flexible.”
   3. Calculations: When duct construction is outside the scope of SMACNA’s “HVAC Duct Construction Standards--Metal and Flexible,” provide calculations to demonstrate compliance with Duct Pressure Classification.
   4. Manufacturers:
      a. Ductmate Industries, Inc.
      b. Elgen Manufacturing
      c. Nexus Inc.
      d. Ward Industries, Inc.
      e. SET Duct
      f. Lapine Metal Products
      g. Universal Spiral Air
B. Transverse Joints:
   1. Prefabricated Slide-On Joints and Components:
      a. Manufacturers:
1) Ductmate Industries, Inc.
2) Elgen Manufacturing
3) Nexus Inc.
4) Ward Industries, Inc.

b. Apply joints using manufacturer’s “Duct Construction Standards” for material thickness, reinforcement size and spacing, and joint reinforcement. “Duct Construction Standards” must be based on the referenced SMACNA Standards. “Duct Construction Standards” shall be submitted as shop drawings, and must be available upon request at the Project Site.

c. Slide-on joints must include the use of corners, bolts, cleats, and gaskets.
d. Gaskets must be suitable for application at temperatures experienced at the Project Site.

2. Formed-On Flanges:
   a. Manufacturers:
      1) Ductmate Industries Incorporated
      2) Elgen Manufacturing
      3) T.D.C.
      4) T.D.F.
   b. Construct according to SMACNA's “HVAC Duct Construction Standards--Metal and Flexible,” Table 1-12. Formed-on flanges shall be constructed as T-25A (T.D.C.) and T-25B (T.D.F.) joints.
   c. Formed-on flanges must include the use of corners, bolts, cleats, and gaskets.
   d. Gaskets must be suitable for application at temperatures experienced at the Project Site.
   e. Duct Size: Maximum 42-inches wide and up to 4-inches wg pressure class.
   f. Duct Size: Maximum 60-inches wide and up to 4-inches wg pressure class.

3. Slips and Drives (Traditional):
   a. Construct according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," Tables 1-11 or 1-12.

C. Longitudinal Seams: Pittsburgh-lock sealed with non-curing polymer sealant.

D. Internal Tie Rod Reinforcements: Do not use a transverse or intermediate reinforcement that requires the use of internal tie rods on ducts less than 96-inches wide.

E. Cross Breaking or Cross Beading: Cross break or cross bead duct sides 19 inches and larger and 0.0359 inch thick or less, with more than 10 sq. ft. of non-braced panel area unless ducts are lined.

F. All-Welded Construction: Provide continuously welded longitudinal and transverse duct joints and seams on ducts as indicated.

G. Ducts at Duct-Mounted Humidifiers: Fabricate ducts 12-inches upstream and 42-inches downstream of humidifiers with 18-gage stainless steel sheets. Provide all-welded construction. Ducts shall be liquid-tight over their entire length. Provide threaded waste fittings with caps at low points. Refer to Drawings and Details for additional requirements. Ducts shall be liquid-tight over their entire length.

H. Fabricate ductwork with accessories installed during fabrication to the greatest extent possible. Refer to Division 23 section "Ductwork Accessories" for accessory requirements.

I. Fabricate ductwork so as to be free from vibration, rattling, or "oil-canning" under all operating conditions.

J. Unless otherwise indicated, the net free area of the duct dimensions given on the Drawings shall be maintained. The duct dimensions shall be increased as necessary to compensate for liner thickness.

2.8 RECTANGULAR DUCT FITTINGS

A. General: Fabricate elbows, transitions, offsets, branch connections, and other duct construction in accordance with SMACNA "HVAC Metal Duct Construction Standards-Metal and Flexible," Figures 2-1 through 2-10.

B. Elbows and Divided Flow Fittings: Fabricate fittings with a centerline radius equal to 1.5 times the associated duct widths up to 28 inches wide, and 1.0 times the duct width for ducts 30 inches wide and wider. Figure 2-2; Type RE 1 radius elbow.
1. Where elbows with a shorter radius are necessary, fabricate elbows with a 4-inch throat radius, full radius heel, and with short radius vanes. Figure 2-2, Type RE-3. Fabricate short radius vanes according to Appendix pages A.41, A.42 and A.43.

2. Do not use square elbows, except where indicated on the Drawings. Where used, fabricate square elbow with single-wall turning vanes.

C. Transitions and Offsets: Limit concentric transitions to 45 degrees for diverging, and 60 degrees for converging; limit single-sided transitions to 22.5 degrees for diverging and 30 degrees for converging. Limit angled offsets to a maximum of 30 degrees.

D. Branch Connections: Fabricate branch connections according to Figure 2-6 using clinch lock joints and 45-degree entry.

2.9 ROUND AND FLAT-OVAL DUCT FABRICATION

A. Fabricate ducts according to SMACNA’s "HVAC Duct Construction Standards-Metal and Flexible," Tables 3-2 and 3-3.

B. Duct Pressure Classification and Duct Sealing Classification: As indicated in previous Article "Duct Fabrication, General."

C. Diameter as applied to flat-oval ducts in this Article is the diameter of a round duct with a circumference equal to the perimeter of a given size of flat-oval duct.

D. Round Longitudinal Lock-Seam Ducts 14-inches and smaller:

1. Manufacturers:
   a. Ductmate Industries, Incorporated
   b. SET Duct
   c. Lapine Metal Products
   d. Universal Spiral Air

2. Fabricate round ducts with longitudinal grooved “Green Seam” snap lock pipe. Figure 3-1, Type RL-5.

3. Longitudinal snaplock seams may be used for round duct diameters 14-inches and smaller for 2-Inch Duct Pressure Classifications. Figure 3-1, Type RL-6, RL-7. RL-78.

E. Round and Flat Oval, Longitudinal and Spiral-Lock-Seam Ducts 16-inches and larger:

1. Manufacturers:
   b. Semco Incorporated.
   c. Sheetmetal Connectors Incorporated.
   d. SET Duct
   e. Lapine Metal Products
   f. Universal Spiral Air

2. Fabricate round ducts with spiral lockseam. Figure 3-1, Type RL-1.

3. Fabricate round ducts with longitudinal grooved seam. Figure 3-1, Type RL-5.

4. Provide continuous butt-welded longitudinal seams on ducts larger than 72-inches, and where otherwise indicated. Figure 3-1, Type RL-4.

F. Transverse Duct Joints.

1. Manufacturers:
   a. Ductmate Industries Incorporated.
   b. Elgen Manufacturing
   c. Semco Incorporated.

2. Duct up to 20-Inches Diameter: Interior, center-beaded slip coupling. Figure 3-2, Type TR-1.
   a. Beaded crimp joints may be used for round duct diameters 14-inches and smaller for 2-Inch Duct Pressure Classifications. Figure 3-2, Type TR-5.
   b. Prefabricated self sealing gasketed coupler: Ductmate “Bullet Band”.

3. Ducts 21 to 72-Inches Diameter: Prefabricated three-piece, gasketed, flanged joint consisting of two inner ring flanges with sealant and one external closure band with gasket. Ductmate “Spiralmate” or equivalent.
   a. Prefabricated flanged joint consisting of two external flanges with sealant and gasket may be used for concealed ducts. Ductmate “Econoflange,” Semco “Accuflange,” or equivalent.
b. Prefabricated self sealing gasketed coupler: Ductmate “Bullet Band”.

4. Ducts larger than 72-Inches Diameter: Companion angle flanged joints with gasket, sealed before and after fastening. Figure 3-2, Type RT-2.
   a. Prefabricated self sealing gasketed coupler: Ductmate “Bullet Band”.

5. Joints shall be made with mechanical fasteners (sheet metal screws, blind rivets, welds, bolts). Use sealer before and after fastening.

6. Traverse Duct Joints on exposed ducts.
   a. Prefabricated self sealing gasketed coupler: Ductmate “Bullet Band”.

G. Unless otherwise indicated, the net free area of the duct dimensions given on the Drawings shall be maintained. The duct dimensions shall be increased as necessary to compensate for liner thickness

2.10 ROUND AND FLAT OVAL DUCT FITTING FABRICATION

A. Manufacturers:
   a. Ductmate Industries, Inc.
   b. Elgan Manufacturing
   d. Semco Incorporated.
   e. Sheetmetal Connectors Incorporated.
   f. SET Duct
   g. Lapine Metal Products
   h. Universal Spiral Air

B. General: Fabricate elbows, transitions, offsets, branch connections, and other duct construction in accordance with SMACNA "HVAC Metal Duct Construction Standards-Metal and Flexible," Figures 3-3 through 3-5.
   1. Duct fittings shall be fabricated from metal thickness not less than required for longitudinal-seam straight duct in Tables 3-2 and 3-3.

C. Round Duct Takeoffs from Rectangular Ducts: Fabricate takeoffs with clinch-lock or spin-in conical connectors with volume dampers.
   1. Straight connectors may be used for 2-inch Duct Pressure Classification.

D. Elbows: Fabricate with welded seam, die-formed or segmented construction with bend radius 1.5 times the elbow diameter.
   1. Die-Formed Elbows (8-Inches and smaller): Fabricate elbows with two-piece, die-formed construction.
   2. Segmented Elbows (Larger than 8-Inches): Fabricate elbows with multiple segments or gores with number of pieces as follows:
      a. 90 degrees - 5 pieces.
      b. 60 degrees - 4 pieces.
      c. 45 degrees - 3 pieces.
      d. 30 degrees - 2 pieces.
   3. 90 degrees, Two-piece Mitered Elbows: Use only where space restrictions do not permit the use of radius elbows. Fabricate elbows with single thickness turning vanes.
   4. Adjustable Mitered Elbow (14-Inches and Smaller): Adjustable seam, mitered elbows (4-piece 90 degree, 3-piece 45 degree) with bend radius 0.6 times the elbow diameter may be used for 2-inch Duct Pressure Classifications. Joints shall be sealed after installation.

E. Laterals, Tees and Wyes: Fabricate with welded seam construction with conical branch taps with no excess material projecting from body into branch tap entrance.
   1. Straight branch taps may be used for 2-inch Duct Pressure Classification.
   2. Fittings with riveted or bonded joints may be used for duct diameters 16-inches and smaller for 2-inch Duct Pressure Classification. Joints shall be sealed after installation.

F. Diverging-Flow Fittings: Fabricate with welded seam with a reduced entrance to branch taps with no excess material projecting from the body onto branch tap entrance.
2.11 DUCT LINER

1. Manufacturers:
   a. CertainTeed Corp.; Insulation Group.
   c. Knauf Fiber Glass GmbH.
   d. Owens Corning.

2. Materials: ASTM C 1071; surfaces exposed to air stream shall be coated to prevent erosion of glass fibers.

   a. Thickness: 1 inch, unless noted otherwise.
   b. Thermal Conductivity (k-Value): 0.24 at 75 degrees F mean temperature.
   c. Minimum Density: 3.0 pcf
   d. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
   e. Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
   f. Mechanical Fasteners: Galvanized steel suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in duct.
      1) Tensile Strength: Indefinitely sustains a 50-lb-tensile, dead load test perpendicular to duct wall.
      2) Fastener Pin Length: As required for thickness of insulation and without projecting more than 1/8 inch into air stream.
      3) Adhesive for Attaching Mechanical Fasteners: Comply with fire-hazard classification of duct liner system.
   g. Acoustic Performance: Sound absorption coefficients at octave band center frequencies.
      (Hz)
      1) 125Hz: 0.05; 250Hz: 0.30; 500Hz: 0.60; 1000Hz: 0.87; 2000Hz: 0.98; 4000Hz: 1.05; NRC: 0.70

B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B. http://www.specagent.com/lookUp/?ulid=3429&mf=04&src=wd

   1. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
   2. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.

2.12 APPLICATION OF LINER IN RECTANGULAR DUCTS

A. Application of Liner:

   1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
   2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
   3. Butt transverse joints without gaps and coat joint with adhesive.
   4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
   5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and standard liner product dimensions make longitudinal joints necessary.
   6. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
   7. Secure transversely oriented liner edges facing the air stream with metal nosing that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
      a. Fan discharges.
b. Intervals of lined duct preceding unlined duct.
c. Upstream edges of transverse joints in ducts where air velocities are greater than 2500 fpm or where indicated.

B. Terminate inner ducts with build-outs attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated build-outs (metal hat sections) or other build-out means are optional; when used; secure build-outs to duct walls with bolts, screws, rivets, or welds.

2.13 DUST COLLECTOR DUCTWORK

A. Provide Donaldson Torit Easy Duct on all ductwork upstream of the dust collector. Use clamped connections with gasket.

B. Fabricate all ductwork downstream of the dust collector with minimum 18 gauge G90 galvanized sheetmetal. Ductwork shall be rated for +14” of static pressure.

C. Provide a cleanout access panel on the inlet and discharge ductwork every 15 feet and every change in direction. Cleanouts are not required on vertical ductwork.

2.14 SPRAY BOOTH DUCTWORK

A. Fabricate all spray booth ductwork upstream of fan from minimum 18 gauge G90 galvanized sheet metal. Fabricate all spray booth ductwork downstream of exhaust fan from minimum 18 gauge 304 stainless steel.

PART 3 - EXECUTION

3.0 DUCT INSTALLATION

A. Install ducts according to SMACNA’s “HVAC Duct Construction Standards—Metal and Flexible,” and the requirements of this Section.

B. Install ducts according to SMACNA’s “Rectangular Industrial Duct Construction Standards” when duct construction is outside the scope of SMACNA’s "HVAC Duct Construction Standards-Metal and Flexible."

C. Construct and install each duct system according to the Duct Pressure Classification and Duct Sealing Classification indicated in previous Article “Duct Fabrication, General.”

D. Install round and flat-oval ducts in lengths not less than 12 feet unless interrupted by fittings.

E. Install fabricated fittings for changes in directions, size, and shape and for connections.

F. Install couplings tight to duct wall surface with a minimum of projections into duct. Secure couplings with sheet metal screws. Install screws at intervals of 12 inches, with a minimum of 3 screws in each coupling.

G. Install ducts, unless otherwise indicated, vertically and horizontally and parallel and perpendicular to building lines; avoid diagonal runs.

H. Provide offset fittings where necessary to avoid structural interference’s and in coordination with existing conditions and the Work of other trades.

I. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building. Provide a minimum clearance of 1 inch, plus an allowance for insulation thickness to other elements.

J. Install ducts as high as possible, unless otherwise indicated. Where overhead structure permits, route ducts between structural elements.

K. Conceal ducts from view in finished spaces by locating within mechanical shafts, within hollow construction, or above suspended ceilings. Do not encase horizontal runs in solid partitions unless specifically indicated.
L. Where exposed to view; install ducts as high as possible, unless otherwise indicated. Protect exposed duct from physical damage. Repair scratches, dents, cuts, and other physical imperfections. Remove stickers and markers. Prepare for field painting. Grind and polish exposed welds so no roughness shows and contours of welded surfaces match adjacent contours.

M. Install insulated ducts with 1-inch clearance outside of insulation.

N. Coordinate the duct layout with suspended ceiling, fire and smoke-control dampers, piping, lighting layouts and conduits, and the Work of other trades.

O. Non-Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, and are exposed to view, conceal space between construction opening and duct or duct insulation with sheet metal flanges of same metal thickness as duct. Overlap opening on four sides by at least 1-1/2 inches.

P. One hour rated fire barrier penetrations: (Where the building code allows fire barrier penetrations without fire dampers) Provide angles on both sides of the wall penetrations conforming to the requirements of wall system approval.

Q. Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, install appropriately rated fire dampers, sleeves, and fire stopping sealant.
   1. Fire and smoke dampers are specified in Division 23 Section "Duct Accessories."
   2. Fire stopping materials and installation methods are specified in Division 7 Section "Fire stopping."

R. Protect duct interiors from elements and foreign materials until building is enclosed. Refer to SMACNA’s “Duct Cleanliness for New Construction.”

S. Paint interiors of metal ducts that do not have duct liner, for 24 inches upstream of registers and grilles. Apply one coat of flat, black, latex finish paint over a compatible galvanized steel primer. Paint materials and application requirements are specified in Division 9 Sections.

3.1 DUCT LINER APPLICATIONS

A. Apply duct liner in the following duct sections:
   1. Supply air ductwork: Provide 1-inch thick elastomeric duct liner for any supply air ductwork noted on the drawings (both round and rectangular trunk ducts).
   2. Return air ductwork: Provide 1-inch thick elastomeric duct liner for any supply air ductwork noted on the drawings (both round and rectangular trunk ducts).
   3. Exhaust air ductwork: None.
   4. Transfer air ducts: Provide 1-inch thick fiberglass duct liner for all transfer air ducts.
   5. Provide 1-inch thick elastomeric duct liner for any duct noted on the Drawings to be lined, unless the Drawings indicate a thicker liner.

3.2 WALL LOUVERS

A. Provide watertight air plenum with soldered drain pan at each louver. Connect air plenum directly to louver frame. The air plenum drain pan shall be arranged to drain through the louver to the building exterior.

B. Provide 2 inch thick insulated double-wall blank-off panels at each unused wall louver. Blank-off panels shall be attached to the louver frame with a gasketed, watertight connection.

3.3 SEAM AND JOINT SEALING

A. Seal duct seams and joints according to SMACNA’s "HVAC Duct Construction Standards--Metal and Flexible" for duct pressure class indicated.

B. Duct Sealing Classification: Provide SMACNA "Seal Class A" for all duct pressure classifications.
   1. Seal all transverse joints, longitudinal joints, and duct penetrations.
   2. Seal to achieve no visible or audible leaks.

C. Seal externally insulated ducts before insulation is applied.

D. Seal exposed joints internally during installation. Do not use external sealant on exposed ducts.
3.4 HANGING AND SUPPORTING

A. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.

B. Support vertical ducts at maximum intervals of 16 feet and at each floor.

C. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load.

D. Install concrete inserts before placing concrete.

E. Fastener System Installation:
   1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs greater than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
   2. Install mechanical fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured.
   3. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

3.5 CONNECTIONS

A. Make connections to equipment with flexible connectors according to Division 23 Section “Duct Accessories.”

B. For branch connections comply with SMACNA’s “HVAC Duct Construction Standards-Metal and Flexible,” Figures 2-5 and 2-6.

C. For inlet and outlet connections comply with SMACNA’s “HVAC Duct Construction Standards-Metal and Flexible,” Figures 2-14 and 2-15.

D. For equipment connections comply with SMACNA’s "HVAC Duct Construction Standards -Metal and Flexible," Figures 2-17.

3.6 PAINTING

A. Exposed galvanized ducts: Paint materials and methods are specified in Division 9 Sections.

3.7 FIELD QUALITY CONTROL

A. Perform field tests and inspections according to SMACNA’s “HVAC Air Duct Leakage Test Manual” and prepare test reports.

B. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.

C. Conduct tests at static pressures equal to Duct Pressure Classification designated static pressures.

D. Conduct tests in the presence of the Architect, or authorized representative. Give 7 day’s advanced notice for testing. Prepare test reports.

E. Remake leaking joints and retest until leakage is equal to or less than maximum allowable.

F. Leakage Tests:
   1. Leak test each section of duct with a Duct Pressure Classification greater than 2-inches wg.
   2. Leak test each section of duct within a concealed shaft.
   3. Leak test each section of laboratory fume hood exhaust duct.
   4. Leak test a representative section of duct with a Duct Pressure Classification of 2-inches or less. Test a section with a positive pressure classification, and a section with a negative pressure classification.
      a. Following a successful test, all other ductwork in the Duct Pressure Classification shall be visually inspected to assure duct construction methods are like the tested sections.
      b. Additional sections shall be tested as requested by the Architect.
G. Maximum Allowable Leakage: Comply with requirements for Leakage Class 3 for ducts with a Duct Pressure Classification greater than 2-inches, and for Leakage Class 6 for ducts with duct pressure classification 2-inches or less.
   a. For a duct section with 4-inch Duct Pressure Classification or greater and Duct Leakage Class 3, leakage shall not exceed 7.5 CFM per 100 sq. ft. of duct surface area.
   b. For a duct section with a 2-inch Duct Pressure Classification and Duct Leakage Class 6, leakage shall not exceed 9.5 CFM per 100-sq. ft. of duct surface area.
   c. For positive pressure exhaust ducts, leakage shall be zero at 4.0 inches wg.

3.8 TEMPORARY USE OF AIR HANDLING SYSTEMS

A. Until the permanent air handling systems are used, duct openings shall have closures to preclude the entry of construction dirt and debris into the duct system and equipment.

B. If the permanent air handling systems are used for temporary heating or ventilating prior to completion of finishing operations, the supply air systems shall be operated with 100 percent outside air (no recirculation air) with pre-filters and final filters in place and maintained.
   1. Operation of air handling systems may not be possible during extreme outside air conditions.
   2. The return air and exhaust air systems shall not be used. The duct openings on these systems shall have permanent closures.

C. When the building is substantially complete, the permanent air handling systems may be utilized with return air with air filters in place. Extra-ordinary measures shall be taken to prevent dirt and/or moisture from entering the duct systems.
   1. Filters: Maintain clean filters in place. Install new permanent filters prior to Owner occupancy of the Project.
   2. Equipment: Maintain fans and equipment until Owner occupancy of the Project.

D. Air handling system ducts shall be vacuum cleaned, and equipment surfaces washed as may be necessary to restore the systems to new condition prior to final acceptance by the Owner.

3.9 CLEANING NEW SYSTEMS

A. General:
   1. All duct stored on site prior to installation, and all open ends of installed ducts must be covered with adhesive end caps on open ends to prevent intrusion of construction dust and/or debris.
   2. If, upon visual review of the materials, at the discretion of the Engineer, Commissioning Authority, Architect, or Owner, it is determined that the duct systems have become dirty during the installation and construction process, cleaning new duct systems will be required.

B. Cleaning of new duct systems
   1. Mark position of dampers and air-directional mechanical devices before cleaning, and perform cleaning before air balancing.
   2. Use service openings, as required, for physical and mechanical entry and for inspection.
      a. Create other openings to comply with duct standards.
      b. Disconnect flexible ducts as needed for cleaning and inspection.
      c. Remove and reinstall ceiling sections to gain access during the cleaning process.
   3. Vent vacuuming system to the outside. Include filtration to contain debris removed from HVAC systems, and locate exhaust down wind and away from air intakes and other points of entry into building.
   4. Clean the following metal duct systems by removing surface contaminants and deposits:
      a. Air outlets and inlets (registers, grilles, and diffusers).
      b. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
      c. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
      d. Coils and related components.
      e. Return-air ducts, dampers, and actuators except in ceiling plenums and mechanical equipment rooms.
f. Supply-air ducts, dampers, actuators, and turning vanes.

5. Mechanical Cleaning Methodology:
   a. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
   b. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
   c. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
   d. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet.
   e. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.

6. Cleanliness Verification:
   a. Visually inspect metal ducts for contaminants.
   b. Where contaminants are discovered, re-clean and re-inspect ducts.

END OF SECTION
SECTION 233119
HVAC CASINGS AND ACOUSTIC HOUSINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Factory-fabricated, field-assembled, double-wall casings for HVAC equipment.

1.3 PERFORMANCE REQUIREMENTS
A. Static-Pressure Classes:
   1. Upstream from Fan(s): -4-inch wg.
   2. Downstream from Fan(s): 4-inch wg.
B. Acoustical Performance:
   1. NRC: 1.09 according to ASTM C 423.
   2. STC: 40 according to ASTM E 90.
   A. Prefabricated Plenum Panels: Submit test data from an independent accredited laboratory indicating sound transmission loss performance of panel system in accordance with ASTM-E90 and sound absorption performance of panels, vision ports and access doors in accordance with ASTM-C423. Submittal shall include assembly drawings and details of joints and fittings to be used in the installation.
C. Structural Performance:
   1. Casings shall be fabricated to withstand 133 percent of the indicated static pressure without structural failure. Wall and roof deflection at the indicated static pressure shall not exceed 1/8 inch per foot of width.
      a. Fabricate outdoor casings to withstand wind load of 15 lbf/sq. ft. and snow load of 30 lbf/sq. ft.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of the following products:
   1. Factory-fabricated casings.
   2. Liners and adhesives.
   3. Sealants and gaskets.
B. Shop Drawings: For HVAC casings. Include plans, elevations, sections, components, and attachments to other work.
   1. Detail HVAC casing assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Sheet metal thickness(es).
   3. Reinforcement and spacing.
   4. Seam and joint construction.
   5. Access doors including frames, hinges, and latches.
   6. Filter, coil, humidifier, and other apparatus being installed in and mounted on casing.
   7. Locations for access to internal components.
8. Hangers and supports including methods for building attachment, vibration isolation, and casing attachment.
9. Interior lighting, including switches.

1.5 INFORMATIONAL SUBMITTALS
A. Product Certificates: For acoustically critical casings, from manufacturer.
   1. Show sound-absorption coefficients in each octave band lower than those scheduled when tested according to ASTM C 423.
   2. Show airborne sound transmission losses lower than those scheduled when tested according to ASTM E 90.
B. Field quality-control reports.

1.6 QUALITY ASSURANCE
B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

1.7 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete.
B. Coordinate sizes and locations of steel supports. Supports are specified in Section 055000 "Metal Fabrications."
C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."

PART 2 - PRODUCTS

2.1 NOISE CONTROL FOR MECHANICAL SYSTEMS
A. Some systems and equipment requirements may also be included in specification section 230548 "Noise Control for Mechanical Systems." Refer to both specification sections for acoustic requirements. Where specifications differ, the more stringent acoustic requirement applies.

2.2 GENERAL CASING AND ACOUSTICAL HOUSING FABRICATION REQUIREMENTS
A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 9, "Equipment and Casings," for acceptable materials, material thicknesses, and casing construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
   1. Fabricate casings with more than 3-inch wg negative static pressure according to SMACNA's "Rectangular Industrial Duct Construction Standards."
   2. Casings with more than 2-inch wg positive static pressure may be fabricated according to SMACNA's "Rectangular Industrial Duct Construction Standards."
B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
   1. Exterior Surface Galvanized Coating Designation: G90.
   2. Interior Surface Galvanized Coating Designation:
      a. Sections Not Exposed to Moisture: G90.
b. Sections Housing and Downstream from Cooling Coil and Humidifiers: G90.

C. Stainless Steel: ASTM A 480/A 480M, Type 304, and having a No. 2D finish.

D. Factory- or Shop-Applied Antimicrobial Coating:
1. Apply to the interior sheet metal surfaces of casing in contact with the airstream. Apply untreated clear coating to the exterior surface.
2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
3. Coating containing the antimicrobial compound shall have a hardness of 2H minimum when tested according to ASTM D 3363.
4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 according to UL 723; certified by an NRTL.

E. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

F. Sealing Requirement: SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Seal Class A. Seal all seams, joints, connections, and abutments to building.

G. Penetrations: Seal all penetrations airtight. Cover with escutcheons and gaskets, or fill with suitable compound so there is no exposed insulation. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping." Provide shaft seals where fan shafts penetrate casing.

H. Access Doors: Fabricate access doors according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 9-15, "Casing Access Doors - 2-inch wg ," and Figure 9-16, "Casing Access Doors - 3-10-inch wg "; and according to pressure class of the plenum or casing section in which access doors are to be installed.
1. Size: minimum 24 by 30 inches.
3. Hinges: Piano or butt hinges and latches, number and size according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
4. Latches: Minimum of two wedge-lever-type latches, operable from inside and outside.
5. Neoprene gaskets around entire perimeters of door frames.
6. Doors shall open against air pressure.

I. Condensate Drain Pans: Formed sections of Type 304 stainless steel sheet complying with requirements in ASHRAE 62.1. Pans shall extend a minimum of 12 inches past coil.
1. Double-wall construction shall have space between walls filled with foam insulation and sealed moisture tight.
2. Intermediate drain pan or drain trough shall collect condensate from top coil for units with stacked coils or stacked eliminators.
3. Insulation: Polystyrene or polyurethane.
4. Slopes shall be in a minimum of two planes to collect condensate from cooling coils (including coil piping connections and return bends), eliminators, and humidifiers when units are operating at maximum catalogued face velocity across cooling coil.
5. Each drain pan connection shall have a trap. Drain traps with depth and height differential between inlet and outlet equal or greater to the design static pressure plus 2-inch wg Include slab height in trap calculation.

J. Acoustical Criteria
1. Sound Transmission Loss: The octave band sound transmission loss of prefabricated plenum panels shall meet or exceed the following values measured in an accredited acoustical laboratory in dB:
   a. Frequency 63 125 250 500 1000 2000 4000 8000
Sound Absorption: The octave band sound absorption coefficients of prefabricated plenum panels shall meet or exceed the following values as measured in an accredited acoustical laboratory in accordance with ASTM-C423:

<table>

2.3 SHOP-FABRICATED CASINGS AND ACOUSTICAL HOUSINGS

A. Double-Wall Casing Inner Panel: Perforated, galvanized sheet steel having 3/32-inch diameter perforations, with overall open area of 23 percent. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for sheet metal thickness based on indicated static-pressure class unless otherwise indicated.

B. Interstitial Insulation: Fibrous-glass liner complying with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
   1. Maximum Thermal Conductivity: 0.27 Btu x in. /h x sq. ft. x deg F at 75 deg F mean temperature.
   2. Coat insulation with antimicrobial coating.
   3. Cover insulation with polyester film complying with UL 181, Class 1.

C. Fabricate casings with standing seams and angle-iron reinforcements unless otherwise indicated.

D. Fabricate close-off sheets from casing to dampers, filter frames, and coils and between stacked coils. Use galvanized sheet steel of same thickness as casing and with a galvanized coating designation of G90.

E. Bolt close-off sheets to frame flanges and housings. Support coils on stands fabricated from galvanized-steel angles or channels.

F. Reinforce casings with galvanized-steel angles.

G. Acoustical Criteria
   1. Sound Transmission Loss: The octave band sound transmission loss of prefabricated plenum panels shall meet or exceed the following values measured in an accredited acoustical laboratory in dB:
      | Frequency | TL |
      |-----------|----|
      | 63        | 26 |
      | 125       | 23 |
      | 250       | 30 |
      | 500       | 42 |
      | 1000      | 51 |
      | 2000      | 59 |
      | 4000      | 58 |
      | 8000      | 58 |

2.4 MANUFACTURED CASINGS AND ACOUSTICAL HOUSINGS

A. Description: Double-wall, insulated, pressurized equipment casing.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Buffalo Air Handling. (www.customairproducts.com)
   3. SEMCO Incorporated. (www.semcohvac.com)

C. Double-Wall Panel Fabrication: Solid, galvanized sheet steel exterior wall and perforated, galvanized sheet steel interior wall; with space between wall filled with insulation.
   1. Wall Thickness: 2 inches unless noted otherwise.
   2. Fabricate with a minimum number of joints.
3. Weld exterior and interior walls to perimeter; to interior, longitudinal, galvanized-steel channels; and to box-end internal closures. Paint welds.

4. Sheet metal thickness shall comply with SMACNA’s "HVAC Duct Construction Standards - Metal and Flexible" for static-pressure class indicated for casing.

5. Sheet Metal Thicknesses:
   a. Exterior Wall Thickness: 0.040 inch minimum.
   b. Interior Wall Thickness: 0.034 inch minimum.

7. Fill each panel assembly with insulating material that is noncombustible, inert, mildew resistant and vermin proof and that complies with NFPA 90A.

8. Fabricate panels with continuous tongue-and-groove or self-locking joints effective inside and outside each panel.

D. Trim Items: Fabricate from a minimum of 0.052-inch galvanized sheet steel, furnished in standard lengths for field cutting.

E. Acoustical Criteria

1. Sound Transmission Loss: The octave band sound transmission loss of prefabricated plenum panels shall meet or exceed the following values measured in an accredited acoustical laboratory in dB:
   a. Frequency 63 125 250 500 1000 2000 4000 8000
   b. TL 26 23 30 42 51 59 58 56

2. Sound Absorption: The octave band sound absorption coefficients of prefabricated plenum panels shall meet or exceed the following values as measured in an accredited acoustical laboratory in accordance with ASTM-C423:
   a. Frequency 125 250 500 1000 2000 4000 8000
   b. Absorption 0.89 1.2 1.16 1.09 1.01 1.03 0.93 0.95

2.5 CASING AND ACOUSTICAL HOUSING LINER

A. Fibrous-Glass Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. CertainTeed Corp.; Insulation Group. (www.certainteed.com)
   b. Johns Manville. (www.jm.com)
   c. Knauf Insulation. (www.knaufinsulation.us)
   d. Owens Corning. (www.owenscorning.com)

2. Maximum Thermal Conductivity:
   a. Type II, Rigid: 0.23 Btu x in. /h x sq. ft. x deg F at 75 deg F mean temperature.

3. Antimicrobial Erosion-Resistant Coating: Apply to surface of the liner that will form the interior surface of casing to act as a moisture repellent and an erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.

4. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
   a. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Adhesive shall comply with the testing and product requirements of the California Department of Health Services’ “Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.”

B. Insulation Pins and Washers:

1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick, stainless steel, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

C. Shop or Factory Application of Casing Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
1. Adhere a single layer of indicated thickness of casing liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of casing liner is prohibited.
2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
3. Butt transverse joints without gaps, and coat joint with adhesive.
4. Fold and compress liner in corners of casings or cut and fit to ensure butted-edge overlapping.
5. Apply adhesive coating on longitudinal seams in casings with air velocity of 2500 fpm.
6. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
7. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or “Z” profiles or are integrally formed from casing wall. Fabricate edge facings at the following locations:
   a. Fan discharges.
   b. Intervals of lined casing preceding unlined duct.
   c. Upstream edges of transverse joints in casings where air velocities are higher than 2500 fpm or where indicated.
8. Secure insulation between perforated sheet metal inner wall of same thickness as specified for outer wall. Use mechanical fasteners that maintain inner wall at uniform distance from outer wall without compressing insulation.

2.6 SEALANT MATERIALS
A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

B. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. For indoor applications, sealant shall have a VOC content of 75 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
8. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
9. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
10. Service: Indoor or outdoor.
11. Substrate: Compatible with galvanized sheet steel or stainless steel.

C. Flanged Joint Sealant: Comply with ASTM C 920.
2. Type: S.
3. Grade: NS.
5. Use: O.
6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
7. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine concrete bases, roof curbs, and steel supports for compliance with requirements for conditions affecting installation and performance of HVAC casings.

B. Examine casing insulation materials and liners before installation. Reject casings that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install casings according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Equipment Mounting:
   1. Install HVAC casings on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
   2. Comply with requirements for vibration isolation devices specified in Section 230548 "Noise and Vibration Controls for HVAC."

C. Apply sealant to joints, connections, and mountings.

D. Field-cut openings for pipe and conduit penetrations; insulate and seal according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

E. Support casings on floor or foundation system. Secure and seal to base.

F. Support components rigidly with ties, braces, brackets, and anchors of types that will maintain housing shape and prevent buckling.

G. Align casings accurately at connections, with 1/8-inch misalignment tolerance and with smooth interior surfaces.

H. Locate access doors to acoustic housings in accessible locations.

3.3 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. Perform field tests and inspections according to SMACNA's "HVAC Air Duct Leakage Test Manual."
   2. Test the following systems:
      a. Systems required by ASHRAE/IESNA 90.1.
      b. Supply Air: 50 percent of total installed duct area with a pressure class of 4-inch wg or higher:
         1) If any of the tests fail with excess leakage, 100% testing coverage will be required.
      c. Return and Exhaust Air: 50 percent of total installed duct area with a pressure class of 3-inch negative wg or higher:
         1) If any of the tests fail with excess leakage, 100% testing coverage will be required.
   3. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If pressure classes are not indicated, test entire system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure. Give seven days' advance notice for testing.
4. Determine leakage from entire system or section of system by relating leakage to surface area of test section. Comply with requirements for leakage classification of ducts connected to casings.

5. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.

B. HVAC casings will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 CLEANING

A. Comply with requirements for cleaning in Section 233113 "Metal Ducts."

END OF SECTION
SECTION 233300
AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   2. Control dampers.
   3. Fire dampers.
   4. Smoke dampers.
   5. Combination fire and smoke dampers.
   6. Duct silencers.
   7. Turning vanes.
   8. Remote damper operators.
   9. Duct-mounted access doors.
  10. Flexible connectors.
  11. Flexible ducts.
  12. Duct accessory hardware.
  13. Flange connectors.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated.
   1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings. Provide test data certified by an independent testing laboratory.

B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
   1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:

C. Wiring Diagrams: For power, signal, and control wiring.

D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.

E. Source quality-control reports.

F. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

B. Comply with AMCA 500-D testing for damper rating.
PART 2 PRODUCTS

2.1 MATERIALS

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
   2. Exposed-Surface Finish: Mill phosphatized.

C. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed ducts and 4 finish for exposed ducts.

D. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.

E. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.

F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 BACKDRAFT DAMPERS

A. Manufacturers:
   1. Air Balance, Incorporated.
   2. American Warming and Ventilating.
   3. CESCO Products.
   4. Duro Dyne Corporation
   5. Greenheck.
   6. Pottorff; Division of PVI Industries Incorporated
   7. Prefco Products Incorporated.
   8. Ruskin Company. (Ruskin model BD6/CBD6)
   9. Standard Metal Products

B. Description: Multiple-blade, parallel action gravity balanced, with center-pivoted blades of maximum 6-inch width, with sealed edges, assembled in rattle-free manner with 90-degree stop, steel ball bearings, and axles; adjustment device to permit setting for varying differential static pressure.

C. Frame: 0.063-inch-thick extruded aluminum, with welded corners.

D. Blades: 0.050-inch-thick aluminum sheet.

E. Blade Seals: Vinyl.

F. Blade Axles: Nonferrous.

G. Tie Bars and Brackets: Aluminum.

H. Return Spring: Adjustable tension.

2.3 MANUAL VOLUME DAMPERS

A. Manufacturers:
   1. Air Balance, Incorporated
   2. American Warming and Ventilating.
3. Flexmaster U.S.A., Incorporated
5. METALAIRE, Incorporated
6. Nailor Industries Incorporated
7. Pottorff; Division of PVI Industries Incorporated
8. Ruskin Company.
9. Standard Metal Products
10. Vent Products Company, Incorporated
11. Young Regulator Company

B. General Description: Factory fabricated, with required hardware and accessories. Stiffen damper blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class.

1. Pressure Classes of 3-Inch wg or Higher: End bearings or other seals for ducts with axles full length of damper blades and bearings at both ends of operating shaft.

C. Low-Leakage Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, low-leakage rating, with linkage outside airstream, and suitable for horizontal or vertical applications.

1. Steel Frames: Hat or Angle-shaped, galvanized or stainless sheet steel channels, minimum of 0.064 inch thick, with mitered and welded corners; frames with flanges where indicated for attaching to walls and flangeless frames where indicated for installing in ducts.
2. Roll-Formed Steel Blades: 0.064-inch-thick galvanized or stainless sheet steel.
3. Aluminum Frames: Hat or Angle-shaped, 0.10-inch-thick, aluminum sheet channels; frames with flanges where indicated for attaching to walls and flangeless frames where indicated for installing in ducts.
4. Roll-Formed Aluminum Blades: 0.10-inch-thick aluminum sheet.
5. Extruded-Aluminum Blades: 0.050-inch-thick extruded aluminum.
7. Bearings: Oil-impregnated bronze, molded synthetic or Stainless steel sleeve thrust or ball.
10. Tie Bars and Brackets: Galvanized steel or Aluminum.
11. Jackshaft: 1-inch-diameter, galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
   a. Length and Number of Mountings: Appropriate to connect linkage of each damper in multiple-damper assembly.

D. Round manual volume dampers.

1. Fabrication:
   a. Frame: None.
   b. Blade:
      1) Style: Round, single-piece.
      2) Material: Minimum 20 gage galvanized steel.
   c. Bearings: Molded synthetic sleeve, turning in hole in duct.
   d. Axle: Minimum 3/8 inch square, plated steel, mechanically attached to blade.
   e. Mounting: Vertical or Horizontal.
3. Performance Data:
a. Capacity: Demonstrate capacity of damper to withstand HVAC system operating conditions.
b. Leakage: Maximum 40 cubic feet per minute total at 1 inch w.g. for 20 inches wide.
c. Hand Quadrant Standoff Bracket: 2 inch standoff for insulated ductwork.
d. Oillite bearings.

2.4 CONTROL DAMPERS
A. Automatic control dampers furnished by Division-23 “Instrumentation and Controls for HVAC”

2.5 FIRE DAMPERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Arrow United Industries; a Division of Mestek, Incorporated
   2. Cesco Products; a Division of Mestek, Incorporated.
   4. Pottorff; Division of PVI Industries Incorporated
   5. Prefco; Perfect Air Control, Incorporated
   6. Ruskin Company.
   7. Vent Products Company, Incorporated
   8. Greenheck.

B. Type: Dynamic; rated and labeled according to UL 555 by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 3000-fpm velocity.

E. Frame: Curtain type with blades outside airstream except when located behind grille where blades may be inside airstream; fabricated with roll-formed, 0.034-inch-thick galvanized steel; with mitered and interlocking corners.

F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
   1. Minimum Thickness: 0.052 or 0.138 inch thick, as indicated, and of length to suit application.
   2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

G. Mounting Orientation: Vertical or horizontal as indicated.

H. Blades: Roll-formed, interlocking, 0.034-inch-thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch-thick, galvanized-steel blade connectors.

I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

J. Heat-Responsive Device: Replaceable, 165 degrees F or 212 degrees F rated, fusible links based on application.

2.6 SMOKE DAMPERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Arrow United Industries; a Division of Mestek, Incorporated
   2. Cesco Products; a Division of Mestek, Incorporated.
   4. Pottorff; Division of PVI Industries Incorporated
   5. Prefco; Perfect Air Control, Incorporated
   6. Ruskin Company.
   7. Vent Products Company, Incorporated
   8. Greenheck.

B. General Requirements: Label according to UL 555S by an NRTL.
1. Frame: Hat-shaped, 0.044-inch-thick, galvanized sheet steel, with welded and mounting flange.
2. Blades: Roll-formed, horizontal, overlapping, 0.063-inch-thick, galvanized sheet steel.
3. Leakage: Class 3.
4. Rated pressure and velocity to exceed design airflow conditions.
5. Mounting Sleeve: Factory-installed, 0.063 thick, galvanized sheet steel; length to suit wall or floor application.
7. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven loads will not require motor to operate in service factor range above 1.0.
   b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230900 "Instrumentation and Control for HVAC."
   c. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
   d. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. X lbf and breakaway torque rating of 150 in. X lbf.
   e. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
   f. Non-spring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. X lbf and breakaway torque rating of 300 in. X lbf.
   g. Electrical Connection: Refer to Division 26 drawings.
8. Accessories:
   a. Auxiliary switches for position indication on building automation system.

2.7 COMBINATION FIRE AND SMOKE DAMPERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Arrow United Industries; a Division of Mestek, Incorporated
   2. Cesco Products; a Division of Mestek, Incorporated.
   4. Pottorff; Division of PVI Industries Incorporated
   5. Prefco; Perfect Air Control, Incorporated
   6. Ruskin Company.
   7. Vent Products Company, Incorporated
   8. Greenheck.
B. Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.
   1. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000-fpm velocity.
   2. Fire Rating: 1-1/2 and 3 hours. Refer to drawings.
   3. Frame: Hat-shaped, 0.063-inch-thick, galvanized sheet steel, with welded and mounting flange.
   7. Leakage: Class I.
   8. Rated pressure and velocity to exceed design airflow conditions.
   9. Mounting Sleeve: Factory-installed, 0.039-inch-thick, galvanized sheet steel; length to suit wall or floor application.
11. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Section 230900 "Instrumentation and Control for HVAC."
   c. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
   d. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
   e. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
   f. Non-spring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
   g. Electrical Connection: Refer to Division 26 drawings.

12. Accessories:
   a. Auxiliary switches for position indication on building automation system.

2.8 FLANGE CONNECTORS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ductmate Industries, Incorporated
   2. Elgin Manufacturing
   3. Nexus PDQ; Division of Shilco Holdings Incorporated
   4. Ward Industries, Incorporated; a Division of Hart & Cooley, Incorporated

B. Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

C. Material: Galvanized steel.

D. Gage and Shape: Match connecting ductwork.

2.9 DUCT SILENCERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Industrial Noise Control, Incorporated
   2. McGill AirFlow LLC.
   3. Price Industries
   4. Ruskin Company.
   5. Semco Incorporated.
   6. VAW Systems Ltd.

B. Source Quality Control:
   1. Acoustic Performance: Test according to ASTM E 477. Acoustic performance tests shall be performed and certified by an independent testing agency.
   2. Record acoustic ratings, including dynamic insertion loss and self-noise power levels with airflow of at least 2000-fpm face velocity.
   3. Leak Test: Test units for air tightness at 200 percent of associated fan static pressure or 6-inch wg static pressure, whichever is greater.

C. General Requirements:
   1. Factory fabricated.
2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84.

3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

D. Shape:
   1. Rectangular straight with splitters or baffles.

E. Rectangular Units: Fabricate casings with a minimum of 0.034-inch-thick, solid galvanized sheet metal for outer casing and 0.022-inch-thick, ASTM A 653/A 653M, G60, perforated galvanized sheet metal for inner casing. Casings shall not fail under 8 inches of differential air pressure.

F. Sheet Metal Perforations: 1/8-inch diameter for inner casing and baffles sheet metal.

G. Fill Material: Inert and vermin-proof fibrous material packed under not less than 15 percent compression.
   1. Erosion Barrier: Polymer bag enclosing fill and heat-sealed before assembly.

H. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations.
   1. Do not use nuts, bolts, or sheet metal screws for unit assemblies.
   2. Lock form and seal or continuously weld joints.
   3. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
   4. Reinforcement: Cross or trapeze angles for rigid suspension.

I. Connection Sizes: Match connecting ductwork unless otherwise indicated.

J. Capacities and Characteristics:
   1. Refer to Duct Silencer Schedule for capacities and characteristics.

2.10 TURNING VANES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ductmate Industries, Incorporated
   2. Elgin Manufacturing
   3. Duro Dyne Incorporated
   4. METALAIRE, Incorporated
   5. SEMCO Incorporated.
   7. Ward Industries, Incorporated; a Division of Hart & Cooley, Incorporated

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

C. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-3, "Vanes and Vane Runners," and 2-4, "Vane Support in Elbows."

D. Vane Construction: Single wall for ducts up to 24 inches wide and double wall for larger dimensions.

2.11 REMOTE MANUAL DAMPER OPERATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Pottorff; a Division of PCI Industries, Incorporated
   2. Ventfabrics, Incorporated
   3. Young Regulator Company.
4. Ruskin
5. Greenheck

B. Description: Concealed damper regulator with cover, cable, damper, and damper operator.
   1. Damper Operator: 9 volt DC actuator with RJ-11 connection.
   2. Cable: Flexible rotating cable up to 30-feet in length. RJ-11 plenum rated cable.
   3. Remote Operator: RC-9V handheld remote damper controller
   4. Cover Plate: Removable flush mounted cover plate up to 3-inches in diameter conceals remote operator.
   5. Factory primer coat cover plate for field painting according to requirements of Division 9.

2.12 DUCT-MOUNTED ACCESS DOORS
A. General Description: Fabricate doors airtight and suitable for duct pressure class.
B. Door: Double wall, duct mounting, and rectangular; fabricated of galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class. Include vision panel where access door located within 3’ of connected equipment. Include 1-by-1-inch butt or piano hinge and cam latches.
   1. Manufacturers:
      a. American Warming and Ventilating.
      b. CESCO Products.
      c. Ductmate Industries, Incorporated
      d. Flexmaster U.S.A., Incorporated
      e. Greenheck.
      g. Nailor Industries Incorporated
      h. Pottorff; Division of PVI Industries Incorporated
      i. Ventfabrics, Incorporated
      j. Ward Industries, Incorporated
   2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
   3. Provide number of hinges and locks as follows:
      a. Less Than 12 Inches square: Secure with two sash locks.
      b. Up to 18 Inches Square: Two hinges and two sash locks.
      c. Up to 24 by 48 Inches: Three hinges and two compression latches with outside handles.
      d. Sizes 24 by 48 Inches and Larger: One additional hinge.
   C. Door: Double wall, duct mounting, and round; fabricated of galvanized sheet metal with insulation fill and 1-inch thickness. Include cam latches.
      1. Manufacturers:
         a. Flexmaster U.S.A., Incorporated
      2. Frame: Galvanized sheet steel, with spin-in notched frame.
   D. Seal around frame attachment to duct and door to frame with neoprene or foam rubber.
   E. Insulation: 1-inch-thick, fibrous-glass or polystyrene-foam board.

2.13 FLEXIBLE CONNECTORS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ductmate Industries, Incorporated
   2. Duro Dyne Incorporated
   3. Ventfabrics, Incorporated
   4. Ward Industries, Incorporated; a Division of Hart & Cooley, Incorporated
   B. Materials: Flame-retardant or noncombustible fabrics.
   C. Coatings and Adhesives: Comply with UL 181, Class 1.
D. Metal-Edged Connectors: Factory fabricated with a fabric strip [3-1/2 inches] [5-3/4 inches] wide attached to 2 strips of 2-3/4-inch wide, 0.028-inch thick, galvanized sheet steel or 0.032-inch thick aluminum sheets. Provide metal compatible with connected ducts.

   1. Minimum Weight: 26 oz./sq. yd.
   2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
   3. Service Temperature: Minus 40 to plus 200 deg F.

   1. Minimum Weight: 24 oz./sq. yd.
   2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
   3. Service Temperature: Minus 50 to plus 250 deg F.

G. High-Corrosive-Environment System, Flexible Connectors: Chemical-resistant industrial rubber.
   1. For use in fume hood exhaust system.
   2. Steel wire reinforced natural rubber with 1/16-inch thick molded “Teflon” liner and 1/8” thick rubber cover.
   3. Rated for 165 psi.
   4. Service Temperature: Minus 67 to plus 400 Degrees F.

2.14 FLEXIBLE DUCTS

A. Manufacturers:
   1. Ductmate Industries, Incorporated
   2. Flexmaster U.S.A., Incorporated
   3. Hart & Cooley, Incorporated
   5. Thermaflex

B. Insulated-Acoustical-Flexible Duct: UL 181, Class 1, spun bond nylon fabric liner supported by helically wound galvanized steel, mechanically fastened to fabric liner without use of adhesive. Fiberglass insulation R-6.0 with aluminized vapor barrier.
   1. Pressure Rating:
      a. Sizes 6-inches to 16-inches: 6-inch wg positive and 5-inch wg negative.
   3. Temperature Range: Minus 20 to plus 250 Degrees.
   4. Minimum Acoustic Performance:
      a. The insertion loss (dB) of a 6 foot length of duct when tested in accordance with ASTM E 477 at a velocity of 1000 feet per minute shall be at least:

      | Frequency | 125 Hz | 250 Hz | 500 Hz | 1000 Hz | 2000 Hz | 4000 Hz |
      |-----------|-------|-------|-------|--------|--------|--------|
      | 8 inch dia. | 11    | 20    | 27    | 31     | 26     | 12     |
      | 12 inch dia. | 10    | 17    | 23    | 30     | 18     | 9      |

C. Flexible Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action, in sizes 3 through 18 inches to suit duct size.

2.15 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.
PART 3 EXECUTION

3.1 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.

B. Install duct accessories according to the manufacturers published installation instructions.

C. Install control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
   1. Duct openings shall be free of any obstruction or irregularities that interfere with blade or linkage rotation or actuator mounting. Duct openings shall measure 1/4" larger than damper dimensions and shall be square, straight, and level.
   2. Multiple damper sections will be square and free from racking, twisting, or bending. Measure diagonally from upper corners to opposite lower corners of each damper section. Both dimensions must be equal ±1/8-inches.
   3. Install extended shaft or jackshaft per manufacturer's instructions. (Typically, a sticker on the damper face shows recommended extended shaft location. Attach shaft on labeled side of damper to that blade.)
   4. Damper blades, axles, and linkage shall operate without binding. Before system operation, cycle damper after installation to assure proper operation. On multiple section assemblies, all sections must open and close simultaneously.
   5. Provide a visible and accessible indication of damper position on the drive shaft end.
   6. After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.

D. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

E. Coordinate the installation of duct accessories with the work of other trades. Plan and maintain access for the installation, inspection and operation of dampers. Access for fire and smoke dampers will be as required by the installation instructions, but not less than a 2'-0" x 2'-0" clear access space to the duct access door and/or damper actuator.

F. Install test holes at fan inlets and outlets and elsewhere as indicated.

G. Install outside air static pressure probe according to the manufactures instructions.

3.2 BACKDRAFT DAMPERS

A. Install backdraft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated on the drawings. Backdraft dampers shall be eliminated when "automatic control dampers" are indicated to prevent back drafts.

3.3 MANUAL VOLUME DAMPERS

A. In ducts with liner, install volume dampers in ducts so as to avoid damage to and erosion of duct liner.

B. Install manual volume dampers at points on supply, return, and exhaust systems where branches lead from larger ducts as required for air balancing. Install at a minimum of two duct widths from branch takeoff. Install manual volume dampers as indicated on the Drawings and Details, and as necessary to accomplish system air balancing. As a minimum, manual volume dampers will be provided at every divided flow main or branch duct, at every branch duct take off, and every duct extending to individual register, grille, or diffuser. Manual volume dampers are not required upstream of variable volume air terminal units.
   1. Install remote damper operators for volume dampers located above gypsum board, plaster, and other hard ceilings.
C. Set dampers to fully open position before testing, adjusting, and balancing.

3.4 DUCT SILENCERS

A. Install duct silencers independent of ducts with flexible duct connectors. Install duct silencers with splitter elements arranged vertically wherever possible. Where elbows precede silencers, splitter elements will be installed parallel to the plane of the elbow. Maintain minimum straight duct lengths upstream and downstream of fans, system components, and duct elbows and fittings as recommended by manufacturer to achieve 1.0 multiplier on published straight duct silencer air pressure drop.

3.5 DUCT ACCESS DOORS

A. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
   1. On both sides of duct coils.
   2. At outdoor-air intakes and mixed-air plenums.
   3. At drain pans and seals.
   4. Upstream from duct filters.
   5. Upstream and downstream from duct filters.
   6. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
   7. Adjacent to and close enough to fire dampers, to reset or reinstall fusible links. Access doors for access to fire dampers having fusible links shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
   8. Upstream or downstream from duct silencers.
   9. Control devices requiring inspection.
   10. Elsewhere as indicated.

B. Install access doors with swing against duct static pressure.

C. Access Door Sizes:
   1. One-Hand or Inspection Access: 8 by 5 inches.
   2. Two-Hand Access: 12 by 6 inches.

D. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

3.6 FLEXIBLE CONNECTORS

A. Install flexible connectors immediately adjacent to equipment in ducts associated with fans and motorized equipment supported by vibration isolators.

B. For fans developing static pressures of 5-inch wg and higher, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

C. Install flexible connectors for fume hood exhaust systems according to the connector manufacturer’s installation instructions.

D. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.
3.7 **INSTALLATION OF FLEXIBLE DUCTS**

A. Install and flexible ducts according to the manufacturer's instructions, applicable SMACNA standards, drawing details, and as follows:

1. Duct Collars: Provide tap-in collars 4-inches minimum in length with a formed bead 1-inch from the end for attachment of flexible duct. Extend minimum collar length for manual volume dampers.
2. Connections: Attach flexible duct to the tap-in collars and to sleeves with a duct clamp (draw band) around the inner liner and a second draw band around the insulation jacket. Position duct clamps behind the beads on the collar or sleeve. Duct clamps may be screwed stainless steel bands or nylon straps tightened with a compression tool.
3. Duct Supports: Support flexible duct at the manufacturer's recommended interval, but not less than every 5 feet. Maximum permissible sag is 1/2-inch per foot of spacing between supports (maximum of 1-1/4-inches over five feet).
4. Duct Hangers: Provide hanger straps in contact with the flexible duct at least 2-inch wide so the internal diameter of the duct is not reduced at the point of support.
5. Duct Bends: Make bends or turns in flexible ducts with not less than a one-duct diameter throat radius.
6. Connect diffusers, registers, grilles, and light troffer boots to low pressure ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place. Refer to drawing details for additional requirements.

3.8 **FIRE DAMPERS**

A. Install fire dampers according to manufacturer's UL-approved written instructions. Refer to the architectural drawings for fire rating requirements. Provide 1-1/2 hour rated fire dampers for wall and floor assemblies rated for 3 hours or less. Provide 3 hour rated fire dampers for wall and floor assemblies rated for more than 3 hours. Fire dampers will have 165-degree F links except as noted.

3.9 **SMOKE DAMPERS**

A. Install smoke dampers, and combination fire/smoke dampers according to manufacturer's UL-approved written instructions. Refer to the architectural drawings for fire rating requirements. Provide 1-1/2 hour rated dampers for wall and floor assemblies rated for 3 hours or less. Provide 3 hour rated combination dampers for wall and floor assemblies rated for more than 3 hours. Combination dampers will have 165-degree F links except as noted.

1. Refer to the damper schedule for additional data.
2. Coordinate the installation of duct smoke detectors provided by Division 26. Duct smoke detectors must be installed in an accessible location in accordance with the manufacturer’s instructions and the UL listing.

3.10 **FIELD QUALITY CONTROL**

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION
SECTION 23 33 05
NOISE CONTROL ACCESSORIES FOR DUCTWORK

PART 1 GENERAL

1.1 SCOPE
A. This section includes:
   1. Duct silencers
   2. Acoustically-rated flexible ducts
   3. Lagging wrap

1.2 RELATED SECTIONS
A. Division 1 – General Acoustical Requirements
B. Division 7 – Sealants

1.3 REFERENCES
A. American Society for Testing and Materials:
   3. E413-87 – Classification for Rating Sound Insulation

1.4 QUALIFICATIONS
A. Installer: Company specializing in performing the work of this Section with minimum 3 years documented experience.

1.5 REGULATORY REQUIREMENTS
A. Ductwork accessory components and installation to conform to applicable building codes

1.6 PERFORMANCE REQUIREMENTS
A. Noise control accessories in the path of airflow to meet minimum performance as indicated in the Contract Documents, when tested in accordance with ASTM E477-13e1.
B. Noise control accessories creating a barrier between noise producing elements and occupied building spaces to meet minimum performance as indicated in the Contract Documents, when tested in accordance with ASTM E90-97 for classification under ASTM E413-87.
C. Noise control performance of duct accessories may exceed the minimum DIL and TL ratings if required to meet other requirements of this section.
1.7 SUBMITTALS
A. Submit manufacturer's data, shop drawings, and product performance certifications in accordance with specified requirements.
B. Submit technical product data indicating acoustic performance as follows:
   1. Duct Silencers
      a. Dynamic Insertion Loss at the specified airflow in octave bands from 63Hz to 4000Hz.
      b. Self-Generated Noise, reported as sound power level, at the specified airflow in octave bands from 63Hz to 4000Hz.
      c. Static pressure drop at the specified airflow, including the effects of duct configurations proximate to the inlet and outlet of the silencer (i.e. “system effects”)
      d. Sheet metal gauge for silencer casing.
   2. Acoustically-Rated Flexible Ducts
      a. Dynamic Insertion Loss per linear foot of duct in octave bands from 125Hz to 4000Hz.
   3. Lagging Wrap
      a. Transmission Loss in octave bands from 125Hz to 4000Hz.

1.8 DELIVERY, STORAGE, AND HANDLING
A. Deliver products to site under provisions of Division 1.
B. Store and protect products under provisions of Division 1.

PART 2 PRODUCTS

2.1 DUCT SILENCERS
A. Duct silencers to be comprised of solid steel casings, perforated sheet metal liners and baffles, and fiberglass fill.
   1. Casing construction:
      a. Standard casing: Minimum 18ga. galvanized sheet steel
      b. High Transmission Loss casing, where noted in the drawings: Minimum 16ga. galvanized sheet steel
   2. Baffle construction:
      a. Perforated facing: Minimum 26ga. galvanized sheet steel
      b. Where indicated on the drawings, encapsulate the fiberglass fill in a polymer or polyester film.
B. Minimum Dynamic Insertion Loss, Self-Generated Noise, and maximum permissible static pressure drop as indicated in the drawings.
C. The precise model of silencer may be selected by the manufacturer to meet the performance requirements as specified in the drawings, within the space allotted for the silencer as indicated in the drawings. Acceptable manufacturers:
   1. Vibro-Acoustics
   2. Price Industries
   3. VAW Systems
2.2  ACOUSTICALLY-RATED FLEXIBLE DUCTS

A. Acoustically-rated flexible ducts to be comprised of a perforated aluminum, chlorinated polyethylene (CPE), spunbond nylon, or other suitably acoustically-transmissive inner face bonded to a wire helix, a fiberglass insulation blanket wrap, and an outer aluminum or metalized film jacket.

B. Maximum length of flexible duct to be 3ft. (1m) except where indicated otherwise in the drawings. In no case should the length exceed applicable local code restrictions.

C. Minimum Dynamic Insertion Loss (dB per linear foot) with no airflow at 6in. (150mm) diameter:

D. Acceptable products:
1. T/L-A-T/L - Triple Lock Acoustic Duct Flexmaster Alpha by Novaflex
2. MK-E by Thermaflex
3. 6M by Flexmaster

2.3 LAGGING WRAP

A. Wrap:
1. Lagging wrap to be comprised of mass loaded vinyl of 1 psf surface weight with fiberglass mesh reinforcing.
   a. Minimum operating temperature range of -40 degrees Fahrenheit to 180 degrees Fahrenheit
   b. Resistant to water, oil, fungi, weak acids and alkalis.
   c. Minimum transmission loss values (dB):

2. Acceptable products include:
   a. KNM-100RB by Kinetics Noise Control
   b. UN-10R by Unger
   c. AudioSeal AB10R by Acoustical Solutions

B. Insulation
1. Glass fiber, mineral fiber or polyurethane foam insulation with density of 1.5pcf to 3pcf (24 to 48 kg/m³).
2. Insulation type to meet required thermal and fire ratings as indicated in the drawings.
3. Thickness of insulation varies depending on the size of the element being wrapped in lagging material, refer to Part 3 of this specification.

C. Joint tape:
1. Tape as recommended by lagging wrap manufacturer to seal joints and edges as required.
PART 3 EXECUTION

3.1 EXAMINATION
A. Verify that field conditions are acceptable and are ready to receive work.
B. Beginning of installation means installer accepts existing conditions.

3.2 INSTALLATION
A. Duct Silencers, Acoustically-Rated Louvers, Acoustically-Rated Transfer Ducts, Acoustically-Rated Flexible Ducts, and Acoustically-Rated Return Air Boots:
   1. Follow all manufacturer’s instructions for material handling and installation.
   2. Follow the standards for installation of sheet metal ductwork and other duct accessories as described elsewhere in the Contract Documents
B. Lagging Wrap
   1. Follow all manufacturer’s instructions for material handling and installation.
   2. For piping and ductwork with risk of condensation within the external insulation, spray-apply vapor absorber to the outside of the element before installing insulation or utilize polyethylene sheet as a vapor barrier.
   3. Insulation around the outside of the element.
      a. Use insulation of the following thickness where the following does not interfere with thermal or fire ratings:
         1) Use 1 inch thick insulation for piping of 3 inch and smaller diameter and ductwork of 144 square inches or less in free area.
         2) Use 2 inch insulation for larger piping and ductwork.
      b. Use insulation compatible with required fire ratings and thermal insulation as defined in the drawings and elsewhere in the specifications, when this differs from the thickness described above.
   4. Wrap each element individually and continuously on all sides with a minimum overlap of 2 inches at seams.
      a. Tape all seams airtight using tape recommended by the lagging manufacturer. Do not use duct tape for this purpose.
      b. If clearance above the element to the underside of the structural deck does not permit installation of the lagging between the element and the deck, request direction from the Acoustics Consultant.
      c. If the lagging material needs to be field-cut to fit, dress the edges of the material according to manufacturer’s instructions prior to installation.
   5. Install a second layer of the lagging where indicated in the drawings. Stagger seams not less than 12 inches from those of the first layer and tape as described above.
   6. All layers of lagging must extend for the full length of piping and ductwork scheduled for lagging, including elbows, branches, and terminal devices such as roof drains. Tape and seal the ends of the installation to perimeter walls and slabs.
   7. Cut in access flaps for valves, access panels, and other items requiring access. Tape edges of access flaps and indelibly label each flap for its purpose.

3.3 PERFORMANCE TESTING
A. Notify the Engineer when the installation is substantially complete so that performance testing may be scheduled in conjunction with final punch list review.
B. Performance testing to be performed by others.

END OF SECTION
SECTION 233416
CENTRIFUGAL HVAC FANS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes: For each product.
      1. Airfoil centrifugal fans.
      2. Backward-inclined centrifugal fans.

1.3 ACTION SUBMITTALS
   A. Acoustic Performance Submittal
      1. Contractor shall submit at the time of bidding the design sound power level of each air moving device as described in the Contract Documents. If the actual sound power generated by any device exceeds in any octave band the specified sound power levels for the equipment specified in the Contract Documents, the contractor shall include in his price system modifications as required to compensate for the additional noise at no expense to the Owner. Any such system modification shall be subject to review and approval.
      2. Air moving devices (Supply, return and exhaust fans, package AHU’s): Submit sound power levels in octave bands from 63 Hz through 8000 Hz inclusive for the operating conditions specified. Data shall be obtained in accordance with AMCA 300-85. If fans are variable speed, provide sound power level data for maximum rpm and also at 80% and 60% of maximum rpm. Provide discharge, inlet and case-radiated sound power data for all fans.
      3. Submit for each fan a performance curve showing the operating point for which the acoustical data has been provided.
   B. Product Data:
      1. Include rated capacities, furnished specialties, and accessories for each fan.
      2. Certified fan performance curves with system operating conditions indicated.
      3. Certified fan sound-power ratings.
      4. Motor ratings and electrical characteristics, plus motor and electrical accessories.
      5. Material thickness and finishes, including color charts.
      6. Dampers, including housings, linkages, and operators.
   C. Shop Drawings:
      1. Include plans, elevations, sections, and attachment details.
      2. Include details of equipment assemblies. Indicate dimensions, weights, loads, and required clearances, method of field assembly, components, and location and size of each field connection.
      3. Include diagrams for power, signal, and control wiring.
      4. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
      5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
1.4 INFORMATIONAL SUBMITTALS
   A. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
   B. Field quality-control reports.
   C. Field Startup Reports.

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS
   A. Belts: One set for each belt-driven unit.

1.7 COORDINATION
   A. Coordinate size and location of structural-steel support members.
   B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
   A. AMCA Compliance:
      1. Comply with AMCA performance requirements and bear the AMCA-Certified Ratings Seal.
      2. Operating Limits: Classify according to AMCA 99.
   B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   C. Capacities and Characteristics:
      1. Refer to centrifugal fan schedule on the drawings for capacities and characteristics.

2.2 AIRFOIL CENTRIFUGAL FANS
   A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1. Twin City Fan
      2. Greenheck
      3. Loren Cook Company
   B. Description:
      1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
      2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
      3. Factory-installed and -wired disconnect switch.
   C. Housings:
      1. Formed panels to make curved-scroll housings with shaped cutoff.
      2. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
      3. Spun inlet cone with flange.
      4. Outlet flange.
   D. Airfoil Wheels:
2. Heavy backplate.
3. Hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.
4. Cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

E. Shafts:
1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Grease-Lubricated Shaft Bearings:
1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Ball-Bearing Rating Life: ABMA 9 L10 at 200,000 hours.
3. Roller-Bearing Rating Life: ABMA 11, L10 at 200,000 hours.

G. Belt Drives:
1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size 25 horsepower and smaller: 1.2
3. Service Factor Based on Fan Motor Size greater than 25 horsepower: 1.5
4. Fan Pulleys: Cast iron or cast steel with split tapered bushing; dynamically balanced at factory.
5. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
6. Belts: Oil resistant, non-sparking, and non-static; matched sets for multiple belt drives.
7. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

H. Accessories:
2. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.
4. Inlet Screens: Grid screen of same material as housing.
5. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
7. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
8. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.
9. Piezo ring airflow measuring device.

2.3 BACKWARD-INCLINED CENTRIFUGAL FANS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Twin City Fan
2. Greenheck
3. Loren Cook Company

B. Description:
1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

C. Housings:
1. Formed panels to make curved-scroll housings with shaped cutoff.
2. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
3. Spun inlet cone with flange.
4. Outlet flange.

D. Backward-Inclined Wheels:
1. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blades, and fastened to shaft with set screws.
2. Welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate.

E. Shafts:
1. Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Grease-Lubricated Shaft Bearings:
1. Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing.
2. Ball-Bearing Rating Life: ABMA 9, L10 at 200,000 hours.
3. Roller-Bearing Rating Life: ABMA 11, L10 at 200,000 hours.

G. Belt Drives:
1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size 25 horsepower and smaller: 1.2
3. Service Factor Based on Fan Motor Size greater than 25 horsepower: 1.5
4. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
5. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
6. Belts: Oil resistant, non-sparking, and non-static; matched sets for multiple belt drives.
7. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

H. Accessories:
2. Scroll Drain Connection: NPS 1 steel pipe coupling welded to low point of fan scroll.
3. Companion Flanges: Rolled flanges for duct connections of same material as housing.
4. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
5. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
7. Piezo ring airflow measuring device.
2.4 MOTORS
   A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   B. Shaft: Grounded
      1. Provide Aegis SGR or approved equivalent for shaft grounding.
      2. Install per manufacturer instructions.

2.5 SOURCE QUALITY CONTROL
   A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
   B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210/ASHRAE 51, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating."

2.6 ELECTRICAL CONNECTION
   A. For all fans, refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

2.7 BUILDING AUTOMATION SYSTEM INTERFACE
   A. Refer also to Sequence of Operation for necessary control and interface requirements.

PART 3 EXECUTION

3.1 INSTALLATION
   A. Install centrifugal fans level and plumb.
   B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
   C. Lift and support units with manufacturer's designated lifting or supporting points.
   D. Equipment Mounting:
      1. Install centrifugal fans on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-In-Place Concrete."
      2. Comply with requirements for vibration isolation devices specified in Section 230548 "Noise and Vibration Controls for HVAC."
   E. Unit Support: Install centrifugal fans level on structural pilings. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.
   F. Isolation Curb Support: Install centrifugal fans on isolation curbs, and install flexible duct connectors and vibration isolation and seismic-control devices.
      1. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.
      2. Comply with requirements in Section 230548 "Noise and Vibration Controls for HVAC"
   G. Install units with clearances for service and maintenance.
   H. Label fans according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."
3.2 CONNECTIONS
A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."
B. Install ducts adjacent to fans to allow service and maintenance.
C. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.

3.3 FIELD QUALITY CONTROL
A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
C. Perform the following tests and inspections:
1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. See Section 230593 "Testing, Adjusting, and Balancing For HVAC" for testing, adjusting, and balancing procedures.
10. Remove and replace malfunctioning units and retest as specified above.
D. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections.
E. Prepare test and inspection reports.

3.4 DEMONSTRATION
A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain centrifugal fans.

END OF SECTION
SECTION 233423
HVAC POWER VENTILATORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Centrifugal roof ventilators.
   2. In-line centrifugal fans.

1.3 PERFORMANCE REQUIREMENTS
A. Project Altitude: Base fan-performance ratings on actual project site elevation.
B. Operating Limits: Classify according to AMCA 99.

1.4 ACTION SUBMITTALS
A. Acoustic Performance Submittal
   1. Contractor shall submit at the time of bidding the design sound power level of each air moving device as described in the Contract Documents. If the actual sound power generated by any device exceeds in any octave band the specified sound power levels for the equipment specified in the Contract Documents, the contractor shall include in his price system modifications as required to compensate for the additional noise at no expense to the Owner. Any such system modification shall be subject to review and approval.
   2. Air moving devices (Supply, return and exhaust fans, package AHU's): Submit sound power levels in octave bands from 63 Hz through 8000 Hz inclusive for the operating conditions specified. Data shall be obtained in accordance with AMCA 300-85. If fans are variable speed, provide sound power level data for maximum rpm and also at 80% and 60% of maximum rpm. Provide discharge, inlet and case-radiated sound power data for all fans.
   3. Submit for each fan a performance curve showing the operating point for which the acoustical data has been provided.

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Dampers, including housings, linkages, and operators.
   6. Roof curbs.
   7. Fan speed controllers.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.
D. Delegated-Design Submittal: For unit hangars and supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
   1. Roof framing and support members relative to duct penetrations.
   2. Ceiling suspension assembly members.
   3. Size and location of initial access modules for acoustical tile.
   4. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
B. Field quality-control reports.
C. Startup Reports.

1.6 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Belts: One set for each belt-driven unit.

1.8 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. AMCA Compliance: Fans shall have AMCA-Certified performance ratings and shall bear the AMCA-Certified Ratings Seal.
C. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.
D. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

1.9 COORDINATION
A. Coordinate size and location of structural-steel support members.
B. Coordinate sizes and locations of concrete bases with actual equipment provided.
C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
D. Coordinate motor control requirements with building automation system installer.
PART 2 PRODUCTS

2.1 CENTRIFUGAL ROOF VENTILATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Aerovent (Twin City Fan) (www.aerovent.com)
   2. Greenheck (www.greenheck.com)
   3. Loren Cook Company. (www.lorencook.com)
   4. PennBarry. (www.pennbarry.com)

B. Housing: Removable, spun-aluminum, dome top and outlet baffle; square, one-piece, aluminum base with venturi inlet cone.
   1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains and grease collector.
   2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

D. Direct Drives:
   1. Motors: Electronically commutated brushless DC single phase.
   2. Motor speed control:
      a. Motor mounted manual speed control adjustment dial; 350 RPM to 1725 RPM.

E. Belt Drives:
   1. Resiliently mounted to housing.
   2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
   5. Fan and motor isolated from exhaust airstream.

F. Accessories:
   1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
   2. Disconnect Switch: Non-fusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
   3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
   4. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
   5. Motor starter
   6. Manufacturer’s standard protective coating.

G. Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
   1. Configuration: Self-flashing without a cant strip, with mounting flange.
   2. Overall Height: Minimum 16 inches.
   3. Sound Curb: Curb with sound-absorbing insulation.
   4. Vented Curb: Unlined with louvered vents in vertical sides. – for high temperature exhaust only

H. Capacities and Characteristics:
   1. Refer to fan schedule on the drawing for capacities and characteristics.

2.2 IN-LINE CENTRIFUGAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Aerovent (Twin City Fan) (www.aerovent.com)
   2. Greenheck (www.greenheck.com)
   3. Loren Cook Company. (www.lorencook.com)
B. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.

C. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing; with wheel, inlet cone, and motor on swing-out service door.

D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.

E. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.

F. Accessories:
   1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
   2. Companion Flanges: For inlet and outlet duct connections.
   3. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.
   4. Disconnect Switch: Non-fusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
   5. Motor starter.

G. Capacities and Characteristics:
   1. Refer to schedule on the drawings for capacities and characteristics.

2.3 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

B. Enclosure Type: Totally enclosed, fan cooled.

C. Shaft: Grounded – for all motors on variable frequency drives.
   1. Provide Aegis SGR or approved equivalent for shaft grounding.
   2. Install per manufacturer instructions.

2.4 SOURCE QUALITY CONTROL

A. Certify sound-power level ratings according to AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

B. Certify fan performance ratings, including flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating." Label fans with the AMCA-Certified Ratings Seal.

2.5 ELECTRICAL CONNECTION

A. For all fans, refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

2.6 BUILDING AUTOMATION SYSTEM INTERFACE

A. Refer also to Sequence of Operation for necessary control and interface requirements.
PART 3 EXECUTION

3.1 INSTALLATION
A. Install power ventilators level and plumb.
B. Install power ventilator accessories.
C. Equipment Mounting:
   1. Install floor mounted power ventilators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
   2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
D. Secure roof-mounted fans to roof curbs with cadmium-plated hardware. See Section 077200 "Roof Accessories" for installation of roof curbs.
E. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
F. Support suspended units from structure using threaded steel rods and vibration isolators; refer to the drawings for isolator deflection and type of isolator required. Vibration-control devices are specified in Division 23 Section "Vibration And Seismic Controls For HVAC Piping And Equipment."
G. Install units with clearances for service and maintenance.
H. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS
A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."
B. Install ducts adjacent to power ventilators to allow service and maintenance.
C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL
A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
B. Tests and Inspections:
   1. Verify that shipping, blocking, and bracing are removed.
   2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
   3. Verify that cleaning and adjusting are complete.
   4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
   5. Adjust belt tension.
   6. Adjust damper linkages for proper damper operation.
   7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
10. Shut unit down and reconnect automatic temperature-control operators.
11. Remove and replace malfunctioning units and retest as specified above.

C. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
D. Prepare test and inspection reports.
E. Submit startup reports.

3.4 ADJUSTING

A. Adjust damper linkages for proper damper operation.
B. Adjust belt tension.
C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
D. Replace fan and motor pulleys as required to achieve design airflow.
E. Lubricate bearings.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Shutoff, single-duct air terminal units.
   2. Fan-powered air terminal units.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
   1. Air terminal units.
   2. Liners and adhesives.
   3. Sealants and gaskets.
   4. Submit shop drawings complete with sound power levels generated by each terminal device at the air flow and pressure drop specified in the contract documents.
B. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Hangers and supports, including methods for duct and building attachment and vibration isolation.
C. Acoustic Submittal
   1. Unit manufacturer shall furnish when requested certified sound power levels for both discharged air and casing radiated sound in each of the second through sixth octave bands for every unit furnished with inlet pressures of 3/4", 1-1/2" and 3" w.g. determined in accordance with ASHRAE Standard 36-72, latest publication.
D. Delegated-Design Submittal:
   1. Materials, fabrication, assembly, and spacing of hangers and supports.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
   1. Ceiling suspension assembly members.
   2. Size and location of initial access modules for acoustic tile.
   3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
B. Field quality-control reports.
1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 “Operation and Maintenance Data,” include the following:
   1. Instructions for resetting minimum and maximum air volumes.
   2. Instructions for adjusting software set points.

1.6 QUALITY ASSURANCE

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - “Systems and Equipment” and Section 7 - “Construction and System Start-Up.”

PART 2 PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Environmental Technologies, Inc. (www.enviro-tec.com)
   3. Titus (www.titus-hvac.com)
   4. Trane (www.trane.com)

B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.

C. Casing: Minimum 0.034-inch steel single wall.
   1. Casing Lining: Adhesive attached, 1/2-inch-thick, polyurethane foam insulation complying with NFPA 90A and UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
   2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
   3. Air Outlet: S-slip and drive connections.
   4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
   5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
   1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.

E. Attenuator Section: 0.034-inch steel sheet. – For boxes scheduled with an attenuator
   1. Lining: Adhesive attached, 1-inch- thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
      a. Cover liner with nonporous foil and perforated metal.
   2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
F. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
   1. Minimum 2-rows.

G. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230900 "Instrumentation and Control for HVAC."

H. Capacities and Characteristics
   1. Refer to equipment schedules for capacities and characteristics.

2.3 PARALLEL FAN-POWERED AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Environmental Technologies, Inc (www.enviro-tec.com)
   3. Titus (www.titus-hvac.com)
   4. Trane (www.trane.com)

B. Configuration: Volume-damper assembly and fan in parallel arrangement inside unit casing with control components inside a protective metal shroud.

C. Casing: 0.034-inch steel single wall.
   1. Casing Lining: Adhesive attached, 1-inch-thick, polyurethane foam insulation complying with NFPA 90A, UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
   2. Air Inlets: Round stub connections or S-slip and drive connections for duct attachment.
   3. Air Outlet: S-slip and drive connections.
   4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket and quarter-turn latches.
   5. Fan: Forward-curved centrifugal, located at plenum air inlet.
   6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. Volume Damper: Galvanized steel with flow-sensing ring and peripheral gasket and self-lubricating bearings.
   1. Maximum Damper Leakage: ARI 880 rated, 3 percent of nominal airflow at 3-inch wg inlet static pressure.

E. Velocity Sensors: Multipoint array with velocity sensors in cold- and hot-deck air inlets and air outlets.

F. Direct Drive:
   1. Motors: Electronically commutated brushless DC single phase.
      a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
      b. Motor Bearings: Ball type.
      c. Fan-Motor Assembly Isolation: Rubber isolators.
   2. Motor speed control:
      a. External control signal 0-10 VDC; fan speed controlled by the building automation system

G. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
   1. Material: Pleated cotton-polyester media having 90 percent arrestance and 7 MERV.
   2. Thickness: 1 inch.
H. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
   1. Minimum 2-rows.
   2. Location: Plenum air inlet.

I. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.

J. Electronic Controls: Bidirectional damper operator and microprocessor-based controller with integral airflow transducer and room sensor. Control devices shall be compatible with temperature controls specified in Section 230900 "Instrumentation and Control for HVAC” and shall have the following features:
   1. Occupied and unoccupied operating mode.
   2. Remote reset of airflow or temperature set points.
   3. Adjusting and monitoring with portable terminal.
   4. Communication with temperature-control system specified in Section 230900 “Instrumentation and Control for HVAC.”

K. Capacities and Characteristics
   1. Refer to equipment schedules for capacities and characteristics.

2.4 HANGERS AND SUPPORTS
   A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
   B. Hanger Rods for Corrosive Environments: Electro galvanized all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
   C. Steel Cables: Galvanized steel complying with ASTM A 603 or Stainless steel complying with ASTM A 492.
   D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
   E. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
   F. Trapeze and Riser Supports: Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

2.5 SOURCE QUALITY CONTROL
   A. Factory Tests: Test assembled air terminal units according to ARI 880.
      1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

2.6 ELECTRICAL CONNECTION
   A. Refer also to Mechanical Electrical Coordination schedule for electrical connection requirements including but not limited to starters, disconnects, wiring, installation, interconnections, etc.

PART 3 EXECUTION

3.1 INSTALLATION
   A. Install air terminal units according to NFPA 90A, “Standard for the Installation of Air Conditioning and Ventilating Systems” and the manufacturers installation instructions.
B. Install air terminal units’ level and plumb. Maintain sufficient clearance for normal service and maintenance.

C. Install return air inlet sound attenuator on fan powered air terminal units.

3.2 HANGER AND SUPPORT INSTALLATION
A. Comply with SMACNA’s "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Where practical, install concrete inserts before placing concrete.
   2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
   3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
   4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.

C. Hangers Exposed to View: Threaded rod and angle or channel supports.

D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS
A. Install piping adjacent to air terminal unit to allow service and maintenance.

B. Hot-Water Piping: In addition to requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties," connect heating coils to supply with shutoff valve, strainer, control valve, And air vent; and to return with balancing.
   1. Connect steel heating-coil supply and return piping with union or flange. Copper piping connections do not require unions or flanges.

C. Connect ducts to air terminal units according to Section 233113 "Metal Ducts."

D. Make supply duct connections to fan powered air terminal units with flexible connectors complying with requirements in Section 233300 "Air Duct Accessories."

3.4 IDENTIFICATION
A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL
A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:
   1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
   2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Air terminal unit will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.
3.6 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer’s written instructions.
   2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
   3. Verify that controls and control enclosure are accessible.
   4. Verify that control connections are complete.
   5. Verify that nameplate and identification tag are visible.
   6. Verify that controls respond to inputs as specified.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Round ceiling diffusers.
   2. Rectangular and square ceiling diffusers.
   3. Louver face diffusers.
   4. Linear bar diffusers.
   5. Linear slot diffusers.
   6. Ceiling-integral continuous diffusers.
   7. Adjustable bar registers and grilles.
   8. Fixed face registers and grilles.
   9. Linear bar grilles.

B. Related Sections:
   1. Section 233300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated, include the following:
   1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
   2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, mounting surface, border, frame, and accessories furnished.

B. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
   1. Ceiling suspension assembly members.
   2. Method of attaching hangers to building structure.
   3. Size and location of initial access modules for acoustical tile.
   4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
   5. Duct access panels.

B. Source quality-control reports.

1.5 COORDINATION
A. Review the architectural drawings for diffuser, register, and grille mounting surfaces.
PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

A. Round Ceiling Diffuser:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.
   2. Face Style: four cones.
   4. Accessories: Refer to the drawings and equipment schedules for accessories.
      a. Equalizing grid.
      b. Plaster ring.

B. Rectangular and Square Ceiling Diffusers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.
   2. Face Style: three cones.
   3. Accessories: Refer to the drawings and equipment schedules for accessories.
      a. Equalizing grid.
      b. Plaster ring.

C. Louver Face Diffuser:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.
   2. Accessories: Refer to the drawings and equipment schedules for accessories.
      a. Square to round neck adaptor.
      b. Adjustable pattern vanes.
      c. Equalizing grid.
      d. Plaster ring.

2.2 CEILING LINEAR SLOT OUTLETS

A. Linear Bar Diffuser:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.

B. Linear Slot Diffuser:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.

C. Ceiling-Integral Continuous Diffuser:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the fol-
      lowing:
      a. Price Industries.
      b. Titus.
2.3 REGISTERS AND GRILLES

A. Adjustable Blade Register:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Titus.
   2. Frame: Minimum 20 gauge steel.
   4. Damper Type: Adjustable opposed blade unless noted otherwise.

B. Adjustable Bar Grille:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Titus.
   2. Frame: Minimum 20 gauge steel.

C. Fixed Face Register:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Titus.
   3. Finish: As scheduled.
   4. Face Arrangement: Refer to register schedule.
   5. Core Construction: Refer to register schedule.
   6. Frame: Minimum 20 Gauge Steel.
   7. Mounting Frame: Refer to register schedule.
   9. Damper Type: Adjustable opposed blade, unless noted otherwise.

D. Fixed Face Grille:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Titus.
   3. Finish: As scheduled.
   4. Face Arrangement: Refer to grille schedule.
   5. Core Construction: Refer to grille schedule.
   6. Frame: Minimum 20 Gauge Steel.
   7. Mounting: Concealed.

E. Linear Bar Grille:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Titus.
   3. Finish: Anodized, color selected by architect.
   4. Face Arrangement: Refer to Grille schedule.
   5. Frame: Refer to Grille schedule.
   7. Damper Type: Adjustable opposed blade, unless noted otherwise.
2.4 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Provide the appropriate mounting frame or border for each diffuser register or grille location. Verify ceiling grid type for lay-in type inlets and outlets. Non-lay-in diffusers, registers, and grilles will have frames or borders for surface mounting.

3.2 INSTALLATION

A. Diffuser, register, and grille sizes and locations are indicated on the drawings and schedules.

B. Install diffusers, registers, and grilles level and plumb.

C. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

D. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

E. Install equalizing grids on round neck ceiling diffusers with an inlet duct of less than one diameter in length.

3.3 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION
SECTION 234100
PARTICULATE AIR FILTRATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes factory-fabricated air-filter devices and media used to remove particulate matter from air for HVAC applications.

1.3 SUBMITTALS
A. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
B. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.
   1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
   2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
C. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE
A. Product Options: Drawings indicate size, profiles, and dimensional requirements of air filters and are based on the specific system indicated.
B. Comply with ARI 850.
C. Comply with ASHRAE 52.1 for arrestance and ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.
D. Comply with NFPA 90A and NFPA 90B.

1.5 EXTRA MATERIALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Provide one complete set of filters for each filter or filter bank
   2. Provide one container of red oil for inclined manometer filter gage.

PART 2 PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Air Filters, Electrostatic Air Cleaners, and Filter-Holding Systems:
      a. AAF International.
      b. Farr Co.
      c. Purafil, Inc.
2. Filter Gages:
   a. Airguard Industries, Inc.
   b. Dwyer Instruments, Inc.
   c. Or Approved Equal

2.2 TYPE “A” DISPOSABLE PLEATED FILTERS

A. Description: Factory-fabricated, pleated-type, disposable air filters with holding frames.

B. Media: Non-woven, reinforced cotton and synthetic fibrous material formed into deep V-shaped pleats and held by self-supporting wire frames. The filter will have a minimum 4.4 square feet of media area per square foot of face area.

C. Enclosing Frame: Nonflammable cardboard, with suitable fasteners and gaskets to hold the media and media frame and to prevent unfiltered air from passing between media frames and holding devices.

D. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

E. Capacities and Characteristics:
   1. UL rating: Class 2.
   2. Efficiency: MERV 8 ASHRAE Standard 52.2-2007
   3. Depth: 2-inches
   4. Maximum initial resistance to air flow at 500 fpm: Refer to equipment schedules
   5. Final resistance to air flow at 500 fpm: Refer to equipment schedules
   6. Refer to equipment schedules for additional requirements.

2.3 TYPE “C” EXTENDED-SURFACE, DISPOSABLE PANEL FILTERS

A. Description: Factory-fabricated, dry, deep pleated, high efficiency, filters with holding frames.

B. Media: Microfiber glass material formed into deep V-shaped pleats with a spacing of 10 pleats per inch and held by self-supporting Wire frames. The filter will have a minimum 25 square feet of media area per square foot of face area.

C. Enclosing Frame: Non metallic frame, with suitable fasteners and gaskets to hold the media and media frame and to prevent unfiltered air from passing between media frames and holding devices.

D. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

E. Capacities and Characteristics:
   1. UL rating: listed Class 2.
   2. Efficiency: MERV 13 ASHRAE Standard 52.2-2007
   3. Depth: 12-inches nominal
   4. Maximum initial resistance to air flow at 500 fpm: Refer to equipment schedules.
   5. Final resistance to air flow at 500 fpm: Refer to equipment schedules.
   6. Refer to equipment schedules for additional requirements.

2.4 TYPE “D” EXTENDED-SURFACE, DISPOSABLE PANEL FILTERS

A. Description: Factory-fabricated, dry, deep pleated, high efficiency, filters with holding frames.

B. Media: Microfiber glass material formed into deep V-shaped pleats with a spacing of 10 pleats per inch and held by self-supporting wire frames. The filter will have a minimum 25 square feet of media area per square foot of face area.

C. Enclosing Frame: Non metallic frame, with suitable fasteners and gaskets to hold the media and media frame and to prevent unfiltered air from passing between media frames and holding devices.
D. Mounting Frames: Welded galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

E. Capacities and Characteristics:
   1. UL rating: Listed Class 2.
   2. Efficiency: MERV 14 ASHRAE Standard 52.2-2007
   3. Depth: 12-inches nominal
   4. Maximum initial resistance to air flow at 500 fpm: Refer to equipment schedules.
   5. Final resistance to air flow at 500 fpm: Refer to equipment schedules.
   6. Refer to equipment schedules for additional requirements.

2.5 FRONT- AND REAR-ACCESS FILTER FRAMES

A. Framing System: Galvanized-steel or Aluminum framing members with access for either upstream (front) or downstream (rear) filter servicing, cut to size and pre-punched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.

B. Prefilters: Incorporate a separate track with spring clips, removable from front or back.

C. Sealing: Factory-installed, positive-sealing device for each row of filters, to ensure seal between gasketed filter elements and to prevent bypass of unfiltered air.

2.6 SIDE-SERVICE HOUSINGS

A. Description: Factory-assembled, side-service housings, constructed of galvanized steel, with flanges to connect to duct system.

B. Prefilters: Integral tracks to accommodate 2-inch (50-mm) disposable or washable filters.

C. Access Doors: Continuous gaskets on perimeter and positive-locking devices. Arrange so filter cartridges can be loaded from either access door. Provide ribbed bagging rim behind access door and PVC bags, for bag-in, bag-out arrangement.

D. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.7 FILTER GAGES

A. Description: Diaphragm type with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.
   1. Diameter: 4-1/2 inches.
   2. Range: 0- to 2.0-inch w.g

B. Manometer-Type Filter Gage: Molded plastic with epoxy-coated aluminum scale, logarithmic-curve tube gage with integral leveling gage, graduated to read from 0- to 3.0-inch w.g, and accurate within 3 percent of full scale range.

C. Accessories: Static-pressure tips with integral compression fittings, 1/4-inch aluminum or plastic tubing, and 2- or 3-way vent valves, gage connections, and mounting bracket.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install filter and filter frames according to manufacturer’s written instructions.

B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.

C. Install filters in position to prevent passage of unfiltered air.
D. Install filter gage for each filter bank.

E. Install filter gage static-pressure tips upstream and downstream from filters to measure pressure drop through filter. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.

F. Coordinate filter installations with duct and air-handling unit installations.

3.2 CLEANING

A. After completing system installation and testing, adjusting, and balancing of air-handling and air-distribution systems, clean filter housings and install new filter media.

END OF SECTION
SECTION 235216
CONDENSING BOILERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes packaged, factory-fabricated and -assembled, gas-fired, condensing boilers, trim, and accessories for generating hot water.

1.3 ACTION SUBMITTALS
A. Product Data: Include performance data, operating characteristics, furnished specialties, factory provided control systems and accessories.
   1. Efficiency Curves: Submit efficiency curves for 100%, 60%, and 5% input firing rates at incoming water temperatures ranging from 60°F to 160°F.
   2. Pressure Drop Curve: Submit pressure drop curve for flows ranging from 0 GPM to maximum value of boiler.
   3. Performance at Altitude: Provide documentation indicating that systems and equipment meets performance requirements at project altitude.
B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
   1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
      a. Design Calculations: Calculate requirements for selecting vibration isolators for designing vibration isolation bases.
      b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
   2. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Source quality-control reports.
B. Field quality-control reports.
C. Warranty: Special warranty specified in this Section.
D. Other Informational Submittals:

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.

C. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."

D. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete. 

B. Coordinate size and location of electrical connections.

C. Coordinate building automation system (BAS) interface.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Condensing Boilers:
   a. Leakage and Materials: 10 years from date of Substantial Completion.
   b. Heat Exchanger Damaged by Thermal Stress and Corrosion: Non-prorated for five years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 CONDENSING BOILERS

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
   1. Advanced Thermal Hydronics
   2. Lochinvar Corporation.
   3. Cleaver Brooks

B. Description: Factory-fabricated, -assembled, and -tested, condensing boiler with heat exchanger sealed pressure tight, built on a steel base; including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Water heating service only.

C. Heat Exchanger: The pressure vessel/heat exchanger shall be welded construction. The heat exchanger shall be ASME stamped for a working pressure not less than 160 psig. Pressure Vessel: Carbon steel with welded heads and tube connections.

D. Burner: The boiler burner shall be capable of a 5-to-1 turndown ratio of the firing rate without loss of combustion efficiency or staging of gas valves.
   1. Natural gas, forced draft.
   2. Burner shall operate without exceeding 20ppm NOx.

E. Blower: Variable speed centrifugal fan to operate during each burner firing sequence and to pre-purge and post purge the combustion chamber.

G. Ignition: Spark ignition with 100 percent main-valve shutoff with electronic flame supervision.

H. Casing:
1. Jacket: Sheet metal with snap-in or interlocking closures.
2. Control Compartment Enclosures: NEMA 250, Type 1A.
3. Finish: Baked-enamel or Powder-coated protective finish.
4. Insulation: Minimum 2-inch-thick, mineral-fiber or polyurethane-foam insulation surrounding the heat exchanger.
6. Mounting base to secure boiler.

I. Characteristics and Capacities:
1. Refer to condensing boiler schedule on drawings for characteristics and capacities.

2.2 TRIM
A. Aquastat Controllers: Operating, firing rate, and high limit.
B. Safety Relief Valve: ASME rated.
C. Additional safety devices: Low gas pressure switch, air flow switch, low water cutoff, high temperature switch, and blocked flue detection.
D. Drain Valve: Minimum NPS 3/4 hose-end gate valve.
E. Alarm Bell
F. Condensate Neutralization: Provide condensate neutralization kit per boiler. Each kit shall include capsule made from corrosion resistant materials with access/fill openings, neutralization, threaded inlet and outlet openings, and related clamps and fittings. Provide one additional set of replacement neutralization media per boiler.

2.3 CONTROLS
A. Boiler operating controls shall include the following devices and features:
   1. Control transformer.
   2. Set-Point Adjust: Set points shall be adjustable by building automation system and local overrides.
   3. Sequence of Operation: Electric, factory-fabricated and field-installed panel to control burner firing rate and to reset supply-water temperature based on reset sequences.
      a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
   4. Outlet water temperature sensor, return water temperature sensor, flue temperature sensor, outdoor air sensor, low water flow protection and built-in adjustable freeze protection.
   5. Multi-Colored Graphic LCD display with Navigation Dial and Soft Keys for, password security, three loop temperature setpoints with individual outdoor air reset curves, pump delay with adjustable freeze protection, pump exercise, domestic hot water prioritization with DHW modulation limiting and USB PC port connection. The boiler shall be capable of controlling a variable speed boiler pump to keep a constant Delta T at all modulation rates. The boiler shall have the capability to accept a 0-10 VDC input connection for BMS control of modulation or setpoint, enable disable of the boiler, variable system pump signal and a 0-10VDC output of boiler modulation rate. The boiler shall have a built-in “Cascade” with sequencing options for “lead lag” or “efficiency optimized” modulation logic, with both capable of rotation while maintaining modulation of up to eight boilers without utilization of an external controller.
   6. Pump starter
   7. Valve proving switch
   8. Isolation valve wiring
   9. Supply voltage shall be 120 volt / 60 hertz / single phase.

B. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
1. High Cutoff: Manual reset stops burner if operating conditions rise above maximum boiler design temperature.
2. Low-Water Cutoff Switch: Electronic probe shall prevent burner operation on low water. Cutoff switch shall be manual-reset type.
4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.

C. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.

1. A communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed, locally at boiler control panel shall be available through building automation system.

2.4 ELECTRICAL POWER

A. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.

1. House in NEMA 250, Type 1 enclosure.
2. Wiring shall be numbered and color-coded to match wiring diagram.
3. Install factory wiring outside of an enclosure in a metal raceway.
4. Field power interface shall be to nonfused disconnect switch.
5. Provide branch power circuit to each motor and to controls with a disconnect switch.
6. Provide each motor with overcurrent protection.

B. Refer to plans, schedules and Mechanical Electrical Coordination Schedules for additional details and responsibilities for electrical connection information, disconnects, starter, variable speed drives, and controls.

2.5 VENTING KITS

A. Kit: Complete system, ASTM A 959, Type 29-4C stainless steel, pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.

B. Venting Kits shall be provided by boiler manufacturer or from a product represented by the manufacturer providing the boiler.

2.6 VENTING

A. Double-wall, 1” ceramic insulated combustion exhaust vent. The exhaust vent must be UL Listed for use with Category III and IV appliances and compatible with operating temperatures up to 480°F, positive pressure, condensing flue gas service. UL-listed vents of Al 29-4C stainless steel must be used with boilers.

B. Combustion-Air Intake: Double-wall, 1” ceramic insulated, stainless steel, pipe, vent terminal with screen, inlet air coupling, and sealant.

C. Venting and combustion air shall be provided by boiler manufacturer or from a product represented by the manufacturer providing the boiler.
2.7 SOURCE QUALITY CONTROL

A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.

B. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.

C. Allow Owner access to source quality-control testing of boilers. Notify Architect 14 days in advance of testing.

PART 3 EXECUTION

3.1 EXAMINATION

A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
   1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.

B. Examine mechanical spaces for suitable conditions where boilers will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

A. Equipment Mounting:
   1. Install boilers level on cast-in-place concrete equipment base(s) with vibration isolation pads.

B. Install boilers, trim, controls, and vents according to the boiler manufacturer’s installation instructions.

C. Install gas-fired boilers according to NFPA 54.

D. Assemble and install boiler trim.

E. Install electrical devices furnished with boiler but not specified to be factory mounted.

F. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to boiler to allow service and maintenance.

C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.

D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service.

E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.

F. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve and union or flange at each connection.

G. Install thermometers on the supply and return water pipes near the boiler connections.

H. Install piping from safety relief valves to nearest floor drain.
I. Boiler Venting and Combustion Air Intake:
   1. Confirm location, elevation and alignment of exterior vent and intake connections with architecture before insulation.
   2. Install flue venting kit and combustion-air intake per boiler.
   3. Connect full size vents and combustion air intake to boiler connections.
   4. All venting, combustion air intake piping, fittings, accessories shall meet all boiler and venting manufacturer's recommendations.

J. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

K. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

L. Provide and install emergency boiler shutoff switch that shall deactivate boilers. Emergency boiler shutoff switch shall meet applicable ASME CSD-1 and local code requirements. Emergency boiler shutoff switch shall deactivate boilers and domestic water heaters. Provide and install all necessary wiring, relays, breakers, etc.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Perform installation and startup checks according to manufacturer's written instructions.
   2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
   3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
      a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
      b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

D. Remove and replace malfunctioning units and retest as specified above.

E. Prepare test and inspection reports.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain boilers. Refer to Section 017900 "Demonstration and Training."

END OF SECTION
SECTION 236423
SCROLL WATER CHILLERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Packaged, air-cooled, variable speed, electric-motor-driven, scroll water chillers with remote evaporators.

1.3 ACTION SUBMITTALS
A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
   1. Performance at ARI standard conditions and at conditions indicated.
   2. Performance at ARI standard unloading conditions.
   3. Minimum evaporator flow rate.
   4. Refrigerant capacity of water chiller.
   5. Oil capacity of water chiller.
   6. Fluid capacity of evaporator.
   7. Minimum entering condenser-air temperature
   8. Performance at varying capacity with constant design entering condenser-air temperature. Repeat performance at varying capacity for different entering condenser-air temperatures from design to minimum in 10 degree F increments.
B. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
   1. Assembled unit dimensions.
   2. Weight and load distribution.
   3. Required clearances for maintenance and operation.
   4. Size and location of piping and wiring connections.
   5. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural supports.
   2. Piping roughing-in requirements.
   3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
   4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
B. Certificates: For certification required in "Quality Assurance" Article.
C. Source quality-control test reports.
D. Startup service reports.
E. Warranty: Sample of special warranty.
1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. ARI Certification: Certify chiller according to ARI 590 certification program.
B. ARI Rating: Rate water chiller performance according to requirements in ARI 506/110, "Water Chilling Packages Using the Vapor Compression Cycle."
C. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
D. ASHRAE/IESNA 90.1-2010 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
E. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
F. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING
A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.

1.8 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided.
B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.9 WARRANTY
A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified period.
   1. Compressor Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
A. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
B. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590.
C. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
E. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
F. Comply with NFPA 70.
G. Comply with requirements of UL 1995, "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.
H. Operation Following Loss of Normal Power:
1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought online.

2. See drawings for equipment served by backup power systems.

3. Provide means and methods required to satisfy requirement even if not explicitly indicated.

I. Outdoor Installations:

1. Chiller shall be suitable for outdoor installation indicated. Provide adequate weather protection to ensure reliable service life over a 25-year period with minimal degradation due to exposure to outdoor ambient conditions.

2. Chillers equipped to provide safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures encountered by the installation. Review historical weather database and provide equipment that can operate at extreme outdoor temperatures recorded over past 30-year period.

2.2 MANUFACTURED UNITS

A. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser with fans, electrical power, controls, and indicated accessories.

B. Sound-reduction package shall have the following:
   1. Acoustic enclosure around compressors.
   2. Reduced-speed fans with acoustic treatment.
   3. High-performance fan design to reduce sound.
   4. Designed to reduce sound level without affecting performance.

C. Security Package: Full unit louvered panels or security grilles with fasteners for additional protection of compressors, evaporator, and condenser coils. Grilles shall be coated for corrosion resistance and shall be removable for service access.

2.3 CABINET

A. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.

B. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.

C. Casing: Galvanized steel.

D. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a 500-hour salt-spray test according to ASTM B 117.

2.4 COMPRESSOR-DRIVE ASSEMBLIES

A. Compressors:
   1. Description: Positive-displacement direct drive with hermetically sealed casing.
   2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
      a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.
   3. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
      a. Digital compressor unloading is an acceptable alternative to achieve capacity control.
5. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug or removable magnet in sump, and initial oil charge.
   a. Manufacturer's other standard methods of providing positive lubrication are acceptable in lieu of an automatic pump.

   a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.

7. Compressor Acoustic Sound Blankets

B. Compressor Motors:
   1. Hermetically sealed and cooled by refrigerant suction gas.
   2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.

C. Compressor Motor Controllers:
   1. Across the Line: NEMA ICS 2, Class A, full voltage, non-reversing.

2.5 REFRIGERATION

A. Refrigerant: R-410A. Classified as Safety Group A1 according to ASHRAE 34.

B. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

C. Refrigerant Circuit: Each circuit shall include an electronic or a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.

D. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.
   1. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in each circuit in lieu of each compressor.

E. Pressure Relief Device:
   1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   2. Select and configure pressure relief devices to protect against corrosion and inadvertent re-release of refrigerant.
   3. ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger.

2.6 REMOTE EVAPORATOR

A. Brazed Plate:
   1. Direct-expansion, single-pass, brazed-plate design.
   2. Type 316 stainless-steel construction.
   4. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
   5. Inlet Strainer: Factory-furnished, 40 mesh strainer for field installation in supply piping to evaporator. Manufacturer has option to factory install strainer.

B. Flow Switch: Factory-furnished, flow switch wired to chiller operating controls.

C. Remote-Mounting Kit: Designed for remote field mounting where indicated. Provide kit for field installation. 

Scroll Water Chillers
2.7 **AIR-COOLED CONDENSER**

A. Coil(s) with integral subcooling on each circuit.

B. Copper Tube with Plate Fin Coils:
   1. Construct coils of copper tubes mechanically bonded to aluminum > aluminum with precoated epoxy-phenolic copper fins.

C. Aluminum Microchannel Coils:
   2. Single- or multiple-pass arrangement.
   3. Construct fins, tubes, and header manifolds of aluminum alloy treated with a corrosion-resistant coating.

D. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

E. Fans: Low-sound fans and direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.

F. Fan Motors: TENV or TEAO enclosure, with sealed and permanently lubricated bearings, and having built-in overcurrent- and thermal-overload protection.
   1. Overcurrent- and thermal-overload protection not integral to motor is acceptable if provided with chiller electrical power package.

G. Fan Guards: Removable steel safety guards with corrosion-resistant PVC coating.

2.8 **INSULATION**

A. Closed-cell, flexible, elastomeric thermal insulation complying with ASTM C 534/C 534M, Type I for tubular materials and Type II for sheet materials.
   1. Thickness: 1-1/2 inch.

B. Adhesive: As recommended by insulation manufacturer.

C. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.
   1. Apply adhesive to 100 percent of insulation contact surface.
   2. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
   3. Seal seams and joints to provide a vapor barrier.
   4. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.
   5. Manufacturer has option to factory or field insulate chiller components to reduce potential for damage during installation.
   6. Field-Applied Insulation:
      a. Components that are not factory insulated shall be field insulated to comply with requirements indicated.
      b. Manufacturer shall be responsible for chiller insulation whether factory or field installed to ensure that manufacturer is the single point of responsibility for chillers.
      c. Manufacturer’s factory-authorized service representative shall instruct and supervise installation of field-applied insulation.
      d. After field-applied insulation is complete, paint insulation to match factory-applied finish.

2.9 **ELECTRICAL**

A. Factory installed and wired, and functionally tested at factory before shipment.
B. Factory-installed and wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.

C. House in a unit-mounted, NEMA 250, Type 3R enclosure with hinged access door with lock and key or padlock and key.

D. Wiring shall be numbered and color-coded to match wiring diagram.

E. Factory wiring shall be located outside of an enclosure in a metal raceway. Terminal connections shall be made with not more than a 24-inch length of liquidtight or flexible metallic conduit.

F. Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch. Minimum SCCR according to UL 508 shall be as required by electrical power distribution system, but not less than 65,000 A.

G. Each motor shall have branch power circuit and controls with one of the following disconnecting means having SCCR to match main disconnecting means:
   1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
   2. NEMA KS 1, heavy-duty, nonfusible switch.
   3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

H. Each motor shall have overcurrent protection.

I. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.

J. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.

K. Power Factor Correction: Capacitors to correct power factor to 0.95 at full load.

L. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

M. Control Relays: Auxiliary and adjustable time-delay relays, or an integral to water chiller microprocessor.

N. Service Receptacle:
   1. Unit-mounted, 120-V GFI duplex receptacle.
   2. Power receptacle from chiller internal electrical power wiring.

O. Indicate the following for water chiller electrical power supply:
   1. Current, phase to phase, for all three phases.
   2. Voltage, phase to phase and phase to neutral for all three phases.
   3. Three-phase real power (kilowatts).
   4. Three-phase reactive power (kilovolt amperes reactive).
   5. Power factor.
   6. Running log of total power versus time (kilowatt hours).
   7. Fault log, with time and date of each.

2.10 CONTROLS

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Standalone, microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.

C. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.

D. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, digital display. Display the following:
1. Date and time.
2. Operating or alarm status.
3. Operating hours.
4. Outside-air temperature if required for chilled-water reset.
5. Temperature and pressure of operating set points.
6. Chilled-water entering and leaving temperatures.
7. Refrigerant pressures in evaporator and condenser.
8. Saturation temperature in evaporator and condenser.
9. No cooling load condition.
10. Elapsed time meter (compressor run status).
11. Pump status.
12. Antirecycling timer status.
15. Number of compressor starts.
16. Alarm history with retention of operational data before unit shutdown.
17. Superheat.

E. Control Functions:
1. Manual or automatic startup and shutdown time schedule.
2. Capacity control based on evaporator leaving-fluid temperature.
3. Capacity control compensated by rate of change of evaporator entering-fluid temperature.
4. Chilled-water entering and leaving temperatures, control set points, and motor load limit.
   Chilled-water leaving temperature shall be reset based on return-water temperature.
5. Current limit and demand limit.
6. Condenser-water temperature.
7. External water chiller emergency stop.
8. Antirecycling timer.

F. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
1. Low evaporator pressure or high condenser pressure.
2. Low chilled-water temperature.
3. Refrigerant high pressure.
4. High or low oil pressure.
5. High oil temperature.
7. Loss of condenser-water flow.
8. Control device failure.

G. BAS / DDC System Interface: Factory-install hardware and software to enable system to monitor, control, and display chiller status and alarms.
1. Communication Interface: ASHRAE 135 (BACnet) communication interface shall enable control system operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

H. Factory-installed wiring outside of enclosures shall be in NFPA 70-complaint raceway. Make terminal connections with liquidtight or flexible metallic conduit.

2.11 CAPACITIES AND CHARACTERISTICS
A. Refer to drawing schedule.
B. Low Ambient Operation: Chiller designed for operation to 0 deg F.
2.12 ADDITIONAL ACCESSORIES
   A. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigeration circuit.
   B. Factory-furnished spring isolators for field installation.

2.13 SOURCE QUALITY CONTROL
   A. Perform functional test of water chillers before shipping.
   B. Factory test and inspect evaporator according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.
   C. For water chillers located outdoors, rate sound power level according to AHRI 370 procedure.

PART 3 EXECUTION

3.1 EXAMINATION
   A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, controls, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
      1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping, controls, and electrical connections.
   B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WATER CHILLER INSTALLATION
   A. Coordinate sizes and locations of bases with actual equipment provided. Cast anchor-bolt inserts into concrete bases.
   B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures with actual equipment provided.
   C. Install water chillers on support structure indicated.
   D. Equipment Mounting:
      1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
      2. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration Controls for HVAC."
   E. Maintain manufacturer’s recommended clearances for service and maintenance.
   F. Maintain clearances required by governing code.
   G. Chiller manufacturer’s factory-trained service personnel shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
   H. Install separate devices furnished by manufacturer and not factory installed.
      1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.3 PIPING CONNECTIONS
   A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties. It is the responsibility of the chiller manufacturer to confirm suitability of refrigerant piping for remote evaporator. In addition to requirements noted elsewhere, the Division 23 contractor shall provide and install all necessary and manufacturer recommended piping, valves and fittings for the project application, pipe routing and remote evaporator elevation.

C. Where installing piping adjacent to chillers, allow space for service and maintenance.

D. Evaporator Fluid Connections:
   1. Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage.
   2. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, and drain connection with valve.
   3. Make connections to water chiller with a flange or mechanical coupling.

E. Connect each drain connection with a drain valve, full size of drain connection.

F. Connect each chiller vent connection with a manual vent, full size of vent connection.

3.4 ELECTRICAL POWER CONNECTIONS
A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Provide nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch high. Locate nameplate where easily visible.

3.5 CONTROLS CONNECTIONS
A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.

C. Connect control wiring between chiller control interface and BAS/DDC system for remote monitoring and control of chillers. Comply with requirements in Section 230900.

D. Provide nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch high.

3.6 STARTUP SERVICE
A. Engage a factory-authorized service representative to perform startup service.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.

C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
   1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
   2. Verify that pumps are installed and functional.
   3. Verify that thermometers and gages are installed.
   4. Operate water chiller for run-in period.
   5. Check bearing lubrication and oil levels.
   6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
   7. Verify proper motor rotation.
8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

D. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.

E. Prepare a written startup report that records results of tests and inspections.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water chillers. Video record the training sessions and provide electronic copy to Owner.
   1. Instructor shall be factory trained and certified.
   2. Provide not less than eight hours of training.
   3. Train personnel in operation and maintenance and to obtain maximum efficiency in plant operation.
   4. Provide instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
   5. Obtain Owner sign-off that training is complete.
   6. Owner training shall be held at Project site.

END OF SECTION
SECTION 237316
AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes constant and variable air volume, factory-fabricated, double-wall, air-handling units for indoor installations.

B. Related Sections: The following Sections contain requirements that relate to this Section:
   1. Division 03 Sections for cast-in place concrete bases and curbs.
   2. Division 23 Section "Common Motor Requirements for HVAC Equipment"
   3. Division 23 Section "Variable Speed Motor Controllers"
   4. Division 23 Section "Vibration Controls for HVAC Piping and Equipment"
   5. Division 23 Section "Duct Accessories"
   6. Division 23 Section "Particulate Air Filtration"
   7. Division 23 Section "Instrumentation and Controls for HVAC"
   8. Division 23 Section "Sequence of Operation for HVAC Controls"
   9. Division 26 Sections for power supply wiring, including disconnect switches, motor starters, and required electrical devices. Division 23 furnishes variable speed drives.

1.3 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 01 Specification Sections.

B. Product data for each air-handling unit component indicated, including the following:
   1. AMCA certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound power ratings.
   3. Certified sound power ratings with calculations for each supply air, return air, relief or exhaust air, and outside air opening for each air handling unit.
   4. Certified unit casing radiated sound power with calculations for each air handling unit.
   5. Vibration isolation data.
   6. ARI certified coil performance ratings with system operating conditions indicated.
   7. Motor ratings and electrical characteristics plus motor and fan accessories.
   8. Variable speed drive data.
   9. Cabinet and frame materials, gages, and finishes.
   10. Air filter holding frame materials and assembly details.

C. Shop Drawings from manufacturer detailing equipment assemblies and indicating dimensions, weights, loadings, required clearances, method of field-assembly, components, and location and size of each field connection.
   1. Show internal air handling unit components. Indicate dimensions between individual components and air handling unit walls, floors and ceilings.
   2. Show support locations, type of support, and weight on each support.
   3. Vibration Isolation Base Details (Unit and Fans): Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

D. Wiring diagrams detailing wiring for power and controls and differentiating between manufacturer-installed wiring and field-installed wiring.
E. Product certificates signed by manufacturers of air-handling units certifying that their products comply with specified requirements. Where there are differences they shall be specifically identified.

F. Field installation and assembly instructions for air-handling unit cabinets and internal components.

G. Field test reports indicating and interpreting test results relative to compliance with specified requirements specified in Part 3 of this Section.

H. Maintenance data for air-handling units to include in Operating and Maintenance Manual specified in Division 01 Sections.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain outdoor air-handling units through one source from a single manufacturer.

B. NFPA Compliance: Air-handling units and components will be designed, fabricated, and installed in compliance with NFPA Standard 90A “Standard for the Installation of Air Conditioning and Ventilating Systems.”

C. Comply with NFPA 70 for components and installation.

D. Listing and Labeling: Provide electrically operated components specified in this Section that are listed and labeled. The Terms “Listed and Labeled” will be defined in the National Electric Code, Article 100.

E. Project Altitude: Base fan performance ratings on sea level.

F. Operating Limits: Classify according to AMCA 99.

G. Fan-Section Source Quality Control:
   2. Factory test fan performance for flow rate, pressure, power, air density, rotation speed, and efficiency. Establish ratings according to AMCA 210, “Laboratory Methods of Testing Fans for Rating.”
   3. Fan Balancing: Fans will be factory balanced and AMCA Certified to meet ANSI S2.19 grade G6.3 requirements. Filter-in vibration measurements will not exceed 0.15 in/second peak at the fan RPM.

H. Sound:
   1. Applicable Standards
      a. All sound power level measurements shall be made in complete accordance with the latest version of ARI Standard 260, Sound Rating of Ducted Air Moving and Conditioning Equipment. Equivalent test procedures may be substituted for the above procedures if approved in advance by the Architect and Acoustical Consultant. The sound power level of the air handling unit’s supply air, return air, relief or exhaust air, and outside air openings and case-radiated noise shall not exceed the values list in the Air Handling Unit Schedule below when operating at the maximum design airflow and static pressure conditions.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver air-handling units as a single factory-assembled unit, to the extent allowable by shipping limitations, with protective crating and covering.

B. Lift and support units with the manufacturer's designated lifting or supporting points.

C. Disassemble and reassemble units only when required for movement into the final location following manufacturer's written instructions.
D. Protect units from physical damage, water and moisture penetration, corrosion, and general construction dirt and debris. Use extraordinary means to assure units are turned over to the Owner in like new condition, clean and undamaged.

E. Units will not be used for tool, material, and equipment storage; or any other purpose during construction.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements. Verify Clearances.

B. Do not operate fans until ductwork is clean, filters are in place, bearings are lubricated, and fans have been commissioned.

1.7 COORDINATION

A. Coordinate the size and location of concrete equipment pads. Cast anchor bolt inserts into pad. Concrete reinforcement and formwork requirements are specified in Division 3 Sections.

B. Coordinate layout and installation of air-handling units with piping, ducts, conduit; the installation will allow access doors to swing a minimum of 90-degrees. Provide an unobstructed entrance path for each access door.

C. Coordinate size and location of factory and field installed control dampers.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Belts: Two sets for each belt-driven fan size.

2. Gaskets: One set(s) for each access door.

3. Provide one additional complete set of filters for each filter or filter bank.

4. Provide one additional variable frequency drive per each size of variable frequency drive provided.

5. Provide one additional motor per each size of motor provided.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Structural Performance: Casing panels shall be self-supporting and capable of withstanding positive/negative 8-inch wg of internal static pressure, without exceeding a midpoint deflection of 0.0042 inch/inch of panel span.

F. Casing Leakage Performance: ASHRAE 111, Class 6 leakage or better at [plus or minus 8 inch wg.

2.2 CAPACITIES AND CHARACTERISTICS

A. Refer to the equipment schedules for capacities and characteristics of each component.
2.3 AIR-HANDLING UNIT MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Buffalo Air Handling
   2. Carrier Corporation
   3. Daikin Applied
   4. Trane
   5. Ventrol Air Handling Systems Incorporated
   6. Climate Craft
   7. York (JCI)
   8. Hunt Air / Temtrol

2.4 UNIT CASINGS
A. The air-handling unit shall be specifically designed for use in an indoor or outdoor application, as specified and indicated on drawings.

B. The construction of the air handling unit shall consist of a complete structural frame with removable panels. Casing shall be supported in such a manner so that maximum allowable air leakage shall not exceed 1% and panel deflection shall not exceed a L/240 ratio when subjected to +/- 8-in. w.g. static pressure. All panels shall be completely gasketed prior to shipment and shall be completely removable for unit access and removal of components. Removal of any or all panels shall not affect the structural integrity of the unit.

C. The air-handling unit shall be provided with a full perimeter base rail channel.
   1. The base rail channel shall be formed of 16-gage minimum galvanized steel.
   2. The base rail channel shall have a minimum height of 8" to insure adequate clearance for drain pipe trapping.
   3. The base rail channel shall support all major components.
   4. Perimeter structural steel lifting lugs shall be provided to accommodate overhead lifting.

D. The air-handling unit shall be supplied with double wall panels for walls, roof, and floor constructed of G90 mill galvanized sheet steel.

E. Outdoor air handling unit(s) shall be provided with a full-perimeter, insulated roof curb. Roof curb shall ship loose for field installation prior to unit placement.
   1. Roof curb shall be a prefabricated galvanized steel-mounting curb.
   2. Roof curb application shall provide for continuous insulation between unit panels and roof curb.
   3. The roof curb shall have 1.5-inch, 3 pound per cubic foot density fiberglass insulation.
   4. Roof curb shall be a perimeter type providing complete perimeter support of the air-handling unit.
   5. Roof curb shall be flat or sloped to accommodate the roof pitch.
   6. The curb shall be a minimum 18 gage and a minimum of 14 inches high.
   7. Gasketing shall be provided for field mounting between the unit base and the roof curb.
   8. The curb shall include a 1" x 4" wood nailer.

F. Outdoor air handling unit(s) shall be provided with an external, double wall construction, insulated vestibule for enclosed service and to fully contain field piping and valves. Vestibule must provide sufficient space for services, access and coil connections and piping to be installed without interference. Vestibule enclosures of adjacent segments shall be combined to be a continuous open vestibule.
   1. Refer to drawings for vestibule depth, with an internal clearance of 2" less than nominal dimension.
   2. Vestibule wall and floor construction shall be the same as that of the unit.

G. The air handling unit casing shall be constructed of 2" thick double wall roof panels, floor panels, and wall panels having exterior construction of 16 gage G90 galvanized steel. The interior lining shall be a solid lining of minimum 20 gage or .080" thick aluminum perforated lining in specific fan segments. Exterior casing screws shall be zinc chromate coated.
H. Floor panels shall be double wall construction, designed to provide at most L/240 deflection based on 300 lb. concentrated load at mid-span. The interior liner of the floor panels shall be a solid lining of minimum 20 gage galvanized. An additional 0.125” aluminum diamond tread plate liner shall be provided as a walk-on surface in unit access areas.

I. The outdoor air-handling unit shall be supplied with a double-sloped roof to promote drainage of precipitation and prevent standing water.
   1. Roof construction design shall accommodate a minimum snow-load of 30 lb/ft².
   2. The roof shall have a minimum pitch of 1/4” per foot.
   3. The roof shall overhang all side and end panels to prevent precipitation drainage from streaming down the unit wall panels.
   4. Outdoor units supplied with flat roofs shall not be acceptable.

J. The air-handling unit shall be completely insulated throughout all panels and structural frame members with spray injected foam to thoroughly insulate and seal the air unit structure. Openings in structural channels shall be covered. If structural channels are not internally insulated, then structural channels must be wrapped with an armaflex type insulation to maintain unit thermal performance and prevent sweating. Any portion of the unit that is not insulated (gaps) or has less than 2” of insulation shall be the responsibility of the contractor to modify.
   1. Insulation shall be a full 2” throughout the entire unit.
   2. Units with less than 2” of insulation in any part of the walls, floor, or roof shall not be acceptable.
   3. Insulation application shall conform to NFPA 90A requirements.
   4. Panels shall have a minimum thermal conductivity R of 12.5 (Hr·Ft²·°F/BTU).
   5. For outdoor units, all vestibules, coil header panels and return bend panels shall be fully insulated.
   6. Panels with perforated panel liner shall utilize a triple-wall construction, joining a matte-faced fiberglass insulated panel with a foam insulated panel to achieve both superior thermal performance and sound attenuation.
   7. All drain pans shall have double-wall construction and be insulated with spray injected foam. Fiberglass insulation is not acceptable.

K. Double wall access doors shall be provided on sections as detailed. Doors shall be of the same material type as the wall panels. A bulb-type gasket shall be provided around the entire door perimeter. Industrial style stainless steel hinges shall permit a complete 180 degree door swing. All doors shall open against positive pressure.
   1. Access door must be of the same material type as exterior/interior casing.
   2. Access door latches shall utilize a roller cam latching mechanism to insure maximum sealing.
   3. Access doors shall be provided with a single door handle linked to multiple latching points. Stacked indoor units shall insure door handles are positioned at the lowest possible point of the top tier segments for convenient access.
   4. Doors serving outdoor air unit vestibule shall be provided with inside operable door latches.
   5. Outdoor unit vestibule access doors shall be provided with a key-lock. All access doors shall be operated by the same key.

L. Viewing windows shall be provided as shown on details. All windows shall be double-pane tempered glass.

M. Provide auxiliary drain pans in segments as indicated on the schedule.
   1. The auxiliary pans shall be double sloped, positive draining with stainless steel liner and double wall construction with drain connection of like material, draining to one side of the unit.
   2. Drain connection shall be welded to the drain pan. If threaded screw-type joint is used, all joints must be easily accessible for inspection and service.

N. Outdoor air handling units shall be provided with a rain-hood and bird screen assembly for protection of the outside and exhaust air dampers from the elements. The outside air hood shall have a moisture eliminator. Configure the exhaust air or outdoor air connections per details and provide necessary air-stream separation when routed through unit service and pipe vestibule.
O. Convenience Outlets: One 20-A duplex GFCI receptacle per air handling unit with junction box located on outside casing wall.
   a. Locations: Fan section.

2.5 FAN, DRIVE, AND MOTOR SECTION

A. Fans shall be Class I, II, and III, as scheduled and selected to provide scheduled performance.

B. Fan segments shall be equipped with double width double inlet (DWDI) housed fans or [single width single inlet (SWSI) plenum fans as scheduled. Double width double inlet (DWDI) fans shall be industrial grade, having airfoil or forward curved blades as scheduled. All single width single inlet fans (SWSI) fans shall have airfoil (AF) blades. Flat plate blades shall not be acceptable.

C. All airfoil fans shall bear the AMCA Seal. Airfoil fan performance shall be based on tests made in accordance with AMCA standards 210 and comply with the requirements of the AMCA certified ratings program for air and sound. In addition, all airfoil wheels shall comply with AMCA standard 99-2408-69 and 99-2401-82.

D. SWSI fans shall be provided with inlet screens, fan screens and belt guards. DWDI fans shall be provided with inlet screens as specified.

E. Industrial grade DWDI airfoil fans shall be provided with an optional access door in the fan scroll.

F. Fans shall have polished steel shafts sized so the first critical speed is at least 25% over the maximum operating speed for each pressure class. Close tolerances shall be maintained where the shaft makes contact with the bearing. Shaft shall be factory coated after assembly with an anti-corrosion coating.

G. After the pre-balanced fan is installed on the fan skid and isolator rails, the entire fan skid shall be run-balanced at the specified speed to insure smooth and trouble-free operation. The run balance shall include filter-in and filter-out balancing in all three (3) planes, on both sides of the fan assembly at the bearings.
   1. Filter-in measurements shall be taken in the horizontal and vertical planes on the drive and opposite-drive sides of the fan shaft.
   2. Filter-out measurements shall be taken in the horizontal, vertical and axial planes on the drive and opposite-drive side of the fan shaft.

H. The fan motor and fan-assembly shall be internally mounted. The fan motor and fan-assembly shall be mounted on a common base to allow consistent belt tension with no relative motion between the fan and motor shafts. The common base shall be isolated on a full width isolator support channel using 1” springs.
   1. Fan motor and drive shall be contained within an OSHA-compliant belt guard.
   2. The fan motor shall be on an adjustable base.
   3. The fan discharge shall be connected to the cabinet through a canvas flexible connection to insure vibration-free operation.
   4. Thrust restraints shall be provided as specified to mitigate fan assembly vibration in the horizontal plane.
   5. Fan segments shall be equipped with an access door.
   6. Fan sections shall be equipped with safety screens covering bottom inlets and discharge openings, sufficient to hold 300 lb. service person with minimal deflection.
   7. Fan assemblies shall be balanced for inverter duty operation.
   8. The fan will be balanced over the entire range of fan operation (30% to 100% of RPM).

I. Fan Bearings
   1. Fan bearings shall be designed for an average life (L10) of at least 200,000.
   2. All re-greaseable bearings shall be factory lubricated and equipped with standard hydraulic grease fittings and lube lines.
J. Fan Arrays: Steel or aluminum frame with inlet cone and structural framing around each fan built into an array of multiple fans. Provide backdraft dampers with integral counterbalance at each fan to prevent short circuiting of flow if one fan is not operating.

K. Fan airflow monitoring: Each fan shall be provided with a factory installed airflow measuring device – piezo ring or approved equivalent. Sensor accuracy shall be +/-3%. Performance shall have been verified in an AMCA registered air chamber. Factory installed assembly shall include flow sensors for field connection to a transducer provided by others.

L. Fans or unit shall be provided with appropriate silencers, acoustic baffles, or sound traps rated for the application to meet sound attenuation values indicated on the schedule.

M. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   1. NEMA Premium Efficient motors as defined in NEMA MG 1.
   2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   4. Mount unit-mounted disconnect switches on exterior of unit.

N. Variable-Frequency Motor Controller: Comply with Specification "Variable-Frequency Motor Controllers."

2.6 COIL SECTION

A. Coil segment length shall be optimized to contain selected coil(s), spacer(s), and optional access doors. Coils shall be selected to maximize unit tunnel area using single or stacked coil arrangements as needed to satisfy required coil face areas.
   1. Coil segment design and coil selection shall not require a drain pan in any downstream section to contain the coil condensate.
   2. All cooling and/or heating coils shall be furnished to meet the performance requirements set forth in the schedule.
   3. All water coils shall have performance certified in accordance with ARI Standard 410 for coil capacity and pressure drop.
   4. Multiple coils in a single coil segment shall be separated by galvanized steel or stainless steel coil spacers in chilled water coils. Coil spacers should accommodate side-access via a removal side-plate.
   5. Coil segment side panels shall be removable to allow for removal and replacement of coils, without affecting the structural integrity of the unit.
   6. Upstream and downstream segment door clearances shall accommodate a minimum 2-inches of field installed external piping insulation.
   7. Coil segment shall accommodate full-face height or reduced face height coils.

B. Cooling Coil Segment shall be provided with a full-width, multi-sloped (IAQ) stainless-steel drain pan that extends downstream a minimum 6” beyond the last coil in the section to provide drain pan access for cleaning and inspection.

C. Drain pan design and application shall comply fully with the stated intent of ASHRAE 62-2001.

D. Drain pans shall be sloped in a minimum of 2 planes; cross break interior pans and pitch toward drain connections to ensure complete condensate drainage. Units with cooling coils shall have drain pans under complete cooling coil section. A minimum of 1” clearance shall be provided from the bottom of the coil casing to the drain pan so that the drain pan can be visually inspected and physically cleaned, including underneath coil, without removal of the coil. All drain pan connections will be to one side of the unit to enable proper trapping. Drain pans that do not comply with these maintenance requirements will be the responsibility of the contractor to field modify.
E. The drain pan shall be of double wall construction with stainless steel liner and shall be insulated with spray-injected foam to completely seal the drain pan assembly. Fiber- glass insulation is not acceptable.

F. Drain pan shall be provided with a minimum 1-1/4" MPT condensate connection positioned beneath the lowest point of the drain pan. Drain connection shall be welded to the drain pan and shall match the drain pan liner material type. If threaded screw-type joint is used, all joints must be easily accessible for inspection and service.

G. All coils shall be slide out, "shipping" type, mounted on tracks, and easily removable from the air handling unit by removing only one exterior panel. Coils that require additional disassembly of the unit or replacement of the entire coil section (e.g. "unit" type coils) for coil removal are unacceptable.

H. Coils shall be supported by galvanized or stainless steel for chilled water coil support members, constructed of channeled members, allowing uninhibited access for inspection and safe cleaning.

I. All vertical coil supporting members (bulkheads) and blockoffs shall be constructed of galvanized steel or stainless steel for chilled water and shall entirely seal off the coil, preventing air bypass.

J. Coil grommets shall be provided on all coils to completely seal the area between the coil connection and the unit casing.

K. Drainable Water coils shall be designed to operate at 250 psig design working pressure and up to 300° F and shall be tested with 325 psig compressed air under water. Circuiting shall provide free and complete draining and venting when installed in the unit. All vent and drain connections shall be extended to the outside of the unit casing.

L. The primary surface shall be 5/8" O.D. or 1/2" O.D. copper tube, staggered in direction of airflow. Tubes shall be mandrel expanded to form fin bond and provide burnished, work-hardened interior surface. The tubes shall have a minimum tube wall thickness of 0.020". Specified thickness shall be maintained throughout the tube including brazed U-bends.

M. Extended surface shall consist of die-formed, continuous, aluminum enhanced performance fins. The fins shall have fully drawn collars to accurately space fins, and to form a protective sheath for the primary surface.

N. Coils with finned height greater than 48 inches shall have an intermediate drain pan extending the entire finned length of the coil. Cooling coils in excess of 48 inches in height shall not be acceptable unless provided with an intermediate drain pan. The intermediate pans shall have copper down spouts to guide condensate to the main drain pan.

O. Coil casing shall be constructed of 16-gauge galvanized steel or stainless steel for chilled water. Tube sheets on each end shall have drawn collars to support tubes. A single intermediate coil support shall be provided on coils with a finned length of more than 62 inches, two (2) intermediate supports above 100 inches in length, and three (3) intermediate supports on coils with a finned length of more than 141 inches. Casing channels shall be free-draining, without depressions to collect moisture and contaminants. Casing channels shall not block fin area.

P. Headers shall be of heavy seamless copper tubing, silver-brazed to tubes. Connections shall be of steel, with male pipe threads, silver-brazed to the headers. A 1/4" FPT, plugged vent or drain tap shall be provided on each connection. All vent and drain connections shall be extended to the outside of the unit casing.

Q. Circuiting shall be to provide free draining and venting, through one vent and one drain on each coil, when installed with casing level. Coils shall be circuited, and have connections arranged, for counter- flow of air and water with supply on bottom and return on top of coil headers. Coil circuiting shall provide for design water velocity in tubes without exceeding total water pressure drops in schedule.

R. Coils using turbulators are unacceptable.

S. Refer to coil schedules for additional coil requirements.
2.7 AIR FILTRATION SECTION
   A. General Requirements for Air Filtration Section:
      1. Comply with NFPA 90A.
      2. Provide minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
      3. Provide filter holding frames arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
      4. A magnehelic differential pressure gauge shall be factory installed and flush mounted to measure the pressure drop across the filter bank.
      5. Refer to Division 23 Section “Particulate Air Filtration” and air filter schedules for additional requirements.

2.8 DAMPERS
   A. All dampers will be of ultra-low leak design having airfoil blades. The damper blades shall be provided with extruded vinyl edge seals and flexible metal compressible jamb seals.
   B. General Requirements for Dampers: Leakage rate, according to AMCA 500, “Laboratory Methods for Testing Dampers for Rating,” 4 cfm/sq. ft. (20 L/s per sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s per sq. m) at 4-inch wg (1.0 MPa).
   C. Damper Operators: Provided in Section 230900.
   D. Outdoor- and Return-Air Dampers shall be parallel blade dampers arranged to promote mixing.

2.9 SOURCE QUALITY CONTROL
   A. AHRI 430 Certification: Air-handling units and their components shall be factory tested according to AHRI 430 and shall be listed and labeled by AHRI.
   B. AMCA 301 or AHRI 260: Air-handling unit fan sound ratings shall comply with AMCA 301, “Methods for Calculating Fan Sound Ratings from Laboratory Test Data,” or AHRI 260, “Sound Rating of Ducted Air Moving and Conditioning Equipment.”
   D. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, “Laboratory Methods of Testing Fans for Aerodynamic Performance Rating.”
   E. Water Coils: Factory tested to 300 psig according to AHRI 410 and ASHRAE 33.

2.10 ELECTRICAL CONNECTION
   A. Refer also to Mechanical Electrical Coordination schedule for electrical connection requirements.
   B. Units shall be a single point power connection with the exception of AHU-2 and with an external unit disconnect and separate circuit for unit lights and convenience receptacles. Provide switch with indicator light to power air handling unit lights. Indicator light shall be on whenever unit lights are off.

PART 3 EXECUTION

3.1 EXAMINATION
   A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

A. Equipment Mounting:
   1. Install air-handling units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
   2. Comply with requirements for vibration isolation devices specified in Section "Vibration Controls for HVAC."

B. Arrange installation of units to provide access space around air-handling units for service and maintenance.

C. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

D. Install filter-gauge, static-pressure taps upstream and downstream of filters. Mount filter gauges on outside of filter housing or filter plenum in accessible position. Provide filter gauges on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

E. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

### 3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to air-handling unit, allow for service and maintenance.

C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans using NPS 1-1/4, ASTM B 88, Type M copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.

### 3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

E. Refer also to Electrical Mechanical Coordination schedule for electrical connection requirements.
3.5 CONTROL CONNECTIONS
A. Install control and electrical power wiring to field-mounted control devices.
B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL
A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.
   2. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
C. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.
D. Prepare test and inspection reports.

3.7 STARTUP SERVICE
A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Verify that shipping, blocking, and bracing are removed.
   3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
   4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
   5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
   6. Verify that zone dampers fully open and close for each zone.
   7. Verify that face-and-bypass dampers provide full face flow.
   8. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
   10. Verify that proper thermal-overload protection is installed for electric coils.
   11. Install new, clean filters.
   12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
B. Starting procedures for air-handling units include the following:
   1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
   2. Measure and record motor electrical values for voltage and amperage.
   3. Manually operate dampers from fully closed to fully open position and record fan performance.
C. Startup report: The startup report shall indicate that the listed startup tasks have been performed and list the results.

3.8 ADJUSTING
A. Adjust damper linkages for proper damper operation.
B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.9 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.
   1. Procedures and schedules related to start-up and shut down, troubleshooting, servicing, preventative maintenance, and how to obtain replacement parts.
   2. Familiarization with contents of Operating and Maintenance Manuals specified in Division 1 Section "Closeout Procedures".

B. Schedule training with at least 14 days' advance notice.

END OF SECTION
SECTION 238123
COMPUTER-ROOM AIR-CONDITIONING UNITS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Floor-mounted computer-room air conditioners

1.3 DEFINITION
A. BAS: Building automation system.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings: For computer-room air conditioners. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, are using input from Installers of the items involved.
B. Field quality-control reports.
C. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For computer-room air conditioners to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fan Belts: One for each belt-driven fan.
   2. Filters: One set(s) of filters for each unit.

1.8 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. ASHRAE Compliance:
   1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

D. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

1.9 COORDINATION

A. Coordinate layout and installation of computer-room air conditioners and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Coordinate installation of computer-room air conditioners with computer-room access flooring Installer.

C. Coordinate sizes and locations of concrete bases with actual equipment provided.

D. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.

2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than three years from date of Substantial Completion.

3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FLOOR-MOUNTED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Compu-Aire, Incorporated (www.compu-aire.com)

2. Data Aire Incorporated (www.dataaire.com)

3. Liebert Corporation (www.emersonnetworkpower.com)

4. Stulz-ATS. (www.stulz-ats.com)

B. Description: Packaged, factory assembled, prewired, and prepped; consisting of cabinet, fans, filters, and controls.

C. Cabinet and Frame: Welded steel, braced for rigidity, and supporting compressors and other mechanical equipment and fittings.

2. Insulation: Thermally and acoustically insulate cabinet interior with 1-inch- thick duct liner.

3. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

4. Finish of Exterior Surfaces: Baked-on, textured vinyl enamel; color as selected from manufacturer's standard colors.

5. Floor Stand: Welded tubular steel, with adjustable legs and vibration isolation pads.

D. Supply-Air Fan(s):
1. Electronically commutated plug-type, direct-drive fan with backward curved blades and ECM motor.

E. Refrigeration System:
1. Compressors: Digital scroll with variable capacity operation from 20-100%; with oil strainer, internal motor overload protection, resilient suspension system, crankcase heater, manual-reset high-pressure switch, and pump-down low-pressure switch.
   a. Provide factory compressor sound jacket with closed cell polymeric jacket.
2. Refrigeration Circuits: Two; each with hot-gas mufflers, thermal-expansion valve with external equalizer, liquid-line solenoid valve, liquid-line filter-dryer, sight glass with moisture indicator, service shutoff valves, charging valves, and charge of refrigerant.
3. Refrigerant: R-410A.
4. Refrigerant Evaporator Coil: Alternate-row or split-face-circuit, direct-expansion coil of seamless copper tubes expanded into aluminum fins.
   a. Mount coil assembly over stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral dual-level float switch, pump-motor assembly, and condensate reservoir.
5. Remote Air-Cooled Refrigerant Condenser: Corrosion-resistant cabinet, copper-tube aluminum-fin coils arranged for two circuits, multiple direct-drive propeller fans with permanently lubricated ball bearings, and single-phase motors with internal overload protection and integral electric control panel and disconnect switch.
6. Low Ambient Kit: Permits operation down to 0 degrees F.

G. Extended-Surface, Disposable, Panel Filter: Pleated, lofted, nonwoven, reinforced cotton fabric; supported and bonded to welded-wire grid; enclosed in cardboard frame with 2-inch- thick, disposable, glass-fiber pre-filter.

H. Disconnect Switch: Non-automatic, molded-case circuit breaker with handle accessible when panel is closed and capable of preventing access until switched to off position.

I. SSCR: 65,000 amp short circuit rating.

J. Microprocessor-Control System: Continuously monitors operation of process cooling system; continuously displays room temperature and room relative humidity; sounds alarm on system malfunction and simultaneously displays problem. If more than one malfunction occurs, system displays fault in sequence with room temperature and continues to display fault when malfunction is cleared until system is reset.
1. Malfunctions:
   a. Power loss.
   b. Loss of airflow.
   c. Clogged air filter.
   d. High room temperature.
   e. Low room temperature.
   f. High humidity.
   g. Low humidity.
   h. Smoke/fire.
   i. Water under floor.
   j. Supply fan overload.
   k. Compressor No. 1 - Overload.
   l. Compressor No. 1 - Low Pressure.
   m. Compressor No. 1 - High Pressure.
   n. Compressor No. 2 - Overload.
   o. Compressor No. 2 - Low Pressure.
   p. Compressor No. 2 - High Pressure.
2. Digital Display:
   a. Control power on.
   b. Dehumidifying.
   c. Compressor No. 1 - Operating.
   d. Compressor No. 2 - Operating.
   e. Heat operating.
   f. Economy cooling.

3. Push buttons shall stop and start process cooling system, silence audible alarm, test indicators, and display room's relative humidity.

4. BAS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display unit status and alarms.
   a. ASHRAE 135 (BACnet) communication interface with the BAS shall enable the BAS operator to remotely control and monitor the unit from an operator workstation. Control features and monitoring points displayed locally at unit control panel shall be available through the BAS.

K. Additional accessories:
   1. High temperature sensor
   2. Remote temperature and humidity sensors
   3. Smoke sensor

2.2 FAN MOTORS
A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven loads will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.3 CAPACITIES AND CHARACTERISTICS
A. Refer to equipment schedules for capacities and characteristics.

2.4 ELECTRICAL CONNECTION
A. Refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

2.5 BUILDING AUTOMATION SYSTEM INTERFACE
A. Refer also to Sequence of Operation for necessary control and interface requirements.

PART 3 - EXECUTION
3.1 EXAMINATION
A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for hydronic piping systems to verify actual locations of piping connections before equipment installation.
C. Examine walls, floors, and roofs for suitable conditions where computer-room air conditioners will be installed.
D. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION
A. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances.
B. Computer-Room Air-Conditioner Mounting: Install using elastomeric pads or mounts. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
C. Air-Cooled Refrigerant Condenser Mounting: Install using elastomeric pads or mounts. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.3 CONNECTIONS
A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to machine to allow service and maintenance.
C. Water and Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.
D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.4 FIELD QUALITY CONTROL
A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
B. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
C. Tests and Inspections:
   1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
   2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
D. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.
E. Prepare test and inspection reports.
F. After startup service and performance test, change filters.

3.5 ADJUSTING
A. Adjust initial temperature set points.
B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.

END OF SECTION
SECTION 238126
VARIABLE REFRIGERANT-FLOW HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes complete VRF HVAC system(s) including, but not limited to, delegated design and the following components to make a complete operating system(s) according to requirements indicated:
   1. Indoor, concealed, ceiling-mounted units for ducting.
   2. Indoor, exposed, wall-mounted units.
   3. Indoor, recessed, ceiling-mounted units.
   4. Indoor, suspended, ceiling-mounted units.
   5. Outdoor, air-source, heat-pump units.
   6. Outdoor, air-source heat recovery units.
   7. Heat recovery control units.
   8. System controls.
   10. System condensate drain piping.
   11. System refrigerant piping.
   12. Piping and tubing insulation.
   13. System control cable and raceways.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for indoor and outdoor units and for HRCUs.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   3. Include operating performance at design conditions and at extreme maximum and minimum outdoor ambient conditions.
   4. Include description of system controllers, dimensions, features, control interfaces and connections, power requirements, and connections.
   5. Include system operating sequence of operation in narrative form for each unique indoor- and outdoor-unit and HRCU control.
   6. Include description of control software features.
   7. Include total refrigerant required and a comprehensive breakdown of refrigerant required by each system installed.
   8. Include refrigerant type and data sheets showing compliance with requirements indicated.
   9. Indicate location and type of service access.
B. Shop Drawings: For VRF HVAC systems.
   1. Include plans, elevations, sections, and mounting / attachment details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams and details of refrigerant piping and tubing showing installation requirements for manufacturer-furnished divided flow fittings.
5. Include diagrams for power, signal, and control wiring.

C. Delegated-Design Submittals:
1. Include design calculations with corresponding diagram of refrigerant piping and tubing sizing for each system installed.
2. Include design calculations with corresponding floor plans indicating that refrigerant concentration limits are within allowable limits of ASHRAE 15 and governing codes.
3. Include calculations showing that system travel distance for refrigerant piping and controls cabling are within horizontal and vertical travel distances set by manufacturer. Provide a comparison table for each system installed.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, sections, and details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended ceiling components.
   2. Structural floors, roofs and associated members to which equipment, piping, ductwork, cables, and conduit will be attached.
   3. Size and location of initial access modules for acoustical tile.
   4. Wall-mounted controllers located in finished space showing relationship to light switches, fire-alarm devices, and other installed devices.
   5. Size and location of access doors and panels installed behind walls and inaccessible ceilings for products installed behind walls and requiring access.
   6. Items penetrating finished ceiling including the following:
      a. Luminaires.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Service access panels.

B. Qualification Data:
   1. For Installer: Certificate from VRF HVAC system manufacturer certifying that Installer has successfully completed prerequisite training administered by manufacturer for proper installation of systems, including but not limited to, equipment, piping, controls, and accessories indicated and furnished for installation.
      a. Retain copies of Installer certificates on-site and make available on request.
   2. For VRF HVAC system manufacturer.
   3. For VRF HVAC system provider.

C. Product Test Reports: Where tests are required, for each product, for tests performed by manufacturer and witnessed by a qualified testing agency or a qualified testing agency.

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranties: For manufacturer's warranties.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For VRF HVAC systems to include in emergency, operation, and maintenance manuals.

B. Software and Firmware Operational Documentation:
   1. Software operating and upgrade manuals.
2. Program Software Backup: On CD or DVD, USB media, or approved cloud storage platform, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications:
1. Nationally recognized manufacturer of VRF HVAC systems and products.
2. Shipped VRF HVAC systems with similar requirements to those indicated for a continuous period of five years within time of bid.
3. VRF HVAC systems and products that have been successfully tested and in use on at least five completed projects.
4. Having complete published catalog literature, installation, and operation and maintenance manuals for all products intended for use.
5. Having full-time in-house employees for the following:
   a. Product research and development.
   b. Product and application engineering.
   c. Product manufacturing, testing, and quality control.
   d. Technical support for system installation training, startup, commissioning, and troubleshooting of installations.
   e. Owner training.

B. Factory- Authorized Service Representative Qualifications:
1. Authorized representative of, and trained by, VRF HVAC system manufacturer.
2. In-place facility located within 100 miles of Project.
3. Demonstrated past experience with products being installed for period within five consecutive years before time of bid.
4. Demonstrated past experience on five projects of similar complexity, scope, and value.
   a. Each person assigned to Project shall have demonstrated past experience.
5. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
6. Service and maintenance staff assigned to support Project during warranty period.
7. Product parts inventory to support ongoing system operation for a period of not less than 20 years after Substantial Completion.
8. VRF HVAC system manufacturer's backing to take over execution of Work if necessary to comply with requirements indicated. Include Project-specific written letter, signed by manufacturer's corporate officer, if requested.

C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by VRF HVAC system manufacturer.
1. Each employee shall be certified by manufacturer for proper installation of systems, including, but not limited to, equipment, piping, controls, and accessories indicated and furnished for installation.
2. Installer certification shall be valid and current for duration of Project.
3. Retain copies of Installer certificates on-site and make available on request.
4. Each person assigned to Project shall have demonstrated past experience.
   a. Demonstrated past experience with products being installed for period within three consecutive years before time of bid.
   b. Demonstrated past experience on five projects of similar complexity, scope, and value.
5. Installers shall have staffing resources of competent, trained, and experienced full-time employees that are assigned to execute work according to schedule.

D. ISO Compliance: System equipment and components furnished by VRF HVAC system manufacturer shall be manufactured in an ISO 9001 and ISO 14001 facility.
1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in a clean and dry place.

B. Comply with manufacturer’s written rigging and installation instructions for unloading and moving to final installed location.

C. Handle products carefully to prevent damage, breaking, denting, and scoring. Do not install damaged products.

D. Protect products from weather, dirt, dust, water, construction debris, and physical damage.
   1. Retain factory-applied coverings on equipment to protect finishes during construction and remove just prior to operating unit.
   2. Cover unit openings before installation to prevent dirt and dust from entering inside of units. If required to remove coverings during unit installation, reapply coverings over openings after unit installation and remove just prior to operating unit.

E. Replace installed products damaged during construction.

1.8 WARRANTY

A. Manufacturer’s Warranty: Manufacturer agrees to repair or replace equipment and components that fail(s) in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures.
      b. Faulty operation.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

   2. Warranty Period:
      a. For Compressor: Seven year(s) from date of Substantial Completion.
      b. For Parts, Including Controls: Five year(s) from date of Substantial Completion.
      c. For Labor: Five year(s) from date of Substantial Completion.

2.1 PART 2 - PRODUCTS MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Daikin AC (America) Inc.
   2. LG Electronics
   3. Mitsubishi Electric & Electronics USA, Inc
   4. Samsung HVAC

B. Source Limitations: Obtain products from single source from single manufacturer including, but not limited to, the following:
   1. Indoor and outdoor units, including accessories.
   2. Controls and software.
   3. HRCUs.
   4. Refrigerant isolation valves.
   5. Specialty refrigerant pipe fittings.

2.2 SYSTEM DESCRIPTION

A. Direct-expansion (DX) VRF HVAC system(s) with variable capacity in response to varying cooling and heating loads. System shall consist of multiple indoor units, HRCUs, outdoor unit(s), piping, controls, and electrical power to make complete operating system(s) complying with requirements indicated.
   1. Two-pipe or three-pipe system design.
   2. System(s) operation, heat pump or heat recovery as indicated on Drawings.
   3. Each system with one refrigerant circuit shared by all indoor units connected to system.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. AHRI Compliance: System and equipment performance certified according to AHRI 1230 and products listed in AHRI directory.

D. ASHRAE Compliance:
   1. ASHRAE 15: For safety code for mechanical refrigeration.
   2. ASHRAE 62.1: For indoor air quality.
   3. ASHRAE 135: For control network protocol with remote communication.
   4. ASHRAE/IES 90.1 Compliance: For system and component energy efficiency.

E. UL Compliance: Comply with UL 1995.

2.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional specialist, as defined in Section 014000 "Quality Requirements," to design complete and operational VRF HVAC system(s) complying with requirements indicated.

   1. Provide system refrigerant calculations.
      a. Refrigerant concentration limits shall be within allowable limits of ASHRAE 15 and governing codes.
      b. Indicate compliance with manufacturer's maximum vertical and horizontal travel distances. Prepare a comparison table for each system showing calculated distances compared to manufacturer's maximum allowed distances.

   2. System Refrigerant Piping and Tubing:
      a. Arrangement: Arrange piping to interconnect indoor units, HRCUs, and outdoor unit(s) in compliance with manufacturer requirements and requirements indicated.
      b. Routing: Conceal piping above ceilings and behind walls to maximum extent possible.
      c. Sizing: Size piping system, using a software program acceptable to manufacturer, to provide performance requirements indicated. Consider requirements to accommodate future change requirements.

   3. System Controls:
      a. Network arrangement.
      b. Network interface with other building systems.
      c. Product selection.
      d. Sizing.

B. Service Access:

   1. Provide and document service access requirements.
   2. Locate equipment, system isolation valves, and other system components that require service and inspection in easily accessible locations. Avoid locations that are difficult to access if possible.
   3. Where serviceable components are installed behind walls and above inaccessible ceilings, provide finished assembly with access doors or panels to gain access. Properly size the openings to allow for service, removal, and replacement.
   4. If less than full and unrestricted access is provided, locate components within an 18-inch reach of the finished assembly.
   5. Where ladder access is required to service elevated components, provide an installation that provides for sufficient access within ladder manufacturer's written instructions for use.
   6. Comply with OSHA regulations.

C. System Design and Installation Requirements:

   1. Design and install systems indicated according to manufacturer's recommendations and written instructions.
   2. Where manufacturer's requirements differ from requirements indicated, contact Architect for direction. The most stringent requirements should apply unless otherwise directed in writing by Architect.
D. System Adaptability to Future Changes: Arrange and size system refrigerant piping to accommodate future changes to system without having to resize and replace existing refrigerant piping as indicated on drawings.

E. Isolation of Equipment: Provide isolation valves to isolate each HRCU, indoor unit and outdoor unit for service, removal, and replacement without interrupting system operation.

F. System Turndown: Stable operation down to 15 percent of outdoor-unit capacity.

G. System Auto Refrigerant Charge: Each system shall have an automatic refrigerant charge function to ensure the proper amount of refrigerant is installed in system.

H. Thermal Movements: Allow for controlled thermal movements from ambient, surface, and system temperature changes.

I. Capacities and Characteristics: As indicated on Drawings.

2.4 INDOOR, CONCEALED, CEILING-MOUNTED UNITS FOR DUCTING

A. Description: Factory-assembled complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:
   1. Material: Galvanized or painted steel.
   2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
   3. Duct Connections: Extended collar or flange, or designated exterior cabinet surface, designed for attaching field-installed ductwork.
   4. Mounting: Manufacturer-designed provisions for field installation.
   5. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:
   1. Coil Casing: Aluminum, galvanized, or stainless steel.
   2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
   3. Coil Tubes: Copper, of diameter and thickness required by performance.
   4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
   5. Unit Internal Tubing: Copper tubing with brazed joints.
   6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
   7. Field Piping Connections: Manufacturer's standard.
   8. Factory Charge: Dehydrated air or nitrogen.
   9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:
   1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
   2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
   3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:
   1. Fan(s):
      a. Direct-drive arrangement.
      b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
      c. Fabricated from non-ferrous components or ferrous components with corrosion-resistant finish.
      d. Wheels statically and dynamically balanced.
   2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
4. **Speed Settings and Control:** Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of at least 50 percent.

5. **Vibration Control:** Integral isolation to dampen vibration transmission.

**F. Filter Assembly:**
1. **Access:** Bottom, side, or rear to accommodate field installation without removing ductwork and to accommodate filter replacement without need for tools.
2. **Efficiency:** ASHRAE 52.2, MERV 8.
3. **Media:**
   a. Replaceable: Extended surface, panel, or cartridge with antimicrobial treatment fiber media.

**G. Unit Accessories:**
1. **Remote Room Temperature Sensor Kit:** Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

**H. Unit Controls:**
1. **Enclosure:** Metal, suitable for indoor locations.
2. **Factory-Installed Controller:** Configurable digital control.
3. **Factory-Installed Sensors:**
   a. Unit inlet air temperature.
   b. Coil entering refrigerant temperature.
   c. Coil leaving refrigerant temperature.
4. **Field-Customizable I/O Capability:**
5. **Features and Functions:**
   a. Self-diagnostics.
   b. Time delay.
   c. Auto-restart.
   d. External static pressure control.
   e. Auto operation mode.
   f. Manual operation mode.
   g. Filter service notification.
   h. Power consumption display.
   i. Drain assembly high water level safety shutdown and notification.
   j. Run test switch.
6. **Communication:** Network communication with other indoor and outdoor units.
7. **Cable and Wiring:** Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. **Field Connection:** Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

**I. Unit Electrical:**
1. **Enclosure:** Metal, suitable for indoor locations.
2. **Field Connection:** Single point connection to power unit and integral controls.
3. **Disconnecting Means:** Factory-mounted circuit breaker or switch.
4. **Control Transformer:** Manufacturer's standard. Coordinate requirements with field power supply.
5. **Wiring:** Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. **Raceways:** Enclose line voltage wiring in metal raceways.
2.5 INDOOR, EXPOSED, WALL-MOUNTED UNITS

A. Description: Factory-assembled complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:
   1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
   2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
   3. Mounting: Manufacturer-designed provisions for field installation.
   4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:
   1. Coil Casing: Aluminum, galvanized, or stainless steel.
   2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
   3. Coil Tubes: Copper, of diameter and thickness required by performance.
   4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
   5. Unit Internal Tubing: Copper tubing with brazed joints.
   6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
   7. Field Piping Connections: Manufacturer's standard.
   8. Factory Charge: Dehydrated air or nitrogen.
   9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:
   1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
      a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.
   3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:
   1. Fan(s):
      a. Direct-drive arrangement.
      b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
      c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
      d. Wheels statically and dynamically balanced.
   2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
   4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
   5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:
   1. Access: Front, to accommodate filter replacement without the need for tools.
   2. Efficiency: MERV 8.

G. Grille Assembly: Manufacturer's standard discharge grille with field-adjustable air pattern mounted in top or front face of unit cabinet.

H. Unit Accessories:
   1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

I. Unit Controls:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Factory-Installed Controller: Configurable digital control.
   3. Factory-Installed Sensors: Unit inlet air temperature, Coil entering refrigerant temperature, Coil leaving refrigerant temperature.
   4. Field-Customizable I/O Capability:
   5. Features and Functions:
      a. Self-diagnostics.
      b. Time delay.
      c. Auto-restart.
      d. External static pressure control.
      e. Auto operation mode.
      f. Manual operation mode.
      g. Filter service notification.
      h. Power consumption display.
      i. Drain assembly high water level safety shutdown and notification.
      j. Run test switch.
   6. Communication: Network communication with other indoor units and outdoor unit(s).
   7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
   8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

J. Unit Electrical:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Field Connection: Single point connection to power entire unit and integral controls.
   3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
   4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
   5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
   6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.6 INDOOR, RECESSED, CEILING-MOUNTED UNITS

A. Description: Factory-assembled complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:
   1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
   2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
   3. Mounting: Manufacturer-designed provisions for field installation.
   4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:
   1. Coil Casing: Aluminum, galvanized, or stainless steel.
   2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Internal Tubing: Copper tubing with brazed joints.
6. Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:
   1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
   2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
   3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:
   1. Fan(s):
      a. Direct-drive arrangement.
      b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
      c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
      d. Wheels statically and dynamically balanced.
   2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
   4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
   5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:
   1. Access: Bottom, to accommodate filter replacement without the need for tools.
   2. Efficiency: ASHRAE 52.2, MERV 8.
   3. Media:
      a. Replaceable: Extended surface, panel, or cartridge with antimicrobial treatment fiber media.

G. Discharge-Air Grille Assembly: Mounted in bottom of unit cabinet.
   1. Discharge Pattern: One-, two-, three-, or four-way throw as indicated on Drawings.
      a. Discharge Pattern Adjustment: Field-adjustable limits for up and down range of motion.
      b. Discharge Pattern Closure: Ability to close individual discharges of units with multiple patterns.

H. Return-Air Grille Assembly: Manufacturer's standard grille mounted in bottom of unit cabinet.

I. Outdoor Air Ventilation Connection: Sheet metal knockout for optional connection to outdoor air ventilation duct.

J. Unit Accessories:
   1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

K. Unit Controls:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Factory-Installed Controller: Configurable digital control.
   3. Factory-Installed Sensors: Unit inlet air temperature, Coil entering refrigerant temperature, Coil leaving refrigerant temperature.
   4. Field-Customizable I/O Capability:

5. Features and Functions:
   a. Self-diagnostics.
   b. Time delay.
   c. Auto-restart.
   d. External static pressure control.
   e. Auto operation mode.
   f. Manual operation mode.
   g. Filter service notification.
   h. Power consumption display.
   i. Drain assembly high water level safety shutdown and notification.
   j. Run test switch.

6. Communication: Network communication with other indoor units and outdoor unit(s).

7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

L. Unit Electrical:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Field Connection: Single point connection to power entire unit and integral controls.
   3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
   4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
   5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
   6. Raceways: Enclose line voltage wiring in raceways to comply with NFPA 70.

2.7 INDOOR, SUSPENDED, CEILING-MOUNTED UNITS

A. Description: Factory-assembled complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:
   1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
   2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
   3. Mounting: Manufacturer-designed provisions for field installation.
   4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:
   1. Coil Casing: Aluminum, galvanized, or stainless steel.
   2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
   3. Coil Tubes: Copper, of diameter and thickness required by performance.
   4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
   5. Internal Tubing: Copper tubing with brazed joints.
   6. Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
   7. Field Piping Connections: Manufacturer's standard.
   8. Factory Charge: Dehydrated air or nitrogen.
   9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:
   1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
   a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.
3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:
   1. Fan(s):
      a. Direct-drive arrangement.
      b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
      c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
      d. Wheels statically and dynamically balanced.
   2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
   4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
   5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:
   1. Access: Front, to accommodate filter replacement without the need for tools.
   2. Efficiency: MERV 8.

G. Discharge-Air Grille Assembly: Mounted in front of unit cabinet.
   1. Discharge Pattern Adjustment: Field-adjustable limits for range of pattern.

H. Return-Air Grille Assembly: Manufacturer's standard.

I. Unit Accessories:
   1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
   2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

J. Unit Controls:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Factory-Installed Controller: Configurable digital control.
   3. Factory-Installed Sensors: Unit inlet air temperature, Coil entering refrigerant temperature, Coil leaving refrigerant temperature.
   4. Field-Customizable I/O Capability:
   5. Features and Functions:
      a. Self-diagnostics.
      b. Time delay.
      c. Auto-restart.
      d. External static pressure control.
      e. Auto operation mode.
      f. Manual operation mode.
      g. Filter service notification.
      h. Power consumption display.
      i. Drain assembly high water level safety shutdown and notification.
      j. Run test switch.
   6. Communication: Network communication with other indoor units and outdoor unit(s).
   7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer’s standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

K. Unit Electrical:
1. Enclosure: Manufacturer’s standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer’s standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer’s standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.8 OUTDOOR, AIR-SOURCE HEAT-PUMP UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.
1. Specially designed for use in systems with either all heating or all cooling demands, but not for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit modules that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.
3. All units installed shall be from the same product development generation.

B. Cabinet:
1. Galvanized steel and coated with a corrosion-resistant finish.
   a. Coating with documented salt spray test performance of 1000 hours according ASTM B 117 surface scratch test (SST) procedure.
2. Mounting: Manufacturer-designed provisions for field installation.
3. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Compressor and Motor Assembly:
1. One or more positive-displacement, direct-drive and hermetically sealed scroll compressor(s) with inverter drive and turndown to 15 percent of rated capacity.
2. Protection: Integral protection against the following:
   a. High refrigerant pressure.
   b. Low oil level.
   c. High oil temperature.
   d. Thermal and overload.
   e. Voltage fluctuations.
   f. Phase failure and phase reversal.
   g. Short cycling.
3. Speed Control: Variable to automatically maintain refrigerant suction and condensing pressures while varying refrigerant flow to satisfy system cooling and heating loads.
5. Oil management system to ensure safe and proper lubrication over entire operating range.
6. Crankcase heaters with integral control to maintain safe operating temperature.
7. Fusible plug.

D. Condenser Coil Assembly:
1. Plate Fin Coils:
   a. Casing: Aluminum, galvanized, or stainless steel.
   b. Fins: Aluminum or copper, mechanically bonded to tubes, with arrangement required by performance.
   c. Tubes: Copper, of diameter and thickness required by performance.
2. Aluminum Microchannel Coils:
b. Single- or multiple-pass arrangement.
c. Construct fins, tubes, and header manifolds of aluminum alloy.

3. Corrosion Protection: Coating with documented salt spray test performance of 1000 hours according ASTM B 117 surface scratch test (SST) procedure.

4. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

E. Condenser Fan and Motor Assembly:
   1. Fan(s): Propeller type.
      a. Direct-drive arrangement.
      b. Fabricated from non-ferrous components or ferrous components with corrosion protection finish to match performance indicated for condenser coil.
      c. Statically and dynamically balanced.

2. Fan Guards: Removable safety guards complying with OSHA regulations. If using metal materials, coat with corrosion-resistant coating to match performance indicated for condenser coil.

3. Motor(s): Brushless dc or electronically commutated with permanently lubricated bearings and rated for outdoor duty.

5. Speed Settings and Control: Variable speed with a speed range of least 75 percent.

F. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

G. Unit Controls:
   1. Enclosure: Manufacturer's standard, and suitable for unprotected outdoor locations.

2. Factory-Installed Controller: Configurable digital control.

3. Factory-Installed Sensors:
   a. Refrigerant suction temperature.
   b. Refrigerant discharge temperature.
   c. Outdoor air temperature.
   d. Refrigerant high pressure.
   e. Refrigerant low pressure.
   f. Oil level.

4. Features and Functions: Self-diagnostics, time delay, auto-restart, fuse protection, auto operation mode, manual operation mode, night setback control, power consumption display, run test switch, equalize run time between multiple same components.

5. Communication: Network communication with indoor units and other outdoor unit(s).

6. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

7. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

H. Unit Electrical:
   1. Enclosure: Metal, similar to enclosure, and suitable for unprotected outdoor locations.

2. Field Connection: Single point connection to power entire unit and integral controls.

3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.

4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.

5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

6. Raceways: Enclose line voltage wiring in raceways to comply with NFPA 70.
I. Unit Hardware: Zinc-plated steel, or stainless steel. Coat exposed surfaces with additional corrosion-resistant coating if required to prevent corrosion when exposed to salt spray test for 1000 hours according ASTM B 117.

J. Unit Piping:
   1. Unit Tubing: Copper tubing with brazed joints.
   2. Unit Tubing Insulation: Manufacturer’s standard insulation, of thickness to prevent condensation.
   3. Field Piping Connections: Manufacturer’s standard.
   4. Factory Charge: Dehydrated air or nitrogen.
   5. Testing: Factory pressure tested and verified to be without leaks.

2.9 OUTDOOR, AIR-SOURCE HEAT RECOVERY UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.
   1. Specially designed for use in systems with simultaneous heating and cooling.
   2. Systems shall consist of one unit, or multiple unit modules that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.
   3. All units installed shall be from the same product development generation.

B. Cabinet:
   1. Galvanized steel and coated with a corrosion-resistant finish.
      a. Coating with documented salt spray test performance of 1000 hours according ASTM B 117 surface scratch test (SST) procedure.
   2. Mounting: Manufacturer-designed provisions for field installation.
   3. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Compressor and Motor Assembly:
   1. One or more positive-displacement, direct-drive and hermetically sealed scroll compressor(s) with inverter drive and turndown to 15 percent of rated capacity.
   2. Protection: Integral protection against the following:
      a. High refrigerant pressure.
      b. Low oil level.
      c. High oil temperature.
      d. Thermal and overload.
      e. Voltage fluctuations.
      f. Phase failure and phase reversal.
      g. Short cycling.
   3. Speed Control: Variable to automatically maintain refrigerant suction and condensing pressures while varying refrigerant flow to satisfy system cooling and heating loads.
   5. Oil management system to ensure safe and proper lubrication over entire operating range.
   6. Crankcase heaters with integral control to maintain safe operating temperature.
   7. Fusible plug.

D. Condenser Coil Assembly:
   1. Plate Fin Coils:
      a. Casing: Aluminum, galvanized, or stainless steel.
      b. Fins: Aluminum or copper, mechanically bonded to tubes, with arrangement required by performance.
      c. Tubes: Copper, of diameter and thickness required by performance.
   2. Aluminum Microchannel Coils:
b. Single- or multiple-pass arrangement.
c. Construct fins, tubes, and header manifolds of aluminum alloy.
3. Corrosion Protection: Coating with documented salt spray test performance of 1000 hours according ASTM B 117 surface scratch test (SST) procedure.
4. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

E. Condenser Fan and Motor Assembly:
1. Fan(s): Propeller type.
   a. Direct-drive arrangement.
   b. Fabricated from non-ferrous components or ferrous components with corrosion protection finish to match performance indicated for condenser coil.
   c. Statically and dynamically balanced.
2. Fan Guards: Removable safety guards complying with OSHA regulations. If using metal materials, coat with corrosion-resistant coating to match performance indicated for condenser coil.
3. Motor(s): Brushless dc or electronically commutated with permanently lubricated bearings and rated for outdoor duty.
5. Speed Settings and Control: Variable speed with a speed range of least 80 percent.

F. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

G. Unit Controls:
1. Enclosure: Manufacturer's standard, and suitable for unprotected outdoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:
   a. Refrigerant suction temperature.
   b. Refrigerant discharge temperature.
   c. Outdoor air temperature.
   d. Refrigerant high pressure.
   e. Refrigerant low pressure.
   f. Oil level.
4. Features and Functions: Self-diagnostics, time delay, auto-restart, fuse protection auto operation mode, manual operation mode, night setback control, power consumption display, run test switch, equalize run time between multiple same components.
5. Communication: Network communication with indoor units and other outdoor unit(s).
6. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
7. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

H. Unit Electrical:
1. Enclosure: Metal, similar to enclosure, and suitable for unprotected outdoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in raceways to comply with NFPA 70.

I. Unit Hardware: Zinc-plated steel, or stainless steel. Coat exposed surfaces with additional corrosion-resistant coating if required to prevention corrosion when exposed to salt spray test for 1000 hours according ASTM B 117.
J. Unit Piping:
   1. Unit Tubing: Copper tubing with brazed joints.
   2. Unit Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
   3. Field Piping Connections: Manufacturer's standard.
   4. Factory Charge: Dehydrated air or nitrogen.
   5. Testing: Factory pressure tested and verified to be without leaks.

2.10 HEAT RECOVERY CONTROL UNITS (HRCUS)

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.
   1. Specially designed for use in systems with simultaneous heating and cooling.
   2. Systems shall consist of one unit, or multiple unit that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.

B. Cabinet:
   2. Insulation: Manufacturer's standard internal insulation to provide thermal resistance and prevent condensation.
   3. Mounting: Manufacturer-designed provisions for field installation.
   4. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

D. Refrigeration Assemblies and Specialties:
   1. Specially designed by manufacturer for type of VRF HVAC system being installed, either two or three pipe.
   2. Each refrigerant branch circuit shall have refrigerant control valve(s) to control refrigerant flow.
   3. Spares: Each heat recovery control unit shall include at least two branch circuit port(s) for future use.
   4. Each system piping connection upstream of heat recovery unit shall be fitted with an isolation valve to allow for service to any heat recovery control unit in the system without interrupting operation of the system.
   5. Each branch circuit connection shall be fitted with an isolation valve and capped service port to allow for service to any individual branch circuit without interrupting operation of the system.
      a. If not available as an integral part of the heat recovery control unit, isolation valves shall be field installed adjacent to the unit pipe connection.

E. Unit Controls:
   1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
   2. Factory-Installed Controller: Configurable digital control.
   4. Communication: Network communication with indoor units and outdoor unit(s).
   5. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
   6. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

F. Unit Electrical:
   1. Enclosure: Metal, similar to enclosure, and suitable for indoor locations.
   2. Field Connection: Single point connection to power entire unit and integral controls.
   3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in raceways to comply with NFPA 70.

G. Unit Piping:
   1. Unit Tubing: Copper tubing with brazed joints.
   2. Unit Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
   3. Field Piping Connections: Manufacturer's standard.
   4. Factory Charge: Dehydrated air or nitrogen.
   5. Testing: Factory pressure tested and verified to be without leaks.

2.11 SYSTEM CONTROLS

A. General Requirements:
   1. Network: Indoor units, HRCUs, and outdoor units shall include integral controls.
   3. Integration with Building Automation System: ASHRAE 135, BACnet IP and certified by BACnet Testing Lab (BTL), including the following:
      a. Ethernet connection via RJ-45 connectors and port with transmission at 100 Mbps or higher.
      b. Integration devices shall be connected to local uninterruptible power supply unit(s) to provide at least 5 minutes of battery backup operation after a power loss.
      c. Integration shall include control, monitoring, scheduling, change of value notifications
   4. Operator Interface:
      a. Operators shall interface with system and unit controls through the following:
         1) Operator interfaces integral to controllers.
         2) Web interface through web browser software.
         3) Integration with Building Automation System.
      b. Users shall be capable of interface with controllers for indoor units control to extent privileges are enabled. Control features available to users shall include the following:
         1) On/off control.
         2) Temperature set-point adjustment.
   5. Refer to Sequence of Operation specifications for requirements of system control. Coordinate with building automation system and provide all necessary control interface equipment, components, etc. to meet sequence of operation and associated monitoring and adjustment.

2.12 SYSTEM REFRIGERANT AND OIL

A. Refrigerant:
   1. As required by VRF HVAC system manufacturer for system to comply with performance requirements indicated.
   2. ASHRAE 34, Class A1 refrigerant classification.

B. Oil:
   1. As required by VRF HVAC system manufacturer and to comply with performance requirements indicated.

2.13 SYSTEM CONDENSATE DRAIN PIPING

A. If more than one material is listed, material selection is Contractor's option.

B. Copper Tubing:
1. Drawn-Temper Tubing: According to ASTM B 88, Type L or Type DWV according to ASTM B 306.

2.14 SYSTEM REFRIGERANT PIPING
A. Comply with requirements in Section 232300 "Refrigerant Piping" for system piping requirements.

2.15 PIPING AND TUBING INSULATION
A. Comply with requirements in Section 230700 for system piping insulation requirements.

2.16 SYSTEM CONTROL CABLE
A. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables" for control wiring and cable raceways.
B. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for control wiring and cable raceways.

2.17 SOURCE QUALITY CONTROL
A. Factory Tests: Test and inspect factory-assembled equipment.
B. Equipment will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports for historical record. Submit reports only if requested.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine products before installation. Reject products that are wet, moisture damaged, or mold damaged.
C. Examine roughing-in for piping and tubing to verify actual locations of connections before equipment installation.
D. Examine roughing-in for ductwork to verify actual locations of connections before equipment installation.
E. Examine roughing-in for wiring and conduit to verify actual locations of connections before equipment installation.
F. Examine walls, floors, roofs, and outdoor pads for suitable conditions where equipment will be installed.
G. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EQUIPMENT INSTALLATION, GENERAL
A. Clearance:
   1. Maintain manufacturer's recommended clearances for service and maintenance.
   2. Maintain clearances required by governing code.
B. Loose Components: Install components, devices, and accessories furnished by manufacturer, with
equipment, that are not factory mounted.

3.3 INSTALLATION OF INDOOR UNITS

A. Install units to be level and plumb while providing a neat and finished appearance.
B. Unless otherwise required by VRF HVAC system manufacturer, support ceiling-mounted units from
structure above using threaded rods; minimum rod size of 3/8 inch.
C. Adjust supports of exposed and recessed units to draw units tight to adjoining surfaces.
D. Protect finished surfaces of ceilings, floors, and walls that come in direct contact with units. Refinish
or replaced damaged areas after units are installed.
E. In rooms with ceilings, conceal piping and tubing, controls, and electrical power serving units above
ceilings.
F. In rooms without ceiling, arrange piping and tubing, controls, and electrical power serving units to
provide a neat and finished appearance.
G. Provide lateral bracing if needed to limit movement of suspended units to not more than 0.25 inch.
H. For wall-mounted units that are exposed, conceal piping and tubing, controls, and electrical power
serving units within walls.

3.4 INSTALLATION OF OUTDOOR UNITS

A. Install units to be level and plumb while providing a neat and finished appearance.
B. Install outdoor units on support structures indicated on Drawings.
C. Pad-Mounted Installations: Install outdoor units on cast-in-place concrete equipment bases.
   1. Attachment: Install anchor bolts to elevations required for proper attachment to supported
equipment.
   2. Grouting: Place grout under equipment supports and make bearing surface smooth.
D. Roof-Mounted Installations: Install outdoor units on equipment supports. Anchor units to supports
   with removable, stainless-steel fasteners.

3.5 GENERAL REQUIREMENTS FOR PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping and
   tubing systems. Install piping and tubing as indicated unless deviations to layout are approved on
   coordination drawings.
B. Install piping and tubing in concealed locations unless otherwise indicated and except in equipment
   rooms and service areas.
C. Install piping and tubing at right angles or parallel to building walls. Diagonal runs are prohibited
   unless specifically indicated otherwise.
D. Install piping and tubing above accessible ceilings to allow sufficient space for ceiling panel
   removal.
E. Install piping and tubing to permit valve servicing.
F. Install piping and tubing at indicated slopes.
G. Install piping and tubing free of sags.
H. Install fittings for changes in direction and branch connections.
I. Install piping and tubing to allow application of insulation.
J. Install groups of pipes and tubing parallel to each other, spaced to permit applying insulation with service access between insulated piping and tubing.

K. Install sleeves for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 “Sleeves and Sleeve Seals for HVAC Piping.”

L. Install escutcheons for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 “Escutcheons for HVAC Piping.”

3.6 INSTALLATION OF SYSTEM CONDENSATE DRAIN PIPING

A. General Requirements for Drain Piping and Tubing:
   1. Install a union in piping at each threaded unit connection.
   2. Install an adjustable stainless-steel hose clamp with adjustable gear operator on unit hose connections. Tighten clamp to provide a leak-free installation.
   3. If required for unit installation, provide a trap assembly in drain piping to prevent air circulated through unit from passing through drain piping. Comply with more stringent of the following:
      a. Details indicated on Drawings.
      b. Manufacturer’s requirements.
      c. Governing codes.
      d. In the absence of requirements, comply with requirements of ASHRAE handbooks.
   4. Extend drain piping from units with drain connections to drain receptors as indicated on Drawings. If not indicated on Drawings, terminate drain connection at nearest accessible location that is not exposed to view by occupants.
   5. Provide each 90-degree change in direction with a Y- or T-fitting. Install a threaded plug connection in the dormant side of fitting or future use as a service cleanout.

B. Gravity Drains:
   1. Slope piping from unit connection toward drain termination at a constant slope of not less than one percent.

C. Pumped Drains:
   1. If unit condensate pump or lift mechanism is not included with an integral check valve, install a full-size check valve in each branch pipe near unit connection to prevent backflow into unit.

3.7 INSTALLATION OF REFRIGERANT PIPING

A. Refrigerant Tubing Kits:
   1. Unroll and straighten tubing to suit installation. Deviations in straightness of exposed tubing shall be unnoticeable to observer.
   2. Support tubing using hangers and supports indicated at intervals not to exceed 5 feet Minimum rod size, 1/4 inch.
   3. Prepare tubing ends and make mating connections to provide a pressure tight and leak-free installation.

B. Install refrigerant piping according to ASHRAE 15 and governing codes.

C. Select system components with pressure rating equal to or greater than system operating pressure.

D. Install piping as short and direct as possible, with a minimum number of joints and fittings.

E. Arrange piping to allow inspection and service of equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels if valves or equipment requiring maintenance is concealed behind finished surfaces.

F. Install refrigerant piping and tubing in rigid or flexible conduit in locations where exposed to mechanical damage.

G. Unless otherwise required by VRF HVAC system manufacturer, slope refrigerant piping and tubing as follows:
1. Install horizontal hot-gas discharge piping and tubing with a uniform slope downward away from compressor.
2. Install horizontal suction lines with a uniform slope downward to compressor.
3. Install traps to entrain oil in vertical runs.
4. Liquid lines may be installed level.

H. When brazing, remove or protect components that could be damaged by heat.

I. Before installation, clean piping, tubing, and fittings to cleanliness level required by VRF HVAC system manufacturer.

J. Joint Construction:
   1. Ream ends of tubes and remove burrs.
   2. Remove scale, slag, dirt, and debris from inside and outside of tube and fittings before assembly.
      a. Use Type BCuP (copper-phosphorus) alloy for joining copper fittings with copper tubing.
      b. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze.

3.8 INSTALLATION OF PIPING AND TUBING INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated. Installation to maintain a continuous vapor barrier.

B. Insulation Installation on Pipe Fittings and Elbows:
   1. Install mitered sections of pipe insulation.
   2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed valve covers manufactured of same material as pipe insulation when available.
   2. When preformed valve covers are unavailable, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   3. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.
   1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

E. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.9 INSTALLATION OF DUCT, ACCESSORIES, AND AIR OUTLETS

A. Where installing ductwork adjacent to equipment, allow space for service and maintenance.

B. Comply with requirements for metal ducts, air duct accessories, flexible ducts, air diffusers and registers and grilles specified in appropriate sections.

3.10 ELECTRICAL INSTALLATION

A. Comply with requirements indicated on Drawings and in applicable Division 26 Sections.
B. To extent electrical power is required for system equipment, components, and controls, and is not indicated on Drawings and addressed in the Specifications, the design for such electrical power shall be delegated to VRF HVAC system provider.
   1. Delegated design of electrical power to equipment, components and controls, and associated installation shall be included at no additional cost to Owner.

C. Connect field electrical power source to each separate electrical device requiring field electrical power. Coordinate termination point and connection type with Installer.

D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

E. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

F. Install nameplate or acrylic label with self-adhesive back for each electrical connection indicating electrical equipment designation and circuit number feeding connection.
   1. Nameplate shall be laminated phenolic layers of black with engraved white letters. Letters at least 1/2 inch high.
   2. Locate nameplate or label where easily visible.

G. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for raceway selection and installation requirements for boxes, conduits, and wireways as supplemented or revised in this Section.
   1. Outlet boxes shall be no smaller than 2 inches wide, 3 inches high, and 2-1/2 deep.
   2. Outlet boxes for cables shall be no smaller than 4 inches square by 2-1/8 inches deep with extension ring sized to bring edge of ring to within 1/8 inch of the finished wall surface.
   3. Flexible metal conduit shall not be used.

H. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

I. Install manufactured conduit sweeps and long-radius elbows if possible.

J. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.11 SOFTWARE

A. Cybersecurity:
   1. Software:
      a. Coordinate security requirements with IT department.
      b. Ensure that latest stable software release is installed and properly operating.
      c. Disable or change default passwords to password using a combination of uppercase and lower letters, numbers, and symbols at least eight characters in length. Record passwords and turn over to party responsible for system operation and administration.
   2. Hardware:
      a. Coordinate location and access requirements with IT department.
      b. Enable highest level of wireless encryption that is compatible with Owner's ICT network.
      c. Disable dual network connections.

3.12 INSTALLATION OF SYSTEM CONTROL CABLE

A. Comply with NECA 1.

B. Installation Method:
   1. Install cables in raceways except as follows:
      a. Within equipment and associated control enclosures.
      b. In accessible ceiling spaces where open cable installation method may be used.
      c. In gypsum board partitions where cable may be enclosed within wall cavity.
2. Conceal raceway and cables except in unfinished spaces.

C. General Requirements for Cabling:
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and shall be continuous from terminal to terminal. Do not splice cable.
5. Cables serving a common system may be grouped in a common raceway. Install control cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
11. Support: Do not allow cables to lie on removable ceiling tiles or access panels.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
15. Do not bend cables in a radius less than 10 times the cable OD.
16. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
17. Ground wire shall be copper, and grounding methods shall comply with IEEE C2. Demonstrate ground resistance.

D. Balanced Twisted-Pair Cable Installation:
2. Do not untwist balanced twisted-pair cables more than 1/2 inch at the point of termination to maintain cable geometry.

E. Open-Cable Installation:
1. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 30 inches apart.
2. Cable shall not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Separation from EMI Sources: Comply with BICSI TDMM and TIA-569-D recommendations for separating unshielded cable from potential EMI sources including electrical power wiring and equipment.

3.13 FIRESTOPPING
A. Comply with requirements in Section 078413 "Penetration Firestopping."
B. Comply with TIA-569-D, Annex A, "Firestopping."
C. Comply with BICSI TDMM, "Firestopping" Chapter.
3.14 GROUNDING INSTALLATION

A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.

B. For low-voltage control cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.15 IDENTIFICATION

A. Identify system equipment, piping, tubing, and valves. Comply with requirements for identification specified in Section 230553 "Identification for HVAC Piping and Equipment."

B. Identify system electrical and controls components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
   1. Identify each control cable on each end and at each terminal with a number-coded identification tag. Each cable shall have a unique tag.

3.16 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage VRF HVAC system manufacturer's service representative to advise and assist installers; witness testing; and observe and inspect components, assemblies, and equipment installations, including controls and connections.
   1. Field service shall be performed by a factory-trained and -authorized service representative of VRF HVAC system manufacturer whose primary job responsibilities are to provide direct technical support of its products.
      a. Additional factory-authorized representatives may assist with completion of certain activities only if supervised by manufacturer's employee. A factory-authorized representative shall not provide assistance without manufacturer's employee supervision.
   2. Manufacturer shall provide on-site visits during the course of construction at installation milestones indicated. System Installer shall coordinate each visit in advance to give manufacturer sufficient notice to plan the visit
      a. First Visit: Kick-off meeting.
      b. Second Visit: At approximately 25 percent completion of system(s).
      c. Third Visit: At approximately 50 percent completion of system(s).
      d. Fourth Visit: At approximately 75 percent completion of system(s).
      e. Fifth Visit: Final inspection before system startup.
   3. Kick-off Meeting:
      a. Meeting shall include system Installer and other related trades with sole purpose of reviewing VRF HVAC system installation requirements and close coordination required to make a successful installation.
      b. Meeting shall be held at Project site and scheduled at a mutually agreed to time that occurs before the start of any part of system installation.
      c. Meeting shall cover the following as a minimum requirement:
         1) Review of latest issue of Contract Documents, Drawings, and Specifications, relevant to VRF HVAC systems.
         2) Manufacturer's installation requirements specific to systems being installed.
         3) Review of all relevant VRF HVAC system submittals, including delegated-design submittals.
         4) Required field activities related installation of VRF HVAC system.
         5) Project team communication protocol, contact information, and exchange of responsibilities for each party involved, including manufacturer, supplier, system Installer, and other related trades.
   4. Site Visits: Activities for each site visit shall include the following:
      a. Meet with VRF HVAC system Installer to discuss field activities, issues, and suggested methods to result in a successful installation.
      b. Offer technical support to Installer and related trades as related to VRF system(s) being installed.
c. Review progress of VRF HVAC system(s) installation for strict compliance with manufacturer's requirements.

d. Advise and if necessary assist Installer with updating related refrigerant calculations and system documentation.

e. Issue a report for each visit, documenting the visit.
   1) Report to include name and contact information of individual making the visit.
   2) Date(s) and time frames while on-site.
   3) Names and contact information of people meeting with while on-site.
   4) Clearly identify and list each separate issue that requires resolution. For each issue, provide a unique identification number, relevant importance, specific location or equipment identification, description of issue, recommended corrective action, and follow-up requirements needed. Include a digital photo for clarification if deemed to be beneficial.

5. Final Inspection before Startup:
   a. Before inspection, Installer to provide written request to manufacturer stating the system is fully installed according manufacturer's requirements and ready for final inspection.
   b. All system equipment and operating components shall be inspected. If components are inaccessible for inspection, they shall be made accessible before the final inspection can be completed.
   c. Manufacturer shall provide a comprehensive inspection of all equipment and each operating component that comprise the complete system(s). Inspection shall follow a detailed checklist specific to each equipment and operating component.
   d. Inspection reports for indoor units shall include, but not be limited to, the following:
      1) Unit designation on Drawings.
      2) Manufacturer model number.
      3) Serial number.
      4) Network address, if applicable.
      5) Each equipment setting.
      6) Mounting, supports, and restraints properly installed.
      7) Proper service clearance provided.
      8) Wiring and power connections correct.
      9) Line-voltage reading(s) within acceptable range.
     10) Wiring and controls connections correct.
     11) Low-voltage reading(s) within an acceptable range.
     12) Controller type and model controlling unit.
     13) Controller location.
     14) Temperature settings and readings within an acceptable range.
     15) Humidity settings and readings within an acceptable range.
     16) Condensate removal acceptable.
     17) Fan settings and readings within an acceptable range.
     18) Unit airflow direction within an acceptable range.
     19) If applicable, fan external static pressure setting.
     20) Filter type and condition acceptable.
     21) Noise level within an acceptable range.
     22) Refrigerant piping properly connected and insulated.
     23) Condensate drain piping properly connected and insulated.
     24) If applicable, ductwork properly connected.
     25) If applicable, external interlocks properly connected.
     26) Remarks.
   e. Inspection reports for outdoor units shall include, but not be limited to, the following:
      1) Unit designation on Drawings.
      2) Manufacturer model number.
      3) Serial number.
      4) Network address, if applicable.
      5) Each equipment setting.
      6) Mounting, supports, and restraints properly installed.
7) Proper service clearance provided.
8) Wiring and power connections correct.
9) Line-voltage reading(s) within acceptable range.
10) Wiring and controls connections correct.
11) Low-voltage reading(s) within an acceptable range.
12) Condensate removal acceptable.
13) Noise level within an acceptable range.
14) Refrigerant piping properly connected and insulated.
15) Condensate drain piping properly connected and insulated.
16) Remarks.

f. Installer shall provide manufacturer with the requested documentation and technical support during inspection.
g. Installer shall correct observed deficiencies found by the inspection.
h. Upon completing the on-site inspection, manufacturer shall provide a written report with complete documentation describing each inspection step, the result, and any corrective action required.
i. If corrective action is required by Installer that cannot be completed during the same visit, provide additional visits, as required, until deficiencies are resolved and systems are deemed ready for startup.
j. Final report shall indicate the system(s) inspected are installed according to manufacturer's requirements and are ready for startup.

B. Perform the following tests and inspections with the assistance of manufacturer's service representative:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Refrigerant Tubing Positive Pressure Testing:

1. Comply with more stringent of VRF HVAC system manufacturer's requirements and requirements indicated.
2. After completion of tubing installation, pressurize tubing systems to a test pressure of not less than 1.5 times VRF HVAC system operating pressure, but not less than 600 psig, using dry nitrogen.
3. Successful testing shall maintain a test pressure for a continuous and uninterrupted period of 24 hours. Allowance for pressure changes attributed to changes in ambient temperature are acceptable.
4. Prepare test report to record the following information for each test:
   a. Name of person starting test, company name, phone number, and e-mail address.
   b. Name of manufacturer's service representative witnessing test, company name, phone number, and e-mail address.
   c. Detailed description of extent of tubing tested.
   d. Date and time at start of test.
   e. Test pressure at start of test.
   f. Outdoor temperature at start of test.
   g. Name of person ending test, company name, phone number, and e-mail address.
   h. Date and time at end of test.
   i. Test pressure at end of test.
   j. Outdoor temperature at end of test.
   k. Remarks:
5. Submit test reports for Project record.
D. Refrigerant Tubing Evacuation Testing:
   1. Comply with more stringent of VRF HVAC system manufacturer's requirements and
      requirements indicated.
   2. After completion of tubing positive-pressure testing, evacuate tubing systems to a pressure of
      500 microns.
   3. Successful testing shall maintain a test pressure for a continuous and uninterrupted period of
      one hour(s) with no change.
   4. Prepare test report to record the following information for each test:
      a. Name of person starting test, company name, phone number, and e-mail address.
      b. Name of manufacturer's service representative witnessing test, company name, phone
         number, and e-mail address.
      c. Detailed description of extent of tubing tested.
      d. Date and time at start of test.
      e. Test pressure at start of test.
      f. Outdoor temperature at start of test.
      g. Name of person ending test, company name, phone number, and e-mail address.
      h. Date and time at end of test.
      i. Test pressure at end of test.
      j. Outdoor temperature at end of test.
      k. Remarks:
   5. Submit test reports for Project record.
   6. Upon successful completion of evacuation testing, system shall be charged with refrigerant.

E. System Refrigerant Charge:
   1. Using information collected from the refrigerant tubing evacuation testing, system Installer shall
      consult variable refrigerant system manufacturer to determine the correct system refrigerant
      charge.
   2. Installer shall charge system following VRF HVAC system manufacturer's written instructions.
   3. System refrigerant charging shall be witnessed by system manufacturer's representative.
   4. Total refrigerant charge shall be recorded and permanently displayed at the system's outdoor
      unit.

F. Products will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.17 STARTUP SERVICE

A. Engage a VRF HVAC system manufacturer's service representative to perform system(s) startup
   service.
   1. Service representative shall be a factory-trained and -authorized service representative of VRF
      HVAC system manufacturer.
   2. Complete startup service of each separate system.
   3. Complete system startup service according to manufacturer's written instructions.

B. Startup checks shall include, but not be limited to, the following:
   1. Check control communications of equipment and each operating component in system(s).
   2. Check each indoor unit's response to demand for cooling and heating.
   3. Check each indoor unit's response to changes in airflow settings.
   4. Check each indoor unit, HRCU, and outdoor unit for proper condensate removal.
   5. Check sound levels of each indoor and outdoor unit.

C. Installer shall accompany manufacturer's service representative during startup service and provide
   manufacturer's service representative with requested documentation and technical support during
   startup service.
   1. Installer shall correct deficiencies found during startup service for reverification.

D. System Operation Report:
1. After completion of startup service, manufacturer shall issue a report for each separate system.
2. Report shall include complete documentation describing each startup check, the result, and any corrective action required.
3. Manufacturer shall electronically record not less than two hours of continuous operation of each system and submit with report for historical reference.
   a. All available system operating parameters shall be included in the information submitted.

### 3.18 ADJUSTING

A. Adjust equipment and components to function smoothly, and lubricate as recommended by manufacturer.
B. Adjust initial temperature and humidity set points. Adjust initial airflow settings and discharge airflow patterns.
C. Set field-adjustable switches and circuit-breaker trip ranges according to VRF HVAC system manufacturer's written instructions, and as indicated.
D. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

### 3.19 PROTECTION

A. Protect products from moisture and water damage. Remove and replace products that are wet, moisture damaged, or mold damaged.
B. Protect equipment from physical damage. Replace equipment with physical damage that cannot be repaired to new condition. Observable surface imperfections shall be grounds for removal and replacement.
C. Protect equipment from electrical damage. Replace equipment suffering electrical damage.
D. Cover and seal openings of equipment to keep inside of equipment clean. Do not remove covers until finish work is complete.

### 3.20 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.
B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
   1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

### 3.21 DEMONSTRATION

A. Engage a VRF HVAC system manufacturer's employed training instructor or factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain entire system.
B. Schedule and Duration:
   1. Schedule training with Owner at least 20 business days before first training session.
   2. Training shall occur before Owner occupancy.
   3. Training shall be held at mutually agreed date and time during normal business hours.
   4. Each training day shall not exceed eight hours of training. Daily training schedule shall allow time for one hour lunch period and 15 minute break after every two hours of training.
   5. Perform not less than 16 total hours of training.
C. Location: Owner shall provide a suitable on-site location to host classroom training.
D. Training Attendees: Assume three people.

E. Training Attendance: For record purposes, document training attendees at the start of each new training session. Record attendee’s name, signature, phone number, and e-mail address.

F. Training Format: Individual training modules shall include classroom training followed by hands-on field demonstration and training.

G. Training Materials: Provide training materials in electronic format to each attendee.
   1. Include instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
   2. Video record each classroom training session and submit an electronic copy to Owner before requesting Owner acceptance of training.

H. Acceptance: Obtain Commissioning Agent or Owner written acceptance that training is complete and requirements indicated have been satisfied.
SECTION 238216
AIR COILS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes the following types of air coils that are not an integral part of air-handling units:
      1. Hot-water.
      2. Chilled-water.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil. Include rated capacity and pressure drop for each air coil.

1.4 INFORMATIONAL SUBMITTALS
   A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE
   A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
   B. ASHRAE Compliance:
      1. Comply with ASHRAE 15 for refrigeration system safety.
      2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
      3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

1.7 PROJECT CONDITIONS
   A. Altitude above Mean Sea Level: 662 feet

PART 2 PRODUCTS

2.1 WATER COILS
   A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      2. Marlo Coil
      3. McQuay International
      4. Trane.
5. Aerofin Corporation.
   
   B. Performance Ratings: Tested and rated according to ARI 410 and ASHRAE 33.
   
   C. Minimum Working-Pressure/ Temperature Ratings: 200 psig, 325 degrees F.
   
   D. Source Quality Control: Factory tested to 300 psig.
   
   E. Tubes: ASTM B 743 copper, minimum 0.020 inch thick.
   
   F. Fins: Aluminum, minimum 0.0075 inch thick.
   
   G. Frames: Galvanized-steel channel frame, minimum 0.0625 inch thick for flanged mounting.
   
   H. Casing: Galvanized casing for coil and drain pan with integral drain pan and water/drain connections.
   
   I. Refer to drawings for coil capacities and characteristics:

PART 3 EXECUTION

3.1 EXAMINATION
   
   A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
   
   B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.
   
   C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
   
   A. Install coils level and plumb.
   
   B. Install coils in metal ducts and casings constructed according to SMACNA’s “HVAC Duct Construction Standards, Metal and Flexible.”

   C. Install stainless-steel drain pan under each cooling coil and encased within duct system the coil is installed in
      1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
      2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
      3. Extend drain pan upstream and downstream from coil face.
      4. Extend drain pan under coil headers and exposed supply piping.

   D. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.

   E. Straighten bent fins on air coils.

   F. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS
   
   A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

   B. Install piping adjacent to coils to allow service and maintenance.

   C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Control valves are specified in Division 23 Section “Instrumentation and Control for HVAC,” and other piping specialties are specified in Division 23 Section “Hydronic Piping.” Refer to coil piping details for valve and specialty requirements.
SECTION 238236
FINNED-TUBE RADIATION HEATERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes:
   2. Electric finned-tube radiators.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
B. Shop Drawings:
   1. Include plans, elevations, sections, and details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include details and dimensions of custom-fabricated enclosures.
   4. Include enclosure joints, corner pieces, access doors, and other accessories.
C. Samples: For each exposed product and for each color and texture specified.
D. Color Samples for Initial Selection: For finned-tube radiation heaters with factory-applied color finishes.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Structural members, including wall construction, to which finned-tube radiation heaters will be attached.
   2. Method of attaching finned-tube radiation heaters to building structure.
   3. Penetrations of fire-rated wall and floor assemblies.
B. Field quality-control reports.

PART 2 PRODUCTS

2.1 HOT-WATER FINNED-TUBE RADIATION HEATERS
A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Jaga North America
   2. Runtal North America
B. Performance Ratings: Rate finned-tube radiation heaters according to Hydronics Institute’s "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."
C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One end of tube shall be belled.
   1. Refer to the Finned Tube Radiation schedule on the drawings for:
a. Tube Diameter  
b. Fin Size  
c. Fin Spacing  
d. Number of Tiers  
e. Heat Output  
f. Entering-Air Temperature  

D. Element Supports: Ball-bearing cradle type to permit longitudinal movement on enclosure brackets.

E. Front Panel: Minimum 0.0528-inch-thick steel.

F. Wall-Mounted Back Panel: Minimum 0.0329-inch-thick steel, full height, with full-length channel support for front panel without exposed fasteners.

G. Floor-Mounted Pedestals: Conceal insulated piping at maximum 36-inch spacing. Pedestal-mounted back panel shall be solid panel matching front panel. Provide stainless-steel escutcheon for floor openings at pedestals.

H. Support Brackets: Locate at maximum 36-inch spacing to support front panel and element.

I. Finish: Baked-enamel finish in manufacturer's custom color as selected by Architect.

J. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches, integral with enclosure.

K. Accessories: Filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes. Provide end caps and cover sections for seamless and continuous appearance of fin tube between walls.

2.2 ELECTRIC FINNED-TUBE RADIATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Berko Electric Heating; a division of Marley Engineered Products.
   2. Chromalox; a division of Emerson Electric Company.
   3. Indeeco.
   4. Markel Products; a division of TPI Corporation.
   5. Marley Electric Heating; a division of Marley Engineered Products.
   6. Ouellet Canada Inc.
   7. Qmark Electric Heating; a division of Marley Engineered Products.
   8. Trane.

B. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

C. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded into fins, with high-temperature cutout and sensor running the full length of the element. Element supports shall eliminate thermal expansion noise.

D. Front Panel: Minimum 0.70-inch (14-gauge) thick steel.

E. Wall-Mounting Back Panel: 14-gauge steel, full height, with full-length channel support for front panel without exposed fasteners.

F. Support Brackets: Locate at maximum 36-inch spacing to support unit.

G. Finish: Baked-enamel finish in manufacturer's custom color as selected by Architect.

H. Extended Enclosure with Access Doors: Factory made extended enclosure for mounting of controls and disconnect, with removable panel for access.

I. Enclosure Style: Flat top.
   1. Bottom Inlet Opening: Punched louver; painted to match enclosure.
   2. Top Outlet Grille: Punched louver; painted to match enclosure.
J. Unit Controls: Integral low-voltage relay and control transformer for remote thermostat.

K. Operational sequences are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls."

L. Electrical Connection: Factory wire motors and controls for a single field connection.

M. Accessories: Integral disconnect switch, filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes. Provide end caps and cover sections for seamless and continuous appearance of fin tube between walls.

N. Refer also to Mechanical Electrical Coordination schedule for electrical connection requirements including but not limited to starters, disconnects, wiring, installation, interconnections, etc.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas to receive finned-tube radiation heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for hydronic-piping connections to verify actual locations before installation of finned-tube radiation heaters.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FINNED-TUBE RADIATION HEATER INSTALLATION

A. Install units level and plumb.

B. Install enclosure continuously around corners, using outside and inside corner fittings.

C. Where recessed between walls at punched opens, install enclosure continuously between walls with access cover to valving.

D. Join sections with splice plates and filler pieces to provide continuous enclosure.

E. Install access doors for access to valves.

F. Install enclosure continuously from wall to wall. Elements shall be centered on windows. Elements shall be equally proportioned beneath multiple windows.

G. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

H. Install valves within reach of access door provided in enclosure.

I. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.

J. Install piping within pedestals for freestanding units.

3.3 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect hot-water finned-tube radiation heaters and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."

1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.

C. Install control valves as required by Section 230900 "Instrumentation and Control for HVAC."

D. Install piping adjacent to finned-tube radiation heaters to allow service and maintenance.
E. Ground electric convection heating units according to Division 26 Section “Grounding and Bonding.”

F. Connect wiring according to Division 26 Section “Conductors and Cables.”

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION
SECTION 238239.13
CABINET UNIT HEATERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes cabinet unit heaters with centrifugal fans and hot-water coils.

1.3 DEFINITIONS
A. BAS: Building automation system.
B. CWP: Cold working pressure.
C. PTFE: Polytetrafluoroethylene plastic.
D. TFE: Tetrafluoroethylene plastic.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
B. Shop Drawings:
   1. Include plans, elevations, sections, and details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, and required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include location and size of each field connection.
   4. Include details of anchorages and attachments to structure and to supported equipment.
   5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
C. Samples: For each exposed product and for each color and texture specified.
D. Samples for Initial Selection: Finish colors for units with factory-applied color finishes.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Floor plans reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended ceiling components.
   2. Structural members to which cabinet unit heaters will be attached.
   3. Method of attaching hangers to building structure.
   4. Size and location of initial access modules for acoustical tile.
   5. Items penetrating finished ceiling, including the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
6. Perimeter moldings for exposed or partially exposed cabinets.

B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Cabinet Unit-Heater Filters: Furnish one spare filter for each filter installed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Airtherm; a Mestek company.
3. Rittling
4. Sigma Corporation
5. Sterling
6. Trane Incorporated

2.2 DESCRIPTION

A. Factory-assembled and -tested unit complying with AHRI 440.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 2021.

2.3 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

2.4 COIL SECTION INSULATION

A. Insulation Materials: Comply with NFPA 90A or NFPA 90B. Unicellular polyethylene thermal plastic, preformed sheet insulation complying with ASTM C 534, Type II, except for density.

1. Thickness: 1/2 inch.
2. Thermal Conductivity (k-Value): 0.24 Btu x in./h x sq. ft. at 75 deg F mean temperature.
3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM C 411.
4. Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
2.5 CABINETS

A. Material: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Architect.
1. Vertical Unit, Exposed Front Panels: Minimum 0.0528-inch-thick sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
2. Horizontal Unit, Exposed Bottom Panels: Minimum 0.0528-inch-thick sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
3. Recessed Flanges: Steel, finished to match cabinet.
4. Control Access Door: Key operated.
5. Base: Minimum 0.0528-inch-thick steel, finished to match cabinet, 4 inches high with leveling bolts.
6. Extended Piping Compartment: 8-inch-wide piping end pocket.
7. False Back: Minimum 0.0428-inch-thick steel, finished to match cabinet.

2.6 FILTERS

A. Minimum Arrestance: According to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
1. Pleated: 90 percent arrestance and MERV 7.

2.7 COILS

A. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain.

2.8 CONTROLS

A. Fan and Motor Board: Removable.
1. Fan: Forward curved, high static, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

B. Control devices and operational sequences are specified in Section 230900 "Instrumentation and Control for HVAC" and Section 230993 "Sequence of Operations for HVAC Controls."

C. BAS Interface Requirements:
1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at central workstation.
3. Interface shall be BAC-net compatible for central BAS workstation and include the following functions:
   a. Adjust set points.
   b. Cabinet unit-heater start, stop, and operating status.
   c. Room-air temperature.
   d. Occupied and unoccupied schedules.
   e. Fan enable/disable

D. Electrical Connection: Factory-wired motors and controls for a single field connection.
1. Provide NEMA-1 disconnect switch for each Cabinet Unit Heater
2. Provide motor starter for each cabinet unit heater.

2.9 CAPACITIES AND CHARACTERISTICS

A. Refer to the Cabinet Unit Heater Schedule on the drawings.
2.10 ELECTRICAL CONNECTION
A. Refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."
B. Install cabinet unit heaters to comply with NFPA 90A.
C. Suspend cabinet unit heaters from structure with elastomeric hangers.
D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS
A. Piping installation requirements are specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," Drawings indicate general arrangement of piping, fittings, and specialties.
B. Comply with safety requirements in UL 1995.
C. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
D. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of cabinet unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."
E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL
A. Perform the following tests and inspections:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
B. Units will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

END OF SECTION
SECTION 238239.16  
PROPELLER UNIT HEATERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes propeller unit heaters with hot-water coils.

1.3 DEFINITIONS
A. BAS: Building automation system.
B. CWP: Cold working pressure.
C. PTFE: Polytetrafluoroethylene plastic.
D. TFE: Tetrafluoroethylene plastic.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
B. Shop Drawings:
   1. Include plans, elevations, sections, and details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include location and size of each field connection.
   4. Include details of anchorages and attachments to structure and to supported equipment.
   5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
   6. Include location and arrangement of piping valves and specialties.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended ceiling components.
   2. Structural members to which propeller unit heaters will be attached.
   3. Method of attaching hangers to building structure.
   4. Size and location of initial access modules for acoustical tile.
   5. Items penetrating finished ceiling, including the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
B. Field quality-control reports.
PART 2 PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Airtherm; a Mestek company.
   3. Trane Inc.
   4. Sterling

2.2 DESCRIPTION
A. Assembly including casing, coil, fan, and motor in horizontal discharge configuration with adjustable discharge louvers.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PERFORMANCE REQUIREMENTS
A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

2.4 HOUSINGS
A. Finish: Manufacturer's standard baked enamel applied to factory-assembled and -tested propeller unit heaters before shipping.
B. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
C. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.

2.5 COILS
A. General Coil Requirements: Test and rate hot-water propeller unit-heater coils according to ASHRAE 33.
B. Hot-Water Coil: Copper tube, minimum 0.025-inch wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 325 deg F, with manual air vent. Test for leaks to 350 psig underwater.
C. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in steel or corrosion-resistant metallic sheath with fins no closer than 0.16 inch. Element ends shall be enclosed in terminal box. Fin surface temperature shall not exceed 550 deg F at any point during normal operation.
   1. Circuit Protection: One-time fuses in terminal box for over-current protection and limit controls for high-temperature protection of heaters.
   2. Wiring Terminations: Stainless-steel or corrosion-resistant material.

2.6 FAN AND MOTOR
A. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.

2.7 CONTROLS
A. Fan and Motor Board: Removable.
1. Fan: Forward curved, high static, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

B. Control devices and operational sequences are specified in Section 230900 "Instrumentation and Control for HVAC" and Section 230993 "Sequence of Operations for HVAC Controls."

C. Electrical Connection: Factory-wired motors and controls for a single field connection.

2.8 CAPACITIES AND CHARACTERISTICS
A. Refer to propeller unit heater schedule on drawings.

2.9 ELECTRICAL CONNECTION
A. Refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
A. Install propeller unit heaters to comply with NFPA 90A.
B. Install propeller unit heaters level and plumb.
C. Suspend propeller unit heaters from structure with all-thread hanger rods and spring hangers. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."
D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.3 CONNECTIONS
A. Piping installation requirements are specified in Section 232113 "Hydronic Piping." Section 232116 Hydronic Piping Specialties," Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to machine to allow service and maintenance.
C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
D. Comply with safety requirements in UL 1995.
E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties."

F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
   3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare startup, test and inspection reports.

3.5 ADJUSTING

A. Adjust initial temperature set points.

END OF SECTION
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following humidifiers:
   1. Electric Steam Humidifiers

1.3 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, and details of components, manifolds, and attachments to other work.

C. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

D. Field quality-control test reports

E. Operation and Maintenance Data: For humidifiers to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Comply with ARI 640, "Commercial and Industrial Humidifiers."

1.5 COORDINATION

A. Coordinate location and installation of humidifiers with manifolds in air-handling units. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

PART 2 – PRODUCTS

2.1 ELECTRIC STEAM HUMIDIFIERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Dri-Steem Corporation.
   2. Nortec/Condair Industries, Inc.
   3. Pure Humidifier Company
4. Carel USA

B. Packaged unit, wall mounted, with built in blower pack for direct space humidification.

C. Unit[s] to be complete with:
   1. Self-generating electrode type steam humidifier producing atmospheric steam inside a plastic cylinder without the use of immersion type electric heating elements.
   2. Disposable plastic steam cylinder with published life expectancy shall be constructed of UL Listed plastic with minimum 94HB safety rating and Zinc plated low carbon steel electrodes.
   3. Electrical connection to electrodes shall be plug type connector fusion molded on cylinder top. Screw down connectors may loosen and/or cause leaks overtime and therefore are not acceptable.
   4. Auto-Adaptive control system to optimize contained water conductivity, control automatic drain/flush cycles, minimizes energy waste and maximizes cylinder life.
   5. High water sensor to prevent over filling and detect water level in the unit.
   6. Full cylinder indication light to advise end of cylinder life.
   7. Output rated at 8.0 lbs/hr at 220-240V, 6.9 lbs/hr at 208V and 4.0 lbs/hr at 110-120V.
   8. Fill valve, drain valve and fill assembly with minimum 1 inch air gap.
   9. Flexible domestic cold water supply tube with fittings, drain hoses, and clamps.
   10. Fault indication lights.
   11. Drain water tempered by fill water to ensure drains do not exceed 140°F during standard operation.
   12. Enclosed cabinet, flame retardant grade polycarbonate construction allows user full front access.
   13. Fully modulating output between 20% and 100% of rated capacity.
   14. Limited manual capacity adjustment of 20%.
   15. Two year limited warranty.
   17. UL Listed.

D. Optional accessories:
   1. Refer to options schedule.

E. Drain Valve: 3/4-inch stainless steel ball valve for manual draining the humidifier reservoir.

F. Operational sequences are specified in Division 23 Sections "Sequence of Operations for HVAC Controls."

G. BAS Interface Requirements:
   1. Provide interface for central BAS workstation for all humidifier setpoints and monitors.
   2. Interface relay to provide indication of fault at the central workstation.

H. Controls: Programmable microprocessor controller, factory mounted and wired on the cover of the control panel. The control cabinet shall have a factory wired time delay relay circuit. The delay circuit shall prevent cycling of the low water interlock circuit due to water fluctuations within the humidifier reservoir.
   1. Microprocessor Control: All operations will be microprocessor based with and include a key pad/digital display module. The system will include the following features and functions:
      a. Numeric display indicating:
         1) Actual room or space RH (adjustable)
         2) Humidistat set point (adjustable)
         3) High limit humidistat set point (adjustable)
         4) Total system demand (% of unit capacity)
         5) Total system output (lbs. /hr)
         6) PI loop (adjustable)
I. Condensate Drain Cooler: Stainless steel water-tempering device that mixes cold water with hot condensate / water discharged from unit to reduce the discharged water temperature to below 140°F. Include supports.

J. Support Legs: As required for installation.

K. Refer to equipment schedule for capacities and characteristics.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install humidifiers according to manufacturer’s written instructions, ARI 640, and the project drawings.

B. Install humidifiers with required clearance for service and maintenance.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
   1. Install piping adjacent to humidifiers to allow service and maintenance.
   2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.

B. Install electrical devices and piping specialties furnished by manufacturer but not factory mounted.

C. Ground equipment according to 26 Section "Grounding and Bonding"

D. Connect wiring according to Division 26 Section "Conductors and Cables."

E. Connect to building automation system for remote monitoring and control.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Remove and replace malfunctioning units and retest as specified above.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain humidifiers. Refer to Division 1 Section "Closeout Procedures."

END OF SECTION
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes dust collectors and associated explosion control system.
B. Related Sections include the following:
   1. Division 23 Section “Sequence of Operation for HVAC Controls”
   2. Division 26 Sections for power supply wiring including disconnects, motor starters, and required electrical devices.
C. Work of this Section includes the power and control wiring between the remote control panel and the dust collector. Refer to Division 26 Sections for requirements.

1.3 PERFORMANCE REQUIREMENTS
A. Project Altitude: Base air ratings on sea level elevations.
B. Operating Limits: Classify centrifugal fans according to AMCA 99.
C. Dust Collector Unit Schedule: Refer to the Drawings and Schedules for capacity, static pressure, motor requirements, electrical characteristics, and accessories.

1.4 SUBMITTALS
A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material gages and finishes, including color charts.
   5. Filter media. Type and area.
   6. Dampers, including housings, linkages, and operators.
B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
C. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.
D. Coordination Drawings: Show dust collector layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
E. Maintenance Data: For dust collectors to include in maintenance manuals specified in Division 1.

1.5 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.

C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver dust collectors as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.

B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.

C. Lift and support units with manufacturer's designated lifting or supporting points.

1.7 COORDINATION

A. Coordinate size and location of structural steel support members.

B. Coordinate installation of roof equipment supports, and roof penetrations. These items are specified in Division 5 and Division 7 Sections.

1.8 WARRANTY

A. Warranty: 10-year warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Donaldson Company, Inc.: Torit Products

2.2 MANUFACTURED UNITS

A. Description: Factory-fabricated, -assembled, -tested, and -finished, dust collector consisting of housing, hopper/support section, filter module with cartridge elements, centrifugal fan and motor, self-cleaning system, compressed air connections, and accessories. Dust collector shall be an aspirated cartridge, continuously operating, self-cleaning type.

B. Construction: Unit constructed of 7- and 10-gage steel; major sections shall be modular bolted construction with tool-less quick-open access doors. Housing rated for +/- 20.00 inches w.g.

C. Filter Module: Filter module with cartridge filter elements, reverse pulse cleaning system, clean air plenum, and cartridge removal/replace replacement sealing hardware with support frame and side walls. Provide a staggered channel inlet baffle in the high entry cross-flow entry plenum to provide diffusion of the inlet airstream and to protect the cartridges from coarse and mildly abrasive materials.

D. Filter Media: Flame Retardant "Fibra-Web FR" cartridges. 99% filtration efficiency on one-micron particles. Filters shall be removable without the use of tools.

E. Compressed Air Self-Cleaning System: Blow pipes, internal piping, compressed air header, solenoid valves, diaphragm valves factory-installed. P4 Photohelic control panel in NEMA 4X enclosure for remote mounting includes photohelic gage/switch to trigger reverse-pulse cleaning on demand. Provide factory compressed air filter and regulator.
   1. Provide cold climate kit with heating elements to prevent cold weather freeze up. All wiring shall be done by the manufacturer and Div 23 through the dust collector unit control panel.

G. Discharge Hopper: 12 gauge steel. One hopper. Hopper square on top, octagonal on bottom and slide gate. shall be bridge free and have no internal ledges. Discharge hopper attaches to drum cover with latches.
   1. Dust Storage: 55 gallon drum.
   2. Provide dust storage drum connector assembly with flex hose and drum attachment.

H. Support leg structure: Legs shall provide 48" clearance below hopper discharge flange.

I. Control Panel: Provide control panel housing motor starter, motor circuit protection for fan motor, control transformer, pulse cleaning controls, start/stop buttons, flange mounted disconnect switch, and filter pressure drop controller.
   1. Pressure drop controller shall include the following features:
      a. Digital readout display
      b. Continuous filter cleaning capability
      c. Filter restriction and cleaning control
      d. 4-20 mA output card for remote pressure drop monitoring and interface with BAS
      e. No battery backup required
      f. Dry contact for remote monitoring of alarms and fan motor status on BAS.
   2. Provide contacts for remote operation of dust collector.
   3. Start/Clean/Stop: Provide Nema 12 (indoor location) start/clean/stop controls in the control panel housing. Also, include a remote push button control for start/clean/stop.

J. Fan Outlet Silencer: Sound attenuator mounted directly to fan outlet. Designed to reduce fan noise below 80 dbA at 5 feet.

K. Factory Finish: Unit parts individually painted prior to assembly, with a second finish coat applied after assembly. There shall be no bare metal surfaces on any part of the unit.
   1. Paint: Powder coat, black color

L. Factory provided disconnect.

M. Pulse Dampening System
   1. Quantity: Prove one compressed air pulse dampening system
   2. Basis-of-Design Product: Donaldson Torit Model PDP-0009SP
   3. Components
      a. Prefilter
      b. Desiccant dryer
      c. Afterfilter
      d. Control System
      e. Automatic condensate drain
      f. 3-gallon reciever

N. Additional Accessories:
   1. Inlets/ outlets: standard (round)
   2. Explosion vent flange
   3. Solenoid enclosure: Nema 4
   4. Explosion vent: Qty 1
   5. Vent weather cover: top mounted
   6. Sprinkler coupling
   7. Ground test documentation
   8. Outlet Damper
2.3 EXPLOSION SUPPRESSION SYSTEM

A. General: Include an explosion suppression system manufactured by Fenwal Protection Systems for the dust collector.

B. The explosion suppression system shall meet the following design parameters:
   1. Material: Common wood dust
   2. Maximum explosion pressure: 10.0 bar
   3. Explosion rate constant: 150 bar m/s
   4. Autoignition temperature: 300 °C

C. Control Unit: EX200 Single Zone in a NEMA 4 enclosure with 24 hour battery backup. Operates on 120 Volt AC power fed from dust collector controller. Include dry contacts for remote signaling of alarm and trouble conditions.

D. Pressure Detection: One pair of static pressure detectors on flexible standoff kits.

E. Suppression: One PF1000 PistonFire with conical spreader. Pressurize suppressors with 900 PSIG of dry nitrogen and charge with KIDDEX dry chemical suppressant. Include flanged stainless steel conical shaped spreader nozzles. Include OSHA lockout/tagout cables.

F. Isolation: One PF1000 PistonFire with single exist head and hose assembly

G. Process Interlock: Automatic shutdown of duct collector equipment.

H. Design Verification: Include the assistance of a factory trained representative to visit the site prior to installation to coordinate with Division 23 to verify the final component locations.

I. Commissioning: Include factory start-up and commissioning of the system by a factory trained representative. Include point-to-point wiring checks, pressure tests, calibration of the detectors, and arming the system.

2.4 MOTORS

A. Comply with the requirements of Division 23 Section "Motors."

B. Motor Construction: Continuous duty, premium efficiency.

C. Explosion Proof Motor

D. Enclosure Type: Totally enclosed, fan cooled.

2.5 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

2.6 ELECTRICAL CONNECTION

A. Refer also to Electrical Coordination schedule for electrical connection requirements. Electrical connection requirements include, but are not limited to, variable speed drives, disconnects, voltage, controls/switching.

2.7 BUILDING AUTOMATION SYSTEM INTERFACE

A. Refer also to Sequence of Operation for necessary control and interface requirements.
PART 3 - EXECUTION

3.1 INSTALLATION
A. Install dust collector units level and plumb in accordance with manufacturer’s instructions.
   1. Support units on structural steel supports as detailed. Supports are specified in Division 5 and Division 7 Sections. Coordinate sizes and locations of supports.
B. Install units with clearances for service and maintenance.
C. Label dust collector according to requirements specified in Division 23 Section "Mechanical Identification."
D. Provide a plastic laminate sign per Division 23 section "Identification for HVAC Piping and Equipment" with the following text: "TBD"

3.2 CONNECTIONS
A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Install ducts adjacent to fans to allow service and maintenance.
B. Install the remote control panel including the interconnecting power and control wiring between the panel and the dust collector.
C. Connect compressed air for cartridge cleaning system.
D. Coordinate the installation and connection of dust collector motor starter and disconnect. Power and supply wiring are work of Division 26.
E. Refer to Division 23 Section “Sequence of Operation for HVAC Controls” for connection requirements to the BAS.
F. Refer to Division 23 Section “Sequence of Operation for HVAC Controls” for unit power and operational interlock requirements.
G. Ground equipment.
H. Tighten electrical connectors and terminals according to manufacturer’s published torque-tightening values. If manufacturer’s torque values are not indicated, use those specified in UL 486A and UL 486B.
B. Dust Collector and Explosion Control System: Division 23 to install all components of the system, including all interconnecting wiring and controls. Division 26 will provide line voltage power to the control panel and the dust collector motor only.

3.3 FIELD QUALITY CONTROL
A. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
B. Repair or replace malfunctioning units. Retest as specified above after repairs or replacements are made.

3.4 CLEANING
A. On completion of installation, internally clean units according to manufacturer’s written instructions. Remove foreign material and construction debris. Vacuum fan wheel and cabinet.
B. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
3.5 DEMONSTRATION

A. Engage a factory service representative to train Owner’s maintenance personnel to adjust, operate, and maintain centrifugal fans.
   1. Train Owner’s maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
   2. Review data in maintenance manuals. Refer to Division 1 Section “Closeout Procedures.”
   3. Schedule training with Owner, through Architect, with at least seven days’ advance notice.

- 142600 Limited-use/Limited-Application Elevators *(Issued in previous Bid Package)*
- 144200 Wheelchair Lifts *(Issued in previous Bid Package)*

**DIVISION 21 FIRE SUPPRESSION**

- 210500 Common Work Results for Fire Suppression
- 210502 Basic Fire Protection Requirements
- 210517 Sleeves and Sleeve Seals for Fire-Suppression Piping
- 210518 Escutcheons for Fire-Suppression Piping
- 210523 General-Duty Valves for Fire-Suppression Piping
- 210529 Hangers and Supports for Fire Suppression Piping and Equipment
- 210553 Identification for Fire Suppression Piping and Equipment
- 211119 Fire Department Connections
- 211200 Fire Suppression Standpipes
- 211313 Wet-Pipe Sprinkler Systems
- 213113 Electric-Drive, Centrifugal Fire Pumps
- 213400 Pressure-Maintenance Pumps
- 213900 Controllers For Fire-Pump Drivers

**DIVISION 22 PLUMBING**

- 220500 Common Work Results for Plumbing
- 220502 Basic Plumbing Requirements
- 220513 Common Motor Requirements for Plumbing Equipment
- 220517 Sleeves and Sleeve Seals for Plumbing Piping
- 220518 Escutcheons for Plumbing Piping
- 220519 Meters and Gages for Plumbing Piping
- 220523.12 Ball Valves for Plumbing Piping
- 220523.13 Butterfly Valves for Plumbing Piping
- 220523.14 Check Valves for Plumbing Piping
- 220529 Hangers and Supports for Plumbing Piping and Equipment
- 220548 Noise and Vibration Control for Plumbing Systems
- 220549 Noise Control Accessories for Plumbing Systems
- 220553 Identification for Plumbing Piping and Equipment
- 220719 Plumbing Piping Insulation
- 221116 Domestic Water Piping
- 221119 Domestic Water Piping Specialties
- 221123 Domestic Water Pumps
- 221316 Sanitary Waste and Vent Piping
- 221319 Sanitary Waste Piping Specialties
- 221413 Facility Storm Drainage Piping
- 221423 Storm Drainage Piping Specialties
- 221429 Sump Pumps
- 221513 General Service Compressed-Air Piping
- 221519 General-Service Packaged Air Compressors and Receivers
- 223400 Fuel-Fired, Domestic-Water Heaters
- 224000 Plumbing Fixtures
- 224500 Emergency Plumbing Fixtures
- 224716 Pressure Water Coolers

**DIVISION 23 HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)**

**END OF SECTION**
SECTION 260500
COMMON WORK RESULTS FOR ELECTRICAL

PART 1 GENERAL

A. BUILDING SYSTEMS COMMISSIONING
   1. “An independent third party Commissioning Agent will document completion of the Plumbing, HVAC, and Electrical Systems for the project. The Construction Manager and Division Contractors are members of the Commissioning Team and will facilitate completion of the Commissioning process. Refer to section 019113 Building Systems Commissioning for the project Commissioning requirements and roles and responsibilities of each member of the Commissioning Team.”

1.2 SUMMARY
   A. Section Includes:
      1. Electrical equipment coordination and installation.
      2. Common electrical installation requirements.
      3. Demolition.
      4. Cutting and patching for electrical construction.
      5. Concrete bases.
      7. Touchup painting.

1.3 QUALITY ASSURANCE
   A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
   B. Comply with NFPA 70.
   C. Comply with State and/or City Code requirements.
   D. All materials shall meet the standards of the following institutes where applicable:
      1. National Fire Protection Association (NFPA)
      2. American Society of Testing Materials (ASTM)
      3. American National Standards Institute (ANSI)
      4. National Electrical Manufacturer’s Association (NEMA)
      5. Institute of Electrical and Electronic Engineers (IEEE)

1.4 COORDINATION
   A. Coordinate arrangement, mounting, and support of electrical equipment:
      1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
      2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
      3. To allow right of way for piping and conduit installed at required slope.
      4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
   B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Section 083100 "Access Doors and Panels."

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 078413 "Penetration Firestopping."

E. Coordinate chases, slots, inserts, sleeves, and openings with general construction work and arrange in building structure during progress of construction to facilitate the electrical installations that follow.
   1. Set inserts and sleeves in poured-in-place concrete, masonry work, and other structural components as they are constructed.

F. Sequence, coordinate, and integrate installing electrical materials and equipment for efficient flow of the Work. Coordinate installing large equipment requiring positioning before closing in the building.

G. Coordinate electrical service connections to components furnished by utility companies.
   1. Coordinate installation and connection of exterior underground and overhead utilities and services, including provision for electricity-metering components.
   2. Comply with requirements of authorities having jurisdiction and of utility company providing electrical power and other services.

H. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability. Document results of said testing.

1.5 DRAWINGS

A. The drawings indicate the arrangements of electrical equipment. Review architectural drawings and details for door swings, cabinets, counters and built-in equipment; conditions indicated on architectural plans shall govern. Coordinate installation of electrical equipment with structural system and mechanical equipment and access thereto. Coordinate installation of recessed electrical equipment with concealed ductwork and piping, and wall thickness. All devices, raceway, and electrical equipment in finished and/or public spaces shall be recessed or concealed unless otherwise noted.

B. Do not scale drawings. Obtain dimensions for layout of equipment from Architectural plans and details unless indicated on Electrical plans.

C. Bring all discrepancies shown on different drawings, between drawings and specifications or between documents and field conditions to the immediate attention of the Architect.

D. Equipment layout is based on one manufacturer's product or from composite dimensions from multiple manufacturers. Where equipment selected for use on the job differs from layout, coordinate space requirements and connection arrangements.

1.6 EQUIPMENT REQUIRING ELECTRICAL SERVICE

A. Review all specification sections and drawings for equipment requiring electrical service. Provide service to and make connections to all such equipment requiring electrical service.

B. Drawings indicate design loads, voltages and corresponding control equipment, feeders, and overcurrent devices. If equipment actually furnished have loads other than those indicated on the drawings or specified herein, control equipment, feeders, and overcurrent devices shall be adjusted in size accordingly at no additional cost to the owner. Such adjustment shall be subject to the review of the Architect.
C. Incidental items not indicated on Drawing or mentioned in Specifications but that can legitimately and reasonably be inferred to belong to the Work or be necessary in good practice to provide complete system, shall be furnished and installed though not itemized here in detail.

1.7 MECHANICAL SYSTEMS INTERFACE

A. All control wiring for plumbing, heating, ventilating and air conditioning systems shall be installed under Division 23. Review Division 23 specifications and shop drawings for control systems to assure compatibility between equipment furnished under Division 23 and wiring furnished under Division 26.

B. Motor controllers (starters) shall be furnished and installed under Division 26, unless specified to be furnished as an integral component of the equipment. Provide the number and type of auxiliary contacts necessary to interlock the equipment and provide the specified control sequence.

C. Power wiring to all motors, motor controllers and between motors and controllers shall be provided in Division 26.

D. All electric heating equipment shall be provided and installed under Division 23 - HEATING, VENTILATING AND AIR CONDITIONING. Power wiring to all electric heating equipment shall be provided under Division 26 of these specifications.

1.8 SITE INVESTIGATION

A. Prior to submitting bids of the project, visit the site of the work to become aware of existing conditions which may affect the cost of the project. Where work under this project requires extension, relocation, reconnections or modifications to existing equipment or systems, the existing equipment or systems shall be restored to their original condition, with the exception of the work under this contract, before the completion of this project. Existing systems and conditions which are not detailed on the drawings must still be restored to their original condition.

1.9 EQUIVALENTS AND SUBSTITUTIONS

A. The applicable paragraphs for General Requirements, Division 01 apply herein.

B. Basis of Design: The manufacturer’s name and product listed on the drawings, or listed first of several names in these Specifications, is used as a basis for design to establish space requirements, a standard of quality and performance.

C. Equivalents: Products of one or more other manufacturer’s names listed in these Specifications following the words “or equivalent by” may be selected, subject to paragraph below titled “Contractor’s Responsibility for Equivalent and Substitutions”.

D. Other Options:
   1. For products specified by naming only one manufacturer, refer to paragraph below under “Substitutions”.
   2. For products specified only by performance characteristics or reference standards, select any manufacturer meeting the requirements.

E. Substitutions: Requests for acceptance of a product of manufacturer’s name not listed in these Specifications will be considered if any one of the following conditions is met:
   1. The named product is not available because of strikes or discontinuance of manufacture; and the proposed product is equivalent to the named product.
   2. The proposed product is superior to the named product, in the opinion of the Owner’s Representative.
3. The proposed product is equivalent to the named product and its use will be to the advantage of the Owner, by the Owner receiving an equitable credit or cost savings. The Owner’s Representative reserves the right to reject any substitution.

4. Submit proposed substitutions with bid along with alternate price, complete descriptive data and a comparison of the substitute manufacturer’s product with specified product. Request for acceptance of a product of manufacturer’s name not listed in these Specifications, is subject to the paragraph titled “Contractor’s Responsibility Equivalents and Substitutions”.

F. Contractor’s Responsibility for Equivalents and Substitutions:

1. Items submitted as a substitution to the Basis of Design or listed general equivalents shall be identified as such and shall include a written request for substitution indicating the following:
   b. Contract time adjustment.
   c. Item by item breakdown of differences between Basis of Design and substituted item.
   d. Operation, maintenance and energy cost difference.

2. Products of manufacturer must match the features, construction, performance and size of those selected for design. Standard catalogued may require certain modifications to meet specified requirements.

3. The responsibility for providing that specified requirements have been met remains with the manufacturer and Contractor. Should the substituted item fail to perform in accordance with the Specifications, replace same with the originally specified item without extra cost to the contract.

4. When requesting review of an equivalent or substituted product, submit a comparison chart listing features, construction, performance and sizes of name product versus equivalent or substituted product.

5. Submittals for review of an equivalent or substituted product will be reviewed for acceptability when all the above requirements have been met. Contractor shall be responsible for all costs incurred by the Architect and Engineer for review of equivalency beyond initial review.

6. Coordinate the installation of the product with all trades.

7. Contractor shall be responsible for changes in electric wiring, materials and for all other additional costs of construction by all trades involved to accommodate the product to perform the same as the product used in the “Basis of Design”.

8. Coordination of General Equivalents and Substitutions: Where Contract Documents permits selection from general equivalents, or where substitutions are authorized, coordinate clearance and other interface requirements with other work.

9. Provide necessary additional items so that selected or substituted item operates equivalent to the Basis of Design and properly fits in the available space allocated for the Basis of Design.

10. Contractor is responsible for assuring that piping, conduit, duct, flue and other service locations for general equivalents or substitutions do not cause access, service or operational difficulties any greater than would be encountered with the Basis of Design.

11. Failure to comply with these requirements will result in immediate rejection of the request for substitution.

1.10 COORDINATION WITHIN DIVISION 26

A. Contract Documents:

1. General: The Contract Documents are diagrammatic showing certain physical relationships, which must be established within Division 26 work and its interface with other work. Such establishment is the exclusive responsibility of the Contractor. Drawings shall not be scaled for the purpose of establishing dimensions, clearances or material quantities.

2. Supplemental Instructions: The exact location for some items in this Specification may not be shown on the Drawings. The location of such items may be established by the Owner’s Representative during the progress of the work.

3. Discrepancies:
a. Examine Drawings and Specifications of all Divisions of the work.
b. Report any discrepancies to the Owner’s Representative and obtain written instructions before proceeding.
c. Should there be a conflict within or between the Specifications or Drawings, the most stringent or higher quality requirements shall apply.
d. Items called for either in the Specifications or on the Drawings shall be required as if called for in both.

4. Constructability:
   a. Examine Drawings and Specifications of all Divisions of the work.
   b. Report any issues to the Owner’s Representative which may prevent installation of Division 26 work in accordance with the Contract Documents and the original construction contract.

B. Contractor shall be responsible for providing proper documentation of equipment product data and shop drawings to all entities providing service.

C. Coordination Drawings: Prepare coordination drawings in accordance with Division 01, Section “Submittals” to scale of 1/4” = 1’-0” or larger, detailing major elements, components, and systems of mechanical equipment (i.e. equipment rooms, and exterior equipment areas) and materials in relationship with other system, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are important to the efficient flow of the work, including (but not necessarily limited to) the following:
   1. Indicate all major electrical equipment and conduits, piping (HVAC, Plumbing and Fire Suppression), structural, and architectural elements in these areas as well.
   2. Sizes and locations of required concrete pads, piers, curbs, and bases.
   3. Provide all necessary sections and elements for clarification.
   4. Failure to produce or submit coordination drawings does not dismiss the Contractor’s responsibility for translating the design intent of the Contract Documents into Construction Drawings.

1.11 COORDINATION WITH OTHER DIVISIONS

A. General:
   1. Coordinate the Division 26 work with the progress of the work of the other trades.
   2. Complete the entire installation as soon as the condition of the building will permit.
   3. Contractor is responsible for coordination of his/her work with Owner’s facility staff engaged in building automation, commissioning of systems, fire alarm system, etc.

B. Chases, Inserts and Openings:
   1. Provide measurements, drawings, and layouts so that opening, inserts and chases in new construction can be built and coordinated as construction progresses.
   2. Check sizes and locations of openings provided.
   3. Any cutting and patching made necessary by failure to provide measurements, drawings, and layouts at the proper time shall be done at no additional cost to the Owner.

C. Support Dimensions: Provide dimensions and drawings so that concrete bases and other equipment supports to be provided under other Sections of the Specifications can be built at the proper time.

1.12 GENERAL SUBMITTAL REQUIREMENTS

A. Refer to Division 01 for additional requirements.

B. Coordination and Sequencing:
   1. Coordinate submittals 3 weeks (minimum) prior to expected order date so that work will not be delayed by submittals.
2. Do not submit product data, or allow its use on the project until compliance with requirement of Contract Documents has been confirmed by Contractor.
3. Submittal is for information and record, unless otherwise indicated, and is not a change order request.
4. Submitting contractor is responsible for routing reviewed submittals to all parties affected including but not limited to electrical, building automation and temperature control, and test and balance subcontractors.
5. Make submittals for group of similar products or materials or by area of work complete and at one time, not in piecemeal fashion.
6. Identify submittals with Architect’s project name and number, with item designation as indicated on drawings, and referenced to applicable paragraphs of the specifications. Submit in brochure form.
7. Submittals of products needed to start of Project for its installation, or those requiring a long lead time for assembly or manufacturing, should be submitted before the others.

C. Preparations of Submittals:
1. Refer to Division 01 requirements.
2. Provide permanent marking on each submittal to identify project, date, Contractor, Subcontractor, Supplier, submittal name and similar information to distinguish it from other submittals.
3. Indicate any portions of work, which deviate from the Contract Documents.
   a. Explain the reasons for the deviations.
   b. Show how such deviations coordinate with interfacing portions of other work.
4. Show Contractor’s executed review and approval marking.
5. Provide space for the Owner’s Representative “Action” marking.
6. Submittals, which are received from sources other than through Contractor’s office, will be returned “Without Action”.
7. Submittals shall be presented in a neat and legible fashion and shall be returned “Without Action” if presented in any other fashion.

D. Response to Submittals: Where standard product data has been submitted, it is recognized:
1. That the Submitter has determined that the products fulfill the specified requirements.
2. That the submittal is for the Owner’s Representative information only, but will be returned with appropriate action where observed to be not in compliance with the requirements.

E. If more than two submittals (either for shop drawings, or test reports) are made by the Contractor due to the incompletion, non-compliance, errors, omissions, etc. the Owner reserves the right to charge the Contractor for subsequent reviews by their consultants. Such extra fees shall be deducted from payments by the Owner to the Contractor.

1.13 RECORD DRAWINGS
A. Record drawings shall meet all “As-built” and “Record Drawings” requirements for Tennessee State Museum. Coordinate all requirements with State of Tennessee staff prior to completion.

B. Drawings:
1. Record of Project progress: Maintain drawings available at the job site for inspection. Keep an accurate, legible and continuously updated record of installed locations and all project revisions other than revised drawings issued by the Architect, including source and date of authorization. Utilize only contract drawing symbols for recording the work. Drawing notations to be sufficiently clear in the representation of the work, for utilization by a CADD operator (drafts person) who is not necessarily familiar with the installed work.
2. Record of Installation: At the conclusion of the work, deliver one (1) set of updated drawings to the Owner’s Representative for review. Following the review, Contractor shall have incorporated by a competent CADD operator all of the installed data represented on the project progress drawings.
3. Include in Record Drawings the Following:
   a. Revisions, including sketches, bulletins, change orders, written addenda and directives, clarifications and responses generated by requests for information (RFIs), regardless of source of the revision.
   b. Location and configuration of equipment with related housekeeping pads.
   c. Physical routing of ductbank work, raceways, exposed and above ceilings with locations of fire dampers, combination fire/smoke dampers, smoke detectors, power supplies, etc., plainly marked and identified.
   d. Location of room controllers, switches, devices, and sensors.
   e. Physical routing of raceways, underground, exposed and above ceiling with locations of accessories, pull points, access points plainly marked and identified.
   f. Location of raceways below building and on exterior, accessories, manholes, appurtenances and stub outs dimensioned from buildings and permanent structures, both horizontally and vertically.
   g. Location of wall and ceiling access panels.

1.1 NOISE CRITICAL SPACES
   A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates the noise-critical spaces:

<table>
<thead>
<tr>
<th>SPACE</th>
<th>ROOM CRITERIA (NC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flex Theater</td>
<td>TBD</td>
</tr>
<tr>
<td>Proscenium Theater</td>
<td>TBD</td>
</tr>
<tr>
<td>Jazz Center</td>
<td>TBD</td>
</tr>
</tbody>
</table>

   B. Penetrations by ducts, pipes, wiring and conduit between noise critical spaces shall be sleeved, packed and sealed airtight with non-hardening sealant.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION
   A. Comply with NECA 1.
   B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
   C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
   D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
   E. Right of Way: Give to piping systems installed at a required slope.
   F. Materials and Components: Install level, plumb, and parallel and perpendicular to other building systems and components, unless otherwise indicated.
3.2 FIRESTOPPING
A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Section 078413 "Penetration Firestopping."

3.3 CUTTING AND PATCHING
A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces required to permit electrical installations. Perform cutting by skilled mechanics of trades involved.
B. Repair and refinish disturbed finish materials and other surfaces to match adjacent undisturbed surfaces. Install new fireproofing where existing firestopping has been disturbed. Repair and refinish materials and other surfaces by skilled mechanics of trades involved.

3.4 FLOOR PENETRATIONS
A. In mechanical rooms above grade: electrical penetrations shall have 4” high water stopped curbs or sleeves around the penetration. Refer also to structural drawings for pre-located penetrations at perimeter of mechanical rooms with curbs. Where not feasible to locate penetrations at perimeter, provide a sealed sleeve for penetration that shall extend a minimum of 1-1/2” above the floor.
B. Seal all floor penetrations air and water tight. Provide sealant materials to meet code penetrations requirements.

3.5 CONCRETE BASES
A. Concrete Bases and Curbs:
   1. Provide scaled layouts of bases and curbs with sizes and locations dimensioned to concrete walls and columns.
   2. Determine base and curb sizes and locations based on “Accepted” equipment shop drawings. Base and curb sizes shall not be scaled from the Drawings.
   3. Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic requirements at Project.
B. Construction Details: Refer also to Architectural Details for base and curb construction types. If not indicated, construct as follows:
   1. Provide concrete bases sized 4 inches larger in both directions than the supported equipment.
   2. Provide 4-inch high curbs and bases with finished edges.
   3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
   4. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   6. Install anchor bolts to elevations required for proper attachment to supported equipment.
   7. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   8. Use 3000-psi, 28-day compressive-strength concrete and reinforcement.
   9. Chamfer all outside corners of concrete bases and curbs.
C. Concrete Base Painting: Provide 3” wide safety stripe at outside edge of concrete bases and curbs. Start paint at bottom edge of chamfer. Color shall be selected by architect.

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGES
A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
B. Field Welding: Comply with AWS D1.1.

### 3.7 FIELD QUALITY CONTROL

A. Inspect installed components for damage and faulty work, including the following:
   1. Firestopping.
   2. Cutting and patching for electrical construction.
   3. Touchup painting.

### 3.8 REFINISHING AND TOUCHUP PAINTING

A. Refinish and touch up paint. Paint materials and application requirements are specified in Section 099000 "Painting."
   1. Clean damaged and disturbed areas and apply primer, intermediate, and finish coats to suit the degree of damage at each location.
   2. Follow paint manufacturer's written instructions for surface preparation and for timing and application of successive coats.
   3. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
   4. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

### 3.9 CLEANING AND PROTECTION

A. On completion of installation, including outlets, fittings, and devices, inspect exposed finish. Remove burrs, dirt, paint spots, and construction debris.

B. Protect equipment and installations and maintain conditions to ensure that coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

**END OF SECTION**
SECTION 260519
LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
    A. Drawings and general provisions of the Contract, including General and Supplementary Conditions
       and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
    A. Section Includes:
       1. Copper building wire rated 600 V or less.
       2. Metal-clad cable, Type MC, rated 600 V or less.
       3. Armored cable, Type AC, rated 600 V or less.
       4. Connectors, splices, and terminations rated 600 V and less.
    B. Related Requirements:
       1. Section 260523 "Control-Voltage Electrical Power Cables" for control systems communications
          cables and Classes 1, 2 and 3 control cables.
       2. Section 271313 "Communications Copper Backbone Cabling" for twisted pair cabling used for
          data circuits.
       3. Section 271513 "Communications Copper Horizontal Cabling" for twisted pair cabling used for
          data circuits.

1.3 DEFINITIONS
    A. RoHS: Restriction of Hazardous Substances.
    B. VFC: Variable frequency controller.

1.4 ACTION SUBMITTALS
    A. Product Data: For each type of product.
    B. Product Schedule: Indicate type, use, location, and termination locations.

1.5 INFORMATIONAL SUBMITTALS
    A. Qualification Data: For manufacturer's authorized service representative.
    B. Field quality-control reports.

PART 2 PRODUCTS

2.1 COPPER BUILDING WIRE
    A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an
       overall insulation layer or jacket, or both, rated 600 V or less.
    B. Manufacturers: Subject to compliance with requirements, available manufacturers offering prod-
       ucts that may be incorporated into the Work include, but are not limited to, the following:
       1. Alpha Wire.
       2. Belden Inc.
       3. Cerro Wire
4. Okonite Company (The)
5. Southwire Incorporated.
6. United Copper Industries.

C. Standards:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. RoHS compliant.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.

E. Conductor Insulation:
1. Type RHW-2: Comply with UL 44.
2. Type TC-ER: Comply with NEMA WC 70/ICEA S-95-658 and UL 1277.
3. Type THHN and Type THWN-2: Comply with UL 83.
4. Type THW and Type THW-2: Comply with NEMA WC-70/ICEA S-95-658 and UL 83.
5. Type UF: Comply with UL 83 and UL 493.
6. Type XHHW-2: Comply with UL 44.

F. Shield:
1. Type TC-ER: Cable designed for use with VFCs, with oversized crosslinked polyethylene insulation, spiral-wrapped foil plus 85 percent coverage braided shields and insulated full-size ground wire, and sunlight- and oil-resistant outer PVC jacket.

2.2 METAL-CLAD CABLE, TYPE MC

A. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. AFC Cable Systems.
2. Allied.
3. Anixter.
4. Kat-Tech
5. Service Wire Co.

C. Standards:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Comply with UL 1569.
3. RoHS compliant.
4. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Circuits:

E. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.
F. Ground Conductor: Insulated.

G. Conductor Insulation:
   1. Type TFN/THHN/THWN-2: Comply with UL 83.
   2. Type XHHW-2: Comply with UL 44.

H. Armor: Steel, interlocked.

I. Jacket: PVC applied over armor for connections mounted exterior of the building.

2.3 ARMORED CABLE, TYPE AC

A. Description: A factory assembly of insulated current-carrying conductors with or without an equipment grounding conductor in an overall metallic sheath.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. AFC Cable Systems.
   2. Allied.
   3. Anixter
   4. Kaf-Tech
   5. Okonite Company (The)
   7. Southwire Incorporated.

C. Standards:
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
   2. RoHS compliant.
   4. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Circuits:

E. Conductors: Copper, complying with ASTM B 3 for bare annealed copper and with ASTM B 8 for stranded conductors.

F. Ground Conductor: Insulated.

G. Conductor Insulation: Type THHN/THWN-2. Comply with UL 83.

H. Armor: Steel, interlocked.

2.4 CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. 3M Electrical Products
   2. AFC Cable Systems, Inc.
   5. Ideal Industries, Inc.
   6. ILSCO
   7. NSi Industries LLC.
8. O-Z/Gedney; a brand of the EGS Electrical Group.
10. TE Connectivity Ltd.
11. Thomas & Betts Corporation

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

C. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.

D. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.
   1. Material: Copper.
   2. Type: Two hole with standard barrels.
   3. Termination: Compression.

PART 3 EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Feeders: Copper for feeders smaller than No. 4 AWG; copper or aluminum for feeders No. 4 AWG and larger. Conductors shall be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

C. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

D. Branch Circuits: Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.

E. Branch Circuits: Copper. Stranded for No. 12 AWG and larger.

F. VFC Output Circuits Cable: Extra-flexible stranded for all sizes.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Exposed Feeders: Type THHN/THWN-2, single conductors in raceway.

B. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN/THWN-2, single conductors in raceway.

C. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN/THWN-2, single conductors in raceway.

D. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway.

E. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.

F. VFC Output Circuits: Type TC-ER cable with braided shield.
   1. Provide a separate grounding conductor to the drive and from the drive to the motor to ensure a continuous ground path to the building source of supply.
2. Provide separate continuous ferrous metallic conduits for the line, load, and control conductors for VSD's. Provide ferrous metallic shielding around each separate VSD conductor group when installed with other conductor in a raceway, wireway, or pullbox.

3. Shielded conductor group cable assemblies specifically designed for VSD use is acceptable and shall meet the following requirements.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.

B. Complete raceway installation between conductor and cable termination points according to Section 260533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.

C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

F. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

G. Group conductors with phases A, B, C, and neutral together in all conduits or raceways regardless of number of sets of conductors, conduits or raceway type.

H. Do not install more conductors in a raceway than indicated on the drawings. A maximum of three branch circuits are to be installed in any one conduit, on 3 phase 4 wire system, unless specifically indicated otherwise on the drawings. No two branch circuits of the same phase are to be installed in the same conduit, unless specifically indicated on the drawings. Where the quantity of wires is not indicated on the drawings for branch circuits (2) #12 copper conductors shall be provided.

I. Conductor size shall be a minimum of No. 12 AWG. Conductor size shall not be less than indicated on the drawings. The minimum size of emergency systems conductors shall be No. 10 AWG. 60 deg. C ampacities shall be used for sizing all wire and cable for feeders rated 100 amps and below. 75 deg. C ampacities shall be used for sizing of all wire and cable for feeders rated over 100 amps. This sizing requirement applies to all cables in these size ranges, including those with higher insulation ratings. Use No. 10 AWG for conductors in 120 volt 20 amp branch circuits longer than 100 feet (30 m), and in 277 volt 20 amp branch circuits longer than 200 feet (60 m).

J. Do not use AC or MC for homeruns. Use conduit from last box in wall or ceiling back to panel.

K. Splicing feeder conductors in a new installation is not allowed.

3.4 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 12 inches (300 mm) of slack.

D. Stranded conductors shall have termination device crimped onto conductors prior to connection to outlet devices or installed with back-wired devices listed for stranded.
3.5 IDENTIFICATION
A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."
B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.6 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS
A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.7 FIELD QUALITY CONTROL
A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
B. Perform the following tests:
   1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors for compliance with requirements.
   2. Perform each of the following visual and electrical tests:
      a. Inspect exposed sections of conductor and cable for physical damage and correct connection according to the single-line diagram.
      b. Test bolted connections for high resistance using one of the following:
         1) A low-resistance ohmmeter.
         2) Calibrated torque wrench.
         3) Thermographic survey.
      c. Inspect compression-applied connectors for correct cable match and indentation.
      d. Inspect for correct identification.
      e. Inspect cable jacket and condition.
      f. Insulation-resistance test on each conductor for ground and adjacent conductors. Apply a potential of 500-V dc for 300-V rated cable and 1000-V dc for 600-V rated cable for a one-minute duration.
      g. Continuity test on each conductor and cable.
      h. Uniform resistance of parallel conductors.
   3. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner. Correct deficiencies determined during the scan.
      a. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
      b. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
   4. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each splice 11 months after date of Substantial Completion.
C. Cables will be considered defective if they do not pass tests and inspections.
D. Prepare test and inspection reports to record the following:
   1. Procedures used.
   2. Results that comply with requirements.
   3. Results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
END OF SECTION
SECTION 260523
CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Backboards.
   2. Category 5e twisted pair cable.
   3. Category 6a twisted pair cable.
   4. Twisted pair cabling hardware.
   5. RS-485 cabling.
   6. Low-voltage control cabling.
   7. Control-circuit conductors.
   8. Identification products.

1.3 DEFINITIONS
A. EMI: Electromagnetic interference.
B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
C. Plenum: A space forming part of the air distribution system to which one or more air ducts are connected. An air duct is a passageway, other than a plenum, for transporting air to or from heating, ventilating, or air-conditioning equipment.
D. RCDD: Registered Communications Distribution Designer.
E. UTP: Unshielded twisted pair.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.

1.5 INFORMATIONAL SUBMITTALS
A. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.
B. Source quality-control reports.
C. Field quality-control reports.
1.6 QUALITY ASSURANCE

PART 2 PRODUCTS

2.0 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.1 BACKBOARDS

A. Description: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels in Section 061000 “Rough Carpentry.”

B. Painting: Paint plywood on all sides and edges with flat white latex paint. Comply with requirements in Section 099000 “Painting.”

2.2 CATEGORY 5E BALANCED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable, certified to meet transmission characteristics of Category 5e cable at frequencies up to 100 MHz.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. ADC.
   2. Alpha Wire Company; a division of Belden Inc.
   3. Belden Inc.
   4. Berk-Tek
   5. CommScope, Inc.
   6. Draka Cableteq USA.
   7. General Cable.
   8. Genesis Cable Products; Honeywell International, Inc.
   9. Mohawk; a division of Belden Inc.
   10. Nexans; Berk-Tek Products.
   11. Siemon Company (The).
   12. Superior Essex Inc.
   13. SYSTIMAX Solutions; a CommScope, Inc. brand.
   14. 3M.
   15. Tyco Electronics/AMP Netconnect; Tyco International Ltd.

C. Standard: Comply with ICEA S-90-661, NEMA WC 63.1, and TIA-568-C.2 for Category 5e cables.

D. Conductors: 100-ohm, 24 AWG solid copper.

E. Shielding/Screening: Shielded twisted pairs (FTP).

F. Cable Rating: Plenum.

G. Jacket: Gray thermoplastic.

2.3 RS-485 CABLE

A. Standard Cable: NFPA 70, Type CMG.
   1. Paired, two pairs, twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
   2. PVC insulation.
   3. Unshielded.
   4. PVC jacket.
5. Flame Resistance: Comply with UL 1685.

B. Plenum-Rated Cable: NFPA 70, Type CMP.
   1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned-copper conductors.
   2. Fluorinated ethylene propylene insulation.
   3. Unshielded.
   4. Fluorinated ethylene propylene jacket.
   5. Flame Resistance: Comply with UL 1685.

2.4 LOW-VOLTAGE CONTROL CABLE
A. Paired Cable: NFPA 70, Type CMG.
   1. Multi-pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
   2. PVC insulation.
   3. Unshielded.
   4. PVC jacket.
   5. Flame Resistance: Comply with UL 1685.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.
   1. Multi-pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
   2. PVC insulation.
   3. Unshielded.
   4. PVC jacket.
   5. Flame Resistance: Comply with NFPA 262.

2.5 CONTROL-CIRCUIT CONDUCTORS
A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Encore Wire Corporation.
   2. General Cable Technologies Corporation.

A. Class 1 Control Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

B. Class 2 0-10V Control Circuits Installed with Class 1 Conductors: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

2.6 SOURCE QUALITY CONTROL
A. Factory test twisted pair cables according to TIA-568-C.2.
B. Cable will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports.

PART 3 EXECUTION

3.1 EXAMINATION
A. Test cables on receipt at Project site.
   1. Test each pair of twisted pair cable for open and short circuits.
3.2 INSTALLATION OF RACEWAYS AND BOXES

A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for raceway selection and installation requirements for boxes, conduits, and wireways as supplemented or modified in this Section.
   1. Outlet boxes for cables shall be no smaller than 4 inches (102 mm) square 2-1/8 inches (53 mm) deep with extension ring sized to bring edge of ring to within 1/8 inch (3.1 mm) of the finished wall surface.
   2. Flexible metal conduit shall not be used.

B. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

C. Install manufactured conduit sweeps and long-radius elbows if possible.

D. Raceway Installation in Equipment Rooms:
   1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed, or in the corner of the room if multiple sheets of plywood are installed around perimeter walls of the room.
   2. Install cable trays to route cables if conduits cannot be located in these positions.
   3. Secure conduits to backboard if entering the room from overhead.
   4. Extend conduits 3 inches (75 mm) above finished floor.
   5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

E. Backboards: Install backboards with 96-inch (2440-mm) dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1 and NFPA 70.

B. General Requirements for Cabling:
   2. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
   3. Cables may not be spliced and shall be continuous from terminal to terminal. Do not splice cable between termination, tap, or junction points.
   4. Cables serving a common system may be grouped in a common raceway. Install network cabling and control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
   5. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
   6. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
   7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
   10. Support: Do not allow cables to lay on removable ceiling tiles.
   11. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
12. Provide strain relief.
13. Keep runs short. Allow extra length for connecting to terminals. Do not bend cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
14. Ground wire shall be copper, and grounding methods shall comply with IEEE C2. Demonstrate ground resistance.

C. Balanced Twisted Pair Cable Installation:
2. Install termination hardware as specified in Section 271513 “Communications Copper Horizontal Cabling” unless otherwise indicated.
3. Do not untwist balanced twisted pair cables more than 1/2 inch (12 mm) at the point of termination to maintain cable geometry.

D. Installation of Control-Circuit Conductors:
1. Install wiring in raceways.
2. Use insulated spade lugs for wire and cable connection to screw terminals.
3. Comply with requirements specified in Section 260533 “Raceways and Boxes for Electrical Systems.”

E. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 30 inches (760 mm) apart.
3. Cable shall not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Installation of Cable Routed Exposed under Raised Floors:
1. Install plenum-rated cable only.
2. Below each feed point, neatly coil a minimum of 72 inches (1830 mm) of cable in a coil not less than 12 inches (305 mm) in diameter.

G. Separation from EMI Sources:
1. Comply with BICSI TDDMM and TIA-569-D recommendations for separating unshielded copper voice and data communications cable from potential EMI sources including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 12 inches (305 mm).
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 24 inches (600 mm).
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 12 inches (305 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 3 inches (75 mm).
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 6 inches (150 mm).

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or 5 HP and Larger: A minimum of 48 inches (1200 mm).

6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

3.4 REMOVAL OF CONDUCTORS AND CABLES
   A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified for future use with a tag.

3.5 CONTROL-CIRCUIT CONDUCTORS
   A. Minimum Conductor Sizes:
      1. Class 1 remote-control and signal circuits; No. 14 AWG.
      2. Class 2 low-energy, remote-control, and signal circuits; No. 16 AWG.
      3. Class 3 low-energy, remote-control, alarm, and signal circuits; No. 12 AWG.

3.6 FIRESTOPPING
   A. Firestopping: Provided by Section 078400 “Firestopping.” Coordinate with Section 078400 “Firestopping” for sealing of penetrations through fire and smoke barriers in accordance with requirements of TIA-569-B, Annex A, "Firestopping" and BICSI TDMM, "Firestopping" Chapter.
   B. Comply with requirements in Section 078400 "Firestopping."
   C. Comply with TIA-569-B, Annex A, "Firestopping."
   D. Comply with BICSI TDMM, "Firestopping" Chapter.

3.7 GROUNDING
   A. For data communication wiring, comply with ANSI-J-STD-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.
   B. For low-voltage control wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION
   A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
   B. Identify data and communications system components, wiring, and cabling according to TIA-606-A; label printers shall use label stocks, laminating adhesives, and inks complying with UL 969.
   C. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire shall have a unique tag.

3.9 FIELD QUALITY CONTROL
   A. Perform the following tests and inspections.
B. Tests and Inspections:
   1. Visually inspect cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
   2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
   3. Test cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not after cross-connection.
      a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
   C. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.
   D. End-to-end cabling will be considered defective if it does not pass tests and inspections.
   E. Prepare test and inspection reports.

END OF SECTION
SECTION 260526
GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes grounding and bonding systems and equipment.
   1. Foundation steel electrodes.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Plans showing dimensioned locations of grounding features specified in "Field Quality Control" Article, including the following:
   1. Test wells.
   2. Ground rods.
B. Qualification Data: For testing agency and testing agency's field supervisor.
C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.
   1. In addition to items specified in Section 017800 "Closeout Submittals," include the following:
      a. Plans showing as-built, dimensioned locations of grounding features specified in "Field Quality Control" Article, including the following:
         1) Test wells.
         2) Ground rods.
         3) Ground rings.

1.6 QUALITY ASSURANCE
A. Testing Agency Qualifications: Certified by NETA.

PART 2 PRODUCTS

2.1 SYSTEM DESCRIPTION
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. Comply with UL 467 for grounding and bonding materials and equipment.
2.2 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. 3M
2. Alanwire
3. Burndy
4. Cerrowire
5. Erico
6. Galvan
7. General Cable Technologies Corporation.
8. Harger
9. Hilti
10. Hubbell
11. Ilsco
12. Lyncole
13. Panduit
15. Thomas & Betts
16. United Copper Industries.

2.3 CONDUCTORS

A. Insulated Conductors: Copper or tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Copper Conductors: Comply with NEMA WC 70/ICEA S-95-658.

C. Conductor Insulation: Comply with NEMA WC 70/ICEA S-95-658 for Type THHN-2-THWN-2.

D. Bare Copper Conductors:
   4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
   5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
   6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
   7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

E. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V and shall be Lexan or PVC, impulse tested at 5000 V.

2.4 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
D. Bus-Bar Connectors: Mechanical type, cast silicon bronze, solderless [compression] [exothermic]-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

E. Bus-Bar Connectors: Compression type, copper or copper alloy, with two wire terminals.

F. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.

G. Cable-to-Cable Connectors: Compression type, copper or copper alloy.

H. Cable Tray Ground Clamp: Mechanical type, zinc-plated malleable iron.

I. Conduit Hubs: Mechanical type, terminal with threaded hub.

J. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt.

K. Lay-in Lug Connector: Mechanical type, [aluminum] [copper rated for direct burial] terminal with set screw.

L. Service Post Connectors: Mechanical type, bronze alloy terminal, in short- and long-stud lengths, capable of single and double conductor connections.

M. Signal Reference Grid Clamp: Mechanical type, stamped-steel terminal with hex head screw.

N. Straps: Solid copper, cast-bronze clamp. Rated for 600 A.

O. Tower Ground Clamps: Mechanical type, copper or copper alloy, terminal two-piece clamp.

P. U-Bolt Clamps: Mechanical type, copper or copper alloy, terminal listed for direct burial.

Q. Water Pipe Clamps:
   1. Mechanical type, two pieces with [zinc-plated] [stainless-steel] bolts.
      a. Material: [Tin-plated aluminum] [Die-cast zinc alloy].
      b. Listed for direct burial.
   2. U-bolt type with malleable-iron clamp and [copper ground connector] [copper ground connector rated for direct burial].

R. Compression Connectors: Irreversible type, copper or copper alloy connectors, meet or exceed IEEE837, UL467, and CSA22.2, factory filled with oxide inhibitor compound, and marked and approved for Direct Burial. Connectors must be fully crimped, allowing visible inspection of the embossed index number on the crimped connector, which should match the same index number on the die. May be used above and below grade, on electrodes, and in concrete encased applications.
   1. Thomas & Betts Easy Ground Figure 6 Connector, Easy Ground Figure 8 Connector, Easy Ground C-Taps, Easy Ground C-Crimps.

2.5 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel, sectional type; 3/4 inch by 10 feet (19 mm by 3 m).
   1. Ground rods to have knurled pattern at clamp or compression connection.

PART 3 EXECUTION

3.1 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.
   1. Bury at least 24 inches (600 mm) below grade.
C. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
   1. Install bus horizontally, on insulated spacers 2 inches (50 mm) minimum from wall, 6 inches (150 mm) above finished floor unless otherwise indicated.
   2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

D. Conductor Terminations and Connections:
   1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
   2. Underground Connections: Irreversible compression or welded connectors except at test wells and as otherwise indicated.
   3. Connections to Ground Rods at Test Wells: Bolted connectors.

3.2 GROUNDING AT THE SERVICE
A. The existing service has been

3.3 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS
A. Comply with IEEE C2 grounding requirements.

3.4 EQUIPMENT GROUNDING
A. Install insulated equipment grounding conductors with all feeders and branch circuits.
B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
   1. Feeders and branch circuits.
   2. Lighting circuits.
   3. Receptacle circuits.
   5. Three-phase motor and appliance branch circuits.
   6. Flexible raceway runs.
   7. Armored and metal-clad cable runs.
C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
E. Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.
F. Metallic Fences: Comply with requirements of IEEE C2.
   1. Grounding Conductor: Bare, tinned copper, not less than No. 8 AWG.

3.5 FENCE GROUNDING
A. Fence Grounding: Install at maximum intervals of 50 feet (15.2 m) except as follows:
1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 50 feet (15.2 m).
   a. Gates and Other Fence Openings: Ground fence on each side of opening.
      1) Bond metal gates to gate posts.
      2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (460 mm) below finished grade.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.

C. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches (150 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.

D. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.

3.6 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade unless otherwise indicated.
   1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
   2. Use exothermic welds for all below-grade connections.
   3. Rod to have knurled area for clamp or compression connection. Knurl may be field installed with tool made for purpose.
   4. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

C. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
   1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
   2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
   3. Use irreversible compression or exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

D. Grounding and Bonding for Piping:
   1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
   2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
   3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
E. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.

F. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet (18 m) apart.

G. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; use a minimum of [20 feet (6 m)] <Insert dimension> of bare copper conductor not smaller than [No. 4] <Insert number> AWG.
   1. If concrete foundation is less than [20 feet (6 m)] <Insert dimension> long, coil excess conductor within base of foundation.
   2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building’s grounding grid or to grounding electrode external to concrete.

H. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; using electrically conductive coated steel reinforcing bars or rods, at least 20 feet (6.0 m) long. If reinforcing is in multiple pieces, connect together by the usual steel tie wires or exothermic welding to create the required length.

I. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
   1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
   2. Make connections with clean, bare metal at points of contact.
   5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

3.7 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

C. Tests and Inspections:
   1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
   2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
   3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal at individual ground rods. Make tests at ground rods before any conductors are connected.
      a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
      b. Perform tests by fall-of-potential method according to IEEE 81.
4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

D. Grounding system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

F. Report measured ground resistances that exceed the following values:
   1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10 ohms.
   2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
   3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
   4. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s).

G. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION
SECTION 260529
HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Steel slotted support systems.
   2. Aluminum slotted support systems.
   3. Conduit and cable support devices.
   4. Support for conductors in vertical conduit.
   5. Structural steel for fabricated supports and restraints.
   6. Mounting, anchoring, and attachment components, including powder-actuated fasteners, mechanical expansion anchors, concrete inserts, clamps, through bolts, toggle bolts, and hanger rods.
   7. Fabricated metal equipment support assemblies.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
      a. Slotted support systems, hardware, and accessories.
      b. Clamps.
      c. Hangers.
      d. Sockets.
      e. Eye nuts.
      f. Fasteners.
      g. Anchors.
      h. Saddles.
      i. Brackets.
   2. Include rated capacities and furnished specialties and accessories.
B. Shop Drawings: Signed and sealed by a qualified professional engineer. For fabrication and installation details for electrical hangers and support systems.
   2. Slotted support systems.
   3. Equipment supports.
   4. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
C. Delegated-Design Submittal: For hangers and supports for electrical systems.
   1. Include design calculations and details of trapeze hangers.
1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended ceiling components.
   2. Ductwork, piping, fittings, and supports.
   3. Structural members to which hangers and supports will be attached.
   4. Size and location of initial access modules for acoustical tile.
   5. Items penetrating finished ceiling, including the following:
      a. Luminaires.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
      f. Projectors.

B. Welding certificates.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.

1.6 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified together with concrete Specifications.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014500 "Quality Control," to design hanger and support system.
   1. Component Importance Factor: 1.5.

B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame Rating: Class 1.
   2. Self-extinguishing according to ASTM D 635.

2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch-(10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Allied Tube & Conduit.
      b. Cooper B-Line, Inc.; a division of Cooper Industries.
      c. ERICO International Corporation.
      d. GS Metals Corp.
      e. Thomas & Betts Corporation.
f. Unistrut; Tyco International, Ltd.
g. Wesanco, Inc.
2. Standard: Comply with MFMA-4, factory-fabricated components for field assembly.
4. Channel Width: Selected for applicable load criteria.
5. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
6. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Aluminum Slotted Support Systems: Extruded-aluminum channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Cooper Industries.
   b. Flex-Strut, Inc.
   c. Haydon Corporation
   d. MKT Metal Manufacturing
   e. Thomas & Betts Corporation.
   f. Unistrut; Tyco International, Ltd.
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
5. Channel Width: Selected for applicable load criteria.
6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
7. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
8. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.

E. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
   a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      1) Hilti Inc.
      2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      3) MKT Fastening, LLC.
      4) Simpson Strong-Tie Co.
2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
   a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      1) Cooper B-Line, Inc.; a division of Cooper Industries.
      2) Empire Tool and Manufacturing Co., Inc.
      3) Hilti Inc.
      4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      5) MKT Fastening, LLC.

3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.

4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.

5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.

6. Toggle Bolts: All-steel springhead type.

2.3 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Section 055000 "Metal Fabrications" for steel shapes and plates.

PART 3 EXECUTION

3.1 APPLICATION

A. Comply with the following standards for application and installation requirements of hangers and supports, except where requirements on Drawings or in this Section are stricter:
   1. NECA 1.
   2. NECA 101
   3. NECA 102.
   4. NECA 105.
   5. NECA 111.

B. Comply with requirements in Section 078400 "Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

C. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMTs, IMCs, and RMCs as scheduled in NECA 1, where its Table 1 lists maximum spacings that are less than those stated in NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter.

E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
   1. Secure raceways and cables to these supports with two-bolt conduit clamps or single-bolt conduit clamps using spring friction action for retention in support channel.
F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC and may be supported by openings through structure members, according to NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. To Existing Concrete: Expansion anchor fasteners.
5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
6. To Steel: Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69.
7. To Light Steel: Sheet metal screws.
8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 PAINTING

A. Touchup: Comply with requirements in Section 099000 "Painting" and Section 099600 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION
SECTION 260533
RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Metal conduits, tubing, and fittings.
   2. Metal wireways and auxiliary gutters.
   3. Surface raceways.
   5. Handholes and boxes for exterior underground cabling.
B. Related Requirements:
   1. Section 270528 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.

1.3 DEFINITIONS
A. ARC: Aluminum rigid conduit.
B. GRC: Galvanized rigid steel conduit.
C. IMC: Intermediate metal conduit.

1.4 ACTION SUBMITTALS
A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.
C. Samples: For wireways and surface raceways and for each color and texture specified, 12 inches (300 mm) long for all raceway mounted in public areas.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
   1. Structural members in paths of conduit groups with common supports.
   2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.
B. Qualification Data: For professional engineer.
C. Source quality-control reports.
PART 2 PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

A. Metal Conduit:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. AFC Cable Systems, Inc.
      b. Allied Tube & Conduit; a Tyco International Ltd. Co.
      c. Anamet Electrical, Inc.
      d. Electri-Flex Company.
      e. FSR Inc.
      f. Opti-Com Manufacturing Network, Inc.
      g. O-Z/Gedney; a brand of EGS Electrical Group.
      h. Republic Conduit.
      i. Southwire Company.
      j. Thomas & Betts Corporation.
      k. Western Tube and Conduit Corporation.
      l. Wheatland Tube Company; a division of John Maneely Company.
   2. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   3. IMC: Comply with ANSI C80.6 and UL 1242.
   4. EMT: Comply with ANSI C90.3 and UL 797.
   5. FMC: Comply with UL 1; zinc-coated steel.
   6. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

B. Metal Fittings:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. AFC Cable Systems, Inc.
      b. Allied Tube & Conduit; a Tyco International Ltd. Co.
      c. Anamet Electrical, Inc.
      d. Bridgeport Fittings, Inc.
      e. Calconduit
      f. Electri-Flex Company.
      g. FSR Inc.
      h. Opti-Com Manufacturing Network, Inc.
      i. O-Z/Gedney; a brand of EGS Electrical Group.
      j. Perma-Cote
      k. Picoma Industries, Inc.
      l. Plasti-Bond
      m. Republic Conduit.
      n. Robroy Industries.
      o. Southwire Company.
      p. Thomas & Betts Corporation.
      q. Topaz Electric; a division of Topaz Lighting Corp.
      r. Western Tube and Conduit Corporation.
      s. Wheatland Tube Company; a division of John Maneely Company.
   2. Comply with NEMA FB 1 and UL 514B.
   3. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   4. Fittings, General: Listed and labeled for type of conduit, location, and use.
   5. Fittings for EMT:
a. Material: Steel or Zinc die cast.
b. Type: Setscrew.

6. EMT Fittings Materials:
   a. All Zinc materials shall be ASTM B86 certified.
   b. All Zinc Product shall be ZAMAK #3 and/or #7 formula.
   c. All Steel shall be SAE 1050.

7. EMT Fittings Design:
   a. Zinc die cast components shall be ball burnished.
   b. Steel parts shall be zinc plated for corrosion protection.
   c. All Locknuts shall have a dual, precision machined-cut thread, reversible and possess a serrated face on each side.
   d. All set screw products shall be manufactured with a tri-drive head and staked or modified to prevent disassembly.
   e. All fitting throat diameters shall be smooth with no sharp edges or slag.
   f. Rain tight products shall have internal sealing rings to create and maintain a rain tight seal.
   g. All fittings shall be tested per UL 514B and be listed by Underwriters Laboratories.

8. Transition Fittings:
   a. All transitions fittings (go-to or from-to fittings) or fittings used to transition from one race-way type to another must be UL listed for that application.

9. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.

10. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

C. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. B-Line, an Eaton business
   2. Hoffman; a Pentair company.
   4. Square D; a brand of Schneider Electric.

B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1 unless otherwise indicated, and sized according to NFPA 70.
   1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Wireway Covers: Screw-cover type unless otherwise indicated.

E. Finish: Manufacturer's standard enamel finish.

2.3 SURFACE RACEWAYS

A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Hubbell Incorporated; Wiring Device-Kellems
      b. Mono-Systems, Inc.
      c. Panduit Corp.
      d. Wiremold / Legrand.

2.4 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Adalet.
   2. Crouse-Hinds, an Eaton business
   3. EGS/Appleton Electric.
   5. FSR Inc.
   6. Hoffman; a Pentair company.
   7. Hubbell Incorporated; Killark Division.
   8. Kraloy.
   10. Mono-Systems, Inc.
   12. Plasti-Bond
   13. RACO; a Hubbell Company.
   14. Spring City Electrical Manufacturing Company.
   15. Stahlin Non-Metallic Enclosures; a division of Robroy Industries.
   17. Topaz Electric; a division of Topaz Lighting
   18. Wiremold / Legrand.

B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

E. Metal Floor Boxes:
   1. Material: Cast metal.
   2. Type: Fully adjustable.
   3. Shape: Rectangular.
   4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb (23 kg). Outlet boxes designed for attachment of luminaires weighing more than 50 lb (23 kg) shall be listed and marked for the maximum allowable weight.

G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.
I. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

J. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep).

K. Gangable boxes are prohibited.

L. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 with continuous-hinge cover with flush latch unless otherwise indicated.

   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

2.5 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. General Requirements for Handholes and Boxes:
   1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
   2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.

   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Armorcast Products Company.
      b. NewBasis.
      c. Oldcast Enclosure Solutions
      d. Oldcastle Precast, Inc.; Christy Concrete Products.
      e. Quazite; Hubbell Power Systems
   2. Standard: Comply with SCTE 77.
   3. Configuration: Designed for flush burial with closed bottom unless otherwise indicated.
   4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
   5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   6. Cover Legend: Molded lettering, "ELECTRIC.".
   7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
   8. Handholes 12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long) and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of polymer concrete.

   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Armorcast Products Company.
      b. NewBasis.
      c. Nordic Fiberglass, Inc.
      d. Oldcastle Enclosure Solutions
      e. Oldcastle Precast, Inc.; Christy Concrete Products.
      f. Quazite; Hubbell Power Systems
   2. Standard: Comply with SCTE 77.
   3. Color of Frame and Cover: Green.
   4. Configuration: Designed for flush burial with open bottom unless otherwise indicated.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, "ELECTRIC."
8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
9. Handholes 12 Inches Wide by 24 Inches Long (300 mm Wide by 600 mm Long) and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.6 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
1. Tests of materials shall be performed by an independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below unless otherwise indicated:
1. Exposed Conduit: IMC.
2. Concealed Conduit, Aboveground: EMT.
3. Underground Conduit: RNC, Type EPC-80-PVC, direct buried within non drive ways/lanes. concrete encased within drive ways and lanes.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.

B. Indoors: Apply raceway products as specified below unless otherwise indicated:
1. Exposed, Not Subject to Physical Damage: EMT.
2. Exposed, Not Subject to Severe Physical Damage: RNC identified for such use.
3. Exposed and Subject to Severe Physical Damage: GRC. Raceway locations include the following:
   a. Loading dock.
   b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
   c. Mechanical rooms.
   d. Gymnasiums.
4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
6. Damp or Wet Locations: ].
7. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 in damp or wet locations.

C. Minimum Raceway Size: 3/4-inch (21-mm) trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. EMT: Use setscrew, steel or Zinc die-cast metal fittings. Comply with NEMA FB 2.10 and UL514B.
3. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
F. Install surface raceways only where indicated on Drawings.
G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).

3.2 INSTALLATION
A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
C. Do not install raceways or electrical items on any "explosion-relief" walls or rotating equipment.
D. Do not fasten conduits onto the bottom side of a metal deck roof.
E. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Do not install horizontal raceway runs above water and steam piping.
F. Complete raceway installation before starting conductor installation.
G. Arrange stub-ups so curved portions of bends are not visible above finished slab.
H. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches (300 mm) of changes in direction.
I. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.
J. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
K. Support conduit within 12 inches (300 mm) of enclosures to which attached.
L. Raceways Embedded in Slabs:
   1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot (3-m) intervals.
   2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
   3. Arrange raceways to keep a minimum of 2 inches (50 mm) of concrete cover in all directions.
   4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
   5. Change from ENT to IMC before rising above floor.
M. Raceways Within 1 ½” of Roof Deck:
   1. All raceway shall be installed further from 1 ½” of roof deck or raceway shall be RMC or IMC.
N. Stub-ups to Above Recessed Ceilings:
   1. Use EMT, IMC, or RMC for raceways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

O. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

P. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.

Q. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

R. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch (35mm) trade size and insulated throat metal bushings on 1-1/2-inch (41-mm) trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

S. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

T. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

U. Cut conduit perpendicular to the length. For conduits 2-inch (53-mm) trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.

V. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

W. Surface Raceways:
   1. Install surface raceway with a minimum 2-inch (50-mm) radius control at bend points.
   2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

X. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

Y. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
   1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
   2. Where an underground service raceway enters a building or structure.
   3. Conduit extending from interior to exterior of building.
   4. Conduit extending into pressurized duct and equipment.
   5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
   6. Where otherwise required by NFPA 70.

Z. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

AA. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

BB. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to top of box unless otherwise indicated.

CC. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a rain-tight connection between box and cover plate or supported equipment and box.

DD. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel. Do not install boxes back-to-back.

EE. Locate boxes so that cover or plate will not span different building finishes.

FF. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

GG. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

HH. Set metal floor boxes level and flush with finished floor surface.

II. Install hinged-cover enclosures and cabinets plumb. Support at each corner.

JJ. Boxes installed in metal stud and sheetrock walls shall have far-side box support.

KK. Boxes shall be secured to metal studs with spring steel clamp which wraps around the entire face of the stud and digs into both sides of the stud. Clamp shall be screwed into the stud.

LL. Set outlet boxes for flush mounted devices to within 1/8" of finished wall.

MM. Minimum box size to be two gang. For installation of single gang device use properly sized mud ring with thickness to install device within 1/8" of finished wall.

NN. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:
   1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312333 "Trenching and Backfilling" for pipe less than 6 inches (150 mm) in nominal diameter.
   2. Install backfill as specified in Section 312333 "Trenching and Backfilling."
   3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312333 "Trenching and Backfilling."
   4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
   5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.
a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling.

b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.

6. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

3.4 INSTALLATION OF UNDERGROUND HANOHOLEs AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.

D. Install handholes with bottom below frost line, or with anchors extending below depth of frost line of 48 inches (122 cm) below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables but short enough to preserve adequate working clearances in enclosure.

F. Field-cut openings for conduits according to enclosure manufacturer’s written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION
SECTION 260543
UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following:
   1. Metal conduits and fittings, including GRC and PVC-coated steel conduit.
   2. Rigid nonmetallic duct.
   3. Flexible nonmetallic duct.
   4. Duct accessories.
   5. Fiberglass handholes and boxes with polymer concrete cover.
   6. Fiberglass handholes and boxes.
   8. Utility structure accessories.

1.3 DEFINITION
A. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials such as concrete.
B. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.
C. Duct Bank: Two or more ducts installed in parallel, with or without additional casing materials.
D. GRC: Galvanized rigid (steel) conduit.
E. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include duct-bank materials, including separators and miscellaneous components.
   2. Include ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
   3. Include accessories for manholes, handholes, boxes, and other utility structures.
   4. Include underground-line warning tape.
B. Shop Drawings:
   1. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
      a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
      b. Include duct entry provisions, including locations and duct sizes.
      c. Include cover design.
      d. Include grounding details.
      e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: For duct and duct bank. Show duct profiles and coordination with other utilities and underground structures.
   1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
   2. Drawings shall be signed and sealed by a qualified professional engineer.

B. Qualification Data: For professional engineer and testing agency responsible for testing non-concrete handholes and boxes.

C. Product Certificates: For concrete and steel used in precast concrete manholes and handholes, as required by ASTM C 858.

D. Source quality-control test reports.

E. Field quality-control reports.

F. Refer to Section 018113 “Sustainable Design Requirements” for requirements of sealants, primers, paints, adhesives, caulk, aerosols, and coatings.

1.6 MAINTENANCE MATERIALS SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Furnish cable-support stanchions, arms, insulators, and associated fasteners in quantities equal to 5 percent of quantity of each item installed.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

1.8 FIELD CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electrical service according to requirements indicated:
   1. Notify Owner no fewer than seven days in advance of proposed interruption of electrical service.
   2. Do not proceed with interruption of electrical service without Owner’s written permission.

B. Ground Water: Assume ground-water level is 36 inches (900 mm) below ground surface unless a higher water table is noted on Drawings.

PART 2 PRODUCTS

2.1 METAL CONDUIT AND FITTINGS

A. GRC: Comply with ANSI C80.1 and UL 6.

B. Coated Steel Conduit: PVC-coated IMC.
   1. Comply with NEMA RN 1.
   2. Coating Thickness: 0.040 inch (1 mm), minimum.

C. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. AFC Cable Systems, Inc.
3. Anamet Electrical, Inc.
4. Bridgeport Fittings, Inc.
5. Electri-Flex Company.
7. Picoma Industries, a subsidiary of Mueller Water Products, Inc.
8. Republic Conduit.
9. Robroy Industries.
10. Southwire Company.
12. Western Tube and Conduit Corporation.

D. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

2.2 RIGID NONMETALLIC DUCT
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. ARNCO Corp.
   2. Beck Manufacturing.
   3. Carlon; a brand of Thomas & Betts.
   4. Cantex, Inc.
   5. CertainTeed Corporation.
   7. ElecSys, Inc.
   8. Electri-Flex Company.
   9. IPEX Inc.
   10. Lamson & Sessions; Carlon Electrical Products.
   11. Spiraduct/AFC Cable Systems, Inc.

B. Underground Plastic Utilities Duct: Type EPC-80-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.

C. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

D. Solvents and Adhesives: As recommended by conduit manufacturer.

2.3 FLEXIBLE NONMETALLIC DUCTS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. ARNCO Corp.
   2. Carlon; a brand of Thomas & Betts
   3. National Pipe & Plastics
   4. Opti-Com Manufacturing
   5. Premier Conduit

B. HDPE Duct: Type EPEC-40 HDPE, complying with NEMA TC 7 and UL 651A.
   1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

2.4 NONMETALLIC FIBERGLASS DUCTS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. FRE NorthEast
2. Champion Fiberglass
3. PWEagle

B. Underground Fiberglass Utilities Duct: NEMA TC 14A/B, UL 1684, Type Direct Burial Standard Wall thickness.
   1. Fiberglass conduit shall be used at all conduit stub-ups at each end of duct raceways system

2.5 DUCT ACCESSORIES
A. Duct Spacers: Factory-fabricated rigid PVC interlocking spacers, sized for type and size of ducts with which used, and selected to provide minimum duct spacing indicated while supporting ducts during concreting or backfilling.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Allied Tube & Conduit; a part of Atkore International
      b. CANTEX INC
      c. Carlon; a brand of Thomas & Betts
      d. IPEX USA LLC
      e. PenCell Plastics
      f. Underground Devices, Inc.

B. Underground-Line Warning Tape: Comply with requirements for underground-line warning tape specified in Section 260553 "Identification for Electrical Systems."

2.6 FIBERGLASS HANDHOLES AND BOXES WITH POLYMER CONCRETE FRAME AND COVER
A. Description: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Armorcast Products Company
      b. Carson Industries LLC
      c. Christy Concrete Products
      d. Quazite: Hubbell Power System, Inc
      e. Synertech Moulded Products, Inc

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Green.

D. Configuration: Units shall be designed for flush burial and have closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.
J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.7 FIBERGLASS HANDHOLES AND BOXES

A. Description: Molded of fiberglass-reinforced polyester resin, with covers of polymer concrete.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Carson Industries LLC.
   b. Christy Concrete Products.
   c. Nordic Fiberglass, Inc.

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Green.

D. Configuration: Units shall be designed for flush burial and have closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.

J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.8 SOURCE QUALITY CONTROL

A. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by an independent testing agency.

2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 EXECUTION

3.1 PREPARATION

A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.
B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.

C. Clear and grub vegetation to be removed, and protect vegetation to remain according to Section 311000 "Earthwork." Remove and stockpile topsoil for reapplication according to Section 311000 "Earthwork."

3.2 UNDERGROUND DUCT APPLICATION

A. Duct for Electrical Cables More Than 600 V: Type EPC-80-PVC RNC, concrete-encased unless otherwise indicated.

B. Duct for Electrical Feeders 600 V and Less: Type EPC-80-PVC RNC, concrete-encased unless otherwise indicated.

C. Duct for Electrical Branch Circuits: Type EPC-80-PVC RNC, direct-buried unless otherwise indicated.

D. Bored Underground Duct: Type EPEC-80-HDPE unless otherwise indicated.

E. Underground Ducts Crossing Paved Paths and Driveways: Type EPC-40 PVC RNC, encased in reinforced concrete.

F. Stub-ups: Concrete-encased GRC.

3.3 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for 600 V and Less:
   1. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Fiberglass-reinforced polyester resin, SCTE 77, Tier 15 structural load rating.
   2. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Heavy-duty fiberglass units with polymer concrete frame and cover, SCTE 77, Tier 8 structural load rating.
   3. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.
   4. Cover design load shall not exceed the design load of the handhole or box.

3.4 EARTHWORK

A. Excavation and Backfill: Comply with Section 312333 "Trenching and Backfilling," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Replace area after construction vehicle traffic in immediate area is complete.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plant Procurement."

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to the "Cutting and Patching" Article in Section 017300 "Execution."

3.5 DUCT AND DUCT BANK INSTALLATION

A. Where indicated on Drawings, install duct, spacers, and accessories into the duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
B. Install ducts according to NEMA TCB 2.

C. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of [48 inches (1220 mm)] [12.5 feet (4 m)] [25 feet (7.5 m)], both horizontally and vertically, at other locations, unless otherwise indicated.
   1. Duct shall have maximum of two 90 degree bends or the total of all bends shall be no more 180 degrees between pull points.

E. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

F. Installation Adjacent to High-Temperature Steam Lines: Where duct banks are installed parallel to underground steam lines, perform calculations showing the duct bank will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct bank crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.

G. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches (250 mm) o.c. for 5-inch (125-mm) ducts, and vary proportionately for other duct sizes.
   1. Begin change from regular spacing to end-bell spacing 10 feet (3 m) from the end bell without reducing duct line slope and without forming a trap in the line.
   2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight line direct-buried duct banks with calculated expansion of more than 3/4 inch (19 mm).
   3. Grout end bells into structure walls from both sides to provide watertight entrances.

H. Terminator Entrances to Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.
   1. Begin change from regular spacing to terminator spacing 10 feet (3 m) from the terminator, without reducing duct line slope and without forming a trap in the line.
   2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight line duct with calculated expansion of more than 3/4 inch (19 mm).

I. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

J. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

K. Pulling Cord: Install 100-lbf- (445-N-) test nylon cord in ducts, including spares.

L. Concrete-Encased Ducts and Duct Bank:
1. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Section 312333 "Trenching and Backfilling" for pipes less than 6 inches (150 mm) in nominal diameter.

2. Width: Excavate trench 3 inches (75 mm) wider than duct bank on each side.

3. Depth: Install top of duct bank at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.

4. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.

5. Spacer Installation: Place spacers close enough to prevent sagging and deforming of ducts, with not less than five spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger separators approximately 6 inches (150 mm) between tiers. Secure separators to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.

6. Minimum Space between Ducts: 3 inches (75 mm) between ducts and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and communications ducts.

7. Elbows: Use manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct run.
   a. Couple RNC duct to GRC with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
   b. Stub-Ups to Outdoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
      1) Stub-ups shall be [flush with] [minimum 4 inches (100 mm) above] finished floor and minimum 3 inches (75 mm) from conduit side to edge of slab.
   c. Stub-Ups to Indoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
      1) Stub-ups shall be [flush with] [minimum 4 inches (100 mm) above] finished floor and no less than 3 inches (75 mm) from conduit side to edge of slab.

8. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.

9. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.

10. Concrete Cover: Install a minimum of 3 inches (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inches (50 mm) between duct of like services, and 4 inches (100 mm) between power and communications ducts.

11. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
   a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
   b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (15-mm) reinforcing-rod dowels extending a minimum of 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
12. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

M. Direct-Buried Duct and Duct Bank:

1. Excavate trench bottom to provide firm and uniform support for duct bank. Comply with requirements in Section 312333 "Trenching and Backfilling" for preparation of trench bottoms for pipes less than 6 inches (150 mm) in nominal diameter.

2. Width: Excavate trench 3 inches (75 mm) wider than duct on each side.

3. Depth: Install top of duct bank at least 36 inches (900 mm) below finished grade unless otherwise indicated.

4. Set elevation of bottom of duct bank below frost line.

5. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.

6. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than five spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.

7. Install duct with a minimum of 3 inches (75 mm) between ducts for like services and 6 inches (150 mm) between power and communications duct.

8. Elbows: Install manufactured duct elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.

9. Install manufactured GRC elbows for stub-ups at poles and equipment, at building entrances through floor, and at changes of direction in duct run.
   a. Couple RNC duct to GRC with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
   b. Stub-ups to Outdoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
      1) Stub-ups shall be [flush with] [minimum 4 inches (100 mm)above] finished floor and minimum 3 inches (75 mm) from conduit side to edge of slab.
   c. Stub-ups to Indoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
      1) Stub-ups shall be [flush with] [minimum 4 inches (100 mm)above] finished floor and no less than 3 inches (75 mm) from conduit side to edge of slab.

10. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches (100 mm) over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.
   a. Place minimum 3 inches (75 mm) of sand as a bed for duct bank. Place sand to a minimum of 6 inches (150 mm) above top level of duct bank.
b. Place minimum 6 inches (150 mm) of engineered fill above concrete encasement of duct bank.

N. Underground-Line Warning Tape: Bury nonconducting underground line specified in Section 260553 "Identification for Electrical Systems" no less than 12 inches (300 mm) above all concrete-encased duct and duct banks and approximately 12 inches (300 mm) below grade. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

3.6 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.7-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.

D. Install handholes and boxes with bottom below the frost line, or with anchors extending below depth of frost line of 48 inches (122 cm) below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

F. Field-cut openings for ducts and conduits according to enclosure manufacturer’s written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

G. For enclosures installed in asphalt paving and concrete and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
   1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with a troweled finish.
   2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep).

3.7 GROUNDING

A. Ground underground ducts and utility structures according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:
   1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
   2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
3. Test manhole[ and handhole] grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 “Grounding and Bonding for Electrical Systems.”

B. Correct deficiencies and retest as specified above to demonstrate compliance.

C. Prepare test and inspection reports.

3.9 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump.
   1. Sweep floor, removing dirt and debris.
   2. Remove foreign material.

END OF SECTION
SECTION 260553
IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Color and legend requirements for raceways, conductors, and warning labels and signs.
   2. Labels.
   4. Tapes and stencils.
   5. Tags.
   7. Cable ties.
   9. Fasteners for labels and signs.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for electrical identification products.

B. Identification Schedule: For each piece of electrical equipment and electrical system components to be an index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

C. Delegated-Design Submittal: For arc-flash hazard study.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
A. Comply with NFPA 70.
C. Comply with ANSI Z535.4 for safety signs and labels.
D. Comply with NFPA 70E and Section 260574 "Arc-Flash Hazard Analysis" requirements for arc-flash warning labels.
E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.
F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
2.2 COLOR AND LEGEND REQUIREMENTS

A. Raceways and Cables Carrying Circuits at 600 V or Less:
   1. Legend: Indicate voltage and system or service type.

B. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded feeder and branch-circuit conductors.
   1. Color shall be factory applied.
   2. Colors for 208/120-V Circuits:
      a. Phase A: Black.
      b. Phase B: Red.
      c. Phase C: Blue.

C. Raceways and Cables Carrying Circuits at More Than 600 V:
   1. Black letters on an orange field.
   2. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

D. Warning Label Colors:
   1. Identify system voltage with black letters on an orange background.

E. Warning labels and signs shall include, but are not limited to, the following legends:
   1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
   2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."

F. Equipment Identification Labels:
   1. Black letters on a white field.

2.3 LABELS

A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
   1. Manufacturers:
      a. Brady Corporation
      b. Champion American
      c. emedco
      d. Grafolast Wire Markers
      e. Hellermann Tyton
      f. LEM Products Inc.
      g. Marking Services, Inc.
      h. Panduit Corp.
      i. Seton Identification Products

B. Self-Adhesive Wraparound Labels: Preprinted, 3-mil- (0.08-mm-) thick, vinyl flexible label with acrylic pressure-sensitive adhesive.
   1. Manufacturers:
      a. A’n D Cable Products
      b. Brady Corporation
      c. Brother International Corporation
      d. emedco
      e. Grafolast Wire Markers
      f. Ideal Industries, Inc.
2. Marker for Labels: Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

C. Self-Adhesive Labels: Vinyl, thermal, transfer-printed, 3-mil- (0.08-mm-) thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.

1. Manufacturers:
   a. A'n D Cable Products
   b. Brady Corporation
   c. Brother International Corporation
   d. emedco
   e. Grafoplast Wire Markers
   f. Hellermann Tyton
   g. Ideal Industries, Inc.
   h. LEM Products Inc.
   i. Marking Services, Inc.
   j. Panduit Corp.
   k. Seton Identification Products

2. Minimum Nominal Size:
   a. 1-1/2 by 6 inches (37 by 150 mm) for raceway and conductors.
   b. 3-1/2 by 5 inches (76 by 127 mm) for equipment.
   c. As required by authorities having jurisdiction.

2.4 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

   1. Carlton Industries, LP
   2. Champion America
   3. Hellermann Tyton
   4. Ideal Industries, Inc.
   5. Marking Services, Inc.
   6. Panduit Corp.

B. Floor Marking Tape: 2-inch- (50-mm-) wide, 5-mil (0.125-mm) pressure-sensitive vinyl tape, with yellow and black stripes and clear vinyl overlay.

   1. Carlton Industries, LP
   2. Seton Identification Products

C. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch (25 mm).

2.5 TAGS

A. Write-On Tags:

   1. Carlton Industries, LP
   2. LEM Products Inc.
   3. Seton Identification Products
   4. Polyester Tags: 0.010 inch (0.25 mm) thick, with corrosion-resistant grommet and cable tie for attachment.
5. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.6 SIGNS

A. Laminated Acrylic or Melamine Plastic Signs:
   1. Manufacturers:
      a. Brady Corporation
      b. Carlton Industries, LP
      c. emedco
      d. Marking Services, Inc.
   2. Engraved legend.
   3. Thickness:
      a. For signs up to 20 sq. inches (129 sq. cm), minimum 1/16-inch- (1.6-mm-).
      b. For signs larger than 20 sq. inches (129 sq. cm), 1/8 inch (3.2 mm) thick.
      c. Engraved legend with black letters on white face.
      d. Self-adhesive.
      e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 CABLE TIES

A. Manufacturers:
   1. Hellermann Tyton
   2. Ideal Industries, Inc.
   3. Marking Services, Inc.
   4. Panduit Corp.
   B. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
      1. Minimum Width: 3/16 inch (5 mm).
      2. Tensile Strength at 73 deg F (23 deg C) according to ASTM D 638: 12,000 psi (82.7 MPa).
      3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
   C. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, Type 6/6 nylon.
      1. Minimum Width: 3/16 inch (5 mm).
      2. Tensile Strength at 73 deg F (23 deg C) according to ASTM D 638: 12,000 psi (82.7 MPa).
      3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
   D. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, self-locking.
      1. Minimum Width: 3/16 inch (5 mm).
      2. Tensile Strength at 73 deg F (23 deg C) according to ASTM D 638: 7000 psi (48.2 MPa).
      3. UL 94 Flame Rating: 94V-0.
      4. Temperature Range: Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C).
      5. Color: Black.

2.8 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Select paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.
PART 3 EXECUTION

3.1 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 INSTALLATION

A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer’s wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

B. Install identifying devices before installing acoustical ceilings and similar concealment.

C. Verify identity of each item before installing identification products.

D. Coordinate identification with Project Drawings, manufacturer’s wiring diagrams, and operation and maintenance manual.

E. Apply identification devices to surfaces that require finish after completing finish work.

F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

G. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

H. System Identification for Raceways and Cables over 600 V: Identification shall completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

J. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

K. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:
   1. "EMERGENCY POWER."
   2. "POWER."
   3. "UPS."

L. Self-Adhesive Labels:
   1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.

M. Snap-around Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.

N. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.
O. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer’s written instructions.

P. Write-on Tags:
   1. Place in a location with high visibility and accessibility.

Q. Laminated Acrylic or Melamine Plastic Signs:
   1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
   2. Unless otherwise indicated, provide a single line of text with 1/2-inch (13-mm) high letters on 1-1/2-inch (38-mm) high sign; where two lines of text are required, use labels 2 inches (50 mm) high.

R. Cable Ties: General purpose, for attaching tags, except as listed below:
   1. Outdoors: UV-stabilized nylon.
   2. In Spaces Handling Environmental Air: Plenum rated.

3.3 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Provide conduit color as specified and identify raceways and covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:

<table>
<thead>
<tr>
<th>System Type</th>
<th>Conduit Color</th>
<th>Conduit Label</th>
<th>Box Covers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emergency Power</td>
<td>Orange</td>
<td>Orange letters/white label</td>
<td>No color</td>
</tr>
<tr>
<td>Normal Power</td>
<td>No color</td>
<td>Black letter/white label</td>
<td>No color</td>
</tr>
<tr>
<td>Fire Alarm</td>
<td>Red</td>
<td>Red letters/white label</td>
<td>No color</td>
</tr>
<tr>
<td>Lighting Control</td>
<td>No color</td>
<td>Purple letters/white label</td>

D. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use self-adhesive vinyl labels with the conductor or cable designation, origin, and destination.

E. Control-Circuit Conductor Termination Identification: For identification at terminations provide self-adhesive labels with the conductor designation.
F. Conductors to Be Extended in the Future: Marker tape to conductors and list source.

G. Auxiliary Electrical Systems Conductor Identification: Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.
   1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

H. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.

I. Workspace Indication: Apply floor marking tape to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

J. Instructional Signs: Self-adhesive labels, including the color code for grounded and ungrounded conductors.

K. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive labels.
   1. Apply to exterior of door, cover, or other access.
   2. For equipment with multiple power or control sources, apply to door or cover of equipment including, but not limited to, the following:
      a. Power transfer switches.
      b. Controls with external control power connections.

   2. Comply with Section 260574 "Arc-Flash Hazard Analysis" requirements for arc-flash warning labels.

M. Operating Instruction Signs: Self-adhesive labels.

N. Emergency Operating Instruction Signs: Self-adhesive labels with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for power transfer.

O. Equipment Identification Labels:
   1. Indoor Equipment: Laminated acrylic or melamine plastic sign.
   2. Outdoor Equipment: Laminated acrylic or melamine sign.
   3. Equipment to Be Labeled:
Identification for Electrical Systems

a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be engraved, laminated acrylic or melamine label.
b. Enclosures and electrical cabinets.
c. Access doors and panels for concealed electrical items.
d. Emergency system boxes and enclosures.
e. Enclosed switches.
f. Enclosed circuit breakers.
g. Enclosed controllers.
h. Variable-speed controllers.
i. Push-button stations.
j. Contactors.
k. Remote-controlled switches, dimmer modules, and control devices.
l. Disconnects for any equipment provided by Owner or other trade.
m. All electrical equipment or devices which are not located within sight of their source of power shall have nameplates listing their source of power (panelboard or switchboard name and number) along with voltage, circuit number, and load served.

END OF SECTION
SECTION 260572
SHORT-CIRCUIT STUDIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes a computer-based, fault-current study to determine the minimum interrupting capacity of circuit protective devices.

1.3 DEFINITIONS
A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.

B. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.

C. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.

D. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.

E. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.

F. SCCR: Short-circuit current rating.

G. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.4 ACTION SUBMITTALS
A. Product Data:
   1. For computer software program to be used for studies.
   2. Submit the following after the approval of system protective devices submittals. Submittals shall be in digital form.
      a. Short-circuit study input data, including completed computer program input data sheets.
      b. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.
         1) Submit study report for action prior to submitting for final approval of the distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.
         2) Revised single-line diagram, reflecting field investigation results and results of short-circuit study.
1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data:
   1. For Short-Circuit Study Software Developer,
   2. For Short-Circuit Study Specialist.

B. Product Certificates: For short-circuit study software, certifying compliance with IEEE 399.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data:
   1. For overcurrent protective devices to include in emergency, operation, and maintenance manuals.
   2. The following are from the Short-Circuit Study Report:
      a. Final one-line diagram.
      b. Final Short-Circuit Study Report.
      c. Short-circuit study data files.
      d. Power system data.

1.7 QUALITY ASSURANCE

A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.
   1. Power System Analysis Software Qualifications: Computer program shall be designed to perform short-circuit studies or have a function, component, or add-on module designed to perform short-circuit studies.
   2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

D. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

E. Short-Circuit Study Certification: Short-Circuit Study Report shall be signed and sealed by Power Systems Analysis Specialist.

F. Field Adjusting Agency Qualifications:
   1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.
   2. A member company of NETA.
   3. Acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

A. Software Developers: Subject to compliance with requirements, provide software by one of the following:
   1. ESA Inc.
   2. Operation Technology, Inc.
   3. Power Analytics, Corporation.
4. SKM Systems Analysis, Inc.

B. Comply with IEEE 399 and IEEE 551.
   1. Analytical features of fault-current-study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output.

2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram of modeled power system, showing the following:
   1. Protective device designations and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Conduit material.
   4. Transformer kilovolt ampere (kVA) and voltage ratings.
   5. Motor and generator designations and kVA ratings.
   6. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
   7. Derating factors and environmental conditions.
   8. Any revisions to electrical equipment required by the study.

D. Comments and recommendations for system improvements or revisions in a written document, separate from one-line diagram.

E. Protective Device Evaluation:
   1. Evaluate equipment and protective devices and compare to short-circuit ratings.
   2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
   3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
   4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
   5. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

F. Short-Circuit Study Input Data:
   1. One-line diagram of system being studied.
   2. Power sources available.
   3. Manufacturer, model, and interrupting rating of protective devices.
   4. Conductors and conduit material.
   5. Transformer data.

G. Short-Circuit Study Output:
   1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
      a. Voltage.
      b. Calculated fault-current magnitude and angle.
      c. Fault-point X/R ratio.
      d. Equivalent impedance.
2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
   a. Voltage.
   b. Calculated symmetrical fault-current magnitude and angle.
   c. Fault-point X/R ratio.
   d. Calculated asymmetrical fault currents:
      1) Based on fault-point X/R ratio.
      2) Based on calculated symmetrical value multiplied by 1.6.
      3) Based on calculated symmetrical value multiplied by 2.7.

3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
   a. Voltage.
   b. Calculated symmetrical fault-current magnitude and angle.
   c. Fault-point X/R ratio.
   d. No AC Decrement (NACD) ratio.
   e. Equivalent impedance.
   f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
   g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

PART 3 EXECUTION

3.1 EXAMINATION

A. Obtain all data necessary for the conduct of the study.
   1. Verify completeness of data supplied on the one-line diagram. Call any discrepancies to the attention of Architect.
   2. For equipment provided that is Work of this Project, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
   3. For relocated equipment and that which is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. The qualifications of technicians and engineers shall be qualified as defined by NFPA 70E.

B. Gather and tabulate the following input data to support the short-circuit study. Comply with recommendations in IEEE 551 as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT Level III certification or NICET Electrical Power Testing Level III certification.
   1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
   2. Obtain electrical power utility impedance at the service.
   3. Power sources and ties.
   4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
   5. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
   6. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
   7. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
   8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
9. Motor horsepower and NEMA MG 1 code letter designation.
10. Conductor sizes, lengths, number, conductor material and conduit material (magnetic or non-magnetic).
11. Derating factors.

3.2 SHORT-CIRCUIT STUDY

A. Perform study following the general study procedures contained in IEEE 399.
B. Calculate short-circuit currents according to IEEE 551.
C. Base study on the device characteristics supplied by device manufacturer.
D. Extent of the electrical power system to be studied is indicated on Drawings.
E. Begin short-circuit current analysis at the service, extending down to the system overcurrent protective devices as follows:
   1. To normal low-voltage load buses where fault current is 10 kA or less.
F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
G. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for the fault-current dc decrement to address asymmetrical requirements of interrupting equipment.
H. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
   1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
I. Include in the report identification of any protective device applied outside its capacity.

END OF SECTION
PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.
   1. Study results shall be used to determine coordination of series-rated devices.

1.3 DEFINITIONS
A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.
B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.
C. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
E. Power System Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
G. SCCR: Short-circuit current rating.
H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.4 ACTION SUBMITTALS
A. Product Data:
   1. For computer software program to be used for studies.
   2. Submit the following after the approval of system protective devices submittals. Submittals shall be in digital form.
      a. Coordination-study input data, including completed computer program input data sheets.
      b. Study and equipment evaluation reports.
   3. Overcurrent protective device coordination study report; signed, dated, and sealed by a qualified professional engineer.
a. Submit study report for action prior to submitting for final approval of the distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data:
   1. For Power System Analysis Software Developer.
   2. For Power Systems Analysis Specialist.

B. Product Certificates: For overcurrent protective device coordination study software, certifying compliance with IEEE 399.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For overcurrent protective devices to include in emergency, operation, and maintenance manuals.
   1. The following are from the Coordination Study Report:
      a. Final one-line diagram.
      b. Final protective device coordination study.
      c. Coordination study data files.
      d. List of all protective device settings.
      e. Time-current coordination curves.

1.7 QUALITY ASSURANCE

A. Studies shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

D. Power System Analysis Software Qualifications:
   1. Computer program shall be designed to perform coordination studies or have a function, component, or add-on module designed to perform coordination studies.
   2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

E. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

F. Field Adjusting Agency Qualifications:
   1. Employer of a NETA ETT-Certified Technician Level III responsible for all field adjusting of the Work.
   2. A member company of NETA.
   3. Acceptable to authorities having jurisdiction.
PART 2 PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

A. Software Developers: Subject to compliance with requirements, available software developers offering software that may be used for the Work include, but are not limited to, the following:
   1. CGI CYME
   2. EDSA Micro Corporation
   3. ESA Inc.
   4. Operation Technology, Inc.
   5. Power Analytics, Corporation.
   6. SKM Systems Analysis, Inc.

B. Comply with IEEE 242 and IEEE 399.

C. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
   1. Optional Features:
      a. Arcing faults.
      b. Simultaneous faults.
      c. Explicit negative sequence.
      d. Mutual coupling in zero sequence.

2.2 COORDINATION STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis and scope. Include case descriptions, definition of terms and guide for interpretation of the computer printout.

C. One-line diagram, showing the following:
   1. Protective device designations and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Transformer kilovolt ampere (kVA) and voltage ratings.
   4. Motor and generator designations and kVA ratings.
   5. Switchgear, switchboard, motor-control center, and panelboard designations.
   6. Any revisions to electrical equipment required by the study.
   7. Study Input Data: As described in "Power System Data" Article.

D. Protective Device Coordination Study:
   1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer’s data sheets for recording the recommended setting of overcurrent protective devices when available.
      a. Phase and Ground Relays:
         1) Device tag.
         2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
         3) Recommendations on improved relaying systems, if applicable.
      b. Circuit Breakers:
         1) Adjustable pickups and time delays (long time, short time, ground).
2) Adjustable time-current characteristic.
3) Adjustable instantaneous pickup.
4) Recommendations on improved trip systems, if applicable.

E. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
4. Plot the following listed characteristic curves, as applicable:
   a. Power utility's overcurrent protective device.
   b. Medium-voltage equipment overcurrent relays.
   c. Medium- and low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
   d. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
   e. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
   f. Cables and conductors damage curves.
   g. Ground-fault protective devices.
   h. Motor-starting characteristics and motor damage points.
   i. Generator short-circuit decrement curve and generator damage point.
   j. The largest feeder circuit breaker in each motor-control center and panelboard.

5. Series rating on equipment allows the application of two series interrupting devices for a condition where the available fault current is greater than the interrupting rating of the downstream equipment. Both devices share in the interruption of the fault and selectivity is sacrificed at high fault levels.
6. Maintain selectivity for tripping currents caused by overloads.
7. Maintain maximum achievable selectivity for tripping currents caused by overloads on series-rated devices.
8. Provide adequate time margins between device characteristics such that selective operation is achieved.
9. Comments and recommendations for system improvements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

A. Obtain all data necessary for conduct of the overcurrent protective device study.
1. Verify completeness of data supplied in one-line diagram on Drawings. Call any discrepancies to Architect's attention.

2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.

3. For equipment that is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. Qualifications of technicians and engineers shall be as defined by NFPA 70E.

B. Gather and tabulate all required input data to support the coordination study. List below is a guide. Comply with recommendations in IEEE 551 for the amount of detail required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification. Data include, but are not limited to, the following:

1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Electrical power utility impedance at the service.

3. Power sources and ties.

4. Short-circuit current at each system bus (three phase and line to ground).

5. Full-load current of all loads.

6. Voltage level at each bus.

7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.

8. For reactors, provide manufacturer and model designation, voltage rating, and impedance.

9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.

10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.

11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.

12. Maximum demands from service meters.

13. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.

14. Motor horsepower and NEMA MG1 code letter designation.

15. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).

16. Medium-voltage cable sizes, lengths, conductor material, cable construction, metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).

17. Data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, showing the following:
   a. Special load considerations, including starting inrush currents and frequent starting and stopping.
   b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
   c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
   d. Generator thermal-damage curve.
   e. Ratings, types, and settings of utility company's overcurrent protective devices.
   f. Special overcurrent protective device settings or types stipulated by utility company.
   g. Time-current-characteristic curves of devices indicated to be coordinated.
h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.

i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.

j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.

k. Identify series-rated interrupting devices for a condition where the available fault current is greater than the interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

3.3 COORDINATION STUDY

A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.

B. Comply with IEEE 399 for general study procedures.

C. Base study on device characteristics supplied by device manufacturer.

D. Extent of the electrical power system to be studied is indicated on Drawings.

E. Begin analysis at the service, extending down to the system overcurrent protective devices as follows:
   1. To normal low-voltage load buses where fault current is 10 kA or less.
   2. Selectively coordinate to 0.1 second. Bring any coordination challenges to the attention of the Engineer.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Motor Protection:
   1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
   2. Select protection for motors served at voltages more than 600 V according to IEEE 620.

H. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

I. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.

J. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
   1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.

K. Protective Device Evaluation:
   1. Evaluate equipment and protective devices and compare to short-circuit ratings.
   2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
3. Any application of series-rated devices shall be recertified, complying with requirements in NFPA 70.
4. Include in the report identification of any protective device applied outside its capacity.

3.4 LOAD-FLOW AND VOLTAGE-DROP STUDY
A. Perform a load-flow and voltage-drop study to determine the steady-state loading profile of the system. Analyze power system performance two times as follows:
   1. Determine load-flow and voltage drop based on full-load currents obtained in "Power System Data" Article.
   2. Determine load-flow and voltage drop based on 80 percent of the design capacity of the load buses.
   3. Prepare the load-flow and voltage-drop analysis and report to show power system components that are overloaded, or might become overloaded; show bus voltages that are less than as prescribed by NFPA 70.

3.5 MOTOR-STARTING STUDY
A. Perform a motor-starting study to analyze the transient effect of the system’s voltage profile during motor starting. Calculate significant motor-starting voltage profiles and analyze the effects of the motor starting on the power system stability.
B. Prepare the motor-starting study report, noting light flicker for limits proposed by IEEE 141, and voltage sags so as not to affect the operation of other utilization equipment on the system supplying the motor.

3.6 FIELD ADJUSTING
A. Adjust relay and protective device settings according to the recommended settings provided by the coordination study. Field adjustments shall be completed by the engineering service division of the equipment manufacturer under the Startup and Acceptance Testing contract portion.
B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.
C. Testing and adjusting shall be by a full-time employee of the Field Adjusting Agency, who holds NETA ETT Level III certification or NICET Electrical Power Testing Level III certification.
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. Perform NETA tests and inspections for all adjustable overcurrent protective devices.

3.7 DEMONSTRATION
A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in the following:
   1. Acquaint personnel in fundamentals of operating the power system in normal and emergency modes.
   2. Hand-out and explain the coordination study objectives, study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpreting time-current coordination curves.
   3. For Owner's maintenance staff certified as NETA ETT-Certified Technicians Level III or NICET Electrical Power Testing Level III Technicians, teach how to adjust, operate, and maintain overcurrent protective device settings.
PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes a computer-based, arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.

1.3 DEFINITIONS
A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.
C. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
E. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
G. SCCR: Short-circuit current rating.
H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.4 ACTION SUBMITTALS
A. Product Data: For computer software program to be used for studies.
B. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. Submittals shall be in digital form.
   1. Arc-flash study input data, including completed computer program input data sheets.
   2. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.
   3. Submit study report for action prior to submitting for final approval of the distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.
1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data:
   1. For Power Systems Analysis Software Developer.
   2. For Power System Analysis Specialist.
   3. For Field Adjusting Agency.

B. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data:
   1. Maintenance procedures according to requirements in NFPA 70E shall be provided in the equipment manuals.
   2. Operation and Maintenance Procedures: In addition to items specified in Section 017800 “Closeout Submittals,” provide maintenance procedures for use by Owner’s personnel that comply with requirements in NFPA 70E.

1.7 QUALITY ASSURANCE

A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

D. Power System Analysis Software Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
   1. Computer program shall be designed to perform arc-flash analysis or have a function, component, or add-on module designed to perform arc-flash analysis.
   2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society’s Certified Software Development Professional certification.

E. Power Systems Analysis Specialist Qualifications: Professional engineer in charge of performing the arc-flash study, analyzing the arc flash, and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.

PART 2 PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

A. Software Developers: Subject to compliance with requirements, available software developers offering software that may be used for the Work include, but are not limited to, the following:
   1. CGI CYME
   2. EDSA Micro Corporation
   3. ESA Inc.
   4. Operation Technology, Inc.
   5. Power Analytics, Corporation.
6. SKM Systems Analysis, Inc.

B. Comply with IEEE 1584 and NFPA 70E.

C. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

2.2 ARC-FLASH STUDY REPORT CONTENT

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram, showing the following:
   1. Protective device designations and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Transformer kilovolt ampere (kVA) and voltage ratings, including derating factors and environmental conditions.
   4. Motor and generator designations and kVA ratings.
   5. Switchgear, switchboard, motor-control center, panelboard designations, and ratings.

D. Study Input Data: As described in "Power System Data" Article.

E. Short-Circuit Study Output Data: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260572 "Short-Circuit Studies."

F. Protective Device Coordination Study Report Contents: As specified in "Protective Device Coordination Study Report Contents" Article in Section 260573 "Coordination Studies."

G. Arc-Flash Study Output Reports:
   1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in the report:
      a. Voltage.
      b. Calculated symmetrical fault-current magnitude and angle.
      c. Fault-point X/R ratio.
      d. No AC Decrement (NACD) ratio.
      e. Equivalent impedance.
      f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
      g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

H. Incident Energy and Flash Protection Boundary Calculations:
   1. Arcing fault magnitude.
   2. Protective device clearing time.
   3. Duration of arc.
   5. Restricted approach boundary.
   7. Working distance.
   8. Incident energy.

I. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of the computer printout.
2.3 ARC-FLASH WARNING LABELS

A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce a 3.5-by-5-inch (76-by-127-mm) self-adhesive equipment label for each work location included in the analysis.

B. The label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
   1. Location designation.
   2. Nominal voltage.
   3. Protection boundaries.
      a. Arc-flash boundary.
      b. Restricted approach boundary.
      c. Limited approach boundary.
   4. Arc flash PPE category.
   5. Required minimum arc rating of PPE in Cal/cm squared.
   6. Available incident energy.
   7. Working distance.
   8. Engineering report number, revision number, and issue date.

C. Labels shall be machine printed, with no field-applied markings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.2 ARC-FLASH HAZARD ANALYSIS

A. Comply with NFPA 70E and its Annex D for hazard analysis study.

B. Preparatory Studies: Perform the Short-Circuit and Coordination studies prior to starting the Arc-Flash Hazard Analysis.
   2. Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573 "Coordination Studies."

C. Calculate maximum and minimum contributions of fault-current size.
   1. The maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
   2. Calculate arc-flash energy at 85 percent of maximum short-circuit current according to IEEE 1584 recommendations.
   3. Calculate arc-flash energy at 38 percent of maximum short-circuit current according to NFPA 70E recommendations.
   4. Calculate arc-flash energy with the utility contribution at a minimum and assume no motor contribution.

D. Calculate the arc-flash protection boundary and incident energy at locations in the electrical distribution system where personnel could perform work on energized parts.

E. Include medium- and low-voltage equipment locations, except equipment rated 240-V ac or less fed from transformers less than 125 kVA.
F. Calculate the limited, restricted, and prohibited approach boundaries for each location.

G. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:
   1. Fault contribution from induction motors shall not be considered beyond three to five cycles.
   2. Fault contribution from synchronous motors and generators shall be decayed to match the actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 per unit to three per unit after 10 cycles).

H. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
   1. When the circuit breaker is in a separate enclosure.
   2. When the line terminals of the circuit breaker are separate from the work location.

I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

3.3 POWER SYSTEM DATA

A. Obtain all data necessary for the conduct of the arc-flash hazard analysis.
   2. For new equipment, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
   3. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers.

B. Electrical Survey Data: Gather and tabulate the following input data to support coordination study. Comply with recommendations in IEEE 1584 and NFPA 70E as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT Level III certification or NICET Electrical Power Testing Level III certification.
   1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
   2. Obtain electrical power utility impedance at the service.
   3. Power sources and ties.
   4. Short-circuit current at each system bus, three phase and line-to-ground.
   5. Full-load current of all loads.
   6. Voltage level at each bus.
   7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in per cent, and phase shift.
   8. For reactors, provide manufacturer and model designation, voltage rating and impedance.
   9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
   10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
12. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
13. Motor horsepower and NEMA MG 1 code letter designation.
14. Low-voltage cable sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
15. Medium-voltage cable sizes, lengths, conductor material, and cable construction and metallic shield performance parameters.

3.4 LABELING
A. Apply one arc-flash label on the front cover for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.
B. Each piece of equipment listed below shall have an arc-flash label applied to it:
   1. Applicable panelboard and safety switch under 250 V.
C. Note on record Drawings the location of equipment where the personnel could be exposed to arc-flash hazard during their work.
   1. Indicate arc-flash energy.
   2. Indicate protection level required.

3.5 APPLICATION OF WARNING LABELS
A. Install the arc-fault warning labels under the direct supervision and control of the Power System Analysis Specialist.

3.6 DEMONSTRATION
A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the significance of arc-flash warning labels.

END OF SECTION
SECTION 260913
ELECTRICAL POWER MONITORING AND CONTROL

PART 1 GENERAL

1.1 SUMMARY

A. The Hilberry Theatre requires that all electrical power monitoring to be connected to the facility Building Automation and Control System (BAS) which includes a front end web interface and centrally managed data collection server that collects data in 1 minute intervals and stores the data in 15 minute averages. All building metering shall be hardwired back to the nearest BAS Building Control cabinet located in electrical, mechanical, or storage type rooms. Data from these devices and power monitors shall be programmed through and display information on the BAS. All programming shall be coordinated with the Division 23 contractor and the State of Tennessee.

B. This project is required to meet the energy monitoring requirements as set forth in the State of Tennessee’s High Performance Building Requirements, and 2010 90.1 ASHRAE Energy Code. These guidelines require the project to monitor the energy consumption of the different types of loads within the building. These loads types are to be categorized into four different types:

1. Lighting
2. Plug load/Equipment
3. Mechanical
4. Process load (i.e. kitchen)
5. Conveyance (i.e. elevators)

Note that the mechanical loads are served from a separate power distribution branch(s) which is dedicated for mechanical system loads. Light and plug loads are served from separate distribution branches. The goal of the project is to limit the quantity of power monitors and use the software to perform additive or subtractive calculations between power monitors to calculate the lighting or plug loads in the building. Where monitoring of distribution feeders does not achieve differentiation between load categories previously identified, monitoring of individual branch circuits will be required.

C. The power monitoring strategy will consist of three basic tiers or types of power monitors (meters), Tier 1 (T1), Tier 2 (T2), and Tier 3 (T3). Refer to one-line diagrams, riser diagrams, floor plans, panelboard schedules for meter types, quantities, and locations.

1. Tier 1 – Typically monitors building services or alternative energy sources.
2. Tier 2 – Typically monitors feeders or panelboards mains.
3. Tier 3 – Branch circuit monitoring (noted in panelboard schedules).

D. The user interface will be required to categorize the various power monitors by load types, and allow the user to have the ability to group energy consumption by these load type categories.

E. Related Sections:
1. Section 230900 “Building Automation System” for control system requirements and managed data acquisition and storage.
2. Section 230993 " Sequence of Operations for HVAC Controls"

1.2 DEFINITIONS

A. Ethernet: Local area network based on IEEE 802.3 standards.

B. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.

C. HTML: Hypertext markup language.
D. I/O: Input/output.

E. KY Pulse: A term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay changing status in response to the rotation of the disk in the meter.

F. LAN: Local area network; sometimes plural as "LANs."

G. LCD: Liquid crystal display.

H. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or remote-control, signaling and power-limited circuits.

I. Modbus TCP/IP: An open protocol for exchange of process data.

J. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

K. PC: Personal computer; sometimes plural as "PCs."

L. rms: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

O. SCADA: Supervisory Control and Data Acquisition. A PLC type device designed to collect data points from a variety of sources.

P. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

Q. THD: Total harmonic distortion.

R. UPS: Uninterruptible power supply; used both in singular and plural context.

S. WAN: Wide area network.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Provide coversheet indicating project title, project location, and vendor contact information.
   2. Organize submittal into logical sections and provide table of contents.
   3. Provide itemized bill of materials indicating model number and quantity for each product.
   4. On datasheets with multiple products, indicate which product is provided under this project.
   5. Combine electronic submittals into one unified PDF document that is organized per the table of contents. The submittal shall be free of copyrighted files and proprietary file formats. Electronic links may be submitted to supplement product datasheets, but may not be used as a substitute for product datasheets that are required to be included in the unified PDF submittal.
   6. Manufacturers' catalog sheets with complete technical data for each item being furnished.
   7. Attach copies of approved Product Data submittals for products (such as switchboards and switchgear) that describe power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.

B. Shop Drawings: For power monitoring and control equipment. Include plans, elevations, sections, details, and attachments to other work.
   1. Outline Drawings: Indicate arrangement of components and clearance and access requirements.
2. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

3. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.

5. Surge Suppressors: Data for each device used and where applied.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Field quality-control reports.

C. Other Informational Submittals:
   1. Manufacturer’s system installation and setup guides, with data forms to plan and record options and setup decisions.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For power monitoring and control units, to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 “Operation and Maintenance Data,” include the following:
   1. Operating and applications software documentation.
   2. Software licenses.
   3. Software service agreement.
   4. Hard copies of manufacturer’s specification sheets, operating specifications, design guides, user’s guides for software and hardware, and PDF files on CD-ROM of the hard-copy submittal.

B. Software and Firmware Operational Documentation:
   1. Self-study guide describing the process for setting equipment’s network address; setting Owner’s options; procedures to ensure data access from any PC on the network, using a standard Web browser; and recommended firewall setup.
   2. Software operating and upgrade manuals.
   3. Software Backup: On a magnetic media or compact disc, complete with Owner-selected options.
   4. Device address list and the set point of each device and operator option, as set in applications software.
   5. Graphic file and printout of graphic screens and related icons, with legend.

C. Software Upgrade Kit: For Owner to use in modifying software to suit future power system revisions or power monitoring and control revisions.

D. Software licenses and upgrades required by and installed for operating and programming digital and analog devices.

E. Upon completion of the work, provide a complete electronic (PDF, AutoCAD) set of ‘as-built’ drawings and application software on compact disk and on the Network Supervisor (NS) hard drive. Drawings shall be provided as AutoCAD™ or Visio™ compatible files. Eight hard copies of the ‘as-built’ drawings shall be provided in addition to the documents on compact disk.
1.6 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Addressable Relays: One for every 10 installed. Furnish at least one of each type.
   2. Data Line Surge Suppressors: One for every 10 of each type installed. Furnish at least one of each type.

1.7 QUALITY ASSURANCE
A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
B. Manufacturer Qualifications: A firm experienced in manufacturing power monitoring and control equipment similar to that indicated for this Project and with a record of successful in-service performance.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
D. Any power monitor substitutions requests must be accompanied with the proper substitution request forms and be able to provide a live on site demonstration that their power monitor can provide and display all power monitoring data using the BAS software system. All software programming and integration between the substituted power monitor and the software system shall be the responsibility of that manufacturers power monitor, including any costs associated with hiring a Technician to collaborate, troubleshoot, or provide any assistance necessary to provide a complete and compatible power monitoring system.

1.8 COORDINATION
A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

PART 2 PRODUCTS

2.1 MANUFACTURERS
A. Power Monitor Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Veris Industries Electro-IndustriesSchweitzer Engineering LaboratoriesASCO SYSTEM REQUIREMENTS
A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
   2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.
B. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.

C. Interface with BAS System: Provide factory-installed hardware and software to enable the BAS system to monitor, display, and record data for use in processing reports.
   1. ASHRAE 135 (BACnet), Provide Modbus to BACnet converter communication interface shall enable the BAS operator to remotely monitor meter information from the power monitors from the operator workstation. Control features and monitoring points displayed locally at metering panel shall be available through the BAS.

2.3 APPLICATIONS SOFTWARE
A. The manufacturer selected to provide the application software shall be responsible to ensure interoperability between systems or system components, including all power monitors and multi-channel branch circuit monitors.

B. Reporting: User commands initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.
   1. Print a record of user-defined alarm, supervisory, and trouble events on workstation printer.
   2. Sort and report by device name and by function.
   3. Report type of signal (alarm, supervisory, or trouble), description, date, and time of occurrence.
   4. Differentiate alarm signals from other indications.
   5. When system is reset, report reset event with same information concerning device, location, date, and time.
   6. User shall be able to report based on load types identified in paragraph 1.2 (B). Refer to Part 3 of this section for monitoring points and load types.

2.4 COMMUNICATION COMPONENTS AND NETWORKS
A. Network Configuration: High-speed, multi-access, open nonproprietary, industry standard communication protocol; LANs complying with EIA 485, 100 Base-T Ethernet, and Modbus TCP/IP.

2.5 TIER 1 AND 2 POWER MONITORS
A. Separately mounted, permanently installed instrument for power monitoring and control, complying with UL 1244.
   1. Enclosure: NEMA 250, Type 1.

B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
   1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.

C. Tier 1 Service or Alternative Energy power monitors shall be rated for bi-directional power flow.

D. rms Real-Time Measurements:
   1. Current: Each phase, neutral, average of three phases, percent unbalance.
   2. Voltage: Line-to-line each phase, line-to-line average of three phases, line-to-neutral each phase, line-to-neutral average of three phases, line-to-neutral percent unbalance.
   3. Power: Per phase and three-phase total.
   4. Reactive Power: Per phase and three-phase total.
   5. Apparent Power: Per phase and three-phase total.
   6. Power Factor: Per phase and three-phase total.
   7. Displacement Power Factor: Per phase and three-phase total.
8. Frequency.
9. Accumulated Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
10. Incremental Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
11. Conditional Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).

E. Demand Current Calculations, per Phase, Three-Phase Average and Neutral:
   1. Present.
   2. Running average.
   3. Last completed interval.
   4. Peak.

F. Demand Real Power Calculations, Three-Phase Total:
   1. Present.
   2. Running average.
   3. Last completed interval.
   4. Predicted.
   5. Peak.
   6. Coincident with peak kVA demand.
   7. Coincident with kVAR demand.

G. Demand Reactive Power Calculations, Three-Phase Total:
   1. Present.
   2. Running average.
   3. Last completed interval.
   4. Predicted.
   5. Peak.
   6. Coincident with peak kVA demand.
   7. Coincident with kVAR demand.

H. Demand Apparent Power Calculations, Three-Phase Total:
   1. Present.
   2. Running average.
   3. Last completed interval.
   4. Predicted.
   5. Peak.
   6. Coincident with peak kVA demand.
   7. Coincident with kVAR demand.

I. Average Power Factor Calculations, Demand Coincident, Three-Phase Total:
   1. Last completed interval.
   2. Coincident with kW peak.
   3. Coincident with kVAR peak.
   4. Coincident with kVA peak.

J. Power Demand Calculations: According to one of the following calculation methods, selectable by the user:
   1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
   2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
      a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
      b. Fixed block that calculates demand at end of the interval.
c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a Synchronization Signal:
   a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
   b. Signal is a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
   c. Demand can be synchronized with clock in the power meter.

K. Minimum and Maximum Values: Record monthly minimum and maximum values, including date and time of record. For three-phase measurements, identify phase of recorded value. Record the following parameters:
   1. Line-to-line voltage.
   2. Line-to-neutral voltage.
   3. Current per phase.
   4. Line-to-line voltage unbalance.
   5. Line-to-neutral voltage unbalance.
   6. Power factor.
   7. Displacement power factor.
   8. Total power.
   9. Total reactive power.
  10. Total apparent power.
  11. Frequency.

L. Current and Voltage Ratings:
   1. Designed for use with current inputs from standard instrument current transformers with 5-A secondary and shall have a metering range of 0-10 A.
   2. Withstand ratings shall not be less than 15 A, continuous; 50 A, lasting over 10 seconds, no more frequently than once per hour; 500 A, lasting 1 second, no more frequently than once per hour.
   3. Designed for use with voltage inputs from standard instrument potential transformers with a 120-V secondary.

M. Accuracy:
   1. Comply with ANSI C12.20, Class 0.5; and IEC 60687, Class 0.5 for revenue meters. Accuracy from Light to Full Rating shall meet the following criteria:
      a. Power: Accurate to 0.25 percent of reading, plus 0.025 percent of full scale.
      b. Voltage and Current: Accurate to 0.075 percent of reading, plus 0.025 percent of full scale.
      c. Power Factor: Plus or minus 0.002, from 0.5 leading to 0.5 lagging.
      d. Frequency: Plus or minus 0.01 Hz at 45 to 67 Hz.
   2. Current Transformer shall be solid core and rated for accuracy Class 0.2 or better as established by IEEE C57.13.
   3. Current Transformers shall have a minimum Thermal Current Rating Factor of 1.33.

N. Input: Two digital input signal(s).
   1. Normal mode for on/off signal.
   2. Demand interval synchronization pulse, accepting a demand synchronization pulse from a utility demand meter.
   3. Conditional energy signal to control conditional energy accumulation.

O. Outputs:
   1. Operated either by user command sent via communication link, or set to operate in response to user-defined alarm or event.
   2. Closed in either a momentary or latched mode as defined by user.
3. Each output relay used in a momentary contact mode shall have an independent timer that can be set by user.
4. One digital KY pulse to a user-definable increment of energy measurement. Output ratings shall be up to 120-V ac, 300-V dc, 50 mA, and provide 3500-V rms isolation.
5. One relay output module(s), providing a load voltage range from 20- to 240-V ac or from 20- to 30-V dc, supporting a load current of 2 A.
6. Output Relay Control:
   a. Relay outputs shall operate either by user command sent via communication link or in response to user-defined alarm or event.
   b. Normally open and normally closed contacts, field configured to operate as follows:
      1) Normal contact closure where contacts change state for as long as signal exists.
      2) Latched mode when contacts change state on receipt of a pickup signal; changed state is held until a dropout signal is received.
      3) Timed mode when contacts change state on receipt of a pickup signal; changed state is held for a preprogrammed duration.
      4) End of power demand interval when relay operates as synchronization pulse for other devices.
      5) Energy Pulse Output: Relay pulses quantities used for absolute kWh, absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
6) Output controlled by multiple alarms using Boolean-type logic.

P. Onboard Data Logging:
1. Store logged data, alarms, events, in 500MB of onboard nonvolatile memory.
2. Stored Data:
   a. Custom Data Logs: One user-defined log(s) holding up to 96 parameters. Date and time stamp each entry to the second and include the following user definitions:
      1) Schedule interval.
      2) Event definition.
      3) Configured as "fill-and-hold" or "circular, first-in first-out."
   b. Alarm Log: Include time, date, event information, and coincident information for each defined alarm or event.
3. Default values for all logs shall be initially set at factory, with logging to begin on device power up.

Q. Alarms.
1. User Options:
   a. Define pickup, dropout, and delay.
   b. Assign one of four severity levels to make it easier for user to respond to the most important events first.
   c. Allow for combining up to four alarms using Boolean-type logic statements for outputting a single alarm.
2. Alarm Events:
   a. Over/undercurrent.
   b. Over/undervoltage.
   c. Current imbalance.
   d. Phase loss, current.
   e. Phase loss, voltage.
   f. Voltage imbalance.
   g. Over kW demand.
   h. Phase reversal.
   i. Digital input off/on.

R. Control Power: 90- to 457-V ac or 100- to 300-V dc.
S. Communications:
   1. Power monitor shall be permanently connected to communicate via a serial RS-485 Modbus connection to the BAS Building Control cabinet.
   2. Modbus TCP via a 100 Base-T Ethernet connection shall be available.
   3. Local plug-in connections shall be for RS-232.

T. Display Monitor:
   1. Backlighted LCD to display metered data with touch-screen or touch-pad selecting device.
   2. Touch-screen display shall be a minimum 12-inch diagonal, resolution of 800 by 600 RGB pixels, 256 colors; NEMA 250, Type 1 display enclosure.
   3. Display four values on one screen at same time.
   4. Reset: Allow reset of the following parameters at the display:
      a. Peak demand current.
      b. Peak demand power (kW) and peak demand apparent power (kVA).
      c. Energy (MWh) and reactive energy (MVARh).

2.6 TIER 3- STANDALONE, WEB-ENABLED MONITORING AND CONTROL INSTRUMENT (MULTI-CHANNEL SUBMETERING DATA RECORDER)

A. Separately mounted, permanently installed instrument for power monitoring and control.
   1. Enclosure: NEMA 250, Type 1.

B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability.
   1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.

C. Sub-metering channels: Shall be capable of monitoring a minimum of 42 single-phase branch circuit current inputs and panelboard mains and neutral.

D. Branch Circuit Level Accuracy:
   1. Accuracy from Light to Full Rating shall meet the following criteria:
      a. Power: Accurate to 3 percent of reading.
      b. Voltage and Current: Accurate to 1 percent of reading from 2.0-100A.
   2. Current Transformer shall be split core and rated for accuracy of 0.5% or better.

E. Panelboard Mains or Sub-Main Accuracy:
   1. Voltage: Accurate to 1% of reading from 90-277V line to Neutral.
   2. Current: Accurate to 2% of reading from 1-10%, 1% of reading from 10-100%.

F. Measured values for branch circuit level monitoring:
   1. Current
   2. Maximum current
   3. Current demand
   4. Real power (kW)
   5. Real Power (kW) demand
   6. Energy (kWh)
   7. Power factor

G. Measured values for main and sub-main level monitoring:
   1. Current per phase
   2. Max current per phase
   3. Current demand per phase
   4. Energy (kWh) per phase
5. Real power (kW) per phase
6. Power Factor Total based on three phase breaker rotation
7. Power factor per phase
8. Voltage Line-to-Line rms
9. Voltage Line-to-Neutral rms
10. Frequency from single phase.

H. Power-Distribution Equipment Monitor: Web enabled, with integral network port and embedded Web server with factory-configured firmware and HTML-formatted Web pages for viewing of power monitoring and equipment status information from connected devices equipped with digital communication ports.

I. LAN Connectivity: Multipoint, RS-485 Modbus serial communication network, interconnecting all metering devices equipped with communications. Serial communication network connected to Ethernet server that functions as a gateway and server, providing data access via 100 Base-T LAN.

J. Communication Devices within the Equipment: Addressed at factory and tested to verify reliable communication with network server.

K. Server Configuration:
   1. Initial network parameters set using a standard Web browser. Connect via a local operator interface, or an RJ-45 port accessible from front of equipment.
   2. Network server shall be factory programmed with embedded HTML-formatted Web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of RS-485 network; with internal memory management information pages for viewing using a standard Web browser.
   3. Login: Password protected; password administration accessible from the LAN using a standard Web browser.
   4. Operating Software: Suitable for local access; firewall protected.

L. Data Access:
   1. Network server shall include embedded HTML pages providing real-time information from devices connected to RS-485 network ports via a standard Web browser.

M. Equipment Monitoring Options: Login shall be followed by a main menu for selecting summary Web pages that follow.

N. Summary Web pages shall be factory configured to display the following information for each communicating device within the power equipment lineup:
   1. User-Configured Custom Home Page: Provide for the lineup, showing status-at-a-glance of the following key operating values:
      a. Mechanical Branch Circuit Loads
      b. Plug Loads
      c. Lighting Loads
   2. Circuit Summary Page: Circuit name, three-phase average rms current, power (kW), power factor.
   3. Load Current Summary Page: Circuit name, Phase A, B, and C rms current values.
   4. Demand Current Summary Page: Circuit name, Phase A, B, and C average demand current values.
   5. Power Summary Page: Circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
   6. Energy Summary Page: Circuit name, energy (kWh), reactive energy (kVARh), and time/date of last reset.

O. Communications:
1. Power monitor: Permanently connected to communicate via RS-485 Modbus TCP/IP or Modbus TCP via a 100 Base-T Ethernet.

2.7 LAN CABLES
A. Comply with Section 271000 "Structure Cabling."
B. RS-485 Cable:
   1. PVC-Jacketed, RS-485 Cable: Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, PVC insulation, unshielded, PVC jacket, and NFPA 70, Type CMG.
   2. Plenum-Type, RS-485 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and fluorinated-ethylene-propylene jacket, and NFPA 70, Type CMP.
C. Unshielded Twisted Pair Cables: Category 6 as specified for horizontal cable for data service in Section 271000 "Structure Cabling."

2.8 LOW-VOLTAGE WIRING
A. Comply with Section 260519 "Low-Voltage Electrical Power Conductors."
B. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
   1. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
   2. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
   3. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

PART 3 EXECUTION

3.1 EXAMINATION
A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CABLING
A. Comply with NECA 1.
B. Install cables and wiring according to requirements in Section 271000 "Structure Cabling."
C. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use NRTL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.
D. Install LAN cables using techniques, practices, and methods that are consistent with specified category rating of components and that ensure specified category performance of completed and linked signal paths, end to end.
E. Install cables without damaging conductors, shield, or jacket.

3.3 IDENTIFICATION
A. Identify components and power and control wiring according to Section 260553 "Identification for Electrical Systems."
B. Label each power monitoring and control module with a unique designation.

3.4 GROUNDING
A. Comply with IEEE 1100, "Recommended Practice for Powering and Grounding Electronic Equipment."

3.5 LOAD TYPES MEASUREMENT AND VERIFICATION PERFORMANCE REPORTING
A. The power monitoring system shall monitor load measurements and verification requirements on a continual basis. Provide all necessary interfaces to make these values available to the system at all times.
B. It is the responsibility of the contractor and manufacturer of the power monitoring system to assign and identify the power monitors and associated load type. Refer to drawings and panelboard schedules for identification of the load types.
C. Assign branch circuit monitoring load types based on the load description in the panelboard schedule.
D. The contractor shall be responsible for coordinating final branch circuit assignments and identifying which load category they belong to, and providing this information to the BAS programmer.

3.6 FIELD QUALITY CONTROL
A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
B. Tests and Inspections:
   1. Electrical Tests: Use caution when testing devices containing solid-state components.
   2. Continuity tests of circuits.
   3. Operational Tests: Work with the Div. 23 contractor to set and operate controls at workstation and at monitored and controlled devices to demonstrate their functions and capabilities. Use a methodical sequence that cues and reproduces actual operating functions as recommended by manufacturer. Submit sequences for approval. Note response to each test command and operation. Note time intervals between initiation of alarm conditions and registration of alarms at central-processing workstation.
      a. Coordinate testing required by this Section with that required by Sections specifying equipment being monitored and controlled.
      b. Test LANs according to requirements in Section 271000 "Structure Cabling."
      c. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of calculated battery operating time.
      d. Verify accuracy of graphic screens and icons.
      e. Metering Test: Load feeders, measure loads on feeder/branch circuit conductor with an rms reading clamp-on ammeter, and simultaneously read indicated current on the same phase at central-processing workstation. Record and compare values measured at the two locations. Resolve discrepancies greater than 5 percent and record resolution method and results.
      f. Record metered values, control settings, operations, cues, time intervals, and functional observations and submit test reports printed by workstation printer to the Engineer and the Client's Facilities Department.
C. Power monitoring and control equipment will be considered defective if it does not pass tests and inspections.
D. Prepare test and inspection reports.
E. Correct deficiencies, make necessary adjustments, and retest. Verify that specified requirements are met.

F. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.

G. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

H. Remove and replace malfunctioning devices and circuits and retest as specified above.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner’s maintenance personnel to adjust, operate, and maintain systems. See Section 017900 “Demonstration and Training.”

A. Provide a minimum of two 8 hours’ of training. One session is to be completed at or before Substantial completion. The second training session shall take place before Final Acceptance.

1. Include instructions on operation of the meter equipment, normal testing, adjustments to the meter, and use of the software maintenance tools provided.

2. Train them on how to change and assign load types to monitoring points.

3. Training Aid: Use approved final versions of software and maintenance manuals as training aids.

3.8 ON-SITE ASSISTANCE

A. Occupancy Adjustments: When requested within 12 months from Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to 8 visits to Project during other-than-normal occupancy hours for this purpose.

3.9 SPECIFICATION PERFORMANCE SPREAD SHEET

A. Prepare a line by line comparison of this specifications and identify if the products or services offered are in compliance with the requirements of this specification. Identify any variations and proposed solutions or comparable products.

SECTION 260923
LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Standalone daylight-harvesting switching and dimming controls.
   2. Indoor occupancy and vacancy sensors.
   4. Wall dimmer occupancy sensors.
   5. Digital timer light switches.
   6. High-bay occupancy sensors.
   7. Wall-box dimmers.

B. Related Requirements:
   1. Section 260523 "Control-Voltage Electrical Power Cables: For control cable requirements.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:
   1. Show installation details for the following:
      a. Occupancy sensors.
      b. Vacancy sensors.
   2. Interconnection diagrams showing field-installed wiring.
   3. Include diagrams for power, signal, and control wiring.
   4. Provide coversheet indicating project title, project location, and vendor contact information.
   5. Organize submittal into logical sections and provide table of contents.
   6. Provide itemized bill of materials indicating model number and quantity for each product.
   7. On datasheets with multiple products, indicate which product is provided under this project.
   8. Combine electronic submittals into one unified PDF document that is organized per the table of contents. The submittal shall be free of copyrighted files and proprietary file formats. Electronic links may be submitted to supplement product datasheets, but may not be used as a substitute for product datasheets that are required to be included in the unified PDF submittal.
   9. Manufacturers' catalog sheets with complete technical data for each item being furnished.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Sample Warranty: For manufacturer's warranties.

C. Refer to Section 018113 "Sustainable Design Requirements" for requirements of sealants, primers, paints, adhesives, caulk, aerosols, and coatings.
1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For each type of lighting control device to include in emergency, operation, and maintenance manuals.

B. Software and Firmware Operational Documentation:
   1. Software operating and upgrade manuals.
   2. Program Software Backup: On manufacturer’s website. Provide names, versions, and website addresses for locations of installed software.
   3. Device address list.
   4. Printout of software application and graphic screens.

1.6 WARRANTY
A. Manufacturer’s Warranty: Manufacturer and Installer agree to repair or replace lighting control devices that fail(s) in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Faulty operation of lighting control software.
      b. Faulty operation of lighting control devices.
   2. Warranty Period: Two year(s) from date of Substantial Completion.

1.7 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 PRODUCTS

2.1 DAYLIGHT-HARVESTING DIMMING CONTROLS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cooper Industries, Inc.
   2. Hubbell Building Automation, Inc.
   4. Lithonia Lighting; Acuity Lighting Group, Inc.
   5. Watt Stopper.

B. System Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
   1. Lighting control set point is based on two lighting conditions:
      a. When no daylight is present (target level).
      b. When significant daylight is present.
   2. System programming is done with two hand-held, remote-control tools.
      a. Initial setup tool.
      b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

C. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with integrated power pack, to detect changes in indoor lighting levels that are perceived by the eye.

D. Electrical Components, Devices, and Accessories:
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Sensor Output: 0- to 10-V dc to operate luminaires. Sensor is powered by controller unit.
3. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc (120 to 640 lux).

E. Power Pack: Digital controller capable of accepting 3 RJ45 inputs with two outputs rated for 20-A ballast load at 120- and 277-V ac, for 16-A LED at 120- and 277-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc class 2 power source, as defined by NFPA 70.
   1. With integral current monitoring
      a. compatible with digital addressable lighting interface.
      1) Plenum rated.

2.2 INDOOR OCCUPANCY AND VACANCY SENSORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work include, but are not limited to, the following:
   1. Bryant Electric; a Hubbell company.
   2. Cooper Industries, Inc.
   3. Hubbell Building Automation, Inc.
   5. Lithonia Lighting; Acuity Lighting Group, Inc.
   7. NSi Industries LLC; TORK Products.
   8. Philips Lighting Controls
   9. RAB Lighting.
  10. Sensor Switch, Inc.
  11. Square D; a brand of Schneider Electric.
  12. Watt Stopper.

A. General Requirements for Sensors:
   2. Dual technology.
   3. Integrated power pack.
   4. Hardwired connection to switch and capability to interface with BAS and lighting control system.
   5. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   6. Operation:
      a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
      b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
      c. Combination Sensor: Unless otherwise indicated, sensor shall be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
   7. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A.
   9. Power Pack: Dry contacts rated for 20-A ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
   10. Mounting:
       a. Sensor: Suitable for mounting in any position on a standard outlet box.
       b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
11. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
12. Bypass Switch: Override the "on" function in case of sensor failure.
13. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lux); turn lights off when selected lighting level is present.

B. Ultrasonic Type: Ceiling mounted; detect occupants in coverage area through pattern changes of reflected ultrasonic energy.
1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches (305 mm).
2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot- (3-m-) high ceiling in a corridor not wider than 14 feet (4.3 m).

C. Dual-Technology Type: Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.
1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm), and detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches (305 mm).
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.
4. Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 1000 square feet (110 square meters) when mounted 48 inches (1200 mm) above finished floor.

2.3 SWITCHBOX-MOUNTED OCCUPANCY AND VACANCY SENSORS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Bryant Electric; a Hubbell company.
2. Cooper Industries, Inc.
3. Hubbell Building Automation, Inc.
4. Intermatic, Inc.
6. Lithonia Lighting; Acuity Lighting Group, Inc.
7. Lutron Electronics Co., Inc.
8. NSI Industries LLC; TORK Products.
9. Philips Lighting Controls
10. RAB Lighting.
11. Sensor Switch, Inc.
12. Square D; a brand of Schneider Electric.
13. Watt Stopper.
A. General Requirements for Sensors: Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox, with provisions for connection to BAS.
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
   3. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
   4. Switch Rating: Not less than 800-VA LED load at 120 V, 1200-VA ballast or LED load at 277 V, and 800-W incandescent.
   5. Faceplate: Color matched to switch.
   6. Color: White

2.4 WALL DIMMER OCCUPANCY SENSORS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Lutron Maestro 0-10 V Dimmer Sensor Series or comparable product.

B. Description:
   1. 0-10V Wall Dimmer Occupancy Sensors:
      a. Compatible with sourcing electronic 0-10 V ballasts/drivers, as per IEC 60929 Annex E.2 0-10 V protocol.
      b. Adjustable sensitivity (high, medium, low, and minimum presets).
      c. Adjustable high/low end trims.
      d. Selectable dimming curve (linear or square law).
      e. Dimmer Features: Locked preset, fade-to-on, fade-to-off.
      f. Turns off lighting after reasonable and adjustable time delay once the last person to occupy the space vacates a room or area. Provide adjustable timeout settings of 1, 5, 15, and 30 minutes.
      g. Selectable option to enable low light feature (automatic-on when ambient light is below threshold). Ambient light threshold to be selectable as either adaptive utilizing occupant feedback (Lutron Smart Ambient Light Detection) or as fixed (high, medium, low, and minimum presets).
      h. Fades lights to off over period of 10 seconds to warn occupant of impending load turn-off.
      i. Provides visual alert for miswire and incompatible load.
   2. Passive Infrared 0-10 V Wall Dimmer Combination Occupancy/Vacancy Sensors:
      a. Programmable to operate as an occupancy sensor (automatic-on and automatic-off) or a vacancy sensor (manual-on and automatic-off).
      b. 0-10 V control for 0-10 V fluorescent ballasts/LED drivers (8 A load at 120-277 V, 50 mA max control current).
      c. Coverage of 900 square feet (81 sq m) with mounting height of 4 feet (1.2 m).
      d. 180 degree field of view.
      e. Multi-location capability using standard 3-way or companion switch (up to nine companion switches may be connected).

2.5 DIGITAL TIMER LIGHT SWITCH

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cooper Industries, Inc.
   2. Hubbell Lighting.
   3. Intermatic, Inc.
   4. Invensys Controls
   6. Lithonia Lighting; Acuity Lighting Group, Inc.
7. Novitas, Inc.
8. NSi Industries LLC.
9. RAB Lighting, Inc.
10. Sensor Switch, Inc.
11. TE Connectivity Ltd.
12. TORK.
13. Watt Stopper (The).

B. Description: Combination digital timer and conventional switch lighting control unit, complying with UL 917. Switchbox-mounted, backlit LCD display, with selectable time interval in 10 minute increments.
   1. Rated 960 W at 120-V ac for tungsten lighting, 10 A at 120-V ac or 10 amps at 277-V ac for LED, and 1/4 horsepower at 120-V ac.
   2. Integral relay for connection to BAS.
   3. Voltage: Match the circuit voltage.
   5. Faceplate: Color matched to switch.

2.6 HIGH-BAY OCCUPANCY SENSORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Hubbell Building Automation, Inc.

B. General Description: Solid-state unit. The unit is designed to operate with the lamp and ballasts indicated.
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Operation: Turn lights on when coverage area is occupied, and to half-power when unoccupied; with a time delay for turning lights to half-power that is adjustable over a minimum range of 1 to 16 minutes.
   3. Continuous Lamp Monitoring: When lamps are dimmed continuously for 24 hours, automatically turn lamps on to full power for 15 minutes for every 24 hours of continuous dimming.
   5. Operating Ambient Conditions: 32 to 149 deg F (0 to 65 deg C).
   7. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
   8. Detector Technology: PIR.
   9. Power and dimming control from the lighting fixture ballast that has been modified to include the dimming capacitor.

C. Detector Coverage: User selectable by interchangeable PIR lenses, suitable for mounting heights from 12 to 50 feet (3.7 to 15.2 m).

D. Accessories: Obtain manufacturer’s installation and maintenance kit with laser alignment tool for sensor positioning and power port connectors.

2.7 WALL-BOX DIMMERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Bryant Electric; a Hubbell company.
   2. Cooper Industries, Inc.
3. Hubbell Building Automation, Inc.
4. Intermatic, Inc.
6. Lithonia Lighting; Acuity Lighting Group, Inc.
7. Lutron Electronics Co., Inc.
8. NSi Industries LLC; TORK Products.
9. Philips Lighting Controls
10. RAB Lighting.
11. Sensor Switch, Inc.
12. Square D; a brand of Schneider Electric.
13. Watt Stopper.

B. Dimmer Switches: Modular, full-wave, solid-state units with integral, quiet on-off switches, with audible frequency and EMI/RFI suppression filters.

C. Control: Continuously adjustable slider; with single-pole or three-way switching. Comply with UL 1472.

D. Power Failure Recovery: When power is interrupted for periods up to 1 year and subsequently restored, lights to automatically return to same levels (dimmed setting, full on, or full off) as prior to power interruption.

E. Dimmers for Electronic Low Voltage (ELV) Transformers: Minimum of 90 percent of line voltage.

F. LED Lamp Dimmer Switches: Modular; compatible with dimming driver; dimmer-ballast combination capable of consistent dimming with low end not greater than 10 percent of full brightness
   1. Provide dimmer and driver that are compatible and tested to comply with UL standards.
   2. Continuous Flicker Free dimming range 100% to 1% measured relative light output.
   3. Meets FCC Part 15 Non-Consumer requirements for EMI/RFI emissions in a typical grounded fixture
   4. Provide dimmers with Pulse Width Modulation for both constant current or constant wattage drivers to maintain LED color when dimming, unless noted otherwise on the Luminaire Schedule.

2.8 EMERGENCY SHUNT RELAY

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Lighting Control and Design; Acuity Lighting Group, Inc.
   2. Watt Stopper.

B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.
   1. Coil Rating: 277 V.

2.9 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
PART 3 EXECUTION

3.1 EXAMINATION
A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.
B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SENSOR INSTALLATION
A. Comply with NECA 1.
B. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
C. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.3 WIRING INSTALLATION
A. Comply with NECA 1.
B. Wiring Method: Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch (13 mm).
C. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.
E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.4 IDENTIFICATION
A. Identify components and power and control wiring according to Section 260553 "Identification for Electrical Systems."
   1. Identify controlled circuits in lighting contactors.
   2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
B. Label time switches and contactors with a unique designation.

3.5 FIELD QUALITY CONTROL
A. Testing Agency: Engage a qualified testing agency to evaluate lighting control devices and perform tests and inspections.
B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections
   1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Lighting control devices will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 ADJUSTING
   A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting sensors to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
      1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
      2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
      3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.7 SOFTWARE SERVICE AGREEMENT
   A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.

   B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
      1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.8 DEMONSTRATION
   A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control systems specified in Section 260943.03 “Distributed Digital Lighting Controls.”

   B. Train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices.

END OF SECTION
SECTION 260936
MODULAR DIMMING CONTROLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Wall-box, multiscene, modular dimming controls.
   2. Multipreset modular dimming controls.

B. Related Requirements:
   2. Section 260523 “Control-Voltage Electrical Power Cables: For control cable requirements.

1.3 DEFINITIONS

A. BAS: Building automation system.
B. Fade Rate: The time it takes each zone to arrive at the next scene, dependent on the degree of change in lighting level.
C. Low Voltage: As defined in NFPA 70, the term for circuits and equipment operating at less than 50 V or for remote-control, signaling, and power-limited circuits.
D. RFI: Radio-frequency interference.
E. Scene: The lighting effect created by adjusting several zones of lighting to the desired intensity.
F. SCR: Silicon-controlled rectifier.
G. Zone: A fixture or group of fixtures controlled simultaneously as a single entity. Also known as a “channel.”

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. For modular dimming controls; include elevation, dimensions, features, characteristics, ratings, and labels.
   2. Device plates and plate color and material.
   4. Sound data including results of operational tests of central dimming controls.
   5. Operational documentation for software and firmware.

B. Shop Drawings: Detail assemblies of standard components, custom assembled for specific application on Project. Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
   1. Include elevation views of front panels of control and indicating devices and control stations.
   2. Include diagrams for power, signal, and control wiring.
3. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.

4. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.

5. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.

6. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.

7. Provide coversheet indicating project title, project location, and vendor contact information.

8. Organize submittal into logical sections and provide table of contents.

9. Provide itemized bill of materials indicating model number and quantity for each product.

10. On datasheets with multiple products, indicate which product is provided under this project.

11. Combine electronic submittals into one unified PDF document that is organized per the table of contents. The submittal shall be free of copyrighted files and proprietary file formats. Electronic links may be submitted to supplement product datasheets, but may not be used as a substitute for product datasheets that are required to be included in the unified PDF submittal.

12. Manufacturers' catalog sheets with complete technical data for each item being furnished.

C. Samples for Verification: For master- and remote-control stations, and faceplates with factory-applied color finishes and technical features.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in Section 230900 "Instrumentation and Controls for HVAC."

1. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.

2. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

B. Field quality-control reports.

C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For standalone multipreset modular dimming controls to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017800 "Closeout Submittals," include the following:
   a. Software manuals.
   b. Adjustments of scene preset controls, adjustable fade rates, and fade overrides.
   c. Operation of adjustable zone controls.
   d. Testing and adjusting of panic and emergency power features.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of standalone multipreset modular dimming controls that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Damage from transient voltage surges.
2. Warranty Period: Cost to repair or replace any parts for two years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Douglas Lighting Controls.
3. Lightolier Controls; a Philips Group brand.
4. Lutron Electronics Co., Inc.
5. Philips Lighting Controls.

2.2 SYSTEM DESCRIPTION

A. Compatibility:

1. Dimming control components shall be compatible with luminaires, ballasts, and transformers.
2. Dimming control devices shall be compatible with lighting control system components specified in Section 260943.03 "Distributed Digital Lighting Controls," and in Section 260923 "Lighting Control Devices."

B. Dimmers and Dimmer Modules: Comply with UL 508.

1. Audible Noise and RFI Suppression: Solid-state dimmers shall operate smoothly over their operating ranges without audible lamp or dimmer noise or RFI. Modules shall include integral or external filters to suppress audible noise and RFI.
2. Dimmer or Dimmer-Module Rating: Not less than 125 percent of connected load unless otherwise indicated.

C. Capacities: Unit shall be rated for 2400 W at 240-V ac and 2000 W at 120-V ac for up to 100 devices or zones.

D. Surge Protection: Withstand supply power surges without impairment to performance.

E. Off Control Position: User-selected off position of any control point shall disconnect the load from line supply.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 WALL-BOX MULTISCENE DIMMING CONTROLS

A. Description: Factory-fabricated equipment providing manual dimming consisting of a wall-box-mounted master controller and indicated number of wall-box zone stations. Controls and dimmers shall be integrated for mounting in multigang wall box under a single wall plate. Each zone shall be adjustable to indicated number of scenes, which shall reside in the memory of zone controller.

B. Dimmers: Each zone shall be configurable to control the following loads:

1. LED lamps.
2. Incandescent lamps.
3. Low-voltage incandescent lamps, derived with electronic transformers.
4. Non-dim, on-off switching only.
C. Dimmers: Regulate voltages to maintain a constant light level, with no visible flicker, when the source voltage varies plus or minus 2 percent rms.

D. Memory:
   1. Retain preset scenes and fade rates through momentary (up to 3-second) power interruptions.
   2. Retain preset scenes through power failures for at least seven days.

E. Device Plates: Style, material, and color shall comply with Section 262726 "Wiring Devices." Master-control cover plate shall be one piece.

F. Master controller shall include the following:
   1. Cover-mounted switches, including master off, all bright, and selectors for each scene.
   2. Cover-mounted LED indicator lights, one associated with each scene switch, and one for the master off switch.
   3. Concealed switches and indicators for specified function.
   4. A raise/lower switch for each zone for temporary adjustments of the zone, without altering scene values stored in memory.
   5. Fade time indicated by digital display for current scene while fading.
   6. Cover-mounted infrared receiver.

2.4 CONDUCTORS AND CABLES
A. Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 2 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 2 0-10V Control Circuits Installed with Class 1 Conductors: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway

PART 3 EXECUTION
3.1 WIRING INSTALLATION
A. Comply with NECA 1.

B. Wiring Method: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch (13 mm).

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

D. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

E. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.2 IDENTIFICATION
A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identifying components and power and control wiring.

B. Label each dimmer module with a unique designation.

C. Label each scene control button with approved scene description.
3.3 **FIELD QUALITY CONTROL**

A. **Testing Agency:** Engage a qualified testing agency to perform tests and inspections.

B. **Manufacturer's Field Service:** Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Continuity tests of circuits.
   2. **Operational Test:** Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.
      a. Include testing of modular dimming control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.

D. Dimming control components will be considered defective if they do not pass tests and inspections.

E. **Test Labeling:** After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.

F. **Reports:** Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

3.4 **DEMONSTRATION**

A. Owner's maintenance personnel to adjust, operate, and maintain modular dimming controls. Lap-top portable computer shall be used in training.

B. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Section 260943.03 "Distributed Digital Lighting Controls."

**END OF SECTION**
SECTION 260943.03
DISTRIBUTED DIGITAL LIGHTING CONTROLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Provide Distributed Digital Lighting Controls (controls) as indicated on the drawings and as specified herein. The controls shall consist of a series of standalone digital load controllers and intelligent low-voltage devices dedicated to the room/space they are serving. All local devices shall be connected together via an In-Room Network, enabling digital communication between devices. Digital Lighting Control Panels, where indicated on the drawings, may also be used for lighting control as part of the overall lighting control scheme. Section Includes: Lighting control panels using mechanically held relays for switching.

B. The system architecture shall connect multiple In-Room local networks for centralized building-wide monitoring and management via a Global Network and PC-based software. Refer to the drawings for which rooms/spaces are to be connected to the Global Network. The system architecture shall allow standalone digital load controllers and associated devices to function in some default capacity, even if network connectivity to the Global Network is lost.

C. The controls shall provide time-based, sensor-based (e.g. occupancy/vacancy and daylight sensors), and/or manual control as indicated in the lighting sequences of operation on the drawings. The controls shall turn lighting loads ON/OFF, and shall dim the lighting where indicated.

D. Section Includes: Networked lighting control panels using control-voltage relays for switching and that are interoperable with HVAC DDC system.

1.3 RELATED SECTIONS
A. Section 260800 "Commissioning of Electrical".
B. Section 265119 "LED Interior Lighting".

1.4 REFERENCE STANDARDS
A. NFPA 70 National Electrical Code; National Fire Protection Association
B. NEMA National Electrical Manufacturers Association
C. FCC Federal Communications Commission – Emission Standards
D. UL Underwriters Laboratories, Inc. Listings
E. UL 2043 Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products Installed in Air-Handling Spaces
F. UL 20 General-Use Snap Switches
G. UL 508 Standard for Industrial Control Equipment
H. UL 916 Standard for Energy Management Equipment
I. UL 924 Standard for Emergency Lighting and Power Equipment
1.5 DESIGN/PERFORMANCE REQUIREMENTS

A. Distributed Digital Lighting Controls shall accommodate the square-footage coverage requirements for each area controlled utilizing digital load controllers, digital occupancy/vacancy sensors, digital daylighting sensors, digital switches, digital lighting control panels, and accessories that suit the required lighting and electrical system parameters.

B. System shall conform to requirements of NFPA 70.

C. System shall comply with FCC emission standards specified in part 15, sub-part J for commercial and residential application.

D. System shall be listed under UL sections 916 and/or 508.

1.6 DEFINITIONS

A. DDC: Direct digital control.

B. IP: Internet protocol.

C. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

1.7 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and plates, and conductors and cables.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   3. Sound data including results of operational tests of central dimming controls.
   4. Operational documentation for software and firmware.

B. Shop Drawings: For each relay panel and related equipment.
   1. Provide coversheet indicating project title, project location, and vendor contact information.
   2. Organize submittal into logical sections and provide table of contents.
   3. Provide itemized bill of materials indicating model number and quantity for each product.
   4. On datasheets with multiple products, indicate which product is provided under this project.
   5. Combine electronic submittals into one unified PDF document that is organized per the table of contents. The submittal shall be free of copyrighted files and proprietary file formats. Electronic links may be submitted to supplement product datasheets, but may not be used as a substitute for product datasheets that are required to be included in the unified PDF submittal.
   6. Manufacturers' catalog sheets with complete technical data for each item being furnished.
   7. All manufacturers shall submit to the specifying engineer a line-by-line compliance comparison between each specifications requirement and the system being proposed. Any ambiguities in the drawings or specifications shall be brought to the attention of the specifying engineer for clarification.
   8. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
   9. Detail enclosure types and details for types other than NEMA 250, Type 1.
   10. Detail wiring partition configuration, current, and voltage ratings.
   11. Short-circuit current rating of relays.
   12. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.
13. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.
15. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

C. Refer to Section 018113 “Sustainable Design Requirements” for requirements of sealants, primers, paints, adhesives, caulks, aerosols, and coatings.

1.8 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Section 230900 "Instrumentation and Controls for HVAC."
